"THE VOLUME IS REQUIRED READING FOR EVERYONE SERIOUSLY INTERESTED IN NATIVE AMERICAN LITERATURE OR IN MESO-AMERICAN CULTURAL HISTORY. ITS PUBLICATION IS A MAJOR EVENT." —*LOS ANGELES TIMES*

Popol Vuh, the Quiché Mayan book of creation, is not only the most important text in the native languages of the Americas, it is also an extraordinary document of the human imagination. It begins with the deeds of Mayan gods in the darkness of a primeval sea and ends with the radiant splendor of the Mayan lords who founded the Quiché kingdom in the Guatemalan highlands. Originally written in Mayan hieroglyphs, it was transcribed into the Roman alphabet in the sixteenth century.

This new edition of Dennis Tedlock's unabridged, widely praised translation includes new notes and commentary, newly translated passages, newly deciphered hieroglyphs, and over forty new illustrations.

"Dennis Tedlock's splendid version . . . [is] the work of a brilliant anthropologist who is also a true 'poet of performance,' himself trained by a native Quiché master. . . . Superb notes and glossary . . . An event of quite exceptional importance."

—WILLIAM ARROWSMITH, ROBERT W. WOODRUFF

PROFESSOR OF CLASSICS AND COMPARATIVE LITERATURE, EMORY UNIVERSITY

"Tedlock's translation is sensitive, precise, and illuminating. It will greatly help the *Popol Vuh* achieve its rightful place as a masterpiece of religious writing, familiar to all those who seek a message that transcends ordinary concerns."

—VINE DELORIA, JR., AUTHOR OF *CUSTER DIED FOR YOUR SINS*

DENNIS TEDLOCK is McNulty Professor of English and Research Professor of Anthropology at the State University of New York at Buffalo. He is the coeditor of *American Anthropologist* and the author of several books.

The Book of the People:

POPUL VUH

Translated into English by

Delia Goetz and Sylvanus Griswold Morley

from Adrián Recino's translation

from Quiché into Spanish

Plantin Press, Los Angeles

[1954, copyright not registered or renewed]

Preamble

THIS IS THE BEGINNING of the old traditions of this place called Quiché.

Here we shall write and we shall begin the old stories, the beginning and the origin of all that was done in the town of the Quiché, by the tribes of the Quiché nation.

And here we shall set forth the revelation, the declaration, and the narration of all that was hidden, the revelation by Tzacol, Bitol, Alom, Qaholom, who are called Hunahpú-Vuch, Hunahpú-Utiú, Zaqui-Nimá-Tziís, Tepeu, Gucumatz, u Qux cho, u Qux Paló, Ali Raxá Lac, Ah Raxá Tzel, as they were called. And [at the same time] the declaration, the combined narration of the Grandmother and the Grandfather, whose names are Xpiyacoc, and Xmucané, helpers and protectors, twice grandmother, twice grandfather, so called in the Quiché chronicles. Then we shall tell all that they did in the light of existence, in the light of history.

This we shall write now under the Law of God and Christianity; we shall bring it to light because now the *Popol Vuh*, as it is called, cannot be seen any more, in which was dearly seen the coming from the other side of the sea and the narration of our obscurity, and our life was clearly seen. The original book, written long ago, existed, but its sight is hidden to the searcher and to the thinker. Great were the descriptions and the account of how all the sky and earth were formed, how it was formed and divided into four parts; how it was partitioned, and how the sky was divided; and the measuring-cord was brought, and it was stretched in the sky and over the earth, on the four angles, on the four corners, as was told by the Creator and the Maker, the Mother and the Father of Life, of all created things, he who gives breath and thought, she who gives birth to the children, he who watches over the happiness of the people, the happiness of the human race, the wise man, he who meditates on the goodness of all that exists in the sky, on the earth, in the lakes and in the sea.

PART I: Chapter 1

THIS IS THE ACCOUNT OF HOW ALL WAS in suspense, all calm, in silence; all motionless, still, and the expanse of the sky was empty.

This is the first account, the first narrative. There was neither man, nor animal, birds, fishes, crabs, trees, stones, caves, ravines, grasses, nor forests; there was only the sky.

The surface of the earth had not appeared. There was only the calm sea and the great expanse of the sky.

There was nothing brought together, nothing which could make a noise, nor anything which might move, or tremble, or could make noise in the sky.

There was nothing standing; only the calm water, the placid sea, alone and tranquil. Nothing existed.

There was only immobility and silence in the darkness, in the night. Only the creator, the Maker, Tepeu, Gucumatz, the Forefathers, were in the water surrounded with light. They were hidden under green and blue feathers, and were therefore called Gucumatz. By nature they were great sages and great thinkers. In this manner the sky existed and also the Heart of Heaven, which is the name of God and thus He is called.

Then came the word. Tepeu and Gucumatz came together in the darkness, in the night, and Tepeu and Gucumatz talked together. They talked then, discussing and deliberating; they agreed, they united their words and their thoughts.

Then while they meditated, it became clear to them that when dawn would break, man must appear. Then they planned the creation, and the growth of the trees and the thickets and the birth of life and the creation of man. Thus it was arranged in the darkness and in the night by the Heart of Heaven who is called Huracán.

The first is called Caculhá Huracán. The second is Chipi-Caculhá. The third is Raxa-Caculhá. And these three are the Heart of Heaven.

Then Tepeu and Gucumatz came together; then they conferred about life and light, what they would do so that there would be light and dawn, who it would be who would provide food and sustenance.

Thus let it be done! Let the emptiness be filled! Let the water recede and make a void, let the earth appear and become solid; let it be done. Thus they spoke. Let there be light, let there be dawn in the sky and on the earth! There shall be neither glory nor grandeur in our creation and formation until the human being is made, man is formed. So they spoke.

Then the earth was created by them. So it was, in truth, that they created the earth. Earth! they said, and instantly it was made.

Like the mist, like a cloud, and like a cloud of dust was the creation, when the mountains appeared from the water; and instantly the mountains grew.

Only by a miracle, only by magic art were the mountains and valleys formed; and instantly the groves of cypresses and pines put forth shoots together on the surface of the earth.

And thus Gucumatz was filled with joy, and exclaimed: "Your coming has been fruitful, Heart of Heaven; and you, Huracán, and you, Chipi-Caculhá, Raxa-Caculhá!"

"Our work, our creation shall be finished," they answered.

First the earth was formed, the mountains and the valleys; the currents of water were divided, the rivulets were running freely between the hills, and the water was separated when the high mountains appeared.

Thus was the earth created, when it was formed by the Heart of Heaven, the Heart of Earth, as they are called who first made it fruitful, when the sky was in suspense, and the earth was submerged in the water.

So it was that they made perfect the work, when they did it after thinking and meditating upon it.

I. Chapter 2

Then they made the small wild animals, the guardians of the woods, the spirits of the mountains, the deer, the birds, pumas, jaguars, serpents, snakes, vipers, guardians of the thickets.

And the Forefathers asked: 'Shall there be only silence and calm under the trees, under the vines? It is well that hereafter there be someone to guard them.'

So they said when they meditated and talked. Promptly the deer and the birds were created. immediately they gave homes to the deer and the birds. "You, deer, shall sleep in the fields by the river bank and in the ravines. Here you shall be amongst the thicket, amongst the pasture; in the woods you shall multiply, you shall walk on four feet and they will support you. Thus be it done!" So it was they spoke.

Then they also assigned homes to the birds big and small. "You shall live in the trees and in the vines. There you shall make your nests; there you shall multiply; there you shall increase in the branches of the trees and in the vines." Thus the deer and the birds were told; they did their duty at once, and all sought their homes and their nests.

And the creation of all the four-footed animals and the birds being finished, they were told by the Creator and the Maker and the Forefathers: "Speak, cry, warble, call, speak each one according to your variety, each, according to your kind." So was it said to the deer, the birds, pumas, jaguars, and serpents.

"Speak, then, our names, praise us, your mother, your father. Invoke then, Huracán, Chipi-Caculhá, Raxa-Caculhá, the Heart of Heaven, the Heart of Earth, the Creator, the Maker, the Forefathers; speak, invoke us, adore us," they were told.

But they could not make them speak like men; they only hissed and screamed and cackled; they were unable to make words, and each screamed in a different way.

When the Creator and the Maker saw that it was impossible for them to talk to each other, they said: "It is impossible for them to say our names, the names of us, their Creators and Makers. This is not well," said the Forefathers to each other.

Then they said to them: "Because it has not been possible for you to talk, you shall be changed. We have changed our minds: Your food, your pasture, your homes. and your nests you shall have; they shall be the ravines and the woods, because it has not been possible for you to adore us or invoke us. There shall be those who adore us, we shall make other [beings] who shall be obedient. Accept your destiny: your flesh shall be tom to pieces. So shall it be. This shall be your lot." So they said, when they made known their will to the large and small animals which are on the face of the earth.

They wished to give them another trial; they, wished to make another attempt; they wished to make [all living things] adore them.

But they could not understand each other's speech; they could succeed in nothing, and could do nothing. For this reason they were sacrificed and the animals which were on earth were condemned to be killed and eaten.

For this reason another attempt had to be made to create and make men by the Creator, the Maker, and the Forefathers.

"Let us try again! Already dawn draws near: Let us make him who shall nourish and sustain us! What shall we do to be invoked, in order to be remembered on earth? We have already tried with our first creations, our first creatures; but we could not make them praise and venerate us. So, then, let us try to make obedient, respectful beings who will nourish and sustain us." Thus they spoke.

Then was the creation and the formation. Of earth, of mud, they made [man's] flesh. But they saw that it was not good. It melted away, it was soft, did not move, had no strength, it fell down, it was limp, it could not move its head, its face fell to one side, its sight was blurred, it could not look behind. At first it spoke, but had no mind. Quickly it soaked in the water and could not stand.

And the Creator and the Maker said: "Let us try again because our creatures will not be able to walk nor multiply. Let us consider this," they said.

Then they broke up and destroyed their work and their creation. And they said: "What shall we do to perfect it, in order that our worshipers, our invokers, will be successful?"

Thus they spoke when they conferred again: "Let us say again to Xpiyacoc, Xmucané, Hunahpú-Vuch, Hunahpú-Utiú: 'Cast your lot again. Try to create again.'" In this manner the Creator and the Maker spoke to Xpiyacoc and Xmucané.

Then they spoke to those soothsayers, the Grandmother of the day, the Grandmother of the Dawn, as they were called by the Creator and the Maker, and whose names were Xpiyacoc and Xmucané.

And said Huracán, Tepeu, and Gucumatz when they spoke to the soothsayer, to the Maker, who are the diviners: "You must work together and find the means so that man, whom we shall make, man, whom we are going to make, will nourish and sustain us, invoke and remember us.

"Enter, then, into council, grandmother, grandfather, our grandmother, our grandfather, Xpiyacoc, Xmucané, make light, make dawn. have us invoked, have us adored, have us remembered by created man, by made man, by mortal man. Thus be it done.

"Let your nature be known, Hunahpú-Vuch, Hunahpú-Utiú, twice-mother, twice-father, Nim-Ac, Nima-Tziís, the master of emeralds, the worker in jewels, the sculptor, the carver, the maker of beautiful plates, the maker of green gourds, the master of resin, the master Toltecat, grandmother of the sun, grandmother of dawn, as you will be called by our works and our creatures.

"Cast the lot with your grains of corn and *tzité*. Do it thus and we shall know if we are to make, or carve his mouth and eyes out of wood." Thus the diviners were told.

They went down at once to make their divination, and cast their lots with the corn and the *tzité*. "Fate! Creature!" said an old woman and an old man. And this old man was the one who cast the lots with Tzité, the one called Xpiyacoc. And the old woman was the diviner, the maker, called Chiracán Xmucané.

Beginning the divination, they said: "Get together, grasp each other! Speak, that we may hear." They said, "Say if it is well that the wood be got together and that it be carved by the Creator and the Maker, and if this [man of wood] is he who must nourish and sustain us when there is light when it is day!

"Thou, corn; thou, *tzité*; thou, fate; thou, creature; get together, take each other," they said to the corn, to the *tzité*, to fate, to the creature. "Come to sacrifice here, Heart of Heaven; do not punish Tepeu and Gucumatz!"

Then they talked and spoke the truth: "Your figures of wood shall come out well; they shall speak and talk on earth."

"So may it be," they answered when they spoke.

And instantly the figures were made of wood. They looked like men, talked like men, and populated the surface of the earth.

They existed and multiplied; they had daughters, they had sons, these wooden figures; but they did not have souls, nor minds, they did not remember their Creator, their Maker; they walked on all fours, aimlessly.

They no longer remembered the Heart of Heaven and therefore they fell out of favor. It was merely a trial, an attempt at man. At first they spoke, but their face was without expression; their feet and hands had no strength; they had no blood, nor substance, nor moisture, nor flesh; their cheeks were dry, their feet and hands were dry, and their flesh was yellow.

Therefore, they no longer thought of their Creator nor their Maker, nor of those who made them and cared for them.

These were the first men who existed in great numbers on the face of the earth.

I. Chapter 3

Immediately the wooden figures were annihilated, destroyed, broken up, and killed.

A flood was brought about by the Heart of Heaven; a great flood was formed which fell on the heads of the wooden creatures.

Of *tzité* the flesh of man was made, but when woman was fashioned by the Creator and the Maker, her flesh was made of rushes. These were the materials the Creator and the Maker wanted to use in making them.

But those that they had made, that they had created, did not think, did not speak with their Creator, their Maker. And for this reason they were killed, they were deluged. A heavy resin fell from the sky. The one called Xecotcovach came and gouged out their eyes; Camalotz came and cut off their heads; Cotzbalam came and devoured their flesh. Tucumbalam came, too, and broke and mangled their bones and their nerves, and ground and crumbled their bones.

This was to punish them because they had not thought of their mother, nor their father, the Heart of Heaven, called Huracán. And for this reason the face of the earth was darkened and a black rain began to fall, by day and by night.

Then came the small animals and the large animals, and sticks and stones struck their faces. And all began to speak: their earthen jars, their griddles, their plates, their pots, their grinding stones, all rose up and struck their faces.

"You have done us much harm; you ate us, and now we shall kill you," said their dogs and birds of the barnyard.

And the grinding stones said: "We were tormented by you; every day, every day, at night, at dawn, all the time our faces went *holi, holi, huqui, huqui*, because of you. This was the tribute we paid you. But now that you are no longer men, you shall feel our strength. We shall grind and tear your flesh to pieces," said their grinding stones.

And then their dogs spoke and said: "Why did you give us nothing to eat? You scarcely looked at us, but you chased us and threw us out. You always had a stick ready to strike us while you were eating.

"Thus it was that you treated us. You did not speak to us. Perhaps we shall not kill you now; but why did you not look ahead, why did you not think about yourselves? Now we shall destroy you, now you shall feel the teeth of our mouths; we shall devour you," said the dogs, and then, they destroyed their faces.

And at the same time, their griddles and pots spoke: "Pain and suffering you have caused us. Our mouths and our faces were blackened with soot; we were always put on the fire and you burned us as though we felt no pain. Now you shall feel it, we shall burn you," said their pots, and they all destroyed their [the wooden men's] faces. The stones of the hearth, which were heaped together, hurled themselves straight from the fire against their heads causing them pain.

The desperate ones [the men of wood] ran as quickly as they could; they wanted to climb to the tops of the houses.

And the houses fell down and threw them to the ground; they wanted to climb to the treetops, and the trees cast them far away; they wanted to enter the caverns, and the caverns repelled them.

So was the ruin of the men who had been created and formed, the men made to be destroyed and annihilated; the mouths and faces of all of them were mangled.

And it is said that their descendants are the monkeys which now live in the forests; these are all that remain of them because their flesh was made only of wood by the Creator and the Maker.

And therefore the monkey looks like man, and is an example of a generation of men which were created and made but were only wooden figures.

I. Chapter 4

IT WAS CLOUDY AND TWILIGHT THEN ON the face of the earth. There was no sun yet. Nevertheless, there was a being called Vucub-Caquix, who was very proud of himself.

The sky and the earth existed, but the faces of the sun and the moon were covered.

And he [Vucub-Caquix] said: "Truly, they are clear examples of those people who were drowned, and their nature is that of supernatural beings.

"I shall now be great above all the beings created and formed. I am the sun, the light, the moon," he exclaimed. "Great is my splendor. Because of me men shall walk and conquer. For my eyes are of silver, bright, resplendent as precious stones, as emeralds; my teeth shine like perfect stones, like the face of the sky. My nose shines afar like the moon, my throne is of silver, and the face of the earth is lighted when I pass before my throne.

"So, then, I am the sun, I am the moon, for all mankind. So shall it be, because I can see very far."

So Vucub-Caquix spoke. But he was not really the sun; he was only vainglorious of his feathers and his riches. And he could see only as far as the horizon, and he could not see over all the world.

The face of the sun had not yet appeared, nor that of the moon, nor the stars, and it had not dawned. Therefore, Vucub-Caquix became as vain as though he were the sun and the moon,

because the light of the sun and the moon had not yet shown itself His only ambition was to exalt himself and to dominate. And all this happened when the flood came because of the wooden-people.

Now we shall tell how Vucub-Caquix was overthrown and died, and how man was made by the Creator and the Maker.

I. Chapter 5

THIS IS THE BEGINNING OF THE DEFEAT and the ruin of the glory of Vucub-Caquix brought about by two youths, the first of whom was called Hunahpú and the second, Xbalanqué. They were really gods. When they saw the harm which the arrogant one had done, and wished to do, in the presence of the Heart of Heaven, the youths said:

"It is not good that it be so, when man does not yet live here on earth. Therefore, we shall try to shoot him with our blowgun when he is eating. We shall shoot him and make him sicken, and then that will be the end of his riches, his green stones, his precious metals, his emeralds, his jewels of which he is so proud. And this shall be the lot of all men, for they must not become vain, because of power and riches.

"Thus shall it be," said the youths, each one putting his blowgun to his shoulder.

Well, now Vucub-Caquix had two sons: the first was called Zipacná, the second was Cabracán; and the mother of the two was called Chimalmat, the wife of Vucub-Caquix.

Well, Zipacná played ball with the large mountains: with Chigag, Hunahpú, Pecul, Yaxcanul, Macamob, and Huliznab. These are the names of the mountains which existed when it dawned and which were created in a single night by Zipacná.

In this way, then, Cabracán moved the mountains and made the large and small mountains tremble.

And in this way the sons of Vucub-Caquix proclaimed their pride. "Listen! I am the sun!" said Vucub-Caquix. "I am he who made the earth!" said Zipacná. "I am he who shook the sky and made the earth tremble!" said Cabracán, In this way the sons of Vucub-Caquix followed the example of their father's assumed greatness. And this seemed very evil to the youths. Neither our first mother nor our first father had yet been created.

Therefore, the deaths of Vucub-Caquix and his sons and their destruction was decided upon by the youths.

I. Chapter 6

Now we shall tell how the two youths shot their blowguns at Vucub-Caquix and how each one of those, who had become arrogant, was destroyed.

Vucub-Caquix had a large nantze tree and he ate the fruit of it. Each day he went to the tree and climbed to the top. Hunahpú and Xbalanqué had seen that this fruit was his food. And they lay in ambush at the foot of the tree, hidden among the leaves. Vucub-Caquix came straight to his meal of nantzes.

Instantly he was injured by a discharge from Hun-Hunahpú's blowgun which struck him squarely in the jaw, and screaming, he fell straight to earth from the treetop.

Hun-Hunahpú ran quickly to overpower him, but Vucub-Caquix seized his arm and wrenching it from him, bent it back to the shoulder. In this way Vucub-Caquix tore out Hun-Hunahpú's arm. Surely the two youths did well in not letting themselves be defeated first by Vucub-Caquix.

Carrying Hun-Hunahpú's arm, Vucub-Caquix went home, and arrived there nursing his jaw.

"What has happened to you, my lord?" said Chimalmat, his wife.

"What could it be, but those two demons who shot me with blowguns and dislocated my jaw? For that reason my teeth are loose and pain me very much. But I have brought it [his arm], to put it on the fire. Let it hang there over the fire, for surely these demons will come looking for it." So said Vucub-Caquix as he hung up the arm of Hun-Hunahpú.

Having thought it over, Hun-Hunahpú and Xbalanqué went to talk with an old man who had snow-white hair and with an old woman, really very old and humble, both already bent, like very old people. The old man was called Zaqui-Nim-Ac and the old woman, Zaqui-Nima-Tziís. The youths said to the old woman and the old man:

"Come with us to Vucub-Caquix's house to get our arm. We will follow you, and you shall tell them: 'These with us are our grandchildren; their mother and father are dead; so they follow us everywhere we are given alms, for the only thing that we know how to do is take the worm from the teeth.'

"So Vucub-Caquix shall think we are boys and we shall also be there to advise you," said the two youths.

"Very well," answered the old man and woman.

Then they started out for the place where they found Vucub-Caquix reclining on his throne. The old woman and man walked along followed by the two boys, who stayed behind them. In this way they arrived at the house of the lord who was screaming because his tooth pained him.

When Vucub-Caquix saw the old man and the old woman and those who accompanied them, he asked, "Where do you come from, grandparents?"

"We come looking for something to eat, honorable sir," they answered.

"And what do you eat? Are those not your sons who are with you?"

"Oh, no, sir! They are our grandsons; but we are sorry for them and what is given to us, we share with them, sir," answered the old woman and the old man.

Meanwhile, the lord was suffering terrible pain from his tooth, and it was only with great difficulty that he could speak.

"I earnestly beseech you to have pity on me. What can you do? What do you know how to cure?" the lord asked them.

And the old ones answered, "Oh, sir! we only take the worm from the teeth, cure the eyes, and set bones."

"Very well. Cure my teeth, which are really making me suffer day and night, and because of them and of my eyes I cannot be calm and cannot sleep. All of this is because two demons shot me with a pellet [from their blowgun] and for that reason I cannot eat. Have pity on me, then, tighten my teeth with your hands."

"Very well, sir. It is a worm which makes you suffer. It will end when these teeth are pulled and others put in their place."

"It is not well that you pull my teeth, because it is only with them that I am a lord and all my ornaments are my teeth and my eyes."

"We will put others of ground bone in their place." But the ground bone was nothing but grains of white corn.

"Very well, pull them out, come and relieve me," he replied.

Then they pulled Vucub-Caquix's teeth; but in their place they put only grains of white corn, and these grains of corn shone in his mouth. Instantly his features sagged and he no longer looked like a lord. They removed the rest of his teeth which shone like pearls in his mouth. And finally they cured Vucub-Caquix's eyes, piercing the pupils of his eyes, and they took all his riches.

But he felt nothing any more. He only watched, because at the advice of Hunahpú and Xbalanqué, they took from him all of the things of which he had been so proud.

Then Vucub-Caquix died. Hun-Hunahpú recovered his arm. Chimalmat, the wife of Vucub-Caquix, also perished.

In this way Vucub-Caquix lost his riches. The healer took all the emeralds and precious stones which had been his pride here on earth.

The old woman and the old man who did this were miraculous beings; and having recovered the arm of Hun-Hunahpú, they put it in place, and it was all right again.

It was only to bring about the death of Vucub-Caquix that they did this, because it seemed wicked to them that he should become so arrogant.

And then the two youths went on, having in this way carried out the order of the Heart of Heaven.

I. Chapter 7

Here now are the deeds of Zipacná the elder son of Vucub-Caquix.

"I am the creator of the mountains," said Zipacná.

Zipacná was bathing at the edge of a river when four hundred youths passed dragging a log to support their house. The four hundred were walking, after having cut down a large tree to make the ridge-pole of their house.

Then Zipacná came up, and going toward the four hundred youths, said to them: "What are you doing, boys?"

"It is only this log," they answered, "which we cannot lift and carry on our shoulders."

"I will carry it. Where does it have to go? What do you want it for?"

"For a ridge-pole for our house."

"All right," he answered, and lifting it up, he put it on his shoulders and carried it to the entrance of the house of the four hundred boys.

"Now stay with us, boy," they said. "Have you a mother or father?"

"I have neither," he answered.

"Then we shall hire you tomorrow to prepare another log to support our house."

"Good," he answered.

The four hundred boys talked together then. and said:

"How shall we kill this boy? Because it is not good what he has done lifting the log alone. Let us make a big hole and push him so that he will fall into it. 'Go down and take out the earth and carry it from the pit,' we shall tell him. and when he stoops down, to go down into the pit, we shall let the large log fall on him and he will die there in the pit."

So said the four hundred boys, and then they dug a large, very deep pit. Then they called Zipacná.

"We like you very much. Go, go and dig dirt, for we cannot reach [the bottom of the pit]," they said.

"All right," he answered. He went at once into the pit. And calling to him as he was digging the dirt, they said: "Have you gone down very deep yet?"

"Yes," he answered beginning to dig the pit. But the pit which he was making was to save him from danger. He knew that they wanted to kill him; so when he dug the pit, he made a second hole at one side in order to free himself.

"How far [have you gone]?" the four hundred boys called down.

"I am still digging; I will call up to you when I have finished the digging," said Zipacná from the bottom of the pit. But he was not digging his grave; instead he was opening another pit in order to save himself.

At last Zipacná called to them. But when he called, he was already safe in the second pit.

"Come and take out and carry away the dirt which I have dug and which is in the bottom of the pit," he said, "because in truth I have made it very deep. Do you not hear my call? Nevertheless, your calls, your words repeat themselves like an echo once, twice, and so I hear well where you are." So Zipacná called from the pit where he was hidden, shouting from the depths.

Then the boys hurled the great log violently, and it fell quickly with a thud to the bottom of the pit.

"Let no one speak! Let us wait until we hear his dying screams," they said to each other, whispering, and each one covered his face as the log fell noisily. He [Zipacná] spoke then, crying out, but he called only once when the log fell to the bottom.

"How well we have succeeded in this! Now he is dead," said the boys. "if, unfortunately, he had continued what he had begun to do, we would have been lost, because he already had interfered with us, the four hundred boys."

And filled with joy they said: "Now we must make our *chicha* within the next three days. When the three days are passed, we shall drink to the construction of our new house, we, the, four hundred boys." Then they said: "Tomorrow we shall look, and day after tomorrow, we shall also look to see if the ants do not come out of the earth when the body smells and begins to rot. Presently we shall become calm and drink our *chicha*," they said.

But from his pit Zipacná listened to everything the boys said. And later, on the second day, multitudes of ants came, going and coming and gathering under the log. Some carried Zipacná's hair in their mouths and others carried his fingernails.

When the boys saw this, they said, "That devil has now perished. Look how the ants have gathered, how they have come by hordes, some bringing his hair and others his fingernails. Look what we have done!" So they spoke to each other.

Nevertheless, Zipacná was very much alive. He had cut his hair and gnawed off his fingernails to give them to the ants.

And so the four hundred boys believed that he was dead, and on the third day they began the orgy and all of the boys got drunk. And the four hundred being drunk knew nothing any more. And then Zipacná let the house fall on their heads and killed all of them.

Not even one or two among the four hundred were saved; they were killed by Zipacná, son of Vucub-Caquix.

In this way the four hundred boys died, and it is said that they became the group of stars which because of them are called Motz, but it may not be true.

I. Chapter 8

Now we shall tell how Zipacná was defeated by the two boys, Hunahpú and Xbalanqué.

Now follows the defeat and death of Zipacná, when he was overcome by the two boys, Hunahpú and Xbalanqué.

The boys' hearts were full of rancor because the four hundred young men had been killed by Zipacná. And he only hunted fish and crabs at the bank of the river, which were his daily food. During the day he went about looking for food, and at night he carried mountains on his back.

With a leaf of the *ec* plant which is found in the forest, Hunahpú and Xbalanqué quickly made a figure to look like a very large crab.

With this they made the stomach of the crab; the claws, they made of *pahac*, and for the shell, which covers the back, they used a stone. Then they put the crab at the bottom of a cave at the foot of a large mountain called *Meaguán*, where he was overcome.

Then the boys went to find Zipacná on the river bank.

"Where are you going, young man?" they asked him.

"I am not going anywhere," Zipacná answered, "only looking for food, boys."

"And what is your food?"

"Fish and crabs, but there are none here and I have not found any; I have not eaten since day before yesterday, and I am dying of hunger," said Zipacná to Hunahpú and Xbalanqué.

"Over there in the bottom of the ravine there is a crab, a really large crab, and it would be well if you would eat it! Only it bit us when we tried to catch it and so we were afraid. We wouldn't try to catch it for anything," said Hunahpú and Xbalanqué.

"Have pity on me! Come and show it to me, boys," begged Zipacná.

"We do not want to. You go alone, you will not get lost. Follow the bank of the river and you will come out at the foot of a large hill; there it is making a noise at the bottom of the ravine. You have only to go there," said Hunahpú and Xbalanqué.

"Oh, unfortunate me! Won't you accompany me, boys? Come and show it to me. There are many birds which you can shoot with your blowguns and I know where to find them," said Zipacná.

His meekness convinced the boys. And they asked him: But, can you really catch him? Because it is only for you that we are returning; we are not going to try to get it again because it bit us when we were crawling into the cave. After that we were afraid to crawl in, but we almost caught it. So, then, it is best that you crawl in," they said.

"Very well," said Zipacná, and then they went with him. They arrived at the bottom of the ravine and there, stretched on his back, was the crab, showing his red shell. And there also in the bottom of the ravine was the boys' hoax.

"Good! Good!" said Zipacná happily. "I should like to have it in my mouth already!" And he was really dying of hunger. He wanted to try to crawl in, he wanted to enter, but the crab was climbing. He came out at once and the boys asked, "Did you not get it?"

"No," he answered, "because he was going up and I almost caught him. But perhaps it would be good if I go in from above," he added. And then he entered again from above, but as he was almost inside, with only the soles of his feet showing, the great hill slid and fell slowly down on his chest.

Zipacná never returned and he was changed into stone.

In this way Zipacná was defeated by the two boys, Hunahpú and Xbalanqué; he was the elder son of Vucub-Caquix, and he, according to the ancient legend, was the one who made the mountains.

At the foot of the hill called Meaguán he was vanquished. Only by a miracle was he vanquished, the second of the arrogant ones. One was left, whose history we shall tell now.

I. Chapter 9

The third of the arrogant ones was the second son of Vucub-Caquix who was called Cabracán.

"I demolish the mountains," he said.

But Hunahpú and Xbalanqué also defeated Cabracán. Huracán, Chipi-Caculhá, and Raxa-Caculhá talked and said to Hunahpú and Xbalanqué:

"Let the second son of Vucub-Caquix also be defeated. This is our will, for it is not well what they do on earth, exalting their glory, their grandeur, and their power, and it must not be so. Lure him to where the sun rises," said Huracán to the two youths.

"Very well, honored sir," they answered, "because what we see is not right. Do you not exist, you who are the peace, you, Heart of Heaven?" said the boys as they listened to the command of Huracán.

Meanwhile, Cabracán was busy shaking the mountains. At the gentlest tap of his feet on the earth, the large and small mountains opened. Thus the boys found him and asked Cabracán:

"Where are you going, young man?"

"Nowhere," he answered, "here I am moving the mountains, and I am leveling them to the ground forever," he answered.

Then Cabracán asked Hunahpú and Xbalanqué, "What did you come to do here? I do not recognize you. What are your names?" said Cabracán.

"We have no names," they answered, "we are nothing more than shooters of blowguns and hunters with bird-traps on the mountains. We are poor and we have nothing, young man. We only walk over the large and small mountains, young man, and we have just seen a large mountain, over there where you see the pink sky. It really rises up very high and overlooks the tops of all the hills. So it is that we have not been able to catch even one or two of the birds on it, boy. But, is it true that you can level all the mountains?" Hunahpú and Xbalanqué asked Cabracán.

"Have you really seen the mountain of which you speak? Where is it? If I see it, I shall demolish it. Where did you see it?"

"Over there it is, where the sun rises," said Hunahpú and Xbalanqué.

"Very well, show me the road," he said to the two boys.

"Oh no!" they answered. "We must take you between us. One shall go at your left and the other at your right, because we have our blowguns, and if there should be birds we can shoot them." And so they set out happily, trying out their blowguns. But when they shot with them, they did not use the clay pellets in the tube of the blowgun; instead they felled the birds only with the puff of air when they shot them, which surprised Cabracán very much.

Then the boys built a fire and put the birds on it to roast, but they rubbed one of the birds with chalk, covering it with a white earth soil.

"We shall give him this," they said, "to whet his appetite with the odor which it gives off. This bird of ours shall be his ruin, as we cover this bird with earth so we shall bring him down to the earth and bury him in the earth.

"Great shall be the wisdom of a created being, of a being fashioned, when it dawns, when there is light," said the boys.

"As it is natural for man to wish to eat, so Cabracán desires food," said Hunahpú and Xbalanqué to each other.

Meanwhile the birds were roasting, they were beginning to turn golden brown, and the fat and juice which dripped from them made an appetizing odor. Cabracán wanted very much to eat them; they made his mouth water, he yawned, and the saliva and spittle drooled because of the smell which the birds gave off.

Then he asked them: "What is that you eat? The smell is really savoury. Give me a little piece," he said to them.

Then they gave a bird to Cabracán, the one which would be his ruin; and when he had finished eating it, they set out toward the east where the great mountain was. But already Cabracán's legs and hands were weakening and he had no strength because of the earth with which the bird he had eaten was rubbed, and he could do nothing to the mountains. Neither was it possible to level them.

Then the boys tied him, they tied his hands behind him and also tied his neck and his feet together. Then they threw him to the ground and there they buried him.

In this way Cabracán was overcome by Hunahpú and Xbalanqué. It would be impossible to tell of all the things they did here on earth.

Now we shall tell of the birth of Hunahpú and Xbalanqué, having first told of the destruction of Vucub-Caquix and that of Zipacná and of Cabracán, here on earth.

PART II: Chapter 1

Now we shall also tell the name of the father of Hunahpú and Xbalanqué. We shall not tell his origin and we shall not tell the history of the birth of Hunahpú and Xbalanqué. We shall tell only half of it, only a part of the history of his father.

Here is the story. Here are the names of Hun-Hunahpú [and Vucub-Hunahpú], as they are called. Their parents were Xpiyacoc and Xmucané. During the night Hun-Hunahpú and Vucub-Hunahpú were born of Xpiyacoc and Xmucané.

Well now, Hun-Hunahpú had begotten two sons; the first was called Hunbatz and the second Hunchouén.

The mother of the two sons was called Xbaquiyalo. Thus was the wife of Hun-Hunahpú called. As for the other son, Vucub-Hunahpú, he had no wife; he was single.

By nature these two sons were very wise, and great was their wisdom; on earth they were soothsayers of good disposition and good habits. All the arts were taught to Hunbatz and Hunchouén, the sons of Hun-Hunahpú. They were flautists, singers, shooters with blowguns, painters, sculptors, jewelers, silversmiths; these were Hunbatz and Hunchouén.

Well, Hun-Hunahpú and Vucub-Hunahpú did nothing but play dice and ball A day long; and when the four got together to play ball, one pair played against the other pair.

And Voc, the messenger of Huracán, of Chipi-Caculhá, of Raxa-Caculhá came there to watch them, but Voc did not stay far from the earth nor far from Xibalba, [7](#) and in an instant he went up to heaven to the side of Huracán.

They were still here on earth when the mother of Hunbatz and Hunchouén died.

And having gone to play ball on the road to Xibalba, they were overheard by Hun-Camé and Vucub-Camé, the lords of Xibalba.

"What are they doing on earth? Who are they who are making the earth shake, and making so much noise? Go and call them! Let them come here to play ball. Here we will overpower them! We are no longer respected by them. They no longer have consideration, or fear of our rank, and they even fight above our heads," said all the lords of Xibalba.

All of them held a council. Those called Hun-Camé and Vucub-Camé were the supreme judges. All the lords had been assigned their duties. Each one was given his own authority by Hun-Camé and Vucub-Camé.

They were, then, Xiquiripat and Cuchumaquic lords of these names. They were the two who caused the shedding of blood of the men.

Others were called Ahalpuh and Ahalganá, also lords. And their work was to make men swell and make pus gush forth from their legs and stain their faces yellow, what is called Chuganal. Such was the work of Ahalpuh and Ahalganá.

Others were Lord Chamiabac and Lord Chamiaholom, constables of Xibalba whose staffs were of bone. Their work was to make men waste away until they were nothing but skin and bone and they died, and they carried them With their stomach and bones stretched out. This was the work of Chamiabac and Chamiaholom, as they were called.

Others were called Lord Ahalmez and Lord Ahaltocob; their work was to bring disaster upon men, as they were going home, or in front of it, and they would be found wounded, stretched out, face up, on the ground, dead. This was the work of Ahalmez and Ahaltocob, as they were called.

Immediately after them were other lords named Xic and Patán whose work it was to cause men to die on the road, which is called sudden death, making blood to rush to their mouths until they died vomiting blood. The work of each one of these lords was to seize upon them, squeeze their throats and chests, so that the men died on the road, making the blood rush to their throats when they were walking. This was the work of Xic and Patán.

And having gathered in council, they discussed how to torment and wound Hun-Hunahpú and Vucub-Hunahpú. What the Lords of Xibalba coveted were the playing implements of Hun-Hunahpú and Vucub-Hunahpú-their leather pads and rings and gloves and crown and masks which were the playing gear of Hun-Hunahpú and Vucub-Hunahpú.

Now we shall tell of their journey to Xibalba and how they left behind them the sons of Hun-Hunahpú, Hunbatz, and [Hun] Chouén, whose mother had died.

Then we shall tell how Hunbatz and Hunchouén were overcome by Hunahpú and Xbalanqué.

II. Chapter 2

THE messengers of Hun-Camé and Vucub-Camé arrived immediately.

"Go, Ahpop Achih!" they were told. "Go and call Hun-Hunahpú and Vucub-Hunahpú. Say to them, 'Come with us. The lords say that you must come.' They must come here to play ball with us so that they shall make us happy, for really they amaze us. So, then, they must come," said the lords. "And have them bring their playing gear, their rings, their gloves, and have them bring their rubber balls, too," said the lords. "Tell them to come quickly," they told the messengers.

And these messengers were owls: Chabi-Tucur, Huracán-Tucur, Caquix-Tucur and Holom-Tucur. These were the names of the messengers of Xibalba.

Chabi-Tucur was swift as an arrow; Huracán-Tucur had only one leg; Caquix-Tucur had a red back, and Holom-Tucur had only a head, no legs, but he had wings.

The four messengers had the rank of Ahpop-Achih. Leaving Xibalba, they arrived quickly, bringing their message to the court where Hun-Hunahpú and Vucub-Hunahpú were playing ball, at the ball-court which was called *Nim-Xob-Carchah*. The owl messengers went directly to the ball-court and delivered their message exactly as it was given to them by Hun-Camé, Vucub-Camé, Ahalpuh, Ahalganá, Chamiabac, Chamiaholom, Xiquiripat, Cuchumaquic, Ahalmez, Ahaltocob, Xic, and Patán, as the lords were called who sent the message by the owls.

"Did the Lords Hun-Camé and Vucub-Camé really say that we must go with you?"

"They certainly said so, and 'Let them bring all their playing gear,' the lords said."

"Very well," said the youths. "Wait for us, we are only going to say good-bye to our mother."

And having gone straight home, they said to their mother, for their father was dead: "We are going, our mother, but our going is only for a while. The messengers of the lord have come to take us. 'They must come,' they said, according to the messengers.

"We shall leave our ball here in pledge," they added. They went immediately to hang it in the space under the roof-tree. "We will return to play," they said.

And going to Hunbatz and Hunchouén they said to them: "Keep on playing the flute and singing, painting, and carving; warm our house and warm the heart of your grandmother."

When they took leave of their mother, Xmucané was moved and burst into tears. "Do not worry, we are going, but we have not died yet," said Hun-Hunahpú and Vucub-Hunahpú as they left.

Hun-Hunahpú and Vucub-Hunahpú went immediately and the messengers took them on the road. Thus they were descending the road to Xibalba, by some very steep stairs. They went down until they came to the bank of a river which flowed rapidly between the ravines called *Nuziván cul* and *Cuziván*, and crossed it. Then they crossed the river which flows among

thorny calabash trees. There were very many calabash trees, but they passed through them without hurting themselves.

Then they came to the bank of a river of blood and crossed it without drinking its waters; they only went to the river bank and so they were not overcome. They went on until they came to where four roads joined, and there at the crossroads they were overcome.

One of the four roads was red, another black, another white, and another yellow. And the black road said to them: "I am the one you must take because I am the way of the Lord." So said the road.

And from here on they were already overcome. They were taken over the road to Xibalba and when they arrived at the council room of the Lords of Xibalba, they had already lost the match.

Well, the first ones who were seated there were only figures of wood, arranged by the men of Xibalba. These they greeted first:

"How are you, Hun-Camé?" they said to the wooden man. "How are you, Vucub-Camé?" they said to the other wooden man. But they did not answer. Instantly the Lords of Xibalba burst into laughter and all the other lords began to laugh loudly, because they already took for granted the downfall and defeat of Hun-Hunahpú and Vucub-Hunahpú. And they continued to laugh.

Then Hun-Camé and Vucub-Camé spoke: "Very well," they said. "You have come. Tomorrow you shall prepare the mask, your rings, and your gloves," they said.

"Come and sit down on our bench," they said. But the bench which they offered them was of hot stone, and when they sat down they were burned. They began to squirm around on the bench, and if they had not stood up they would have burned their seats.

The Lords of Xibalba burst out laughing again; they were dying of laughter; they writhed from pain in their stomach, in their blood, and in their bones, caused by their laughter, all the Lords of Xibalba laughed.

"Go now to that house," they said. "There you will get your sticks of fat pine and your cigar and there you shall sleep."

Immediately they arrived at the House of Gloom. There was only darkness within the house. Meanwhile the Lords of Xibalba discussed what they should do.

"Let us sacrifice them tomorrow, let them die quickly, quickly, so that we can have their playing gear to use in play," said the Lords of Xibalba to each other.

Well, their fat-pine sticks were round and were called *zaquitoc*, which is the pine of Xibalba. Their fat-pine sticks were pointed and filed and were as bright as bone; the pine of Xibalba was very hard.

Hun-Hunahpú and Vucub-Hunahpú entered the House of Gloom. There they were given their fat-pine sticks, a single lighted stick which Hun-Camé and Vucub-Camé sent them, together

with a lighted cigar for each of them which the lords had sent. They went to give them to Hun-Hunahpú and Vucub-Hunahpú.

They found them crouching in the darkness when the porters arrived with the fat-pine sticks and the cigars. As they entered, the pine sticks lighted the place brightly.

"Each of you light your pine sticks and your cigars; come and bring them back at dawn, you must not burn them up, but you must return them whole; this is what the lords told us to say." So they said. And so they were defeated. They burned up the pine sticks, and they also finished the cigars which had been given to them.

There were many punishments in Xibalba; the punishments were of many kinds.

The first was the House of Gloom, Quequma-ha, in which there was only darkness.

The second was Xuxulim-ha, the house where everybody shivered, in which it was very cold. A cold, unbearable wind blew within.

The third was the House of Jaguars, Balami-ha, it was called, in which there were nothing but jaguars which stalked about, jumped around, roared, and made fun. The jaguars were shut up in the house.

Zotzi-há, the House of Bats, the fourth place of punishment was called. Within this house there were nothing but bats which squeaked and cried and flew around and around. The bats were shut in and could not get out.

The fifth was called Chayim-há, the House of Knives, in which there were only sharp, pointed knives, silent or grating against each other in the house.

There were many places of torture in Xibalba, but Hun-Hunahpú and Vucub-Hunahpú did not enter them. We only mention the names of these houses of punishment.

When Hun-Hunahpú and Vucub-Hunahpú came before Hun-Camé and Vucub-Camé, they said: "Where are my cigars? Where are my sticks of fat pine which I gave you last night?"

"They are all gone, Sir."

"Well. Today shall be the end of your days. Now you shall die. You shall be destroyed, we will break you into pieces and here your faces will stay hidden. You shall be sacrificed," said Hun-Camé and Vucub-Camé.

They sacrificed them immediately and buried them in the Pucbal-Chah, as it was called. Before burying them, they cut off the head of Hun-Hunahpú and buried the older brother together with the younger brother.

"Take the head and put it in that tree which is Planted on the road," said Hun-Camé and Vucub-Camé. And having put the head in the tree, instantly the tree, which had never borne fruit before the head of Hun-Hunahpú was placed among its branches, was covered with fruit. And this calabash tree, it is said, is the one which we now call the head of Hun-Hunahpú.

Hun-Camé and Vucub-Camé looked in amazement at the fruit on the tree. The round fruit was everywhere; but they did not recognize the head of Hun-Hunahpú; it was exactly like the other fruit of the calabash tree. So it seemed to all of the people of Xibalba when they came to look at it.

According to their judgment, the tree was miraculous, because of what had instantly occurred when they put Hun-Hunahpú's head among its branches. And the Lords of Xibalba said:

"Let no one come to pick this fruit. Let no one come and sit under this tree!" they said, and so the Lords of Xibalba resolved to keep everybody away.

The head of Hun-Hunahpú did not appear again because it had become one and the same as the fruit of the gourd tree. Nevertheless, a girl heard the wonderful story. Now we shall tell about her arrival.

II. Chapter 3

THIS is the story of a maiden, the daughter of a lord named Cuchumaquic.

A maiden, then, daughter of a lord heard this story. The name of the father was Cuchumaquic and that of the maiden was Xquic. When she heard the story of the fruit of the tree which her father told, she was amazed to hear it.

"Why can I not go to see this tree which they tell about?" the girl exclaimed. "Surely the fruit of which I hear tell must be very good." Finally she went alone and arrived at the foot of the tree which was planted in Pucbal-Chah.

"Ah!" she exclaimed. "What fruit is this which this tree bears? Is it not wonderful to see how it is covered with fruit? Must I die, shall I be lost, if I pick one of this fruit?" said the maiden.

Then the skull which was among the branches of the tree spoke up and said: "What is it you wish? Those round objects which cover the branches of the trees are nothing but skulls." So spoke the head of Hun-Hunahpú turning to the maiden. "Do you, perchance, want them?" it added.

"Yes, I want them," the maiden answered.

"Very well," said the skull. "Stretch your right hand up here."

"Very well," said the maiden, and with her right hand reached toward the skull.

In that instant the skull let a few drops of spittle fall directly into the maiden's palm. She looked quickly and intently at the palm of her hand, but the spittle of the skull was not there.

"In my saliva and spittle I have given you my descendants," said the voice in the tree. "Now my head has nothing on it any more, it is nothing but a skull without flesh. So are the heads of the great princes, the flesh is all which gives them a handsome appearance. And when they die, men are frightened by their bones. So, too, is the nature of the sons, which are like saliva and spittle, they may be sons of a lord, of a wise man, or of an orator. They do not lose their

substance when they go, but they bequeath it; the image of the lord, of the wise man, or of the orator does not disappear, nor is it lost, but he leaves it to the daughters and to the sons which he begets. I have done the same with you. Go up, then, to the surface of the earth, that you may not die. Believe in my words that it will be so," said the head of Hun-Hunahpú and of Vucub-Hunahpú.

And all that they did together was by order of Huracán, Chipi-Caculhá, and Raxa-Caculhá.

After all of the above talking, the maiden returned directly to her home, having immediately conceived the sons in her belly by virtue of the spittle only. And thus Hunahpú and Xbalanqué were begotten.

And so the girl returned home, and after six months had passed, her father, who was called Cuchumaquic, noticed her condition. At once the maiden's secret was discovered by her father when he observed that she was pregnant.

Then the lords, Hun-Camé and Vucub-Camé, held council with Cuchumaquic.

"My daughter is pregnant, Sirs; she has been disgraced," exclaimed Cuchumaquic when he appeared before the lords.

"Very well," they said. "Command her to tell the truth, and if she refuses to speak, punish her; let her be taken far from here and sacrifice her."

"Very well, Honorable Lords," he answered. Then he questioned his daughter: "Whose are the children that you carry, my daughter?" And she answered, "I have no child, my father, for I have not yet known a youth."

"Very well," he replied. "You are really a whore. Take her and sacrifice her, Ahpop Achih; bring me her heart in a gourd and return this very day before the lords," he said to the two owls.

The four messengers took the gourd and set out carrying the young girl in their arms and also taking the knife of flint with which to sacrifice her.

And she said to them: "It cannot be that you will kill me, oh, messengers, because what I bear in my belly is no disgrace, but was begotten when I went to marvel at the head of Hun-Hunahpú which was in Pucbal-Chah. So, then, you must not sacrifice me, oh, messengers!" said the young girl, turning to them.

"And what shall we put in place of your heart? Your father told us: 'Bring the heart, return before the lords, do your duty, all working together, bring it in the gourd quickly, and put the heart in the bottom of the gourd.' Perchance, did he not speak to us so? What shall we put in the gourd? We wish too, that you should not die," said the messengers.

"Very well, but my heart does not belong to them. Neither is your home here, nor must you let them force you to kill men. Later, in truth, the real criminals will be at your mercy and I will overcome Hun-Camé and Vucub-Camé. So, then, the blood and only the blood shall be theirs and shall be given to them. Neither shall my heart be burned before them. Gather the product of this tree," said the maiden.

The red sap gushing forth from the tree fell in the gourd and with it they made a ball which glistened and took the shape of a heart. The tree gave forth sap similar to blood, with the appearance of real blood. Then the blood, or that is to say the sap of the red tree, clotted, and formed a very bright coating inside the gourd, like clotted blood; meanwhile the tree glowed at the work of the maiden. It was called the "red tree of cochineal," but [since then] it has taken the name of Blood Tree because its sap is called Blood.

"There on earth you shall be beloved and you shall have all that belongs to you," said the maiden to the owls.

"Very well, girl. We shall go there, we go up to serve you; you, continue on your way, while we go to present the sap, instead of your heart, to the lords," said the messengers.

When they arrived in the presence of the lords, all were waiting.

"You have finished?" asked Hun-Camé.

"All is finished, my lords. Here in the bottom of the gourd is the heart."

"Very well. Let us see," exclaimed Hun-Camé. And grasping it with his fingers he raised it, the shell broke and the blood flowed bright red in color.

"Stir up the fire and put it on the coals," said Hun-Camé.

As soon as they threw it on the fire, the men of Xibalba began to sniff and drawing near to it, they found the fragrance of the heart very sweet.

And as they sat deep in thought, the owls, the maiden's servants, left, and flew like a flock of birds from the abyss toward earth and the four became her servants.

In this manner the Lords of Xibalba were defeated. All were tricked by the maiden.

II. Chapter 4

Well, then, Hunbatz and Hunchouén were with their mother when the woman called Xquic arrived.

When the woman Xquic came before the mother of Hunbatz and Hunchouén, she carried her sons in her belly and it was not long before Hunahpú and Xbalanqué, as they were called, were to be born.

When the woman came to the old lady, she said to her: "I have come, mother; I am your daughter-in-law and your daughter, mother." She said this when she entered the grandmother's house.

"Where did you come from? Where are my sons? Did they, perchance, not die in Xibalba? Do you not see these two who remain, their descendants and blood, and are called Hunbatz and Hunchouén. Go from here! Get out!" the old lady screamed at the girl.

"Nevertheless, it is true that I am your daughter-in-law; I have been for a long time. I belong to Hun-Hunahpú. They live in what I carry, Hun-Hunahpú and Vucub-Hunahpú are not dead; they will return to show themselves clearly, my mother-in-law. And you shall soon see their image in what I bring to you," she said to the old woman.

Then Hunbatz and Hunchouén became angry. They did nothing but play the flute and sing, paint, and sculpture all day long and were the consolation of the old woman.

Then the old woman said: "I do not wish you to be my daughter-in-law, because what you bear in your womb is fruit of your disgrace. Furthermore, you are an impostor; my sons of whom you speak are already dead."

Presently the grandmother added: "This, that I tell you is the truth; but well, it is all right, you are my daughter-in-law, according to what I have heard. Go, then, bring the food for those who must be fed. Go and gather a large net [full of corn] and return at once, since you are my daughter-in-law, according to what I hear," she said to the girl.

"Very well," the girl replied, and she went at once to the cornfield which Hunbatz and Hunchouén had planted. They had opened the road and the girl took it and so came to the cornfield; but she found only one stalk of corn; there were not two or three, and when she saw that there was only one stalk with an ear on it, the girl became very anxious.

"Ah, sinner that I am, unfortunate me! Where must I go to get a net full of corn as she told me to do?" she exclaimed. Immediately she began to beg Chahal for the food which she had to get and must take back.

"Xtoh, Xcanil, Xcacau, you who cook the corn; and you, Chahal, guardian of the food of Hunbatz and Hunchouén!" said the girl. And then she seized the beards, the red silk of the ears of corn and pulled them off without picking the ear. Then she arranged the silk in the net like ears of corn and the large net was completely filled.

The girl returned immediately; the animals of the field went along carrying the net, and when they arrived, they went to put the load in a corner of the house, as though she might have carried it. The old woman came and when she saw the corn in the large net she exclaimed:

"Where have you brought all this corn from? Did you, perchance, take all the corn in our field and bring it all in? I shall go at once to see," said the old woman, and she set out on the road to the cornfield. But the one stalk of corn was still standing there, and she saw too where the net had been at the foot of the stalk. The old woman quickly returned to her house and said to the girl:

"This is proof enough that you are really my daughter-in-law. I shall now see your little ones, those whom you carry and who also are to be soothsayers," she said to the girl.

II. Chapter 5

Now we shall tell of the birth of Hunahpú and Xbalanqué. Here, then, we shall tell about their birth.

When the day of their birth arrived, the girl named Xquic gave birth; but the grandmother did not see them when they were born. Instantly the two boys called Hunahpú and Xbalanqué were born. There in the wood they were born.

Then they came to the house, but they could not sleep.

"Go throw them out!" said the old woman, "because truly they cry very much." Then they went and put them on an ant-hill. There they slept peacefully. Then they took them from the ant-hill and laid them on thistles.

Now, what Hunbatz and Hunchouén wished was that they [Hunahpú and Xbalanqué] would die there on the ant-hill, or on the thistles. They wished this because of the hatred and envy Hunbatz and Hunchouén felt for them.

At first they refused to receive their younger brothers in the house; they would not recognize them and so they were brought up in the fields.

Hunbatz and Hunchouén were great musicians and singers; they had grown up in the midst of trials and want and they had had much trouble, but they became very wise. They were flautists, singers, painters, and carvers; all of this they knew how to do.

They had heard about their birth and knew also that they were the successors of their parents, those who went to Xibalba and died there. Hunbatz and Hunchouén were diviners, and in their hearts they knew everything concerning the birth of their two younger brothers. Nevertheless, because they were envious, they did not show their wisdom, and their hearts were filled with bad will for them, although Hunahpú and Xbalanqué had not offended them in any way.

These two [last] did nothing all day long but shoot their blowguns; they were not loved by their grandmother, nor by Hunbatz, nor by Hunchouén; they were given nothing to eat; only when the meal was ended and Hunbatz and Hunchouén had already eaten, then the younger brothers came to eat. But they did not become angry, nor did they become vexed, but suffered silently, because they knew their rank, and they understood everything clearly. They brought their birds when they came, and Hunbatz and Hunchouén ate them without giving anything to either of the two, Hunahpú and Xbalanqué.

The only thing that Hunbatz and Hunchouén did was to play the flute and sing.

And once when Hunahpú and Xbalanqué came without bringing any bird at all, they went into the house and their grandmother became furious.

"Why did you bring no birds?" she said to Hunahpú and Xbalanqué.

And they answered: "What happened, grandmother, is that our birds were caught in the tree and we could not climb up to get them, dear grandmother. If our elder brothers so wish, let them come with us to bring the birds down," they said.

"Very well," the older brothers answered, "we shall go with you at dawn."

The two younger brothers then discussed the way to overcome Hunbatz and Hunchouén. "We shall only change their nature, their appearance; and so let our word be fulfilled, for all the suffering that they have caused us. They wanted us to die, that we might be lost, we, their younger brothers. In their hearts they really believe that we have come to be their servants. For these reasons we shall overcome them and teach them a lesson." Thus they spoke.

Then they went toward the foot of the tree called Canté. They were accompanied by their two elder brothers and they were shooting their blowguns. It was not possible to count the birds which sang in the tree, and their elder brothers marveled to see so many birds. There were birds, but not one fell at the foot of the tree.

"Our birds do not fall to the ground. Go and fetch them down," they said to their elder brothers.

"Very well," the latter answered. And then they climbed the tree; but the tree became larger and the trunk swelled. Then Hunbatz and Hunchouén wanted to come down but they could not come down from the top of the tree.

Then they called from the treetop. "What has happened to us, our brothers? Unfortunate we. This tree frightens us only to look at it. Oh, our brothers!" they called from the treetop. And Hunahpú and Xbalanqué answered: "Loosen your breechclouts; tie them below your stomach, leaving the long ends hanging and pull these from behind, and in this way you can walk easily." Thus said the younger brothers.

"Very well," they answered, pulling the ends of their belts back, but instantly these were changed into tails and they took on the appearance of monkeys. Then they hopped over the branches of the trees, among the great woods and little woods, and they buried themselves in the forest, making faces and swinging in the branches of the trees.

In this way Hunbatz and Hunchouén were overcome by Hunahpú and Xbalanqué; and only because of their magic could they have done it.

Then they returned to their home, and when they arrived they spoke to their grandmother and their mother, and said to them: "What could it be, grandmother, that has happened to our elder brothers, that suddenly their faces turned into the faces of animals?" So they said.

"If you have done any harm to your elder brothers, you have hurt me and have filled me with sadness. Do not do such a thing to your brothers, oh, my children," said the old woman to Hunahpú and Xbalanqué.

And they replied to their grandmother:

"Do not grieve, our grandmother. You shall see our brother's faces again; they shall return, but it will be a difficult trial for you, grandmother. Be careful that you do not laugh at them. And now, let us cast our lot," they said.

Immediately they began to play their flutes, playing the song of Hunahpú-Qoy. Then they sang, playing the flute and drum, picking up their flutes and their drum. Afterward they sat down close to their grandmother and continued playing and calling back [their brothers] with music and song, intoning the song, called Hunahpú-Qoy.

At last, Hunbatz and Hunchouén came and began to dance; but when the old woman saw their ugly faces, she began to laugh, unable to control her laughter, and they went away at once and she did not see their faces again.

"Now you see, grandmother! They have gone to the forest. What have you done, grandmother of ours? We may make this trial but four times and only three are left. Let us call them [back again] with flute and with song, but you, try to control your laughter. Let the trial begin!" said Hunahpú and Xbalanqué.

Immediately they began again to play. Hunbatz and Hunchouén returned dancing, and came as far as the center of the court of the house grimacing and provoking their grandmother to laughter, until finally she broke into loud laughter. They were really very amusing with their monkey faces, their broad bottoms, their narrow tails, and the hole of their stomach. all of which made the old woman laugh.

Again the [elder brothers] went back to the woods. And Hunahpú and Xbalanqué said: "And now what shall we do, grandmother? We shall try once again, this third time."

They played the flute again, and the monkeys returned dancing. The grandmother contained her laughter. Then they went up over the kitchen; their eyes gave off a red light; they drew away and scrubbed their noses and frightened each other with the faces they made.

And as the grandmother saw all of this, she burst into violent laughter; and they did not see the faces [of the elder brothers] again because of the old woman's laughter.

"Only once more shall we call them, grandmother, so that they shall come for the fourth time," said the boys. They began again, then, to play the flute, but [their brothers] did not return the fourth time, instead they fled into the forest as quickly as they could.

The boys said to their grandmother: "We have done everything possible, dear grandmother; they came once, then we tried to call them again. But do not grieve, here we are, your grandchildren; you must look to us, oh, our mother! Oh, our grandmother! to remind you of our elder brothers, those who were called and have the names of Hunbatz and Hunchouén," said Hunahpú and Xbalanqué.

They were invoked by the musicians and singers, and by the old people. The painters and craftsmen also invoked them in days gone by. But they were changed into animals and became monkeys because they became arrogant and abused their brothers.

In this way they were disgraced; this was their loss, in this way Hunbatz and Hunchouén were overcome and became animals. They had always lived in their home; they were musicians and

singers and also did great things when they lived with their grandmother and with their mother.

II. Chapter 6

Then they [Hunahpú] and [Xbalanqué] began to work, in order to be well thought of by their grandmother and their mother. The first thing they made was the cornfield. "We are going to plant the cornfield, grandmother and mother," they said. "Do not grieve; here we are, your grandchildren, we who shall take the place of our brothers," said Hunahpú and Xbalanqué.

At once they took their axes, their picks, and their wooden hoes and went, each carrying his blowgun on his shoulder. As they left the house they asked their grandmother to bring them their midday meal.

"At midday, come and bring our food, grandmother," they said.

"Very well, my grandsons," the old woman replied.

Soon they came to the field. And as they plunged the pick into the earth, it worked the earth; it did the work alone.

In the same way they put the ax in the trunks of the trees and in the branches, and instantly they fell and all the trees and vines were lying on the ground. The trees fell quickly, with only one stroke of the ax.

The pick also dug a great deal. One could not count the thistles and brambles which had been felled with one blow of the pick. Neither was it possible to tell what it had dug and broken up, in all the large and small woods.

And having taught an animal, called Xmucur, they had it climb to the top of a large tree and Hunahpú and Xbalanqué said to it: "Watch for our grandmother to come with our food, and as soon as she comes, begin at once to sing, and we shall seize the pick and the ax."

"Very well," Xmucur answered.

And they began to shoot with their blowguns; certainly they did none of the work of clearing and cultivating. A little later, the dove sang, and they ran quickly, grabbing the pick and ax. And one of them covered his head and also deliberately covered his hands With earth and in the same way smeared his face to look like a real laborer, and the other purposely threw splinters of wood over his head as though he really had been cutting the trees.

Thus their grandmother saw them. They ate at once, but they had not really done the work of tilling the soil, and without deserving it they were given their midday meal. After a while, they went home.

"We are really tired, grandmother," they said upon arriving, stretching their legs and arms before her, but without reason.

They returned the following day, and upon arriving at the field, they found that all the trees and vines were standing again and that the brambles and thistles had become entangled again.

"Who has played this trick on us;" they said. "No doubt all the small and large animals did it, the puma, the jaguar, the deer, the rabbit, the mountain-cat, the coyote, the wild boar, the coati, the small birds, the large birds; they, it was, who did it; in a single night, they did it."

They began again to prepare the field and to prepare the soil and cut the trees. They talked over what they would have to do with the trees which they had cut, and the weeds which they had pulled up.

"Now we shall watch over our cornfield; perhaps we can surprise those who come to do all of this damage," they said, talking it over together. And later they returned home.

"What do you think of it, grandmother? They have made fun of us. Our field, which we had worked, has been turned into a field of stubble and a thick woods. Thus we found it, when we got there, a little while ago, grandmother," they said to her and to their mother. "But we shall return there and watch over it, because it is not right that they do such things to us," they said.

Then they dressed and returned at once to their field of cut trees, and there they hid themselves, stealthily, in the darkness.

Then all the animals gathered again; one of each kind came with the other small and large animals. It was just midnight when they came, all talking as they came, saying in their own language: "Rise up, trees! Rise up, vines!"

So they spoke when they came and gathered under the trees, under the vines, and they came closer until they appeared before the eyes [of Hunahpú and Xbalanqué].

The puma and the jaguar were the first, and [Hunahpú and Xbalanqué] wanted to seize them, but [the animals] did not let them. Then the deer and the rabbit came close. and the only parts of them which they could seize were their tails, only these, they pulled out. The tail of the deer remained in their hands, and for this reason the deer and the rabbit have short tails.

Neither the mountain-cat, the coyote, the wild boar, nor the coati fell into their hands. All the animals passed before Hunahpú and Xbalanqué, who were furious because they could not catch them.

But, finally, another animal came hopping along, and this one which was the rat, [which] they seized instantly, and wrapped him in a cloth. Then when they had caught him, they squeezed his head and tried to choke him, and they burned his tail in the fire, and for that reason the rat's tail has no hair. So, too, the boys, Hunahpú and Xbalanqué, tried to poke at his eyes.

The rat said: "I must not die at your hands. And neither is it your business to plant the cornfield."

"What are you telling us now?" the boys asked the rat.

"Loosen me a little, for I have something which I wish to tell you, and I shall tell you immediately, but first give me something to eat," said the rat.

"We will give you food afterward, but first speak," they answered.

"Very well. Do you know, then, that the property of your parents Hun-Hunahpú and Vucub-Hunahpú, as they were called, those who died in Xibalba, or rather the gear with which they played ball, has remained and is hanging from the roof of the house: the ring, the gloves, and the ball? Nevertheless, your grandmother does not want to show them to you for it was on account of these things that your parents died."

"Are you sure of that?" said the boys to the rat. And they were very happy when they heard about the rubber ball. And as the rat had now talked, they showed the rat what his food would be.

"This shall be your food: corn, chili-seeds, beans, pataxte, cacao; all this belongs to you, and should there be anything stored away or forgotten, it shall be yours also. Eat it," Hunahpú and Xbalanqué said to the rat.

"Wonderful, boys," he said; "but what shall I tell your grandmother if she sees me?"

"Do not worry, because we are here and shall know what to say to our grandmother. Let us go! We shall go quickly to the corner of the house, go at once to where the things hang; we shall be looking at the garret of the house and paying attention to our food," they said to the rat.

And having arranged it thus, during the night after talking together, Hunahpú and Xbalanqué arrived at midday. When they arrived, they brought the rat with them, but they did not show it; one of them went directly into the house, and the other went to the corner and there let the rat climb up quickly.

Immediately they asked their grandmother for food. "Prepare our food, we wish a chili-sauce, grandmother," they said. And at once the food was prepared for them and a plate of broth was put before them.

But this was only to deceive their grandmother and their mother. And having dried up the water which was in the water jar, they said, "We are really dying of thirst; go and bring us a drink," they said to their grandmother.

"Good," she said and went. Then they began to eat, but they were not really hungry; it was only a trick. They saw then by means of their plate of chile how the rat went rapidly toward the ball which was suspended from the roof of the house. On seeing this in their chile-sauce, they sent to the river a certain xan, an animal called xan which is like a mosquito, to puncture the side of their grandmother's water jar, and although she tried to stop the water which ran out, she could not close the hole made in the jar.

"What is the matter with our grandmother? Our mouths are dry, with thirst, we are dying of thirst," they said to their mother and they sent her out. Immediately the rat went to cut [the cord which held] the ball and it fell from the garret of the house together with the ring and the gloves and the leather pads. The boys seized them and ran quickly to hide them on the road which led to the ball-court.

After this they went to the river to join their grandmother and their mother, who were busily trying to stop the hole in the water jar. And arriving With their blowgun, they said when they came to the river: "What are you doing? We got tired [of waiting] and we came," they said.

"Look at the hole in my jar which I cannot stop, said the grandmother. Instantly they stopped it, and together they returned, the two walking before their grandmother.

And in this way the ball was found.

II. Chapter 7

The boys returned happily to the ball-court to play; they were playing alone a long time and cleared the court where their parents had played.

And the Lords of Xibalba, hearing them, said: "Who are they who play again over our heads and disturb us with the noise they make? Perchance Hun-Hunahpú and Vucub-Hunahpú did not die, those who wished to exalt themselves before us? Go at once and call them!"

So said Hun-Camé, Vucub-Camé, and all the lords. And sending the messengers to call them, they said to them: "Go and tell them when you get there: 'Let them come,' the lords have said; we wish to play ball with them here, within seven days we wish to play; tell them so when you arrive," thus said the lords. This was the command which they gave to the messengers. And they came then by the wide road which the boys had made that led directly to their house; by it the messengers arrived directly before [the boys'] grandmother. They were eating when the messengers from Xibalba arrived.

"Tell them to come, without fail, the lords commanded," said the messengers of Xibalba. And the messengers of Xibalba indicated the day: "Within seven days they will await them," they said to Xmucané.

"It is well, messengers; they will go," the old woman answered. And the messengers set out on their return.

Then the old woman's heart was filled with anxiety. "Who shall I send to call my grandchildren? Was it not in this same way that the messengers of Xibalba came before, when they came to take the [boys'] parents?" said the grandmother, entering her house, alone and grieving.

And immediately a louse fell into her lap. She seized it and put it in the palm of her hand, and the louse wriggled and began to walk.

"My child, would you like that I sent you away to call my grandchildren from the ball-court?" she said to the louse. "'Messengers have come to your grandmother,' tell them; 'come within seven days, tell them to come, said the messengers of Xibalba; thus your grandmother told me to say,'" thus she told the louse.

At once the louse swaggered off. Sitting on the road was a boy called Tamazul, or the toad.

"Where are you going?" the toad said to the louse.

"I am carrying a message in my stomach. I go to find the boys," said the louse to Tamazul.

"Very well, but I see that you do not go quickly," said the toad to the louse. "Do you not want me to swallow you? You shall see how I run, and so we shall arrive quickly."

"Very well," the louse said to the toad. Immediately the toad swallowed him. And the toad walked a long time, but without hurrying. Soon he met a large snake, called Zaquicaz.

"Where are you going, young Tamazul?" said Zaquicaz to the toad.

"I go as a messenger; I carry a message in my stomach," said the toad to the snake.

See that you do not walk quickly. Would I not arrive sooner?" the snake said to the toad.

"Come here," he said. At once Zaquicaz swallowed the toad. And from then on this was the food of snakes, who still today swallow toads.

The snake went quickly and having met Vac, which is a very large bird, the hawk, [the latter] instantly swallowed the snake. Shortly afterward it arrived at the ball-court. From that time, this has been the food of hawks, who devour snakes in the fields.

And upon arrival, the hawk perched upon the cornice of the ball-court where Hunahpú and Xbalanqué were amusing themselves playing ball. Upon arriving, the hawk began to cry:

"*Vac-có! Vac-có!*" it said cawing. ["Here is the hawk! Here is the hawk!"]

"Who is screaming? Bring our blowguns!" the boys exclaimed. And shooting at the hawk, they aimed a pellet at the pupil of the eye and [the hawk] spiraled to the ground. They ran to seize it and asked: "What do you come to do here?" they asked the hawk.

"I bring a message in my stomach. First cure my eye and afterward I shall tell you," the hawk answered.

"Very well," they said, and taking a bit of the rubber of the ball with which they were playing, they put it in the hawk's eye. Lotzquic they called it, and instantly the hawk's eye was perfectly healed.

"Speak, then," they said to the hawk. And immediately it vomited a large snake.

"Speak, thou," they said to the snake.

"Good," the [snake] said and vomited the toad.

"Where is the message that you bring?" they asked the toad.

"Herein my stomach is the message," answered the toad. And immediately he tried, but could not vomit; his mouth only filled with spittle but he did not vomit. The boys wanted to hit him then.

"You are a liar," they said, kicking him in the rump, and the bone of the haunches gave way. He tried again, but his mouth only filled with spittle. Then the boys opened the toad's mouth and once open, they looked inside of it. The louse was stuck to the toad's teeth: it had stayed

in its mouth and had not been swallowed, but only pretended to be swallowed. Thus the toad was tricked, and the kind of food to give it is not known. It cannot run; and it became the food of the snakes.

"Speak," they said to the louse, and then it gave its message. "Your grandmother has said, boys: 'Go call them; the messengers of Hun-Camé and Vucub-Camé have come to tell them to go to Xibalba, saying: "They must come here within seven days to play ball with us, and they must also bring their playing gear, the ball, the rings, the gloves, the leather pads, in order that they may amuse themselves here," said the lords. They have really come,' said your grandmother. That is why I have come. For truly your grandmother said this and she cries and grieves, for this reason I have come."

"Is it true?" the boys asked themselves when they heard this. And running quickly they arrived at their grandmother's side; they went only to take their leave of her.

"We are going, grandmother, we came only to say goodbye. But here will be the sign which we shall leave of our fate: each of us shall plant a reed, in the middle of the house we shall plant it; if it dries, this shall be the sign of our death. 'They are dead!' you shall say, if it begins to dry up. But if it sprouts again: 'They are living!' you shall say, oh, our grandmother. And you, mother, do not weep, for here we leave the sign of our fate," thus they said.

And before going, Hunahpú planted one [reed] and Xbalanqué planted another; they planted them in the house and not in the field, nor did they plant them in moist soil, but in dry soil; in the middle of their house, they left them planted.

II. Chapter 8

Then they went, each one carrying his blowgun, and went down in the direction of Xibalba. They descended the steps quickly and passed between several streams and ravines. They passed among some birds and these birds were called Molay.

They also passed over a river of corruption, and over a river of blood, where they would be destroyed, so the people of Xibalba thought; but they did not touch it with their feet, instead they crossed it on their blowguns.

They went on from there, and came to a crossway of four roads. They knew very well which were the roads to Xibalba; the black road, the white road, the red road, and the green road. So, then, they sent an animal called Xan. It was to go to gather information which they wanted. "Sting them, one by one; first sting the one seated in the first place and then sting all of them, since this is the part you must play: to suck the blood of the men on the roads," they said to the mosquito.

"Very well," answered the mosquito. And immediately it flew on to the dark road and went directly toward the wooden men which were seated first and covered with ornaments. It stung the first, but this one said nothing; then it stung the next one, it stung the second, who was seated, but this one said nothing, either.

After that it stung the third; the third of those seated was Hun-Camé. "Ah!" he exclaimed when it stung him. "What is this, Hun-Camé? What is it that has stung you? Do you not know who has stung you?" said the fourth one of the lords, who were seated.

"What is the matter, Vucub-Camé? What has stung you?" said the fifth.

"Ah! Ah!" then said Xiquiripat. And Vucub-Camé asked him, "What has stung you?" and when they stung the sixth who was seated [he cried], "Ah!"

"What is this, Cuchumaquic?" asked Xiquiripat. "What is it that has stung you?" And the seventh one seated said "Ah" when he was stung.

"What is the matter, Ahalpuh?" said Cuchumaquic. "What has stung you?" And when it stung him, the eighth of those seated said, "Ah!"

"What is the matter, Ahalcaná?" said Ahalpuh. "What has stung you?" And when he was stung the ninth of those seated said "Ah!"

"What is this, Chamiabac?" said Ahalcaná. "What has stung you?" And when the tenth of those seated was stung, he said "Ah!"

"What is the matter, Chamiaholom?" said Chamiabac. "What has stung you?" And when the eleventh of those seated was stung he said, "Ah!"

"What happened?" said Chamiaholom. "What has stung you?" And when the twelfth of those seated was stung, he said "Alas!"

"What is this, Patán?" they said. "What has stung you?" And the thirteenth of those seated said "Alas!" when he was stung.

"What is the matter, Quicxic?" said Patán. "What has stung you?" And the fourteenth of those seated when he was stung said "Alas!"

"What has stung you, Quicrixcac?" said Quicré.

In this way they told their names, as they all said them one to the other. So they made themselves known by telling their names, calling each chief, one by one. And in this manner each of those seated in his corner told his name.

Not a single one of the names was missed. All told their names when Hunahpú puffed out a hair of his leg, which was what had stung them. It was really not a mosquito which stung them which went for Hunahpú and Xbalanqué to hear the names of all of them.

They [the youths] continued on their way and arrived where the Lords of Xibalba were.

"Greet the lord, the one who is seated," said one in order to deceive them.

"That is not a lord. it is nothing more than a wooden figure," they said, and went on. Immediately they began to greet them:

"Hail, Hun-Camé! Hail, Vucub-Camé! Hail, Xiquiripat! Hail, Cuchumaquic! Hail, Ahalpuh! Hail, Ahalcaná! Hail, Chamiabac! Hail, Chamiaholom! Hail, Quicxic! Hail, Patán! Hail, Quicré! Hail, Quicrixcac!" they said coming before them. And looking in their faces, they spoke the name of all, without missing the name of a single one of them.

But what the lords wished was that they should not discover their names.

"Sit here," they said, hoping that they would sit in the seat [which they indicated].

"That is not a seat for us; it is only a hot stone," said Hunahpú and Xbalanqué, and they [the Lords of Xibalba] could not overcome them.

"Very well, go to that house," the lords said. And they [the youths] went on and entered the House of Gloom. And neither there were they overcome.

II. Chapter 9

This was the first test of Xibalba. The Lords of Xibalba thought that [the boys'] entrance there would be the beginning of their downfall. After a while [the boys] entered the House of Gloom; immediately lighted sticks of fat pine were given them and the messengers of Hun-Camé also took a cigar to each one.

"These are their pine sticks," said the lord; 'they must return them at dawn, tomorrow, together with the cigars, and you must bring them back whole,' said the lord." So said the messengers when they arrived.

"Very well," [the boys] replied. But they really did not [light] the sticks of pine, instead they put a red-colored thing in place of them, or some feathers from the tail of the macaw, which to the night watches looked like lighted pine sticks. And as for the cigars, they attached fireflies to their end.

All night [everybody] thought they were defeated. "They are lost," said the night watchmen. But the pine sticks had not been burned and looked the same, and the cigars had not been lighted and looked the same as before.

They went to tell the lords.

"How is this? Whence have they come? Who conceived them? Who gave birth to them? This really troubles us, because it is not well what they do. Their faces are strange, and strange is their conduct." they said to each other.

Soon all the lords summoned [the boys].

"Eh! Let us play ball, boys!" they said. At the same time they were questioned by Hun-Camé and Vucub-Camé:

"Where did you come from? Tell us, boys!" said the Lords of Xibalba.

"Who knows whence we came! We do not know," they said, and nothing more.

"Very well. Let us play ball, boys," said the Lords of Xibalba.

"Good," they replied.

"We shall use our ball," said the Lords of Xibalba.

"By no means, shall you use [your ball], but ours," the boys answered.

"Not that one, but ours we shall use," insisted the Lords of Xibalba.

"Very well," said the boys.

"Let us play for a worm, the *chil*," said the Lords of Xibalba.

"No, but instead, the head of the puma shall speak," said the boys.

"Not that," said those of Xibalba.

"Very well," said Hunahpú.

Then the Lords of Xibalba seized the ball; they threw it directly at the ring of Hunahpú. Immediately, while those of Xibalba grasped the handle of the knife of flint, the ball rebounded and bounced all around the floor of the ball-court.

"What is this?" exclaimed Hunahpú and Xbalanqué. "You wish to kill us? Perchance you did not send to call us? And your own messengers did not come? In truth, unfortunate are we! We shall leave at once," the boys said to them.

This was exactly what those of Xibalba wanted to have happen to the boys, that they would die immediately, right there in the ball-court and thus they would be overcome. But it did not happen thus, and it was the Lords of Xibalba who were defeated by the boys.

"Do not leave, boys, let us go on playing ball, but we shall use your ball," they said to the boys.

"Very well," the boys answered and then they drove their ball through [the ring of Xibalba], and with this the game ended.

And offended by their defeat, the men of Xibalba immediately said: "What shall we do in order to overcome them?" And turning to the boys they said to them: "Go gather and bring us, early tomorrow morning, four gourds of flowers." So said the men of Xibalba to the boys.

"Very well. And what kind of flowers?" they asked the men of Xibalba.

"A branch of red *chiptlín*, a branch of white *chiptlín*, a branch of yellow *chiptlín*, and a branch of *carinimac*," said the men of Xibalba.

"Very well," replied the boys.

Thus the talk ended; equally strong and vigorous were the words of the boys. And their hearts were calm when they gave themselves up to be overcome.

The Lords of Xibalba were happy, thinking that they had already defeated them.

"This has turned out well for us. First they must cut them [the flowers]," said the Lords of Xibalba. "Where shall they go to get the flowers?" they said to themselves.

"Surely you will give us our flowers tomorrow early; go, then, to cut them," the Lords of Xibalba said to Hunahpú and Xbalanqué.

"Very well," they replied. "At dawn we shall play ball again," they said upon leaving.

And immediately the boys entered the House of Knives, the second place of torture in Xibalba. And what the lords wanted was that they would be cut to pieces by the knives, and would be quickly killed; that is what they Wished in their hearts.

But the [boys] did not die. They spoke at once to the knives and said to them:

"Yours shall be the flesh of all the animals," they said to the knives. And they did not move again, but all the knives were quiet.

Thus they passed the night in the House of Knives, and calling all the ants, they said to them: "Come, Cutting Ants, come, *zompopos*, and all of you go at once, go and bring all the kinds of flowers that we must cut for the lords."

"Very well," they said, and all the ants went to bring the flowers from the gardens of Hun-Camé and Vucub-Camé.

Previously [the lords] had warned the guards of the flowers of Xibalba: "Take care of our flowers, do not let them be taken by the boys who shall come to cut them. But how could [the boys] see and cut the flowers? Not at all. Watch, then, all night!"

"Very well," they answered. But the guards of the garden heard nothing. Needlessly they shouted up into the branches of the trees in the garden. There they were all night, repeating their same shouts and songs.

"*Ixpurpuvec! Ixpurpuvec!*" one shouted.

"*Puhuyú! Puhuyú!*" the other answered.

Puhuyú was the name of the two who watched the garden of Hun-Camé and Vucub-Camé. But they did not notice the ants who were robbing them of what they were guarding, turning around and moving here and there, cutting the flowers, climbing the trees to cut the flowers, and gathering them from the ground at the foot of the trees.

Meanwhile the guards went on crying, and they did not feel the teeth which were cutting their tails and their wings.

And thus the ants carried, between their teeth, the flowers which they took down, and gathering them from the ground, they went on carrying them with their teeth.

Quickly they filled the four gourds with flowers, which were moist [with dew] when it dawned. Immediately the messengers arrived to get them. "'Tell them to come,' the lord has said, 'and bring here instantly what they have cut,'" they said to the boys.

"Very well," the [boys] answered. And carrying the flowers in the four gourds, they went, and when they arrived before the lord [of Xibalba] and the other lords, it was lovely to see the flowers they had brought. And in this way the Lords of Xibalba were overcome.

The boys had only sent the ants [to cut the flowers], and in a night the ants cut them and put them in the gourds.

Instantly the Lords of Xibalba paled and their faces became livid because of the flowers. They sent at once for the guardians of the flowers. "Why did you permit them to steal our flowers? These which we see here are our flowers," they said to the guardians.

"We noticed nothing, my lord. Our tails also suffered," they answered. And then the [lords] tore at their mouths as a punishment for having let that which was under their care be stolen.

Thus were Hun-Camé and Vucub-Camé defeated by Hunahpú and Xbalanqué. And this was the beginning of their deeds. From that time the mouth of the owl is divided, cleft as it is today.

Immediately they went down to play ball, and also they played several tie-matches. Then they finished playing and agreed to play again the following day at dawn. So said the Lords of Xibalba.

"It is well," said the boys upon finishing.

II. Chapter 10

Afterward they entered the House of Cold. It is impossible to describe how cold it was. The house was full of hail; it was the mansion of cold. Soon, however, the cold was ended because with [a fire of] old logs the boys made the cold disappear.

That is why they did not die; they were still alive when it dawned. Surely what the Lords of Xibalba wanted was that they would die; but it was not thus, and when it dawned, they were still full of health, and they went out again, when the messengers came to get them.

"How is this? They are not dead yet?" said the Lords of Xibalba. They were amazed to see the deeds of Hunahpú and Xbalanqué.

Presently the boys [entered] the House of Jaguars. The house was full of jaguars. "Do not bite us! Here is what belongs to you," [the boys] said to the jaguars. And quickly they threw some bones to the animals, which pounced upon the bones.

"Now surely they are finished. Now already they have eaten their own entrails. At last they have given themselves up. Now their bones have been broken," so said the guards, all happy because of this.

But they [the boys] did not die. As usual, well and healthy, they came out of the House of Jaguars.

"What kind of people are they? Where did they come from?" said all the Lords of Xibalba.

Presently they [the boys] entered into the midst of fire in the House of Fire, inside which there was only fire; but they were not burned. Only the coals and the wood burned. And, as usual, they were well when it dawned. But what they [the Lords of Xibalba] wished was that [the boys] would die rapidly, where they had been. Nevertheless, it did not happen thus, which disheartened the Lords of Xibalba.

Then they put them into the House of Bats. There was nothing but bats inside this house, the house of Camazotz, a large animal, whose weapons for killing were like a dry point, and instantly those who came into their presence perished.

They [the boys] were in there, then, but they slept inside their blowguns. And they were not bitten by those who were in the house. Nevertheless, one of them had to give up because of another Camazotz that came from the sky, and made him come into sight.

The bats were assembled in council all night, and flew about: "*Quilitz, quilitz*," they said: So they were saying all night. They stopped for a little while, however, and they did not move and were pressed against the end of one of the blowguns.

Then Xbalanqué said to Hunahpú: "Look you, has it begun already to get light?"

"Maybe so. I am going to see," [Hunahpú] answered.

And as he wished very much to look out of the mouth of the blowgun, and wished to see if it had dawned, instantly Camazotz cut off his head and the body of Hunahpú was decapitated.

Xbalanqué asked again: "Has it not yet dawned?" But Hunahpú did not move. "Where have you gone, Hunahpú? What have you done?" But he did not move, and remained silent.

Then Xbalanqué felt concerned and exclaimed: "Unfortunate are we. We are completely undone."

They went immediately to hang the head [of Hunahpú] in the ball-court by special order of Hun-Camé and Vucub-Camé, and all the people of Xibalba rejoiced for what had happened to the head of Hunahpú.

II. Chapter 11

Immediately he [Xbalanqué] called all the animals, the coati, the wild boar, all the animals small and large, during the night, and at dawn he asked them what their food was.

"What does each of you eat? For I have called you so that you may choose your food," said Xbalanqué to them.

"Very well," they answered. And immediately each went to take his [own food] and they all went together. Some went to take rotten things; others went to take grasses; others went to get stones. Others went to gather earth. Varied was the food of the [small] animals and of the large animals.

Behind them the turtle was lingering, it came waddling along to take its food. And reaching at the end [of Hunahpú's body] it assumed the form of the head of Hunahpú, and instantly the eyes were fashioned.

Many soothsayers came, then, from heaven. The Heart of Heaven, Huracán, came to soar over the House of Bats.

It was not easy to finish making the face, but it turned out very well; the hair had a handsome appearance and [the head] could also speak.

But as it was about to dawn and the horizon reddened: "Make it dark again, old one!" the buzzard was told.

"Very well," said the old one, and instantly the old one darkened [the sky]. "Now the buzzard has darkened it," the people say nowadays.

And so, during the cool of dawn, the [Hunahpú] began his existence.

"Will it be good?" they said. "Will it turn out to look like Hunahpú?"

"It is very good," they answered. And really it seemed that the skull had changed itself back into a real head.

Then they [the two boys] talked among themselves and agreed: "Do not play ball; only pretend to play; I shall do everything alone," said Xbalanqué.

At once he gave his orders to a rabbit: "Go and take your place over the ball-court; stay there within the oak grove," the rabbit was told by Xbalanqué; "when the ball comes to you, run out immediately, and I shall do the rest," the rabbit was told, when they gave him these instructions during the night.

Presently day broke and the two boys were well and healthy. Then they went down to play ball. The head of Hunahpú was suspended over the ball-court.

"We have triumphed! [said the Lords of Xibalba]. You worked your own destruction, you have delivered yourselves," they said. In this way they annoyed Hunahpú.

"Hit his head with the ball," they said. But they did not bother him with it; he paid no attention to it.

Then the Lords of Xibalba threw out the ball. Xbalanqué went out to get it; the ball was going straight to the ring, but it stopped, bounced, and passed quickly over the ball-court and with a jump went toward the oak grove.

Instantly the rabbit ran out and went hopping; and the Lords of Xibalba ran after it. They went, making noise and shouting after the rabbit. It ended by all of the Lords of Xibalba going.

At once Xbalanqué took possession of the head of Hunahpú; and taking the turtle he went to suspend it over the ball-court. And that head was actually the head of Hunahpú and the two boys were very happy.

Those of Xibalba ran, then, to find the ball and having found it between the oaks, called them, saying:

"Come here. Here is the ball. We found it," they said, and they brought it.

When the Lords of Xibalba returned, they exclaimed, "What is this we see?"

Then they began to play again. Both of them tied.

Presently Xbalanqué threw a stone at the turtle, which came to the ground and fell in the ball-court, breaking into a thousand pieces like seeds, before the lords.

"Who of you shall go to find it? Where is the one who shall go to bring it?" said the Lords of Xibalba.

And so were the Lords of Xibalba overcome by Hunahpú and Xbalanqué. These two suffered great hardships, but they did not die despite all that was done to them.

II. Chapter 12

Here is the account of the death of Hunahpú and Xbalanqué. Now we shall tell of the way they died.

Having been forewarned of all the suffering which the [Lords of Xibalba] wished to impose upon them, they did not die of the tortures of Xibalba, nor were they overcome by all the fierce animals which were in Xibalba.

Afterward they sent for two soothsayers who were like prophets; they were called Xulú and Pacam and were diviners, and they said unto them:

"You shall be questioned by the Lords of Xibalba about our deaths, for which they are planning and preparing because of the fact that we have not died, nor have they been able to overcome us, nor have we perished under their torments, nor have the animals attacked us. We have the presentiment in our hearts that they shall kill us by burning us. All the people of Xibalba have assembled, but the truth is, that we shall not die. Here, then, you have our instructions as to what you must say:

"If they should come to consult you about our death and that we may be sacrificed, what shall you say then, Xulú and Pacam? If they ask you: 'Will it not be good to throw their bones into the ravine?' 'No, it would not be well,' tell them, 'because they would be brought to life again, afterward!' If they ask you: 'Would it not be good to hang them from the trees?' you shall answer: 'By no means would it be well, because then you shall see their faces again.' And when for the third time they ask you: 'Would it be good to throw their bones into the river?' If you were asked all the above by them, you should answer: 'It would be well if they were to die that way; then it would be well to crush their bones on a grinding stone, as corn meal is ground; let each one be ground [separately]; throw them into the river immediately, there where the spring gushes forth, in order that they may be carried away among all the small and large hills.' Thus you shall answer them when the plan which we have advised you is put into practice," said Hunahpú and Xbalanqué. And when they [the boys] took leave of them, they already knew about their approaching death.

They made then, a great bonfire, a kind of oven; the men of Xibalba made it and filled it with thick branches.

Shortly afterward the messengers arrived who had to accompany [the boys], the messengers of Hun-Camé and Vucub-Camé.

"Tell them to come. Go and get the boys; go there so that they may know we are going to burn them.' This the lords said, oh, boys!" the messengers exclaimed.

"It is well," they answered. And setting out quickly, they arrived near the bonfire. There [the Lords of Xibalba] wanted to force the boys to play a mocking game with them.

"Let us drink our *chicha* and fly four times, each one [over the bonfire] boys!" was said to them by Hun-Camé.

"Do not try to deceive us,"[the boys] answered. "Perchance, we do not know about our death, oh lords! And that this is what awaits us here?" And embracing each other, face to face, they both stretched out their arms, bent toward the ground and jumped into the bonfire, and thus the two died together.

All those of Xibalba were filled with joy, shouting and whistling they exclaimed: "Now we have overcome them. At last they have given themselves up."

Immediately they called Xulú and Pacam, to whom they [the boys] had given their instructions, and asked them what they must do with their bones, as they [the boys] had foretold. Those of Xibalba then ground their bones and went to cast them into the river. But the bones did not go very far, for settling themselves down at once on the bottom of the river, they were changed back into handsome boys. And when again they showed themselves they really had their same old faces.

II. Chapter 13

On the fifth day they appeared again and were seen in the water by the people. Both had the appearance of fishmen; when those of Xibalba saw them, after having hunted them all over the river.

And the following day, two poor men presented themselves with very old-looking faces and of miserable appearance, [and] ragged clothes, whose countenances did not commend them. So they were seen by all those of Xibalba.

And what they did was very little. They only performed the dance of the *puhuy* [owl or chum-owl], the dance of the *cux* [weasel], and the dance of the *iboy* [armadillo], and they also danced the *xtzul* [centipede] and the *chitic* [that walks on stilts].

Furthermore, they worked many miracles. They burned houses as though they really were burning and instantly they were as they had been before. Many of those of Xibalba watched them in wonder.

Presently they cut themselves into bits; they killed each other; the first one whom they had killed stretched out as though he were dead, and instantly the other brought him back to life. Those of Xibalba looked on in amazement at all they did, and they performed it, as the beginning of their triumph over those of Xibalba.

Presently word of their dances came to the ears of the lords Hun-Camé and Vucub-Camé. Upon hearing it they exclaimed: "Who are these two orphans? Do they really give you so much pleasure?"

"Surely their dances are very beautiful, and all that they do," answered he who had brought the news to the lords.

Happy to hear this, the [lords] then sent their messengers to call [the boys] with flattery. "Tell them to come here, tell them to come so that we may see what they do; that we may admire them and regard them with wonder," this the lords said. 'So you shall say unto them,'" this was told to the messengers.

They arrived at once before the dancers and gave them the message of the lords.

"We do not wish to, the [boys] answered," because, frankly, we are ashamed. How could we not but be ashamed to appear in the house of the lords with our ugly countenances, our eyes which are so big, and our poor appearance? Do you not see that we are nothing more than some [poor] dancers? What shall we tell our companions in poverty who have come with us and wish to see our dances and be entertained by them? How could we do our dances before the lords? For that reason, then, we do not want to go, oh, messengers," said Hunahpú and Xbalanqué.

Finally, with downcast faces and with reluctance and sorrow they went; but for a while they did not wish to walk, and the messengers had to beat them in the face many times, when they led them to the house of the lords.

They arrived, then, before the lords, timid and with head bowed; they came prostrating themselves, making reverences and humiliating themselves. They looked feeble, ragged, and their appearance was really that of vagabonds when they arrived they were questioned immediately about their country and their people; they also asked them about their mother and their father.

"Where do you come from?" [the lords] said.

"We do not know, Sir. We do not know the faces of our mother and father; we were small when they died," they answered, and did not say another word.

"All right. Now do [your dances] so that we may admire you. What do you want? We shall give you pay," they told them.

"We do not want anything; but really we are very much afraid," they said to the lord.

"Do not grieve, do not be afraid. Dance! And do first the part in which you kill yourselves; burn my house, do all that you know how to do. We shall marvel at you, for that is what our hearts desire. And afterwards, poor things, we shall give help for your journey," they told them.

Then they began to sing and dance. All the people of Xibalba arrived and gathered together in order to see them. Then they performed the dance of the *cux*, they danced the *puhuy*, and they danced the *iboy*.

And the lord said to them: "Cut my dog into pieces and let him be brought back to life by you," he said to them.

"Very well," they answered, and cut the dog into bits. Instantly they brought him back to life. The dog was truly full of joy when he was brought back to life, and wagged his tail when they revived him.

The Lord said to them then: "Burn my house now!" Thus he said to them. instantly they put fire to the lord's house, and although all the lords were assembled together within the house, they were not burned. Quickly it was whole again, and not for one instant was the house of Hun-Camé destroyed.

All of the lords were amazed, and in the same way the [boys'] dances gave them much pleasure.

Then they were told by the lord: "Now kill a man, sacrifice him, but do not let him die," he told them.

"Very well," they answered. And seizing a man, they quickly sacrificed him, and raising his heart on high, they held it so that all the lords could see it.

Again Hun-Camé and Vucub-Camé were amazed. A moment afterward the man was brought back to life by them [the boys], and his heart was filled with joy when he was revived.

The lords were astounded. "Sacrifice yourselves now, let us see it! We really like your dances!" said the lords. "Very well, Sirs," they answered. And they proceeded to sacrifice each other. Hunahpú was sacrificed by Xbalanqué; one by one his arms and his legs were sliced off, his head was cut from his body and carried away; his heart was torn from his breast and thrown onto the grass. All the Lords of Xibalba were fascinated. They looked on in wonder, but really it was only the dance of one man; it was Xbalanqué.

"Get up!" he said, and instantly [Hunahpú] returned to life. They [the boys] were very happy and the lords were also happy. In truth, what they did gladdened the hearts of Hun-Camé and Vucub-Camé, and the latter felt as though they themselves were dancing.

Then their hearts were filled with desire and longing by the dances of Hunahpú and Xbalanqué; and Hun-Camé and Vucub-Camé gave their commands.

"Do the same with us! Sacrifice us!" they said. "Cut us into pieces, one by one!" Hun-Camé and Vucub-Camé said to Hunahpú and Xbalanqué.

"Very well; afterward you will come back to life again. Perchance, did you not bring us here in order that we should entertain you, the lords, and your sons, and vassals?" they said to the lords.

And so it happened that they first sacrificed the one, who was the chief and [Lord of Xibalba], the one called Hun-Camé, king of Xibalba.

And when Hun-Camé was dead, they overpowered Vucub-Camé, and they did not bring either of them back to life.

The people of Xibalba fled as soon as they saw that their lords were dead and sacrificed. In an instant both were sacrificed. And this they [the boys] did in order to chastize them. Quickly the principal lord was killed. And they did not bring him back to life.

And another lord humbled himself then, and presented himself before the dancers. They had not discovered him, nor had they found him. "Have mercy on me!" he said when they found him.

All the sons and vassals of Xibalba fled to a great ravine, and all of them were crowded into this narrow, deep place. There they were crowded together and hordes of ants came and found them and dislodged them from the ravine. In this way [the ants] drove them to the road, and when they arrived [the people] prostrated themselves and gave themselves up; they humbled themselves and arrived, grieving.

In this way the Lords of Xibalba were overcome. Only by a miracle and by their [own] transformation could [the boys] have done it.

II. Chapter 14

Immediately [the boys] told their names and they extolled themselves before all the people of Xibalba.

"Hear our names. We shall also tell you the names of our fathers. We are Hunahpú and Xbalanqué; those are our names. And our fathers are those whom you killed and who were called Hun-Hunahpú and Vucub-Hunahpú. We, those whom you see here, are, then, the avengers of the torments and suffering of our fathers. That is the reason why we resent all the evil you have done to them. Therefore, we shall put an end to all of you, we shall kill you, and not one of you shall escape," they said.

Instantly all the people of Xibalba fell to their knees, crying.

"Have mercy on us, Hunahpú and Xbalanqué! It is true that we sinned against your fathers as you said, and that they are buried in Puchbal-Chah," they said.

"Very well. This is our sentence, that we are going to tell you. Hear it, all you of Xibalba:

"Since neither your great power nor your race any longer exist, and since neither do you deserve mercy, your rank shall be lowered. Not for you shall be the ball game. You shall spend your time making earthen pots and tubs and stones to grind corn. Only the children of the thickets and desert shall speak with you. The noble sons, the civilized vassals shall not consort with you, and they will forsake your presence. The sinners, the evil ones, the sad ones, the unfortunate ones, those who give themselves up to vice, these are the ones who will welcome you. No longer will you seize men suddenly [for sacrifice]; remember your rank has been lowered."

Thus they spoke to all the people of Xibalba.

In this way their destruction and their lamentations began. Their power in the olden days was not much. They only liked to do evil to men in those times. In truth, in those days, they did not have the category of gods. Furthermore, their horrible faces frightened people. They were the enemies, the owls. They incited to evil, to sin and to discord.

They were also false in their hearts, black and white at the same time, envious and tyrannical, according to what was said of them. Furthermore, they painted and greased their faces.

In this way, then, occurred the loss of their grandeur and the decadence of their empire.

And this was what Hunahpú and Xbalanqué did.

Meanwhile, the grandmother was crying and lamenting before the reeds which they had left planted. The reeds sprouted, then they dried up when [the boys] were consumed in the bonfire; afterward [the reeds] sprouted again. Then the grandmother lighted the fire and burned incense before the reeds in memory of her grandchildren. And the grandmother's heart filled with joy when, for the second time, the reeds sprouted. Then they were worshiped by the grandmother, and she called them the Center of the House, *Nicah* [the center] they were called.

"Green reeds growing in the plains" [*Cazam Ah Chatam Uleu*] was their name. And they were called the Center of the House and the Center, because in the middle of the house they planted the reeds. And the reeds, which were planted, were called the plains, Green Reeds growing on the plains. They also were called Green Reeds because they had resprouted. This name was given them by Xmucané [given] to those [reeds] which Hunahpú and Xbalanqué left planted in order that they should be remembered by their grandmother.

Well, now, their fathers, those who died long ago, were Hun-Hunahpú and Vucub-Hunahpú. They also saw the faces of their fathers there in Xibalba and their fathers talked with their descendants, that is the ones who overthrew those of Xibalba.

And here is how their fathers were honored by them. They honored Vucub-Hunahpú; they went to honor him at the place of sacrifice of the ball-court. And at the same time they wanted to make Vucub-Hunahpú's face. They hunted there for his entire body, his mouth, his nose, his eyes. They found his body, but it could do very little. It could not pronounce his name, this Hunahpú. Neither could his mouth say it.

And here is how they extolled the memory of their fathers, whom they had left there in the place of sacrifice at the ball-court: "You shall be invoked," their sons said to them, when they fortified their heart. "You shall be the first to arise, and you shall be the first to be worshiped by the sons of the noblemen, by the civilized vassals. Your names shall not be lost. So it shall be!" they told their fathers and thus consoled themselves. "We are the avengers of your death, of the pains and sorrows which they caused you."

Thus was their leave-taking, when they had already overcome all the people of Xibalba.

Then they rose up in the midst of the light, and instantly they were lifted into the sky. One was given the sun, the other, the moon. Then the arch of heaven and the face of the earth were lighted. And they dwelt in heaven.

Then the four hundred boys whom Zipacná had killed also ascended, and so they again became the companions of [the boys] and were changed into stars in the sky.

PART III: Chapter 1

Here, then is the beginning of when it was decided to make man, and when what must enter into the flesh of man was sought.

And the Forefathers, the Creators and Makers, who were called Tepeu and Gucumatz said: "The time of dawn has come, let the work be finished, and let those who are to nourish and sustain us appear, the noble sons, the civilized vassals; let man appear, humanity, on the face of the earth." Thus they spoke.

They assembled, came together and held council in the darkness and in the night; then they sought and discussed, and here they reflected and thought. In this way their decisions came dearly to light and they found and discovered what must enter into the flesh of man.

It was just before the sun, the moon, and the stars appeared over the Creators and Makers.

From Paxil, from Cayalá, as they were called, came the yellow ears of corn and the white ears of corn.

These are the names of the animals which brought the food: *yac* (the mountain cat), *utiú* (the coyote), *quel* (a small parrot), and *hoh* (the crow). These four animals gave tidings of the yellow ears of corn and the white ears of corn, they told them that they should go to Paxil and they showed them the road to Paxil.

And thus they found the food, and this was what went into the flesh of created man, the made man; this was his blood; of this the blood of man was made. So the corn entered [into the formation of man] by the work of the Forefathers.

And in this way they were filled with joy, because they had found a beautiful land, full of pleasures, abundant in ears of yellow corn and ears of white corn, and abundant also in *pataxte* and cacao, and in innumerable *zapotes*, *anonas*, *jocotes*, *nantzes*, *matasanos*, and honey. There was an abundance of delicious food in those villages called Paxil and Cayalá. There were foods of every kind, small and large foods, small plants and large plants.

The animals showed them the road. And then grinding the yellow corn and the white corn, Xmucané made nine drinks, and from this food came the strength and the flesh, and with it they created the muscles and the strength of man. This the Forefathers did, Tepeu and Gucumatz, as they were called.

After that they began to talk about the creation and the making of our first mother and father; of yellow corn and of white corn they made their flesh; of corn-meal dough they made the arms and the legs of man. Only dough of corn meal went into the flesh of our first fathers, the four men, who were created.

III. Chapter 2

THESE ARE THE NAMES OF THE FIRST men who were created and formed: the first man was Balam-Quitze, the second, Balam-Acab, the third, Mahucutah, and the fourth was Iqui-Balam.

These are the names of our first mothers and fathers.

It is said that they only were made and formed, they had no mother, they had no father. They were only called men. They were not born of woman, nor were they begotten by the Creator nor by the Maker, nor by the Forefathers. Only by a miracle, by means of incantation were they created and made by the Creator, the Maker, the Forefathers, Tepeu and Gucumatz. And as they had the appearance of men, they were men; they talked, conversed, saw and heard, walked, grasped things; they were good and handsome men, and their figure was the figure of a man.

They were endowed with intelligence; they saw and instantly they could see far, they succeeded in seeing, they succeeded in knowing all that there is in the world. When they looked, instantly they saw all around them, and they contemplated in turn the arch of heaven and the round face of the earth.

The things hidden [in the distance] they saw all, without first having to move; at once they saw the world, and so, too, from where they were, they saw it.

Great was their wisdom; their sight reached to the forests, the rocks, the lakes, the seas, the mountains, and the valleys. In truth, they were admirable men. Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam.

Then the Creator and the Maker asked them: "What do you think of your condition? Do you not see? Do you not hear? Are not your speech and manner of walking good? Look, then! Contemplate the world, look [and see] if the mountains and the valleys appear! Try, then, to see!" they said to [the four first men].

And immediately they [the four first men] began to see all that was in the world. Then they gave thanks to the Creator and the Maker: "We really give you thanks, two and three times! We have been created, we have been given a mouth and a face, we speak, we hear, we think, and walk; we feel perfectly, and we know what is far and what is near. We also see the large and the small in the sky and on earth. We give you thanks, then, for having created us, oh, Creator and Maker! for having given us being, oh, our grandmother! oh, our grandfather!" they said, giving thanks for their creation and formation.

They were able to know all, and they examined the four comers, the four points of the arch of the sky and the round face of the earth.

But the Creator and the Maker did not hear this with pleasure. "It is not well what our creatures, our works say; they know all, the large and the small," they said. And so the Forefathers held counsel again. "What shall we do with them now? Let their sight reach only to that which is near; let them see only a little of the face of the earth! It is not well what they say. Perchance, are they not by nature simple creatures of our making? Must they also be gods? And if they do not reproduce and multiply when it will dawn, when the sun rises? And what if they do not multiply?" So they spoke.

"Let us check a little their desires, because it is not well what we see. Must they perchance be the equals of ourselves, their Makers, who can, see afar, who know all and see all?"

Thus spoke the Heart of Heaven, Huracán, Chipi-Caculhá, Raxa-Caculhá, Tepeu, Gucumatz, the Forefathers, Xpiyacoc, Xmucané, the Creator and the Maker. Thus they spoke, and immediately they changed the nature of their works, of their creatures.

Then the Heart of Heaven blew mist into their eyes, which clouded their sight as. when a mirror is breathed upon. Their eyes were covered and they could see only what was close, only that was clear to them.

In this way the wisdom and all the knowledge of the four men, the origin and beginning [of the Quiché race], were destroyed.

In this way were created and formed our grandfathers, our fathers, by the Heart of Heaven, the Heart of Earth.

III. Chapter 3

Then their wives had being, and their women were made. God himself made them carefully. And so, during sleep, they came, truly beautiful, their women, at the side of Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam.

There were their women when they awakened, and instantly their hearts were filled with joy because of their wives.

Here are the names of their wives: Cahá-Paluna was the name of the wife of Balam-Quitze; Chomihá was the wife of Balam-Acab; Tzununihá, the wife of Mahucutah; and Caquixahá was the name of the wife of Iqui-Balam. These are the names of their wives, who were distinguished women.

They conceived the men, of the small tribes and of the large tribes, and were the origin of us; the people of Quiché.

There were many priests and sacrificers; there were not only four, but those four were the Forefathers of us, the people of the Quiché.

The names of each one were different when they multiplied there in the East, and there were many names of the people: Tepeu, Olomán, Cohah, Quenech, Ahau, as they called those men there in the East, where they multiplied.

The beginning is known, too, of those of Tamub and those of Ilocab who came together from there in the East.

Balam-Quitze was the grandfather and the father of the nine great houses of the Cavec; Balam-Acab was the grandfather and father of the nine great houses of the Nimhaib; Mahucutah, the grandfather and father of the four great houses of Ahau-Quiché.

Three groups of families existed; but they did not forget the name of their grandfather and father, those who propagated and multiplied there in the East.

The Tamub and Ilocab also came, and thirteen branches of peoples, the thirteen of Tecpán, and those of Rabinal, the Cakchiquel, those from Tziquinahá, and the Zacahá and the Lamaq, Cumatz, Tuhahá, Uchabahá, those of Chumilahá, those of Quibahá, of Batenabá, Acul-Vinac, Balamihá, the Canchahel, and Balam-Colob.

These are only the principal tribes, the branches of the people which we mention; only of the principal ones shall we speak. Many others came from each group of the people, but we shall not write their names. They also multiplied there in the East.

Many men were made and in the darkness they multiplied. Neither the sun nor the light had yet been made when they multiplied. All lived together, they existed in great number and walked there in the East.

Nevertheless, they did not sustain nor maintain [their God]; they only raised their faces to the sky, and they did not know why they had come so far as they did.

There they were then, in great number, the black men and the white men, men of many classes, men of many tongues, that it was wonderful to hear them.

There are generations in the world, there are country people, whose faces we do not see, who have no homes, they only wander through the small and large woodlands, like crazy people. So it is said scornfully of the people of the wood. So they said there, where they saw the rising of the sun.

The speech of all was the same. They did not invoke wood nor stone, and they remembered the word of the Creator and the Maker, the Heart of Heaven, the Heart of Earth.

in this manner they spoke, while they thought about the coming of the dawn. And they raised their prayers, those worshipers of the word [of God], loving, obedient. and fearful, raising their faces to the sky when they asked for daughters and sons:

"Oh thou, Tzacol, Bitol! Look at us, hear us! Do not leave us, do not forsake us, oh, God, who art in heaven and on earth, Heart of Heaven, Heart of Earth! Give us our descendants, our succession, as long as the sun shall move and there shall be light. Let it dawn; let the day come! Give us many good roads, flat roads! May the people have peace, much peace, and may they be happy; and give us good life and useful existence! Oh, thou Huracán, Chipi-Caculhá, Raxá-Caculhá, Chipi-Nanauac, Raxá-Nanauac, Voc, Hunahpú, Tepeu, Gucumatz, Alom, Qaholom, Xpiyacoc, Xmucané, grandmother of the sun, grandmother of the light, let there be dawn, and let the light come!"

Thus they spoke while they saw and invoked the coming of the sun, the arrival of day; and at the same time that they saw the rising of the sun, they contemplated the Morning Star, the Great Star, which comes ahead of the sun, that lights up the arch of the sky and the surface of the earth, and illuminates the steps of the men who had been created and made.

III. Chapter 4

Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam said, "Let us await the break of day." So said those great wise men, the enlightened men, the priests and sacrificers. This they said.

Our first mothers and fathers did not yet have wood nor stones to keep; but their hearts were tired of waiting for the sun. Already all the tribes and the Yaqui people, the priests and sacrificers, were very many.

"Let us go, let us go to search and see if our [tribal] symbols are in safety; if we can find what we must burn before them. For being as we are, there is no one who watches for us," said Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam.

And having heard of a city, they went there.

Now then, the name of the place where Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam and those of Tamub and Ilocab went was Tulán-Zuivá, Vucub-Pec, Vucub-Ziván. This was the name of the city where they went to receive their gods.

So, then, all arrived at Tulán. It was impossible to count the men who arrived; there were very many and they walked in an orderly way.

Then was the appearance of their gods; first those of Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam who were filled with joy: "At last we have found that for which we searched!" they said.

And the first that appeared was Tohil, as this god was called, and Balam-Quitze put him on his back, in his chest. Instantly the god called Avilix appeared, and Balam-Acab carried him. The god called Hacavitz was carried by Mahucutah; and Iqui-Balam carried the one called Nicahtacah.

And together with the people of the Quiché, they also received those of Tamub. And in the same way Tohil was the name of the god of the Tamub who received the grandfather and father of the Lords of Tamub, whom we know today.

In the third place were those of Ilocab. Tohil was also the name of the god who was received by the grandfathers and the fathers of the lords, whom we also know today.

In this way, the three Quiché [families] were given their names and they did not separate, because they had a god of the same name, Tohil of the Quiché, Tohil of the Tamub and [Tohil] of the Ilocab; one only was the name of the god, and therefore the three Quiché [families] did not separate.

Great indeed was the virtue of the three, Tohil, Avilix, and Hacavitz.

Then all the people arrived, those from Rabinal, the Cakchiquel, those from Tziquinahá, and the people who now are called the Yaqui. And there it was that the speech of the tribes changed; their tongues became different. They could no longer understand each other clearly after arriving at Tulán. There also they separated, there were some who had to go to the East, but many came here.

And their clothing was only the skins of animals; they had no good clothes to put on, the skins of animals were their only dress. They were poor, they possessed nothing, but they had the nature of extraordinary men.

When they arrived at Tulán-Zuivá, Vucub-Pec, Vucub-Zivan, the old traditions say that they had traveled far in order to arrive there.

III. Chapter 5

And they did not have fire. Only the people of Tohil had it. He was the god of the tribes which first created fire. It is not known how it was made, because it was already burning when Balam-Quitze and Balam-Acab saw it.

"Ah, we have no fire yet! We shall die of cold," they said. Then Tohil said to them: "Do not worry! Yours shall be the lost fire which is talked of. Yours shall be what is spoken of as lost fire," Tohil said to them.

"Really? Oh, God, our support, our maintenance, thou, our God!" they said, returning thanks.

And Tohil answered: "Very well, certainly I am your God; so shall it be! I am your Lord; so let it be!" Thus it was told to the priests and sacrificers by Tohil. And in this manner the tribes received fire and they were joyful because of it.

Instantly a great shower began to fall when the fire of the tribes was burning. Much hail fell on all the tribes and the fire was put out because of it, and again the fire was extinguished.

Then Balam-Quitze and Balam-Acab again asked Tohil for fire. "Oh, Tohil, we are truly dying of cold!" they said to Tohil.

"Very well, do not worry," Tohil answered, and instantly he made fire, turning about in his shoe.

Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam were at once happy and immediately they became warm.

Now, the fire of the peoples [of Vucamag] had also gone out and they were dying of cold. immediately they came to ask Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam for fire. They could no longer bear the cold nor the ice; they were shivering and their teeth were chattering; they were numb; their legs and hands shook and they could not hold anything in them, when they came.

"We are not ashamed to come before you, to beg for a little of your fire," they said. But they were not well received. And then the tribes were very sad.

"The speech of Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam is different! Oh! We have given up our speech! What have we done? We are lost. How were we deceived? We had only one speech when we arrived there at Tulán; we were created and educated in the same way. It is not good what we have done," said all the tribes under the trees, under the vines.

Then a man came before Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam and [this man], who was a messenger of Xibalba, spoke thus: "This is, in truth, your God; this is your support; this is, furthermore, the representation, the memory of your Creator and Maker. Do not give your fire to the tribes until they present offerings to Tohil. It is not necessary that they give anything to you. Ask Tohil what they should give when they come to receive fire," said the man from Xibalba. He had wings like the wings of a bat. "I am sent by your Creator, your Maker," said the man of Xibalba.

They were filled with joy then, and Tohil, Avilix, and Hacavitz were also gladdened when the man from Xibalba spoke, who disappeared instantly from their presence.

But the tribes did not perish when they came, although they were dying of cold. There was much hail, black rain and mist, and indescribable cold.

All the tribes were trembling and shivering with cold when they came where Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam were. Their hearts were greatly troubled and their mouths and eyes were sad.

In a moment the beggars came before Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam and said: "Will you not have pity on us, we only ask a little of your fire? Perchance, were we not [once] together and reunited? Did we not have the same home and one country when we were created, when we were made? Have mercy, then, on us!" they said.

"What will you give us so that we shall have mercy on you?" they were asked.

"Well, then, we shall give you money," the tribes answered.

"We do not want money," said Balam-Quitze and Balam-Acab.

"And what do you want?" [asked the tribes].

"We shall ask now" [said Balam-Quitze].

"Very well," said the tribes.

"We shall ask Tohil and then we shall tell you," they answered.

"What must the tribes give, oh, Tohil! who have come to ask for your fire?" said Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam.

"Well! Are they willing to give their waist and their armpits? Do they want me to embrace them? For if they do not want to do that, neither shall I give them fire," answered Tohil.

"Tell them that this shall come later, that they do not have to come now to give me their waist and their armpits. This is what Tohil orders us to tell you, you will say." This was the answer to Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam.

Then they took Tohil's message. "Very well, we shall join you and we shall embrace him," they [the people] said when they heard and were told the message from Tohil. And they did not delay in acting. "Good," they said, "but may it be soon!" And immediately they received the fire. Then they became warm.

III. Chapter 6

There was nevertheless a tribe who stole the fire in the smoke; and they were from the house of Zotzil. The god of the Cakchiquel was called *Chamalcan* and he had the form of a bat.

When they passed through the smoke, they went softly and then they seized the fire. The Cakchiquel did not ask for the fire, because they did not want to give themselves up to be overcome, the way that the other tribes had been overcome when they offered their breasts and their armpits so that they would be opened. And this was the opening [of the breasts] about which Tohil had spoken; that they should sacrifice all the tribes before him, that they should tear out their hearts from their breasts.

And this had not yet begun when the taking of power and sovereignty by Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam was prophesied by Tohil.

There in Tulán-Zuivá, whence they had come, they were accustomed to fast, they observed a perpetual fast while they awaited the coming of dawn and watched for the rising sun.

They took turns at watching the Great Star called *Icoquih*, which rises first before the sun, when the sun rises, the brilliant Icoquih, which was always before them in the East, when they were there in the place called Tulán-Zuivá, whence came their god.

It was not here, then, where they received their power and sovereignty, but there they subdued and subjected the large and small tribes when they sacrificed them before Tohil, and offered him the blood, the substance, breasts, and sides of all the men.

In Tulán power came instantly to them; great was their wisdom in the darkness and in the night.

Then they came, they pulled up stakes there and left the East. "This is not our home; let us go and see where we should settle," Tohil said then.

In truth, he was accustomed to talk to Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam: "Give thanks before setting out; do what is necessary to bleed your ears, prick your elbows, and make your sacrifices, this shall be your thanks to God."

"Very well," they said, and took blood from their ears. And they wept in their chants because of their departure from Tulán; their hearts mourned when they left Tulán.

"Pity us! We shall not see the dawn here, when the sun rises and lights the face of the earth," they said at leaving. But they left some people on the road which they followed so that they would keep watch.

Each of the tribes kept getting up to see the star which was the herald of the sun. This sign of the dawn they carried in their hearts when they came from the East, and with the same hope they left there, from that great distance, according to what their songs now say.

III. Chapter 7

They came at last to the top of a mountain and there all the Quiché people and the tribes were reunited. There they all held council to make their plans. Today this mountain is called Chi-Pixab, this is the name of the mountain.

There they reunited and there they extolled themselves: "I am, I, the people of the Quiché! And thou, Tamub, that shall be thy name." And to those from Ilocab they said: "Thou, Ilocab, this shall be thy name. And these three Quiché [peoples] shall not disappear, our fate is the same," they said when they gave them their names.

Then they gave the Cakchiquel their name: Gagchequeleb was their name. In the same way they named those of Rabinal, which was their name, and they still have it. And also those of Tziquinahá, as they are called today. Those are the names which they gave to each other.

There they were come together to await the dawn and to watch for the coming of the star, which comes just before the sun, when it is about to rise. "We came from there, but we have separated," they said to each other.

And their hearts were troubled; they were suffering greatly; they did not have food; they did not have sustenance; they only smelled the ends of their staffs and thus they imagined they were eating; but they did not eat when they came.

It is not quite clear, however, how they crossed the sea; they crossed to this side, as if there were no sea; they crossed on stones, placed in a row over the sand. For this reason they were called Stones in a Row, Sand Under the Sea, names given to them when they [the tribes] crossed the sea, the waters having parted when they passed.

And their hearts were troubled when they talked together, because they had nothing to eat, only a drink of water and a handful of corn they had.

There they were, then, assembled on the mountain called Chi-Pixab. And they had also brought Tohil, Avilix, and Hacavitz. Balam-Quitze and his wife Cahá-Paluna, which was the name of his wife, observed a complete fast. And so did Balam-Acab and his wife, who was called Chomihá; and Mahucutah and his wife, called Tzununihá, also observed a complete fast, and Iqui-Balam. with his wife, called Caquixahá, likewise.

And there were those who fasted in the darkness, and in the night. Great was their sorrow when they were on the mountain, called Chi-Pixab.

III. Chapter 8

And their gods spoke to them again. Thus Tohil, Avilix, and Hacavitz spoke to Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam: "Let us go, let us get up, let us not stay here, take us to a secret place! Already dawn draws near. Would it not be a disgrace for you if we were imprisoned by our enemies within these walls where you, the priests and sacrificers. keep us? Put each of us, then. in a safe place," they said when they spoke.

"Very well. We shall go on, we shall go in search of the forests," all answered.

Immediately after, they took up their gods and put them on their backs. In this way they carried Avilix to the ravine called Euabal-Ziván, so named by them, to the large ravine of the forest. now called Pavilix, and there they left him. In this ravine he was left by Balam-Acab.

They were left one by one. The first one left was Hacavitz, he was left on a large red pyramid, on the mountain now called *Hacavitz*. There they founded their town, there in the place where the god called Hacavitz, was.

In the same way, Mahucutah left his god, who was the second one hidden by them.

Hacavitz was not in the forest, but on a hill cleared of trees, Hacavitz was hidden.

Then Balam-Quitze came, he came there to the large forest; Balam-Quitze came to hide Tohil at the hill which is today called *Patohil*. Then they celebrated the hiding of Tohil in the

ravine, in his refuge. A great quantity of snakes, jaguars, vipers, and *cantiles* were in the forest where they were hidden by the priests and sacrificers.

Balam-Quitzé, Balam-Acab, Mahucutah, and Iqui-Balam were together; together they awaited the dawn, there on the mountain, called Hacavitz.

And a short distance away, was the god of the people of Tamub and of the people of Ilocab. Amac-Tan, the place is called, where the god of the Tamub [people] was, and there dawn came to the tribes. The place where those from Ilocab awaited the dawn was called *Amac-Uquincat*; there was the god of those of Ilocab, a short distance from the mountain.

There, too, were all the people of Rabinal, the Cakchiquel, the Tziquinahá, all the small tribes, and the large tribes. Together they stayed, awaiting the coming of the dawn and the rising of the large star called Icoquih, which rises just before the sun, when it dawns, according to the legend.

There they were together, then, Balam-Quitzé, Balam-Acab, Mahucutah, and Iqui-Balam. They did not sleep; they remained standing and great was the anxiety of their hearts and their stomachs for the coming of dawn and the day. There, too, they felt shame; they were overcome with great sorrow, great suffering, and they were oppressed with pain.

They had come that far. "Oh, we have come without joy! If only we could see the rising of the sun! What shall we do now? If we lived in harmony in our country, why did we leave it?" they said to each other, in the midst of their sadness and affliction, and with mournful voices.

They talked, but they could not calm their hearts which were anxious for the coming of the dawn. "The gods are seated in the ravines, in the forests, they are among the air-plants, among the mosses, not even a seat of boards were they given," they said.

First there were Tohil, Avilix, and Hacavitz. Great was their glory, their strength, and their power over the gods of all the tribes. Many were their miracles, and countless their journeys, and their pilgrimages in the midst of the cold; and the hearts of the tribes were filled with fear.

But calm were the hearts of Balam-Quitzé, Balam-Acab, Mahucutah, and Iqui-Balam. With respect to them [the gods]. They felt no anxiety in their hearts for the gods whom they had received, and had carried on their backs when they came there from Tulán-Zuivá, from there in the East.

They were there, then, in the forest, now called Zaquiribal, Pa-Tohil, P'Avilix, Pa-Hacavitz.

And next came the dawn, and light shone for our grandparents and our parents.

Now we shall tell of the coming of the dawn and the appearance of the sun, the moon, and the stars.

III. Chapter 9

Here, then, is the dawn, and the coming of the sun, the moon, and the stars.

Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam were very happy when they saw the Morning Star. It rose first, with shining face, when it came ahead of the sun.

Immediately they unwrapped the incense which they had brought from the East, and which they had planned to burn, and then they untied the three gifts which they had planned to offer.

The incense which Balam-Quitze brought was called Mixtán-Pom; the incense which Balam-Acab brought was called Cavixtán-Pom; and that which Mahucutah brought was called Cabauil-Pom. The three had their incense and burned it when they began to dance facing toward the East.

They wept for joy as they danced and burned their incense, their precious incense. Then they wept because they did not yet behold nor see the sunrise.

But, then, the sun came up. The small and large animals were happy; and arose from the banks of the river, in the ravines, and on the tops of the mountains, and all turned their eyes to where the sun was rising.

Then the puma and the jaguar roared. But first the bird called Queletzu burst into song. In truth, all the animals were happy, and the eagle, the white vulture; the small birds and the large birds stretched their wings.

The Priests and the sacrificers were kneeling; great was the joy of the priests and sacrificers and of the people of Tamub and Ilocab and the people of Rabinal, the Cakchiquel, those from Tziquinahá, and those from Tuhalhá, Uchabahá, Quibahá, from Batená, and the Yaqui Tepeu, all those tribes which exist today. And it was not possible to count the people. The light of dawn fell upon all the tribes at the same time.

Instantly the surface of the earth was dried by the sun. Like a man was the sun when it showed itself, and its face glowed when it dried the surface of the earth.

Before the sun rose, damp and muddy was the surface of the earth, before the sun came up; but then the sun rose, and came up like a man. And its heat was unbearable. It showed itself when it was born and remained fixed [in the sky] like a mirror. Certainly it was not the same sun which we see, it is said in their old tales.

Immediately afterward Tohil, Avilix, and Hacavitz were turned to stone, together with the deified beings the puma, the jaguar, the snake, the *cantil*, and the hobgoblin. Their arms became fastened to the trees when the sun, the moon, and the stars appeared. All alike, were changed into stone. Perhaps we should not be living today because of the voracious animals, the puma, the jaguar, the snake, and the *cantil*, as well as the hobgoblin; perhaps our power would not exist if these first animals had not been turned into stone by the sun.

When the sun arose, the hearts of Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam were filled with joy. Great was their joy when it dawned. And there were not many men at

that place; only a few were there on the mountain Hacavitz. There dawn came to them, there they burned their incense and danced, turning their gaze toward the East, whence they had come. There were their mountains and their valleys, whence had come Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam, as they were called.

But it was here where they multiplied, on the mountain, and this was their town; here they were, too, when the sun, the moon, and the stars appeared, when it dawned and the face of the earth and the whole world was lighted. Here, too, began their song, which they call *camucú*; they sang it, but only the pain in their hearts and their innermost selves they expressed in their song. "Oh pity us! In Tulán we were lost, we were separated, and there our older and younger brothers stayed. Ah, we have seen the sun! but where are they now, that it has dawned?" so said the priests and the sacrificers of the Yaqui.

Because, in truth, the so-called Tohil is the same god of the Yaqui, the one called Yolcuat-Quitzaucuat.

"We became separated there in Tulán, in Zuyva, from there we went out together, and there our race was created when we came," they said to each other.

Then they remembered their older brothers and their younger brothers, the Yaqui, to whom dawn came there in the land which today is called Mexico. Part of the people remained there in the East, those called Tepeu Olimán, who stayed there, they say.

They felt much grief in their hearts, there in Hacavitz; and sad, too, were the people from Tamub and Ilocab, who were also there in the forest called Amac-Tan. Where dawn came to the priests and sacrificers of Tamub and to their god, who also was Tohil, because one and the same was the name of the god of the three branches of the Quiché people. And this is also the name of the god of the people of Rabinal, for there is little difference between that and the name of Hunto, as the god of the people of Rabinal is called; for that reason, it is said, they wanted to make their speech the same as that of the Quiché.

Well, the speech of the Cakchiquel is different, because the name of their god was different when they came from there, from Tulán-Zuyva. Tzotzihá Chimalcan was the name of their god, and today they speak a different tongue; and also from their god the families of Ahpozotzil and Ahpoxa, as they are called, took their names.

The speech of the god was also changed when they were given their god there, in Tulán, near the stone; their speech was changed when they came from Tulán in the darkness. And being together, dawn came to them and the light shone on all the tribes, in the order of the names of the gods of each of the tribes.

III. Chapter 10

And now we shall tell of their stay and abode there on the mountain, where the four called Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam were together. Their hearts mourned for Tohil, Avilix, and Hacavitz, whom they had placed among the air-plants and the moss.

We shall tell now how they made the sacrifices at the foot of the place where they had carried Tohil, when they arrived in the presence of Tohil and Avilix. They went to see them, to greet

them, and also to give them thanks for the arrival of the dawn. They were in the thicket amidst the stones, there in the woods. And only by magic art did they speak when the priests and sacrificers came before Tohil. They did not bring great gifts, only resin, the remains of the gum, called *noh*, and *pericón*, they burned before their gods.

Then Tohil spoke; only by a miracle he gave counsel to the priests and sacrificers. And they [the gods] spoke and said: "Truly here shall be our mountains and our valleys. We are yours; great shall be our lory and numerous our descendents, through the work of all men. Yours are all the tribes and we, your companions. Care for your town, and we shall give you your learning.

"Do not show us before the tribes when we are angered by the words of their mouths, or because of their conduct. Neither shall you permit us to fall into a snare. Give us, instead, the creatures of the woods and of the fields, and also the female deer, and the female birds. Come and give us a little of your blood, have pity upon us. You may have the skins of the deer and guard us from those whose eyes have deceived us.

"So, then, [the skin of] the deer shall be our symbol which you shall show before the tribes. When they ask 'Where is Tohil?' show the deerskin before their eyes. Neither shall you show yourselves. for you shall have other things to do. Great shall be their position; you shall dominate all the tribes; you shall bring your blood and their substance before us, and those who come to embrace us, shall be ours also," thus spoke Tohil, Avilix, and Hacavitz.

They had the appearance of youths, when those who came to offer gifts saw them. Then the persecution of the young of the birds and of the deer began, and the fruit of the chase was received by the priests and sacrificers. And when they found the young of the birds and the deer, they went at once to place the blood of the deer and of the birds in the mouths of the stones, that were Tohil and Avilix.

As soon as the blood had been drunk by the gods, the stones spoke, when the priests and the sacrificers came, when they came to bring their offerings. And they did the same before their symbols, burning *pericón* and *holom-ocox*.

The symbols of each one were there where they had been placed on the top of the mountain. But they [the priests] did not live in their houses by day, but walked over the mountains, and ate only the young horseflies, and the wasps, and the bees which they hunted; they had neither good food nor good drink. And neither were the roads from their homes known, nor did they know where their wives had remained.

PART IV: Chapter 1

NOW, THEN, MANY TOWNS WERE BEING founded, one by one, and the different branches of the tribes were being reunited and settled close to the roads, their roads which they had opened.

As for Balam-Quitzé, Balam-Acab, Mahucutah, and Iqui-Balam, it was not known where they were. But when they saw the tribes that passed on the roads, instantly they began to shout on the mountain-tops, howling like a coyote, screaming like a mountain cat, and imitating the roaring of the puma and the jaguar.

And the tribes seeing these things, as they walked, said: "Their screams are like those of the coyote, of the mountain cat, of the puma, and of the jaguar. They want to appear to the tribes as though they are not men, and they only do this to deceive us, we the people. Their hearts wish something. Surely, they do not frighten us with what they do. They mean something with the roaring of the puma, with the noise of the jaguar which they break into when they see one or two men walking; what they want is to make an end of us."

Every day they [the priests] came to their houses and to their women, carrying only the young of the bumblebees and the wasps, and the honeybees to give to their women.

Every day, too, they came before Tohil, Avilix, and Hacavitz and said in their hearts: "Here are Tohil, Avilix, and Hacavitz. We can offer them only the blood of the deer and the birds; we take only blood from our ears and our arms. Let us ask Tohil, Avilix, and Hacavitz for strength and vigor. What will [the tribes] say about the deaths of the people, which, one by one, we are killing?" they said to one another as they went into the presence of Tohil, Avilix, and Hacavitz.

Then they punctured their ears and their arms before the divinities; they caught their blood and put it in a vase near the stones. They were not really stones, but each one appeared in the likeness of a youth.

They were happy with the blood of the priests and sacrificers when they arrived with this example of their work.

"Follow their tracks [those of the animals which they sacrificed], there is your salvation!

"From there, from Tulán, whence you brought us," they were told, "came the skin, called Pazilizib, which was given to you, smeared with blood: spill your blood and let this be the offering of Tohil, Avilix, and Hacavitz."

IV. Chapter 2

Here is how Balam-Quitzé, Balam-Acab, Mahucutah. and Iqui-Balam began the abduction of the men of the tribes [of Vuc Amag].

Then came the killing of the tribes. They seized a man as he walked alone, or two when they were walking together, and it was not known when they were seized, and then they went to sacrifice them before Tohil. and Avilix. Afterward they sprinkled the blood on the road and placed the heads separately on the road. And the tribes said, "The jaguar ate them." And they spoke thus because like footprints of the jaguar were the tracks which they had left, although they did not show themselves.

Already, many were the men who had been carried off, but the tribes did not notice it until later. "Could it be Tohil. and Avilix who have been here among us? It must be they who are nourished by the priests and the sacrificers. Where are their homes? Let us follow their footprints!" said all the people.

Then they held a council among themselves. Then they began to follow the footprints of the priests and the sacrificers, but they were not clear. There were only tracks of wild animals,

tracks of jaguars that they saw, but the tracks were not distinct. The first ones were not clear because they were reversed, as though made so that the people went astray, and their way was not clear. A mist formed, a black rain fell and made much mud; and it began to drizzle. This was what the people saw before them. And their hearts became weary of searching and following them on the roads, because the beings of Tohil, Avilix, and Hacavitz were so great that the latter withdrew to the summit of the mountains, in the vicinity of the people, whom they killed.

Thus began the abduction of the people when the sorcerers caught the tribes in the roads and sacrificed them before Tohil. Avilix, and Hacavitz; but their [own] sons they saved there on the mountain.

Tohil, Avilix, and Hacavitz had the appearance of three youths and walked by virtue of the magic stone. There was a river in which they bathed, at the edge of the water and only there did they appear. For this reason it was called "in the Bathing Place of Tohil," and this was the name of the river. Often the tribes saw them, but they disappeared immediately, when they were seen by the people.

Then they had tidings of where Balam-Quitzé, Balam-Acab, Mahucutah. and Iqui-Balam were, and at once the tribes held council as to the way in which they could be killed.

In the first place the tribes wanted to discuss the way to overcome Tohil, Avilix, and Hacavitz. And all the priests and sacrificers [of the tribes] said to the people: "Arise, all of you, call everyone, let there be not one group, nor two groups, among us who remain behind the others."

All assembled, they assembled in great numbers and deliberated among themselves. And they said, asking each other: "What shall we do to overcome the Quiché of *Cavec* by whose hands our sons and vassals are being killed? it is not known how our people are being destroyed. If we must perish, because of these abductions, so let it be; and if the power of Tohil, Avilix, and Hacavitz is so great then let our god be this Tohil, and God grant that you take him captive. It is not possible that they shall overcome us. Are there not, perchance, enough men among us? And the *Cavec* are not many," they said, when all were assembled.

And some said, turning to the tribes, when they spoke: "Who has seen those who bathe in the river every day? If they are Tohil, Avilix, and Hacavitz, then we shall overcome them first, and afterward, we shall begin the destruction of the priests and sacrificers." This, many of them said, when they talked.

"But how shall we overcome them?" they asked again.

"This shall be our way of overcoming them. Since they have the appearance of youths when they let themselves be seen in the water, then let two maidens who are really beautiful, and very lovely, go and provoke in them desire to possess them," they said.

"Very well. Let us go, then; let us find two beautiful maidens," they exclaimed, and then they went to find their daughters. And truly beautiful were the maidens.

Then they instructed the maidens: "Go, our daughters, go to wash clothes at the river, and if you see the three youths, undress before them, and if their hearts desire you, call to them. If

they say to you, 'May we come to you?' answer, 'Yes.' And when they ask: 'Where do you come from, whose daughters are you?' tell them, 'We are daughters of the lords.'

"Then you shall say: 'Give us a token of yours.' And if after they have given you something, they want to kiss your faces, really give yourselves to them. And if you do not give yourselves to them, we shall kill you. Afterward our hearts shall be satisfied. When you have the token, bring it here, and this shall be proof, in our judgment, that they were joined with you."

Thus spoke the lords when they advised the two maidens. Here are their names: Xtah was the name of one of the maidens, and the other was Xpuch. And the two maidens, Xtah and Xpuch, were sent to the river, to the bathing place of Tohil, Avilix, and Hacavitz. This is what was decided by all the tribes.

They went at once, well adorned, and they were truly very beautiful when they went there where Tohil was bathing, so that they would be seen, when they were washing. When they went, the lords were happy because they had sent their two daughters.

As soon as the latter arrived at the river, they began to wash. The two had already taken off their clothes and were bending over the stones when Tohil, Avilix, and Hacavitz came. They came there to the edge of the river and paused a moment, surprised to see the two young girls who were washing, and the girls became ashamed at the moment when Tohil came. But the two girls did not appeal to Tohil. And then he asked them: "Where did you come from?" Thus he asked the two maidens, and added: "What do you want that you come here to the edge of our water?"

And they answered: "The lords have sent us to come here. 'Go look at the faces of Tohil and speak with them,' the lords told us; and 'then bring proof that you have seen their faces.' they told us." Thus the two girls spoke, making known the purpose of their coming.

Well, what the tribes wanted was that the two maidens would be violated by the incarnation of Tohil. But Tohil, Avilix, and Hacavitz said, speaking again to Xtah and Xpuch, as the two maidens were called: "Very well, with you shall go proof of our conversation. Wait a little and then you shall give it to the lords." they said.

Then they held council with the priests and sacrificers and they said to Balam-Quitzé, Balam-Acab, Mahucutah, and Iqui-Balam: "Paint three capes, paint on them the symbol of your being in order that it may be recognized by the tribes, when the maidens who are washing carry them back. Give the capes to them," Balam-Quitzé, Balam-Acab, and Mahucutah were told.

At once the three began to paint. First, Balam-Quitzé painted a jaguar; the figure was made and painted on the surface of the cape. Then Balam-Acab painted the figure of an eagle on the surface of a cape; and then Mahucutah painted bumblebees and wasps all over, figures and drawings of which he painted on the cloth. And the three finished their painting, three pieces they painted.

Then they went to give the capes to Xtah and Xpuch, as they were called, and Balam-Quitzé, Balam-Acab, and Mahucutah said to them: "Here is proof of your conversation [with us]; take these before the lords: Say to them, 'In truth, Tohil has talked to us; here we bring the proof,' tell them, and have them dress themselves in the clothes which you will give them." This they

told the maidens when they bade them farewell. The latter went at once, carrying the above-mentioned painted capes.

When they arrived, the lords were filled with joy to see their faces and their hands, from which hung the things the maidens had gone for.

"Did you see the face of Tohil?" they asked them.

"Yes, we saw it," answered Xtah and Xpuch.

"Very well. And you bring the token, do you not?" the lords asked, thinking that this was the proof of their sin.

Then the maidens held out the painted capes, all covered with [the figures] of jaguars and eagles, and covered with bumblebees and wasps, painted on the surface of the cloth and which shone before them. At once they felt a desire to put the capes on.

The jaguar did nothing when the lord threw the first painting on his back. Then the lord put on the second painting, with the figure of the eagle. The lord felt very well wrapped within it. And he turned about before all of them.

Then he undressed before all, and put on the third painted cape. And now he had on himself, the bumblebees and wasps which were on it. Instantly the bumblebees and the wasps stung his flesh. And not being able to suffer the stings of these insects, he began to scream because of the insects whose figures were painted on the cloth, the painting of Mahucutah, which was the third one that had been painted.

Thus they were overcome. Then the lords reprimanded the two maidens named Xtah and Xpuch: "What kind of clothes are those which you have brought? Where did you go to bring them, you devils?" they said to the maidens when they reprimanded them. All the people were overcome by Tohil.

Well, what they [the lords] wanted was that Tohil should have gone to amuse himself with Xtah and Xpuch, and that the [maidens] would have become whores, for the tribes believed that they would serve to tempt them. But it was not possible that they should overcome them, thanks to those miraculous men, Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam.

IV. Chapter 3

Afterwards the tribes held council again.

"What shall we do with them? in truth, their estate is very great," they said when they assembled again in council.

"Well, then, we shall waylay them, we shall kill them, we shall arm ourselves with bows and with shields. Perchance, are we not many? Let there not be one or two among us who remains behind." This they said when they held council. And all the people armed. Many were the warriors when all the people gathered together for the killing.

Meanwhile, there were Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam, they were on the mountain Hacavitz, on the hill of this name. They were there in order to save their sons who were on the mountain.

And they did not have many people, they did not have multitudes such as the multitudes of the tribes. The summit of the mountain where they had their place was small, and for that reason when the tribes assembled together and rose, they decided to kill all of them.

In this manner, then, took place the reunion of all the people, all armed with their bows and their shields. It is impossible to describe the richness of their arms; the appearance of all the chiefs and men was very beautiful, and certainly all obeyed their orders.

"They shall positively be destroyed, and as for Tohil. he shall be our god, we shall worship him, if we take him prisoner," they said to each other. But Tohil knew everything and so did Balam-Quitze, Balam-Acab, and Mahucutah. They heard all the plans, because they did not sleep, or rest, from the time the warriors armed themselves.

Then all the warriors rose up and started out on the road, intending to enter [the town] by night. But they did not arrive, for all the warriors were watching on the road, and then they were destroyed by Balam-Quitze, Balam-Acab, and Mahucutah.

All remained watching along the road, but they heard nothing and they finally fell asleep. Then they [Balam-Quitze, Balam-Acab, and Mahucutah] began to pull out their eyelashes and their beards; they took off the metal ornaments from their throats--their crowns and necklaces. And they took the metal from the handles of their spears. They did this to punish them and humiliate them, and give them an example of the power of the Quiché people.

When they [the warriors] awoke, they wanted to take their crowns and their staffs, but they no longer had metal in the staff-handles, nor their crowns. "Who has stripped us? Who has torn out our beards? Whence have they come to rob us of our precious metals?" said all of the warriors. "Can it be these devils who are carrying off the men? But they shall not succeed in frightening us. We shall enter their town by force, and we shall again see the face of our silver; this we shall do," said all the tribes, and all truly intended to carry out their word.

Meanwhile the hearts of the priests and the sacrificers on the summit of the mountain were calm. And Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam having talked together, they built a wall at the edge of the town and enclosed it with boards and thorns. Then they made figures in the form of men, and put them in rows on the wall, armed them with shields and arrows and adorned them, putting metal crowns on their heads. These they put on the simple wooden figures, they adorned them with the metal which they had taken from the tribes on the road and with them they decorated the figures.

They made a moat around the town, and then they asked advice of Tohil: "Shall they kill us? Shall they overcome us?" their hearts said to Tohil.

"Do not be troubled! I am here. And this you will use. Do not be afraid," he [Tohil] said to Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam, when they were given the bumblebees and the wasps. This is what they went to fetch. And when they came, they put them inside four big gourds which were placed around the town. They shut the bumblebees and wasps inside the gourds, in order to fight the people with them.

The city was watched from afar, spied upon and observed by the scouts of the tribes. "They are not many," they said. But they saw only the wooden figures which lightly moved their bows and their shields. In truth, they had the appearance of men, had in truth the appearance of warriors when the tribes looked at them, and all the tribes were happy because they saw that they were not many.

There were many tribes; it was not possible to count the people, the warriors and soldiers who were going to kill Balam-Quitze, Balam-Acab, and Mahucutah, who were on the mountain Hacavitz, the name of the place where they were found.

Now we shall tell about their arrival.

IV. Chapter 4

They were there, then, Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam, were all together on the mountain with their wives and their children when all the warriors and soldiers came. The tribes did not number sixteen thousand, or twenty-four thousand men, [but even more].

They surrounded the town, crying out loudly, armed with arrows and shields, beating drums, giving war whoops, whistling, shouting, inciting them to fight, when they arrived in front of the town.

But the priests and sacrificers were not frightened; they only looked at them from the edge of the wall, where they were in good order with their wives and children. They thought only of the strength and the shouting of the tribes when they came up the side of the mountain.

Shortly before they were about to throw themselves at the entrance of the town, the four gourds which were at the edge of the town were opened and the bumblebees and the wasps came out of the gourds; like a great cloud of smoke they emerged from the gourds. And thus the warriors perished because of the insects which stung the pupils of their eyes and fastened themselves to their noses, their mouths, their legs, and their arms. "Where are they," they said, "those who went to get and bring in all the bumblebees and wasps that are here?"

They went straight to sting the pupils of their eyes, the little insects buzzing in swarms over each one of the men; and the latter, stunned by the bumblebees and wasps, could no longer grasp their bows and their shields, which were broken on the ground.

When the warriors fell, they were stretched out on the mountainside, and they no longer felt when they were hit with arrows, and wounded by the axes. Balam-Quitze and Balam-Acab used only blunt sticks. Their wives also took part in this killing. Only a part [of them] returned and all the tribes began to flee. But the first ones caught were put to death; not a few of the men died, and those who died were not the ones they intended to kill but those who were attacked by the insects. Neither was it a deed of valor, because the warriors were not killed by arrows or by shields.

Then all the tribes surrendered. The people humbled themselves before Balam-Quitze, Balam-Acab, and Mahucutah. "Have pity on us, do not kill us," they exclaimed.

"Very well. Although you deserve to die, you shall [instead] become [our] vassals for the rest of your lives," they said to them.

In this way were all of the tribes destroyed by our first mothers and fathers; and this happened there on the mountain Hacavitz, as it is now called. This was where they first settled, where they multiplied and increased, begot their daughters, gave being to their sons, on the mountain Hacavitz.

They were, then, very happy when they had overcome all the tribes, whom they destroyed there on the mountaintop. In this way they carried out the destruction of the tribes, of all the tribes. After this their hearts rested. And they said to their sons that when they [the tribes] intended to kill them, the hour of their own death was approaching.

And now we shall tell of the death of Balam-Quitzé, Balam-Acab, Mahucutah, and Iqui-Balam, as they were called.

IV. Chapter 5

And as they had had a presentiment of their death, they counseled their children. They were not ill, they had neither pain nor agony when they gave their advice to their children.

These are the names of their sons: Balam-Quitzé had two sons, Qocaib the first was called, and Qocavib was the name of the second son of Balam-Quitzé, the grandfather and father of those of Cavec.

And these are the two sons which Balam-Acab begot, here are their names: Qoacul the first of his sons was called, and Qoacutec was the name of the second son of Balam-Acab [the founder] of those of Nihaib.

Mahucutah had but one son, who was called Qoahau.

Those three had sons, but Iqui-Balam did not have children. They were really the sacrificers, and these are the names of their sons.

So, then, they bade [their sons] farewell. The four were together and they began to sing, feeling sad in their hearts; and their hearts wept when they sang the *camucú*, as the song is called which they sang when they bade farewell to their sons.

"Oh, our sons! we are going, we are going away; sane advice and wise counsel we leave you. And you, also, who came from our distant country, oh our wives! they said to their women, and they bade farewell to each one. "We are going back to our town, there already in his place is Our Lord of the stags, to be seen there in the sky. We are going to begin our return, we have completed our mission [here], our days are ended. Think, then, of us, do not erase us [from your memory], nor forget us. You shall see your homes and your mountains again; settle, there, and so let it be! Go on your way and you shall see again the place from which we came."

These words they said when they bade them farewell. Then Balam-Quitzé left the symbol of his being: "This is a remembrance which I leave you. This shall be your power. I take my

leave filled with sorrow," he added. Then he left the symbol of his being, the *Pizom-Gagal*, as it was called, whose form was invisible because it was wrapped up and could not be unwrapped; the seam did not show because it was not seen when they wrapped it up.

In this way they took their leave and immediately they disappeared there on the summit of the mountain Hacavitz.

They [the four lords] were not buried by their wives nor by their children, because they were not seen when they disappeared. Only their leaving was seen dearly, and therefore the bundle was very dear to them. It was the reminder of their fathers and at once they burned incense before this reminder of their fathers.

And then the lords, who succeeded Balam-Quitzé, begot new generations of men, and this was the beginning of the grandfathers and fathers of those of Cavec; but their sons, those called Qocaib and Qocavib, did not disappear.

In this way the four died, our first grandfathers and fathers; in this way they disappeared, leaving their children on the mountain Hacavitz, there where they have remained.

And the people being subdued already, and their grandeur ended, the tribes no longer had power, and all lived to serve daily.

They remembered their fathers; great was the glory of the bundle to them. Never did they unwrap it, but it was always wrapped, and with them. Bundle of Greatness they called it when they extolled and named that which their fathers had left in their care as a symbol of their being.

In this manner, then, came about the disappearance and end of Balam-Quitzé, Balam-Acab, Mahucutah, and Iqui-Balam, the first men who came there from the other side of the sea, where the sun rises. They had been here a long time when they died, being very old, the chiefs and sacrificers, as they were called.

IV. Chapter 6

Then they decided to go to the east, thinking thus to fulfill the command of their fathers which they had not forgotten. It had been a long time since their fathers had died, when the tribes gave them their wives, and thus they acquired many relatives-in-law, when the three took wives.

And starting on their journey, they said: "We are going to the East, there whence came our fathers." So they said when the three sons set out. One was called Qocaib, and he was the son of Balam-Quitze, of the Cavec. The one called Qoacutec was son of Balam-Acab, of the Nihaib; and the other called Qoahau, was son of Mahucutah, of the Ahau-Quiché.

These, then, are the names of those who went there to the other side of the sea; the three went then, and were endowed with intelligence and experience, but they were not common men. They took leave of all their brothers and relatives and left joyfully. "We shall not die; we shall return," said the three when they left.

Certainly they crossed the sea when they came there to the East, when they went to receive the investiture of the kingdom. And this was the name of the Lord, King of the East, where they went. When they arrived before Lord Nacxit, which was the name of the great lord, the only supreme judge of all the kingdoms, he gave them the insignia of the kingdom and all its distinctive symbols. Then came the insignia of Ahpop and Ahpop-Camhá, and then the insignia of the grandeur and the sovereignty of the Ahpop and the Ahpop-Camhá. And Nacxit ended by giving them the insignia of royalty, which are: the canopy, the throne, the flutes of bone, the *cham-cham*, yellow beads, puma claws, jaguar claws, the heads and feet of the deer, dais, snail shells, tobacco, little gourds, parrot feathers, standards of royal aigrette feathers, *tatam*, and *caxcon*. All the foregoing they carried, those who came after going to the other side of the sea to receive the paintings of Tulán, the paintings, as these were called, in which they wrote their histories.

Then, having arrived at their town called Hacavitz, all the people of Tamub and of Ilocab assembled there; all the tribes were assembled and were filled with joy when Qocaib, Qoacutec, and Qoahau arrived, and there they again assumed the rule of the tribes.

The people of Rabinal, the Cakchiquel, and the people of Tziquinahá rejoiced. Before them they showed the insignia of the grandeur of the kingdom. Great, too, were the tribes, although they had not finished showing their might. And they were there in Hacavitz, all were there with those who came from the East. There they spent much time; there on the summit of the mountain they were in great numbers.

There, too, the wives of Balam-Quitzé, Balam-Acab, and Mahucutah died.

Later they left, abandoning their country, and searching for other places in which to settle. innumerable were the places in which they settled, where they were, and which they named. There our first mothers and our first fathers were reunited and increased. So said the old people when they told how they left their first capital, called Hacavitz, and went to found another capital, called *Chi-Quix*.

They were a long time in this other town, where they had daughters and sons. There were many of them there, and there were four other places, to each of which they gave the name of their town. Their daughters and sons married; they simply gave them away [in marriage] and the presents and favors they received they considered as the price for their daughters, and, in this way, they lived happily.

Afterward they went through each one of the wards of the town, the different names of which are: Chi-Quix, Chichac, Humetahá, Culbá, and Cavinal. These were the names of the places where they settled. And they surveyed the hills and their towns and sought the uninhabited places, for, all together, they were now very many.

Those who had gone to the East to receive the sovereignty were now dead. They were already old when they arrived at each of the towns. They did not become accustomed to the different places through which they passed; they suffered many hardships and troubles and only after a long time did the grandfathers and fathers arrive at their town. Here is the name of the city to which they came.

Finally Qocaib returned and gave an account of his mission. "He brought the titles of Ahpop, Ahtzalam, Tzanchinamital, and many others; he showed the insignia which must accompany

these titles, and they were the claws of the jaguars and eagles, skins of other animals, and also stones, sticks, etc." Seeing his wife with a newly born child in her arms, he asked whence it had come. "'It is of thy blood,' answered the woman, 'of thy flesh and thy same bones.'" Qocaib accepted the explanation, and taking the child's cradle said: "'From today on, and forever this child shall be called Balam Conaché.' And the latter began the House of Conaché and Iztayul." With respect to the second journey of the Quiché princes, the Título says that they returned satisfied to Hacavitz Chipal, and displayed the signs and symbols which they brought. }

IV. Chapter 7

Chi-Izmachí is the name of the site of their town, where they were afterward and where they settled. There, under the fourth generation of kings, they developed their power and constructed buildings of mortar and stone.

And Conaché and Beleheb-Queh, the Galel-Ahau, ruled. Then king Cotuhá and Iztayul reigned, as they were called the Ahpop and the Ahpop-Camhá, who reigned there in Izmachí, which was the beautiful city which they had built.

Only three great houses were there in Izmachí. There were not twenty-four great houses then, only their three great houses, only a great house of the Cavec, only a great house of the Nihaib, and only one of the people of Ahau-Quiché. Only two had great houses, the two branches of the family [the Quiché and the Tamub].

And there they were in Izmachí with only one thought, without disputes or difficulties, peaceful was the kingdom, they had no quarrels nor disputes, in their hearts were only peace and happiness. They were not envious nor jealous. Their grandeur was limited, they had not thought of aggrandizing themselves, nor of expanding. When they tried to do it, they fastened the shield there in Izmachí but only to give a sign of their empire, as a symbol of their power and a symbol of their greatness.

Seeing this, the people of Ilocab began the war; they wanted to kill King Cotuhá, wishing to have a chief of their own. And as for Lord Iztayul, they wanted to punish him, that he be punished and killed by those of Ilocab. But their evil plans against King Cotuhá did not succeed, for he fell upon them before the people of Ilocab were able to kill him.

This, then, was the beginning of the revolution and the dissensions of the war. First they attacked the town, and the warriors came. And what they wanted was to ruin the Quiché race; they wanted to reign alone. But they only came to die; they were captured and fell into captivity, and few among them succeeded in escaping.

Immediately afterward the sacrifices began; the people of Ilocab were sacrificed before the god, and this was the punishment for their sins by order of King Cotuhá. Many also fell into slavery and servitude; they only went to give themselves up to be overcome because of having arranged the war against the lords and against the town. The destruction and ruin of the Quiché race and their king was what they wished, but they did not succeed in accomplishing it.

In this way the sacrifice of men began before the gods, when the war of the shields broke out, which was the reason that they began the fortifications of the city of Izmachí.

There began and originated their power, because the empire of the King of the Quiché was really large. They were in every sense marvelous kings; there was no one who could dominate them, neither was there anyone who could humble them. And at the same time they were the builders of the grandeur of the kingdom which they had founded there in Izmachí.

There the fear of god waxed, they were inspired with awe, and the tribes large and small were filled with fear, for they saw the arrival of the captives, those who were sacrificed and killed because of the power and sovereignty of King Cotuhá, the King Iztayul, and the people of Nihai and Ahau-Quiché.

There were only three branches of the [Quiché] family there in Izmachí, as the town was called, and there they also began the feasts and orgies for their daughters when [suitors] came to ask for them in marriage.

There the so-called three great houses gathered, and there they drank their drinks, there they also ate their food, which was the price of their sisters, the price of their daughters, and their hearts were joyful when they did it, and they ate and drank in the great houses.

"In this way we show our gratitude, and thus we open the road for our posterity and our descendants, this is the demonstration of our consent to their becoming husbands and wives," they said.

There they identified themselves, and there they took their names; they distributed themselves in clans in the seven principal tribes and in cantons.

"Let us unite, we of the Cavec, we of the Nihai, and we of the Ahau-Quiché," said the three clans, and the three great houses. For a long time they were there in Izmachí, until they found and saw another town, and abandoned that of Izmachí.

IV. Chapter 8

AFTER THEY HAD LEFT THERE, THEY CAME here to the town of Gumarcaah, as the Quiché named it when Kings Cotuhá and Gucumatz and all the lords came. There had then begun the fifth generation of men, since the beginning of civilization and of the population, the beginning of the existence of the nation.

There, then, they built many houses and at the same time constructed the temple of God; in the center of the high part of the town they located it when they arrived and settled there.

Then their empire grew. They were very numerous, when they held their council in their great houses. They reunited, but later divided, because dissensions had arisen and jealousies grew up amongst them over the price for their sisters and their daughters, and because they no longer drank together.

This, then, was the reason why they divided and why they turned against each other, and they threw the skulls of the dead, they hurled them around among each other.

Then they divided into nine families, and having ended the dispute over the sisters and the daughters, they carried out the plan of dividing the kingdom into twenty-four great houses, as they did. It is a long time since they came here to their town, and finished the twenty-four great houses, there

in the City of Gumarcaah, which was blessed by the Bishop. Later the city was abandoned.

There they increased, there they installed their splendid thrones and royal seats, and they distributed their honors among all the lords. The nine lords of Cavec formed nine families; the lords of Nihaib formed another nine; the lords of Ahau-Quiché formed another four; and the lords of Zaquic formed another two families.

They became very numerous, and many also followed each of the lords; these were the first among their vassals, and each of the lords had large families.

We shall tell now the names of the lords of each of the great houses. Here, then, are the names of the lords of Cavec. The first of the lords was Ahpop, [then] Ahpop-Camhá, Ah-Tohil, Ah-Gucumatz, Nim-Chocoh-Cavec, Popol-Vinac-Chituy, Lolmet-Quehnay, Popol-Vinac Pa-Hom Tzalat, and Uchuch-Camhá.

These, then, were the lords of Cavec, nine lords, each one of which had his great house, which afterward will appear again.

Here then are the lords of Nihaib. The first was Ahau-Galel, then Ahau-Ahtzic-Vinac, Galel-Camhá, Nima-Camhá, Uchuch-Camhá, Nim-Chocoh-Nihaibab, Avilix, Yacolatam, Utzampop-Zalclatol, and Nimá-Lolmet-Ycoltux, the nine lords of Nihaib.

And as for those of Ahau-Quiché, these are the names of the lords: Ahtzic-Vinac, Ahau-Lolmet, Ahau-Nim-Chocoh-Ahau, and Ahau-Hacavitz, four lords of Ahau-Quiché, in the order of their great houses.

And the house of Zaquic had two families, the Lords Tzutuhá and Galel Zaquic. These two lords had only one great house.

IV. Chapter 9

In this way [the number] of the twenty-four lords was completed and the twenty-four great houses came into being. Thus the grandeur and power of the sons of the Quiché grew, when they built the town of the ravines out of stone and mortar.

Then the small tribes and the great tribes came before the king. The Quiché increased when their glory and majesty waxed, when they raised the house of their gods and the house of their lords. But it was not they who worked, or constructed their houses either, or made the house of the gods, for they were [made] by their sons and vassals, who had multiplied.

And they were not cheating them, nor robbing them, nor seizing them by force, because in reality each belonged to the lords, and many of their brothers and relatives had come together and had assembled, to hear the commands of each of the lords.

The lords were really loved and great was their glory; and the sons and the vassals held the birthdays of the lords in great respect when the inhabitants of the country and the city multiplied.

But it did not happen that all the tribes delivered themselves up, and neither did the country and towns [the inhabitants of them] fall in battle, but instead they increased, because of the marvels of the lords, King Gucumatz and King Cotuhá. Gucumatz was truly a marvelous king. For seven days he mounted to the skies and for seven days he went down into Xibalba; seven days he changed himself into a snake and really became a serpent; for seven days he changed himself into an eagle; for seven days he became a jaguar; and his appearance was really that of an eagle and a jaguar. Another seven days he changed himself into clotted blood and was only motionless blood.

The nature of this king was really marvelous, and all the other lords were filled with terror before him. Tidings of the wonderful nature of the King were spread and all the lords of the towns heard it. And this was the beginning of the grandeur of the Quiché, when King Gucumatz gave these signs of his power. His sons and his grandsons never forgot him. And he did not do this in order to be an extraordinary king, he did it as a means of dominating all the towns, as a means of showing that only one was called upon to be chief of the people.

The generation of the wonderful king called Gucumatz was the fourth generation, and Gucumatz was also the Ahpop and the Ahpop-Camhá.

They left successors and descendants who reigned and ruled, and begot children, and did many things. Tepepul and Iztayul whose reign was the fifth generation of kings were begotten; and in the same way, each of the generations of these lords had succession.

IV. Chapter 10

Here are the names of the sixth generation of kings. There were two great kings, the first was called Gag-Quicab, and the other, Cavizimah, and they performed heroic deeds and aggrandized the Quiché; for surely they were of marvelous nature.

Here is the destruction and division of the fields and the towns of the neighboring nations, small and large. Among them was that, which in olden times, was the country of the Cakchiquel, the present Chuvilá, and the country of the people of Rabinal, Pamacá, the country of the people of Caoqué, Zaccabahá and the towns of the peoples of Zaculeu, of Chuvi-Miquiná, Xelahun, Chuva-Tzac, and Tzolahche.

These [peoples] hated Quicab. He made war on them and certainly conquered and destroyed the fields and towns of the people of Rabinal, the Cakchiquel, and the people of Zaculeu; he came and conquered all the towns, and the soldiers of Quicab carried his arms to distant parts. One or two tribes did not bring tribute, and then he fell upon all the towns and they were forced to bring tribute to Quicab and Cavizimah.

They were made slaves, they were wounded, and they were killed with arrows against the trees [to which they had been tied] and for them there was no longer any glory, they no longer had power. In this way came about the destruction of the towns, which were instantly razed to

the ground. Like a flash of lightning which strikes and shatters the rock, so, in an instant were the conquered people filled with terror.

Before Colché, as a symbol of a town destroyed by him, there is now a pile of stones, which look almost as if they had been cut With the edge of an ax. it is there on the coast, called Petatayub, and it may be clearly seen today by people who pass, as proof of the valor of Quicab.

They could neither kill him nor overcome him, for, in truth, he was a brave man, and all the people rendered tribute unto him.

And all the lords, having gathered in council, went to fortify the ravines and the towns, having conquered the towns of all the tribes. Then spies went out to observe the enemy and they founded something like towns in the occupied places. "Just in case by chance the tribes might return to occupy the town," they said, when they reassembled in council.

Then they went out to [take up] their positions. "These shall be like our forts and our town, our walls and defenses, here shall our valor and our manhood be proved," said all the lords, when they went to take up the position assigned to each clan in order to fight the enemy.

And having received their orders they went to the places that had been founded in the land of the tribes. "Go there, for now it is our land. Do not be afraid, if there are still enemies who come to kill you, come quickly and let me know, and I will go to kill them!" said Quicab, when he took leave of all of them in the presence of the Galel and the Ahtzic-Vinac.

Then the bowmen and the slingers, as they were called, set out. Then the grandfathers and the fathers of all the Quiché nation took their [battle] positions. They were on each one of the mountains, and they were like guards--of the mountains; they were guarding [with] their bows and slings; they were the sentinels of the war. They were not of different origin, nor did they have a different god, when they went. They went only to fortify their towns.

Then all the people of Uvilá went out, those of Chulimal, Zaquiya, Xahbaquieh, Chi-Temah, Vahxalahuh, and the people of Cabracán, Chabicac-Chi-Hunahpú, and those of Macá, those of Xoyabah and those of Zaccabahá, those of Ziyahá, those of Miquiná, those of Xelahun, and those of the coast. They went to observe the war and to guard the land, when they went by order of Quicab and Cavizimah, [who were] the Ahpop and the Ahpop-Camhá, and the Galel and the Ahtzic-Vinac, who were the four lords.

They were sent in order to watch the enemies of Quicab and Cavizimah, names of the kings, both of the House of Cavec, of Queemá, name of the lord of the people of Nihaib, and of Achac-Iboy, the name of the lord of the people of Ahau-Quiché. These were the names of the lords who sent them, When their sons and vassals went to the mountains, to each one of the mountains.

They went at once and they took captives; they brought their prisoners into the presence of Quicab, Cavizimah, the Galel, and the Ahtzic-Vinac. The bowmen and slingers made war, taking captives and prisoners. Some of the defenders of the positions were heroes, and the lords gave [them gifts] and lavished rewards upon them, when they came to deliver up all their captives and prisoners.

Later they gathered in council by order of the lords, the Ahpop, the Ahpop-Camhá, the Galel, and the Ahtzic-Vinac, and they decided and said, that those who were there first should have the rank of representing their families. "I am the Ahpop! I am the Ahpop-Camhá! Mine shall be the rank of the Ahpop; meanwhile thou, the Ahau-Galel, shall have the rank of Galel," said all the lords when they held council.

Those of Tamub and of Ilocab did likewise; equal in position were the three clans of the Quiché when for the first time they named their sons and vassals captains, and ennobled them. This was the result of the council. But they were not made captains here in Quiché. The mountain where the sons and vassals were made captains for the first time has its name, when all were sent, each one to his mountain, and all were reunited. Xebalax and Xecamax are the names of the mountains where they were made captains and they received their commands. This happened in Chulimal.

In this manner was the naming, the promotion, and distinction of the twenty Galel, of the twenty Ahpop, who were named by the Ahpop and the Ahpop-Camhá and by the Galel and the Ahtzic-Vinac. All of the Galel-Ahpops received their rank: eleven Nim-Chocoh, Galel-Ahau, Galel-Zaquic, Galel-Achih, Rahpop-Achih, Rahtzalam-Achih, Utzam-Achih were the names which the warriors received when their titles and distinctions were conferred upon them, as they were on their thrones and on their seats, being the first sons and vassals of the Quiché nation, their spies, their scouts, the bowmen, the slingers, the walls, doors, forts, and bastions of the Quiché.

Those of Tamub and Ilocab also did thus; they named and ennobled the first sons and vassals who were in each place.

This, then, was the origin of the Galel-Ahpops, and of the titles which are now preserved in each one of these places. This is the way their titles were created, by the Ahpop and the Ahpop-Camhá, by the Galel and the Ahtzic-Vinac they were created.

IV. Chapter 11

WE SHALL NOW TELL OF THE HOUSE of the God. The house was also given the same name as the god. The Great Edifice of Tohil was the name of the Temple of Tohil, of those of Cavec. Avilix was the name of the Temple of Avilix, of the people of Nihaib; and Hacavitz was the name of the Temple of the God of the people of Ahau-Quiché.

Tzutuhá, which is seen in Cahbahá, is the name of a large edifice in which there was a stone which all the lords of Quiché worshiped and which was also worshiped by all the tribes.

The people first offered their sacrifices before Tohil, and afterward went to pay their respects to the Ahpop and the Ahpop-Camhá. Then they went to Present their gorgeous feathers and their tribute before the king. And the kings whom they maintained were the Ahpop and the Ahpop-Camhá, who had conquered their towns.

Great lords and wonderful men were the marvelous kings Gucumatz and Cotuhá, the marvelous kings Quicab and Cavizimah. They knew if there would be war, and everything was clear before their eyes; they saw if there would be death and hunger, if there would be

strife. They well knew that there was a place where it could be seen, that there was a book which they called the *Popol Vuh*.

But not only in this way was the estate of the lords great, great also were their fasts. And this was in recognition of their having been created, and in recognition of their having been given their kingdoms. They fasted a long time and made sacrifices to their gods. Here is how they fasted: Nine men fasted and another nine made sacrifices and burned incense. Thirteen more men fasted, and another thirteen more made offerings and burned incense before Tohil. And while before their god, they nourished themselves only with fruits, with *zapotes*, *matasanos*, and *jocotes*. And they did not eat any *tortillas*. Now if there were seventeen men who made sacrifice, or ten who fasted, the truth is they did not eat. They fulfilled their great precepts, and thus showed their position as lords.

Neither had they women to sleep with, but they remained alone, fasting. They were in the House of God, all day they prayed, burning incense and making sacrifices. Thus they remained from dusk until dawn, grieving in their hearts and in their breasts, and begging for happiness and life for their sons and vassals as well as for their kingdom, and raising their faces to the sky.

Here are their petitions to their god, when they prayed; and this was the supplication of their hearts:

"Oh, Thou, beauty of the day! Thou, Huracán; Thou, Heart of Heaven and of Earth! Thou, giver of richness, and giver of the daughters and the sons! Turn toward us your power and your riches; grant life and growth unto my sons and vassals; let those who must maintain and nourish Thee multiply and increase; those who invoke Thee on the roads, in the fields, on the banks of the rivers, in the ravines, under the trees, under the vines.

"Give them daughters and sons. Let them not meet disgrace, nor misfortune, let not the deceiver come behind or before them. Let them not fall, let them not be wounded, let them not fornicate, nor be condemned by justice. Let them not fall on the descent or on the ascent of the road. Let them not encounter obstacles back of them or before them, nor anything which strikes them. Grant them good roads, beautiful, level roads. Let them not have misfortune, nor disgrace, through Thy fault, through Thy sorceries.

"Grant a good life to those who must give Thee sustenance and place food in Thy mouth, in Thy presence, to Thee, Heart of Heaven, Heart of Earth, Bundle of Majesty. And Thou, Tohil; Thou, Avilix; Thou, Hacavitz, Arch of the Sky, Surface of the Earth, the Four Corners, the Four Cardinal Points. Let there be but peace and tranquility in Thy mouth, in Thy presence, oh, God!"

Thus [spoke] the lords, while within, the nine men fasted, the thirteen men, and the seventeen men. During the day they fasted and their hearts grieved for their sons and vassals and for all their wives and their children when each of the lords made his offering.

This was the price of a happy life, the price of power, the price of the authority of the Ahpop, of the Ahpop-Camhá, of the Galel and of the Ahtzic-Vinac. Two by two they ruled, each pair succeeding the other in order to bear the burden of the people of all the Quiché nation.

One only was the origin of their tradition and [one only] the origin of the manner of maintaining and sustaining, and one only, too, was the origin of the tradition and the customs of those of Tamub and Ilocab and the people of Rabinal and the Cakchiquel, those of Tziquinahá, of Tuhalahá and Uchabahá. And there was but one trunk [a single family] when they heard there in Quiché what all of them were to do.

But it was not only thus that they reigned. They did not squander the gifts of those whom they sustained and nourished, but they ate and drank them. Neither did they buy them; they had won and seized their empire, their power, and their sovereignty.

And it was not at small cost, that they conquered the fields and the towns; the small towns and the large towns paid high ransoms; they brought precious stones and metals, they brought honey of the bees, bracelets, bracelets of emeralds and other stones, and brought garlands made of blue feathers, the tribute of all the towns. They came into the presence of the marvelous kings Gucumatz and Cotuhá, and before Quicab and Cavizimah, the Ahpop, the Ahpop-Camhá, the Galel and the Ahtzic-Vinac.

It was not little what they did, neither were few, the tribes which they conquered. Many branches of the tribes came to pay tribute to the Quiché; full of sorrow they came to give it over. Nevertheless, the [Quiché] power did not grow quickly. Gucumatz it was, who began the aggrandizement of the kingdom. Thus was the beginning of his aggrandizement and that of the Quiché nation.

And now we shall name the generations of the lords and give their names; again we shall name all of the lords.

IV. Chapter 12

Here, then, are the generations and the order of all the rulers which began with our first grandfathers and our first fathers, Balam-Quitze, Balam-Acab, Mahucutah, and Iqui-Balam, when the sun appeared, and the moon and the stars were seen.

Now, then, we shall give the beginning of the generations, the order of kingdoms from the beginning of their lineage, how the lords entered into power, from their accessions to their deaths: [we shall give] each generation of lords and ancestors, as well as the lord of the town, all and each of the lords. Here, then, the person of each one of the lords of the Quiché shall be shown.

Balam-Quitze, the root of those of Cavec.

Qocavib, second generation [of the line] of Balam-Quitze.

Balam-Conache, with whom the title of Ahpop began, third generation.

Cotuhá [I] and Iztayub, fourth generation.

Gucumatz and Cotuhá, [II] first of the marvelous kings, who were of the fifth generation.

Tepepul and Iztayul, of the sixth order.

Quicab and Cavizimah, of the seventh order of succession to the kingdom.

Tepepul and Iztayub, eighth generation.

Tecum and Tepepul, ninth generation.

Vahxaqui-Caam and Quicab, tenth generation of kings.

Vucub-Noh and Cauutepech, eleventh order of kings.

Oxib-Queh and Beleheb-Tzi, the twelfth generation of kings. These were those who reigned when Donadiú came, and who were hanged by the Spaniards.

Tecum and Tepepul, who paid tribute to the Spaniards, they left sons, and the former were the thirteenth generation of kings.

Don Juan de Rojas and don Juan Cortés, the fourteenth generation of kings, were the sons of Tecum and Tepepul.

These are, then, the generations and the order of the kingdom of the lords Ahpop and Ahpop-Camhá of the Quiché of Cavec.

And now we shall name again the families. These are the Great Houses of each of the lords who followed the Ahpop and the Ahpop-Camhá. These are the names of the nine families of those of Cavec, of the nine Great Houses, and these are the titles of the lords of each one of the Great Houses:

Ahau-Ahpop, one Great House. Cuhá was the name of this Great House.

Ahau-Ahpop-Camhá, whose Great House was called Tziquinahá.

Nim-Chocoh-Cavec, one Great House.

Ahau-Ah-Tohil, one Great House.

Ahau-Ah-Gucumatz, one Great House.

Popol-Vinac Chituy, one Great House.

Lolmet-Quehnay, one Great House.

Popol-Vinac Pahom Tzalatx Xcuxebá, one Great House.

Tepeu-Yaqui, one Great House.

These, then, are the nine families of Cavec. And very numerous were the sons and vassals of the tribes which followed these nine Great Houses.

Here are the nine Great Houses of those of Nihaib. But first we shall give the lineage of the rulers of the kingdom. From one root only these names originated when the sun began to shine, with the beginning of light.

Balam-Acab, first grandfather and father.

Qoacul and Qoacutec, second generation.

Cochahuh and Cotzibahá, third generation.

Beleheb-Queh [I], fourth generation.

Cotuhá, [I] fifth generation of kings.

Batza, sixth generation.

Iztayul, seventh generation of kings.

Cotuhá [II], eighth order of the kingdom.

Beleheb-Queh [II], ninth order.

Quemá, so called, tenth generation.

Ahau-Cotuhá, eleventh generation.

Don Cristóval, so called, who ruled in the time of the Spaniards.

Don Pedro de Robles, the present Ahau-Galel.

These, then, are all the kings who descended from the Ahau-Galel. Now we shall name the lords of each of the Great Houses.

Ahau-Galel, first lord of the Nihaib, head of one Great House.

Ahau-Ahtzic-Vinac, one Great House.

Ahau-Galel-Camhá, one Great House.

Nima-Camhá, one Great House.

Uchuch-Camhá, one Great House.

Nim-Chocoh-Nihaib, one Great House.

Ahau-Avilix, one Great House.

Yacolatam, one Great House.

Nima-Lolmet-Ycoltux, one Great House.

These, then, are the Great Houses of the Nihai; these were the names of the nine families of those of Nihai, as they were called. Numerous were the families of each one of the lords, whose names we have given first.

Here, now, is the lineage of those of Ahau-Quiché, who were their grandfather and father.

Mahucutah, the first man.

Qoahau, name of the second generation of kings.

Caglacán.

Cocozom.

Comahcún.

Vucub-Ah.

Cocamel.

Coyabacoh.

Vinac-Bam.

These were the kings of those of the Ahau-Quiché; this is the order of their generations.

Here now are the titles of the lords who made up the Great Houses; there were only four Great Houses.

Ahtzic-Vinac-Ahau, title of the first lord, one Great House.

Lolmet-Ahau, second lord, a Great House.

Nim-Chocoh-Ahau, third lord, a Great House.

Hacavitz, fourth lord, a Great House.

Therefore, four were the Great Houses of the Ahau-Quiché.

There were, then, three Nim-Chocoh, who were like fathers [vested with authority] of all the lords of the Quiché. The three Chocoh came together in order to make known the orders of the mothers, the orders of the fathers. Great was the position of the three Chocoh. There were, then, the Nim-Chocoh of those of Cavec, the Nim-Chocoh of those of Nihai, who was second, and the Nim-Chocoh-Ahau of the Ahau-Quiché, who was third. Each one of the three Chocoh represented his family.

And this was the life of the Quiché, because no longer can be seen [the book of the Popol Vuh] which the kings had in olden times, for it has disappeared.

In this manner, then, all the people of the Quiché, which is called Santa Cruz, came to an end.

Title: Popol Vuh: the Mayan Book of the Dawn of Life
Author: Dennis Tedlock

POPOL VUH: THE MAYAN BOOK OF THE DAWN OF LIFE

translated by Dennis Tedlock with commentary based on the ancient
knowledge of the modern Quiche Maya

-ANDRES XILOJ

THE TRANSLATOR of the Popol Vuh, as if possessed by the story the Popol Vuh tells, must wander in darkness and search long for the clear light. The task is not a matter of deciphering Maya hieroglyphs, since the only surviving version of the Popol Vuh is a transcription into alphabetic writing, but the manuscript nevertheless abounds with ambiguities and obscurities. My work took me not only into dark corners of libraries but into the forests and tall cornfields and smoky houses of highland Guatemala, where the people who speak and walk and work in the pages of the Popol Vuh, the Quiche Maya, have hundreds of thousands of descendants. Among them are diviners called "daykeepers," who know how to interpret illnesses, omens, dreams, messages given by sensations internal to their own bodies, and the multiple rhythms of time. It is their business to bring what is dark into "white clarity," just as the gods of the Popol Vuh first brought the world itself to light.

The Quiche people speak a Mayan language, say prayers to Mayan mountains and Mayan ancestors, and keep time according to the Mayan calendar. They are also interested citizens of the larger contemporary world, but they find themselves surrounded and attacked by those who have yet to realize they have something to teach the rest of us. For them it is not that the time of Mayan civilization has passed, to be followed by the time of European civilization, but that the two have begun to run alongside one another. A complete return to conditions that existed before Europeans first arrived is unthinkable, and so is a complete abandonment of indigenous traditions in favor of European ones. What most worries daykeepers about people from Europe, and specifically about missionaries, is that they confuse the Earth, whose divinity is equal to that of the celestial God, with the devil. As daykeepers put it, "He who makes an enemy of the Earth makes an enemy of his own body."

In the western part of what was once the Quiche kingdom is a town called Chuua 4,ak or "Before the Building." It is listed in the Popol Vuh as one of the citadels that were added to the kingdom during the reign of two great lords named Quicab and Cauizimah. When they sent "guardians of the land" to occupy newly conquered towns, Before the Building was assigned to nobles whose descendants still possess documents that date from the period of the Popol Vuh manuscript. Among

contemporary Guatemalan towns it is without rival in the degree to which its ceremonial life is timed according to the Mayan calendar and mapped according to the relative elevations and directional positions of outdoor shrines. Once each 260 days, on the day named Eight Monkey, daykeepers converge from all over the Guatemalan highlands for the largest of all present-day Mesoamerican ceremonies that follow the ancient calendar. That Before the Building was already a religious center before the fall of the Quiche kingdom is indicated by the Nahua name that Pedro de Alvarado's Mexican-Indian allies gave it: Momostenango, meaning "Citadel of Shrines." It was in this town that I began my search for someone who might be able to light my way through some of the darker passages of the Popol Vuh. At the same time I began making sound recordings of contemporary narratives, speeches, and prayers, looking for passages that might resemble the Popol Vuh.

For fieldworkers in a Citadel of Shrines, visiting sacred places, listening to prayers and chants, and learning how to reckon time according to the continuing rhythms of the Mayan calendar can be a dangerous business. Barbara Tedlock and I almost came to the point of giving up our various research projects and leaving town when a daykeeper named Andres Xiloj divined that we had not only annoyed people at shrines but had entered the presence of these shrines without even realizing that we must be ritually clean in order to do so. But it was this same daykeeper, a man who is also the head of his patrilineage, who took on the task of answering all our inquiries about the shrines, the people who went there, the calendar, and the process by which he had divined the nature of our offense. One day, when we had come to the point of asking for a detailed description of the training and initiation of daykeepers, he dropped what seemed to be a broad hint that the best way to find out the answer to such questions would be to undertake an actual apprenticeship. After debating the meaning of his remarks all night, we asked him the next day whether he had meant that he would in fact be willing to take us on as apprentices, and he said, "Of course." There followed four and a half months of formal training, timed according to the Mayan calendar, that left us much more knowledgeable than we had ever intended to be.

Diviners are, by profession, interpreters of difficult texts. They can even start from a nonverbal sign, such as an ominous invasion of a house by a wild animal, and arrive at a "reading," as we would say, or *ubixic*, "its saying" or "its announcement," as is said in Quiche. When they start from a verbal sign such as the name of a day on the Mayan calendar, they may treat it as if it were a sign from a writing system rather than a word in itself, arriving at "its saying" by finding a different word with similar sounds. It should therefore come as no surprise that a diviner might be willing to take on the task of reading the Popol Vuh, whose text presents its own intriguing difficulties of interpretation.

When Andres Xiloj was given a chance to look at the text of the Popol Vuh, he produced a pair of spectacles and began reading aloud, word by word. His previous knowledge of alphabetic reading and writing was limited to Spanish, but he was able to grasp the orthography of the Popol Vuh text with very little help. When he was puzzled by archaic words, I offered definitions drawn from Quiche dictionaries

compiled during the colonial period; in time, of course, he readily recognized the more frequent archaic forms. He was never content with merely settling on a Quiche reading of a particular passage and then offering a simple Spanish translation; instead, he was given to frequent interpretive asides, some of which took the form of entire stories. In the present volume the effects of the three-way dialogue among Andres Xiloj, the Popol Vuh text, and myself are most obvious in the Glossary and the Notes and Comments, but they are also present in the Introduction and throughout the translation of the Popol Vuh itself.

My work in Guatemala took me not only to the town called Before the Building (Momostenango), but to the ruins of Rotten Cane (Utatlan), to the mountain called Patohil, to the pile of broken stones at Petatayub, and to towns such as Santa Cruz Quiche, Spilt Water (Zacualpa), Above the Nettles (Chichicastenango), Above the Hot Springs (Totonicapán), Willow Tree (Santa María Chiquimula), and Under Ten Deer (Quezaltenango). To the patron saints and earthly spirits of all these places I pay my respects, especially to Santiago and his scribe, San Felipe, at Momostenango; to San Juan and to the divine Uhaal and Roz Utz stones at Agua Tibia; and above all to Uhaal Zabal, 4huti Zabal, and Nima Zabal.

Library pilgrimages have taken me to nearby Cambridge, Massachusetts, to the Tozzer Library at Harvard; to the National Anthropological Archives at the Smithsonian Institution in Washington, D.C.; to the Latin American libraries at Tulane in New Orleans and the University of Texas in Austin; to the special-collections library at Brigham Young University in Provo, Utah; to the Museo Nacional de Antropología in Mexico City; to the Archivo General de Centroamérica in Guatemala City; and to the Newberry Library in Chicago, where I saw, felt, smelled, and heard the rustle of the manuscript of the Popol Vuh.

Such is the magnitude of the present project that it stretched over nine years; except for one of these years and part of another, it necessarily took a backseat to the countless complexities of university life. Most of the Guatemalan fieldwork was carried out during the summer of 1975 and throughout 1976. Much of my effort to transform masses of research and multiple trial runs at translation into a book was made during evenings and weekends at home, and it was also carried on during all-too-brief retreats to such places as Tepoztlán, south of Mexico City; Panajachel, on the shore of Lake Atitlán in Guatemala; and in the woodlands and rocks near Cerrillos, New Mexico, south of Santa Fe. But even when one is confined to Massachusetts, there are ways in which the world of the Popol Vuh makes itself felt. During the months in which I completed the manuscript for the book you now hold in your hands, I could see Venus as the morning star if I looked out the window of my study early enough.

Thinking back over my work on the Popol Vuh brings a great many people to mind; I apologize in advance to those who should have been remembered here but were not. Having learned my lessons about ancestors from my Quiche master, I will begin with persons who are now deceased. Robert Wauchopé, when I first began my graduate work at Tulane in 1961, soon became convinced that I should eventually go to Guatemala to do archaeological fieldwork; he lived long enough to know

that fourteen years later I finally did get to Guatemala, but as an ethnologist, linguist, and translator rather than an archaeologist. My first lessons in how to read and interpret manuscript sources from Spanish America were given to me by France V. Scholes in the Coronado Library at the University of New Mexico, during the summer of 1964. He and Wauchope enjoyed full careers, but the career of Thelma Sullivan, the finest of all scholars working with texts in the Nahuatl language, was cut short; she stood out among Americanists in general as one of those rare individuals who realize and demonstrate that precision in translation is not to be confused with mechanical literalness. Also cut short was the career of Fernando Horcasitas, who gave a splendid lecture on Nahuatl theater one fine warm evening in Cuernavaca when Barbara Tedlock and I were waiting for the Guatemalan border to reopen after the great earthquake of 1976.

And then there is Abelino Zapeta y Zapeta, who in 1979 became the first Quiche to serve as mayor of Santa Cruz Quiche in centuries. He offered gracious words of greeting to an international conference on the Popol Vuh that took place in his town. For the time being it must also be said that he was the last Quiche to serve as mayor. A year after the conference, while he was riding home from work on his bicycle, he was assassinated by gunmen who were seen driving away in an army jeep. The day may come when the Popol Vuh will be entirely at home in Santa Cruz Quiche, the town where it was written, but that day may not be soon.

Turning to those who are still living, and beginning with graduate school, I first think of Munro S. Edmonson. I have come to disagree with him about a great many matters affecting the Popol Vuh, as he well knows, but I have not forgotten his seminar on the Maya at Tulane, which I took more than twenty years ago. When he offered a list of possible research topics to the students in that seminar, I was the one who chose to do a class presentation and term paper on the Popol Vuh. But my first fieldwork in anthropology took me closer to my home in New Mexico: I went to the Zuni, who live on the northern frontier of Mesoamerica. When it came, at long last, to doing field research among the people whose ancestors wrote the Popol Vuh, it was Robert M. Carmack, of the State University of New York at Albany, who introduced Barbara Tedlock and myself to the western highlands of Guatemala. He did this with a generosity that is rare among ethnographers- and with a wisdom, still rarer, that led him to abandon us to our fate once he had gotten us into the field.

Among the people of Guatemala, I give special thanks to Andres Xiloj Peruch, who not only traveled with me through the Quiche text of the Popol Vuh but taught me how to read dreams, omens, and the rhythms of the Mayan calendar. Thanks also go to his daughter Maria, who has boundless patience and kindness; to Santiago Guix, who showed the way down many a path; to Gustavo Lang, who offers a steady hand in any emergency; to Lucas Pacheco Benitez, who combines a warm heart with an intimate knowledge of the spiritual properties of stones; to Celso Akabal, who offers genial toasts at his home near the shrine called the Great Place of Declaration; to Vicente de Leon Abac, who knows how the ancient customs originated; to Esteban Ajxub, who eloquently prays and sings for others; and to Flavio Rojas Lima, who knows how to make foreigners feel welcome at the Seminario de Integracion Social Guatemalteca.

In matters of Native American linguistics and poetics, I am especially thankful for more than fifteen years of unceasing dialogue with Dell Hymes. Others who come to mind here are Allan Burns, the first to reveal that conversation is the root of all Mayan discourse; Lyle Campbell, who went beyond his normal duties in providing myself and others with an introductory course in Quiche at the State University of New York at Albany in the fall of 1975 and who taught me the value of Cakchiquel sources; Ives Goddard, who convinced me that even the most intractable manuscript materials on Native American languages may conceal moments of great accuracy; T. J. Knab, who helped me with Nahuatl loanwords in the Popol Vuh and with Nahuatl metaphors; and James L. Mondloch, who answered some of my questions about Quiche syntax.

In matters of ethnography, ethnohistory, and archaeology I think of Duncan Earle, who revealed that the "mushroom head" of the Popol Vuh is in fact an herb; Gary Gossen, who knows that in trying to comprehend the contemporary highland Maya we are dealing with nothing less than a civilization; Doris Heyden, the first to reveal the full meaning of the secret cave at Teotihuacan; Alain Ichon, who excavated the site called Thorny Place in the Popol Vuh; David H. Kelley, who personally convinced me in far-off Calgary that classic Maya vase paintings do indeed illustrate scenes from the Popol Vuh; J. Jorge Klor de Alva, who knows that the "spiritual conquest" of Mesoamerica has in fact never taken place; Linda Schele, who brought the hieroglyphic texts of Palenque closer than ever to the Popol Vuh at the eighth Workshop on Maya Hieroglyphic Writing in Austin; and Nathaniel Tarn, who in earlier times played the role of anthropologist among neighbors of the Quiche and later returned as a poet.

Anthony Aveni, John B. Carlson, and Floyd G. Lounsbury have heard out my ideas concerning the calendrical and astronomical interpretation of the Popol Vuh. Michael D. Coe, who well knows what a calabash tree is, not only provided welcome praise for the translation but generously permitted the use of the vase drawings reproduced here. Peter T. Furst and Jill Leslie Furst are steady friends who can be counted upon to do unexpected things, like raising toads, cooking sharks, and praising the fertility of skeletons. But above all I am grateful to my wife-colleague Barbara Tedlock, scholar and artist, who has meanwhile been telling her own story about places and times in Guatemala.

At various times over the years I have discussed portions of this work with four past and present colleagues in the University Professors Program at Boston University, all of whom have views on the subject of translation: William Arrowsmith, Rodolfo Cardona, D. S. Carne-Ross, and Herbert Mason. Others who have lent patient ears include the poets Robert Kelly, George Quasha, Jerome Rothenberg, and Charles Stein, along with the book-rancher Gus Blaisdell and the apple-farmer Jeff Titon. Thanks also go to Richard Lewis, of the Touchstone Center in New York, who provided me with the opportunity to do a public performance of parts of the translation at the American Museum of Natural History.

My fieldwork in Guatemala in 1976 was done with the aid of a Fellowship for Independent Study and Research from the National Endowment for the Humanities. Released time for the continuation of the translation of the Popol Vuh was provided, during the academic

years 1979-80 and 1980-81, by a grant from the Translations Program at the National Endowment for the Humanities, which is ably and thoughtfully administered by Susan Mango. During 1980-81 I received additional aid in the form of a sabbatical leave from Boston University.

From the beginning of our work on the Popol Vuh, Andres Xiloj felt certain that if one only knew how to read it perfectly, borrowing the knowledge of the day lords, the moist breezes, and the distant lightning, it should reveal everything under the sky and on the earth, all the way out to the four corners. As a help to my own reading and pondering of the book, he suggested an addition to the prayer that daykeepers recite when they go to public shrines. It goes like this:

Make my guilt vanish,
Heart of Sky, Heart of Earth;
do me a favor,
give me strength, give me courage
in my heart, in my head,
since you are my mountain and my plain;
may there be no falsehood and no stain,
and may this reading of the Popol Vuh
come out clear as dawn,
and may the sifting of ancient times
be complete in my heart, in my head;
and make my guilt vanish,
my grandmothers, grandfathers,
and however many souls of the dead there may be,
you who speak with the Heart of Sky and Earth,
may all of you together give strength
to the reading I have undertaken.

INTRODUCTION

INTRODUCTION

(See illustration: Map of the Mayan region.)

THE FIRST FOUR HUMANS, the first four earthly beings who were truly articulate when they moved their feet and hands, their faces and mouths, and who could speak the very language of the gods, could also see everything under the sky and on the earth. All they had to do was look around from the spot where they were, all the way to the limits of space and the limits of time. But then the gods, who had not intended to make and model beings with the potential of becoming their own equals, limited human sight to what was obvious and nearby. Nevertheless, the lords who once ruled a kingdom from a place called Quiche, in the highlands of Guatemala, once had in their possession the means for overcoming this nearsightedness, an *ilbal*, a "seeing instrument" or a "place to see"; with this they could know distant or future events. The instrument was not a telescope, not a crystal for gazing, but a book.

The lords of Quiche consulted their book when they sat in council, and their name for it was Popol Vuh or "Council Book." Because this book contained an account of how the forefathers of their own lordly lineages had exiled themselves from a faraway city called Tulan, they sometimes described it as "the writings about Tulan." Because a later generation of lords had obtained the book by going on a pilgrimage that took them across water on a causeway, they titled it

"The Light That Came from Across the Sea." And because the book told of events that happened before the first sunrise and of a time when the forefathers hid themselves and the stones that contained the spirit familiars of their gods in forests, they also titled it "Our Place in the Shadows." And finally, because it told of the first rising of the morning star and the sun and moon, and of the rise and radiant splendor of the Quiche lords, they titled it "The Dawn of Life."

Those who wrote the version of the Popol Vuh that comes down to us do not give us their personal names but rather call themselves "we" in its opening pages and "we who are the Quiche people" later on. In contemporary usage "the Quiche people" are an ethnic group in Guatemala, consisting of all those who speak the particular Mayan language that itself has come to be called Quiche; they presently number over half a million and occupy most of the former territory of the kingdom whose development is described in the Popol Vuh. To the west and northwest of them are other Mayan peoples, speaking other Mayan languages, who extend across the Mexican border into the highlands of Chiapas and down into the Gulf coastal plain of Tabasco. To the east and northeast still other Mayans extend just across the borders of El Salvador and Honduras, down into the lowlands of Belize, and across the peninsula of Yucatan. These are the peoples, with a total population of about four million today, whose ancestors developed what has become known to the outside world as Maya civilization.

The roots of Maya civilization may lie in the prior civilization of the Olmecs, which reached its peak on the Gulf coastal plain about three thousand years ago. Maya hieroglyphic writing and calendrical reckoning probably have antecedents that go back at least that far, but they did not find expression in the lasting form of inscriptions on stone monuments until the first century B.C., in a deep river valley that cuts through the highlands of Chiapas. From there, the erection of inscribed monuments spread south to the Pacific and eastward along the Guatemalan coastal plain, then reached back into the highlands at the site of Kaminaljuyu, on the western edge of what is now Guatemala City. During the so-called classic period, beginning about A.D. 300, the center of literate civilization in the Mayan region shifted northward into the lowland rain forest that separates the mountain pine forest of Chiapas and Guatemala from the low and thorny scrub forest of northern Yucatan. Swamps were drained and trees were cleared to make way for intensive cultivation. Hieroglyphic texts in great quantity were sculpted in stone and stucco, painted on pottery and plaster, and inked on long strips of paper that were folded like screens to make books. This is the period that accounts for the glories of such sites as Palenque, Tikal, and Copan, leaving a legacy that has made Maya civilization famous in the fields of art and architecture. The Mayan languages spoken at most of these sites probably corresponded to the ones now known as Cholan, which are still spoken by the Mayan peoples who live at the extreme eastern and western ends of the old classical heartland.

Near the end of the classic period, the communities that had carved out a place for themselves in the rain forest were caught in a deepening vortex of overpopulation, environmental degradation, and malnutrition. The organizational and technological capacities of

Maya society were strained past the breaking point, and by A.D. 900 much of the region had been abandoned. That left Maya civilization divided between two areas that had been peripheral during classic times, one in northern Yucatan and the other in the Guatemalan highlands. The subsequent history of both these areas was shaped by invaders from the western end of the old classical heartland, from Tabasco and neighboring portions of the Gulf coastal plain, who set up militaristic states among the peoples they conquered. The culture they carried with them has come to be called Toltec; it is thought to have originated among speakers of Nahuatl languages, who are presently concentrated in central Mexico (where they include the descendants of the Aztecs) and who once extended eastward to Tabasco. In the Mayan area, Toltec culture was notable for giving mythic prominence to the god-king named Plumed Serpent, technical prominence to the use of spear-throwers in warfare, and sacrificial prominence to the human heart. Those who carried this culture to highland Guatemala brought many Nahuatl words with them, but they themselves were probably Gulf-coast Maya of Cholan descent. Among them were the founders of the kingdom whose people have come to be known as the Quiche Maya.*

Mayan monuments and buildings no longer featured inscriptions after the end of the classic period, but scribes went right on making books for another six centuries, sometimes combining Mayan texts with Toltec pictures. Then, in the sixteenth century, Europeans arrived in Mesoamerica. They forcibly imposed a monopoly on all major forms of visible expression, whether in drama, architecture, sculpture, painting, or writing. Hundreds of hieroglyphic books were tossed into bonfires by ardent missionaries; between this disaster and the slower perils of decay, only four books made it through to the present day. Three of them, all thought to come from the lowlands, found their way to Europe in early colonial times and eventually turned up in libraries in Madrid, Paris, and Dresden; a fragment from a fourth book was recovered more recently from looters who had found it in a dry cave in Chiapas. But the survival of Mayan literature was not dependent on the survival of its outward forms. Just as Mayan peoples learned to use the symbolism of Christian saints as a mask for ancient gods, so they learned to use the Roman alphabet as a mask for ancient texts.*(2)

(See illustration: Drawing by Carlos A. Villacorta.)

SCRIBES WENT RIGHT ON MAKING BOOKS: This is a page from the Maya hieroglyphic book known as the Dresden Codex, which dates to the thirteenth century. The left-hand column describes the movements of Venus during one of five different types of cycles reckoned for that planet. The right-hand column describes the auguries for the cycle and gives both pictures and names for the attendant deities. The top picture, in which the figure at right is seated on two glyphs that name constellations, may have to do with the position of Venus relative to the fixed stars during the cycle. In the middle picture is the god who currently accounts for Venus itself, holding a dart-thrower in his left hand and darts in his right; in the bottom picture is his victim, with a dart piercing his shield. The Venus gods of the Popol Vuh are more conservatively Mayan than those of the Dresden Codex; they are armed with old-fashioned blowguns rather than Toltec dart-throwers.)

There was no little justice in the fact that it was the missionaries

themselves, the burners of the ancient books, who worked out the problems of adapting the alphabet to the sounds of Mayan languages, and while they were at it they charted grammars and compiled dictionaries. Their official purpose in doing this linguistic work was to facilitate the writing and publishing of Christian prayers, sermons, and catechisms in the native languages. But very little time passed before some of their native pupils found political and religious applications for alphabetic writing that were quite independent of those of Rome. These independent writers have left a literary legacy that is both more extensive than the surviving hieroglyphic corpus and more open to understanding. Their most notable works, created as alphabetic substitutes for hieroglyphic books, are the Chilam Balam or "Jaguar Priest" books of Yucatan and the Popol Vuh of Guatemala.

The authors of the alphabetic Popol Vuh were members of the three lordly lineages that had once ruled the Quiche kingdom: the Cauecs, the Greathouses, and the Lord Quiches. They worked in the middle of the sixteenth century, shortly before the end of one of the fifty-two-year cycles measured out by their own calendar. The scene of their writing was the town of Quiche, northwest of what is now Guatemala City. The east side of this town, on flat land, was new in their day, with buildings in files on a grid of streets and the bell towers of a church at the center. The west side, already in ruins, was on fortified promontories above deep canyons, with pyramids and palaces clustered around multiple plazas and courtyards. The buildings of the east side displayed broad expanses of blank stone and plaster, but the ruined walls of the west side bore tantalizing traces of multicolored murals. What concerned the authors of the new version of the Popol Vuh was to preserve the story that lay behind the ruins.

During the early colonial period the town of Quiche was eclipsed, in both size and prosperity, by the neighboring town of Chuui La or "Above the Nettles," better known today as Chichicastenango.*⁽³⁾ The residents of the latter town included members of the Cauec and Lord Quiche lineages, and at some point a copy of the alphabetic Popol Vuh found its way there. Between 1701 and 1703, a friar named Francisco Ximenez happened to get a look at this manuscript while he was serving as the parish priest for Chichicastenango. He made the only surviving copy of the Quiche text of the Popol Vuh and added a Spanish translation. His work remained in the possession of the Dominican order until after Guatemalan independence, but when liberal reforms forced the closing of all monasteries in 1830, it was acquired by the library of the University of San Carlos in Guatemala City. Carl Scherzer, an Austrian physician, happened to see it there in 1854, and Charles Etienne Brasseur de Bourbourg, a French priest, had the same good fortune a few months later.*⁽⁴⁾ In 1857 Scherzer published Ximenez' Spanish translation under the patronage of the Hapsburgs in Vienna,*⁽⁵⁾ members of the same royal lineage that had ruled Spain at the time of the conquest of the Quiche kingdom, and in 1861 Brasseur published the Quiche text and a French translation in Paris. The manuscript itself, which Brasseur spirited out of Guatemala, eventually found its way back across the Atlantic from Paris, coming to rest in the Newberry Library in 1911. The town graced by this library, with its magnificent collection of Native

American texts, is not in Mesoamerica, but it does have an Indian name: Chicago, meaning "Place of Wild Onions."

The manuscript Ximenez copied in the place called "Above the Nettles" may have included a few illustrations and even an occasional hieroglyph, but his version contains nothing but solid columns of alphabetic prose. Mayan authors in general made only sparing use of graphic elements in their alphabetic works, but nearly every page of the ancient books combined writing (including signs meant to be read phonetically) and pictures. In the Mayan languages, as well as in Nahua, the terms for writing and painting were and are the same, the same artisans practiced both skills, and the patron deities of both skills were twin monkey gods born on the day bearing a name translatable (whether from Mayan or Nahua) as One Monkey. In the books made under the patronage of these twin gods there is a dialectical relationship between the writing and the pictures: the writing not only records words but sometimes has elements that picture or point to their meaning without the necessity of a detour through words. As for the pictures, they not only depict what they mean but have elements that can be read as words. When we say that Mesoamerican writing is strongly ideographic relative to our own, this observation should be balanced with the realization that Mesoamerican painting is more conceptual than our own.

At times the writers of the alphabetic Popol Vuh seem to be describing pictures, especially when they begin new episodes in narratives. In passages like the following, the use of sentences beginning with phrases like "this is" and the use of verbs in the Quiche equivalent of the present tense cause the reader to linger, for a moment, over a lasting image:

This is the great tree of Seven Macaw, a nance, and this is the food of Seven Macaw. In order to eat the fruit of the nance he goes up the tree every day. Since Hunahpu and Xbalanque have seen where he feeds, they are now hiding beneath the tree of Seven Macaw, they are keeping quiet here, the two boys are in the leaves of the tree.

It must be cautioned, of course, that "word pictures" painted by storytellers, in Quiche or in any other language, need not have physical counterparts in the world outside the mind's eye. But the present example has an abruptness that suggests a sudden still picture from a story already well under way rather than a moving picture unfolded in the course of the events of that story. The narrators do not describe how the boys arrived "in the leaves of the tree"; the opening scene is already complete, waiting for the blowgun shot that comes in the next sentence, where the main verb is in the Quiche equivalent of the past tense and the still picture gives way to a moving one.

More than any other Mayan book, whether hieroglyphic or alphabetic, the Popol Vuh tells us something about the conceptual place of books in the pre-Columbian world. The writers of the alphabetic version explain why the hieroglyphic version was among the most precious possessions of Quiche rulers:

They knew whether war would occur; everything they saw was clear to them. Whether there would be death, or whether there would be famine, or whether quarrels would occur, they knew it for certain, since there was a place to see it, there was a book. "Council Book" was their name for it.

When "everything they saw was clear to them" the Quiche lords were recovering the vision of the first four humans, who at first "saw everything under the sky perfectly." That would mean that the Popol Vuh made it possible, once again, to sight "the four sides, the four corners in the sky, on the earth," the corners and sides that mark not only the earth but are the reference points for the movements of celestial lights.*(6)

If the ancient Popol Vuh was like the surviving hieroglyphic books, it contained systematic accounts of cycles in astronomical and earthly events that served as a complex navigation system for those who wished to see and move beyond the present. In the case of a section dealing with the planet Venus, for example, there would have been tables of rising and setting dates, pictures of the attendant gods, and brief texts outlining what these gods did when they established the pattern for the movements of Venus. When the ancient reader of the Popol Vuh took the role of a diviner and astronomer, seeking the proper date for a ceremony or a momentous political act, we may guess that he looked up a specific passage, pondered its meaning, and rendered an opinion. But the authors of the alphabetic Popol Vuh tell us that there were also occasions on which the reader offered "a long performance and account" whose subject was the emergence of the whole cahuleu or "sky-earth," which is the Quiche way of saying "world." If a divinatory reading or pondering was a way of recovering the depth of vision enjoyed by the first four humans, a "long performance," in which the reader may well have covered every major subject in the entire book, was a way of recovering the full cosmic sweep of that vision.

If the authors of the alphabetic Popol Vuh had transposed the ancient Popol Vuh directly, on a glyph-by-glyph basis, they might have produced a text that would have made little sense to anyone but a fully trained diviner and performer. What they did instead was to quote what a reader of the ancient book would say when he gave a "long performance," telling the full story that lay behind the charts, pictures, and plot outlines of the ancient book. Lest we miss the fact that they are quoting, they periodically insert such phrases as "This is the account, here it is," or "as it is said." At one point they themselves take the role of a performer, speaking directly to us as if we were members of a live audience rather than mere readers. As they introduce the first episode of a long cycle of stories about the gods who prepared the sky-earth for human life, they propose that we all drink a toast to the hero.*(7)

At the beginning of their book, the authors delicately describe the difficult circumstances under which they work. When they tell us that they are writing "amid the preaching of God, in Christendom now," we can catch a plaintive tone only by noticing that they make this statement immediately after asserting that their own gods "accounted for everything- and did it, too- as enlightened beings, in enlightened words." What the authors propose to write down is what Quiches call the Oher Tzih, the "Ancient Word"*(8) or "Prior Word," which has precedence over "the preaching of God." They have chosen to do so because "there is no longer" a Popol Vuh, which makes it sound as though they intend to re-create the original book solely on the basis of their memory of what they have seen in its pages or heard in the "long performance." But when we remember their complaint

about being "in Christendom," there remains the possibility that they still have the original book but are protecting it from possible destruction by missionaries. Indeed, their next words make us wonder whether the book might still exist, but they no sooner raise our hopes on this front than they remove the book's reader from our grasp: "There is the original book and ancient writing, but he who reads and ponders it hides his face." Here we must remember that the authors of the alphabetic Popol Vuh have chosen to remain anonymous; in other words, they are hiding their own faces. If they are protecting anyone with their enigmatic statements about an inaccessible book or a hidden reader, it could well be themselves.*⁽⁹⁾

The authors begin their narrative in a world that has nothing but an empty sky above and a calm sea below. The action gets under way when the gods who reside in the primordial sea, named Maker, Modeler, Bearer, Begetter, Heart of the Lake, Heart of the Sea, and Sovereign Plumed Serpent, are joined by gods who come down from the primordial sky, named Heart of Sky, Heart of Earth, Newborn Thunderbolt, Raw Thunderbolt, and Hurricane. These two parties engage in a dialogue, and in the course of it they conceive the emergence of the earth from the sea and the growth of plants and people on its surface. They wish to set in motion a process they call the "sowing" and "dawning," by which they mean several different things at once. There is the sowing of seeds in the earth, whose sprouting will be their dawning, and there is the sowing of the sun, moon, and stars, whose difficult passage beneath the earth will be followed by their own dawning. Then there is the matter of human beings, whose sowing in the womb will be followed by their emergence into the light at birth, and whose sowing in the earth at death will be followed by dawning when their souls become sparks of light in the darkness.

For the gods, the idea of human beings is as old as that of the earth itself, but they fail in their first three attempts (all in Part One) to transform this idea into a living reality. What they want is beings who will walk, work, and talk in an articulate and measured way, visiting shrines, giving offerings, and calling upon their makers by name, all according to the rhythms of a calendar. What they get instead, on the first try, is beings who have no arms to work with and can only squawk, chatter, and howl, and whose descendants are the animals of today. On the second try they make a being of mud, but this one is unable to walk or turn its head or even keep its shape; being solitary, it cannot reproduce itself, and in the end it dissolves into nothing.

Before making a third try the gods decide, in the course of a further dialogue, to seek the counsel of an elderly husband and wife named Xpiyacoc and Xmucane. Xpiyacoc is a divine matchmaker and therefore prior to all marriage, and Xmucane is a divine midwife and therefore prior to all birth. Like contemporary Quiche matchmakers and midwives, both of them are ah3ih or "daykeepers," diviners who know how to interpret the auguries given by thirteen day numbers and twenty day names that combine to form a calendrical cycle lasting 260 days.*⁽¹⁰⁾ They are older than all the other gods, who address them as grandparents, and the cycle they divine by is older than the longer cycles that govern Venus and the sun, which have not yet been established at this point in the story. The question the younger gods put to them here is whether human beings should be made out of

wood. Following divinatory methods that are still in use among Quiche daykeepers, they give their approval. The wooden beings turn out to look and talk and multiply themselves something like humans, but they fail to time their actions in an orderly way and forget to call upon the gods in prayer. Hurricane brings a catastrophe down on their heads, not only flooding them with a gigantic rainstorm but sending monstrous animals to attack them. Even their own dogs, turkeys, and household utensils rise against them, taking vengeance for past mistreatment. Their only descendants are the monkeys who inhabit the forests today.

At this point the gods who have been working on the problem of making human beings will need only one more try before they solve it, but the authors of the Popol Vuh postpone the telling of this episode, turning their attention to stories about heroic gods whose adventures make the sky-earth a safer place for human habitation. The gods in question are the twin sons of Xpiyacoc and Xmucane, named One Hunahpu and Seven Hunahpu, and the twin sons of One Hunahpu, named Hunahpu and Xbalanque. Both sets of twins are players of the Mesoamerican ball game, in which the rubber ball (an indigenous American invention) is hit with a yoke that rides on the hips rather than with the hands. In addition to being ballplayers, One and Seven Hunahpu occupy themselves by gambling with dice, whereas Hunahpu and Xbalanque go out hunting with blowguns.*(11)

The adventures of the sons and grandsons of Xpiyacoc and Xmucane are presented in two different cycles, with the episodes divided between the cycles more on the basis of where they take place in space than when they take place in time. The first cycle deals entirely with adventures on the face of the earth, while the second, though it has two separate above-ground passages, deals mainly with adventures in the Mayan underworld, named Xibalba. If the events of these two cycles were combined in a single chronological sequence, the above-ground episodes would probably alternate with those below, with the heroes descending into the underworld, emerging on the earth again, and so forth. These sowing and dawning movements of the heroes, along with those of their supporting cast, prefigure the present-day movements of the sun, moon, planets, and stars.

Hunahpu and Xbalanque are the protagonists of the first of the two hero cycles (corresponding to Part Two in the present translation), and their enemies are a father and his two sons, all of them pretenders to lordly power over the affairs of the earth. Hurricane, or Heart of Sky, is offended by this threesome, and it is he who sends Hunahpu and Xbalanque against them. The first to get his due is the father, named Seven Macaw, who claims to be both the sun and moon. In chronological terms this episode overlaps with the story of the wooden people (at the end of Part One), since Seven Macaw serves as their source of celestial light and has his downfall at the same time they do. The twins shoot him while he is at his meal, high up in a fruit tree, breaking his jaw and bringing him down to earth. Later they pose as curers and give him the reverse of a face-lift, pulling out all his teeth and removing the metal disks from around his eyes; this puts an end to his career as a lordly being. His earthly descendants are scarlet macaws, with broken and toothless jaws and mottled white patches beneath their eyes. He himself remains as the seven stars of the Big Dipper, and his wife, named Chimalmat,

corresponds to the Little Dipper. The rising of Seven Macaw (in mid-October) now marks the coming of the dry season, and his fall to earth and his disappearance (beginning in mid-July) signal the beginning of the hurricane season. It was his first fall, brought on by the blowgun shot of Hunahpu and Xbalanque, that opened the way for the great flood that brought down the wooden people. Just as Seven Macaw only pretended to be the sun and moon, so the wooden people only pretended to be human.*(12)

Hunahpu and Xbalanque next take on Zipacna, the elder of Seven Macaw's two sons, a crocodilian monster who claims to be the maker of mountains. But first comes an episode in which Zipacna has an encounter with the gods of alcoholic drinks, the Four Hundred Boys. Alarmed by Zipacna's great strength, these boys trick him into digging a deep hole and try to crush him by dropping a great log down behind him. He survives, but he waits in the hole until they are in the middle of a drunken victory celebration and then brings their own house down on top of them. At the celestial level they become the stars called Motz, the Quiche name for the Pleiades, and their downfall corresponds to early-evening settings of these stars. At the earthly level, among contemporary Quiches, the Pleiades symbolize a handful of seeds, and their disappearance in the west marks the proper time for the sowing of crops.

Zipacna meets his own downfall when Hunahpu and Xbalanque set out to avenge the Four Hundred Boys. At a time when Zipacna has gone without food for several days, they set a trap for him by making a device that appears to be a living, moving crab. Having placed this artificial crab in a tight space beneath an overhang at the bottom of a great mountain, they show him the way there. Zipacna goes after the crab with great passion, and his struggles to wrestle himself into the right position to consummate his hunger become a symbolic parody of sexual intercourse. When the great moment comes the whole mountain falls on his chest (which is to say he ends up on the bottom), and when he heaves a sigh he turns to stone.*(13)

Finally there comes the demise of the younger son of Seven Macaw, named Earthquake, who bills himself as a destroyer of mountains. In his case the lure devised by Hunahpu and Xbalanque is the irresistibly delicious aroma given off by the roasting of birds. They cast a spell on the bird they give him to eat: just as it was cooked inside a coating of earth, so he will end up covered by earth. They leave him buried in the east, opposite his elder brother, whose killing of the Four Hundred Boys associates him with the west (where the Pleiades may be seen to fall beneath the earth). Seven Macaw, as the Big Dipper, is of course in the north. He is near the pivot of the movement of the night sky, whereas his two sons make the earth move- though they cannot raise or level whole mountains in a single day as they once did.*(14)

Having accounted for three of the above-ground episodes in the lives of Hunahpu and Xbalanque, the Popol Vuh next moves back in time to tell the story of their father, One Hunahpu, and his twin brother, Seven Hunahpu (at the beginning of Part Three). This is the point at which the authors treat us as if we were in their very presence, introducing One Hunahpu with these words: "Let's drink to him, and let's just drink to the telling and accounting of the begetting of Hunahpu and Xbalanque." The story begins long before One Hunahpu meets

the woman who will bear Hunahpu and Xbalanque; in the opening episode, he marries a woman named Xbaquiyalo and they have twin sons named One Monkey and One Artisan. One Hunahpu and his brother sometimes play ball with these two boys, and a messenger from Hurricane, a falcon,*⁽¹⁵⁾ sometimes comes to watch them. The boys become practitioners of all sorts of arts and crafts, including flute playing, singing, writing, carving, jewelry making, and metalworking. At some point Xbaquiyalo dies, but we are not told how; that leaves Xmucane, the mother of One and Seven Hunahpu, as the only woman in the household.

The ball court of One and Seven Hunahpu lies on the eastern edge of the earth's surface at a place called Great Abyss at Carchah.*⁽¹⁶⁾ Their ballplaying offends the lords of Xibalba, who dislike hearing noises above their subterranean domain. The head lords are named One Death and Seven Death, and under them are other lords who specialize in causing such maladies as lesions, jaundice, emaciation, edema, stabbing pains, and sudden death from vomiting blood. One and Seven Death decide to challenge One and Seven Hunahpu to come play ball in the court of Xibalba, which lies at the western edge of the underworld. They therefore send their messengers, who are monstrous owls, to the Great Abyss. One and Seven Hunahpu leave One Monkey and One Artisan behind to keep Xmucane entertained and follow the owls over the eastern edge of the world. The way is full of traps, but they do well until they come to the Crossroads, where each of four roads has a different color corresponding to a different direction. They choose the Black Road, which means, at the terrestrial level, that their journey through the underworld will take them from east to west. At the celestial level, it means that they were last seen in the black cleft of the Milky Way when they descended below the eastern horizon; to this day the cleft is called the Road of Xibalba.

Entering the council place of the lords of Xibalba is a tricky business, beginning with the fact that the first two figures seated there are mere manikins, put there as a joke. The next gag that awaits visitors is a variation on the hot seat, but after that comes a deadly serious test. One and Seven Hunahpu must face a night in Dark House, which is totally black inside. They are given a torch and two cigars, but they are warned to keep these burning all night without consuming them. They fail this test, so their hosts sacrifice them the next day instead of playing ball with them. Both of them are buried at the Place of Ball Game Sacrifice, except that the severed head of One Hunahpu is placed in the fork of a tree that stands by the road there. Now, for the first time, the tree bears fruit, and it becomes difficult to tell the head from the fruit. This is the origin of the calabash tree, whose fruit is the size and shape of a human head.

Blood Woman, the maiden daughter of a Xibalban lord named Blood Gatherer, goes to marvel at the calabash tree. The head of One Hunahpu, which is a skull by now, spits in her hand and makes her pregnant with Hunahpu and Xbalanque. The skull explains to her that henceforth, a father's face will survive in his son, even after his own face has rotted away and left nothing but bone. After six months, when Blood Woman's father notices that she is pregnant, he demands to know who is responsible. She answers that "there is no man whose face I've known," which is literally true. He orders the owl

messengers of Xibalba to cut her heart out and bring it back in a bowl; armed with the White Dagger, the instrument of sacrifice, they take her away.*(17) But she persuades them to spare her, devising a substitute for her heart in the form of a congealed nodule of sap from a croton tree. The lords heat the nodule over a fire and are entranced by the aroma; meanwhile the owls show Blood Woman to the surface of the earth. As a result of this episode it is destined that the lords of Xibalba will receive offerings of incense made from croton sap rather than human blood and hearts. At the astronomical level Blood Woman corresponds to the moon, which appears in the west at nightfall when it begins to wax, just as she appeared before the skull of One Hunahpu at the Place of Ball Game Sacrifice when she became pregnant.

Once she is out of the underworld, Blood Woman goes to Xmucane and claims to be her daughter-in-law, but Xmucane resists the idea that her own son, One Hunahpu, could be responsible for Blood Woman's pregnancy. She puts Blood Woman to a test, sending her to get a netful of corn from the garden that One Monkey and One Artisan have been cultivating. Blood Woman finds only a single clump of corn plants there, but she produces a whole netful of ears by pulling out the silk from just one ear. When Xmucane sees the load of corn she goes to the garden herself, wondering whether Blood Woman has stripped it. On the ground at the foot of the clump of plants she notices the imprint of the carrying net, which she reads as a sign that Blood Woman is indeed pregnant with her own grandchildren.

To understand how Xmucane is able to interpret the sign of the net we must remember that she knows how to read the auguries of the Mayan calendar, and that one of the twenty day names that go into the making of that calendar is "Net." Retold from a calendrical point of view, the story so far is that Venus rose as the morning star on a day named Hunahpu, corresponding to the ballplaying of Xmucane's sons, One and Seven Hunahpu, in the east; then, after being out of sight in Xibalba, Venus reappeared as the evening star on a day named Death, corresponding to the defeat of her sons by One and Seven Death and the placement of One Hunahpu's head in a tree in the west. The event that is due to come next in the story is the rebirth of Venus as the morning star, which should fall, as she already knows, on a day named Net. When she sees the imprint of the net in the field, she takes it as a sign that this event is coming near, and that the faces of the sons born to Blood Woman will be reincarnations of the face of One Hunahpu.*(18)

When Hunahpu and Xbalanque are born they are treated cruelly by their jealous half-brothers, One Monkey and One Artisan, and even by their grandmother. They never utter a complaint, but keep themselves happy by going out every day to hunt birds with their blowguns. Eventually they get the better of their brothers by sending them up a tree to get birds that failed to fall down when they were shot. They cause the tree to grow tall enough to maroon their brothers, whom they transform into monkeys. When Xmucane objects they give her four chances to see the faces of One Monkey and One Artisan again, calling them home with music. They warn her not to laugh, but the monkeys are so ridiculous she cannot contain herself; finally they swing up and away through the treetops for good. One Monkey and One Artisan, both of whose names refer to a single day on the divinatory

calendar, correspond to the planet Mars, which thereafter begins its period of visibility on a day bearing these names, and their temporary return to the house of Xmucane corresponds to the retrograde motion of Mars. They are also the gods of arts and crafts, and they probably made their first journey through the sky during the era of the wooden people, who were the first earthly beings to make and use artifacts and who themselves ended up as monkeys.

With their half-brothers out of the way, Hunahpu and Xbalanque decide to clear a garden plot of their own, but when they return to the chosen spot each morning they find that the forest has reclaimed it. By hiding themselves at the edge of the plot one night, they discover that the animals of the forest are restoring the cleared plants by means of a chant. They try to grab each of these animals in turn, but they miss the puma and jaguar completely, break the tails off the rabbit and deer, and finally get their hands on the rat. In exchange for his future share of stored crops, the rat reveals to them that their father and uncle, One and Seven Hunahpu, left a set of ball game equipment tied up under the rafters of their house, and he agrees to help them get it down. At home the next day, Hunahpu and Xbalanque get Xmucane out of the house by claiming her chili stew has made them thirsty; she goes after water but is delayed when her water jar springs a leak. Then, when Blood Woman goes off to see why Xmucane has failed to return, the rat cuts the ball game equipment loose and the twins take possession of it.

When Hunahpu and Xbalanque begin playing ball at the Great Abyss they disturb the lords of Xibalba, just like their father and uncle before them. Once again the lords send a summons, but this time the messengers go to Xmucane, telling her that the twins must present themselves in seven days. She sends a louse to relay the message to her grandsons, but the louse is swallowed by a toad, the toad by a snake, and the snake by a falcon.*(19) The falcon arrives over the ball court and the twins shoot him in the eye. They cure his eye with gum from their ball, which is why the laughing falcon now has a black patch around the eye. The falcon vomits the snake, who vomits the toad, who still has the louse in his mouth, and the louse recites the message, quoting what Xmucane told him when she quoted what the owls told her when they quoted what the lords of Xibalba told them to say.

Having been summoned to the underworld, Hunahpu and Xbalanque go to take leave of their grandmother, and in the process they demonstrate a harvest ritual that Quiches follow to this day. They "plant" ears of corn in the center of her house, in the attic; these ears are neither to be eaten nor used as seed corn but are to be kept as a sign that corn remains alive throughout the year, even between the drying out of the plants at harvest time and the sprouting of new ones after planting. They tell their grandmother that when a crop dries out it will be a sign of their death, but that the sprouting of a new crop will be a sign that they live again.*(20)

The twins play a game with language when they instruct their grandmother; only now, instead of a quotation swallowed up inside other quotations we get a word hidden within other words. The secret word is "Ah," one of the twenty day names; the twins point to it by playing on its sounds rather than simply mentioning it. When they tell their grandmother that they are planting corn ears (ah) in the house

(ha), they are making a pun on Ah in the one case and reversing its sound in the other. The play between Ah and ha is familiar to contemporary Quiche daykeepers, who use it when they explain to clients that the day Ah is portentous in matters affecting households. If the twins planted their corn ears in the house on the day Ah, then their expected arrival in Xibalba, seven days later, would fall on the day named Hunahpu. This fits the Mayan Venus calendar perfectly: whenever Venus rises as the morning star on a day named Net, corresponding to the appearance of Hunahpu and Xbalanque on the earth, its next descent into the underworld will always fall on a day named Hunahpu.

Following in the footsteps of their father and uncle, Hunahpu and Xbalanque descend the road to Xibalba, but when they come to the Crossroads they do things differently. They send a spy ahead of them, a mosquito, to learn the names of the lords. He bites each one of them in turn; the first two lords reveal themselves as mere manikins by their lack of response, but the others, in the process of complaining about being bitten, address each other by name, all the way down the line. When the twins themselves arrive before the lords, they ignore the manikins (unlike their father and uncle) and address each of the twelve real lords correctly. Not only that, but they refuse to fall for the hot seat, and when they are given a torch and two cigars to keep lit all night, they trick the lords by passing off a macaw's tail as the glow of the torch and putting fireflies at the tips of their cigars.*(21)

The next day Hunahpu and Xbalanque play ball with the Xibalbans, something their father and uncle did not survive long enough to do. The Xibalbans insist on putting their own ball into play first, though the twins protest that this ball, which is covered with crushed bone, is nothing but a skull. When Hunahpu hits it back to the Xibalbans with the yoke that rides on his hips, it falls to the court and reveals the weapon that was hidden inside it. This is nothing less than the White Dagger, the same instrument of sacrifice that the owls were supposed to use on Blood Woman; it twists its way all over the court, but it fails to kill the twins.

The Xibalbans consent to use the rubber ball belonging to the twins in a further game; this time four bowls of flowers are bet on the outcome. After playing well for awhile the twins allow themselves to lose, and they are given until the next day to come up with the flowers. This time they must spend the night in Razor House, which is full of voracious stone blades that are constantly looking for something to cut. In exchange for a promise that they will one day have the flesh of animals as their food, the blades stop moving. This leaves the boys free to attend to the matter of the flowers; they send leaf-cutting ants to steal them from the very gardens of the lords of Xibalba. The birds who guard this garden, poorwills and whippoorwills, are so oblivious that they fail to notice that their own tails and wings are being trimmed along with the flowers. The lords, who are aghast when they receive bowls filled with their own flowers, split the birds' mouths open, giving them the wide gape that birds of the night-jar family have today.

Next, the hero twins survive stays in Cold House, which is full of drafts and falling hail; Jaguar House, which is full of hungry, brawling jaguars; and a house with fire inside. After these horrors

comes Bat House, full of moving, shrieking bats, where they spend the night squeezed up inside their blowgun.*(22) When the house grows quiet and Hunahpu peeks out from the muzzle, one of the bats swoops down and takes his head off. The head ends up rolling on the ball court of Xibalba, but Xbalanque replaces it with a carved squash. While he is busy with this head transplant the eastern sky reddens with the dawn, and a possum, addressed in the story as "old man," makes four dark streaks along the horizon. Not only the red dawn but the possum and his streaks are signs that the time of the sun (which has never before been seen) is coming nearer. In the future a new solar year will be brought in by the old man each 365 days; the four streaks signify that only four of the twenty day names- Deer, Tooth, Thought, and Wind- will ever correspond to the first day of a solar year. Contemporary Quiche daykeepers continue to reckon the solar dimension of the Mayan calendar; in 1986, for example, they will expect the old man to arrive on February 28, which will be the day Thirteen Deer.*(23)

Once Hunahpu has been fitted out with a squash for a head, he and Xbalanque are ready to play ball with the Xibalbans again. When the lords send off Hunahpu's original head as the ball, Xbalanque knocks it out of the court and into a stand of oak trees. A rabbit decoys the lords, who mistake his hopping for the bouncing of the ball, while Xbalanque retrieves the head, puts it back on Hunahpu's shoulders, and then pretends to find the squash among the oaks. Now the squash is put into play, but it wears out and eventually splatters its seeds on the court, revealing to the lords of Xibalba that they have been played for fools. The game played with the squash, like the games played with the bone-covered ball and with Hunahpu's severed head, corresponds to an appearance of Venus in the west, the direction of evening and death. If these events were combined in chronological order with those that take place entirely above ground, they would probably alternate with the episodes in which the twins defeat One Monkey and One Artisan, Seven Macaw, Zipacna, and Earthquake, with each of these latter episodes corresponding to an appearance of Venus in the east, the direction of morning and life.*(24)

At this point we are ready for the last of the episodes that prefigure the cycles of Venus and prepare the way for the first rising of the sun. Knowing that the lords of Xibalba plan to burn them, Hunahpu and Xbalanque instruct two seers named Xulu and Pacam as to what they should say when the lords seek advice as to how to dispose of their remains. This done, the twins cheerfully accept an invitation to come see the great stone pit where the Xibalbans are cooking the ingredients for an alcoholic beverage. The lords challenge them to a contest in which the object is to leap clear across the pit, but the boys cut the deadly game short and jump right in. Thinking they have triumphed, the Xibalbans follow the advice of Xulu and Pacam, grinding the bones of the boys and spilling the powder into a river.

After five days Hunahpu and Xbalanque reappear as catfish;*(25) the day after that they take human form again, only now they are disguised as vagabond dancers and actors. They gain great fame as illusionists, their most popular acts being the ones in which they set fire to a house without burning it and perform a sacrifice without killing the victim. The lords of Xibalba get news of all this and invite them to show their skills at court; they accept with

pretended reluctance. The climax of their performance comes when Xbalanque sacrifices Hunahpu, rolling his head out the door, removing his heart, and then bringing him back to life. One and Seven Death go wild at the sight of this and demand that they themselves be sacrificed. The twins oblige- and, as might already be imagined, these final sacrifices are real ones. Hunahpu and Xbalanque now reveal their true identities before all the inhabitants of the underworld. They declare that henceforth, the offerings received by Xibalbans will be limited to incense made of croton sap and to animals, and that Xibalbans will limit their attacks on future human beings to those who have weaknesses or guilt.

At this point the narrative takes us back to the twins' grandmother, telling us what she has been doing all this time. She cries when the season comes for corn plants to dry out, signifying the death of her grandsons, and rejoices when they sprout again, signifying rebirth. She burns incense in front of ears from the new crop and thus completes the establishment of the custom whereby humans keep consecrated ears in the house, at the center of the stored harvest. Then the scene shifts back to Hunahpu and Xbalanque, who are about to establish another custom.

Having made their speech to the defeated Xibalbans, the twins go to the Place of Ball Game Sacrifice with the intention of reviving Seven Hunahpu, whose head and body still lie buried there. The full restoration of his face depends on his own ability to pronounce the names of all the parts it once had, but he gets no further than the mouth, nose, and eyes, which remain as notable features of skulls. They leave him there, but they promise that human beings will keep his day (the one named Hunahpu), coming to pray where his remains are. To this day, Hunahpu days are set aside for the veneration of the dead, and graveyards are called by the same word (hom) as the ball courts of the Popol Vuh.

At the astronomical level the visit of Hunahpu and Xbalanque to their uncle's grave signals the return of a whole new round of Venus cycles, starting with a morning star that first appears on a day named Hunahpu. As for the twins themselves, they rise as the sun and moon. Contemporary Quiches regard the full moon as a nocturnal equivalent of the sun, pointing out that it has a full disk, is bright enough to travel by, and goes clear across the sky in the same time it takes the sun to do the same thing. Most likely the twin who became the moon is to be understood specifically as the full moon, whereas Blood Woman, the mother of the twins, would account for the other phases of the moon.* (26)

With the ascent of Hunahpu and Xbalanque the Popol Vuh returns to the problem the gods confronted at the beginning: the making of beings who will walk, work, talk, and pray in an articulate manner. The account of their fourth and final attempt at a solution is a flashback, since it takes us to a time when the sun had not yet appeared. As we have already seen, the gods failed when they tried using mud and then wood as the materials for the human body, but now they get news of a mountain filled with yellow corn and white corn, discovered by the fox, coyote, parrot, and crow (at the beginning of Part Four). Xmucane grinds the corn from this mountain very finely, and the flour, mixed with the water she rinses her hands with, provides the substance for human flesh, just as the ground bone thrown

in the river by the Xibalbans becomes the substance for the rebirth of her grandsons. The first people to be modeled from the corn dough are four men named Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar. They are the first four heads of Quiche patrilineages; as in the case of the men who occupy such positions today, they are called "mother-fathers,"*(27) since in ritual matters they serve as symbolic androgynous parents to everyone in their respective lineages.

This time the beings shaped by the gods are everything they hoped for and more: not only do the first four men pray to their makers, but they have perfect vision and therefore perfect knowledge. The gods are alarmed that beings who were merely manufactured by them should have divine powers, so they decide, after their usual dialogue, to put a fog on human eyes. Next they make four wives for the four men, and from these couples come the leading Quiche lineages. Celebrated Seahouse becomes the wife of Jaguar Quitze, who founds the Cauec lineage; Prawn House becomes the wife of Jaguar Night, who founds the Greathouse lineage; and Hummingbird House becomes the wife of Mahucutah, who founds the Lord Quiche lineage. True Jaguar is also given a wife, Macaw House, but they have no male children. Other lineages and peoples also come into being, and they all begin to multiply.

All these early events in human history take place in darkness, somewhere in the "east," and all the different peoples wander about and grow weary as they go on watching and waiting for the rising of the morning star and the sun. Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar decide to change their situation by acquiring patron deities they can burn offerings in front of, and it is with this purpose in mind that they go to a great eastern city bearing the names Tulan Zuyua, Seven Caves, Seven Canyons. These are grand names that call up broad reaches of the Mesoamerican past. Tulan (or Tollan)*(28) means "Place of Reeds" or more broadly "metropolis" in Nahuatl, and it was prefixed to the names of many different towns during Toltec times. The particular Tulan called Zuyua was probably near the Gulf coast in Tabasco or Campeche, "eastern" because it was east of the principal Tulan of the Toltecs, near Mexico City at the site now known as Tula. But in giving Tulan Zuyua the further name Seven Caves, the Popol Vuh preserves the memory of a metropolis much older and far grander than any Toltec town. This ultimate Tulan was at the site now known as Teotihuacan, northeast of Mexico City. It was the greatest city in Mesoamerican history, dating from the same period as the classic Maya. Only recently it has been discovered that beneath the Pyramid of the Sun at Teotihuacan lies a natural cave whose main shaft and side chambers add up to seven.*(29)

Countless lineages and tribes converge on the Tulan Zuyua of the Popol Vuh, and each of them, starting with the Quiches, is given a god. The Cauecs receive the god named Tohil, the Greathouses receive Auilix, and the Lord Quiches receive Hacauitz. Ultimately the patronage of the first-ranking god, Tohil, extended to all three of these lineages, and to two other Quiche lineages of lesser rank, the Tams and Ilocs. The worship of Tohil has recently been traced back to the classic period; in the inscriptions at Palenque, he bears the name Tahil, a Cholan word meaning "Obsidian Mirror," and he is shown with a smoking mirror in his forehead.

The Popol Vuh tells us that although "all the tribes were sown and

came to light in unity," their languages differentiated while they were at Tulan. The cause of this was that some peoples were given patron deities whose names differed from that of the god of the Quiches. The language of the Rabinals became only slightly different, since they were given a god named One Toh rather than Tohil, but others, who received gods with completely distinctive names, ended up speaking distinctive languages, including the Cakchiquels, the Bird House people, and the Yaqui people. Today, indeed, the Rabinals, who live to the northeast of the Quiche proper, speak a dialect of Quiche, whereas the Cakchiquels (still known by this name) and the Bird House people (better known as the Tzutuhils) speak related but separate languages. What the Popol Vuh calls the Yaqui people are the speakers of Nahua languages, in Mexico. Those languages belong to a family that not only stands apart from Quiche, Cakchiquel, and Tzutuhil, but from Mayan languages in general.

Tohil is the source of the first fires kept by human beings, making it possible for them to keep warm in the cold of the predawn world. When a great hailstorm puts all these fires out, Tohil restores fire to the Quiches by pivoting inside his sandal, which is to say that he originates the technology whereby fire is started by rotating a drill in the socket of a wooden platform. The other tribes, shivering with cold, come to the Quiches to beg for fire, but Tohil refuses to let them have it unless they promise to embrace him someday, allowing themselves to be suckled. They agree, not realizing that when the time comes for the Quiche lords to subjugate them, being "suckled" by Tohil will mean having their hearts cut out in sacrifice. Only the Cakchiquels, who get their fire by sneaking past everyone else in the smoke, escape this fate.

At the suggestion of Tohil the Quiches leave Tulan. They sacrifice their own blood to him, passing cords through their ears and elbows, and they sing a song called "The Blame Is Ours," lamenting the fact that they will not be in Tulan when the time comes for the first dawn. Packing their gods on their backs and watching continuously for the appearance of the morning star, they begin a long migration. At a place called Rock Rows, Furrowed Sands they cross a "sea" (30) on a causeway; this would be somewhere in Tabasco or Campeche, perhaps at Potonchan or Tixchel, both lowland Maya sites where causeways pass through flooded areas. They also pass the Great Abyss, the location of the eastern ball court used by the sons and grandsons of Xmucane, a long way east and a little south of any likely location for Rock Rows, Furrowed Sands. Next they enter the highlands, turning west and continuing at a slight southward angle until they reach a mountain called Place of Advice, not very far short of the site where they will one day reach their greatest glory. With them at Place of Advice, having accompanied them ever since they left Tulan, are the Rabinals, Cakchiquels, and Bird House people.

Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar, together with their wives, observe a great fast at Place of Advice. Tohil, Auilix, and Hacauitz speak to them, asking to be given hiding places so that they will not be captured by enemies of the Quiches. After a search through the forest, each of these gods is hidden at the place that bears his name today. They are not yet placed in temples atop pyramids, but merely in arbors decorated with bromelias and hanging mosses. At the place of Hacauitz, on a mountaintop, the Cauecs,

Greathouses, and Lord Quiches weep while they wait for the dawn; the Tams and Ilocs wait on nearby mountains, while peoples other than the Quiches wait at more distant places. When, at last, they all see the daybringer, the morning star, they give thanks by burning the incense they have kept for this occasion, ever since they left Tulan.

At this point we reach the moment in the account of human affairs that corresponds to the final event in the account of the lives of the gods: the Sun himself rises. On just this one occasion he appears as an entire person, so hot that he dries out the face of the earth. His heat turns Tohil, Auilix, and Hacauitz to stone, along with such pumas, jaguars, and snakes as had existed until now. A diminutive god called White Sparkstriker*(31) escapes petrification by going into the shade of the trees, becoming the keeper of the stone animals. He remains to this day as a gamekeeper, with stone fetishes (volcanic concretions and meteorites) that resemble animals, together with flesh-and-blood game animals, in his care. He may be encountered in forests and caves, or on dark nights and in dreams; he appears in contemporary masked dramas dressed entirely in red, the color of the dawn.

At first the Quiches rejoice when they see the first sunrise, but then they remember their "brothers," the tribes who were with them at Tulan, and they sing the song called "The Blame Is Ours" once again. In the words of this song they wonder where their brothers might be at this very moment. In effect, the coming of the first sunrise reunites the tribes, despite the fact that they remain widely separated in space; as the Popol Vuh has it, "there were countless peoples, but there was just one dawn for all tribes." The orderly movements of the lights of the sky, signs of the deeds of the gods, enable human beings to coordinate their actions even when they cannot see one another. In point of fact Mesoamerican peoples in general shared a common calendar, consisting of the 260-day cycle, whose auguries were first read by Xpiyacoc and Xmucane, and the cycles of Mars, Venus, and the sun and moon, as measured off by the movements of their sons and grandsons and by Blood Woman.*(32)

Having seen the first sunrise from the mountain of Hacauitz, the Quiches eventually build a citadel there. But at first, even while the people of other tribes are becoming thickly settled and are seen traveling the roads in great numbers, the Quiches remain rustic and rural, gathering the larvae of yellow jackets, wasps, and bees for food and staying largely out of sight. When they go before the petrified forms of Tohil, Auilix, and Hacauitz, they burn bits of pitchy bark and wildflowers as substitutes for refined incense and offer blood drawn from their own bodies. The three gods are still able to speak to them, but only by appearing in spirit form. Tohil tells them to augment their offerings with the blood of deer and birds taken in the hunt, but they grow dissatisfied with this arrangement and begin to cast eyes on the people they see walking by in the roads. From hiding places on mountain peaks, they begin imitating the cries of the coyote, fox, puma, and jaguar.

Finally Tohil tells the Quiches to go ahead and take human beings for sacrifice, reminding them that when they were at Tulan the other tribes promised to allow him to "suckle" them. They begin to seize people they find out walking alone or in pairs, taking them away to cut them open before Tohil, Auilix, and Hacauitz and then rolling

their heads out onto the roads. At first the lords who rule the victimized tribes think these deaths are the work of wild animals, but then they suspect the worshipers of Tohil, Auilix, and Hacauitz and attempt to track them down. Again and again they are foiled by rain, mist, and mud, but they do discover that the three gods, whose spirit familiars take the form of adolescent boys, have a favorite bathing place. They send two beautiful maidens, Xtah and Xpuch, to wash clothes there, instructing them to tempt the boys and then yield to any advances. They warn the maidens to return with proof of the success of their mission, which must take the form of presents from the boys.*(33)

Contrary to plan, the three Quiche gods fail to lust after Xtah and Xpuch, but they do agree to provide them with presents. They give them three cloaks with figures on the inside, one painted with a jaguar by Jaguar Quitze, another painted with an eagle by Jaguar Night, and the third painted with swarms of yellow jackets and wasps by Mahucutah. When the maidens return the enemy lords are so pleased with the cloaks that they cannot resist trying them on. All is well until the wasps painted on the inside of the third cloak turn into real ones. Xtah and Xpuch are spurned; despite their failure to tempt Tohil, Auilix, and Hacauitz they become the first prostitutes, or what Quiches call "barkers of shins." As for the enemy lords, they resolve to make war and launch a massive attack on the Quiche citadel at Hacauitz.

The enemy warriors come at night in order to get as far as possible without resistance, but they fall into a deep sleep on the road. The Quiches not only strip them of all the metal ornaments on their weapons and clothes, but pluck out their eyebrows and beards as well. Even so the enemy warriors press on the next day, determined to recover their losses, but the Quiches are well prepared. What the enemy lookouts see all around the citadel of Hacauitz is a wooden palisade; visible on the parapet are rows of warriors, decked out with the very metal objects that were stolen during the night. What the lookouts do not see is that these warriors are mere wooden puppets, and that behind the palisade, on each of its four sides, is a large gourd filled with yellow jackets and wasps, put there at the suggestion of Tohil. As for the Quiches on the inside, what they see, once the attack begins, is more than twenty-four thousand warriors converging on them, bristling with weapons and shouting continuously. But Tohil has made them so confident that they treat the attack as a great spectacle, bringing their women and children up on the parapet to see it. When they release the yellow jackets and wasps their enemies drop their weapons and attempt to flee, so badly stung they hardly even notice the blows they receive from conventional Quiche weapons. The survivors become permanent payers of tribute to the Quiche lords.

After their great victory, Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar begin preparing, with complete contentment, for what they know to be their approaching death. First they sing "The Blame Is Ours," and then they explain to their wives and successors that "the time of our Lord Deer" has come around again. This is a reference to the day named Deer, one of the four days on which a new solar year can begin, and specifically to the first day of a longer period, lasting fifty-two years, which falls on One Deer.*(34) Such a major temporal

transition is an occasion for rites of renewal; the Quiche forefathers declare that their time as lords among the living has been completed and that they intend to return to the place where they came from, far in the east. Jaguar Quitze leaves a sacred object called the "Bundle of Flames," a sort of cloth-wrapped ark with mysterious contents, as a "sign of his being." He and the others "die" by simply departing; they are never seen again, but their descendants burn incense before the Bundle of Flames in remembrance of them, just as Xmucane burned incense before the ears of corn in remembrance of Hunahpu and Xbalanque.

The Quiche lords of the second generation, following the instructions of their departed fathers, go on a pilgrimage to the east (at the beginning of Part Five). Unlike their fathers, they do this with the intention of returning in the flesh. Cocaib, the firstborn son of Jaguar Quitze, goes on behalf of the Cauec lineage; Coacutec, the second son of Jaguar Night, represents the Greathouses; and Coahau, the only son of Mahucutah, represents the Lord Quiches. They go all the way back down into the lowlands, to the other side of the same "sea" their fathers once crossed on the way up to the highlands. If they were retracing their fathers' route in detail, they must have descended into the lowlands by way of the Great Abyss. They do not go to Tulan Zuyua, which may have been in ruins by this time, but they do come before the ruler of a great kingdom. His name is Nacxit, one of the epithets Nahua speakers give to the god-king Plumed Serpent. He gives them the emblems that go with the two highest titles of Mayan nobility, Keeper of the Mat and Keeper of the Reception House Mat. Both these titles, the one belonging to a head of state and the other to an overseer of tribute collection, go to the Cauecs. From other sources we know that the Greathouse and Lord Quiche lineages also receive emblems at this time, with the title of Lord Minister (ranking third) going to one and that of Crier to the People (ranking fourth) to the other.*(35)

Cocaib, Coacutec, and Coahau return "from across the sea" with the regalia given them by Nacxit, including canopies, thrones, musical instruments, cosmetics, jewelry, the feet and feathers of various animals and birds, and "the writings about Tulan." Since one of the titles of the Popol Vuh is "The Light That Came from Across the Sea," we may guess that it was the Popol Vuh they brought back, and that the hieroglyphic version of the book contained not only writings about the gods whose movements prefigured those of celestial lights, but about such human affairs as those of Tulan. The sovereign lordship of the returned pilgrims is recognized not only by the Quiches themselves, but by the Rabinals, Cakchiquels, and Bird House people as well. Only now do the Quiche lords begin to have what the Popol Vuh calls "fiery splendor." It seems likely that their pilgrimage was conceived as a reenactment of the adventures of Hunahpu and Xbalanque in Xibalba, who had only the planet Venus to their credit when they first descended in the east at the Great Abyss, but who eventually returned with the greater splendor of the sun and full moon.

Later, after the death of the widows of Jaguar Quitze, Jaguar Night, and Mahucutah, the Quiches leave Hacauitz and settle at a succession of other sites. The Popol Vuh mentions only one of these by name, Thorny Place, settled at some point after the deaths of Cocaib,

Coacutec, and Coahau. The ruins of Thorny Place, which are divided into four parts just as the Popol Vuh indicates they should be, are some distance east and a little north of Hacautitz, in the direction of the Great Abyss. This location may have been chosen because it was a step backward on the Quiche migration route, placing the ruling lords closer to their forefathers than they were before. But when the Quiches move again, two generations later, they go west and a little south again, ending up even farther in that direction than Hacautitz. This time, with Cotuha as Keeper of the Mat and Iztayul as Keeper of the Reception House Mat, they found the citadel of Bearded Place, directly across a canyon to the south from the site of what will one day be their greatest citadel.*(36)

At Bearded Place there is great harmony among the Cauecs, Greathouses, and Lord Quiches; these three lineages, each with its own palace, are tied together through intermarriage. At Thorny Place women were married off in exchange for modest favors and gifts, but now, at Bearded Place, wedding arrangements are accompanied by elaborate feasting and drinking. The only disturbance during this period comes when the Ilocs not only try to get Iztayul involved in a plot to assassinate Cotuha, but come to the point of making a military attack on Bearded Place. They are defeated, and some of their own number are sacrificed before the gods of their intended victims. The Cauec, Greathouse, and Lord Quiche lineages now rise to greater and greater power, defeating some tribes in direct attacks and terrorizing still others by having them witness the sacrifice of prisoners of war.

In the next generation the Keeper of the Mat bears the divine name Plumed Serpent, while the Keeper of the Reception House Mat is Cotuha, named after the previous Keeper of the Mat. They build a new and larger citadel across the canyon from Bearded Place, at Rotten Cane.*(37) The three leading lineages, faced with increased numbers and torn by quarrels over inflation in bride prices, break apart into smaller groups. The Cauecs divide into nine segments, the Greathouses into nine, and the Lord Quiches into four, with each of these segments headed by a titled lord and occupying its own palace. In addition, the inhabitants of Rotten Cane include the Zauquics, a lineage not previously mentioned in the Popol Vuh, divided into two segments but occupying only a single palace, making twenty-three palaces in all. Along with all these palaces, Rotten Cane is provided with three pyramids that bear the temples of Tohil, Auilix, and Hacautitz, ranged around a central plaza; elsewhere is a fourth pyramid for Corntassel, the god of the Zauquics.

The Popol Vuh identifies Plumed Serpent, who holds the titles of both Keeper of the Mat and Keeper of the Reception House Mat during at least part of his reign at Rotten Cane, as "a true lord of genius." He has the power to manifest his personal spirit familiars, putting on performances in which he transforms himself into a snake, an eagle, a jaguar, or a puddle of blood, climbing to the sky or descending to Xibalba. As the Popol Vuh explains it, his displays are "just his way of revealing himself," but they have the effect of terrorizing the lords of other tribes. The next Quiche lords to manifest genius, coming two generations later, are Quicab, who serves as Keeper of the Mat, and Cauizimah, who serves as Keeper of the Reception House Mat. Under their rule the dominion of the Quiches reaches its greatest extent. Where Plumed Serpent gained power through spectacular displays

of shamanic skill, Quicab now gains it by military force. Not content with merely overpowering the citadels of surrounding peoples, he sends out loyal vassals, called "guardians of the land" or "lookout lineages," to serve as forces of occupation. The stationing of these guardians is conceived as analogous to the construction of a palisade; they turn the entire Quiche kingdom into one great fortress.

During this period the settlement at the center of the Quiche kingdom embraced a cluster of four citadels, with Rotten Cane at the focal point. Together with the ordinary houses that occupied the lower ground around them, these four sites made up a larger town that took the name Quiche. It was perhaps the most densely built-up area that had existed in highland Guatemala since early in the classic period, and it took on the stature of the place where Cocaib, Coacutec, and Coahau had gone to receive the titles and emblems of truly glorious lordship. Five generations after their pilgrimage a new conferring of titles took place, only now it was not Quiches but the heads of the leading "lookout" lineages who were ennobled, and it happened not under the authority of Nacxit, lord of a domain in the mythic "east," but under Quicab, who ruled from Quiche.*(38)

The town of Quiche not only took on the status of the place visited by the pilgrims who saw Nacxit, but of the Tulan visited by their forefathers as well. When the founders of the ruling Quiche lineages and their closest allies left Tulan Zuyua before the first sunrise, they had come away with tribal gods whose names were "meant to be in agreement," and they were "in unity" when they passed the Great Abyss and convened at Place of Advice. Now, in this latter day, "the word came from just one place" again, and the allies convened in a town and "came away in unity" again, but this time they came away "having heard, there at Quiche, what all of them should do." It was probably during this period that the Quiche lords went so far as to have a branching tunnel constructed directly beneath Rotten Cane, a tunnel that brought the Seven Caves of Tulan Zuyua, or of the ultimate Tulan that was Teotihuacan, to the time and place of their own greatest glory.

It is in the course of explaining the greatness of lords like Plumed Serpent and Quicab that the writers of the alphabetic Popol Vuh tell us how its hieroglyphic predecessor was put to use, serving as a way of seeing into distant places and times. Greatness also came to the lords through their participation in religious retreats. For long periods they would stay in the temples, praying, burning incense, bleeding themselves, sleeping apart from their wives, and abstaining not only from meat but from corn products, eating nothing but the fruits of various trees. The shortest fast lasted 180 days, corresponding to half the 360-day cycle (separate from the solar year) that was used in keeping chronologies of historical events, and another lasted 260 days, or one complete run of the cycle whose days were counted by Xpiyacoc and Xmucane when they divined for the gods. The longest fast, 340 days, corresponded to a segment of the Mayan Venus calendar, beginning with the departure of Venus as the morning star and continuing through its stay in the underworld and its period of reappearance as the evening star, leaving just eight days to go before its rebirth as the morning star. This fast probably commemorated the heroic adventures of Hunahpu and Xbalanque in

Xibalba, the long darkness endured by the first generation of lords as they watched for the appearance of the morning star, and the lowland pilgrimage undertaken by Cocaib, Coacutec, and Coahau.

The Quiche lords sought identification with the very gods, not only in their pilgrimages, shamanic feats, limitless vision, and long fasts, but in the requirements they set for their subjects. Just as the gods needed human beings to nurture them with offerings, so human lords required subjects to bring them tribute. As the Popol Vuh points out, the "nurture" required by the Quiche lords consisted not only of the food and drink that were prepared for them, but of turquoise, jade, and the iridescent blue-green feathers of the quetzal bird. Apparently such precious objects as these were considered the ultimate fruits of the earth and sky, which were themselves described as the "blue-green plate" and "blue-green bowl."

Near the end, the Popol Vuh lists all the noble titles held by the various segments of the Cauec, Greathouse, and Lord Quiche lineages (in rank order), and it gives the names of those who held the highest titles (in the order of their succession). In the case of the two leading segments of the Cauec lineage, those whose heads held the titles of Keeper of the Mat and Keeper of the Reception House Mat, the text lists four generations after Quicab and Cauizimah, who were in the seventh generation, without comment. Then, in the twelfth generation, the names Three Deer and Nine Dog are followed by two sentences whose combination of gravity and brevity gives the reader a chill. The first is, "And they were ruling when Tonatiuh arrived," Tonatiuh or "Sun" being the name given by the Aztecs to Pedro de Alvarado, the man whose forces destroyed Rotten Cane in 1524. And the second sentence about Three Deer and Nine Dog is simply, "They were hanged by the Castilian people."*(39)

In the thirteenth generation of Cauecs the Popol Vuh lists Tecum and Tepepul, who were "tributary to the Castilian people." Then, at the end of the list of Cauec generations, come the first lords who adopted Spanish names, Juan de Rojas and Juan Cortes, the living holders of the titles of Keeper of the Mat and Keeper of the Reception House Mat when the alphabetic Popol Vuh was written. Today Quiches ideally list either nine or thirteen generations when they invoke their ancestors in prayer; from this we can see that the thirteen generations of lords named as preceding Juan de Rojas and Juan Cortes need not be taken as constituting an exhaustive genealogy but may simply be a list of the names these two men used in their own prayers.

By giving us the names of Quiche lords who were alive while they were writing, the authors of the alphabetic Popol Vuh also give us the means for dating their work. They could not have finished it any later than 1558, since by that year the name of Juan de Rojas is missing from documents he would have signed had he still been among the living. And since they mention Pedro de Robles of the Greathouse lineage as the current Lord Minister, they could not have finished any earlier than 1554, at which time his predecessor was still in office. This places the writing of the Popol Vuh during the very same decade as the writing of the majority of the native *titulos* that exist for colonial Guatemala, documents that were composed by indigenous authors for the express purpose of reasserting the rights formerly enjoyed by specific lordly lineages living in specific

places. The version of the Popol Vuh that comes down to us does not include a copy of the original title page or of whatever explicitly legal statements might have been appended to the original alphabetic manuscript, but it makes the lineage and place names plain enough, and it contains two different lists of towns that had once been tributary to Quiche.*(40)

It may be that the indigenous lords of highland Guatemala chose the 1550s to make their claims because they thought they saw an opening in Spanish policy, but they may also have been preparing for the major temporal transition that Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar had once called "the time of our Lord Deer." A new fifty-two-year cycle, with the first day of its first year falling on One Deer, was due to begin on June 2, 1558 (on the Julian calendar). Juan Cortes, whose duties as Keeper of the Reception House Mat would have included tribute collection had he served before the coming of Alvarado, worked constantly to restore tribute rights to the lordly lineages of the town of Quiche. In 1557 he went all the way to Spain to press his case, and it may well be that he took a copy of the alphabetic Popol Vuh with him. He continued to make claims when he returned to Guatemala in 1558, prompting a missionary to warn Philip II that "this land is new and not confirmed in the faith," and that Cortes, "son of idolatrous parents, would need to do very little to restore their ceremonies and attract their former subjects to himself."*(41) Quiche rights to collect tribute never were restored, but over the next thirty years Juan Cortes did take a considerable role in appointing and installing the leaders of various towns that had once been under Quiche rule.*(42)

By the time the authors of the Popol Vuh have finished giving the rank order of noble titles and the names of the individuals who held the highest titles, they are only a few sentences away from finishing their work. At this point they single out one of the lesser titles for further discussion, a move that seems anticlimactic until we realize that they are giving us a clue to their own identity. Without naming any individuals, they point out that each of the three leading lineages included one lord bearing the title of Great Toastmaster,*(43) also translatable as Great Convener of Banquets. Here we may recall that when the authors introduced the story of One Hunahpu, they themselves proposed a toast to the reader. If we look for a convener of banquets and maker of toasts among the contemporary Quiche, we find the professional matchmaker, who serves as an eloquent master of ceremonies at the feasts where marriage arrangements are completed. If our mysterious authors were themselves the three Great Toastmasters, and if their duties included the convening of wedding banquets, that would help explain why they took a special interest in marriage customs when they recounted the life and times of successive Quiche citadels. Indeed, they specifically noted the point at which feasting and drinking first became a part of the negotiations for a bride.

The authors give us one final clue to their identity when they tell us that the three Great Toastmasters are "Mothers of the Word" and "Fathers of the Word." The combination of "Mother" and "Father" suggests the contemporary daykeepers called mother-fathers, who serve as the ritual heads of patrilineages; it is from their ranks that matchmakers are drawn. The focus on "the Word," coming as it does

near the very end of a work whose opening line promised to give us the "Ancient Word," suggests that the Word parented by the Great Toastmasters and the Word written down in the alphabetic Popol Vuh are one and the same. If so, we know the name of at least one of the writers: when Juan de Rojas and Juan Cortes signed a document known as the "Title of the Lords of Totonicapan" in 1554, a man named Cristobal Velasco*(44) signed himself as Great Toastmaster of the Cauecs.

At the end of their work the authors repeat the enigma they presented near the beginning, allowing us to wonder whether the hieroglyphic Popol Vuh might still exist somewhere, only now they say it has been "lost" instead of telling us that the reader is hiding his face. They close on a note of reassurance, asking us, in effect, to accept what they have written without demanding a closer look at their sources, since "everything has been completed here concerning Quiche," meaning the place named Quiche. Then, lest we forget their difficult circumstances, they add the phrase, "which is now named Santa Cruz," or "Holy Cross." Here again they take us back to the beginning, where they told us, "We shall write about this now amid the preaching of God, in Christendom now."

Today, even when Quiche daykeepers go to a remote mountaintop shrine, sending up great clouds of incense for multitudes of deities and ancestors, they sometimes begin and end by running through an "Our Father" and a "Hail Mary" and crossing themselves. It is as if the alien eye and ear of the conqueror were present even under conditions of solitude and required the recitation of two spells, one to ward them off for awhile and the other to readmit their existence. Between these protective spells daykeepers are left to enter, in peace, a world whose obligations they know to be older than those of Christianity, obligations to the mountains and plains where they continue to live and to all those who have ever lived there before them. So it is with the authors of the Popol Vuh, who mention Christendom on the first page, Holy Cross on the last page, and open up the whole sky-earth, vast and deep, within.

Perhaps the most remarkable thing about the Popol Vuh, considered in its entirety, is the vast temporal sweep of its narrative. It begins in darkness, with a world inhabited only by gods, and continues all the way past the dawn into the time of the humans who wrote it. The surviving Maya hieroglyphic books abound with gods, but they seem to stop short of dealing directly with the acts of mortals. The Dresden book does have one page that shifts the action to the human sphere, but the following pages were torn off at some time in the past. If we wish to find hieroglyphic texts that have the same proportion between divine and human affairs as the alphabetic Popol Vuh, we must leave the time and place in which it was written and go a thousand years back and hundreds of miles away to the classic Maya site of Palenque, in the Gulf-coast lowlands.*(45)

At Palenque, in the sanctuary of each temple in what is now known as the Cross Group, is a stone tablet bearing a hieroglyphic narrative. In each case the text is divided into two panels, one of which begins with the deeds of gods who include the classic equivalents of Hunahpu and Xbalanque, and the other of which ends with the deeds of human lords whose own scribes were the authors of the inscriptions. In the middle of this narrative, where the reader passes from one panel to the other, are characters who are neither fully divine nor quite

human. So also with the Popol Vuh: about halfway through, the reader comes to a transition between what might be called "myth" and "history" (at the end of Part Three). The characters in the narrative are still divine at this point, but they are described as performing rituals for the veneration of ripened corn and deceased relatives, rituals that are meant to be followed by future humans rather than by ancient gods. After this episode, in which the gods act like people, comes another in which people act like gods (at the beginning of Part Four). The people in question are the first four humans, the ones who saw and understood everything in the sky-earth. Once their perfect vision has been taken away the narrative begins to sound more like history as it moves along, though human characters continue to aspire to deeds of divine proportions.* (46)

We tend to think of myth and history as being in conflict with one another, but the authors of the inscriptions at Palenque and the alphabetic text of the Popol Vuh treated the mythic and historical parts of their narratives as belonging to a single, balanced whole. By their sense of proportion, the Egyptian Book of the Dead would need a second half devoted to human deeds in the land of the living, and the Hebrew Testament would need a first half devoted to events that took place before the fall of Adam and Eve. In the case of ancient Chinese literature the Book of Changes, which is like the Popol Vuh in being subject to divinatory interpretation, would have to be combined with the Book of History in a single volume.

To this day the Quiche Maya think of dualities in general as complementary rather than opposed, interpenetrating rather than mutually exclusive. Instead of being in logical opposition to one another, the realms of divine and human actions are joined by a mutual attraction. If we had an English word that fully expressed the Mayan sense of narrative time, it would have to embrace the duality of the divine and the human in the same way the Quiche term *cahuleu* or "sky-earth" preserves the duality of what we call the "world." In fact we already have a word that comes close to doing the job: *mythistory*, taken into English from Greek by way of Latin. For the ancient Greeks, who set about driving a wedge between the divine and the human, this term became a negative one, designating narratives that should have been properly historical but contained mythic impurities. For Mayans, the presence of a divine dimension in narratives of human affairs is not an imperfection but a necessity, and it is balanced by a necessary human dimension in narratives of divine affairs. At one end of the Popol Vuh the gods are preoccupied with the difficult task of making humans, and at the other humans are preoccupied with the equally difficult task of finding the traces of divine movements in their own deeds.

The difference between a fully mythistorical sense of narrative time and the European quest for pure history is not reducible to a simple contrast between cyclical and linear time. Mayans are always alert to the reassertion of the patterns of the past in present events, but they do not expect the past to repeat itself exactly. Each time the gods of the Popol Vuh attempt to make human beings they get a different result, and except for the solitary person made of mud, each attempt has a lasting result rather than completely disappearing into the folds of cyclical time. Later, when members of the second generation of Quiche lords go on a pilgrimage that takes them into the

lowlands, their journey is not described as a literal repetition of the journey of Hunahpu and Xbalanque to Xibalba, nor even as a retracing of the journey of the human founders of the ruling Quiche lineages, but is allowed its own character as a unique event, an event that nevertheless carries echoes of the past. The effect of these events, like others, is cumulative, and it is a specifically human capacity to take each of them into account separately while at the same time recognizing that they double back on one another.*(47)

In theory, if we who presently claim to be human were to forget our efforts to find the traces of divine movements in our own actions, our fate should be something like that of the wooden people in the Popol Vuh. For them, the forgotten force of divinity reasserted itself by inhabiting their own tools and utensils, which rose up against them and drove them from their homes. Today they are swinging through the trees.

PRONOUNCING_QUICHE_WORDS

PRONOUNCING QUICHE WORDS

VOWELS

a	Like a in English "father," or Spanish a.
e	Like ai in English "wait," or Spanish e.
i	Like ee in English "seed," or Spanish i.
o	Like o in English "bone," or Spanish o.
u	Like oo in English "hoot," or Spanish u.
aa, ee, ii, oo, uu	The doubling of a vowel normally indicates that it is followed by a glottal stop, which is like tt in the Scottish pronunciation of "bottle"; when uu begins a word or follows another vowel it is pronounced like English "woo."

CONSONANTS

b	Like English b, but pronounced together with a glottal stop.
c, qu	Pronounced without the puff of air that follows c in English "cat."
ch	Like English ch.
h	Pronounced deeper in the throat than English h, like Spanish j or German ch.
k	Pronounced with the tongue farther back in the mouth than for c or qu, like the Hebrew letter qoph.
l	Pronounced with the tongue moved forward from the position of English l so as to touch the teeth, as in the ll of Welsh "Lloyd."
m	Like English m.
n	Like English n.
p	Pronounced without the puff of air that follows p in English "pit."
r	Pronounced with a flap if between two vowels, like Spanish r, otherwise trilled like Spanish rr.
t	Pronounced without the puff of air that follows t in English "ten."

tt Like t, but pronounced together with a glottal stop.
 tz Like ts in English "mats."
 x Like English sh.
 y Like English y.
 z Like English s.
 3 Like k, but pronounced together with a glottal
 stop.
 4 Like c or qu, but pronounced together with a glottal
 stop.
 4h Like ch, but pronounced together with a glottal
 stop.
 4, Like tz, but pronounced together with a glottal
 stop.

Stress is always on the final syllable of a word.

PART_ONE

PART ONE

THIS IS THE BEGINNING*(48) OF THE ANCIENT WORD, here in this place called Quiche.*(49) Here we shall inscribe, we shall implant the Ancient Word, the potential and source for everything done in the citadel of Quiche, in the nation of Quiche people.

And here*(50) we shall take up the demonstration, revelation, and account of how things were put in shadow and brought to light*(51)

by the Maker, Modeler, named Bearer, Begetter,
 Hunahpu Possum, Hunahpu Coyote,
 Great White Peccary, Tapir,
 Sovereign Plumed Serpent,
 Heart of the Lake, Heart of the Sea,
 Maker of the Blue-Green Plate,
 Maker of the Blue-Green Bowl,

as they are called, also named, also described as

the midwife, matchmaker*(52)
 named Xpiyacoc, Xmucane,
 defender, protector,*(53)
 twice a midwife, twice a matchmaker,

as is said in the words of Quiche. They accounted for everything- and did it, too- as enlightened beings, in enlightened words.*(54)

We shall write about this now amid the preaching of God, in Christendom now.*(55) We shall bring it out because there is no longer a place to see it,*(56) a Council Book,

a place to see "The Light That Came from
 Across the Sea,"

the account of "Our Place in the Shadows,"
 a place to see "The Dawn of Life,"

as it is called. There is the original book and ancient writing, but he who reads and ponders it hides his face.*(57) It takes a long performance*(58) and account to complete the emergence of all the sky-earth:

the fourfold siding, fourfold cornering,
 measuring, fourfold staking,
 halving the cord, stretching the cord
 in the sky, on the earth,
 the four sides, the four corners,*(59)

as it is said,

by the Maker, Modeler,
mother-father of life, of humankind,
giver of breath, giver of heart,
bearer, upbringer*(60) in the light that lasts*(61)
of those born in the light, begotten in the light;
worrier, knower of everything, whatever there is:
sky-earth, lake-sea.

THIS IS THE ACCOUNT, here it is:

Now it still ripples, now it still murmurs, ripples, it still sighs,
still hums, and it is empty*(62) under the sky.

Here follow the first words, the first eloquence:*(63)

There is not yet one person, one animal, bird, fish, crab, tree,
rock, hollow, canyon, meadow, forest. Only the sky alone is there; the
face of the earth is not clear. Only the sea alone is pooled under all
the sky; there is nothing whatever gathered together. It is at rest;
not a single thing stirs.*(64) It is held back,*(65) kept at rest
under the sky.

Whatever there is that might be is simply not there: only the pooled
water, only the calm sea, only it alone is pooled.

Whatever might be is simply not there: only murmurs, ripples, in the
dark, in the night. Only the Maker, Modeler alone, Sovereign Plumed
Serpent, the Bearers, Begetters are in the water, a glittering
light.*(66) They are there, they are enclosed in quetzal feathers,
in blue-green.

Thus the name, "Plumed Serpent." They are great knowers, great
thinkers in their very being.*(67)

And of course there is the sky, and there is also the Heart of
Sky. This is the name of the god,*(68) as it is spoken.

And then came his word, he came here to the Sovereign Plumed
Serpent, here in the blackness, in the early dawn.*(69) He spoke
with the Sovereign Plumed Serpent, and they talked, then they thought,
then they worried. They agreed with each other, they joined their
words, their thoughts.*(70) Then it was clear, then they reached
accord in the light, and then humanity was clear, when they
conceived the growth, the generation*(71) of trees, of bushes, and the
growth of life, of humankind, in the blackness, in the early dawn, all
because of the Heart of Sky, named Hurricane. Thunderbolt Hurricane
comes first, the second is Newborn Thunderbolt, and the third is Raw
Thunderbolt.*(72)

So there were three of them, as Heart of Sky, who came to the
Sovereign Plumed Serpent, when the dawn of life was conceived:

"How should it be sown, how should it dawn?*(73) Who is to be the
provider, nurturer?*(74)

"Let it be this way, think about it: this water should be removed,
emptied out for the formation of the earth's own plate and platform,
then comes the sowing, the dawning of the sky-earth. But there will be
no high days and no bright praise*(75) for our work, our design, until
the rise of the human work, the human design," they said.

And then the earth arose because of them, it was simply their word
that brought it forth. For the forming of the earth they said "Earth."
It arose suddenly, just like a cloud, like a mist, now forming,
unfolding. Then the mountains were separated from the water,*(76)
all at once the great mountains came forth. By their genius alone,
by their cutting edge alone*(77) they carried out the conception of

the mountain-plain, whose face grew instant groves of cypress and pine.

And the Plumed Serpent was pleased with this:

"It was good that you came, Heart of Sky, Hurricane, and Newborn Thunderbolt, Raw Thunderbolt. Our work, our design will turn out well," they said.

And the earth was formed first, the mountain-plain. The channels of water were separated; their branches wound their ways among the mountains. The waters were divided when the great mountains appeared.

Such was the formation of the earth when it was brought forth by the Heart of Sky, Heart of Earth, as they are called, since they were the first to think of it.*(78) The sky was set apart, and the earth was set apart in the midst of the waters.

Such was their plan when they thought, when they worried about the completion of their work.

NOW THEY PLANNED THE ANIMALS OF THE MOUNTAINS, all the guardians of the forests,*(79) creatures of the mountains: the deer, birds, pumas, jaguars, serpents, rattlesnakes, yellowbites,*(80) guardians of the bushes.

A Bearer, Begetter speaks:

"Why this pointless humming?*(81) Why should there merely be rustling beneath the trees and bushes?"

"Indeed- they had better have guardians," the others replied. As soon as they thought it and said it, deer and birds came forth.

And then they gave out homes to the deer and birds:

"You, the deer: sleep along the rivers, in the canyons. Be here in the meadows, in the thickets, in the forests, multiply yourselves. You will stand and walk on all fours," they were told.

So then they established the nests of the birds, small and great:

"You, precious birds:*(82) your nests, your houses are in the trees, in the bushes. Multiply there, scatter there, in the branches of trees, the branches of bushes," the deer and birds were told.

When this deed had been done, all of them had received a place to sleep*(83) and a place to stay. So it is that the nests of the animals are on the earth, given by the Bearer, Begetter. Now the arrangement of the deer and birds was complete.

AND THEN THE DEER AND BIRDS WERE TOLD by the Maker, Modeler, Bearer, Begetter:

"Talk, speak out. Don't moan, don't cry out.*(84) Please talk, each to each, within each kind, within each group," they were told- the deer, birds, puma, jaguar, serpent.

"Name now our names, praise us. We are your mother, we are your father. Speak now:

'Hurricane,
Newborn Thunderbolt, Raw Thunderbolt,
Heart of Sky, Heart of Earth,
Maker, Modeler,
Bearer, Begetter, '

speak, pray to us, keep our days," they were told. But it didn't turn out that they spoke like people: they just squawked, they just chattered, they just howled.*(85) It wasn't apparent what language they spoke;*(86) each one gave a different cry. When the Maker, Modeler heard this:

"It hasn't turned out well, they haven't spoken," they said among

themselves. "It hasn't turned out that our names have been named. Since we are their mason and sculptor, this will not do," the Bearers and Begetters said among themselves. So they told them:

"You will simply have to be transformed. Since it hasn't turned out well and you haven't spoken, we have changed our word:

"What you feed on, what you eat, the places where you sleep, the places where you stay, whatever is yours will remain in the canyons, the forests. Although it turned out that our days were not kept, nor did you pray to us, there may yet be strength in the keeper of days, the giver of praise whom we have yet to make. Just accept your service, just let your flesh be eaten.

"So be it, this must be your service," they were told when they were instructed- the animals, small and great, on the face of the earth.

And then they wanted to test their timing again, they wanted to experiment again, and they wanted to prepare for the keeping of days again. They had not heard their speech among the animals; it did not come to fruition and it was not complete.

And so their flesh was brought low: they served, they were eaten, they were killed- the animals on the face of the earth.

AGAIN THERE COMES AN EXPERIMENT WITH THE HUMAN WORK, the human design, by the Maker, Modeler, Bearer, Begetter:

"It must simply be tried again. The time for the planting and dawning is nearing. For this we must make a provider and nurturer. How else can we be invoked and remembered on the face of the earth? We have already made our first try at our work and design, but it turned out that they didn't keep our days, nor did they glorify us.

"So now let's try to make a giver of praise, giver of respect, provider, nurturer," they said.

So then comes the building and working with earth and mud. They made a body, but it didn't look good to them. It was just separating, just crumbling, just loosening, just softening, just disintegrating, and just dissolving. Its head wouldn't turn, either. Its face was just lopsided, its face was just twisted. It couldn't look around. It talked at first, but senselessly.*(87) It was quickly dissolving in the water.

"It won't last," the mason and sculptor said then. "It seems to be dwindling away, so let it just dwindle. It can't walk and it can't multiply, so let it be merely a thought," they said.

So then they dismantled, again they brought down their work and design. Again they talked:

"What is there for us to make that would turn out well, that would succeed in keeping our days and praying to us?" they said. Then they planned again:

"We'll just tell Xpiyacoc, Xmucane, Hunahpu Possum, Hunahpu Coyote, to try a counting of days, a counting of lots,"*(88) the mason and sculptor said to themselves. Then they invoked Xpiyacoc, Xmucane.

THEN COMES THE NAMING OF THOSE WHO ARE THE MIDMOST SEERS: the "Grandmother of Day, Grandmother of Light," as the Maker, Modeler called them. These are names of Xpiyacoc and Xmucane.

When Hurricane had spoken with the Sovereign Plumed Serpent, they invoked the daykeepers, diviners, the midmost seers:

"There is yet to find, yet to discover how we are to model a person, construct a person again, a provider, nurturer, so that we are called upon and we are recognized: our recompense is in words.

Midwife, matchmaker,
our grandmother, our grandfather,
Xpiyacoc, Xmucane,
let there be planting, let there be the dawning
of our invocation, our sustenance, our recognition
by the human work, the human design,
the human figure, the human mass.*(89)

So be it, fulfill your names:

Hunahpu Possum, Hunahpu Coyote,
Bearer twice over, Begetter twice over,
Great Peccary, Great Tapir,
lapidary, jeweler,
sawyer, carpenter,
Maker of the Blue-Green Plate,
Maker of the Blue-Green Bowl,
incense maker, master craftsman,*(90)
Grandmother of Day, Grandmother of Light.

You have been called upon because of our work, our design. Run your hands over the kernels of corn, over the seeds of the coral tree,*(91) just get it done, just let it come out whether we should carve and gouge a mouth, a face in wood," they told the daykeepers.

And then comes the borrowing,*(92) the counting of days; the hand is moved over the corn kernels, over the coral seeds, the days, the lots.*(93)

Then they spoke to them, one of them a grandmother, the other a grandfather.

This is the grandfather, this is the master of the coral seeds: Xpiyacoc is his name.

And this is the grandmother, the daykeeper, diviner who stands behind others:*(94) Xmucane is her name.

And they said, as they set out the days:

"Just let it be found, just let it be discovered,
say it, our ear is listening,
may you talk, may you speak,
just find the wood for the carving and sculpting
by the builder, sculptor.
Is this to be the provider, the nurturer
when it comes to the planting, the dawning?
You corn kernels, you coral seeds,
you days, you lots:

may you succeed, may you be accurate,"*(95)

they said to the corn kernels, coral seeds, days, lots. "Have shame, you up there, Heart of Sky: attempt no deception*(96) before the mouth and face of Sovereign Plumed Serpent," they said. Then they spoke straight to the point:

"It is well that there be your manikins, woodcarvings,*(97) talking, speaking, there on the face of the earth."

"So be it," they replied. The moment they spoke it was done: the manikins, woodcarvings, human in looks and human in speech.

This was the peopling of the face of the earth:

They came into being, they multiplied, they had daughters, they had sons, these manikins, woodcarvings. But there was nothing in their hearts and nothing in their minds, no memory of their mason and builder. They just went and walked wherever they wanted.*(98) Now they

did not remember the Heart of Sky.

And so they fell, just an experiment and just a cutout for humankind. They were talking at first but their faces were dry. They were not yet developed in the legs and arms. They had no blood, no lymph. They had no sweat, no fat. Their complexions were dry, their faces were crusty. They flailed their legs and arms, their bodies were deformed.

And so they accomplished nothing before the Maker, Modeler who gave them birth, gave them heart. They became the first numerous people here on the face of the earth.

AGAIN THERE COMES A HUMILIATION, destruction, and demolition. The manikins, woodcarvings were killed when the Heart of Sky devised a flood for them. A great flood was made; it came down on the heads of the manikins, woodcarvings.

The man's body was carved from the wood of the coral tree*(99) by the Maker, Modeler. And as for the woman, the Maker, Modeler needed the pith of reeds*(100) for the woman's body. They were not competent, nor did they speak before the builder and sculptor who made them and brought them forth, and so they were killed, done in by a flood:

There came a rain of resin*(101) from the sky.

There came the one named Gouger of Faces: he gouged out their eyeballs.

There came Sudden Bloodletter: he snapped off their heads.

There came Crunching Jaguar: he ate their flesh.

There came Tearing Jaguar: he tore them open.

They were pounded down to the bones and tendons, smashed and pulverized even to the bones. Their faces were smashed because they were incompetent before their mother and their father, the Heart of Sky, named Hurricane. The earth was blackened because of this; the black rainstorm*(102) began, rain all day and rain all night. Into their houses came*(103) the animals, small and great. Their faces were crushed by things of wood and stone. Everything spoke: their water jars, their tortilla griddles, their plates, their cooking pots, their dogs, their grinding stones, each and every thing crushed their faces. Their dogs and turkeys*(104) told them:

"You caused us pain, you ate us, but now it is you whom we shall eat." And this is the grinding stone:

"We were undone because of you.

Every day, every day,
in the dark, in the dawn, forever,
r-r-rip, r-r-rip,
r-r-rub, r-r-rub,*(105)
right in our faces, because of you.

This was the service we gave you at first, when you were still people, but today you will learn of our power. We shall pound and we shall grind your flesh," their grinding stones told them.

And this is what their dogs said, when they spoke in their turn:

"Why is it you can't seem to give us our food? We just watch and you just keep us down, and you throw us around. You keep a stick ready when you eat, just so you can hit us. We don't talk, so we've received nothing from you. How could you not have known? You did know that we were wasting away there, behind you.

"So, this very day you will taste the teeth in our mouths. We shall eat you," their dogs told them, and their faces were crushed.

And then their tortilla griddles and cooking pots spoke to them in turn:

"Pain! That's all you've done for us. Our mouths are sooty, our faces are sooty. By setting us on the fire all the time, you burn us. Since we felt no pain, you try it. We shall burn you," all their cooking pots said, crushing their faces.

The stones, their hearthstones were shooting out,*(106) coming right out of the fire, going for their heads, causing them pain. Now they run for it, helter-skelter.

They want to climb up on the houses, but they fall as the houses collapse.

They want to climb the trees; they're thrown off by the trees.

They want to get inside caves, but the caves slam shut in their faces.

Such was the scattering of the human work, the human design. The people were ground down, overthrown. The mouths and faces of all of them were destroyed and crushed. And it used to be said that the monkeys in the forests today are a sign of this. They were left as a sign because wood alone was used for their flesh*(107) by the builder and sculptor.

So this is why monkeys look like people: they are a sign of a previous human work, human design- mere manikins, mere woodcarvings.

THIS WAS WHEN THERE WAS JUST A TRACE OF EARLY DAWN on the face of the earth, there was no sun. But there was one who magnified himself; Seven Macaw is his name. The sky-earth was already there, but the face of the sun-moon was clouded over. Even so, it is said that his light provided a sign for the people who were flooded. He was like a person of genius in his being.

"I am great. My place is now higher than that of the human work, the human design. I am their sun and I am their light, and I am also their months.*(108)

"So be it: my light is great. I am the walkway and I am the foothold of the people,*(109) because my eyes are of metal. My teeth just glitter with jewels, and turquoise as well; they stand out*(110) blue with stones like the face of the sky.

"And this nose of mine shines white into the distance like the moon. Since my nest is metal, it lights up the face of the earth. When I come forth before my nest, I am like the sun and moon for those who are born in the light, begotten in the light. It must be so, because my face reaches into the distance," says Seven Macaw.

It is not true that he is the sun, this Seven Macaw, yet he magnifies himself, his wings, his metal. But the scope of his face lies right around his own perch;*(111) his face does not reach everywhere beneath the sky. The faces of the sun, moon, and stars are not yet visible, it has not yet dawned.

And so Seven Macaw puffs himself up as the days and the months, though the light of the sun and moon has not yet clarified. He only wished for surpassing greatness. This was when the flood was worked upon the manikins, woodcarvings.

And now we shall explain how Seven Macaw died, when the people were vanquished, done in by the mason and sculptor.

PART TWO

PART TWO

(See illustration: Drawings by the author.

THE FIRST NAMED HUNAHPU AND THE SECOND NAMED XBALANQUE: These are the portrait glyphs for the classic Maya equivalents of Hunahpu (left) and Xbalanque (right) at Palenque.)

HERE IS THE BEGINNING OF THE DEFEAT AND DESTRUCTION OF THE DAY OF SEVEN MACAW by the two boys, the first named Hunahpu and the second named Xbalanque. Being gods, the two of them saw evil in his attempt at self-magnification before the Heart of Sky. So the boys talked:

"It's no good without life, without people here on the face of the earth."

"Well then, let's try a shot. We could shoot him while he's at his meal. We could make him ill, then put an end to his riches, his jade, his metal, his jewels, his gems, the source of his brilliance. Everyone might do as he does, but it should not come to be that fiery splendor is merely a matter of metal. So be it," said the boys, each one with a blowgun on his shoulder, the two of them together.

And this Seven Macaw has two sons: the first of these is Zipacna, and the second is the Earthquake. And Chimalmat is the name of their mother, the wife of Seven Macaw.

And this is Zipacna, this is the one to build up the great mountains: Fire Mouth, Hunahpu, Cave by the Water, Xcanul, Macamob, Huliznab, as the names of the mountains that were there at the dawn are spoken. They were brought forth by Zipacna in a single night.

And now this is the Earthquake. The mountains are moved by him; the mountains, small and great, are softened by him.*(112) The sons of Seven Macaw did this just as a means of self-magnification.

"Here am I: I am the sun," said Seven Macaw.

"Here am I: I am the maker of the earth," said Zipacna.

"As for me, I bring down the sky, I make an avalanche of all the earth," said Earthquake. The sons of Seven Macaw are alike, and like him: they got their greatness from their father.

And the two boys saw evil in this, since our first mother and father could not yet be made. Therefore deaths and disappearances were planned by the two boys.

AND HERE IS THE SHOOTING OF SEVEN MACAW BY THE TWO BOYS. We shall explain the defeat of each one of those who engaged in self-magnification.

This is the great tree of Seven Macaw, a nance, and this is the food of Seven Macaw. In order to eat the fruit of the nance he goes up the tree every day. Since Hunahpu and Xbalanque have seen where he feeds, they are now hiding beneath the tree of Seven Macaw, they are keeping quiet here, the two boys are in the leaves of the tree.

(See illustration: Photo 1980 by Justin Kerr.

THEY ARE NOW HIDING BENEATH THE TREE OF SEVEN MACAW: In this classic Maya vase painting from the lowlands, Seven Macaw is shown perched in the top of a fruit tree. The tree itself is portrayed as animate, with a face and ears at its base. Hidden behind the tree is Xbalanque, whose pawlike hand protrudes above the tree's left ear. Crouching at the right is Hunahpu, in the act of shooting Seven Macaw with his blowgun. The presence of a scorpion beneath the tree remains unexplained.)

And when Seven Macaw arrived, perching over his meal, the nance, it was then that he was shot by Hunahpu. The blowgun shot went right

to his jaw, breaking his mouth. Then he went up over the tree and fell flat on the ground.*(113) Suddenly Hunahpu appeared, running. He set out to grab him, but actually it was the arm of Hunahpu that was seized by Seven Macaw. He yanked it straight back, he bent it back at the shoulder. Then Seven Macaw tore it right out of Hunahpu. Even so, the boys did well: the first round was not their defeat by Seven Macaw.

And when Seven Macaw had taken the arm of Hunahpu, he went home. Holding his jaw very carefully, he arrived:

"What have you got there?" said Chimalmat, the wife of Seven Macaw.

"What is it but those two tricksters!*(114) They've shot me, they've dislocated my jaw.*(115) All my teeth are just loose,*(116) now they ache. But once what I've got is over the fire- hanging there, dangling over the fire- then they can just come and get it. They're real tricksters!" said Seven Macaw, then he hung up the arm of Hunahpu.

Meanwhile Hunahpu and Xbalanque were thinking. And then they invoked a grandfather, a truly white-haired grandfather, and a grandmother, a truly humble grandmother- just bent-over, elderly people. Great White Peccary is the name of the grandfather, and Great White Tapir is the name of the grandmother. The boys said to the grandmother and grandfather:

"Please travel with us when we go to get our arm from Seven Macaw; we'll just follow right behind you. You'll tell him:

'Do forgive us*(117) our grandchildren, who travel with us. Their mother and father are dead, and so they follow along there, behind us. Perhaps we should give them away, since all we do is pull worms out of teeth.' So we'll seem like children to Seven Macaw, even though we're giving you the instructions," the two boys told them.

"Very well," they replied.

After that they approached the place where Seven Macaw was in front of his home. When the grandmother and grandfather passed by, the two boys were romping along behind them. When they passed below the lord's house, Seven Macaw was yelling his mouth off because of his teeth. And when Seven Macaw saw the grandfather and grandmother traveling with them:

"Where are you headed, our grandfather?" said the lord.

"We're just making our living, your lordship," they replied.

"Why are you working for a living? Aren't those your children traveling with you?"

"No, they're not, your lordship. They're our grandchildren, our descendants, but it is nevertheless we who take pity on them. The bit of food they get is the portion we give them, your lordship," replied the grandmother and grandfather. Since the lord is getting done in by the pain in his teeth, it is only with great effort*(118) that he speaks again:

"I implore you, please take pity on me! What sweets can you make, what poisons can you cure?*" (119) said the lord.

"We just pull the worms out of teeth,*(120) and we just cure eyes.*(121) We just set bones, your lordship," they replied.

"Very well, please cure my teeth. They really ache, every day. It's insufferable! I get no sleep because of them- and my eyes. They just shot me, those two tricksters! Ever since it started I haven't eaten because of it. Therefore take pity on me! Perhaps it's because my teeth are loose now."

"Very well, your lordship. It's a worm, gnawing at the bone.*(122) It's merely a matter of putting in a replacement and taking the teeth out, sir."

"But perhaps it's not good for my teeth to come out- since I am, after all, a lord. My finery is in my teeth- and my eyes."

"But then we'll put in a replacement. Ground bone will be put back in." And this is the "ground bone": it's only white corn.

"Very well. Yank them out! Give me some help here!" he replied.

And when the teeth of Seven Macaw came out, it was only white corn that went in as a replacement for his teeth- just a coating*(123) shining white, that corn in his mouth. His face fell at once, he no longer looked like a lord. The last of his teeth came out, the jewels that had stood out blue from his mouth.

And then the eyes of Seven Macaw were cured. When his eyes were trimmed back*(124) the last of his metal came out. Still he felt no pain; he just looked on while the last of his greatness left him. It was just as Hunahpu and Xbalanque had intended.

And when Seven Macaw died, Hunahpu got back his arm. And Chimalmat, the wife of Seven Macaw, also died.

Such was the loss of the riches of Seven Macaw: only the doctors got the jewels and gems that had made him arrogant, here on the face of the earth. The genius of the grandmother, the genius of the grandfather did its work when they took back their arm: it was implanted and the break got well again. Just as they had wished the death of Seven Macaw, so they brought it about. They had seen evil in his self-magnification.

After this the two boys went on again. What they did was simply the word of the Heart of Sky.*(125)

AND HERE ARE THE DEEDS OF ZIPACNA, the first son of Seven Macaw.

"I am the maker of mountains," says Zipacna.

And this is Zipacna, bathing on the shore. Then the Four Hundred Boys passed by dragging a log, a post for their hut. The Four Hundred Boys were walking along, having cut a great tree for the lintel of their hut.*(126)

And then Zipacna went there, he arrived where the Four Hundred Boys were:

"What are you doing, boys?"

"It's just this log. We can't lift it up to carry it."

"I'll carry it. Where does it go? What do you intend to use it for?"

"It's just a lintel for our hut."

"Very well," he replied.

And then he pulled it, or rather carried it, right on up to the entrance of the hut of the Four Hundred Boys.

"You could just stay with us, boy. Do you have a mother and father?"

"Not so," he replied.

"We'd like some help*(127) tomorrow in cutting another one of our logs, a post for our hut."

"Good," he replied.

After that the Four Hundred Boys shared their thoughts:

"About this boy: what should we do with him?"

"We should kill him, because what he does is no good. He lifted that log all by himself. Let's dig a big hole for him, and then we'll throw him down*(128) in the hole. We'll say to him:

'Why are you spilling dirt in the hole?''*(129) And when he's

wedged*(130) down in the hole we'll wham a big log*(131) down behind him. Then he should die in the hole," said the Four Hundred Boys.

And when they had dug a hole, one that went deep, they called for Zipacna:

"We're asking you to please go on digging out the dirt. We can't go on," he was told.

"Very well," he replied.

After that he went down in the hole.

"Call out when enough dirt has been dug, when you're getting down deep," he was told.

"Yes," he replied, then he began digging the hole. But the only hole he dug was for his own salvation. He realized that he was to be killed, so he dug a separate hole to one side,* (132) he dug a second hole for safety.

"How far is it?" the Four Hundred Boys called down to him.

"I'm digging fast. When I call up to you, the digging will be finished," said Zipacna, from down in the hole. But he's not digging at the bottom of the hole, in his own grave; rather, the hole he's digging is for his own salvation.

After that, when Zipacna called out, he had gone to safety in his own hole. Then he called out:

"Come here, take the dirt, the fill from the hole. It's been dug. I've really gone down deep! Can't you hear my call? As for your call, it just echoes down here, it sounds to me as if you were on another level, or two levels away,"*(133) said Zipacna from his hole. He's hidden in there, he calls out from down in the hole.

Meanwhile, a big log is being dragged along by the boys.

And then they threw the log down in the hole.

"Isn't he there? He doesn't speak."

"Let's keep on listening. He should cry out when he dies," they said among themselves. They're just whispering, and they've hidden themselves, each one of them, after throwing down the log.

And then he did speak, now he gave a single cry. He called out when the log fell to the bottom.

"Right on! He's been finished!"

"Very good! We've done him in, he's dead."

"What if he had gone on with his deeds, his works? He would've made himself first among us and taken our place- we, the Four Hundred Boys!" they said. Now they enjoyed themselves:

"On to the making of our sweet drink! Three days will pass, and after three days let's drink to dedicate*(134) our hut- we, the Four Hundred Boys!" they said. "And tomorrow we'll see, and on the day after tomorrow we'll see whether or not ants come from the ground when he's stinking and rotting. After that our hearts will be content when we drink our sweet drink," they said. But Zipacna was listening from the hole when the boys specified "the day after tomorrow."

And on the second day, when the ants collected, they were running, swarming. Having taken their pickings*(135) under the log, they were everywhere, carrying hair in their mouths and carrying the nails of Zipacna. When the boys saw this:

"He's finished, that trickster! Look here how the ants have stripped him, how they've swarmed. Everywhere they carry hair in their mouths. It's his nails you can see. We've done it!" they said among themselves.

But this Zipacna is still alive. He just cuts the hair off his head and chews off his nails to give them to the ants.

And so the Four Hundred Boys thought he had died.

After that, their sweet drink was ready on the third day, and then all the boys got drunk, and once they were drunk, all four hundred of those boys, they weren't feeling a thing.

After that the hut was brought down on top of them by Zipacna. All of them were completely flattened. Not even one or two were saved from among all the Four Hundred Boys. They were killed by Zipacna, the son of Seven Macaw.

Such was the death of those Four Hundred Boys. And it used to be said that they entered a constellation, named Hunderath after them, though perhaps this is just a play on words.*(136)

And this is where we shall explain the defeat of Zipacna by the two boys, Hunahpu and Xbalanque.

NOW THIS IS THE DEFEAT AND DEATH OF ZIPACNA, when he was beaten by the two boys, Hunahpu and Xbalanque.

What now weighed heavily on the hearts of the two boys was that the Four Hundred Boys had been killed by Zipacna.

It's mere fish and crabs that Zipacna looks for in the waters, but he's eating every day, going around looking for his food by day and lifting up mountains by night.

Next comes the counterfeiting*(137) of a great crab by Hunahpu and Xbalanque.

And they used bromelia flowers, picked from the bromelias of the forests. These became the forearms*(138) of the crab, and where they opened*(139) were the claws.*(140) They used a flagstone for the back of the crab, which clattered.*(141)

After that they put the shell beneath an overhang,*(142) at the foot of a great mountain. Meauan is the name of the mountain where the defeat took place.

After that, when the boys came along, they found Zipacna by the water:

"Where are you going, boy?" Zipacna was asked.

"I'm not going anywhere. I'm just looking for my food, boys," Zipacna replied.

"What's your food?"

"Just fish and crabs, but there aren't any that I can find. It's been two days since I stopped getting meals. By now I can't stand the hunger,"*(143) Zipacna told Hunahpu and Xbalanque.

"There is that crab that's down in the canyon. A really big crab! Perhaps you might manage to eat her. We were just getting bitten. We wanted to catch her, but we got scared by her. If she hasn't gone away you could catch her," said Hunahpu and Xbalanque.

"Take pity on me, please come point her out, boys,"*(144) said Zipacna.

"We don't want to, but you go ahead. You can't miss her. Just follow the river, and you go straight on over there below a great mountain. She's clattering there at the bottom of the canyon. Just head on over there," said Hunahpu and Xbalanque.

"But won't you please*(145) take pity on me? What if she can't be found, boys? If you come along I'll show you a place where there are plenty of birds.*(146) Please come shoot them, I know where they are," Zipacna replied. They consented. He went ahead of the boys.

"What if you can't catch the crab? Just as we had to turn back, so will you. Not only didn't we eat her, but all at once she was biting us. We were entering*(147) face down, but when she got scared we were entering on our back.*(148) We just barely missed reaching her then, so you'd better enter on your back," he was told.

"Very well," Zipacna replied, and then they went on. Now Zipacna had company as he went. They arrived at the bottom of the canyon.

The crab is on her side, her shell is gleaming red there.*(149) In under the canyon wall is their contrivance.

"Very good!" Zipacna is happy now. He wishes she were already in his mouth, so she could really cure his hunger. He wanted to eat her, he just wanted it face down, he wanted to enter, but since the crab got on top of him with her back down, he came back out.

"You didn't reach her?" he was asked.

"No indeed- she was just getting on top with her back down. I just barely missed her on the first try, so perhaps I'd better enter on my back,"*(150) he replied.

After that he entered again, on his back. He entered all the way- only his kneecaps were showing now!*(151) He gave a last sigh and was calm.*(152) The great mountain rested on his chest. He couldn't turn over now, and so Zipacna turned to stone.

Such, in its turn, was the defeat of Zipacna by the two boys, Hunahpu and Xbalanque. He was "the maker of mountains," as his previous pronouncements had it, the first son of Seven Macaw. He was defeated beneath the great mountain called Meauan, defeated by genius alone. He was the second to magnify himself, and now we shall speak what is spoken of another.

AND THE THIRD TO MAGNIFY HIMSELF IS THE SECOND SON OF SEVEN MACAW, NAMED EARTHQUAKE.

"I am the breaker of mountains," he said. But even so, Hunahpu and Xbalanque defeated the Earthquake. Then Hurricane spoke, Newborn Thunderbolt, Raw Thunderbolt; he spoke to Hunahpu and Xbalanque:

"The second son of Seven Macaw is another one, another who should be defeated. This is my word, because what they do on the face of the earth is no good. They are surpassing the sun in size, in weight, and it should not be that way. Lure this Earthquake into settling down*(153) over there in the east," Hurricane told the two boys.

"Very well, your lordship. There is more to be done. What we see is no good. Isn't it a question of your position and your eminence, sir, Heart of Sky?" the two boys said when they responded to the word of Hurricane.

Meanwhile he presses on, this Earthquake, breaker of mountains. Just by lightly tapping his foot on the ground he instantly demolishes the mountains, great and small. When he met up with the two boys:

"Where are you going, boy?" they asked Earthquake.

"I'm not going anywhere. I just scatter the mountains, and I'm the one who breaks them, in the course of the days, in the course of the light,"*(154) he said when he answered. Then the Earthquake asked Hunahpu and Xbalanque:

"Where did you come from? I don't know your faces. What are your names?" said Earthquake.

"We have no names. We just hunt and trap in the mountains. We're just orphans, we have nothing to call our own, boy. We're just making our way among the mountains, small and great, boy. And

there's one great mountain we saw that's just growing right along. It's rising really high! It's just swelling up, rising above all the other mountains. And there weren't even one or two birds to be found, boy. So how could it be that you destroy all mountains, boy?" Hunahpu and Xbalanque said to Earthquake.

"It can't be true you saw the mountain you're talking about. Where is it? You'll see me knock it down yet. Where did you see it?"

"Well, it's over there in the east," said Hunahpu and Xbalanque.

"Good. Lead the way,"*(155) the two boys were told.

"Not so. You take the middle. Stay here between us- one of us at your left, the other at your right hand- because of our blowguns. If there are birds, we'll shoot," they said. They enjoy practicing their shooting.

And this is the way they shoot: the shot of their blowguns isn't made of earth- they just blow at the birds when they shoot,*(156) to the amazement of the Earthquake.

And then the boys made fire with a drill*(157) and roasted the birds over the fire. And they coated one of the birds with plaster, they put gypsum on it.

(See illustration: Drawing by Carlos A. Villacorta: Photo by Hillel Burger (C) 1984 by the President and Fellows of Harvard College.

AND THEN THE BOYS MADE FIRE WITH A DRILL: In this illustration from the lowland Maya hieroglyphic book now known as the Madrid Codex, two figures turn a fire drill while sparks fly up from the wooden platform where the point of the drill is inserted. They are seated on or beside a road, marked by footprints.)

"So this is the one we'll give him when he's hungry, and when he savors the aroma of our birds. That will be victory, since we've covered his bird with baked earth. In earth we must cook it, and in earth must be his grave- if the great knower, the one to be made and modeled,*(158) is to have a sowing and dawning," said the boys.

"Because of this, the human heart*(159) will desire a bite of meat, a meal of flesh,*(160) just as the heart of the Earthquake will desire it," Hunahpu and Xbalanque said to one another. Then they roasted the birds and cooked them until they were brown, dripping with fat that oozed from the backs of the birds, with an overwhelmingly fragrant aroma.

And this Earthquake wants to be fed, his mouth just waters, he gulps and slurps with spittle and saliva because of the fragrance of the birds. So then he asked:

"What are you eating? I smell a truly delicious aroma! Please give me a little bit," he said. And when they gave a bird to Earthquake, he was as good as defeated.

After he had finished off the bird, they went on until they arrived in the east, where the great mountain was.

Meanwhile, Earthquake had lost the strength in his legs and arms. He couldn't go on because of the earth that coated the bird he'd eaten. So now there was nothing he could do to the mountain. He never recovered; he was destroyed. So then he was bound by the two boys; his hands were bound behind him. When his hands had been secured by the boys, his ankles were bound to his wrists.*(161)

After that they threw him down, they buried him in the earth.

Such is the defeat of Earthquake. It's Hunahpu and Xbalanque yet again. Their deeds on the face of the earth are countless.

And now we shall explain the birth of Hunahpu and Xbalanque, having first explained the defeat of Seven Macaw, along with Zipacna and Earthquake, here on the face of the earth.

PART_THREE

PART THREE

AND NOW WE SHALL NAME THE NAME OF THE FATHER OF HUNAHPU AND XBALANQUE. Let's drink to him, and let's just drink to the telling*(162) and accounting of the begetting of Hunahpu and Xbalanque. We shall tell just half of it, just a part of the account of their father. Here follows the account.

These are the names: One Hunahpu and Seven Hunahpu, as they are called.*(163)

And these are their parents: Xpiyacoc, Xmucane. In the blackness, in the night, One Hunahpu and Seven Hunahpu were born to Xpiyacoc and Xmucane.

And this One Hunahpu had two children, and the two were sons, the firstborn named One Monkey and the second named One Artisan.

And this is the name of their mother: she is called Xbaquiyalo, the wife of One Hunahpu. As for Seven Hunahpu, he has no wife. He's just a partner*(164) and just secondary; he just remains a boy.

They are great thinkers and great is their knowledge. They are the midmost seers, here on the face of the earth. There is only good in their being and their birthright. They taught skills to One Monkey and One Artisan, the sons of One Hunahpu. One Monkey and One Artisan became flautists, singers, and writers; carvers, jewelers, metalworkers*(165) as well.

(See illustration: Photo 1980 by Justin Kerr.

ONE MONKEY AND ONE ARTISAN BECAME FLAUTISTS, SINGERS, AND WRITERS: In this classic Maya funerary vase painting from northern Guatemala, the twin monkey gods are shown seated in a cross-legged position, pointing to screen-folded books while speaking or singing. The books they hold in their hands have jaguar-skin covers; other books are piled up at their feet. [Vase in the New Orleans Museum of Art.]

And as for One and Seven Hunahpu, all they did was throw dice and play ball, every day. They would play each other in pairs, the four of them together. When they gathered in the ball court for entertainment a falcon would come to watch them, the messenger of Hurricane, Newborn Thunderbolt, Raw Thunderbolt. And for this falcon it wasn't far to the earth here, nor was it far to Xibalba; he could get back to the sky, to Hurricane, in an instant.

The four ballplayers*(166) remained here on the face of the earth after the mother of One Monkey and One Artisan had died. Since it was on the road to Xibalba that they played, they were heard by One Death and Seven Death, the lords of Xibalba:

"What's happening on the face of the earth? They're just stomping and shouting. They should be summoned to come play ball here. We'll defeat them, since we simply get no deference from them. They show no respect, nor do they have any shame. They're really determined to run right over us!"*(167) said all of Xibalba, when they all shared their thoughts, the ones named One and Seven Death. They are great lawgivers.

AND THESE ARE THE LORDS OVER EVERYTHING, each lord with a commission and a domain assigned by One and Seven Death:

There are the lords named House Corner and Blood Gatherer. And this is their commission: to draw blood from people.*(168)

Next are the lordships of Pus Master and Jaundice Master. And this is their domain: to make people swell up, to make pus come out of their legs, to make their faces yellow, to cause jaundice,*(169) as it is called. Such is the domain of Pus Master and Jaundice Master.

Next are the lords Bone Scepter and Skull Scepter, the staff bearers of Xibalba; their staffs are just bones. And this is their staff-bearing: to reduce people to bones, right down to the bones and skulls, until they die from emaciation and edema.*(170) This is the commission of the ones named Bone Scepter and Skull Scepter.

Next are the lords named Trash Master and Stab Master. This is their commission: just to catch up with people*(171) whenever they have filth or grime in the doorway of the house,*(172) the patio of the house.*(173) Then they're struck, they're just punctured until they crawl on the ground, then die. And this is the domain of Trash Master and Stab Master, as they are called.

Next are the lords named Wing and Packstrap. This is their domain: that people should die in the road, just "sudden death,"*(174) as it is called. Blood comes to the mouth, then there is death from vomiting blood. So to each of them his burden, the load on his shoulders: just to strike people on the neck and chest. Then there is death in the road, and then they just go on causing suffering, whether one is coming or going. And this is the domain of Wing and Packstrap.

Such are those who shared their thoughts*(175) when they were piqued and driven*(176) by One and Seven Hunahpu. What Xibalba desired was the gaming equipment of One and Seven Hunahpu: their kilts, their yokes, their arm guards, their panaches and headbands, the costumes of One and Seven Hunahpu.

And this is where we shall continue telling of their trip to Xibalba. One Monkey and One Artisan, the sons of One Hunahpu, stayed behind. Their mother died- and, what is more, they were to be defeated by Hunahpu and Xbalanque.

(See illustration: Drawing reproduced by permission of Michael D.

Coe and the Grolier Club.

AND THESE ARE THE LORDS OVER EVERYTHING: This late classic Maya funerary vase painting from northern Guatemala shows seven lords of Xibalba, with the head lord, corresponding to One Death of the Popol Vuh, smoking a cigar and sitting on a jaguar skin at right. The two lords immediately to his left may be Bone Scepter (in the bottom row) and Skull Scepter (in the top row), one with a staff that looks like a spinal column in front of him and the other with a rounded bundle that could contain a skull. All seven lords wear ball game yokes on their hips. The Popol Vuh mentions fourteen lords, counting two manikins that are meant to be mistaken for lords. Perhaps each pair of names mentioned in the Popol Vuh originally belonged to a single lord, or perhaps each of the lords shown here is understood to have another seated at his side.)

AND NOW FOR THE MESSENGERS OF ONE AND SEVEN DEATH: "You're going, you Military Keepers of the Mat, to summon One and Seven Hunahpu. You'll tell them, when you arrive:

"They must come," the lords say to you. "Would that they might come to play ball with us here. Then we could have some excitement with them. We are truly amazed at them. Therefore they should come," say the lords, "and they should bring their playthings, their yokes and arm guards should come, along with their rubber ball," say the lords, 'you will say when you arrive,' the messengers were told.

And these messengers of theirs are owls:*(177) Shooting Owl, One-legged Owl, Macaw Owl, Skull Owl, as the messengers of Xibalba are called.

There is Shooting Owl, like a point, just piercing.

And there is One-legged Owl, with just one leg; he has wings.

And there is Macaw Owl, with a red back; he has wings.

And there is also Skull Owl, with only a head alone; he has no legs, but he does have wings.

There are four messengers, Military Keepers of the Mat in rank.

And when they came out of Xibalba they arrived quickly, alighting above the ball court where One and Seven Hunahpu were playing, at the ball court called Great Abyss at Carchah. The owls, arriving in a flurry over the ball court, now repeated their words, reciting the exact words*(178) of One Death, Seven Death, Pus Master, Jaundice Master, Bone Scepter, Skull Scepter, House Corner, Blood Gatherer, Trash Master, Stab Master, Wing, Packstrap, as all the lords are named. Their words were repeated by the owls.

"Don't the lords One and Seven Death speak truly?"*(179)

"Truly indeed," the owls replied. "We'll accompany you.

'They're to bring along all their gaming equipment,' say the lords."

"Very well, but wait for us while we notify our mother," they replied.

And when they went to their house, they spoke to their mother; their father had died:

"We're going, our dear mother, even though we've just arrived.*(180) The messengers of the lord have come to get us:

"They should come," he says, 'they say, giving us orders. We'll leave our rubber ball behind here," they said, then they went to tie it up under the roof of the house. "Until we return- then we'll put it in play again."

They told One Monkey and One Artisan:

"As for you, just play and just sing,*(181) write and carve to warm our house and to warm the heart of your grandmother." When they had been given their instructions, their grandmother Xmucane sobbed, she had to weep.

"We're going, we're not dying. Don't be sad," said One and Seven Hunahpu, then they left.

AFTER THAT ONE AND SEVEN HUNAHPU LEFT, guided down the road by the messengers.

And then they descended the road to Xibalba, going down a steep cliff, and they descended until they came out where the rapids cut through,*(182) the roaring canyon narrows named Neck Canyon. They passed through there, then they passed on into the River of Churning Spikes. They passed through countless spikes but they were not stabbed.

And then they came to water again, to blood: Blood River. They crossed but did not drink. They came to a river, but a river filled with pus. Still they were not defeated, but passed through again.

And then they came to the Crossroads, but here they were defeated, at the Crossroads:

Red Road was one and Black Road another.

White Road was one and Yellow Road another.

There were four roads, and Black Road spoke:

"I am the one you are taking. I am the lord's road," said the road. And they were defeated there: this was the Road of Xibalba.

And then they came to the council place of the lords of Xibalba, and they were defeated again there. The ones seated first there are just manikins, just woodcarvings dressed up by Xibalba. And they greeted the first ones:

"Morning,*(183) One Death," they said to the manikin. "Morning, Seven Death," they said to the woodcarving in turn.

So they did not win out, and the lords of Xibalba shouted out with laughter over this. All the lords just shouted with laughter because they had triumphed; in their hearts they had beaten One and Seven Hunahpu. They laughed on until One and Seven Death spoke:

"It's good that you've come. Tomorrow you must put your yokes and arm guards into action," they were told.

"Sit here on our bench," they were told, but the only bench they were offered was a burning-hot rock.

So now they were burned on the bench; they really jumped around on the bench now, but they got no relief.*(184) They really got up fast, having burned their butts. At this the Xibalbans laughed again, they began to shriek with laughter, the laughter rose up like a serpent in their very cores,*(185) all the lords of Xibalba laughed themselves down to their blood and bones.*(186)

"Just go in the house. Your torch and cigars will be brought to your sleeping quarters," the boys were told.

After that they came to the Dark House, a house with darkness alone inside. Meanwhile the Xibalbans shared their thoughts:

"Let's just sacrifice them tomorrow. It can only turn out to be quick; they'll die quickly because of our playing equipment, our gaming things," the Xibalbans are saying among themselves.

This ball of theirs is just a spherical knife.*(187) White Dagger is the name of the ball, the ball of Xibalba. Their ball is just ground down to make it smooth; the ball of Xibalba is just surfaced with crushed bone to make it firm.

AND ONE AND SEVEN HUNAHPU WENT INSIDE DARK HOUSE.

And then their torch was brought,*(188) only one torch, already lit, sent by One and Seven Death, along with a cigar for each of them, also already lit, sent by the lords. When these were brought to One and Seven Hunahpu they were cowering,*(189) here in the dark. When the bearer of their torch and cigars arrived, the torch was bright as it entered; their torch and both of their cigars were burning. The bearer spoke:

"'They must be sure to return them in the morning- not finished, but just as they look now. They must return them intact,' the lords say to you," they were told, and they were defeated. They finished the torch and they finished the cigars that had been brought to them.

And Xibalba is packed with tests, heaps and piles of tests.

This is the first one: the Dark House, with darkness alone inside.

And the second is named Rattling House, heavy with cold inside, whistling with drafts, clattering with hail.*(190) A deep chill

comes inside here.

And the third is named Jaguar House, with jaguars alone inside, jostling one another, crowding together, with gnashing teeth. They're scratching around; these jaguars are shut inside the house.

Bat House is the name of the fourth test, with bats alone inside the house, squeaking, shrieking, darting through the house. The bats are shut inside; they can't get out.

And the fifth is named Razor House, with blades alone inside. The blades are moving back and forth,* (191) ripping, slashing through the house.

These are the first tests of Xibalba, but One and Seven Hunahpu never entered into them, except for the one named earlier, the specified test house.

And when One and Seven Hunahpu went back before One and Seven Death, they were asked:

"Where are my cigars? What of my torch? They were brought to you last night!"

"We finished them, your lordship."

"Very well. This very day, your day is finished, you will die, you will disappear, and we shall break you off. Here you will hide your faces: you are to be sacrificed!" said One and Seven Death.

And then they were sacrificed and buried. They were buried at the Place of Ball Game Sacrifice, as it is called. The head of One Hunahpu was cut off; only his body was buried with his younger brother.

"Put his head in the fork of the tree that stands by the road,"* (192) said One and Seven Death.

And when his head was put in the fork of the tree, the tree bore fruit. It would not have had any fruit, had not the head of One Hunahpu been put in the fork of the tree.

This is the calabash tree, as we call it today, or "the head of One Hunahpu," as it is said.

And then One and Seven Death were amazed at the fruit of the tree. The fruit grows out everywhere, and it isn't clear where the head of One Hunahpu is; now it looks just the way the calabashes look. All the Xibalbans see this, when they come to look.

The state of the tree loomed large in their thoughts, because it came about at the same time the head of One Hunahpu was put in the fork. The Xibalbans said among themselves:

"No one is to pick the fruit, nor is anyone to go beneath the tree," they said. They restricted themselves; all of Xibalba held back.

It isn't clear which is the head of One Hunahpu; now it's exactly the same as the fruit of the tree. Calabash tree came to be its name, and much was said about it. A maiden heard about it, and here we shall tell of her arrival.

AND HERE IS THE ACCOUNT OF A MAIDEN, the daughter of a lord named Blood Gatherer.

And this is when a maiden heard of it, the daughter of a lord. Blood Gatherer is the name of her father, and Blood Woman is the name of the maiden.

And when he heard the account of the fruit of the tree, her father retold it. And she was amazed at the account:

"I'm not acquainted with that tree they talk about. 'Its fruit is truly sweet!' they say, 'I hear,'"* (193) she said.

Next, she went all alone and arrived where the tree stood. It

stood at the Place of Ball Game Sacrifice:

"What? Well! What's the fruit of this tree? Shouldn't this tree bear something sweet? They shouldn't die, they shouldn't be wasted. Should I pick one?" said the maiden.

And then the bone spoke; it was here in the fork of the tree:

"Why do you want a mere bone, a round thing in the branches of a tree?" said the head of One Hunahpu when it spoke to the maiden.

"You don't want it," she was told.

"I do want it," said the maiden.

"Very well. Stretch out your right hand here,*(194) so I can see it," said the bone.

"Yes," said the maiden. She stretched out her right hand, up there in front of the bone.

And then the bone spit out its saliva, which landed squarely in the hand of the maiden.

And then she looked in her hand, she inspected it right away, but the bone's saliva wasn't in her hand.

"It is just a sign I have given you, my saliva, my spittle.*(195) This, my head, has nothing on it- just bone, nothing of meat. It's just the same with the head of a great lord: it's just the flesh that makes his face look good. And when he dies, people get frightened by his bones. After that, his son is like his saliva, his spittle, in his being, whether it be the son of a lord or the son of a craftsman, an orator. The father does not disappear, but goes on being fulfilled. Neither dimmed nor destroyed is the face of a lord, a warrior, craftsman, orator. Rather, he will leave his daughters and sons. So it is that I have done likewise through you. Now go up there on the face of the earth; you will not die. Keep the word.*(196) So be it," said the head of One and Seven Hunahpu- they were of one mind*(197) when they did it.

This was the word Hurricane, Newborn Thunderbolt, Raw Thunderbolt had given them. In the same way, by the time the maiden returned to her home, she had been given many instructions. Right away something was generated in her belly, from the saliva alone, and this was the generation of Hunahpu and Xbalanque.

And when the maiden got home and six months had passed, she was found out by her father. Blood Gatherer is the name of her father.

AND AFTER THE MAIDEN WAS NOTICED BY HER FATHER, when he saw that she was now with child, all the lords then shared their thoughts- One and Seven Death, along with Blood Gatherer:

"This daughter of mine is with child, lords. It's just a bastard,"*(198) Blood Gatherer said when he joined the lords.

"Very well. Get her to open her mouth.*(199) If she doesn't tell, then sacrifice her. Go far away and sacrifice her."

"Very well, your lordships," he replied. After that, he questioned his daughter:

"Who is responsible for the child in your belly, my daughter?" he said.

"There is no child, my father, sir; there is no man whose face I've known,"*(200) she replied.

"Very well. It really is a bastard you carry! Take her away for sacrifice, you Military Keepers of the Mat. Bring back her heart in a bowl, so the lords can take it in their hands*(201) this very day," the owls were told, the four of them.

Then they left, carrying the bowl. When they left they took the maiden by the hand, bringing along the White Dagger, the instrument of sacrifice.

"It would not turn out well if you sacrificed me, messengers, because it is not a bastard that's in my belly. What's in my belly generated all by itself when I went to marvel at the head of One Hunahpu, which is there at the Place of Ball Game Sacrifice. So please stop:*(202) don't do your sacrifice, messengers," said the maiden. Then they talked:

"What are we going to use in place of her heart? We were told by her father:

'Bring back her heart. The lords will take it in their hands, they will satisfy themselves, they will make themselves familiar with its composition.*(203) Hurry, bring it back in a bowl, put her heart in the bowl.' Isn't that what we've been told? What shall we deliver in the bowl? What we want above all is that you should not die," said the messengers.

"Very well. My heart must not be theirs, nor will your homes be here.*(204) Nor will you simply force people to die, but hereafter, what will be truly yours will be the true bearers of bastards. And hereafter, as for One and Seven Death, only blood,*(205) only nodules of sap, will be theirs. So be it that these things are presented before them, and not that hearts are burned before them. So be it: use the fruit of a tree,"*(206) said the maiden. And it was red tree sap she went out to gather in the bowl.

After it congealed, the substitute for her heart became round. When the sap of the croton tree was tapped, tree sap like blood, it became the substitute for her blood. When she rolled the blood around inside there, the sap of the croton tree, it formed a surface like blood,*(207) glistening red now, round inside the bowl. When the tree was cut open by the maiden, the so-called cochineal croton, the sap is what she called blood, and so there is talk of "nodules of blood."*(208)

"So you have been blessed with the face of the earth. It shall be yours," she told the owls.

"Very well, maiden. We'll show you the way up there. You just walk on ahead; we have yet to deliver this apparent duplicate of your heart before the lords," said the messengers.

And when they came before the lords, they were all watching closely:

"Hasn't it turned out well?" said One Death.

"It has turned out well, your lordships, and this is her heart. It's in the bowl."

"Very well. So I'll look," said One Death, and when he lifted it up with his fingers,*(209) its surface was soaked with gore, its surface glistened red with blood.

"Good. Stir up the fire, put it over the fire," said One Death.

After that they dried it over the fire, and the Xibalbans savored the aroma. They all ended up standing here, they leaned over it intently.*(210) They found the smoke of the blood to be truly sweet!

And while they stayed at their cooking, the owls went to show the maiden the way out. They sent her up through a hole onto the earth, and then the guides returned below.

In this way the lords of Xibalba were defeated by a maiden; all of them were blinded.

And here, where the mother of One Monkey and One Artisan*(211) lived, was where the woman named Blood Woman arrived.

AND WHEN THE BLOOD WOMAN CAME TO THE MOTHER OF ONE MONKEY AND ONE ARTISAN, her children were still in her belly, but it wasn't very long before the birth of Hunahpu and Xbalanque, as they are called.

And when the woman came to the grandmother, the woman said to the grandmother:

"I've come, mother, madam.*(212) I'm your daughter-in-law and I'm your child,*(213) mother, madam," she said when she came here to the grandmother.

"Where do you come from? As for my lastborn children,*(214) didn't they die in Xibalba? And these two remain as their sign and their word: One Monkey and One Artisan are their names. So if you've come to see my children, get out of here!" the maiden was told by the grandmother.

"Even so, I really am your daughter-in-law. I am already his, I belong to One Hunahpu. What I carry is his. One Hunahpu and Seven Hunahpu are alive, they are not dead. They have merely made a way for the light to show itself,*(215) madam mother-in-law, as you will see when you look at the faces of what I carry," the grandmother was told.

And One Monkey and One Artisan have been keeping their grandmother entertained: all they do is play and sing, all they work at is writing and carving, every day, and this cheers the heart of their grandmother.

And then the grandmother said:

"I don't want you, no thanks, my daughter-in-law. It's just a bastard in your belly, you trickster! These children of mine who are named by you are dead," said the grandmother.

"Truly, what I say to you is so!"*(216)

"Very well, my daughter-in-law, I hear you. So get going, get their food so they can eat. Go pick a big netful of corn, then come back- since you are already my daughter-in-law,*(217) as I understand it," the maiden was told.

"Very well," she replied.

After that, she went to the garden;*(218) One Monkey and One Artisan had a garden. The maiden followed the path they had cleared and arrived there in the garden, but there was only one clump,*(219) there was no other plant, no second or third. That one clump had borne its ears. So then the maiden's heart stopped:

"It looks like I'm a sinner, a debtor! Where will I get the netful of food she asked for?" she said. And then the guardians of food were called upon by her:

"Come thou, rise up, come thou, stand up:*(220)

Generous Woman, Harvest Woman,

Cacao Woman, Cornmeal Woman,

thou guardian of the food of One Monkey, One Artisan,"

said the maiden.

And then she took hold of the silk, the bunch of silk at the top of the ear. She pulled it straight out, she didn't pick the ear, and the ear reproduced itself to make food for the net. It filled the big net.

And then the maiden came back, but animals carried her net. When she got back she went to put the pack frame in the corner of the house, so

it would look to the grandmother as if she had arrived with a load.

And then, when the grandmother saw the food, a big netful:

"Where did that food of yours come from? You've leveled the place! I'm going to see if you've brought back our whole garden!" said the grandmother.

And then she went off, she went to look at the garden, but the one clump was still there, and the place where the net had been put at the foot of it was still obvious.

And the grandmother came back in a hurry, and she got back home, and she said to the maiden:

"The sign is still there. You really are my daughter-in-law! I'll have to keep watching what you do. These grandchildren of mine are already showing genius," the maiden was told.

Now this is where we shall speak of the birth of Hunahpu and Xbalanque.

AND THIS IS THEIR BIRTH; WE SHALL TELL OF IT HERE.

Then it came to the day of their birth, and the maiden named Blood Woman gave birth. The grandmother was not present when they were born; they were born suddenly. Two of them were born, named Hunahpu and Xbalanque. They were born in the mountains, and then they came into the house. Since they weren't sleeping:

"Throw them out of here! They're really loudmouths!" said the grandmother.

After that, when they put them on an anthill, they slept soundly there. And when they removed them from there, they put them in brambles next.

And this is what One Monkey and One Artisan wanted: that they should die on the anthill and die in the brambles. One Monkey and One Artisan wanted this because they were rowdyish and flushed with jealousy.*⁽²²¹⁾ They didn't allow their younger brothers in the house at first, as if they didn't even know them, but even so they flourished in the mountains.

And One Monkey and One Artisan were great flautists and singers, and as they grew up they went through great suffering and pain. It had cost them suffering to become great knowers. Through it all they became flautists, singers, and writers, carvers. They did everything well. They simply knew it when they were born, they simply had genius. And they were the successors*⁽²²²⁾ of their fathers who had gone to Xibalba, their dead fathers.

Since One Monkey and One Artisan were great knowers, in their hearts they already realized everything when their younger brothers came into being, but they didn't reveal their insight because of their jealousy. The anger in their hearts came down on their own heads;*⁽²²³⁾ no great harm was done. They were decoyed*⁽²²⁴⁾ by Hunahpu and Xbalanque, who merely went out shooting every day. These two got no love from the grandmother, or from One Monkey and One Artisan. They weren't given their meals; the meals had been prepared and One Monkey and One Artisan had already eaten them before they got there.

But Hunahpu and Xbalanque aren't turning red with anger; rather, they just let it go, even though they know their proper place, which they see as clear as day. So they bring birds when they arrive each day, and One Monkey and One Artisan eat them. Nothing whatsoever is given to Hunahpu and Xbalanque, either one of them. All One Monkey and One Artisan do is play and sing.

And then Hunahpu and Xbalanque arrived again, but now they came in here without bringing their birds, so the grandmother turned red:

"What's your reason for not bringing birds?" Hunahpu and Xbalanque were asked.

"There are some, our dear grandmother, but our birds just got hung up in a tree,"*(225) they said, "and there's no way to get up the tree after them, our dear grandmother, and so we'd like our elder brothers to please go with us, to please go get the birds down," they said.

"Very well. We'll go with you at dawn," the elder brothers replied.

Now they had won, and they gathered their thoughts, the two of them, about the fall of One Monkey and One Artisan:

"We'll just turn their very being around*(226) with our words. So be it, since they have caused us great suffering. They wished that we might die and disappear- we, their younger brothers. Just as they wished us to be slaves here,* (227) so we shall defeat them there. We shall simply make a sign of it," they said to one another.

And then they went there beneath a tree, the kind named yellowwood, together with the elder brothers. When they got there they started shooting. There were countless birds up in the tree, chittering, and the elder brothers were amazed when they saw the birds. And not one of these birds fell down beneath the tree:

"Those birds of ours don't fall down; just go throw them down," they told their elder brothers.

"Very well," they replied.

And then they climbed up the tree, and the tree began to grow, its trunk got thicker.

After that, they wanted to get down, but now One Monkey and One Artisan couldn't make it down from the tree. So they said, from up in the tree:

"How can we grab hold?*(228) You, our younger brothers, take pity on us! Now this tree looks frightening to us, dear younger brothers," they said from up in the tree. Then Hunahpu and Xbalanque told them:

"Undo your pants, tie them around your hips, with the long end trailing like a tail behind you, and then you'll be better able to move," they were told by their younger brothers.

"All right," they said.

And then they left the ends of their loincloths trailing, and all at once these became tails. Now they looked like mere monkeys.

After that they went along in the trees of the mountains, small and great. They went through the forests, now howling, now keeping quiet in the branches of trees.

Such was the defeat of One Monkey and One Artisan by Hunahpu and Xbalanque. They did it by means of their genius alone.

And when they got home they said, when they came to their grandmother and mother:

"Our dear grandmother, something has happened to our elder brothers. They've become simply shameless,* (229) they're like animals now," they said.

"If you've done something to your elder brothers, you've knocked me down and stood me on my head. Please don't do anything to your elder brothers, my dear grandchildren," the grandmother said to Hunahpu and Xbalanque. And they told their grandmother:

"Don't be sad, our dear grandmother. You will see the faces of our

elder brothers again. They'll come, but this will be a test for you, our dear grandmother. Will you please not laugh*(230) while we test their destiny?" they said.

And then they began playing. They played "Hunahpu Monkey."

AND THEN THEY SANG, THEY PLAYED, THEY DRUMMED. When they took up their flutes and drums, their grandmother sat down with them, then they played, they sounded out the tune, the song that got its name then. "Hunahpu Monkey" is the name of the tune.

And then One Monkey and One Artisan came back, dancing when they arrived.

And then, when the grandmother looked, it was their ugly faces the grandmother saw. Then she laughed, the grandmother could not hold back her laughter, so they just left right away, out of her sight again, they went up and away in the forest.

"Why are you doing that, our dear grandmother? We'll only try four times; only three times are left. We'll call them with the flute, with song. Please hold back your laughter. We'll try again," said Hunahpu and Xbalanque.

Next they played again, then they came back, dancing again, they arrived again, in the middle of the patio of the house.*(231) As before, what they did was delightful; as before, they tempted their grandmother to laugh. Their grandmother laughed at them soon enough. The monkeys looked truly ridiculous, with the skinny little things below their bellies*(232) and their tails wiggling in front of their breasts.*(233) When they came back the grandmother had to laugh at them, and they went back into the mountains.

"Please, why are you doing that, our dear grandmother? Even so, we'll try it a third time now," said Hunahpu and Xbalanque.

Again they played, again they came dancing, but their grandmother held back her laughter. Then they climbed up here, cutting right across the building, with thin red lips,*(234) with faces blank,*(235) puckering their lips,*(236) wiping their mouths and faces,*(237) suddenly scratching themselves.*(238) And when the grandmother saw them again, the grandmother burst out laughing again, and again they went out of sight because of the grandmother's laughter.

"Even so, our dear grandmother, we'll get their attention."

So for the fourth time they called on the flute, but they didn't come back again. The fourth time they went straight into the forest. So they told their grandmother:

"Well, we've tried, our dear grandmother. They came at first, and we've tried calling them again. So don't be sad. We're here- we, your grandchildren. Just love our mother, dear grandmother. Our elder brothers will be remembered. So be it: they have lived here and they have been named; they are to be called One Monkey and One Artisan," said Hunahpu and Xbalanque.

So they were prayed to by the flautists and singers among the ancient people, and the writers and carvers prayed to them. In ancient times they turned into animals, they became monkeys, because they just magnified themselves, they abused their younger brothers. Just as they wished them to be slaves, so they themselves were brought low. One Monkey and One Artisan were lost then, they became animals, and this is now their place forever.

Even so, they were flautists and singers; they did great things while they lived with their grandmother and mother.

(See illustration: Drawing by the author.

SUDDENLY SCRATCHING THEMSELVES: This spider monkey was painted on a classic Maya funerary vase from northern Guatemala. Note the dangling genitals, or what the Popol Vuh calls "the skinny little things below their bellies." [The vase is in the collection of Edwin Pearlman.])

AND NOW THEY BEGAN TO ACT OUT THEIR SELF-REVELATION before their grandmother and mother. First they made a garden:

"We'll just do some gardening, our dear grandmother and mother," they said. "Don't worry. We're here, we're your grandchildren, we're the successors of our elder brothers," said Hunahpu and Xbalanque.

And then they took up their axe, their mattock, their hoe;*(239) each of them went off with a blowgun on his shoulder. They left the house having instructed their grandmother to give them their food:

"At midday bring our food, dear grandmother," they said.

"Very well, my dear grandchildren," said their grandmother.

After that, they went to their gardening. They simply stuck their mattock in the ground, and the mattock simply cultivated the ground.

And it wasn't only the mattock that cultivated, but also the axe. In the same way, they stuck it in the trunk of a tree; in the same way, it cut into the tree by itself, felling, scattering, felling all the trees and bushes, now leveling, mowing down the trees.*(240)

Just the one axe did it, and the mattock, breaking up thick masses, countless stalks and brambles.*(241) Just one mattock was doing it, breaking up countless things, just clearing off whole mountains, small and great.

And then they gave instructions to that creature named the mourning dove. They sat up on a big stump, and Hunahpu and Xbalanque said:

"Just watch for our grandmother, bringing our food. Cry out right away when she comes, and then we'll grab the mattock and axe."

"Very well," said the mourning dove.

This is because all they're doing is shooting; they're not really doing any gardening.

And as soon as the dove cries out they come running, one of them grabbing the mattock and the other grabbing the hoe, and they're tying up their hair.

One of them deliberately rubs dirt on his hands; he dirties his face as well, so he's just like a real gardener.

And as for the other one, he deliberately dumps wood chips on his head,*(242) so he's like a real woodcutter.

Once their grandmother has seen them they eat, but they aren't really doing their gardening; she brings their food for nothing. And when they get home:

"We're really ready for bed, our dear grandmother," they say when they arrive. Deliberately they massage, they stretch their legs, their arms*(243) in front of their grandmother.

And when they went on the second day and arrived at the garden, it had all grown up high again. Every tree and bush, every stalk and bramble had put itself back together again when they arrived.

"Who's been picking us clean?" they said.

And these are the ones who are doing it, all the animals, small and great: puma, jaguar, deer, rabbit, fox, coyote,*(244) peccary, coati, small birds, great birds. They are the ones who did it; they

did it in just one night.

After that, they started the garden all over again. Just as before, the ground worked itself, along with the woodcutting.

And then they shared their thoughts, there on the cleared and broken ground:

"We'll simply have to keep watch over our garden. Then, whatever may be happening here, we'll find out about it," they said when they shared their thoughts. And when they arrived at the house:

"How could we get picked clean, our dear grandmother? Our garden was tall thickets and groves all over again when we got there awhile ago, our dear grandmother," they said to their grandmother and mother. "So we'll go keep watch, because what's happening to us is no good," they said.

After that, they wound everything up, and then they went back to the clearing.

And there they took cover, and when they were well hidden there, all the animals gathered together, each one sat on its haunches, all the animals, small and great.

And this was the middle of the night when they came. They all spoke when they came. This is what they said:

"Arise, conjoin, you trees!

Arise, conjoin, you bushes!"*(245)

they said. Then they made a great stir beneath the trees and bushes, then they came nearer, and then they showed their faces.

The first of these were the puma and jaguar. The boys tried to grab them, but they did not give themselves up. When the deer and rabbit came near they only got them by the tail, which just broke off: the deer left its tail in their hands. When they grabbed the tail of the deer, along with the tail of the rabbit, the tails were shortened. But the fox, coyote, and peccary, coati did not give themselves up. All the animals went by in front of Hunahpu and Xbalanque.

SO NOW THERE WAS FIRE IN THEIR HEARTS, because they didn't catch them. And one more came, the last one now, jumping as he came, then they cut him off. In their net they caught the rat.

And then they grabbed him and squeezed him behind the head. They tried to choke him; they burned his tail over a fire. Ever since the rat's tail got caught, there's been no hair on his tail, and his eyes have been the way they are since the boys tried to choke him, Hunahpu and Xbalanque.

"I will not die by your hand! Gardening is not your job, but there is something that is," said the rat.

"Where is what is ours? Go ahead and name it," the boys told the rat.

"Will you let me go then? My word is in my belly,*(246) and after I name it for you, you'll give me my morsel of food," said the rat.

"We'll give you your food, so name it," he was told.

"Very well. It's something that belonged to your fathers, named One Hunahpu and Seven Hunahpu, who died in Xibalba. What remains is their gaming equipment. They left it up under the roof of the house:*(247) their kilts, their arm guards, their rubber ball. But your grandmother doesn't take these down in front of you, because this is how your fathers died."

"You know the truth, don't you!" the boys told the rat.

There was great joy in their hearts when they got word of the rubber

ball. When the rat had named it they gave the rat his food, and this is his food: corn kernels, squash seeds, chili, beans, pataxte, cacao. These are his.

"If anything of yours is stored or gets wasted, then gnaw away," the rat was told by Hunahpu and Xbalanque.

"Very well, boys. But what will your grandmother say if she sees me?"*(248) he said.

"Don't be fainthearted. We're here. We know what our grandmother needs to be told. We'll set you up under the corner of the roof right away. When that's taken care of you'll go straight to where the things were left, and we'll look up there under the roof, but it's our stew we'll be looking at," they told the rat when they gave him his instructions.

Hunahpu and Xbalanque made their plans overnight and arrived right at noon, and it wasn't obvious that they had a rat with them when they arrived. One of them went right inside the house when he reached it, while the other went to the corner of the house, quickly setting up the rat. And then they asked their grandmother for their meal:

"Just grind something for our stew, we want chili sauce, our dear grandmother," they said.

After that, she ground chili for their stew. A bowl of broth was set out in front of them, but they were just fooling*(249) their grandmother and mother. They had emptied the water jar:

"We're really parched! Bring us a drink," they told their grandmother.

"Yes," she said, then she went, and they kept on eating. They weren't really hungry; they just put on false appearances.

And then they saw the rat reflected in their chili sauce: here was the rat loosening the ball*(250) that had been left in the peak of the roof. When they saw him in the chili sauce they sent a mosquito, that creature the mosquito, similar to a gnat. He went to the water, then he punctured the side of the grandmother's jar. The water just gushed out from the side of her jar. She tried, but she could not stop up the side of her jar.

"What has our grandmother done? We're choking for lack of water, our parched throats will do us in," they told their mother, then they sent her there.

After that, the rat cut the ball loose. It dropped from beneath the roof, along with the yokes, arm guards, kilts. These were taken away*(251) then; they went to hide them on the road, the road to the ball court.

After that, they went to join their grandmother at the water, and their grandmother and mother were unable to stop up the side of the jar, either one of them.

After that, the boys arrived, each with his blowgun. When they arrived at the water:

"What have you done? We got weary at heart, so we came," they said.

"Look at the side of my jar! It cannot be stopped," said their grandmother, and they quickly stopped it up.

And they came back together, the two of them ahead of their grandmother.

In this way, the matter of the rubber ball was arranged.

HAPPY NOW, THEY WENT TO PLAY BALL AT THE COURT. So they played ball at a distance, all by themselves. They swept out the court of

their fathers.

And then it came into the hearing of the lords of Xibalba:

"Who's begun a game again up there, over our heads? Don't they have any shame, stomping around this way? Didn't One and Seven Hunahpu die trying to magnify themselves in front of us? So, you must deliver another summons," they said as before, One and Seven Death, all the lords.

"They are hereby summoned," they told their messengers. "You are to say, on reaching them:

'"They must come," say the lords. "We would play ball with them here. In seven days we'll have a game," say the lords,' you will say when you arrive," the messengers were told.

And then they came along a wide roadway, the road to the house of the boys, which actually ended at their house, so that the messengers came directly to their grandmother. As for the boys, they were away playing ball when the messengers of Xibalba got there.

"'Truly, they are to come,' say the lords," said the messengers of Xibalba. So then and there the day was specified by the messengers of Xibalba:

"'In seven days our game will take place,'" Xmucane was told there.

"Very well. They'll go when the day comes, messengers," said the grandmother, and the messengers left. They went back.

So now the grandmother's heart was broken:

"How can I send for my grandchildren? Isn't it really Xibalba, just as it was when the messengers came long ago, when their fathers went to die?" said the grandmother, sobbing, at home by herself.

After that, a louse fell on her elbow,*(252) and then she picked it up and put it in her hand, and the louse moved around with fits and starts.

"My grandchild, perhaps you might like to take my message, to go where my grandchildren are, at the ball court," the louse was told, then he went as a message bearer:

"'A messenger has come to your grandmother,' you will say. '"You are to come:

'In seven days they are to come,' say the messengers of Xibalba," says your grandmother,' you will say," the louse was told.

Then he went off, and he went in fits and starts, and sitting in the road was a boy named Tamazul, the toad.

"Where are you going?" said the toad to the louse.

"My word is contained*(253) in my belly. I'm going to the two boys," said the louse to Tamazul.

"Very well. But I notice you're not very fast," the louse was told by the toad. "Wouldn't you like me to swallow you? You'll see, I'll run bent over*(254) this way, we'll arrive in a hurry."

"Very well," said the louse to the toad.

After that, when he had been united with the toad,*(255) the toad hopped. He went along now, but he didn't run.

After that, the toad met a big snake named Zaquicaz:

"Where are you going, Tamazul boy?" the toad was asked next by Zaquicaz.

"I'm a messenger. My word is in my belly," the toad next said to the snake.

"But I notice you're not fast. Listen to me, I'll get there in a hurry," said the snake to the toad.

"Get going," he was told, so then the toad was next swallowed by Zaquicaz. When snakes get their food today they swallow toads.

So the snake was running as he went, then the snake was met from overhead by a laughing falcon, a large bird. The snake was swallowed up by the falcon, and then he arrived above the court. When hawks get their food, they eat snakes in the mountains.

And when the falcon arrived he alighted on the rim of the ball court.*(256) Hunahpu and Xbalanque were happy then, they were playing ball when the falcon arrived.

So then the falcon cried out:

"Wak-ko! Wak-ko!"*(257)

said the falcon as he cried.

"Who's crying out there? Come on! Our blowguns!" they said. And they shot the falcon, landing their blowgun shot*(258) right in his eye. Wobbling, he fell down and they went right there to grab him, then they asked him:

"What are you after?" they said to the falcon.

"My word is contained in my belly.*(259) But heal my eye first, then I'll name it," said the falcon.

"Very well," they said.

Next they took a bit of gum off the surface of the ball, then they put it on the eye of the falcon. "Sorrel gum" was their name for it. As soon as it was treated by them, the vision of the falcon became good again.

"So name it," they said to the falcon, and then he vomited a big snake.

"Speak up," they said next to the snake.

"Yes," he said next, then he vomited the toad.

"What's your errand? Tell it," the toad was told next.

"My word is contained in my belly," the toad said next, and then he tried to throw up, but there was no vomit, he just sort of drooled.*(260) He was trying, but there was no vomit.

After that, he had to be kicked by the boys.

"You trickster!" he was told, then they kicked him*(261) in the rear, and they crushed the bones*(262) of his rear end with their feet. When he tried again, he just sort of spit.

And then they pried the toad's mouth open, it was opened by the boys. They searched his mouth, and the louse had simply stuck in the toad's teeth, it was right there in his mouth.*(263) He hadn't swallowed it, but had only seemed to swallow.

And such was the defeat of the toad. It's not clear what kind of food they gave him, and because he didn't run he became mere meat for snakes.

"Tell it," the louse was told next, so then he named his word:

"Boys, your grandmother says:

'Summon them. A message came for them:

"From Xibalba comes the messenger of One and Seven Death:

"In seven days they are to come here. We'll play ball. Their gaming equipment must come along: rubber ball, yokes, arm guards, kilts. This will make for some excitement here," say the lords,' is the word that came from them,'" says your grandmother. So your grandmother says you must come. Truly your grandmother cries, she calls out to you to come."

"Isn't it the truth!" the boys said in their thoughts. When they

heard it they left at once and got to their grandmother, but they went there only to give their grandmother instructions:

"We're on our way, dear grandmother. We're just giving you instructions. So here is the sign of our word. We'll leave it with you. Each of us will plant an ear of corn.*(264) We'll plant them in the center of our house. When the corn dries up,*(265) this will be a sign of our death:

'Perhaps they died,' you'll say, when it dries up. And when the sprouting comes:*(266)

'Perhaps they live,' you'll say, our dear grandmother and mother. From now on, this is the sign of our word. We're leaving it with you," they said, then they left.

Hunahpu planted one and Xbalanque planted another.*(267) They were planted right there in the house: neither in the mountains nor where the earth is damp,*(268) but where the earth is dry, in the middle of the inside of their house.*(269) They left them planted there, then went off, each with his own blowgun.

THEY WENT DOWN TO XIBALBA, quickly going down the face of a cliff, and they crossed over the bottom of a canyon with rapids. They passed right through the birds- the ones called throng birds- and then they crossed Pus River and Blood River, intended as traps by Xibalba. They did not step in, but simply crossed over on their blowguns, and then they went on over to the Crossroads. But they knew about the roads of Xibalba:*(270) Black Road, White Road, Red Road, Green Road.

And there they summoned that creature named the mosquito. Having heard that he's a spy, they sent him ahead:

"Bite them one by one. First bite the first one seated there, then bite every last one of them, and it will be yours alone to suck the blood of people in the roads," the mosquito was told.

"Very well," replied the mosquito, then he took Black Road and stopped at the two manikins, the woodcarvings, that were seated first. They were all dressed up, and he bit the first of them. It didn't speak, so he bit again. When he bit the one seated second, again it didn't speak, and then he bit the third one, the one seated third actually being One Death.

"Yeow!" each one said as he was bitten.

"What?" each one replied.

"Ouch!" said One Death.

"What is it, One Death?"

"Something's bitten me."

"It's- ouch! There's something that's bitten me," the one seated fourth said next.

"What is it, Seven Death?"

"Something's bitten me." The one seated fifth spoke next:

"Ow! Ow!" he said.

"What, House Corner?" Seven Death said to him.

"Something's bitten me," he said next. The one seated sixth was bitten:

"Ouch!"

"What is it, Blood Gatherer?" House Corner said to him.

"Something's bitten me," he said next. Then the one seated seventh was bitten:

"Ouch!" he said next.

"What is it, Pus Master?" Blood Gatherer said to him.

"Something's bitten me," he said next. The one seated eighth was bitten next:

"Ouch!" he said next.

"What is it, Jaundice Master?" Pus Master said to him next.

"Something's bitten me," he said next. Then the one seated ninth was bitten next:

"Ouch!" he said.

"What is it, Bone Scepter?" Jaundice Master said to him.

"Something's bitten me," he said next. Then the one seated tenth in order was bitten next:

"Ouch!"

"What is it, Skull Scepter?" said Bone Scepter.

"Something's bitten me," he said next. Then the one seated eleventh was bitten next:

"Ouch!" he said next.

"What is it, Wing?"*(271) Skull Scepter said to him next.

"Something's bitten me," he said next. Then the one seated twelfth was bitten next:

"Ouch!" he said next.

"What, Packstrap?" he was asked next.

"Something's bitten me," he said next. Then the one seated thirteenth was bitten next:

"Ouch!"

"What is it, Bloody Teeth?" Packstrap said to him.

"Something's bitten me," he said next. Then the one seated fourteenth was bitten next:

"Ouch! Something's bitten me," he said next.

"Bloody Claws?" Bloody Teeth said to him next.

And such was the naming of their names, they named them all among themselves. They showed their faces and named their names, each one named by the one ranking above him, and naming in turn the name of the one seated next to him.*(272) There wasn't a single name they missed, naming every last one of their names when they were bitten by the hair that Hunahpu had plucked from his own shin. It wasn't really a mosquito that bit them. It went to hear all their names for Hunahpu and Xbalanque.

After that Hunahpu and Xbalanque went on, and then they came to where the Xibalbans were:

"Bid the lords good day," said someone who was seated there. It was a deceiver who spoke.

"These aren't lords! These are manikins, woodcarvings!"*(273) they said as they came up.

And after that, they bid them good morning:

"Morning, One Death. Morning, Seven Death.
Morning, House Corner. Morning, Blood Gatherer.
Morning, Pus Master. Morning, Jaundice Master.
Morning, Bone Scepter. Morning, Skull Scepter.
Morning, Wing. Morning, Packstrap.
Morning, Bloody Teeth. Morning, Bloody Claws,"

they said when they arrived, and all of their identities were accounted for. They named every one of their names; there wasn't a single name they missed. When this was required of them, no name was omitted by them.

"Sit here," they were told. They were wanted on the bench, but they didn't want it:

"This bench isn't for us! It's just a stone slab for cooking," said Hunahpu and Xbalanque. They were not defeated.

"Very well. Just get in the house," they were told.

And after that, they entered Dark House. They were not defeated there. This was the first test they entered in Xibalba, and as far as the Xibalbans were concerned they were as good as defeated.

FIRST THEY ENTERED DARK HOUSE.

And after that, the messenger of One Death brought their torch, burning when it arrived, along with one cigar apiece.

"Here is their torch," says the lord. "They must return the torch in the morning, along with the cigars. They must return them intact," say the lords," the messenger said when he arrived.

"Very well," they said, but they didn't burn the torch- instead, something that looked like fire was substituted. This was the tail of the macaw, which looked like a torch to the sentries. And as for the cigars, they just put fireflies at the tips of those cigars, which they kept lit all night.

"We've defeated them," said the sentries, but the torch was not consumed- it just looked that way. And as for the cigars, there wasn't anything burning there- it just looked that way. When these things were taken back to the lords:

"What's happening? Where did they come from? Who begot them and bore them? Our hearts are really hurting, because what they're doing to us is no good. They're different in looks and different in their very being," they said among themselves. And when they had summoned all the lords:

"Let's play ball, boys," the boys were told. And then they were asked by One and Seven Death:

"Where might you have come from? Please name it," Xibalba said to them.

"Well, wherever did we come from? We don't know," was all they said. They didn't name it.

"Very well then, we'll just go play ball, boys," Xibalba told them.

"Good," they said.

"Well, this is the one we should put in play, here's our rubber ball," said the Xibalbans.*(274)

"No thanks. This is the one to put in, here's ours," said the boys.

"No it's not. This is the one we should put in," the Xibalbans said again.

"Very well," said the boys.

"After all, it's just a decorated one,"*(275) said the Xibalbans.

"Oh no it's not, it's just a skull!*(276) We've said enough,"*(277) said the boys.

"No it's not," said the Xibalbans.

"Very well," said Hunahpu. When it was sent off by Xibalba, the ball was stopped by Hunahpu's yoke.

And then, while Xibalba watched, the White Dagger came out from inside the ball. It went clattering, twisting all over the floor of the court.

"What's that!" said Hunahpu and Xbalanque. "Death is the only thing you want for us! Wasn't it you who sent a summons to us,*(278) and wasn't it your messenger who went? Truly, take pity on us, or else

we'll just leave," the boys told them.

And this is what had been ordained for the boys: that they should have died right away, right there, defeated by that knife. But it wasn't like that. Instead, Xibalba was again defeated by the boys.

"Well, don't go, boys. We can still play ball, but we'll put yours into play," the boys were told.

"Very well," they said, and this was the time for their rubber ball, so the ball was dropped in.

And after that, they specified the prize:

"What should our prize be?" asked the Xibalbans.

"It's yours for the asking," was all the boys said.

"We'll just win four bowls of flowers," said the Xibalbans.

"Very well. What kinds of flowers?" the boys asked Xibalba.

"One bowl of red petals,* (279) one bowl of white petals, one bowl of yellow petals, and one bowl of whole ones," said the Xibalbans.

"Very well," said the boys, and then their ball was dropped in. The boys were their equals in strength and made many plays, since they only had very good thoughts. Then the boys gave themselves up in defeat, and the Xibalbans were glad when they were defeated:

"We've done well. We've beaten them on the first try," said the Xibalbans. "Where will they go to get the flowers?" they said in their hearts.

"Truly, before the night is over, you must hand over our flowers and our prize," the boys, Hunahpu and Xbalanque, were told by Xibalba.

"Very well. So we're also playing ball at night," they said when they accepted their charge.

(See illustration: Drawing from Alfred M. Tozzer, Chichen Itza and

Its Cenote of Sacrifice: photo by Hillel Burger (C) 1984 by the President and Fellows of Harvard College.

"IT'S JUST A SKULL": In this section from the relief panels in the ball court at Chichen Itza, the ball (at center) bears a skull motif. Like One and Seven Hunahpu and their sons in the Popol Vuh, the players in this scene wear kilts, yokes (the belts with objects protruding upward from them at an angle), arm guards, panaches, and headbands. From the mouths of the two players at left and the one at extreme right comes speech (resembling curling smoke), probably in the form of taunts like those the lords of Xibalba hurl at Hunahpu and Xbalanque in a later Popol Vuh episode. The kneeling player to the right of the ball has been decapitated; from his neck emerge serpents and a vine with flowers and fruits. This may be a squash vine, corresponding to the squash that was substituted for Hunahpu's head when he lost his own to a snatch-bat.)

AND AFTER THAT, THE BOYS NEXT ENTERED RAZOR HOUSE, the second test of Xibalba.

And this is when it was ordained that they be cut clear through with knives. It was intended to be quick, intended that they should die, but they did not die. They spoke to the knives then, they instructed them:

"This is yours: the flesh of all the animals," they told the knives, and they no longer moved- rather, each and every knife put down its point.

And this is how they stayed there overnight, in Razor House. Now they summoned all the ants:

"Cutting ants, conquering ants, come now,
all of you fetch all of them for us:
flowers in bloom, prizes for lords."

"Very well," they replied. Then all the ants went to get the flowers, the plantings of One and Seven Death, who had already given instructions to the guardians of the flowers of Xibalba:

"Would you please watch our flowers? Don't let them get stolen. We've defeated these boys, so won't they come looking for the prize they owe us? Don't sleep tonight."

"Very well," they replied, but the guardians of the plants never knew a thing. Their only inclination was to stretch their mouths wide open, going from one perch to another in the trees and plants, repeating the same song:

"Whip-poor-will! Whip-poor-will!"

one of them says as he cries.

"Poor-willow! Poor-willow!"*(280)

says the other as he cries, the one named poorwill.

The two of them are the guards of the garden, the garden of One and Seven Death, but they don't notice the ants stealing what's under their guard, swarming, carrying away loads of flowers, coming to cut down the flowers in the trees, gathering these together with the flowers beneath the trees, while the guards just stretch their mouths wide open, not noticing the nibbling at their own tails, the nibbling at their own wings.*(281) The severed flowers rain down into the gathering and bunching here below, so that four bowls of flowers are easily filled, an acrobatic performance*(282) that lasts till dawn.

After that the messengers, the pages, arrive:

"They are to come," says the lord. "They must bring our prizes here right away," the boys were told.

"Very well," they said. Having loaded up the flowers, four bowls of them, they left and came before the lord, or lords, who received the flowers with pained looks.

With this, the Xibalbans were defeated. The boys had sent mere ants; in just one night the ants had taken the flowers and put them in the bowls.

With this, all the Xibalbans looked sick, they paled*(283) at the sight of the flowers.

After that, they summoned the flower guards:

"How did you allow our flowers to get stolen? These are our flowers! Here! Look!" the guards were told.

"We took no notice, your lordship, though our tails are the worse for it," they said.

And then their mouths were split wide,*(284) their payment for the theft of what was under their guard.

Such was the defeat of One and Seven Death by Hunahpu and Xbalanque, on account of which the whippoorwills got gaping mouths. Their mouths gape to this day.

Now after that, when the ball was dropped in, they just played to a tie. When they finished the game they made an arrangement with each other:

"At dawn again," said Xibalba.

"Very well," said the boys, then they were finished.

AND NOW THEY ENTERED COLD HOUSE. There are countless drafts,

thick-falling hail*(285) inside the house, the home of cold. They diminished the cold right away by shutting it out. The cold dissipated because of the boys. They did not die, but were alive when it dawned.

So, although Xibalba had wanted them to die there, they did not, but were alive when it dawned. They came out when the pages arrived and the guards left.

"Why haven't they died?" said the rulers of Xibalba. Again they were amazed at the feats of the boys, Hunahpu and Xbalanque.

SO NEXT THEY ENTERED JAGUAR HOUSE, the jaguar-packed home of jaguars:

"Don't eat us. There is something that should be yours," the jaguars were told.

With that, they scattered bones before the animals.

After that, the jaguars were wrestling around there, over the bones.

"So they've made good work of them, they've eaten their very hearts. Now that the boys have given themselves up, they've already been transformed into skeletons," said the sentries, all of them finding it sweet. But they hadn't died; they were well. They came out of Jaguar House.

"What sort of people are they? Where did they come from?" said all the Xibalbans.

SO NEXT THEY ENTERED THE MIDST OF THE FIRE, a house of fire*(286) with only fire alone inside. They weren't burned by it, just toasted, just simmered, so they were well when it dawned. Although it had been ordained that they be quickly killed in there, overcome, they weren't, and instead it was the Xibalbans who lost heart over this.

NOW THEY WERE PUT INSIDE BAT HOUSE, with bats alone inside the house, a house of snatch-bats, monstrous beasts, their snouts like knives, the instruments of death. To come before these is to be finished off at once.

When they were inside they just slept in their blowgun; they were not bitten by the members of the household. But this is where they gave one of themselves up because of a snatch-bat that came down, he came along just as one of them showed himself. They did it because it was actually what they were asking for, what they had in mind.

And all night the bats are making noise:

"Squeak! Squeak!"

they say, and they say it all night.

(See illustration: Drawing by the author.

SNATCH-BATS, MONSTROUS BEASTS: The bats of Xibalba were frequently painted on classic Maya funerary vases of the Chama style, from sites in the same region as the Great Abyss where Hunahpu and Xbalanque descended into the underworld. The designs on the present bat's wings represent plucked-out eyes, and he wears two eyes on his collar; the scroll-like forms issuing from his mouth, with ragged upper edges, may represent his shrieks. [The vase is in the collection of Edwin Pearlman.]

Then it let up a little. The bats were no longer moving around. So there, one of the boys crawled to the end of the blowgun, since Xbalanque said:

"Hunahpu? Can you see how long it is till dawn?"*(287)

"Well, perhaps I should look to see how long it is," he replied. So he kept trying to look out the muzzle of the blowgun, he tried to

see the dawn.

And then his head was taken off by a snatch-bat, leaving Hunahpu's body still stuffed inside.

"What's going on?*(288) Hasn't it dawned?" said Xbalanque. No longer is there any movement from Hunahpu. "What's this? Hunahpu hasn't left, has he? What have you done?" He no longer moves; now there is only heavy breathing.

After that, Xbalanque despaired:*(289)

"Alas!*(290) We've given it all up!" he said. And elsewhere, the head meanwhile went rolling onto the court, in accordance with the word of One and Seven Death, and all the Xibalbans were happy over the head of Hunahpu.

After that, Xbalanque summoned all the animals: coati, peccary, all the animals, small and great. It was at night, still night-time when he asked them for their food:

"Whatever your foods are, each one of you: that's what I summoned you for, to bring your food here," Xbalanque told them.

"Very well," they replied, then they went to get what's theirs, then indeed they all came back.

There's the one who only brought his rotten wood.

There's the one who only brought leaves.

There's the one who only brought stones.

There's the one who only brought earth, on through the varied foods of the animals, small and great, until the very last one remained: the coati. He brought a squash,*(291) bumping it along with his snout as he came.

And this became a simulated head for Hunahpu. His eyes were carved right away, then brains came from the thinker, from the sky.*(292) This was the Heart of Sky, Hurricane, who came down, came on down into Bat House. The face wasn't finished any too quickly; it came out well. His strength was just the same,*(293) he looked handsome, he spoke just the same.

And this is when it was trying to dawn, reddening along the horizon:

"Now make the streaks, man," the possum was told.

"Yes," said the old man. When he made the streaks he made it dark again; the old man made four streaks.

(See illustration: Drawings by Carlos A. Villacorta.

THE OLD MAN MADE FOUR STREAKS: In these drawings from the Dresden Codex, the possum deity is shown bringing in each of the four types of solar years. The repeated glyphs in the column to the left of each figure give the names of the four year-beginning day names; in Quiche the names are E or "Tooth" (upper left), Naoh or "Thought" (upper right), I3 or "Wind" (lower left), and Queh or "Deer." Each figure bears the patron deity of a given type of year on his back.)

"Possum is making streaks,"*(294) people say today, ever since he made the early dawn red and blue, establishing its very being.

"Isn't it good?" Hunahpu was asked.

"Good indeed," he replied. His head was as if it had every bone; it had become like his real head.

After that, they had a talk, they made arrangements with each other:

"How about not playing ball yourself? You should just make lots of threats,*(295) while I should be the one to take all the action," Xbalanque told him. After that, he gave instructions to a rabbit:

"Your place is there above the court, on top. Stay there in the

oaks,"*(296) the rabbit was told by Xbalanque, "until the ball comes to you, then take off while I get to work," the rabbit was told. He got his instructions while it was still dark.

After that, when it dawned, both of them were just as well as ever.

And when the ball was dropped in again, it was the head of Hunahpu that rolled over the court:

"We've won! You're done!

Give up! You lost!"

they were told. But even so Hunahpu was shouting:

"Punt the head as a ball!" he told them.

"Well, we're not going to do them any more harm with threats," and with this the lords of Xibalba sent off the ball and Xbalanque received it, the ball was stopped by his yoke, then he hit it hard and it took off, the ball passed straight out of the court, bouncing just once, just twice, and stopping among the oaks. Then the rabbit took off hopping, then they went off in pursuit, then all the Xibalbans went off, shouting, shrieking, they went after the rabbit, off went the whole of Xibalba.

After that, the boys got Hunahpu's head back. Then Xbalanque planted the squash; this is when he went to set the squash above the court.

So the head of Hunahpu was really a head again, and the two of them were happy again. And the others, those Xibalbans, were still going on in search of the ball.

After that, having recovered the ball from among the oaks,* (297) the boys cried out to them:

"Come back! Here's the ball! We've found it!" they said, so they stopped. When the Xibalbans got back:

"Have we been seeing things?" they said. Then they began their ball game again, and they made equal plays on both sides again.

After that, the squash was punted by Xbalanque. The squash was wearing out;*(298) it fell on the court, bringing to light its light-colored seeds, as plain as day*(299) right in front of them.

"How did you get ahold of that? Where did it come from?" said Xibalba.

With this, the masters of Xibalba were defeated by Hunahpu and Xbalanque. There was great danger there, but they did not die from all the things that were done to them.

AND HERE IT IS: THE EPITAPH, THE DEATH OF HUNAHPU AND XBALANQUE.

Here it is: now we shall name their epitaph, their death. They did whatever they were instructed to do, going through all the dangers, the troubles that were made for them, but they did not die from the tests of Xibalba, nor were they defeated by all the voracious animals that inhabit Xibalba.

After that, they summoned two midmost seers, similar to readers. Here are their names: Xulu, Pacam, both knowers.

"Perhaps there will be questions from the lords of Xibalba about our death. They are thinking about how to overcome us because we haven't died, nor have we been defeated. We've exhausted all their tests. Not even the animals got us. So this is the sign, here in our hearts: their instrument for our death will be a stone oven. All the Xibalbans have gathered together. Isn't our death inevitable? So this is your plan, here we shall name it: if you come to be questioned by them about our death, once we've been burned, what will you say, Xulu and Pacam? If they ask you:

'Wouldn't it be good if we dumped their bones in the canyon?''*(300)

'Perhaps it wouldn't be good, since they would only come back to life again,' you will say.

'Perhaps this would be good: we'll just hang them up in a tree,' they'll say to you next.

'Certainly that's no good, since you would see their faces,'*(301) you will say, and then they'll speak to you for the third time:

'Well, here's the only good thing: we'll just dump their bones in the river.' If that's what they ask you next:

'This is a good death for them, and it would also be good to grind their bones on a stone, just as corn is refined into flour, and refine each of them separately, and then:

Spill them into the river,
sprinkle them*(302) on the water's way,
among the mountains, small and great,'

you will say, and then you will have carried out the instructions we've named for you," said Hunahpu and Xbalanque. When they gave these instructions they already knew they would die.

THIS IS THE MAKING OF THE OVEN, the great stone oven. The Xibalbans made it like the places where the sweet drink is cooked, they opened it to a great width.

After that, messengers came to get the boys, the messengers of One and Seven Death:

"'They must come. We'll go with the boys, to see the treat we've cooked up for them,' say the lords, you boys," they were told.

"Very well," they replied. They went running and arrived at the mouth of the oven.

And there they tried to force them into a game:

"Here, let's jump over our drink four times, clear across, one of us after the other, boys," they were told by One Death.

"You'll never put that one over on us.*(303) Don't we know what our death is, you lords? Watch!" they said, then they faced each other. They grabbed each other by the arms and went head first into the oven.*(304)

And there they died, together, and now all the Xibalbans were happy, raising their shouts, raising their cheers:*(305)

"We've really beaten them! They didn't give up easily," they said.

After that they summoned Xulu and Pacam, who kept their word: the bones went just where the boys had wanted them. Once the Xibalbans had done the divination, the bones were ground and spilled in the river, but they didn't go far- they just sank to the bottom of the water. They became handsome boys; they looked just the same as before when they reappeared.

AND ON THE FIFTH DAY THEY REAPPEARED. They were seen in the water by the people. The two of them looked like channel catfish*(306) when their faces were seen by Xibalba. And having germinated in the waters, they appeared the day after that as two vagabonds,*(307) with rags before and rags behind, and rags all over too. They seemed unrefined*(308) when they were examined by Xibalba; they acted differently now.

It was only the Dance of the Poorwill, the Dance of the Weasel, only Armadillos they danced.

Only Swallowing Swords, only Walking on Stilts now they danced.

They performed many miracles now. They would set fire to a house, as

if they were really burning it, and suddenly bring it back again. Now Xibalba was full of admiration.*(309)

Next they would sacrifice themselves, one of them dying for the other,*(310) stretched out as if in death. First they would kill themselves, but then they would suddenly look alive again. The Xibalbans could only admire what they did. Everything they did now was already the groundwork for their defeat of Xibalba.

(See illustration: Drawing by the author.

ONLY ARMADILLOS THEY DANCED: This dancer, who wears an armadillo mask, plays a flute, and shakes a rattle, was painted on a classic Maya funerary vase of the Chama style, which pertains to sites in the same general region as the Great Abyss where Hunahpu and Xbalanque descended into the underworld. The cross-hatching represents the scales of an armadillo.)

And after that, news of their dances came to the ears of the lords, One and Seven Death. When they heard it they said:

"Who are these two vagabonds? Are they really such a delight? And is their dancing really that pretty? They do everything!" they said. An account of them had reached the lords. It sounded delightful, so then they entreated their messengers to notify them that they must come:

"If only they'd come make a show for us, we'd wonder at them and marvel at them," say the lords, 'you will say,' the messengers were told. So they came to the dancers, then spoke the words of the lords to them.

"But we don't want to, because we're really ashamed. Just plain no. Wouldn't we be afraid to go inside there, into a lordly house? Because we'd really look bad. Wouldn't we just be wide-eyed? Take pity on us! Wouldn't we look like mere dancers to them? What would we say to our fellow vagabonds? There are others who also want us to dance today, to liven things up with us, so we can't do likewise for the lords, and likewise is not what we want, messengers," said Hunahpu and Xbalanque.

Even so, they were prevailed upon: through troubles, through torments, they went on their tortuous way. They didn't want to walk fast. Many times they had to be forced; the messengers went ahead of them as guides but had to keep coming back.*(311) And so they went to the lord.

AND THEY CAME TO THE LORDS. Feigning great humility,*(312) they bowed their heads all the way to the ground*(313) when they arrived. They brought themselves low, doubled over, flattened out, down to the rags, to the tatters.*(314) They really looked like vagabonds when they arrived.

So then they were asked what their mountain*(315) and tribe were, and they were also asked about their mother and father:

"Where do you come from?" they were asked.

"We've never known, lord. We don't know the identity of our mother and father. We must've been small when they died," was all they said. They didn't give any names.

"Very well. Please entertain us, then. What do you want us to give you in payment?" they were asked.

"Well, we don't want anything. To tell the truth, we're afraid," they told the lord.

"Don't be afraid. Don't be ashamed. Just dance this way: first

you'll dance to sacrifice yourselves, you'll set fire to my house after that, you'll act out all the things you know. We want to be entertained. This is our heart's desire, the reason you had to be sent for, dear vagabonds. We'll give you payment," they were told.

So then they began their songs and dances, and then all the Xibalbans arrived, the spectators crowded the floor, and they danced everything: they danced the Weasel, they danced the Poorwill, they danced the Armadillo. Then the lord said to them:

"Sacrifice my dog, then bring him back to life again," they were told.

"Yes," they said.

When they sacrificed the dog
he then came back to life.
And that dog was really happy
when he came back to life.
Back and forth he wagged his tail
when he came back to life.

And the lord said to them:

"Well, you have yet to set my home on fire," they were told next, so then they set fire to the home of the lord. The house was packed with all the lords, but they were not burned. They quickly fixed it back again, lest the house of One Death be consumed all at once, and all the lords were amazed, and they went on dancing this way. They were overjoyed.

And then they were asked by the lord:

"You have yet to kill a person! Make a sacrifice without death!" they were told.

"Very well," they said.

And then they took hold of a human sacrifice.

And they held up a human heart on high.

And they showed its roundness*(316) to the lords.

(See illustration: Drawing reproduced by permission of Michael D.

Coe and the Grolier Club.

AND THEN THEY TOOK HOLD OF A HUMAN SACRIFICE: In this classic Maya funerary vase painting from northern Guatemala, the head lord of Xibalba, One Death, is seated on his throne at right; perched on his hat is one of the messengers of Xibalba, Macaw Owl, who is like an owl except in having the tail of a macaw. In front of One Death are Hunahpu (left) and Xbalanque (right), acting out the roles of sacrificial priests; Xbalanque's identity is marked by the jaguar paw on the nose of his mask. The women around the platform are all of noble rank; the one at extreme left is tapping the foot of the one who faces One Death, calling her attention to the sacrificial performance. [The vase is in the Princeton University Art Museum.]

And now One and Seven Death admired it, and now that person was brought right back to life. His heart was overjoyed when he came back to life, and the lords were amazed:

"Sacrifice yet again, even do it to yourselves! Let's see it! At heart, that's the dance we really want from you," the lords said now.

"Very well, lord," they replied, and then they sacrificed themselves.

AND THIS IS THE SACRIFICE OF HUNAHPU BY XBALANQUE. One by one his legs, his arms were spread wide.*(317) His head came off, rolled far

away outside. His heart, dug out, was smothered in a leaf,* (318) and all the Xibalbans went crazy at the sight.

So now, only one of them was dancing there: Xbalanque.

"Get up!" he said, and Hunahpu came back to life. The two of them were overjoyed at this- and likewise the lords rejoiced, as if they were doing it themselves. One and Seven Death were as glad at heart as if they themselves were actually doing the dance.

(See illustration: Drawing reproduced by permission of Michael D. Coe and the Grolier Club.

"SACRIFICE YET AGAIN, EVEN DO IT TO YOURSELVES!": This classic Maya funerary vase painting from the lowlands shows Hunahpu (at extreme left) about to swing the stone axe in his right hand and decapitate his brother Xbalanque, while an ecstatic lord of Xibalba (in skeletal form) looks on. The dog at right is doubtless the one already sacrificed and brought back to life earlier in this same episode. The insect above the dog holds a torch and may be one of the fireflies with which Hunahpu and Xbalanque made their cigars appear to be burning while they spent the night in Dark House, in an earlier episode. In the present scene Hunahpu is identifiable, in part, by the catfish barbel that emerges just behind his nostril; he acquired this attribute in a previous episode, when he and Xbalanque appeared as channel catfish after their ground bones had been thrown in water. Xbalanque, whose name is partly derived from *balam* or "jaguar," is identifiable from his jaguar ears, paws, feet, and tail. [This vase can be seen at the Metropolitan Museum of Art.]

And then the hearts of the lords were filled with longing, with yearning for the dance of Hunahpu and Xbalanque, so then came these words from One and Seven Death:

"Do it to us! Sacrifice us!"* (319) they said. "Sacrifice both of us!" said One and Seven Death to Hunahpu and Xbalanque.

"Very well. You ought to come back to life. After all, aren't you Death?*" (320) And aren't we making you happy, along with the vassals of your domain?" they told the lords.

And this one was the first to be sacrificed: the lord at the very top, the one whose name is One Death, the ruler of Xibalba.

And with One Death dead, the next to be taken was Seven Death. They did not come back to life.

And then the Xibalbans were getting up to leave, those who had seen the lords die. They underwent heart sacrifice* (321) there, and the heart sacrifice was performed on the two lords only for the purpose of destroying them.

As soon as they had killed the one lord without bringing him back to life, the other lord had been meek and tearful before the dancers. He didn't consent, he didn't accept it:

"Take pity on me!" he said when he realized. All their vassals took the road to the great canyon, in one single mass they filled up the deep abyss. So they piled up there and gathered together, countless ants,* (322) tumbling down into the canyon, as if they were being herded there. And when they arrived, they all bent low in surrender, they arrived meek and tearful.

Such was the defeat of the rulers of Xibalba. The boys accomplished it only through wonders, only through self-transformation.

AND THEN THEY NAMED THEIR NAMES, they gave themselves names before all of Xibalba:

"Listen: we shall name our names, and we shall also name the names of our fathers for you. Here we are: we are Hunahpu and Xbalanque by name. And these are our fathers, the ones you killed: One Hunahpu and Seven Hunahpu by name. And we are here to clear the road of the torments and troubles of our fathers. And so we have suffered all the troubles you've caused us. And so we are putting an end to all of you. We're going to kill you. No one can save you now," they were told. And then all the Xibalbans got down on the ground and cried out:

"Take pity on us, Hunahpu and Xbalanque! It is true that we wronged your fathers, the ones you name. Those two are buried at the Place of Ball Game Sacrifice," they replied.

"Very well. Now this is our word, we shall name it for you. All of you listen, you Xibalbans: because of this, your day and your descendants will not be great. Moreover, the gifts you receive will no longer be great, but reduced to scabrous nodules of sap. There will be no cleanly blotted blood for you,*(323) just griddles, just gourds, just brittle things broken to pieces.*(324) Further, you will only feed on creatures of the meadows and clearings. None of those who are born in the light, begotten in the light*(325) will be yours. Only the worthless will yield themselves up before you. These will be the guilty, the violent, the wretched, the afflicted. Wherever the blame is clear,*(326) that is where you will come in, rather than just making sudden attacks on people in general. And you will hear petitions over headed-up sap,"*(327) all the Xibalbans were told.

Such was the beginning of their disappearance and the denial of their worship.

Their ancient day was not a great one,
these ancient people only wanted conflict,
their ancient names are not really divine,
but fearful is the ancient evil of their faces.
They are makers of enemies, users of owls,
they are inciters to wrongs and violence,*(328)
they are masters of hidden intentions as well,
they are black and white,

masters of stupidity, masters of perplexity,*(329)
as it is said. By putting on appearances they cause dismay.

Such was the loss of their greatness and brilliance. Their domain did not return to greatness. This was accomplished by Hunahpu and Xbalanque.

AND THIS IS THEIR GRANDMOTHER, CRYING AND CALLING OUT*(330) IN FRONT OF THE CORN EARS they left planted.*(331) Corn plants grew, then dried up.

And this was when they were burned in the oven; then the corn plants grew again.

And this was when their grandmother burned something,*(332) she burned copal before the corn as a memorial to them. There was happiness in their grandmother's heart the second time the corn plants sprouted. Then the ears were deified by their grandmother,*(333) and she gave them names: Middle of the House, Middle of the Harvest, Living Corn, Earthen Floor became their names.

And she named the ears Middle of the House, Middle of the Harvest, because they had planted them right in the middle of the inside of

their home.

And she further named them Earthen Floor, Living Corn, since the corn ears had been placed up above an earthen floor.*(334)

And she also named them Living Corn, because the corn plants had grown again. So they were named by Xmucane. They had been left behind, planted by Hunahpu and Xbalanque, simply as a way for their grandmother to remember them.

And the first to die, a long time before, had been their fathers, One Hunahpu and Seven Hunahpu. And they saw the face of their father*(335) again, there in Xibalba. Their father spoke to them again when they had defeated Xibalba.

AND HERE THEIR FATHER IS PUT BACK TOGETHER BY THEM. They put Seven Hunahpu back together; they went to the Place of Ball Game Sacrifice to put him together. He had wanted his face to become just as it was, but when he was asked to name everything,*(336) and once he had found the name of the mouth, the nose, the eyes of his face, there was very little else to be said. Although his mouth could not name the names of each of his former parts,*(337) he had at least spoken again.

And so it remained that they were respectful of their father's heart, even though they left him at the Place of Ball Game Sacrifice:

"You will be prayed to here,"*(338) his sons told him, and his heart was comforted. "You will be the first resort, and you will be the first to have your day kept*(339) by those who will be born in the light, begotten in the light. Your name will not be lost.*(340) So be it," they told their father when they comforted his heart.

"We merely cleared the road of your death, your loss, the pain, the suffering that were inflicted upon you."

And such was the instruction they gave when all the Xibalbans had been finally defeated. And then the two boys ascended this way, here into the middle of the light, and they ascended straight on into the sky, and the sun belongs to one and the moon to the other.*(341) When it became light within the sky, on the face of the earth, they were there in the sky.

And this was also the ascent of the Four Hundred Boys killed by Zipacna.

And these came to accompany the two of them. They became the sky's own stars.*(342)

PART_FOUR

PART FOUR

AND HERE IS THE BEGINNING OF THE CONCEPTION OF HUMANS, and of the search for the ingredients of the human body. So they spoke, the Bearer, Begetter, the Makers, Modelers named Sovereign Plumed Serpent:

"The dawn has approached, preparations have been made, and morning has come for the provider, nurturer, born in the light, begotten in the light. Morning has come for humankind, for the people of the face of the earth," they said. It all came together as they went on thinking in the darkness, in the night, as they searched and they sifted, they thought and they wondered.

And here their thoughts came out in clear light. They sought and discovered*(343) what was needed for human flesh. It was only a short while before the sun, moon, and stars were to appear above the Makers and Modelers. Broken Place, Bitter Water Place is the name: the yellow corn, white corn came from there.

And these are the names of the animals who brought the food:*(344) fox, coyote, parrot, crow. There were four animals who brought the news of the ears of yellow corn and white corn. They were coming from over there at Broken Place, they showed the way to the break.

And this was when they found the staple foods.

And these were the ingredients for the flesh of the human work, the human design, and the water was for the blood. It became human blood, and corn was also used by the Bearer, Begetter.

And so they were happy over the provisions of the good mountain, filled with sweet things, thick with yellow corn, white corn, and thick with pataxte and cacao, countless zapotes, anonas, jocotes, nances, matasanos, sweets- the rich foods filling up the citadel named Broken Place, Bitter Water Place. All the edible fruits were there: small staples, great staples, small plants, great plants. The way was shown by the animals.

And then the yellow corn and white corn were ground, and Xmucane did the grinding nine times.*(345) Corn was used, along with the water she rinsed her hands with,*(346) for the creation of grease; it became human fat when it was worked by the Bearer, Begetter, Sovereign Plumed Serpent, as they are called.

After that, they put it into words:

the making, the modeling of our first mother-father,
with yellow corn, white corn alone for the flesh,*(347)
food alone for the human legs and arms,
for our first fathers, the four human works.

It was staples alone that made up their flesh.

THESE ARE THE NAMES OF THE FIRST PEOPLE WHO WERE MADE AND MODELED.

This is the first person: Jaguar Quitze.

And now the second: Jaguar Night.

And now the third: Mahucutah.

And the fourth: True Jaguar.

And these are the names of our first mother-fathers. They were simply made and modeled, it is said; they had no mother and no father. We have named the men by themselves. No woman gave birth to them, nor were they begotten by the builder, sculptor, Bearer, Begetter. By sacrifice alone, by genius alone they were made, they were modeled by the Maker, Modeler, Bearer, Begetter, Sovereign Plumed Serpent. And when they came to fruition, they came out human:

They talked and they made words.

They looked and they listened.

They walked, they worked.*(348)

They were good people, handsome, with looks of the male kind. Thoughts came into existence and they gazed; their vision came all at once. Perfectly they saw, perfectly they knew everything under the sky, whenever they looked. The moment they turned around and looked around in the sky, on the earth, everything was seen without any obstruction. They didn't have to walk around before they could see what was under the sky; they just stayed where they were.

As they looked, their knowledge became intense. Their sight passed through trees, through rocks, through lakes, through seas, through mountains, through plains. Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar were truly gifted people.

And then they were asked by the builder and mason:

"What do you know about your being? Don't you look, don't you

listen? Isn't your speech good, and your walk? So you must look, to see out under the sky. Don't you see the mountain-plain clearly? So try it," they were told.

And then they saw everything under the sky perfectly. After that, they thanked the Maker, Modeler:

"Truly now,
double thanks, triple thanks
that we've been formed, we've been given
our mouths, our faces,
we speak, we listen,
we wonder, we move,
our knowledge is good, we've understood
what is far and near,
and we've seen what is great and small
under the sky, on the earth.
Thanks to you we've been formed,
we've come to be made and modeled,
our grandmother, our grandfather,"

they said when they gave thanks for having been made and modeled. They understood everything perfectly, they sighted the four sides, the four corners in the sky, on the earth, and this didn't sound good to the builder and sculptor:

"What our works and designs have said is no good:

'We have understood everything, great and small,' they say." And so the Bearer, Begetter took back their knowledge:

"What should we do with them now? Their vision should at least reach nearby, they should see at least a small part of the face of the earth, but what they're saying isn't good. Aren't they merely 'works' and 'designs' in their very names? Yet they'll become as great as gods, unless they procreate, proliferate at the sowing, the dawning, unless they increase."

"Let it be this way: now we'll take them apart just a little, that's what we need. What we've found out isn't good. Their deeds would become equal to ours, just because their knowledge reaches so far. They see everything," so said

the Heart of Sky, Hurricane,
Newborn Thunderbolt, Raw Thunderbolt,
Sovereign Plumed Serpent,
Bearer, Begetter,
Xpiyacoc, Xmucane,
Maker, Modeler,

as they are called. And when they changed the nature of their works, their designs, it was enough that the eyes be marred by the Heart of Sky. They were blinded as the face of a mirror is breathed upon. Their eyes were weakened. Now it was only when they looked nearby that things were clear.

And such was the loss of the means of understanding, along with the means of knowing everything, by the four humans. The root was implanted.

And such was the making, modeling of our first grandfather, our father, by the Heart of Sky, Heart of Earth.

AND THEN THEIR WIVES AND WOMEN CAME INTO BEING. Again, the same gods thought of it. It was as if they were asleep*(349) when they received them, truly beautiful women were there with Jaguar Quitze,

Jaguar Night, Mahucutah, and True Jaguar. With their women there they became wider awake. Right away they were happy at heart again, because of their wives.

Celebrated Seahouse is the name of the wife of Jaguar Quitze.

Prawn House is the name of the wife of Jaguar Night.

Hummingbird House is the name of the wife of Mahucutah.

Macaw House is the name of the wife of True Jaguar.

So these are the names of their wives, who became ladies of rank,*⁽³⁵⁰⁾ giving birth to the people of the tribes, small and great.

AND THIS IS OUR ROOT, WE WHO ARE THE QUICHE PEOPLE. And there came to be a crowd of penitents and sacrificers.*⁽³⁵¹⁾ It wasn't only four who came into being then, but there were four mothers for us, the Quiche people. There were different names for each of the peoples when they multiplied, there in the east. Their names became numerous: Sovereign Oloman, Cohah, Quenech Ahau, as the names of the people who were there in the east are spoken. They multiplied, and it is known that the Tams and Ilocs began then. They came from the same place, there in the east.

Jaguar Quitze was the grandfather and father of the nine great houses of the Cauecs.

Jaguar Night was the grandfather and father of the nine great houses of the Greathouses.

Mahucutah was the grandfather and father of the four great houses of the Lord Quiches.

There were three separate lineages. The names of the grandfathers and fathers are not forgotten. These multiplied and flowered there in the east, but the Tams and Ilocs also came forth, along with thirteen allied tribes, thirteen principalities,*⁽³⁵²⁾ including:

The Rabinals, Cakchiquels, those of the Bird House.

And the White Cornmeals.

And also the Lamacs, Serpents, Sweatbath House, Talk House, those of the Star House.

And those of the Quiba House, those of the Yokes House, Acul people, Jaguar House, Guardians of the Spoils, Jaguar Ropes.

It is sufficient that we speak only of the largest tribes from among the allied tribes; we have only noted the largest. Many more came out afterward, each one a division of that citadel.*⁽³⁵³⁾ We haven't written their names, but they multiplied there, from out of the east. There came to be many peoples in the blackness; they began to abound even before the birth of the sun and the light. When they began to abound they were all there together; they stood and walked in crowds, there in the east.

There was nothing they could offer for sustenance, but even so they lifted their faces to the sky. They didn't know where they were going. They did this for a long time, when they were there in the grasslands: black people, white people, people of many faces, people of many languages, uncertain, there at the edge of the sky.

And there were mountain people.*⁽³⁵⁴⁾ They didn't show their faces, they had no homes. They just traveled the mountains, small and great. "It's as if they were crazy," they used to say. They derided the mountain people, it was said. There they watched for the sunrise, and for all the mountain people there was just one language.*⁽³⁵⁵⁾ They did not yet pray to wood and stone.*⁽³⁵⁶⁾

These are the words with which they remembered the Maker, Modeler,

Heart of Sky, Heart of Earth. It was said that these were enough to keep them mindful of what was in shadow and what was dawning. All they did was ask; they had reverent words. They were reverent, they were givers of praise, givers of respect, lifting their faces to the sky*(357) when they made requests for their daughters and sons:

"Wait!

thou Maker, thou Modeler,
look at us, listen to us,
don't let us fall, don't leave us aside,
thou god in the sky, on the earth,
Heart of Sky, Heart of Earth,
give us our sign, our word,
as long as there is day, as long as there is light.*(358)
When it comes to the sowing, the dawning,
will it be*(359) a greening road, a greening path?
Give us a steady light, a level place,
a good light, a good place,
a good life and beginning.*(360)
Give us all of this, thou Hurricane,
Newborn Thunderbolt, Raw Thunderbolt,
Newborn Nanahuac, Raw Nanahuac,
Falcon, Hunahpu,
Sovereign Plumed Serpent,
Bearer, Begetter,
Xpiyacoc, Xmucane,
Grandmother of Day, Grandmother of Light,
when it comes to the sowing, the dawning,"

they said when they made their fasts*(361) and prayers, just watching intently*(362) for the dawn. There, too, they looked toward the east, watching closely for the daybringer, the great star at the birth of the sun, of the heat for what is under the sky, on the earth, the guide for the human work, the human design.

They spoke, those who are Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar:

"We're still waiting for the dawning," they said, these great knowers, great thinkers, penitents, praisers, as they are called. And there was nothing of wood and stone in the keeping of our first mother-fathers, and they were weary at heart there, waiting for the sun. Already there were many of them, all the tribes, including the Yaqui people, all penitents and sacrificers.

"Let's just go. We'll look and see whether there is something to keep as our sign. We'll find out what we should burn in front of it. The way we are right now, we have nothing to keep as our own," said Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar. They got word of a citadel. They went there.

AND THIS IS THE NAME OF THE MOUNTAIN WHERE THEY WENT, Jaguar Quitze, Jaguar Night, Mahucutah, True Jaguar, and the Tams and Ilocs: Tulan Zuyua, Seven Caves, Seven Canyons is the name of the citadel. Those who were to receive the gods arrived there.

And they arrived there at Tulan, all of them, countless people arrived, walking in crowds, and their gods were given out in order, the first being those of Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar. They were happy:

"We have found what we were looking for," they said. And this one

was the first to come out:

Tohil is the name of the god loaded in the backpack borne by Jaguar Quitze. And the others came out in turn:

Auilix is the name of the god that Jaguar Night carried.

Hacautitz, in turn, is the name of the god received by Mahucutah.

Middle of the Plain is the name of the god received by True Jaguar.

And there were still other Quiche people, since the Tams also received theirs, but it was the same Tohil for the Tams, that's the name received by the grandfather and father of the Tam lords, as they are known today.

And third were the Ilocs: again, Tohil is the name of the god received by the grandfather and father of those lords, the same ones known today.

And such was the naming of the three Quiches. They have never let go of each other because the god has just one name: Tohil for the Quiche proper, and Tohil for the Tams and Ilocs. There is just one name for their god, and so the Quiche threesome has not come apart, those three. Tohil, Auilix, and Hacautitz are truly great in their very being.

And then all the tribes came in: Rabinals, Cakchiquels, those of the Bird House, along with the Yaqui people, as the names are today. And the languages of the tribes changed there; their languages became differentiated. They could no longer understand one another clearly when they came away from Tulan.

And there they broke apart. There were those who went eastward and many who came here, but they were all alike in dressing with hides. There were no clothes of the better kinds. They were in patches, they were adorned with mere animal hides. They were poor. They had nothing of their own. But they were people of genius in their very being when they came away from Tulan Zuyua, Seven Caves, Seven Canyons, so says the Ancient Word.

THEY WALKED IN CROWDS WHEN THEY ARRIVED AT TULAN, AND THERE WAS NO FIRE. Only those with Tohil had it: this was the tribe whose god was first to generate fire. How it was generated is not clear. Their fire was already burning when Jaguar Quitze and Jaguar Night first saw it:

"Alas! Fire has not yet become ours. We'll die from the cold," they said. And then Tohil spoke:

"Do not grieve. You will have your own even when the fire you're talking about has been lost," Tohil told them.

"Aren't you a true god!

Our sustenance and our support!

Our god!"

they said when they gave thanks for what Tohil had said.

"Very well, in truth,

I am your god: so be it.

I am your lord: so be it,"

the penitents and sacrificers were told by Tohil.

And this was the warming of the tribes. They were pleased by their fire.

After that a great downpour began, which cut short the fire of the tribes. And hail fell thickly on all the tribes, and their fires were put out by the hail. Their fires didn't start up again. So then Jaguar Quitze and Jaguar Night asked for their fire again:

"Tohil, we'll be finished off by the cold," they told Tohil.

"Well, do not grieve," said Tohil. Then he started a fire. He pivoted inside his sandal.*(363)

After that, Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar were pleased.

After they had been warmed, the fires of the other tribes were still out. Now they were being finished off by the cold, so they came back to ask for their fire from Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar. They could bear the cold and hail no longer. By now they were chattering and shivering. There was no life left in them. Their legs and arms kept shaking. Their hands were stiff when they arrived.

"Perhaps we wouldn't make ourselves ashamed in front of you if we asked to remove a little something from your fire?" they said when they arrived, but they got no response.*(364) And then the tribes cursed in their thoughts. Already their language had become different from that of Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar.

"Alas! We left our language behind. How did we do it? We're lost! Where were we deceived? We had only one language when we came to Tulan, and we had only one place of emergence*(365) and origin. We haven't done well," said all the tribes beneath the trees and bushes.

And then a person showed himself*(366) before Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar, and he spoke as a messenger of Xibalba:

"Truly, since you have your god, your nurturer, and he is the representation,*(367) the commemoration of your Maker and your Modeler, don't give the tribes their fire until they give something to Tohil. You don't want them to give anything to you. You must ask for what belongs to Tohil; to him must come what they give in order to get fire," said the Xibalban. He had wings like the wings of a bat.

"I am a messenger of those who made you and modeled you," said the Xibalban. So now they were happy; now they thought all the more of Tohil, Auilix, and Hacauitz. When the Xibalban had spoken he made himself vanish right in front of them, without delay.

And so again the tribes arrived, again done in by the cold. Thick were the white hail, the blackening storm, and the white crystals. The cold was incalculable. They were simply overwhelmed.*(368) Because of the cold all the tribes were going along doubled over, groping along*(369) when they arrived in the presence of Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar. There was great pain in their hearts; they had covetous mouths and covetous faces.*(370)

And now they were coming as thieves before Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar:

"Wouldn't you take pity on us if we asked to remove a little something from your fire? Wasn't it found and wasn't it revealed*(371) that we had just one home and just one mountain when you were made, when you were modeled? So please take pity on us," they said.

"And what would you give us for taking pity on you?" they were asked.

"Well, we'd give you metal," said the tribes.

"We don't want metal," said Jaguar Quitze and Jaguar Night.

"Whatever might you want, if we may ask?" the tribes said then.

"Very well. First we must ask Tohil, and then we'll tell you,"

they were told next. And then they asked Tohil:

"What should the tribes give you, Tohil? They've come to ask for your fire," said Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar.

"Very well. You will tell them:

"Don't they want to be suckled*(372) on their sides and under their arms? Isn't it their heart's desire to embrace me? I, who am Tohil? But if there is no desire, then I'll not give them their fire," says Tohil. "When the time comes, not right now, they'll be suckled on their sides, under their arms," he says to you, 'you will say," they were told, Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar, and then they spoke the word of Tohil.

"Very well. Let him suckle. And very well, we shall embrace him," said the tribes, when they answered and agreed to the word of Tohil. They made no delay*(373) but said "very well" right away, and then they received their fire.

After that they got warm, but there was one group that simply stole the fire, there in the smoke. This was the Bat House. Calm Snake is the name of the god of the Cakchiquels, but it looks like a bat. They went right past in the smoke then, they sneaked past when they came to get fire. The Cakchiquels didn't ask for their fire. They didn't give themselves up in defeat, but all the other tribes were defeated when they gave themselves up to being suckled on their sides, under their arms.

And this is what Tohil meant by being "suckled": that all the tribes be cut open before him, and that their hearts be removed "through their sides, under their arms." This deed had not yet been attempted*(374) when Tohil saw into the middle of it, nor had Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar received fiery splendor and majesty.

(See illustration: Drawing by the author.

"THEY'VE COME TO ASK FOR YOUR FIRE": This is a scepter held by a ruler, one of the forms taken by Tohil, the classic Maya antecedent of Tohil. On his forehead he wears an obsidian mirror with a burning torch emerging from it. Sometimes he is shown with a body of human form, except that one leg is a serpent; only his head and the serpent leg are shown here. The drawing is reconstructed from several stucco reliefs at Palenque.)

WHEN THEY CAME AWAY FROM TULAN ZUYUA, they weren't eating. They observed a continuous fast. It was enough that they watch intently for the dawning, that they watch closely for the rising of the sun, taking turns at watching for the great star named daybringer. This one came first before the sun when the sun was born, the new daybringer.*(375)

And there, always, they were facing the east, when they were there in the place named Tulan Zuyua. Their gods came from there. It wasn't really here that they received their fiery splendor and their dominion, but rather there that the tribes, great and small, were subjugated and humiliated. When they were cut open before Tohil, all the peoples gave their blood, their gore, their sides, their underarms. Fiery splendor came to them all at once at Tulan, along with great knowledge, and they achieved this in the darkness, in the night.

And now they came away, they tore themselves away from there. Now they left the east:*(376)

"Our home is not here. Let's go on until we see where we belong,"*(377) said Tohil. He actually spoke to them, to Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar.

"It remains for you to give thanks, since you have yet to take care of bleeding your ears and passing a cord through your elbows.*(378) You must worship. This is your way of giving thanks before your god."

"Very well," they replied, then they bled their ears. They cried in their song about coming from Tulan. They cried in their hearts when they came away, when they made their departure from Tulan:

"Alas! We won't be here when we see the dawn,
when the sun is born, when the face of the earth is lit,"
they said.

AND THEN THEY CAME AWAY, JUST CAMPING ON THE ROAD.*(379) People were just camping there, each tribe slept and then got up again. And they were always watching for the star, the sign of the day. They kept this sign of the dawn in their hearts when they came away from the east. In unity*(380) they passed beyond the place named Great Abyss today.

And then they arrived on top of a mountain there. All the Quiche people got together there, along with the other tribes, and all of them held council there. The name the mountain has today is from when they took counsel together: Place of Advice is the name of the mountain. They got together and identified themselves there:

"Here am I: I am a Quiche person, and you there, you are Tams, this will be your name," the Tams were told. And then the Ilocs were told:

"You are the Ilocs, this will be your name. The three Quiches must not be lost. We are united in our word," they said when they fixed their names.

And then the Cakchiquels were named: their name became Cakchiquels. So, too, with the Rabinals; this became their name. It hasn't been lost today.

And then there are those of the Bird House, as they are named today.

These are the names they named for each other. When they held council there, they were still waiting for the dawning, watching for the appearance of the rising star, the one that came before the sun when it was born.

"When we came away from Tulan, we broke ourselves apart," they told each other.

This is what kept weighing on their hearts, the great pain they went through: there was nothing to eat, nothing to feed on. They were just smelling the tips of their staffs*(381) as if they were thinking of eating them, but they weren't eating at all as they came.

And it isn't clear how they crossed over the sea. They crossed over as if there were no sea. They just crossed over on some stones, stones piled up in the sand. And they gave it a name: Rock Rows, Furrowed Sands was their name for the place where they crossed through the midst of the sea. Where the waters divided, they crossed over.

And this is what weighed on their hearts when they took counsel: that they had nothing to eat. They had one beverage to drink, just one atole, which they brought up on the mountain named Place of Advice. And they also brought Tohil, Auilix, and Hacauitz.

Observing a great fast was Jaguar Quitze, with his wife; Great Seahouse is his wife's name.

Likewise doing it was Jaguar Night, with his wife, named Prawn House.

And Mahucutah was also there at the great fast, with his wife, named Hummingbird House, along with True Jaguar, whose wife's name is Macaw House.

So these were the ones who fasted, there in the blackness, in the early dawn. Their sadness was great when they were there on the mountain named Place of Advice today. And their gods spoke there.

AND THEN TOHIL, ALONG WITH AUILIX AND HACAUITZ, SPOKE TO THEM, to Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar:

"Let's just go, let's just get up, let's not stay here. Please give us places to hide. It's nearly dawn. Wouldn't you look pitiful if we became plunder for warriors? Construct places where we can remain yours, you penitents and sacrificers, and give one place to each of us," they said when they spoke.

"Very well. Let's get out and search the forests," they all replied.

After that they packed each one of the gods on their backs.*(382)

And then Auilix went into the canyon named Concealment Canyon, as they called it, into the great canyon in the forest. Pauilix is the name of the place today. He was left there, placed in the canyon by Jaguar Night, coming first in the sequence of placements.

And then Hacauitz was placed above a great red river.*(383) Hacauitz is the name of the mountain today, and it became their citadel. So the god Hacauitz remained there, and Mahucutah stayed with his god. This was the second god to be hidden by them. Hacauitz didn't stay in the forest. It was on a bare mountain*(384) that Hacauitz was hidden.

And then came Jaguar Quitze. He arrived in the great forest there. Tohil was put into hiding by Jaguar Quitze; the mountain is called Patohil today. Then they gave Concealment Canyon an epithet: Tohil Medicine. Masses of serpents and masses of jaguars, rattlesnakes, yellowbites were there in the forest where he was hidden*(385) by the penitents and sacrificers.

So they were there in unity: Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar. In unity they waited for the dawn, there on top of the mountain named Hacauitz.

Also, a short distance away, was the god of the Tams, together with the Ilocs. Tam Tribe is the name of the place where the god of the Tams was, there at the dawn. Net Weave Tribe is the name of the place where dawn came for the Ilocs. The god of the Ilocs was just a short distance away.

Also there were all the Rabinals, Cakchiquels, those of the Bird House, all the tribes, small and great. In unity they stopped there,*(386) and in unity they had their dawning there. In unity they waited there for the rising of the great star named daybringer.

"It will rise before the sun when the dawn comes," they said, and they were in unity there: Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar. There was no sleep, no rest for them. They cried their hearts and their guts out,*(387) there at the dawning and clearing, and so they looked terrible. Great sorrow, great anguish came over them; they were marked by their pain. They just stayed that way.

"Coming here hasn't been sweet for us. Alas! If we could only see the birth of the sun! What have we done? We all had one identity, one mountain, but we sent ourselves into exile," they said when they

talked among themselves. They talked about sorrow, about anguish, about crying and wailing, since their hearts had not yet been set to rest by the dawn.

And these are the ones who did feel settled there: the gods who were in the canyons, in the forests, just out in the bromelias, in the hanging mosses, not yet set on pedestals.*(388) At first, Tohil, Auilix, and Hacauitz actually spoke. The greatness of their day and the greatness of their breath of spirit set them above all the other tribal gods. Their genius was manifold and their ways were manifold, their strategies.*(389) They were chilling, they were frightening in their very being and in the hearts of the tribes, whose thoughts were calmed by Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar. Their hearts did not yet harbor ill will*(390) toward the gods who had been taken up and carried away when they all came from Tulan Zuyua, there in the east, and who were now in the forest.

These were the dawning places: Patohil, Pauilix, and Hacauitz, as they are called today. And this is where our grandfathers, our fathers had their sowing, their dawning.

This is what we shall explain next: the dawning and showing of the sun, moon, and stars.

AND HERE IS THE DAWNING AND SHOWING OF THE SUN, MOON, AND STARS. And Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar were overjoyed when they saw the daybringer. It came up first. It looked brilliant when it came up, since it was ahead of the sun.

After that they unwrapped their copal incense, which came from the east, and there was triumph in their hearts when they unwrapped it. They gave their heartfelt thanks with three kinds at once:

Mixtam Copal is the name of the copal brought by Jaguar Quitze.

Cauiztan Copal, next, is the name of the copal brought by Jaguar Night.

Godly Copal, as the next one is called, was brought by Mahucutah.

The three of them had their copal, and this is what they burned as they incensed*(391) the direction of the rising sun. They were crying sweetly as they shook their burning copal, the precious copal.

After that they cried because they had yet to see and yet to witness the birth of the sun.

And then, when the sun came up, the animals, small and great, were happy. They all came up from the rivers and canyons; they waited on all the mountain peaks. Together they looked toward the place where the sun came out.

So then the puma and jaguar cried out, but the first to cry out was a bird, the parrot by name. All the animals were truly happy. The eagle, the white vulture, small birds, great birds spread their wings, and the penitents and sacrificers knelt down. They were overjoyed, together with the penitents and sacrificers of the Tams, the Ilocs.

And the Rabinals, Cakchiquels, those of the Bird House.

And the Sweatbath House, Talk House, Quiba House, those of the Yoke House.

And the Yaqui Sovereign- however many tribes there may be today. There were countless peoples, but there was just one dawn for all tribes.

And then the face of the earth was dried out by the sun. The sun was like a person when he revealed himself. His face was hot, so he

dried out the face of the earth. Before the sun came up it was soggy, and the face of the earth was muddy before the sun came up. And when the sun had risen just a short distance he was like a person, and his heat was unbearable. Since he revealed himself only when he was born, it is only his reflection that now remains.*(392) As they put it in their own words:

"The sun that shows itself is not the real sun."

And then, all at once, Tohil, Auilix, and Hacautitz were turned to stone, along with the idols of the puma, jaguar, rattlesnake, yellowbite, which the White Sparkstriker took with him into the trees.*(393) Everywhere, all of them became stone when the sun, moon, and stars appeared. Perhaps we would have no relief from the voracious animals today- the puma, jaguar, rattlesnake, yellowbite- and perhaps it wouldn't even be our day today, if the original animals hadn't been turned to stone*(394) by the sun when he came up.

There was great happiness in the hearts of Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar. They were overjoyed when it dawned. The people on the mountain of Hacautitz were not yet numerous; just a few were there. Their dawning was there and they burned copal there, incensing the direction of the rising sun. They came from there: it is their own mountain, their own plain. Those named Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar came from there, and they began their increase on that mountain.

And that became their citadel, since they were there when the sun, moon, and stars appeared, when it dawned and cleared on the face of the earth, over everything under the sky.

AND THERE BEGAN THEIR SONG NAMED "THE BLAME IS OURS." They sang out the lament of their very hearts and guts. In their song they stated:

"Alas!
We were lost at Tulan!
We shattered ourselves!
We left our elder brothers behind!
Our younger brothers!
Where did they see the sun?
Where must they be staying,
now that the dawn has come?"

They were speaking of the penitents and sacrificers who were the Yaqui people.

"Even though Tohil is hisname, he is the same as the god of the Yaqui people, who is named Yolcuat and Quitzalcuat. When we divided, there at Tulan, at Zuyua, they left with us, and they shared our identity when we came away," they said among themselves when they remembered their faraway brothers, elder and younger, the Yaqui people whose dawn was there in the place named Mexico today.

And again, there were also the Fishkeeper people. They stayed there in the east; Sovereign Oloman is their name.

"We left them behind," they said. It was a great weight on their hearts, up there on Hacautitz. The Tams and Ilocs did likewise, except that they were in the forest. Tam Tribe is the name of the place where it dawned for the penitents and sacrificers of the Tams, with their god, the same Tohil. There was just one name for the god of all three divisions of the Quiche people.

And again, the name of the god of the Rabinals was the same. His

name was only slightly changed; "One Toh" is the way the name of the god of the Rabinals is spoken. They say it that way, but it is meant to be in agreement with the Quiches and with their language.

And the language has differentiated in the case of the Cakchiquels,*(395) since their god had a different name when they came away from Tulan Zuyua. Calm Snake is the name of the god of the Bat House, and they speak a different language today. Along with their god, the lineages took their names; they are called Keeper of the Bat Mat and Keeper of the Dancer Mat. Like their god, their language was differentiated on account of a stone, when they came from Tulan in the darkness. All the tribes were sown and came to light in unity, and each division was allocated a name for its god.

And now we shall tell about their stay*(396) and their sojourn there on the mountain. The four were there together, the ones named Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar. Their hearts cried out to Tohil, Auilix, and Hacautitz, who were now amid the bromelias and hanging mosses.

AND HERE THEY BURN THEIR COPAL, and here also is the origin of the masking of Tohil.*(397)

And when they went before Tohil and Auilix, they went to visit them and keep their day. Now they gave thanks before them for the dawning, and now they bowed down*(398) before their stones, there in the forest. Now it was only a manifestation of his genius that spoke when the penitents and sacrificers came before Tohil,*(399) and what they brought and burned was not great. All they burned before their gods was resin, just bits of pitchy bark, along with marigolds.*(400)

And when Tohil spoke now it was only his genius. When the gods taught procedures to the penitents and sacrificers, they said this when they spoke:

"This very place has become our mountain, our plain. Now that we are yours, our day and our birth have become great, because all the peoples are yours, all the tribes. And since we are still your companions, even in your citadel, we shall give you procedures:

"Do not reveal us to the tribes*(401) when they search for us.*(402) They are truly numerous now, so don't you let us be hunted down,*(403) but rather give the creatures of the grasses and grains to us, such as the female deer and female birds.*(404) Please come give us a little of their blood, take pity on us. And leave the pelts of the deer apart, save them. These are for disguises, for deception. They will become deer costumes,*(405) and so also they will serve as our surrogates before the tribes. When you are asked:

'Where is Tohil?' then you will display the deer costumes before them, and without revealing yourselves. And there is still more for you to do. You will become great in your very being. Defeat all the tribes. They must bring blood and lymph before us, they must come to embrace us. They belong to us already,"*(406) said Tohil, Auilix, and Hacautitz. They had a youthful appearance when they saw them, when they came to burn offerings before them.

So then began the hunting of the young of all the birds and deer; they were taken in the hunt by the penitents and sacrificers.

And when they got hold of the birds and fawns, they would then go to anoint the mouth of the stone of Tohil or Auilix with the blood of the deer or bird.*(407) And the bloody drink was drunk by the gods. The stone would speak at once when the penitents and sacrificers

arrived, when they went to make their burnt offerings.

They did the very same thing before the deerskins: they burned resin, and they also burned marigolds and yarrow. There was a deerskin for each one of the gods, which was displayed there on the mountain.

They didn't occupy their houses during the day, but just walked in the mountains. And this was their food: just the larva of the yellow jacket, the larva of the wasp, and the larva of the bee,*⁽⁴⁰⁸⁾ which they hunted. As yet there wasn't anything good to eat or good to drink. Also, it wasn't obvious how to get to their houses, nor was it obvious where their wives stayed.

And the tribes were already densely packed, settling down one by one, with each division of a tribe gathering itself together. Now they were crowding the roads; already their roadways were obvious.

As for Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar, it wasn't obvious where they were. When they saw the people of the tribes passing by on the roads, that was when they would get up on the mountain peaks, just crying out with the cry of the coyote and the cry of the fox. And they would make the cries of the puma and jaguar, whenever they saw the tribes out walking in numbers. The tribes were saying:

"It's just a coyote crying out," and "Just a fox."

"Just a puma. Just a jaguar."

In the minds of all the tribes, it was as if humans weren't involved. They did it just as a way of decoying the tribes; that was what their hearts desired. They did it so that the tribes wouldn't get really frightened just yet; that was what they intended when they cried out with the cry of the puma and the cry of the jaguar. And then, when they saw just one or two people out walking, they intended to overwhelm them.

Each day, when they came back to their houses and wives, they brought just the same things- yellow-jacket larvae, wasp larvae, and bee larvae- and gave them to their wives, each day. And when they went before Tohil, Auilix, and Hacauitz, they thought to themselves:

"They are Tohil, Auilix, and Hacauitz, yet we only give them the blood of deer and birds, we only draw cords through our ears and elbows when we ask for our strength and our manhood from Tohil, Auilix, and Hacauitz. Who will take care of the death of the tribes? Should we just kill them one by one?" they said among themselves.

And when they went before Tohil, Auilix, and Hacauitz, they drew cords through their ears and elbows in front of the gods. They spilled their blood, they poured gourdfuls into the mouths of the stones. But these weren't really stones: each one became like a boy when they arrived, happy once again over the blood.

And then came a further sign as to what the penitents and sacrificers should do:

"You must win a great many victories. Your right*⁽⁴⁰⁹⁾ to do this came from over there at Tulan, when you brought us here," they were told. Then the matter of the suckling*⁽⁴¹⁰⁾ was set forth, at the place called Staggering, and the blood that would result from it, the rainstorm of blood, also became a gift for Tohil, along with Auilix and Hacauitz.

Now here begins the abduction of the people of the tribes by Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar.

AND THEN COMES THE KILLING OF THE TRIBES. This is how they died:

when there was just one person out walking, or just two were out walking, it wasn't obvious when they took them away.

After that they went to cut them open before Tohil and Auilix.

After that, when they had offered the blood, the skull would be placed in the road. They would roll it onto the road. So the tribes were talking:

"A jaguar has been eating," was all that was said, because their tracks were like a jaguar's tracks when they did their deed. They did not reveal themselves. Many people were abducted.

It was actually a long time before the tribes came to their senses:

"If it's Tohil and Auilix who are after us, we have only to search for the penitents and sacrificers. We'll follow their tracks to wherever their houses are," said all those of the tribes, when they shared their thoughts among themselves.

After that, they began following the tracks of the penitents and sacrificers, but they weren't clear. They only saw the tracks of the deer, the tracks of the jaguar. The tracks weren't clear, nothing was clear. Where they began the tracks were merely those of animals.*(411) It was as if the tracks were there for the sole purpose of leading them astray. The way was not clear:

It would get cloudy.

It would get dark and rainy.*(412)

It would get muddy, too.

It would get misty and drizzly.*(413)

That was all the tribes could see in front of them, and their search would simply make them weary at heart. Then they would give up.

Because Tohil, Auilix, and Hacautitz were great in their very being, they did this for a long time, there on the mountain. They did their killing on the frontiers of the tribes when the abductions began; they singled them out and cut them down.*(414) They would seize the people of the tribes in the roads, cutting them open before Tohil, Auilix, and Hacautitz.

And the boys hid there on the mountain. Tohil, Auilix, and Hacautitz had the appearance of three boys when they went out walking; these were simply the spirit familiars of the stones. There was a river. They would bathe there on the bank, just as a way of revealing themselves, and this gave the place its name. The name of the river came to be Tohil's Bath, and the tribes saw them there many times. They would vanish the moment they were seen by the tribes.

Then the news spread as to the whereabouts of Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar, and this is when the tribes realized how they were being killed.

FIRST THE TRIBES TRIED TO PLAN THE DEFEAT OF TOHIL, AUILIX, AND HACAUTITZ. All the penitents and sacrificers of the tribes spoke to the others. They roused and summoned one another, all of them. Not even one or two divisions were left out. All of them converged and presented themselves, then they shared their thoughts. And they said, as they questioned one another:

"What would assure the defeat of the Cauecs, the Quiche people? Our vassals have met their ends because of them. Isn't it clear that our people have been lost because of them? What if they finish us off with these abductions?"

"Let it be this way: if the fiery splendor of Tohil, Auilix, and Hacautitz is so great, then let this Tohil become our god! Let him be

captured! Don't let them defeat us completely! Don't we constitute a multitude of people? And as for the Cauecs, there aren't as many of them," they said when all of them had assembled. Then the Fishkeepers spoke to the tribes, saying:

"Who could be bathing every day at the river bank? If it's Tohil, Auilix, and Hacauitz, then we can defeat them ahead of time. Let the defeat of the penitents and sacrificers begin right there!" said the Fishkeepers, and then they spoke further:

"How shall we defeat them?" And then they said:

"Let this be our means for defeating them: since they present the appearance of adolescent boys at the river, let two maidens go there. Let them be in full blossom,*(415) maidens who radiate preciousness,*(416) so that when they go they'll be desirable," they said.

"Very well. So we'll just search for two perfect maidens," the others replied. And then they searched among their daughters for those who were truly radiant maidens. Then they gave the maidens instructions:

"You must go, our dear daughters. Go wash clothes at the river, and if you should see three boys, undress yourselves in front of them. And if their hearts should desire you, you will titillate them. When they say to you:

'We're coming after you,' then you are to say:

'Yes.' And then you will be asked:

'Where do you come from? Whose daughters are you?' When they say that, you are to answer them:

'We are the daughters of lords, so let a sign be forthcoming from you.' Then they should give you something. If they like your faces you must really give yourselves up to them. And if you do not give yourselves up, then we shall kill you. We'll feel satisfied when you bring back a sign, since we'll think of it as proof that they came after you," said the lords, instructing the two maidens.

Here are their names: Xtah is the name of the one maiden, and Xpuch is the name of the other.

AND THEY SENT THE TWO OF THEM, NAMED XTAH AND XPUCH, over to the place where Tohil, Auilix, and Hacauitz bathed. All the tribes knew about this.

And then they went off. They were dressed up, looking truly beautiful, when they went to the place where Tohil bathed. They were carrying what looked like their wash when they went off. Now the lords were pleased over having sent their two daughters there.

And when they arrived at the river, they began to wash. They undressed themselves, both of them. They were on the rocks, on their hands and knees,*(417) when Tohil, Auilix, and Hacauitz came along. They got to the bank of the river and just barely glanced at the two maidens washing there, and the maidens got a sudden scare when Tohil and the others*(418) arrived. They did not go lusting after the two maidens. Then came the questioning:

"Where do you come from?" the two maidens were asked. "What do you intend by coming here, to the bank of our river?" they were also asked.

"We were sent here by the lords, so we came. The lords told us:

'Go see the faces of Tohil and the others, and speak to them,' the lords told us, 'and also, there must come a sign as to whether you

really saw their faces.*(419) Go!' is what we were told," said the two maidens, explaining their errand.

But this is what the tribes had intended: that the maidens should be violated by the spirit familiars of Tohil and the others. Then Tohil, Auilix, and Hacautitz spoke, answering the two maidens named Xtah and Xpuch:

"Good. Let a sign of our word go with you. But you must wait for it, then give it directly to the lords," they were told.

And then Tohil and the others plotted with the penitents and sacrificers. Jaguar Quitze, Jaguar Night, and Mahucutah were told:

"You must draw figures on three cloaks. Inscribe them with the signs of our being. They're for the tribes; they'll go back with the maidens who are washing. Give them to the maidens," Jaguar Quitze, Jaguar Night, and Mahucutah were told.

After that, they drew figures for all three of them. Jaguar Quitze drew first: his image was that of the jaguar. He drew it on his cloak.

And as for Jaguar Night, he drew the image of an eagle on his cloak.

And the one who drew next was Mahucutah, who drew the images, the figures of swarms of yellow jackets, swarms of wasps on his cloak. Then the figures were complete; they had drawn all three of them, the threefold figures.

After that, when Jaguar Quitze, Jaguar Night, and Mahucutah went to give the cloaks to those who were named Xtah and Xpuch, they spoke to them:

"Here is the proof of your word. When you come before the lords you will say:

'Tohil really spoke to us, and here is the sign we've brought back,' you'll tell them, and give them the cloaks to try on," the maidens were told when they were given their instructions.

So then they went back, taking the figured cloaks.

And when they arrived, the lords were happy the moment they spotted*(420) what they had asked for, hanging from the arms of the maidens.

"Didn't you see the face of Tohil?" they were asked.

"See it we did," said Xtah and Xpuch.

"Very good. You've brought back some sort of sign. Isn't that so?" said the lords, since there seemed to be signs of their sin- or so thought the lords. So then they were shown the figured cloaks by the maidens: one with a jaguar, one with an eagle, and one with yellow jackets and wasps drawn on the inside, on a smooth surface.*(421)

And they loved the way the cloaks looked. They costumed themselves. The jaguar didn't do anything; it was the first figure to be tried on by a lord.

And when another lord costumed himself with the second figured cloak, with the drawing of the eagle, the inside of it just felt good to him. He turned around*(422) in front of them, unfurling it*(423) in front of all of them.

And then came the third figured cloak to be tried on by a lord; he costumed himself with the one that had yellow jackets and wasps painted inside.

And then he started getting stung by the yellow jackets and wasps. He couldn't endure it, he couldn't stand the stings of the insects. That lord yelled his mouth off over the insects. Mahucutah's figures inside the cloak looked like a mere drawing. It was the third

drawing that defeated them.

And then the maidens named Xtah and Xpuch were reprimanded by the lords:

"How did you get these things you brought back? Where did you go to get them, you tricksters!" the maidens were told when they were reprimanded.

Again, all the tribes were defeated because of Tohil. This is what they had intended: that Tohil would be tempted to go after the maidens. It then became the profession of Xtah and Xpuch to bark shins;*(424) the tribes continued to think of them as temptresses.

So the defeat of Jaguar Quitze, Jaguar Night, and Mahucutah was not brought about, since they were people of genius.

And then all the tribes plotted again:

"How are we going to beat them? They are truly great in their very being," they said when they shared their thoughts.

"Even so, we'll invade them and kill them. Let's fit ourselves out with weapons and shields. Aren't we a multitude? There won't even be one or two of them left," they said when they shared their thoughts. All the tribes fitted themselves out. There were masses of killers, once the killers of all the tribes had joined together.

And as for Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar, they were there on the mountain. Hacauitz is the name of the mountain where they were, and those spirit boys*(425) of theirs were hidden there on the mountain. They were not a numerous people then; their numbers were not equal to the numbers of the tribes. There were just a few of them on the mountain, their fortress,*(426) so when it was said that the tribes had planned death for them, all of them gathered together. They held a council; they all sent for one another.

AND HERE IS THE JOINING TOGETHER OF ALL THE TRIBES, all decked out now with weapons and shields. Their metal ornaments were countless, they looked beautiful, all the lords, the men. In truth, they were just making talk, all of them. In truth, they would become our captives.

"Since there is a Tohil, and since he is a god, let's celebrate his day- or let's make him our prize!" they said among themselves. But Tohil already knew about it, and Jaguar Quitze, Jaguar Night, and Mahucutah also knew about it. They had heard about it while it was being plotted, since they were neither asleep nor at rest.

So then all the lance-bearing warriors of the tribes were armed.

After that, all the warriors got up during the night, in order to enter our very midst. They set off, but they never arrived. They just fell asleep on the way, all those warriors.

And then they were defeated again by Jaguar Quitze, Jaguar Night, and Mahucutah, since every last one of them fell asleep in the road. Now they couldn't feel a thing. A multitude slept, all of them, and that's when things got started. Their eyebrows were plucked out, along with their beards.*(427)

And then the metal was undone from their cloaks, along with their headdresses.

And their necklaces came off too, and then the necks of their staffs. Their metal was taken just to cause them a loss of face, and the plucking was done just to signify the greatness of the Quiche.

After that, they woke up. Right away they reached for their headdresses, along with the necks of their staffs. There was no

metal on their cloaks and headdresses.

"How could it have been taken from us? Who could have plucked us? Where did they come from? Our metal has been stolen!" said all the warriors.

"Perhaps it's those tricksters who've been abducting people! But it's not over with. Let's not get frightened by them. Let's enter their very citadel! That's the only way we'll ever see our metal and make it ours again!" said all the tribes, but even so, they were just making talk, all of them.

The hearts of the penitents and sacrificers were content, there on the mountain, but even so, Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar were making great plans.

AND THEN JAGUAR QUITZE, JAGUAR NIGHT, MAHUCUTAH, AND TRUE JAGUAR HAD A PLAN. They made a fence*(428) at the edge of their citadel. They just made a palisade of planks and stakes*(429) around their citadel.*(430)

Next they made manikins; it was as if they had made people. Next they lined them up on the parapet. They were even equipped with weapons and shields. Headdresses were included, with metal on top, and cloaks were included. But they were mere manikins, mere woodcarvings. They used the metal that belonged to the tribes, which they had gone to get in the road. This is what they used to decorate the manikins. They surrounded the citadel.*(431)

And then they asked Tohil about their plan:

"What if we die, and what if we're defeated?" They spoke straight from their hearts before Tohil.

"Do not grieve. I am here. And here is what you will use on them. Do not be afraid," Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar were told, and then the matter of the yellow jackets and wasps was set out.

And when they had gone to get these insects and come back with them, they put them inside four large gourds, which were placed all around the citadel. The yellow jackets and wasps were shut inside the gourds. These were their weapons against the tribes.

And they were spied upon and watched from hiding; their citadel was studied by the messengers of the tribes.

"There aren't many of them," they said, but when they came to look it was only the manikins, the woodcarvings, that were moving, with weapons and shields in their hands. They looked like real people, they looked like real killers when the tribes saw them.

And all the tribes were happy when they saw there weren't many of them. The tribes themselves were in crowds; there were countless people, warriors and killers, the assassins of Jaguar Quitze, Jaguar Night, and Mahucutah, who were there on the mountain called Hacautitz. This is where they were when they were invaded. Here we shall tell about it.

AND THESE ARE THE ONES WHO WERE THERE: JAGUAR QUITZE, JAGUAR NIGHT, MAHUCUTAH, AND TRUE JAGUAR. They were in unity on the mountain with their wives and children.

And then all the warriors came, the killers, and it was nothing less than eight hundred score, or even thirty times eight hundred*(432) people who surrounded the citadel. They were bellowing, bristling with weapons and shields, rending their mouths with howling and growling, bellowing, yelling, whistling through their hands when they came up

below the citadel. But the penitents and sacrificers had no fear; they just enjoyed the spectacle*(433) from the parapet of the stockade. They were lined up with their wives and children. Their hearts were content, since the tribes were merely making talk.

And then they climbed up the mountainside, and now they were just a little short of the edge of the citadel.

And then the gourds were opened up- there were four of them around the citadel- and the yellow jackets and wasps were like a cloud of smoke when they poured out of each of the gourds. And the warriors were done in, with the insects landing on their eyes and landing on their noses, on their mouths, their legs, their arms.*(434) The insects went after them wherever they were, they overtook them wherever they were. There were yellow jackets and wasps everywhere, landing to sting their eyes. They had to watch out for whole swarms of them, there were insects going after every single person. They were dazed by the yellow jackets and wasps. No longer able to hold onto their weapons and shields, they were doubling over*(435) and falling to the ground, stumbling.*(436) They fell down the mountainside.

And now they couldn't feel a thing when they were hit*(437) with arrows and cut with axes. Now Jaguar Quitze and Jaguar Night could even use sticks; even their wives became killers.

Then the Fishkeepers turned away, and all the other tribes just took off running. The first to be overtaken were finished off, killed, and it wasn't just a few people who died. For those who didn't die the chase was carried into their very midst when the insects caught up with them. There were no manly deeds for them to do, since they no longer carried weapons and shields.

Then all the tribes were conquered. Now the tribes humbled themselves before Jaguar Quitze, Jaguar Night, and Mahucutah:

"Take pity on us! Don't kill us!" they said.

"Very well. Although you were destined to join the dead, you will be payers of tribute for as long as there are days and as long as there is light," they were told.

Such was the defeat of all the tribes by our first mother-fathers. It was done there on the mountain named Hacautitz today. This is where they first began. They grew, they multiplied, they had daughters, they had sons on Hacautitz. They were happy, once they had beaten all the tribes, who were defeated there on the mountain.

In this way they accomplished the defeat of the tribes, all the tribes.

After that, their hearts were content. They informed their sons that their death was approaching. They very much intended to be taken by death.

NOW THIS IS WHERE WE SHALL TELL ABOUT THE DEATH OF JAGUAR QUITZE, JAGUAR NIGHT, MAHUCUTAH, AND TRUE JAGUAR, as they are named. Since they knew about their death and disappearance, they left instructions with their sons. They weren't sickly yet, they weren't gasping for breath*(438) when they left their word with their sons.

These are the names of their sons:

Jaguar Quitze begot these two: Cocaib was the name of the firstborn and Cocauib was the name of the second of the sons of Jaguar Quitze, the grandfather and father of the Cauecs.

And again, Jaguar Night begot two. These are their names: Coacul was the name of his first son, and the other was called Coacutec, the

second son of Jaguar Night, of the Greathouses.

And Mahucutah begot just one son, named Coahau.

These three had sons, but True Jaguar had no son. They were all true penitents and sacrificers, and these are the names of their sons, with whom they left instructions. They were united, the four of them together. They sang of the pain in their hearts, they cried their hearts out in their singing. "The Blame Is Ours" is the name of the song they sang.

And then they advised their sons:

"Our dear sons: we are leaving. We are going back. We have enlightened words, enlightened advice to leave with you- and with you who have come from faraway mountains, our dear wives," they told their wives. They advised each one of them:

"We are going back to our own tribal place.*(439) Again it is the time of our Lord Deer,*(440) as is reflected in the sky. We have only to make our return. Our work has been done, our day has been completed. Since you know this, neither forget us nor put us aside. You have yet to see your own home and mountain, the place of your beginning.

"Let it be this way: you must go. Go see the place where we came from,"*(441) were the words they spoke when they gave their advice.

And then Jaguar Quitze left a sign of his being:

"This is for making requests*(442) of me. I shall leave it with you. Here is your fiery splendor.*(443) I have completed my instructions, my counsel," he said when he left the sign of his being, the Bundle of Flames, as it is called. It wasn't clear just what it was; it was wound about with coverings. It was never unwrapped. Its sewing wasn't clear because no one looked on while it was being wrapped.

In this way they left instructions, and then they disappeared from there on the mountain of Hacautitz. Their wives and children never saw them again. The nature of their disappearance was not clear. But whatever the case with their disappearance, their instructions were clear, and the bundle became precious to those who remained. It was a memorial to their fathers. Immediately they burned offerings before this memorial to their fathers.

When the lords began their generation of the people, the Cauecs took their start from Jaguar Quitze, the grandfather and father; his sons, named Cocaib and Cocauib, were not lost.

Such was the death of all four of our first grandfathers and fathers. When they disappeared their sons remained there on the mountain of Hacautitz; their sons stayed there for awhile. As for all the tribes, it was now their day to be broken and downtrodden.*(444) They no longer had any splendor to them, though they were still numerous.

All those on Hacautitz*(445) gathered on each day that was for the remembrance of their fathers. For them, the day of the bundle*(446) was a great one. They could not unwrap it; for them it stayed bundled- the Bundle of Flames, as they called it. It was given this epithet, this name when it was left in their keeping by their fathers, who made it just as a sign of their being.

Such was the disappearance and loss of Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar, the first people to come across the sea, from the east. They came here in ancient times. When they died they were already old. They had a reputation for penitence and

sacrifice.

PART_FIVE

PART FIVE

AND THEN THEY REMEMBERED WHAT HAD BEEN SAID ABOUT THE EAST. This is when they remembered the instructions of their fathers. The ancient things received from their fathers were not lost. The tribes gave them their wives, becoming their fathers-in-law as they took wives. And there were three of them who said, as they were about to go away:

"We are going to the east, where our fathers came from," they said, then they followed their road. The three of them were representative sons:

Cocaib was the name of the son of Jaguar Quitze who represented all the Cauecs.*(447)

Coacutec was the name of the son of Jaguar Night who served as the sole representative of the Greathouses.

Coahau was the name of the only son of Mahucutah, representing the Lord Quiches.

So these are the names of those who went across the sea. There were only three who went, but they had skill and knowledge. Their being was not quite that of mere humans. They advised all their brothers, elder and younger, who were left behind. They were glad to go:

"We're not dying. We're coming back," they said when they went, yet it was these same three who went clear across the sea.

And then they arrived in the east; they went there to receive lordship. Next comes the name of the lord with dominion over those of the east, where they arrived.

AND THEN THEY CAME BEFORE THE LORD NAMED NACXIT, the great lord and sole judge*(448) over a populous domain.

And he was the one who gave out the signs of lordship, all the emblems; the signs of the Keeper of the Mat and the Keeper of the Reception House Mat were set forth.

And when the signs of the splendor and lordship of the Keeper of the Mat and Keeper of the Reception House Mat were set forth, Nacxit gave a complete set of the emblems of lordship. Here are their names:

Canopy, throne.

Bone flute, bird whistle.

Paint of powdered yellow stone.

Puma's paw, jaguar's paw.

Head and hoof of deer.

Bracelet of rattling snail shells.

Gourd of tobacco.

Nosepiece.

Parrot feathers, heron feathers.

They brought all of these when they came away. From across the sea, they brought back the writings about Tulan. In the writings, in their words, they spoke of having cried.*(449)

And then, when they got back up in their citadel, named Hacautitz, all the Tams and Ilocs gathered there. All the tribes gathered themselves together; they were happy. When Cocaib, Coacutec, and Coahau came back, they resumed their lordship over the tribes. The Rabinals, the Cakchiquels, and those of the Bird House were happy. Only the signs of the greatness of lordship were revealed before them.

Now the lords became great in their very being; when they had displayed their lordship previously, it was incomplete.

This was when they were at Hacautitz. The only ones with them were all those who had originally come from the east. And they spent a long time there on that mountain. Now they were all numerous.

And the wives of Jaguar Quitze, Jaguar Night, and Mahucutah died there. Then they came away, they left their mountain place behind. They sought another mountain where they could settle. They settled countless mountains, giving them epithets and names. Our first mothers and our first fathers multiplied and gained strength at those places, according to what the people of ancient times said when they told about the abandonment of their first citadel, named Hacautitz.

AND THEN THEY CAME TO A PLACE WHERE THEY FOUNDED A CITADEL NAMED THORNY PLACE. They spent a long time there in that one citadel. They had daughters and sons while they were there. There were actually four mountains,*⁽⁴⁵⁰⁾ but there came to be a single name for the whole town. Their daughters and sons got married. They just gave them away. They accepted mere favors and gifts as sufficient payment for their daughters. They did only what was good.

Then they examined*⁽⁴⁵¹⁾ each division of the citadel. Here are the names of the divisions of Thorny Place: Dry Place, Bark House, Culba, Cauinal are the names of the mountains where they stayed.

And this is when they looked out over the mountains of their citadel. They were seeking a further mountain, since all the divisions had become more numerous. But those who had brought lordship from the east had died by now; they had become old in the process of going from one citadel to another. But their faces did not die;*⁽⁴⁵²⁾ they passed them on.

They went through a great deal of pain and affliction;*⁽⁴⁵³⁾ it was a long time before the grandfathers and fathers found their citadel. Here is the name of the citadel where they arrived.

AND BEARDED PLACE IS THE NAME OF THE MOUNTAIN OF THEIR CITADEL. They stayed there and they settled down there.

And they tested their fiery splendor there. They ground their gypsum their plaster,*⁽⁴⁵⁴⁾ in the fourth generation of lords. It was said that Conache ruled when Nine Deer was the Lord Minister, and then the lords named Cotuha and Iztayul reigned as Keeper of the Mat and Keeper of the Reception House Mat. They reigned there at Bearded Place. It was through their works that it became an excellent citadel.

The number of great houses only reached three, there at Bearded Place. There were not yet a score and four great houses, but only three of them:

Just one Cauec great house.

And just one great house for the Greathouses.

And finally, just one for the Lord Quiches.

But the three were housed in just two buildings, one in each*⁽⁴⁵⁵⁾ of the two divisions of the citadel.

This is the way it was when they were at Bearded Place:

They were of just one mind: there was no evil for them, nor were there difficulties.

Their reign was all in calm: there were no quarrels for them, and no disturbances.

Their hearts were filled with a steady light: there was nothing of stupidity and nothing of envy in what they did.

Their splendor was modest: they caused no amazement, nor had they grown great.

And then they tested themselves. They excelled in the Shield Dance, there at Bearded Place. They did it as a sign of their sovereignty. It was a sign of their fiery splendor and a sign of their greatness.

When it was seen by the Ilocs, the Ilocs began to foment war. It was their desire that the Lord Cotuha be murdered, and that the other lord be allied with them.*(456) It was the Lord Iztayul they wanted to persuade; the Ilocs wanted him as their disciple*(457) in committing murder. But their jealous plotting behind the back of the Lord Cotuha failed to work out. They just wanted it over with, but the lord wasn't killed by the Ilocs on the first try.

Such were the roots of disturbances, of tumult and war. First they invaded the citadel,*(458) the killers were on the move. What they wanted was to obliterate the very identity of the Quiches. Only then, they thought, could they alone have sovereignty, and it was for this alone that they came to kill. They were captured and they were made prisoners. Not many of them ever got their freedom again.

And then began the cutting of flesh. They cut the Ilocs open before the gods. This was in payment*(459) for their wrongs against Lord Cotuha. And many others went into bondage; they were made into slaves and serfs. They had simply given themselves up in defeat by fomenting war against the lord and against the canyon and the citadel.*(460) What their hearts had desired was the destruction and disintegration of the very identity of the Quiche lord, but it did not come to pass.

In this way it came about that people were cut open before the gods. The shields of war were made then; it was the very beginning of the fortification of the citadel at Bearded Place. The root of fiery splendor was implanted there, and because of it the reign of the Quiche lords was truly great. They were lords of singular genius.*(461) There was nothing to humble them; nothing happened to make fools of them*(462) or to ruin the greatness*(463) of their reign, which took root there at Bearded Place.

The penance done for the gods increased there, striking terror again, and all the tribes were terrified, small tribes and great tribes. They witnessed the arrival of people captured in war, who were cut open and killed for the splendor and majesty of Lord Cotuha and Lord Iztayul, along with the Greathouses and the Lord Quiches. There were only three branches of kin there at the citadel named Bearded Place.

And it was also there that they began feasting and drinking over the blossoming of their daughters.*(464) This was the way those who were called the "Three Great Houses" stayed together. They drank their drinks there and ate their corn*(465) there, the payment for their sisters, payment for their daughters. There was only happiness in their hearts when they did it. They ate, they feasted inside their palaces.

"This is just our way of being thankful and grateful*(466) that we have good news and good tidings. It is the sign of our agreements about the daughters and sons born to our women," they said.

Epithets were bestowed there, and the lineages, the allied tribes, the principalities*(467) gave themselves names there.

"We are intermarried: we Cauecs, we Greathouses, and we Lord Quiches," said those of the three lineages and the three great houses. They spent a long time there at Bearded Place, and then they sought again and saw another citadel. They left Bearded Place behind.

AND THEN THEY GOT UP AND CAME TO THE CITADEL OF ROTTEN CANE, as the name is spoken by the Quiches. The Lords Cotuha and Plumed Serpent*(468) came along, together with all the other lords. There had been five changes and five generations*(469) of people since the origin of light, the origin of continuity, the origin of life and of humankind.

And they built many houses there.

And they also built houses for the gods, putting these in the center of the highest part of the citadel. They came and they stayed.

After that their domain grew larger; they were more numerous and more crowded. Again they planned their great houses, which had to be regrouped and sorted out because of their growing quarrels. They were jealous of one another over the prices of their sisters and daughters, which were no longer a matter of mere food and drink.

So this was the origin of their separation, when they quarreled among themselves, disturbing the bones and skulls of the dead.*(470) Then they broke apart into nine lineages, putting an end to quarrels over sisters and daughters. When the planning of the lordships was done, the result was a score and four great houses.

It was a long time ago when they all came up onto their citadel, building a score and four palaces there in the citadel of Rotten Cane. That was the citadel blessed by the lord bishop*(471) after it had been abandoned.

They achieved glory there. Their marvelous seats and cushions were arranged; the varieties of splendor were sorted out for each one of the lords of the nine lineages. One by one they took their places:

The nine lords of the Cauecs.

The nine lords of the Greathouses.

The four lords of the Lord Quiches.

The two lords of the Zauquics.

They became numerous. Those who were in the following of a given lord were also numerous, but the lord came first, at the head of his vassals. There were masses, masses of lineages for each of the lords. We shall name the titles of the lords one by one, for each of the great houses.

AND HERE ARE THE TITLES OF THE LORDS WHO LED THE CAUECS, beginning with the first in rank:

Keeper of the Mat.

Keeper of the Reception House Mat.

Keeper of Tohil.

Keeper of the Plumed Serpent.

Great Toastmaster of the Cauecs.

Councilor of the Stores.

Lolmet Quehnay.

Councilor of the Ball Court.

Mother of the Reception House.

So these are the lords who led the Cauecs, nine lords with their palaces ranged around, one for each of them. And now to show their faces ...*(472)

AND NOW THESE ARE THE LORDS WHO LED THE GREATHOUSES, beginning

with the first lord:

Lord Minister.

Lord Crier to the People.

Minister of the Reception House.

Great Reception House.

Mother of the Reception House.

Great Toastmaster of the Greathouses.

Lord Auilix.

Yacolatam, or Edge of the Zaclatol Mat.

Great Lolmet Yeoltux.

So there were nine lords who led the Greathouses.

AND NOW THESE ARE THE LORD QUICHES. Here are the titles of the lords:

Crier to the People.

Lord Lolmet.

Lord Great Toastmaster of the Lord Quiches.

Lord Hacauitz.

Four lords led the Lord Quiches, with their palaces ranged around.

AND THERE WERE ALSO TWO LINEAGES OF ZAQUIC LORDS:

Lord Corntassel House.

Minister for the Zaquics.

There was just one palace for these two lords.

Such was the arrangement of the score and four lords, and there came to be a score and four great houses as well.

THEN SPLENDOR AND MAJESTY GREW AMONG THE QUICHE. The greatness and weight of the Quiche reached its full splendor and majesty with the surfacing and plastering of the canyon and citadel. The tribes came, whether small or great and whatever the titles of their lords, adding to the greatness of the Quiche. As splendor and majesty grew, so grew the houses of gods and the houses of lords.

But the lords could not have accomplished it, they could not have done the work of building their houses or the houses of the gods, were it not for the fact that their vassals had become numerous. They neither had to lure them nor did they kidnap them or take them away by force, because each one of them rightfully belonged to the lords. And the elder and younger brothers of the lords also became populous.

Each lord led a crowded life, crowded with petitions.*⁽⁴⁷³⁾ The lords were truly valued and had truly great respect. The birthdays*⁽⁴⁷⁴⁾ of the lords were made great and held high by their vassals. Those who lived in the canyons and those who lived in the citadels multiplied then. Even so they would not have been numerous, had not all the tribes arrived to give themselves up.

And when war befell their canyons and citadels, it was by means of their genius that the Lord Plumed Serpent and the Lord Cotuha blazed with power. Plumed Serpent became a true lord of genius:

On one occasion*⁽⁴⁷⁵⁾ he would climb up to the sky; on another he would go down the road to Xibalba.

On another occasion he would be serpentine, becoming an actual serpent.

On yet another occasion he would make himself aquiline, and on another feline;*⁽⁴⁷⁶⁾ he would become like an actual eagle or a jaguar in his appearance.

On another occasion it would be a pool of blood; he would become nothing but a pool of blood.

Truly his being was that of a lord of genius. All the other lords were fearful before him. The news spread;*(477) all the tribal lords heard about the existence of this lord of genius.

And this was the beginning and growth of the Quiche, when the Lord Plumed Serpent made the signs of greatness. His face was not forgotten by his grandsons and sons. He didn't do these things just so there would be one single lord, a being of genius, but they had the effect of humbling all the tribes when he did them. It was just his way of revealing himself, but because of it he became the sole head*(478) of the tribes.

This lord of genius named Plumed Serpent was in the fourth generation of lords; he was both Keeper of the Mat and Keeper of the Reception House Mat.

And so he left signs and sayings for the next generation. They achieved splendor and majesty, and they, too, begot sons, making the sons still more populous. Tepepul and Iztayul were begotten; they merely served out their reign, becoming the fifth generation of lords. They begot another generation of lords.

AND HERE ARE THE NAMES OF THE SIXTH GENERATION OF LORDS. There were two great lords; they were fiery. Quicab was the name of one lord; Cauizimah was the name of the other.

And Quicab and Cauizimah did a great deal in their turn. They added to the greatness of the Quiche because they truly had genius. They crushed and they shattered the canyons and citadels of the tribes, small and great- the ones that had citadels among them in ancient times, nearby:

There was a mountain place of the Cakchiquels, called Above the Nettles today.

And also a mountain place of the Rabinals, Place of Spilt Water.

And a mountain of the Caoques, Plaster House.

And then a citadel of the White Earths, Above the Hot Springs.

Under Ten, Before the Building, and Willow Tree.

They all hated Quicab. They made war, but in fact they were brought down, they were shattered, these canyons, these citadels of the Rabinals, Cakchiquels, White Earths. All the tribes went down on their faces or flat on their backs.*(479) The warriors of Quicab kept up the killing for a long time, until there were only one or two groups, from among all the enemies, who hadn't brought tribute. Their citadels fell and they brought tribute to Quicab and Cauizimah. Their lineages came to be bled, shot full of arrows at the stake.*(480) Their day came to nothing, their heritage came to nothing.

Projectiles alone were the means for breaking the citadels.*(481) All at once the earth itself would crack open; it was as if a lightning bolt had shattered the stones. In fear, the members of one tribe after another*(482) went before the gum tree,*(483) carrying in their hands*(484) the signs of the citadels, with the result that a mountain of stones is there today. Only a few of these aren't cut stones;*(485) the rest look as though they had been split with an axe. The result is there on the flat*(486) named Petatayub; it is obvious to this day. Everyone who passes by can see it as a sign of the manhood of Quicab. He could not be killed, nor could he be conquered. He was truly a man, and all the tribes brought tribute.

And then all the lords made plans; they moved to cordon off the

canyons and citadels, the fallen citadels of all the tribes.

AFTER THAT CAME THE SENTRIES, to watch for the makers of war. Now lookout lineages were established to occupy the conquered mountains:

"Otherwise the tribes would return to inhabit their citadels," all the lords said when they had all shared their thoughts. Then the assignments were given out:

"Let them be like a palisade to us, and like doubles for our own lineages,*⁽⁴⁸⁷⁾ and like a stockade, a fortress to us. Let them now become our anger, our manliness," said all the lords. The assignments were given to each of the lineages that were to provide opposition to the makers of war.

And then they were notified, and then they went to their posts, occupying the mountain places of the tribes:

"Go, because these are now our mountains. Do not be afraid. The moment there are makers of war again, coming back among you as your murderers, send for us to come and kill them,"*⁽⁴⁸⁸⁾ Quicab and the Minister and the Crier to the People told them, notifying all of them.

Then they went off, those who are called the Point of the Arrow, Angle of the Bowstring. Their grandfathers and fathers split up then; they were on each of the mountains. They went just as guards of the mountains, and as arrowhead and bowstring guards, and as guards against the makers of war as well. None of them had been there at the dawning nor did any of them have his own god;*⁽⁴⁸⁹⁾ they just blocked the way to the citadel. They all went out:

Keepers of Above the Nettles, Keepers of Chulimal, White River, Deer Dance Plaza, Plank Place, Eighteen.

Also, Keepers of Earthquake, Meteor, Hunahpu Place.

And Keepers of Spilt Water, Keepers of Cut Rock, Keepers of Plaster House, Keepers of Ziya House, Keepers of Hot Springs, Keepers of Under Ten, of the plains, of the mountains.

The war sentries, the guardians of the land, went out, they went on behalf of Quicab and Cauizimah, Keeper of the Mat and Keeper of the Reception House Mat, and on behalf of the Minister and the Crier to the People. There were four lords who posted messengers and sentries against the makers of war:

Quicab and Cauizimah are the names of the two lords who led the Cauecs.

Quema is the name of the lord who led the Greathouses.

And Armadillo Dung is the name of the lord who led the Lord Quiches.

So these are the names of the lords who posted messengers and couriers. Their own vassals went to the mountains, to each one of the mountains, and as soon as they had gone, spoils kept coming back, and prisoners of war kept coming back to Quicab and Cauizimah, to the Minister and the Crier to the People. The Points of the Arrows and Angles of the Bowstrings made war. They took spoils and prisoners again. There came to be heroes again, among those who were sentries. They were given seats and honored; they were generously remembered by the lords when they came to turn over all their spoils and their prisoners.

After that, when the Lords Keeper of the Mat, Keeper of the Reception House Mat, Minister, and Crier to the People had shared their thoughts, their decision came out:

"When it comes to the ennobling of the lookout lineages,*⁽⁴⁹⁰⁾ we'll induct*⁽⁴⁹¹⁾ only those who are first in rank. I am Keeper of the

Mat."

"And I am Keeper of the Reception House Mat."

"The nobility of Keeper of the Mat, which is mine- and that which is yours,* (492) Lord Minister- should enter into this. Ministers will be ennobled." And all the lords spoke as they gathered their thoughts. The Tams and Ilocs did just the same; the three divisions of the Quiche were in concord* (493) when they carried out the investiture. They titled those of the first rank among their vassals.

In this way the decision was reached. But they weren't inducted at Quiche. The mountain where the first-ranking vassals were inducted has a name; all of them were summoned, from each of the mountains where they were, and they gathered in just one place. Under the Twine, Under the Cord is the name of the mountain where they were inducted, where they entered into nobility. It was done there in Chulimal.

And here are their titles, their honors, and their marks: a score of Ministers and a score of Keepers of the Mat were created by the Keeper of the Mat and the Keeper of the Reception House Mat, and by the Minister and the Crier to the People.

All of these entered the nobility: Ministers, Keepers of the Mat, eleven Great Toastmasters, Minister for the Lords, Minister for the Zaguics, Military Minister, Military Keeper of the Mat, Military Walls, and Military Corners are the titles that came in when the soldiers were titled and named to their seats, their cushions.

These were the first-ranking vassals, watchers and listeners for the Quiche people, Points of the Arrows, Angles of the Bowstrings, a palisade, an enclosure, a wall, a fortress around Quiche.* (494)

And the Tams and Ilocs did the same thing; they inducted and titled the first-ranking vassals for each mountain.

So this was the origin of the noble Ministers and Keepers of the Mat that exist for each of the mountains today. The sequence was such that they came out later than the Keeper of the Mat proper and the Keeper of the Reception House Mat, and later than the Minister and the Crier to the People.

AND NOW WE SHALL NAME THE NAMES OF THE HOUSES OF THE GODS, although the houses have the same names as the gods:

Great Monument of Tohil is the name of the building that housed Tohil of the Cauacs.

Auilix, next, is the name of the building that housed Auilix of the Greathouses.

Hacautitz is the name, then, of the building that housed the god of the Lord Quiches.

Corntassel, whose house of sacrifice* (495) can still be seen, is the name of another great monument.

These were the locations of the stones whose days were kept by the Quiche lords. Their days were also kept by all the tribes. When the tribes burned offerings, they came before Tohil first.

After that, they greeted the Keeper of the Mat and Keeper of the Reception House Mat next, then they handed over their quetzal feathers and their tribute to the lords, these same lords.

And so they nurtured and provided for the Keeper of the Mat and Keeper of the Reception House Mat,* (496) who had been victorious over their citadels.

They were great lords, they were people of genius. Plumed Serpent and Cotuha were lords of genius, and Quicab and Cauizimah were lords

of genius. They knew whether war would occur; everything they saw was clear to them.*(497) Whether there would be death, or whether there would be famine, or whether quarrels would occur, they knew it for certain, since there was a place to see it, there was a book.*(498) Council Book was their name for it.

But it wasn't only in this way that they were lords. They were great in their own being and observed great fasts. As a way of cherishing*(499) their buildings and cherishing their lordship, they fasted for long periods, they did penance before their gods.

And here is their way of fasting:

For nine score days they would fast,*(500) and for nine they would do penance and burn offerings.

Thirteen score was another of their fasts, and for thirteen they would do penance and burn offerings before Tohil and their other gods. They would only eat zapotes, matasanos,*(501) jocotes; there was nothing made of corn for their meals.

Even if they did penance for seventeen score, then for seventeen they fasted, they did not eat. They achieved truly great abstinence.*(502)

This was a sign that they had the being of true lords. And there weren't any women with them when they slept;*(503) they kept themselves apart when they fasted. They just stayed in the houses of the gods, each day. All they did was keep the days, burn offerings, and do penance. They were there whether it was dark or dawn; they just cried their hearts and their guts out when they asked for light and life for their vassals and their domain. They lifted their faces to the sky, and here is their prayer before their gods, when they made their requests.

AND THIS IS THE CRY OF THEIR HEARTS, here it is:

"Wait! On this blessed day,*(504)
thou Hurricane, thou Heart of the Sky-Earth,
thou giver of ripeness and freshness,*(505)
and thou giver of daughters and sons,
spread thy stain, spill thy drops
of green and yellow;*(506)
give life and beginning
to those I bear and beget,
that they might multiply*(507) and grow,
nurturing and providing for thee,
calling to thee along the roads and paths,
on rivers, in canyons,
beneath the trees and bushes;
give them their daughters and sons.
"May there be no blame, obstacle, want or misery;
let no deceiver come behind or before them,
may they neither be snared nor wounded,
nor seduced, nor burned,
nor diverted below the road nor above it;*(508)
may they neither fall over backward nor stumble;
keep them on the Green Road, the Green Path.
"May there be no blame or barrier for them
through any secrets or sorcery of thine;*(509)
may thy nurturers and providers be good
before thy mouth and thy face,*(510)

thou, Heart of Sky; thou, Heart of Earth;
thou, Bundle of Flames;
and thou, Tohil, Auilix, Hacauitz,
under the sky, on the earth,
the four sides, the four corners;
may there be only light, only continuity within,
before thy mouth and thy face, thou god."

So it was with the lords when they fasted during nine score, thirteen score, or seventeen score days; their days of fasting were many. They cried their hearts out over their vassals and over all their wives and children. Each and every lord did service, as a way of cherishing the light of life and of cherishing lordship.

Such were the lordships of the Keeper of the Mat, Keeper of the Reception House Mat, Minister, and Crier to the People. They went into fasting two by two, taking turns at carrying the tribes and all the Quiche people on their shoulders.*(511)

At its root the word came from just one place, and the root of nurturing and providing was the same as the root of the word. The Tams and Ilocs did likewise, along with the Rabinals, Cakchiquels, those of the Bird House, Sweatbath House, Talk House. They came away in unity, having heard, there at Quiche, what all of them should do.

It wasn't merely that they became lords;*(512) it wasn't just that they gathered in gifts*(513) from nurturers and providers who merely made food and drink*(514) for them. Nor did they wantonly falsify*(515) or steal their lordship, their splendor, their majesty. And it wasn't merely that they crushed the canyons and citadels of the tribes, whether small or great, but that the tribes paid a great price:

There came turquoise, there came metal.

And there came drops of jade and other gems that measured the width of four fingers or a full fist across.*(516)

And there came green and red featherwork,*(517) the tribute of all the tribes. It came to the lords of genius Plumed Serpent and Cotuha, and to Quicab and Cauizimah as well, to the Keeper of the Mat, Keeper of the Reception House Mat, Minister, and Crier to the People.

What they did was no small feat, and the tribes they conquered were not few in number. The tribute of Quiche came from many tribal divisions.

And the lords had undergone pain and withstood it; their rise to splendor had not been sudden. Actually it was Plumed Serpent who was the root of the greatness of the lordship.

Such was the beginning of the rise and growth*(518) of Quiche.

And now we shall list the generations of lords, and we shall also name the names of all these lords.

AND HERE ARE THE GENERATIONS, THE SEQUENCES OF LORDSHIPS, so that all of them will be clear.

Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar were our first grandfathers, our first fathers when the sun appeared, when the moon and stars appeared.

And here are the generations, the sequences, of lordships. We shall begin from here, at their very root. The lords will come up two by two,*(519) as each generation of lords enters and succeeds*(520) the previous grandfathers and lords of the citadel, going on through each and every one of the lords.

And here shall appear the faces of each one of the lords.
AND HERE SHALL APPEAR THE FACES, ONE BY ONE, OF EACH OF THE QUICHE LORDS ...*(521)

Jaguar Quitze, origin of the Cauecs.

Cocauib, in the second generation after Jaguar Quitze.

Jaguar Conache, who began the office of Keeper of the Mat, was in the third generation.

Cotuha and Iztayul, in the fourth generation.

Plumed Serpent and Cotuha, at the root of the lords of genius, were in the fifth generation.

Tepepul and Iztayul next, sixth in the sequence.

Quicab and Cauizimah, in the seventh change of lordship, were the culmination of genius.

Tepepul and Xtayub, in the eighth generation.

Tecum and Tepepul, in the ninth generation.

Eight Cords, with Quicab, in the tenth generation of lords.

Seven Thought and Cauatepech next, eleventh in the sequence of lords.

Three Deer and Nine Dog, in the twelfth generation of lords. And they were ruling when Tonatiuh arrived. They were hanged by the Castilian people.

Tecum and Tepepul were tributary to the Castilian people. They had already been begotten as the thirteenth generation of lords.

Don Juan de Rojas and don Juan Cortes, in the fourteenth generation of lords. They are the sons of Tecum and Tepepul.

So these are the generations, the sequences of lordships for the Keeper of the Mat and Keeper of the Reception House Mat, the lords who have led the Cauecs of Quiche. Next we shall name the lineages.

And here are the great houses of each one of the lords in the following of the Keeper of the Mat and Keeper of the Reception House Mat. These are the names of the nine lineages of the Cauecs, nine great houses. Here are the titles of the rulers of each one of the great houses:

Lord Keeper of the Mat, with one great house. Granary is the name of the palace.

Lord Keeper of the Reception House Mat. Bird House is the name of his palace.

Great Toastmaster of the Cauecs, with one great house.

Lord Keeper of Tohil, with one great house.

Lord Keeper of the Plumed Serpent, with one great house.

Councilor of the Stores, with one great house.

Lolmet Quehnay, with one great house.

Councilor of the Ball Court, Xcuxeba, with one great house.

Sovereign Yaqui, with one great house.

So these are the nine lineages of the Cauecs. Many vassals are counted in the following of these nine great houses.

AND HERE ARE THOSE OF THE GREATHOUSES, with nine more great houses. First we shall name the genealogy of the lordship. It began, from just one root, at the origin of the root of the day and the light:

Jaguar Night, first grandfather and father.

Coacul and Coacutec, in the second generation.

Cochahuh and Cotzibaha, in the third generation.

Nine Deer next, in the fourth generation.

Cotuha, in the fifth generation of lords.

And Monkey House next, in the sixth generation.

And Iztayul, in the seventh generation of lords.

Cotuha then, eighth in the sequence of lordships.

Nine Deer, ninth in the sequence.

Quema, as the next one was called, in the tenth generation.

Lord Cotuha, in the eleventh generation.

Don Cristobal, as he was called, became lord in the presence of the Castilian people.

Don Pedro de Robles is Lord Minister today.

And these are all the lords who come in the following of the Lord Minister. Now we shall give the title of the ruler of each one of the great houses:

Lord Minister, the first-ranking lord at the head of the Greathouses, with one great house.

Lord Crier to the People, with one great house.

Lord Minister of the Reception House, with one great house.

Great Reception House,*(522) with one great house.

Mother of the Reception House, with one great house.

Great Toastmaster of the Greathouses, with one great house.

Lord Auilix, with one great house.

Yacolatam, with one great house.

So these are the great houses at the head of the Greathouses; these are the names of the nine lineages of the Greathouses, as they are called. There are many branch lineages in the following of each one of these lords; we have named only the first-ranking titles.

AND NOW THESE ARE FOR THE LORD QUICHES. Here are their grandfathers and fathers:

Mahucutah, the first person.

Coahau is the name of the lord of the second generation.

Red Banner.

Cocozom.

Comahcun.

Seven Cane.

Cocamel.

Coyabacoh.

Person of Bam.

So these are the lords at the head of the Lord Quiches; these are their generations and sequences.

And here are the lords within the palaces, with just four great houses:

Crier to the People for the Lords is the title of the first lord, with one great house.

Lolmet of the Lords, the second lord, with one great house.

Great Toastmaster of the Lords, the third lord, with one great house.

And Hacauitz, the fourth lord, with one great house.

And so these are the four great houses at the head of the Lord Quiches.

AND THERE ARE THREE GREAT TOASTMASTERS IN ALL. They are like fathers to all the Quiche lords. They come together in unity, these three Toastmasters. They are givers of birth, they are Mothers of the Word, they are Fathers of the Word, great in being few,*(523) these three Toastmasters:

Great Toastmaster for the Cauecs, first.
And Great Toastmaster for the Greathouses, second.
Great Toastmaster Lord for the Lord Quiches, third of the Great Toastmasters.

And so there are three Toastmasters, one representing each of these lineages.

THIS IS ENOUGH ABOUT THE BEING OF QUICHE, given that there is no longer a place to see it. There is the original book and ancient writing* (524) owned by the lords, now lost, but even so, everything has been completed here concerning Quiche, which is now named Santa Cruz.

(See illustration: Map of places mentioned in the Popol Vuh.)

NOTES_AND_COMMENTS

NOTES AND COMMENTS

Quiche words in brackets are corrections of the spellings in the Popol Vuh manuscript. Popol Vuh is abbreviated P.V. throughout. Sources for the meanings of words, here and in the Glossary, are cited by the following letter code (see the Bibliography for the full citations):

- (A.) Miguel Alvarado Lopez, Lexico medico quiche-espanol.
- (B.) Domingo de Basseta, "Vocabulario en lengua quiche."
- (C.) Lyle Campbell, "Prestamos linguisticos en el Popol Vuh."
- (D.) Alonso de Molina, Vocabulario en lengua castellana y mexicana.
- (E.) Charles Etienne Brasseur de Bourbourg, Gramatica de la lengua quiche.
- (F.) Floyd G. Lounsbury, "The Identities of the Mythological Figures in the 'Cross Group' Inscriptions."
- (G.) Pantaleon de Guzman, "Compendio de nombres en lengua cakchiquel."
- (K.) Terrence Kaufman, "Common Cholan Lexical Items."
- (L.) Robert M. Laughlin, The Great Tzotzil Dictionary.

INTRODUCTION

* My account of Mayan archaeology is based largely on Michael D. Coe, The Maya, and Norman Hammond, Ancient Maya Civilization.

*(2) For a general discussion of pre-Columbian books in the Mayan region, see J. Eric S. Thompson, A Commentary on the Dresden Codex, chap. 1; the hieroglyphic book now in Dresden is reproduced in color in this same source. For a color reproduction of the fragment that was found more recently in Chiapas, see Coe, The Maya Scribe and His

World; for a demonstration of the authenticity of this fragment, see John B. Carlson, "The Grolier Codex."

*(3) For a comparison of the towns of Quiche and Chichicastenango during the colonial period, see Robert M. Carmack, *The Quiche Mayas of Utatlan*, pp. 76, 106, 304, 328.

*(4) For a longer account of the odyssey of the Ximenez manuscript, see Adrian Recinos et al., *Popol Vuh: The Sacred Book of the Ancient Quiche Maya*, pp. 32-45.

*(5) For the Vienna volume see Francisco Ximenez, *Las historias del origen de los indios de esta provincia de Guatemala*; for the Paris volume, see Charles Etienne Brasseur de Bourbourg, *Popol Vuh: Le livre sacre et les mythes de l'antiquite americaine*. The title chosen by Scherzer for the Vienna volume is the one used by Ximenez; Brasseur was the first to call the alphabetic version of the ancient book by the name of its hieroglyphic predecessor. His version of the Quiche text leaves much to be desired; by far the best version ever published is that of Leonhard S. Schultze Jena (*Popol Vuh: Das heilige Buch der Quiche-Indianer von Guatemala*). A highly legible facsimile of the manuscript (easier to read than the original) was published in 1973 by the Guatemalan Ministry of Education (Francisco Ximenez, *Popol Vuh*).

For evidence that the manuscript Ximenez worked from contained at least a few hieroglyphs, see notes *(472) and *(521). Maya writing, like Egyptian and Chinese, was both logographic and phonetic, which is to say that a given word could be written with a single sign all its own, but could also be spelled out with glyphs that stood for the sounds of its individual consonants or syllables; see David Humiston Kelley, *Deciphering the Maya Script*, chaps. 6 and 9. The monkey patrons of writing and painting and the close relationship between these arts are discussed in Coe, "Supernatural Patrons of Maya Scribes and Artists."

*(6) The four corners in question here are not the four cardinal points, but the four places marked out by the solstitial rising and setting points of the sun; see Eva Hunt, *The Transformation of the Hummingbird*, chap. 6.

*(7) See Alfred M. Tozzer, *Landa's Relacion de las cosas de Yucatan*, pp. 153-54, for a description of the reading of a hieroglyphic book in Yucatan. At present there are public readings of alphabetic manuscripts in the Yucatec Maya ceremonial center of Xcacal, in Quintana Roo; see Allan F. Burns, "The Caste War in the 1970's," and *An Epoch of Miracles*, pp. 22-23, 71-72.

*(8) For a further discussion of the Ancient Word and its relation to the preaching of God, see Dennis Tedlock, *The Spoken Word and the Work of Interpretation*, chap. 12.

*(9) In holding open the possibility that the authors of the alphabetic P.V. had access to the hieroglyphic version I am in agreement with Munro S. Edmonson, *The Book of Counsel: The Popol Vuh of the Quiche Maya of Guatemala*, pp. 6-7. For a discussion of the role of dialogue in the Quiche story of the origin of the world and the contrasting monologue of Genesis, see D. Tedlock, *The Spoken Word*, chap. 11.

*(10) Contemporary Quiche daykeepers and their practices are fully described in Barbara Tedlock, *Time and the Highland Maya*. The 260-day cycle daykeepers divine by is made up of two shorter cycles,

one consisting of an endlessly repeating sequence of thirteen day numbers and the other of an endlessly repeating sequence of twenty day names. Since 13 and 20 have no common factor, the interaction of 13 numbers with 20 names produces a larger cycle consisting of 13×20 or 260 days, each with a unique combination of number and name. If we begin with the day that combines the number 1 with the name Queh, the list of successive days proceeds as follows:

QUICHE DAY NAMES WITH NUMBERS

(Yucatec names in parentheses)

1 Queh	(Manik)	12 Tihax	(Etznab)
2 3anil	(Lamat)	13 Cauuk	(Cauac)
3 Toh	(Muluc)	1 Hunahpu	(Ahau)
4 4,ii	(Oc)	2 Imox	(Imix)
5 Ba4,	(Chuen)	3 I3	(Ik)
6 E	(Eb)	4 A3abal	(Akbal)
7 Ah	(Ben)	5 4at	(Kan)
8 Ix	(Ix)	6 Can	(Chicchan)
9 4,iquin	(Men)	7 Came	(Cimi)
10 Ahmac	(Cib)	8 Queh	(Manik)
11 Naoh	(Caban)	etc.	etc.

From 8 Queh the count goes on to 9 3anil, 10 Toh, and so forth, returning to 1 Queh after 260 days.

Andres Xiloj, the daykeeper introduced in the preface to the present work, insists that the period of human pregnancy is the basis for the length of this cycle; medically speaking, 260 days is indeed a sound, average figure for the period lasting from the time when a woman first misses her menses to the time when she gives birth. It should also be noted that the growth cycle of one of the varieties of corn used in highland Guatemala is such that it is harvested 260 days after planting, though it is necessary to hasten the ripening of the ears by bending the stalks over; see B. Tedlock, "Earth Rites and Moon Cycles: Mayan Synodic and Sidereal Moon Reckoning."

*(11) For more on the ball game, see Theodore Stern, *The Rubber-Ball Games of the Americas*, and Stephan F. de Borhegyi, *The Pre-Columbian Ballgames: A Pan-Mesoamerican Tradition*.

*(12) For a full exploration of the astronomical dimensions of the P.V., see D. Tedlock, "The Sowing and Dawning of All the Sky-Earth: Astronomy in the Popol Vuh." The sources for the astronomical identifications of Seven Macaw and Chimalmat are given under their names in the Glossary. Claude Levi-Strauss states that the Big Dipper is identified with the hurricane (rather than opposed to it) in the mythology of Mesoamerica and the Caribbean (From Honey to Ashes, pp. 115-16), but he bases this statement on the work of R. Lehmann-Nitsche, who presents not a single concrete ethnographic example of such an identification and even passes over evidence that would place the stellar aspect of the hurricane close to the ecliptic rather than near the pole star ("La constelacion de la Osa Mayor y su concepto como Huracan o dios de la tormenta en la esfera del Mar Caribe").

*(13) The symbolism of the Pleiades is discussed in B. Tedlock, "Earth Rites and Moon Cycles." The sexual symbolism of the Zipacna story was pointed out by Andres Xiloj, whose full comments will be found in notes *(144)-*(152).

*(14) Together, Zipacna and Earthquake probably correspond to the

two-headed "Cauac monster" of classic Maya iconography (see Dicey Taylor, "The Cauac Monster").

*(15) The falcon who serves as the messenger for Hurricane, or Heart of Sky, may correspond to the planet Jupiter, for reasons that are given in D. Tedlock, "The Sowing and Dawning."

*(16) The Great Abyss at Carchah (see the Glossary) is probably near the town of Coban; an independent colonial source on that region, Bartolome de las Casas, has a god named Exbalanquen entering the underworld through a cave near Coban (Apologetica historia de las Indias, pp. 330, 619).

*(17) The movements of the messenger owls, here and elsewhere, fit those of the planet Mercury; see D. Tedlock, "The Sowing and Dawning."

*(18) The Maya Venus cycle, as given in the Dresden Codex, is discussed at length in Thompson, A Commentary on the Dresden Codex, pp. 62-71. A given Venus cycle (lasting 584 days) is divided into four stages, with Venus appearing as the morning star (for 236 days), then disappearing (90 days), then reappearing as the evening star (250 days), and finally disappearing again (8 days). During a given 584-day cycle the 20 day names will repeat fully 29 times, giving 580 days and a remainder of 4; this means that a new Venus cycle will always begin 4 days later in the sequence of 20 day names than the previous cycle. And since 4 divides evenly into 20, giving 5, only 5 of the 20 day names can ever begin a Venus cycle. In the Dresden Codex the chosen days (here given their Quiche names) were Hunahpu, 4at (or "Net"), 3anil, E, and Ahmac, followed by Hunahpu again. Starting from 1 Hunahpu (as the Dresden Codex does) and running through five complete cycles so as to show all of the possible day names, the beginning dates for the four stages within each Venus cycle work out as follows:

	DAY NUMBERS AND NAMES FOR FIVE SUCCESSIVE VENUS CYCLES				
	FIRST CYCLE	SECOND CYCLE	THIRD CYCLE	FOURTH CYCLE	FIFTH CYCLE
Appears as morning star:	1 Hunahpu	13 4at	12 3anil	11 E	10 Ahmac
Becomes invisible:	3 Ahmac	2 Hunahpu	1 4at	13 3anil	12 E
Appears as evening star:	2 Came	1 4,ii	13 Ix	12 Tihax	11 13
Becomes invisible:	5 Ahmac	4 Hunahpu	3 4at	2 3anil	1 E

After five complete cycles totaling 2,920 days, the movements of Venus fill exactly 8 years of 365 days each and come within hours of filling 99 lunar months. At this point Venus is also close to completing 13 of its sidereal periods, which run a little under 225 days each. In the present context this means that when Venus begins its cycle for the sixth time, an event that will fall on 9 Hunahpu, it will have the same relationship to the fixed stars that it had 2,920 days earlier, when its appearance as morning star began on 1 Hunahpu. The date for this appearance will not return to 1 Hunahpu until all five of the possible day names have combined with each of the 13 day numbers, by which time Venus will have passed through precisely 65 cycles of 584 days each, 104 cycles of 365 days each, and 146 cycles of 260 days each.

The divine names One and Seven Hunahpu and One and Seven Came (or "Death") point directly to the Venus calendar, and specifically to the first of its five cycles. Andres Xiloj pointed out that combining the numbers 1 and 7 with a given day name is a conventional way of indicating all 13 days bearing that name. The reason is that when one traces a single day name through all of its occurrences in a given 260-day cycle, the accompanying numbers fall out in the sequence 1, 8, 2, 9, 3, 10, 4, 11, 5, 12, 6, 13, and 7. This means that if the divine names in question here refer to astronomical events, these should be events whose day names remain constant but whose day numbers are variable, which is indeed the case. By the same argument, the names One Ba4, (or "Monkey") and One Chouen (or "Artisan"), both of which refer to the same day (see the Glossary), point to an event that varies neither as to number nor as to name and must therefore occur each 260 days or a multiple thereof. The only astronomical events that fit this description are those pertaining to Mars, whose synodic period is 780 (3 x 260) days. For example, if Mars made its first appearance in a given cycle on the day 1 Ba4, the return of this same event would again fall on the day 1 Ba4,.

*(19) The falcon who serves as the messenger for Xmucane may correspond to the planet Saturn, for reasons that are given in D. Tedlock, "The Sowing and Dawning."

*(20) It was Andres Xiloj who pointed out that the ritual performed with the ears of corn in the P.V. is the same as a contemporary ritual; his detailed comments on this and other connections between the P.V. and contemporary practices may be found throughout the notes to the P.V. translation itself. For an account of contemporary sound plays on day names, see B. Tedlock, "Sound Texture and Metaphor in Quiche Maya Ritual Language," and Time and the Highland Maya, chap. 5.

*(21) The macaw's tail and the two fireflies that glowed all night may correspond to the stars Procyon, Castor, and Pollux, for reasons that are given in D. Tedlock, "The Sowing and Dawning."

*(22) Ideally there should be a total of five test houses, corresponding to the second stage in each of the five types of Venus cycles; these would be Dark House, Razor House, Cold (or Rattling) House, Jaguar House, and Bat House. They may correspond to locations along the Mayan zodiac, since Venus begins to repeat the pattern of its relationship to the fixed stars after five cycles. In the second of two passages naming the houses, the P.V. seems to add a sixth house, a "house of fire," but this may be a secondary elaboration on the part of the narrator [see note *(286)].

*(23) In a given 365-day period the 20 day names repeat themselves completely 18 times, giving 360 days with a remainder of 5; this means that the next solar year will always begin with a day name that comes 5 days later in the cycle of 20 than the name that began the previous year. And since 5 divides evenly into 20, giving 4, only 4 of the 20 day names, evenly spaced within the name cycle, can ever begin a solar year. For the Quiche, these new year's day names were and are Queh or "Deer," E or "Tooth," Naoh or "Thought," and I3 or "Wind," followed by Queh again. As for the new year's day number, the cycle of 13 numbers repeats itself completely 28 times in a given solar year, giving 364 days and a remainder of 1; this means that a given solar year will always begin with a day number that comes

a single place later in the cycle of 13 than the number that began the previous year.

The year as a whole is designated by the number and name of its beginning day; starting with a year bearing the name 1 Queh, the reckoning of successive years proceeds as follows:

QUICHE YEAR DESIGNATIONS

1 Queh	6 E	11 Naoh
2 E	7 Naoh	12 I3
3 Naoh	8 I3	13 Queh
4 I3	9 Queh	1 E
5 Queh	10 E	etc.

Note that two of these day names, E and I3, also have a potential for events pertaining to Venus (see the Venus calendar in an earlier note). They occur in the fourth and (more markedly) in the fifth and final cycle of Venus, just as the solar dimension of the story of Hunahpu and Xbalanque begins to manifest itself in the final episodes.

*(24) In Mesoamerican iconography the evening-star Venus is a death's head (see Carlson, "The Grolier Codex"). Even the ball game played with the squash fits into place when we consider the report of Ruth Bunzel that in at least one contemporary Quiche town, an excess of large squashes in a field means that the senior male of a family may die, since the squashes are a sign that his head is rotting (Chichicastenango, p. 54). The vine shown growing out of the head of a ballplayer in one of the ball-court relief panels at Chichen Itza may well be a squash vine; note that the ball in this panel is shown as enclosing a skull (see illustration: "It's just a skull").

The morning-star and evening-star episodes should total five each, corresponding to the five types of Venus cycles. The morning-star episodes are brought up to five if we count the period when One and Seven Hunahpu were on the surface of the earth as the first episode, with the four above-ground adventures of Hunahpu and Xbalanque following. The first evening-star episode is of course the one in which One Hunahpu's head is placed in the tree at the Place of Ball Game Sacrifice, followed by the three ball games with literal or figurative heads; the fifth head will be Hunahpu's again, when he loses it in a future episode.

*(25) The appearance of Hunahpu and Xbalanque as catfish recalls that the purported equivalent of Hunahpu among the classic Maya, the god designated G-I in the epigraphic literature on Palenque, has cheeks with appendages that sometimes look like catfish barbels and sometimes like spiny fins [see Floyd G. Lounsbury, "The Identities of the Mythological Figures in the 'Cross Group' Inscriptions at Palenque," and notes *(306)-*(307)]. The appearance of the twins as vagabond actors is a further sign, beyond the earlier appearance of the "old man" or possum, that the sun will soon rise. Among the roles of classic Maya year-bearers was that of wandering actors (Thompson, *Maya History and Religion*, p. 277).

*(26) The similarities between the sun and full moon were also pointed out by the Aztecs (Bernardino de Sahagun, *Florentine Codex*, Book 7, p. 3).

*(27) Contemporary Quiche mother-fathers are discussed in B. Tedlock, *Time and the Highland Maya*, pp. 74-85.

*(28) For a general discussion of the subject of Tollan, see Nigel Davies, *The Toltecs*, chap. 2. Tulan (Tulapan in Yucatec sources) and

Zuyua (often Holtun Zuyua in Yucatec sources) are mentioned in various Mayan alphabetic writings, including Recinos et al., *The Annals of the Cakchiquels*, pp. 44-53; Ralph L. Roys, *The Book of Chilam Balam of Chumayel*, pp. 74, 132, 139, 153; and Eugene R. Craine and Reginald C. Reindorp, *The Codex Perez and the Book of Chilam Balam of Mani*, pp. 80, 138, 166, 167.

From a Yucatec point of view (see the Chumayel book), Holtun Zuyua occupied the western position in a four-directional group of towns whose leaders converged on Chichen Itza (a fifth and central town) in order to receive lordship; it may have been at the place now known as Puerto Escondido in Campeche (Thompson, *Maya History and Religion*, p. 23), though Edmonson (without giving any evidence) locates it near Motul in Yucatan (*The Ancient Future of the Itza: The Book of Chilam Balam of Tizimin*, p. 38). As for Tulapan, that was the place where the Tutul Xiu lineage traced its origins; it was even farther west than Zuyua (according to the Mani book), which could mean that it was the primary Toltecan Tollan near Mexico City. The Cakchiquel book uses the name Tulan in this narrow sense when it has the Quiches and Cakchiquels coming to Zuyua from a western Tulan, but it also uses the name in a broader sense that takes in the Yucatec system of directional towns, speaking of a Tulan for each of the four directions and of a convergence on what appears to be a central Tulan. In effect, the authors of the P.V. apply the name Tulan specifically to the western town in the Yucatec system, producing the name Tulan Zuyua. When they say Tulan Zuyua is in the "east," they are reckoning its position not in the context of the Yucatec system but relative to the Tulan or Tulapan that is west of Zuyua in the Mani and Cakchiquel books.

*(29) The main cave at Teotihuacan and its relationship to a Nahua tradition concerning seven caves are discussed by Doris Heyden in "An Interpretation of the Cave Underneath the Pyramid of the Sun in Teotihuacan, Mexico." The existence of a god named Tahil at Palenque and his relationship to Tohil have been pointed out by Linda Schele (*Notebook for the Maya Hieroglyphic Writing Workshop*, p. 114) and Floyd G. Lounsbury (personal communication). For more on the Yaqui see the Glossary; they are not to be confused with the Yaqui tribe of Sonora and Arizona.

*(30) The reference to the body of water crossed by the Quiche forefathers as a "sea" is a hyperbole; it is called both a "lake" and a "sea" in "Historia Quiche de don Juan de Torres," in Recinos, *Cronicas indigenas de Guatemala* pp. 24-25. The causeways at Potonchan and Tixchel are noted in France V. Scholes and Ralph L. Roys, *The Maya Chontal Indians of Acalan-Tixchel*, p. 81.

*(31) For more on the Zaki 4oxol or "White Sparkstriker," see the Glossary and B. Tedlock, "El C'oxol: un simbolo de la resistencia quiche a la conquista espiritual."

*(32) In Quiche theory, at least, the reckoning of the 260-day cycle should have been in synchrony everywhere in Mesoamerica. We do know that Cuauhtemoc, the successor of Moctezuma, surrendered the city of Tenochtitlan to Hernan Cortes on an Aztec day whose name means "One Snake," falling on August 13, 1521, on the Julian calendar (Thompson, *Maya Hieroglyphic Writing*, p. 303). Tracing the contemporary Quiche calendar back to that same Julian date, we come to a day whose Quiche name, Hun Can, also means "One Snake." In other

words, when it was One Snake in Tenochtitlan, it was One Snake a thousand road miles away in the town of Quiche. Lounsbury argues, in "The Base of the Venus Table of the Dresden Codex," for a lowland Maya calendar correlation that would move the classic Maya 260-day cycle two days out of synchrony with the Quiche and Aztec calendars, but the astronomical basis of his argument could easily be two days off, according to the astronomer John B. Carlson (personal communication).

*(33) If the Quiches timed their attacks on their rivals in the same way as the classic lowland Maya, they favored periods when Venus was the evening star (see Lounsbury, "Astronomical Knowledge and Its Uses at Bonampak, Mexico"). The "road" onto which they rolled the head of a sacrifice victim may have been symbolic of the zodiacal path within which Venus is confined, and the head may have been thought of on the model of the severed heads that appeared as the evening-star Venus in the story of Hunahpu and Xbalanque and their fathers.

*(34) It took 52 years of 365 days each for all four year-beginning day names to occur in combination with all thirteen day numbers ($4 \times 13 = 52$). The seniority given by the Quiche to Queh or "Deer" among the year-beginning day names is noted in B. Tedlock, *Time and the Highland Maya*, p. 99.

*(35) Alternative accounts of the names and generational positions of the Quiches who went on the pilgrimage, and of the titles that were given to them, may be found in Adrian Recinos et al., *Title of the Lords of Totonicapan*, pp. 176-79. Tulan, the place where the Quiche founding fathers had spent some time in an earlier episode, may have been left completely empty by the time they and the other tribes mentioned in the P.V. had departed from it. In the Quiche language the word for this place, in the form tolan, came to figure in such phrases as tolanic tinamit, "abandoned city," and tolan ha, "dark, uninhabited house" (B.).

*(36) A long list of the citadels settled by the Quiches between Hacautitz and Thorny Place is given in Recinos et al., *Title of the Lords of Totonicapan*, pp. 180-83. For a description of Thorny Place, now known as Cauinal (the name given to one of its four divisions in the P.V.), see John W. Fox, *Quiche Conquest: Centralism and Regionalism in Highland Guatemalan State Development* pp. 243-50, and Alain Ichon, "Arqueologia y etnohistoria en Cawinal."

*(37) For a full discussion of the buildings of 3umarakah (Rotten Cane) or Utatlan (the Nahua name for the same place), see Carmack, *The Quiche Mayas*, chap. 9.

*(38) The military exploits of Quicab are discussed in Carmack, *The Quiche Mayas*, pp. 134-37. The citadels that made up the town of Quiche, in addition to Rotten Cane, were Bearded Place to the south, which now belonged to the Tams; Mukuitz Pilocab to the north, belonging to the Ilocs; and Resguardo, or Atalaya, to the east, whose Quiche name and lineage affiliation are unknown (Carmack, *The Quiche Mayas*, chap. 8).

*(39) For the full story of Alvarado's conquest of the Quiche kingdom, which was resisted by a large military force, see Victoria Reifler Bricker, *The Indian Christ, the Indian King*, pp. 39-41. The events at Rotten Cane itself are further described in Carmack, *The Quiche Mayas*, pp. 143-47. According to Spanish sources, Three Deer and Nine Dog were burned at the stake and it was Tecum and Tepepul who were hanged.

*(40) In dating the writing of the alphabetic P.V., I follow Recinos, *Popol Vuh*, pp. 22-23. For a description of *titulos* contemporary with the P.V., see Carmack, *Quichean Civilization*, pp. 19-71. The calculations correlating a year-beginning day bearing the name One Deer with June 2, 1558 (Julian) are my own. The fact that a calendrical event of the same kind fell on April 10, 1818 (Gregorian), may help explain why the years 1816 to 1820 saw a Quiche revolt against tribute payments to the Spanish crown, climaxing in the coronation of Atinasio Tzul, the mayor of Totonicapan, as King of the Quiches. For a description of this revolt see Bricker, *The Indian Christ*, chap. 7.

*(41) For more on the Spanish journey of Juan Cortes and the warning sent to Philip II, see Pedro Carrasco, "Don Juan Cortes, cacique de Santa Cruz Quiche."

*(42) The lineal descendants of Juan de Rojas and Juan Cortes continued to litigate well into the eighteenth century. The Cortes line died out by 1788; the de Rojas line still lives, but its members lost all remaining vestiges of their lordly privileges with the coming of liberal reforms in 1801 (Carmack, *The Quiche Mayas*, pp. 321, 362).

*(43) In translating the *nim chocohib* of the P.V. as "Great Toastmasters" or "Great Conveners of Banquets" I take my cue from Ximenez, who has "grandes combites" (*Popol Vuh*, p. 265); see also Great Toastmaster in the Glossary. For more on contemporary matchmakers (or "road guides"), see B. Tedlock, *Time and the Highland Maya*, pp. 74, 110, 117, 156.

*(44) The name Cristobal Velasco may be found in Recinos et al., *Title of the Lords of Totonicapan*, p. 195.

*(45) The Dresden Codex page that begins an otherwise torn-off section is discussed in Thompson, *A Commentary on the Dresden Codex*, pp. 78-80.

*(46) My discussion of the Palenque inscriptions is based on lectures given by Linda Schele in the spring of 1984; their contents are partially available in Schele, *Notebook for the Maya Hieroglyphic Writing Workshop at Texas*.

*(47) For more on the dialectical nature of Quiche thought see B. Tedlock, *Time and the Highland Maya*, pp. 145-46, 176-77. The role of myth in Mayan thinking about history is explored by Bricker in *The Indian Christ*, chaps. 1 and 14.

POPOL VUH

PART ONE

*(48) the beginning: This is *uxe*, literally "its base" or "root"; it is as if the writers were starting at the bottom of something vertical and working their way up.

*(49) this place called Quiche: That "Quiche" is meant as a place name here is confirmed at the very end of the P.V.: "everything has been completed here concerning Quiche, which is now named Santa Cruz." See the Glossary for more on Quiche and Santa Cruz.

*(50) And here: The paragraphing of the present translation is largely based on two considerations. The first is the occurrence of what Dell Hymes calls "initial particles" ("In Vain I Tried to Tell You", pp. 318-20). Examples in Quiche are *4ut*, "And here" (or "And this is"); *4ate 4ut*, "And next"; and *quehe 4ut*, "And so." The second consideration is the occurrence of quotations. In contemporary

Quiche speech there are deliberate pauses both before and after phrases consisting of initial particles, and immediately before quotations. For more details, see D. Tedlock, *The Spoken Word*, chap. 4, and "Hearing a Voice in an Ancient Text."

*(51) how things were put in shadow and brought to light: This is euaxibal zaquiribal [zakiribal], "being-hidden-instrument becoming-light-instrument." The first word is built on a passive (-x) form of euah, which V. glosses as "to hide" but then explains that it has to do with shadows or dark places. The second word is built on an inchoative (-ir) form of zak, "be light," which it shares with zakiric, "to dawn." The two words together describe the activities of the gods at a very general level. As will be seen, the gods not only bring things to light but can also darken what was once in the light.

On the other hand, the two words could also be translated as "the hiding place, the dawning place," since -bal can either be instrumental or indicate place. The "hiding place" would be euabal ziuan or "Concealment Canyon" (see Glossary), where the gods were hidden away before the dawn; the "dawning place" would be the place (or places) where the founding ancestors of the ruling Quiche lineages were keeping vigil when the morning star and then the sun rose for the first time, places which are referred to as zaquiribal [zakiribal.]

*(52) the midwife, matchmaker: This is iyom, mamom. Andres Xiloj immediately identified iyom as the modern term for "midwife" (yom is given the same meaning in B.). He knew of mamom only as a term addressed to a matchmaker in the ceremonial language of a bride-asking ceremony; ordinarily the matchmaker is referred to as 4amal be, "road guide."

*(53) defender, protector: This is matzanel chuquenel. B. lists matzanel (under matzo) as "defender," which fits the role of the Quiche daykeeper as the maker of prayers and offerings on behalf of clients. As Andres Xiloj pointed out, the daykeeper who takes this role today may be called, among other things, by the Spanish word abogado, "lawyer, advocate," and may be thought of as presenting the case of the client before a divine tribunal. The translation of chuquenel rests on the entry in B. for chukonal (under chu3u), "protector." The two terms are very similar in their root senses; for matzo, B. gives "to shelter after the manner of a hen," and for chu3u, "to cover over."

*(54) as enlightened beings, in enlightened words: "Enlightened" is my translation, for the present context, of zaquil [zakil], "lightness" or "whiteness." This insistence that the aforementioned Quiche deities and their words have the properties of light is directly juxtaposed to a mention of God and Christendom in the sentence that follows; it can thus be read as a direct and deliberate contradiction of the missionary teaching that the pre-Conquest gods were all devils.

*(55) amid the preaching of God, in Christendom now: After the Dios and christianoil in this phrase, there will be no more Spanish or Spanish-derived words until Part Five of the present translation [see note *(471) for the lord bishop]. The "preaching" is 4habal, literally "manner of speaking" or just plain "talk"; the phrase u4habal Dios, "talk of God," came to be the standard Quiche way of referring to Christian doctrine and is still used in that sense by

both Quiches and missionaries, but the original choice of these words to translate "la palabra de Dios" must have been made by a Quiche rather than a missionary. The proper Quiche term for an authoritative and abiding "word" was and still is tzih rather than 4habal; the writers of the P.V. refer to their own manuscript as containing oher tzih, "the Ancient Word," but neither they nor contemporary Quiches use tzih as a way of referring to "la palabra de Dios." In choosing to translate u4habal Dios as "the preaching of God" in the present context, I have tried to combine the "Christian doctrine" sense of this phrase with the more general sense of 4habal as an act of speaking.

*(56) a place to see it: The original pre-Columbian P.V. is referred to here and much later as an ilbal re (written ibal re in the later place), "an instrument (or place) for the seeing of something." What was "seen" there included "how things were put in shadow and brought to light" by the gods, together with future events such as war, death, famine, and quarrels. B. has an entry for ilbal re (under ilo) glossed redundantly as "figura de dibujos," which could variously mean "figure," "drawing," and even "picture." Today ilbal or illobal (without the re) refers to crystals used for gazing by diviners and to eyeglasses, binoculars, and telescopes.

*(57) There is the original book and ancient writing, but he who reads and ponders it hides his face: Edmonson is correct in interpreting the phrase eual uuach, "hidden his-face," as pertaining to the reader of the P.V. rather than to the book itself (The Book of Counsel, p. 7). "There is" is my translation of 4o; some translators have used the past tense here, the usual treatment for Quiche verbs inflected for the complete aspect, but that would call for x4o. "He who reads" translates ilol, literally "one who sees." B. gives ilol as "seer" or "prophet," and ilol uuh (literally "book seer") as "reader"; an English translation built on "read" does quite well at covering the full range of ilol, since "read" still retains divinatory usages that go all the way back to its Germanic root. "[He who] ponders" translates bizol, an agentive form of biz, "sad" or "pensive." The emotional dimension of bizol is made quite clear in later passages, where we hear again and again how the Quiche forefathers wept at the thought of having left the mythic city of Tulan and having become separated from other tribes.

*(58) performance: This is my translation of peoxic, which I read as a passive and nominalized form of peyoh, "to hire" (V.), probably meaning something like "service rendered."

*(59) the fourfold siding, fourfold cornering, / measuring, fourfold staking, / halving the cord, stretching the cord / in the sky, on the earth, / the four sides, the four corners: The "fourfold siding" and "cornering" are ucah tzucuxic and ucah xucutaxic; the "four sides" and "four corners" are cah tzuc and cah xucut. Xucut was and is "corner," and cah xucut is still in use as a way of referring to the four directions, most frequently in prayers in the line, cah xucut cah, cah xucut uleu, "four corners of sky, four corners of earth." Tzuc is more difficult to translate. Andres Xiloj suggested "sides" on the basis of context. B. gives cahzuc as "a square thing," and although he gives cahxucut as a synonym for cahzuc under the entry for the latter, he elsewhere glosses cahxucut as "four angles of the world." The notion that tzuc means "side" in the present context, in

contrast with "corner" or "angle," is based on zu3u-, "to go somewhere straight, without straying" (B.), and on zu4um, "straight" (X.). Under zucube, which would mean "straight (direct) road," B. lists tzucu be as an alternative spelling; this supports the relationship between the tzuc of the P.V., with its tz, and the dictionary entries for zu3 and zu4um with their z.

The "fourfold staking" is ucah cheexic; Andres Xiloj understood this to be four sticks or poles driven in the ground at the four corners. The "measuring" is retaxic, literally "its-being-measured," translated on the basis of etah, "to measure, to mark out" (B.), and the reading offered by don Andres. The measuring in this passage is done according to a unit still in use among the Quiche, the 4aam or "cord" (a length of rope). Don Andres was familiar with the phraseology used here, umeh camaxic [4aamaxic], "its-folded cording," and uyuc camaxic [uyuk 4aamaxic], "its-stretched cording." He explained that the "folded" measurement is done with the cord folded back upon itself to halve its length, and that the "stretched" measurement is done with the cord pulled out to its full length. His reading of 4aamaxic (which has a passive ending) is confirmed by an entry in B., caamaah (with an active ending), "to measure lands." He observed that the P.V. describes the measuring out of the sky and earth as if a cornfield were being laid out for cultivation. The Book of Chilam Balam of Chumayel also describes the setting up of the earth and sky as an act of measurement, carried out not only in space (by footsteps in this case) but in time (through twenty consecutive days from the 260-day divinatory cycle) (Roys, The Book of Chilam Balam of Chumayel, pp. 116-118). The Chumayel document makes a passing reference to a celestial cord (p. 155); Yucatec Mayas near Valladolid told Alfred M. Tozzer that a cord suspended in the sky once linked Tulum and Coba with Chichen Itza and Uxmal (A Comparative Study of the Mayas and Lacandonas, p. 153).

The present passage offers one of the clearest examples of parallel verse structure in the P.V.; it may be scanned as follows:

ucah tzucuxic,	fourfold siding,
ucah xucutaxic	fourfold cornering,
retaxic,	measuring,
ucah cheexic,	fourfold staking,
umeh camaxic,	halving the cord,
uyuc camaxic	stretching the cord
upa cah,	in the sky,
upa uleu	on the earth,
cah tzuc	the four sides,
cah xucut	the four corners

Note that the first two lines actually form a quatrain, with a slight variation in the third part; such quatrains occur elsewhere in the P.V. and in Yucatec texts as well (see D. Tedlock, The Spoken Word, chap. 8). Edmonson presented the entire P.V. in couplets (The Book of Counsel), ignoring triplets, quatrains, and passages in which the horizontal movement of prose strongly modifies the vertical movement of parallelism [see note *(70)]. In the present work I have chosen a verse format only where the parallelism is both strongly marked and sustained.

In contemporary Quiche discourse with parallelism like that of the passage under discussion, the formation of lines in oral delivery

would depend on considerations of audience. If this were a prayer meant only for the ears of the gods and if the wording were well known to the speaker, the whole thing might be run off on a single breath, with the end of each phrase marked by a slight drop in pitch. In a slower rendition meant to be heard by humans, or near the beginning of a performance, there might be a pause after each of the lines as they are given in the translation, though the opening quatrain might well be run together as a single spoken line rather than divided between two lines (see D. Tedlock, "Hearing a Voice"). In any case, the two parts of a couplet are seldom divided between lines.

*(60) giver of heart, ... upbringer: These are respectively 4uxlanel and 4uxlaay, both built on the stem 4ux, "heart," which in its 4uxla-forms has to do with thought in the sense of "memory" and "will." Andres Xiloj defined 4uxlanel as follows: "One who raises us and has a good reputation for doing this." In the translation I have tried to preserve the full range of 4uxla- by staying literal for its first occurrence ("giver of heart") and translating for sense the second time around ("upbringer").

*(61) in the light that lasts: Here I have tried to preserve in English the relationship that exists between the corresponding words of the text, zaquil amauil [zakil ama3el]. These two Quiche words are linked by assonance and alliteration, giving them a parallel sound, but they are not properly parallel in their morphology- in fact, the latter word modifies the former. Zakil is composed of zak, an adjective meaning "light" or "white," and -il, which makes it into an abstract noun; ama3el, on the other hand, whether in classical or modern Quiche, is a unitary, unanalyzable form (at least where proper morphology is concerned). As an adverb it means "always" or "all the time"; as an adjective it means "continuous" or "eternal." In rendering zakil ama3el as "the light that lasts," I change parts of speech as the original phrase does (though not in precisely the same way), while at the same time linking the two halves of the phrase through alliteration.

*(62) Now it still ripples, now it still murmurs, ripples, it still sighs, still hums, and it is empty: The full sound pattern of this passage can only be fully appreciated in the original; I have corrected ca to 4a, -oc to -ok, and tzini- and tzino- to 4,ini- and 4,ino-: 4a ca4,ininok, 4a cachamamok ca4,inonic, 4a cazilanic, 4a calolinic, catolona puch. 4a is "still, yet"; ca- is the incomplete aspect; and -ok has the effect of "now"; nevertheless, translators have generally put this passage in the past tense! What we are hearing here is the performer's effort to make the primordial state of the world present for his listeners, setting a scene rather than recounting a past event; the mood is a lyric rather than a historical one.

Translators have rendered the first five verbs here with adjectives like "quiet" or "silent"; the problems with such a treatment only begin with the fact that the Quiche words in question are, after all, verbs and not adjectives. To translate these verbs as referring to mere silence and the like misses the fact that the stems 4,inin-, chamam-, 4,inon-, and lolin- all contain reduplicative alliteration (together with reduplicative assonance in two cases) and are therefore onomatopoeic. Colonial and modern dictionary entries for the stems of this passage do indeed include

some of the glosses translators have chosen, but B. gives "ring" for 4,ino-, and V. explains that zilan- (under zilee) refers to the (audible) process through which windy weather is calmed. Further, Andres Xiloj identifies lolin- as the standard Quiche way of rendering the sound of a cricket. In translating this passage I have chosen quiet sounds that can be expressed as verbs; my "ripples" are derived from the fact that there is nothing but sky and water in this opening scene, as will be seen further on; for the same reason I have avoided obvious animal sounds. The "quiet" in question here is not so much a complete silence as it is a "hush" (note the onomatopoeic quality of this English word), the kinds of sounds one hears when there are no other sounds- or in this case, the "white noise" of the primordial world itself.

*(63) the first eloquence: Ximenez translates uchan as "eloquence," the same gloss given it by B. (under the entry for chan).

*(64) It is at rest; not a single thing stirs: Some translators have made the first half of this sentence negative by joining it to the negative clause that precedes it, but in fact what we have here is the last in a series of three sentences with the same positive-negative clause structure. The negativity of the second clause of the present sentence is marked by hunta, "not one thing" (B.), which is not to be confused with hutak, "each one." The entire sentence is perfectly intelligible, just as it is, in modern Quiche; Andres Xiloj gave it the same reading I have.

*(65) It is held back: This is camal cabantah, which is difficult to translate. I find my clue in the entry for camalo in B., which is glossed "late, not quick"; the entire phrase might be read as, "it is made to be late (or slow)."

*(66) a glittering light: This is zactetoh [zaktetoh], which B. glosses as "the brightness that enters through cracks." If this is the central meaning of this word rather than an illustrative example, then the light in question must be escaping between the feathers with which the Bearers and Begetters are covered (see the next two sentences). Note that the first light in the primordial scene is not up in the sky, but down at (or in) the level of the water. Its "glittering" corresponds, in the sensory domain of light, to the soft and repetitive nature of the primordial sounds described earlier.

*(67) in their very being: This is chiqui4oheic, "at-their-being-there." I have translated it as "in their very being" because the writers of the P.V., wherever they add chiqui4oheic (or a similar form based on 4oheic) to a statement in which the verb "to be" is already present or understood, are making a pointedly ontological statement. Some translators have softened the ontological abstractness of these statements by using such phrases as "by their nature," but 4oheic has no aura of the natal or the biological hanging about it the way "nature" does, and in fact I know of no Quiche concept that corresponds to "nature." If I were translating 4oheic into German, I would choose Dasein.

*(68) the name of the god: The word I have translated as "god" here is cabauil [4abauil]. The primary reference of 4abauil, through most of the P.V., is to the patron deities of the ruling Quiche lineages and to the sacred stones that were the material embodiments of these deities. But the present passage- given that 4abauil is linked specifically to the Heart of Sky, and given that the Heart of

Sky will shortly hereafter be described as a trinity- must be read as an allusion to Christian teachings. Note carefully that when the passage is read literally rather than as an allusion, it contains nothing that directly contradicts indigenous Quiche theology; Heart of Sky is among the names uttered before 4abauil stones in a prayer given much later. For a general discussion of biblical allusions in the P.V., see D. Tedlock, *The Spoken Word*, chap. 11.

Looking into the etymology of 4abauil, we find 4ab, "to have the mouth open"- for example, in admiration and in death (V.). B. and T. have caba, "to open," with the mouth given as an example. 4abauil, then, could mean something like "open-mouthed." The ancient stone 4abauil were given drinks of sacrificed blood through their mouths; their modern counterparts in the eastern Quiche area, called 4amauil, are given drinks of liquor (and sometimes chicken blood) through their mouths.

*(69) in the early dawn: This phrase constitutes the P.V.'s first allusion to the day names of the 260-day divinatory calendar. Instead of the ordinary word for "early dawn," a3abil, the text has a3abal, an archaic form that is also the proper name of a day. Like other day names, A3abal is often given a divinatory interpretation by means of sound play, and one of the words used to play on it today is in fact a3abil, an allusion to the fact that the rituals scheduled for days named A3abal are best carried out during the time of day known as a3abil. The rituals in question, appropriately enough, involve the first steps toward the negotiation of new social relationships that will last a lifetime (B. Tedlock, *Time and the Highland Maya*, pp. 77-81). One A3abal is an appropriate day for a daykeeper with the office of mother-father to go to the pair of shrines dedicated to the welfare of the human inhabitants of the lands of his patrilineage, in order to discuss (in prayer) the fact that a family in his lineage wishes to propose a marriage between one of its young men and a woman from another lineage. A later day named A3abal may be chosen for the making of the actual proposal at the house of the prospective bride.

On One, Eight, and Nine A3abal a mother-father who has taken on the responsibility of training and installing the successor of his deceased counterpart in a neighboring lineage will go to the shrines of that lineage to discuss the fact that one of its members wishes to become its new mother-father. In both the marriage and the installation the negotiation has two levels: it is not only the living who must give their approval to the bond between husband and wife or between the new mother-father and the foundation shrines (which is thought of as a spiritual marriage), but the ancestors and the gods. In the case of the Heart of Sky's discussion with the Sovereign Plumed Serpent in the P.V., the problem is a more fundamental one. When, by their joint efforts (and those of other gods) they eventually succeed in making four different mother-fathers, each of them married to one of four different women, these will be the first human mother-fathers and the first human married couples who ever existed.

*(70) He spoke with the Sovereign Plumed Serpent.... they joined their words, their thoughts: This passage offers an example of what happens when the Quiche tendency to parallel verse is modified by the forward thrust of prose (see D. Tedlock, "Hearing a Voice"). The

result is a diagonal trajectory:

xchau ru4 ri tepeu 4ucumatz
xe4ha cut, ta xenaohinic
ta xebizonic,
xerico quib
xquicuch quitzih
quinaoh

He spoke with the Sovereign Plumed Serpent,
and they talked, then they thought,
then they worried.

They agreed with each other,
they joined their words,
their thoughts.

It is passages such as this that move the action forward in narratives, with the balance sometimes swinging more toward the verticality of verse than in the present example and sometimes more toward the horizontality of prose. The more a passage in contemporary Quiche discourse swings toward this horizontality the less predictable- and, potentially, the more dramatic- its pauses become, except for the paragraphing discussed in note *(50). As in the present case, I have kept such passages in a prose format in the translation proper.

*(71) the generation: This is uinaquiric [uinakiric]. Others have translated this as "creation," but it has to do with such processes as the seasonal rising of springs in places that would otherwise be dry, and the growth or formation of algae or larvae in still water (V.). The word "creation" is too heavily laden with an implied ontological priority of the spiritual over the material to be imported into the present account of origins, which contains no word quite like it.

*(72) Thunderbolt Hurricane comes first, the second is Newborn Thunderbolt, and the third is Raw Thunderbolt: There may be an allusion to the Christian trinity here, but the pre-Columbian Quiche pantheon did include at least one trinity, whether that trinity was the same as the present Thunderbolt trinity or not. The principal gods (4abauil) of the ruling Quiche lineages are listed again and again as Tohil, Auilix, and Hacauitz, though there is occasional mention of a fourth god. The P.V. never directly links the three Thunderbolts with the three lineage gods, but it is at least suggestive that the dwelling place of the latter threesome is described as shrouded in a rainstorm.

On the basis of fieldwork, Barbara Tedlock and I can confirm Lowy's report that cakulha not only is the Quiche term for thunderbolt but is also the Quiche name for the Amanita muscaria mushroom (Bernard Lowy, "Amanita muscaria and the Thunderbolt Legend in Guatemala and Mexico," p. 189). We must hasten to add that although Quiches are indeed what Gordon Wasson would call "mycophiles" rather than "mycophobes"- they are very fond of the Amanita caesaria, for example- they generally regard the muscaria as a poisonous species best avoided. But we cannot rule out the possible presence of a muscaria cult in the P.V., whether in the form of a symbolic residue of something long past or a highly coded allusion to something still under way at the time Europeans first arrived, nor can we rule out the use of muscaria by some present-day highland Guatemalan shamans.

As to the stone and pottery mushroom effigies discovered in Guatemalan archaeological sites (Stephan F. de Borhegyi, "Pre-Columbian Pottery Mushrooms from Mesoamerica"), these pertain to the hot Pacific lowlands rather than to the high, cool evergreen forests where the muscaria grows, and there is the further problem that the ruling Quiche lineages trace their origins to the Gulf coast rather than the Pacific. Moreover, de Borhegyi dates the effigies no later than a thousand years ago, leaving a gap of several centuries before the Quiche kingdom expanded into the Pacific lowlands during the reign of Quicab. Of all the arguments for a mushroom cult among the highland Maya the archaeological one is the weakest.

The case for *Amanita muscaria* in the P.V. itself is somewhat stronger, though we must begin from the fact that mushrooms as such are never mentioned. Far beyond the present passage there occur the words *holom ocox*, literally "head of a mushroom," translated there as "yarrow", but Duncan MacLean Earle ("La etnoecologia quiche en el Popol Vuh") has found this to be the Quiche term for a common herb, named (like a great many other Quiche plants and mushrooms) for its resemblance to an anatomical part of another biological species (see yarrow in the Glossary). What is more, the *holom ocox* of the P.V. is not eaten but rather burned as incense, along with another common herb called *iya* (see marigold in the Glossary); according to Earle, both these herbs are still used as incense today in the region east of Santa Cruz Quiche, and Andres Xiloj attested the use of *iya* in Momostenango. The flowers of *iya* are yellow and those of *holom ocox* are white; the P.V. mentions the two plant names in this same order, which fits with the yellow/white order of corn colors in the P.V. and the color pairings in the couplets of contemporary prayers (see B. Tedlock, *Time and the Highland Maya*, Appendix B).

Whatever the problems with finding a clear reference to mushrooms in the P.V., the evidence for the *Amanita muscaria* is not limited to the fact that *cakulha* could refer both to a literal thunderbolt and to the mushroom named for the thunderbolt. First of all, the stipe of a mushroom (like the trunk of a tree) is called *rakan*, "its leg," in Quiche, and of course a mushroom with a stipe has only one "leg," which recalls that the name translated "Thunderbolt Hurricane" here could also be glossed as "One-legged Thunderbolt" (see Hurricane in the Glossary). This leaves the way open to the muscaria but does not settle the matter, since there are plenty of literal thunderbolts that also have a single "leg." The rawness (or freshness) and youthfulness ascribed to the *cakulha* in the P.V. work in the same way: there could be an allusion to the suddenness of the growth of mushrooms, but these same qualities are also possessed by thunderbolts.

The single most suggestive bit of evidence for the mushroom theory lies in the fact that a later P.V. passage gives Newborn Thunderbolt and Raw Thunderbolt two further names: Newborn *Nanahuac* and Raw *Nanahuac*. As Schultze Jena pointed out (*Popol Vuh*, p. 187), *Nanahuac* would appear to be the same as the Aztec deity *Nanahuatl* (or *Nanahuatzin*), who throws a thunderbolt to open the mountain containing the first corn. *Nanahuatl* means "warts" in *Nahua* (D.), which suggests the appearance of the muscaria when the remnants of its veil still fleck the cap.

*(73) "How should it be sown, how should it dawn?": "Sowing" (auax-) and "dawning" (zakir-) are frequently paired throughout the portion of the P.V. that deals with the predawn world. The meanings of these two words, which run through them several different threads when they are paired, have something of the structure of a Mobius strip. If we start with the literal meaning of sowing in the present context, the reference is to the beginning of plants; but if we trace that idea over to the other side of our strip, the sprouting of those same plants is expressed metaphorically as "dawning." If, on the other hand, we start from the literal meaning of "dawning," the present reference is to the first of all dawns; but if we trace that idea back over to the other side of the strip, the origin of that dawn is expressed metaphorically as a "sowing," referring to the fact that the Quiche gods who eventually become Venus and the sun and moon must first descend into the underworld. The head of one of these gods becomes the fruit of a calabash tree, while another has his head replaced by a squash- that is, at least two of them acquire plant characteristics in the underworld before the coming of the first literal dawning.

The pairing of sowing and dawning receives a further meaning when it is taken to refer to human beings, whose perfection is the principal goal of the world-making gods of the present passage. To trace out this meaning, we must have recourse to ethnography. In Momostenango a mother-father or patrilineage head "sows" and "plants" an unborn child in certain shrines of his lineage by announcing its mother's pregnancy there (B. Tedlock, *Time and the Highland Maya*, p. 80). On the "dawning" side of this process, the woman who gives birth to the child *cuya ri zak*, "gives it light" (Ibid., p. 211). This particular tracing remains metaphorical on both sides of the "sowing" and "dawning," but it retains a twist in that it is specifically built on the model of the literal sowing and metaphorical "dawning" of vegetation. A second human tracing, also metaphorical on both sides but twisted in that it seems to be built on the model of the metaphorical "sowing" and literal dawning of heavenly bodies, is followed out in death and its aftermath. Here the body is put in the earth, but the deceased "becomes light" or "dawns" (both *zakiric*) in two different senses: the body itself is reduced to plain white (light-colored) bones, but the spirit becomes a spark of light, something like a star.

*(74) provider, nurturer: This is *tzucul cool* [tzukul 3ool]; both words broadly refer to sustenance, but the latter seems to refer more overtly to actual food than the former (at least in B.), and the only word that resembles it today is *3obic*, "to get fat" (X.). The providers or nurturers ultimately intended here are human beings, who will one day sustain the gods through prayer and sacrifice, but for the time being the gods will succeed only in making animals. Eventually deer and birds will indeed be among those who nurture the gods with their blood, but only when there are humans to sacrifice them; these same sacrificers will also provide their very own blood to the gods, drawing it from their ears and elbows, and will ultimately offer the blood and the hearts of human captives.

*(75) But there will be no high days and no bright praise: The paired words here are *uquihilabal* [u3ihilabal] and *ucalaibal* [u3alaibal]. The first is literally "its-day-ness-instrument,"

referring to the keeping or setting aside of a specific day on the calendar for ritual purposes; I chose "high days" because the notion of "holidays" has become so secularized in English (despite the etymology of that word). The second is "its-brightness (or manifestness)-instrument"; it could even be translated as "publicity," but that term, unlike the Quiche one, is strictly secular, includes unfavorable attention, and does not involve a visual metaphor.

*(76) just like a cloud, like a mist, now forming, unfolding. Then the mountains were separated from the water: The "unfolding" here is upupuheic, which for both B. and Andres Xiloj describes the way in which clouds form around mountains. "Separated" is my translation of xtape, tangentially based on tapo, "to pick out" (B.). On reading this passage don Andres immediately commented: "It's just the way it is right now, there are clouds, then the clouds part, piece by piece, and now the sky is clear." It is as if the mountains were there in the primordial world all along and were revealed, little by little, as the clouds parted. But don Andres complicated this interpretation by saying, "Haven't you seen that when the water passes- a rainstorm- and then it clears, a vapor comes out from among the trees? The clouds come out from among the mountains, among the trees." This lends a cyclical movement to the picture: the clouds come from the mountains, then conceal the mountains, then part to reveal the mountains, and so on.

*(77) By their genius alone, by their cutting edge alone: The paired terms here are naual and puz. The former term, although it is a Nahua borrowing, does not have the narrow meaning in Quiche that it has in central Mexico, but rather covers a very broad notion that may be glossed as "spirit familiar" (see genius in the Glossary for more detail). The latter term, puz, carries one central literal meaning from its Mixe-Zoque (and possibly Olmec) origins right down to its use in modern Quiche: it refers to the cutting of flesh with a knife (see D. Tedlock, *The Spoken Word*, p. 265). At the time of the conquest it was the primary term for sacrifice. In the present context, it implies that "the mountains were separated from the water" through an act resembling the extraction of the heart (or other organs) from a sacrifice. As if to confirm this allusion, the text goes on to refer to the earth as the "mountain-plain," or huyub tacah [ta3ah], which is today the principal Quiche metaphor for the human body.

When don Andres read these lines, he shifted away from the idea that the preceding lines about cloud formation and dispersal referred to something happening in the atmosphere around the mountains, moving toward the idea that this process was a simile for the formation and differentiation of the mountains themselves. That the mountains under discussion were made by means of naual rather than physical labor suggested a certain insubstantiality to him, and he commented: "Then these mountains are for no other reason than representing that there are hills or volcanoes." That is to say, he interpreted the mountains not as hard realities but as mere "signs" (retal), unfolding themselves "just like a cloud, like a mist."

*(78) it was brought forth by the Heart of Sky, Heart of Earth, as they are called, since they were the first to think of it: Andres Xiloj took this to mean that the formation of the earth was an act of self-revelation on the part of the Heart of Sky and Heart of Earth.

He compared them to the present-day u4ux puuak or "Heart of Metal (or silver or money)," which reveals itself to the fortunate. As he explained it, "When one has luck, one picks up some kind of rock, but in the form of an animal; this is the Heart of Metal. When the moment comes, suddenly it appears." Such rocks may be volcanic concretions that happen to resemble animals, or they may be ancient stone artifacts. They are properly kept in the indoor half of a pair of patrilineage shrines called the mebil, which consists of a wooden box placed on a family altar (B. Tedlock, *Time and the Highland Maya*, p. 81). Don Andres continued, "This is where one prays, this is where the fortune, the money, abounds. Here in the Popol Vuh, the Heart of Sky and the Heart of Earth appeared, and this is where the earth was propagated." The objects in a mebil should multiply of their own accord, and that, as don Andres would have it, is what happened to the object or objects from which the earth began.

The notion of a "Heart of Sky" might seem out of place where something as substantial as earth or stone is concerned, but don Andres' interpretation is supported by a much later passage in which the names Heart of Sky and Heart of Earth are both addressed to gods whose bodies have been petrified. The connection between these gods and the sky lies in the fact that they were petrified when the sun first rose and burned them. The objects called "Heart of Metal" today also have their celestial dimensions: volcanic concretions with animal shapes are said to have been formed at the first sunrise, just as the stone gods of the P.V. were, while ancient stone artifacts are said to have been formed where thunderbolts struck the ground. The P.V. does not mention the latter process, but it does include thunderbolts among the attributes of the Heart of Sky. The Book of Chilam Balam of Chumayel takes the question of celestial stoniness home to the sky itself, declaring that the "Heart of Heaven" is a bead of precious stone (Roys, *The Book of Chilam Balam of Chumayel*, p. 91).

*(79) all the guardians of the forests: Andres Xiloj commented: "The animals are the caretakers of the woods. They [the gods] thought, 'There is a need for animals, so that people won't be able to enter the woods. The animals will frighten them.'" For the contemporary Quiche, wild animals are (in effect) the domestic animals of the Mundo, or earth deity. One cannot take a deer in the hunt without first asking permission of the Mundo. When a family is in arrears in its offerings, the Mundo may send a predator from out of the woods to raid its flocks or herds.

*(80) deer, birds,... yellowbites: On the basis of meaning this list might be organized into couplets and triplets:

quieh,	deer,
tziquin,	birds,
4oh,	pumas
balam,	jaguars,
cumatz,	serpents,
zochoch,	rattlesnakes,
canti	yellowbites

But whatever the groupings according to meaning, a list of this kind would be orally delivered today without any more marking of the transition between jaguars and serpents than that between pumas and jaguars; each individual word would retain its integrity, as marked by

a stress on its final (or only) syllable, but there would be no pause until the run of parallel nouns came to a halt, or until the breath of the speaker ran out. On this basis I have chosen not to break such lists into lines of verse in the translation, but have run them on as prose.

*(81) "Why this pointless humming?": The "humming" and "rustling" referred to in this passage are the lolin- and tzinin- sounds discussed earlier [see note *(62)]. What the gods are ultimately looking for here is the sound of articulate human speech, but they will not succeed in hearing it until Part Four of the present translation. In the present scene, all they can hear on the earth is sounds that are indefinitely repetitive or vibratory and therefore without meaning, just as sounds were without meaning when there was only the sea.

*(82) "You, precious birds": This is ix ix 4,iquin, in which the second ix might be treated as a scribal error, but it is essential to the full understanding of the phrase. The first ix is plainly enough "you," in the familiar and in the plural, but the second one has a double meaning. At one level it is diminutive, making the whole phrase translatable as "You, precious (or little) birds," but at another level it is the day name Ix, which immediately precedes 4,iquin or "Bird" in the sequence of twenty day names. These are the two days devoted to the contemporary rites of the patrilineage shrine called the mebil, specifically Seven Ix and Eight 4,iquin; indeed, this shrine is often referred to simply by naming these two days.

*(83) a place to sleep: This is uarabal, and it alludes to patrilineage shrines, which are called uarabalha, "foundation of the house" or, literally, "sleeping (or resting) place of the house." The animals that are given places to sleep in this passage, queh or "deer" and 4,iquin or "birds," give their names to two of the days used for uarabalha rites today. The human mother-father or patrilineage head uses a low-numbered day bearing the name Queh or "Deer" to go to the parts of the uarabalha dedicated to people in order to announce that a woman married into his lineage is pregnant and to pray for the child she bears. This ritual is called a "sowing," just as is the long process in which the divine mother-fathers of the P.V. speak of making humans and prepare for their coming long before they actually succeed in making them a reality. Deer result from one of their four attempts to make humans; these animals are, in effect, an approximation of real humans, their fault being that they walk on all fours and lack articulate speech. The implication here is that in visiting his shrines to announce a child on the day named after the deer, the human mother-father commemorates the process whereby properly walking and talking humans were spoken of and approximated by the divine mother-fathers (the Maker and Modeler) before they were realized.

The most startling link between shrines and deer- deer as animals rather than days named Deer- manifests itself in dreams. On this point I can give firsthand testimony. During the period of my formal apprenticeship as a daykeeper in Momostenango, I told Andres Xiloj of dreaming that I was followed along a path by a series of large deer. After a laugh of immediate recognition he told me that I had been followed by shrines! He explained that outdoor shrines have

spirit familiars that frequently take the form of deer- and, these days, of horses and cattle. The path, of course, was that of the days of the calendar, along which each shrine had its proper place in a sequence. The deer were following me in anticipation of the time when I would end my apprenticeship and feed them- that is, make offerings of my own.

*(84) "Talk, speak out. Don't moan, don't cry out": Here again the gods express their desire for articulate human speech, this time contrasted with moans and cries rather than humming and rustling. Not only that, but they want to hear their own names and praises, and they ask the animals to "keep our days." This last idea is expressed by *cohiquihila* [*cohi3ihilaa*], literally, "to-us-you (plural familiar) day (transitive imperative)," analogous to the form rendered as "high days." If English permitted "day" to be a verb, one could translate *cohi3ihilaa* as "dayify us," with the pun on "deify" being appropriate enough. A less direct translation would be "calendrify us."

*(85) they just squawked they just chattered, they just howled: New sounds have been added to the world here. They are not yet the sounds of speech, but neither are they like the rippling, murmuring, and humming of the world that had only a sea. Those sounds tended toward vowel harmony and repeated consonants- 4, *inin-* and *chamam-*, for example- whereas the verb stems here retain vowel harmony but do not repeat their consonants: *uachela-*, *carala-*, and *uoho-*.

*(86) It wasn't apparent what language they spoke: The text has *maui xuachinic uuach qui4habal*, literally, "not faced-out its face their-talk-instrument." The active verb *uachinic*, built on *uach*, "face," is used primarily with reference to the bearing of fruit by plants. The implication is that the sounds made by the animals contained a potential for articulate speech, but that this potential was never realized.

*(87) It talked at first, but senselessly: The person of mud is unique among all the creatures made by the gods in that it not only lacks sensible speech, but is not even quoted by means of onomatopoeia. Note also the correlate lack of articulation of its body. But the subtlest point here is that the only creature made of mud is also the only one made in the singular, which makes this episode an allusion to the Adamic myth. What the writers of the P.V. have to say about Adam, in their indirect way, is that a singular creature of mud could neither have made sense nor walked nor multiplied. If there ever was such a creature, there is no way it could have left a trace of itself; it must have dissolved.

*(88) "a counting of days, a counting of lots": This is *uquihixic* [*u3ihixic*] *ubitaxic*, "its-being-dayed (or timed) its-being-modeled (or shaped)." As daykeepers, *Xpiyacoc* and *Xmucane* will divine by means of counting the day numbers and names of the 260-day divinatory cycle, dividing or "shaping" a fistful of seeds of the coral tree (see the Glossary) into lots.

*(89) the human mass: "Mass" is *anom*, which is given this gloss in B.

*(90) master craftsman: This is *ahtoltecat*, in which *ah-* is occupational; the rest is from Nahuatl *toltecatl*, "master of mechanical arts" (D.).

*(91) "Run your hands over the kernels of corn, over the seeds of

the coral tree": The verb stem here is mala-, "to run the hand over something" (V.). The contemporary Quiche daykeeper first pours the seeds out of a small bundle into a pile on a table and mixes them, moving the right hand over them with palm down flat and fingers spread, and then grabs a fistful. The remaining seeds are then set aside; those from the fistful are sorted into lots of four seeds each, arranged in parallel rows so that the days can easily be counted on them, one day for each lot. When seeds are left over from the division into fours, a remainder of three seeds is made into two additional lots (with two seeds in one and one seed in the other), while a remainder of one or two seeds counts as one additional lot. Once the clusters are complete the diviner begins counting the days of the 260-day cycle, starting in the present (the day of the divination itself), the past (the day the client's problem began), or the future (the day of an action contemplated by the client). The augury is reckoned from the character or portent of the day that is reached by counting through to the final lot of seeds.

The alphabetic P.V. does not give the numbers and names of the days counted by Xpiyacoc and Xmucane in this earliest of all divinations, but the ancient P.V. may have been like the Chilam Balam book from Chumayel, which treats the first counting of days as nothing less than the origin of the 260-day calendar itself and gives not only numbers and names but day-by-day interpretations, running through twenty consecutive days (Roys, *The Book of Chilam Balam of Chumayel*, chap. 13).

*(92) the borrowing: This is ukahic, a term that Andres Xiloj, as a daykeeper, recognized immediately. When today's daykeeper speaks the opening prayer for a divination, invoking the sheet-lightning, clouds, mists, and damp breezes of the world, he or she is said to be "borrowing" these forces from the days themselves, each of which is ruled by a lord, and from the mountains of the world, each of which has a spirit familiar (B. Tedlock, *Time and the Highland Maya*, pp. 155, 157, 162). Xpiyacoc and Xmucane are not as modest as this human daykeeper in their own borrowing of lightning, moisture, and air currents: they name the Heart of Sky, whose electrical aspect ultimately manifests not as far-off and silently flickering sheet-lightning but as close-up thunderbolts, and who is also known as Hurricane, the bringer of rains and winds of world-destroying proportions. Meteorological forces, large or small, serve to connect the cosmos at large, both temporally and spatially, with the microcosmic scene of the divination, transmitting information about distant places or times through the counting of days and through lightninglike sensations that occur in various parts of the diviner's own body.

*(93) the lots: This is bit, possibly the same as the stem in the name bitol, "Modeler" (see Maker, Modeler in the Glossary). My guess is that it refers to the clusters of seeds that are made up from the random fistful taken up by the diviner (as described above); in effect, the diviner is giving shape to a chaotic mass. I translate bit as "lots" because that word both fits the groups of seeds, which are arranged in lots of four, and figures in English-language divination terminology. "Diviner" (in a later passage) is a translation of ahbit, in which bit has the occupational prefix.

*(94) who stands behind others: This is chiracan, which Andres Xiloj

identified as part of a phrase used today by daykeepers: chirakan u3ab, "at-his/her-legs his/her-arms" (in which "legs" and "arms" include "feet" and "hands"). To be at someone's feet and hands means to give assistance, as a daykeeper does when praying and giving offerings on behalf of a client, or a midwife does when assisting a birth.

*(95) "may you succeed, may you be accurate": Like Xpiyacoc and Xmucane, the contemporary daykeeper speaks to the seeds while arranging them, asking for a clear outcome.

*(96) "Have shame, you up there,... attempt no deception": Andres Xiloj was not surprised to hear the Heart of Sky addressed in this manner. He pointed out that today's daykeepers (including himself) also ask that the gods not deceive their divinatory clients. The praying diviner may say, for example, ma ban la ri mentira, "Do not make a lie." In the case of the P.V. the client in question is none other than the god Sovereign Plumed Serpent.

*(97) manikins, woodcarvings: Andres Xiloj remarked, "Then these will only be representations of humans."

*(98) They just went and walked wherever they wanted: Andres Xiloj commented: "Then they're like animals." In Quiche thinking one of the major differences between animals and humans is that humans must ask permission of the gods to go abroad in the world. To pray that nothing bad happen to one in the road is to ask permission to pass; the need for such permission is more acute in the case of visits to powerful shrines or distant towns. In prayers that prepare the way for a long trip, one asks not only that there be no robbers in the road, but that policemen, soldiers, and customs officials look the other way.

*(99) The man's body was carved from the wood of the coral tree: The body of the god presently called Maximon in the Tzutuhil Maya town of Santiago Atitlan is made of this wood (Michael Mendelson, "Maximon: An Iconographical Introduction," p. 57).

*(100) the pith of reeds: This is zibac; B. gives ziba3 as "the pith or insides of a small reed."

*(101) a rain of resin: Andres Xiloj commented: "This was turpentine that fell, and it was burning as it fell."

*(102) the black rainstorm: This is quecal hab [3ekal hab]. As Andres Xiloj explained, this does not mean that the rain itself was black, but refers to the darkness created by a very intense rainstorm.

*(103) Into their houses came: This is xoc ula [xoc ulaa], "entered as visitors." Today any invasion of the house (including its patio) by a wild animal is viewed as a sign sent by the earth deity, whether it is a fox or possum that attacks domestic animals or, say, a bird that happens to fly indoors. Andres Xiloj pointed out that such animals do not speak (4hauic) but rather give signs (retal) by their cries or movements. Note that even under the cataclysmic conditions of the present episode the speaking is done by domestic animals and by artifacts; it is not attributed to wild animals.

*(104) turkeys: This is ac [a4], which became the term for the Old World chicken during colonial times. A number of colonial dictionaries give the term for turkey as kitzih a4, "true a4" (T. and V.), or mazeual a4, "Indian a4" (G.), which makes it plain enough that the pre-Hispanic term for turkey was a4. Today the turkey is called nooz (X.), a term that had already appeared by the seventeenth century

(listed in B. as noz).

*(105) r-r-rip, r-r-rip, / r-r-rub, r-r-rub: This is holi, holi, huqui, huqui, onomatopoeic for the sound of a handstone (mano) rubbing against a grinding stone (metate). If the performance of the present Quiche story was anything like that of North American Indian tales, these lines were probably sung. It must be kept in mind that h in Quiche is rough, like Spanish j or German ch. This roughness would probably be exaggerated in a dramatic oral rendering, hence my suggestion in the translation that the r be trilled. When judged by the fact that the verb for "rub together" is hukunic (X.), huqui, huqui should probably be huki, huki. Andres Xiloj immediately heard a sound play in these lines, which he rendered as follows:

hoo ali, hoo ali,
hukuuic, hukuuic

meaning something like this:

Let's go girl, let's go girl,
rubbing together, rubbing together.

*(106) their hearthstones were shooting out: Andres Xiloj remarked: "It's like a cataract of stones from a volcano!" This incident may be the origin of the stars Alnitak, Saiph, and Rigel in Orion; today these three stars are said to be the three hearthstones of the typical Quiche kitchen fireplace, arranged to form a triangle, and the cloudy area they enclose (Great Nebula M42) is said to be the smoke from a fire (B. Tedlock, "Earth Rites and Moon Cycles").

*(107) wood alone was used for their flesh: Andres Xiloj remarked, "They lacked blood, or quickening, which is what corn gives." As it turns out later, real human beings are indeed made of corn.

*(108) "I am their sun ... their months": "Sun" is quih [3ih] here, which could either be "sun" or "day," but "months" is iquil [i4il], which is definitely "months," rather than i4, "moon."

*(109) "I am the walkway and I am the foothold of the people": "Walkway" is binibal and "foothold" is chacabal; -bal is an instrumental suffix. Andres Xiloj explicated Seven Macaw's statement as follows: "Binibal is to give light for walking, or to go out on a somewhat clear road; and chacabal- now we say chacanibal- is the same. These words are in the prayers we say at the uarabalha [patrilineage shrines], to ask permission for anyone who goes out of the house to whatever place. They can walk, they can crawl- chacanibal is to crawl on all fours. Seven Macaw is saying that he is a person's feet, since he knows that he has light [to show a person where to step], but in fact the person sees darkly, it isn't very clear."

*(110) "they stand out": This is cauacoh, translated on the basis of cauauic, "to have big teeth (so as to be unable to close the mouth)" (X.).

*(111) the scope of his face lies right around his own perch: Seven Macaw, as the Big Dipper, is restricted to a path that lies close to the pole star, unlike the sun and moon (see Glossary and D. Tedlock, "The Sowing and Dawning of All the Sky-Earth"). The classic Maya equivalent of Seven Macaw is shown perched atop a northern tree at Palenque, in the central panel of the Tablet of the Cross and on the lid of the sarcophagus beneath the Temple of the Inscriptions (Linda Schele, Notebook, pp. 66-67).

PART TWO

*(112) the mountains ... are softened by him: "Softened" is my translation of nebonic; X. glosses this as "overcooked," but Andres Xiloj read it as "soaked." He commented: "When the earth is completely soaked it can be destroyed by the water. When there are rains of forty-eight or sixty hours, there may be destruction. Landslides are the work of such rains."

*(113) Then he went up over the tree and fell flat on the ground: When birds are shot they fly upward in a spasm before falling from a tree. But Seven Macaw's movement here also suggests that of the Big Dipper; assuming that his head and body correspond to the bowl of the Big Dipper and his tail to its handle, his climbing of the tree to eat his nances, his going up over the tree when shot, and his fall to the ground all follow the pattern of the Big Dipper, which rises with its handle down, goes up over the North Star (counterclockwise) in a momentarily horizontal position, and then sets with its bowl end down. The period when all seven stars may be seen in ascendancy, from mid-October to mid-May, corresponds approximately to the dry season; the period when the Big Dipper is already in steep descent by twilight and when all seven stars may become invisible for as much as half the night, from mid-July to mid-October, corresponds to the hurricane season.

*(114) "tricksters": This is 4axto4; it is glossed as "the devil" or "liar" in colonial dictionaries (B. and V.), but that is a missionary view of the matter. In the P.V., where the word is used ten different times, it is usually obvious from context that the person or persons labeled by it have done something tricky or are accused of trickery. In the present case Hunahpu and Xbalanque have ambushed Seven Macaw while he was at his meal. In other cases the Four Hundred Boys suspect Zipacna of being tricky, which he indeed turns out to be; Xmucane accuses Blood Woman of trickery, but (ironically) Blood Woman's ability to work magic apparently comes from the fact that she carries Xmucane's own grandchildren in her womb; Hunahpu and Xbalanque accuse a toad of trickery, and sure enough it turns out that the toad never swallowed what he claimed was in his belly; Xtah and Xpuch are accused of trickery when painted wasps turn into real ones; and the Quiches are called tricksters by their enemies for making it look as though the people they've seized for sacrifice were attacked by wild animals. Except for the cases of Zipacna and the toad, the trickery works on the side of the protagonists in a given story. Translating 4axto4 as "trickster" rather than "devil" puts the matter in a more general American Indian context, where the exploits of trickster figures are simultaneously disapproved and enjoyed.

*(115) "they've dislocated my jaw": This is obviously the origin of the way a macaw's beak looks, with a huge upper mandible and a much smaller and retreating lower one.

*(116) "All my teeth are just loose": "Loose" is chu, translated on the basis of a reduplicated form in B., chuyucha, "to rattle."

*(117) "'Do forgive us'": The addition of "'Do'" to this phrase is my way of translating qui [ki], which, according to V., carries a sense of exaggerated politeness.

*(118) with great effort: This is nimac ua chih [nimak uaa 4hih], "great this effort," in which 4hih is translated on the basis of 4hihinic, "the strength to do something" (X.).

*(119) "What sweets can you make, what poisons can you cure?": The "sweets" and "poisons" are both qui [quiil], a word that carries both these meanings to this day (for an explanation see sweet drink in the Glossary).

*(120) "We just pull the worms out of teeth": There is a contemporary Mopan Maya myth in which Lord Kin ("Sun" or "Day") causes the chief of the vultures to have a toothache and then is begged to come and cure it (Thompson, *Ethnology of the Mayas*, pp. 129-32). But in this case the motive of the trickery is the protagonist's desire to get his wife back from the vultures.

*(121) "we just cure eyes": As a medical specialty, the curing of eyes fits under the same heading as bones and teeth because the Quiche language classifies the eyes as bones. Eyes are ubac [ubak] uuach, literally "its-bones (or pits) his/her-eyes," in the P.V.; today they are uba3uach. Andres Xiloj himself covers a medical territory similar to that of Hunahpu and Xbalanque: in addition to being a bonesetter and healer of sprains, he knows how to make eyedrops.

*(122) "It's a worm, gnawing at the bone": The present-day Quiche retain the notion that a toothache is caused by a worm gnawing at the bone. According to T. J. Knab (personal communication), there is a Mesoamerican parasite that takes up residence in the gums.

*(123) a coating: This is cu [3u], "covering" (X.).

*(124) When his eyes were trimmed back: The verb stem here is cholic [4holic], "to cut or pull out hair or feathers" (X.), or "flay, skin, take off crust" (V.). This is clearly meant to be the origin of the large white eye patch and very small eyes of the scarlet macaw (see Seven Macaw in the Glossary). I take it that Seven Macaw sported two large metal discs where the patches of the scarlet macaw are now.

*(125) What they did was simply the word of the Heart of Sky: In a similar fashion the Zunis sometimes portray the Ahayuuta warrior heroes- who, like Hunahpu and Xbalanque, are tricksters- as simply carrying out the word of the Sun Father, though they may appear to be acting on their own (see D. Tedlock, *Finding the Center*, pp. 234-48).

*(126) a post for their hut.... the lintel of their hut: This passage is self-contradictory as to what use the Four Hundred Boys intend for their log. The "post" is acan [akan], literally "leg"; Andres Xiloj explained that this would be a vertical post with a fork at the top. The "lintel" is uapalil (apalil today), which he specified as a term for a horizontal beam over a door or window.

*(127) "We'd like some help": This is cacachaquimah [cakacha3imah] tana, in which caka- is "incomplete-we" and tana indicates supplication; the verb stem, cha3imah, is given by V. as "ask to borrow."

*(128) "we'll throw him down": The verb stem here is tzac [tzak], "fling, cast" (X.). This is mere bravado; it is not what the Four Hundred Boys actually end up doing.

*(129) "'Why are you spilling dirt in the hole?': The verb stem here is written macaha, but with the stem of the h crossed off to make it into an n. I translate it "spill" on the basis of ma4anic, "to spill or scatter" (X.). Here the Four Hundred Boys are proposing to make a sarcastic statement to Zipacna, but once again, as when they talked about throwing him into the hole, they are indulging in

bravado.

*(130) "wedged": This is pachal, translated on the basis of pa4hnic, "be between two walls or in a crack" (X.).

*(131) "we'll wham a big log": The verb stem here is tarih, "give a blow that makes a sound" (X.). In effect the Four Hundred Boys are planning to put a major vertical post for their hut into place, resting its butt end on a sacrifice victim.

*(132) he dug a separate hole to one side: Edmonson notes here that in digging a hole for the present-day Flying Pole Dance, Quiches place offerings in a hole dug to one side from the post hole proper (The Book of Counsel, p. 45). Speakers of the Achi dialect of Quiche tell a story in which a character now known as Zipac carries a log the narrator compares with the pole used in the Monkey Dance (Mary Shaw, According to Our Ancestors, p. 48).

*(133) "on another level, or two levels away": "Level" is my translation of elebal; literally this would be "place of egress," but I take my cue from Burgess and Xec, who decided on "elevation" (Popol Wuj, p. 42), a solution that fits with the general Mesoamerican notion of a stratified underworld.

*(134) to dedicate: This is lacabebal, with an instrumental suffix (-bal), translated on the basis of la3abeh, "to inhabit some place, occupying it" (B.).

*(135) Having taken their pickings: The verb stem here is culun, translated on the basis of 3ulunic, "to pluck, devastate, strip" (X.).

*(136) a play on words: This is zachal tzi, "play-instrument words"; B. gives zaquibal as "instrument for playing." The authors of the P.V. seem uncertain as to whether the Four Hundred Boys actually became the Pleiades (see Hundrath in the Glossary), in which case motz (the Quiche term for these stars) would mean the same thing as omu4h, "four hundred," or whether the supposed connection between the Four Hundred Boys and the Pleiades is merely a matter of a pun between omu4h and motz.

*(137) counterfeiting: This is haluachixic, translated on the basis of haluachir, "change one thing for another" (V.).

*(138) the forearms: This is xul, translated on the basis of an entry in V. that is missing its heading but falls between xulbak and xulu; the gloss is "little arms of crabs or shrimps."

*(139) where they opened: This is pa hac, pa is "in" and hac is translated on the basis of the entry for hak in V., "to open things" (such as curtains or eyelids).

*(140) the claws: This is ucoc [ucooc] 3ab, "its-carrying-device arm," in which cooc is translated on the basis of an entry in X.

*(141) They used a flagstone for the back of the crab, which clattered: Andres Xiloj commented: "A crab is just like a wristwatch: it has the meat inside and it's pure bone outside."

*(142) they put the shell beneath an overhang: Andres Xiloj pictured this as a spot beneath a waterfall.

*(143) "By now I can't stand the hunger": "Hunger" is a Quiche metaphor for sexual appetite; that the metaphorical level is intended here becomes more obvious as the story unfolds.

*(144) "please come point her out, boys": Andres Xiloj chuckled as he read this and then said, "This Zipacna is abusing the boys here, he's saying they shouldn't be afraid. It says here, quibe ta iuaba, which could be quibe ta iuabaa, 'If only you would come along to

iuabaa- to point it out,' but it could also be, quebe ta iuabah, 'If only iuabah- your stones, your balls- would come along.' Today, when someone runs from a fight, the saying is queeme ta iuabah, 'Don't hide your balls.' So Zipacna is saying, 'Don't you have any balls, boys?' They're still young." Since the puns in this passage cannot be preserved in English I have tried to make its sexual dimension more obvious by using feminine pronouns for the crab (though Quiche pronouns do not have gender), since the crab is the object of Zipacna's "hunger."

*(145) "But won't you please": This sentence begins with la qui [ki]; la makes it a yes/no question and ki (according to V.) indicates exaggerated politeness.

*(146) "I'll show you a place where there are plenty of birds": Continuing along the lines of the above comment, Andres Xiloj said, "There it is again, only now it's nuuaba, 'I show you something,' or else nuabah, 'my balls'- he's got balls." As for the "birds" (4,iquin), the primary metaphor for penis is "bird" in Quiche; Q. dates this metaphor to the late post-Hispanic period, but it is already present in a colonial dictionary for Pokoman Maya (P.), a Quichean language.

*(147) "We were entering": The verb stem here is oc-, translated (literally) as "enter" throughout this passage, a simple solution that keeps the same double meaning going in English that is present in the original.

*(148) "facedown ... on our back": These two opposite body positions are given throughout the present episode as hupulic and pacalic, respectively. Although they seem to have caused difficulties for some translators, they are spelled correctly in the MS., are glossed in B. in the same way I have translated them, and were perfectly transparent to Andres Xiloj.

*(149) her shell is gleaming red there: Some translators have complained about the color of this crab, but there are species of crab that are red before they are cooked.

*(150) "perhaps I'd better enter on my back": By this time Andres Xiloj had already begun snickering as he read, but now he burst into laughter. Explaining himself, he said: "Clearly, the crab is a woman. As you already know, a woman does it on her back, but here it's in reverse: the man is on the bottom and the crab will go on top. These are trial runs. In ancient times, I think, they didn't know what sin was. They were looking for a way to understand everything."

*(151) only his kneecaps were showing now: At this point don Andres sat back and said, "My God! All the way to the knees!"

*(152) He gave a last sigh and was calm: The "sigh" here is biqutahic, translated as suggested by don Andres; X. gives bi3bitic, "sigh." Don Andres translated xlilob as "was calm"; V. gives lilot as "tranquil." Of Zipacna's state don Andres commented: "Nothing will bother him now." The story of Zipacna and the crab prompted him to tell a story that has been translated elsewhere (see D. Tedlock, The Spoken Word, pp. 317-20). There is a contemporary Achi story about a character named Zipac that makes the sexual dimension more overt than it is in the P.V. (Shaw, According to Our Ancestors, pp. 48-51).

*(153) "Lure this Earthquake into settling down": "Lure" is bochihih, translated on the basis of bochihi, "allure" (B.); "settling down" is cuubic, "to sit" (X.). I have supplied "this Earthquake" in order to

clarify the sense of the sentence, setting it apart from the plural reference of the previous sentence.

*(154) "in the course of the days, in the course of the light": chi be quih [3ih], chi be zac [zak], "in-road day (or sun), in-road light." According to Andres Xiloj, this means "for all time. Just the way we in my family are weavers. All the time, and for all time, we are weavers." For an alternative translation of this line and a further comment by don Andres, see "as long as there is day" in note *(358).

*(155) "Lead the way": This is chicama cabe [chi4ama kabe], literally "imperative-you-take our-road," a common Quiche idiom which I have translated into the equivalent English idiom.

*(156) they just blow at the birds when they shoot: Andres Xiloj remarked: "When people go out hunting today with guns, and when they see that an animal is coming, they do this: [blows a quick puff of air]. It is like magnetism, they pull it, the animal stops- it feels, it thinks there is a person hidden. When the animal has stopped for a moment, the person shoots, and there it is. The animal stopped to see what this noise was."

*(157) made fire with a drill: This is xquibac cu quicac [xquibak 4u qui3a3], "they-drilled then their-fire." And example of the same idiom is given by B. as canuba3 ca3, "I start a fire"; V. gives bak as "to drill."

*(158) "the one to be made and modeled": The reference is to humankind, and the problem is the same one the twins discuss in an earlier passage. Like so many other American Indian hero twins, they are monster slayers, making the earth habitable for humans.

*(159) "the human heart": I have supplied "human" here, assuming that the subject of the discussion has not changed since the previous sentence.

*(160) "a bite of meat, a meal of flesh": The parallel items here are tiic and chacuxic, which have been translated in many different ways; my version is based on tiinic, "to eat meat" (X.), and 4hacuh, "to eat meat" (V.).

*(161) his ankles were bound his wrists: The "ankles" and "wrists" are ucul racan ucab [rakan u3ab], literally "its-necks his-legs his-arms"; Andres Xiloj explained, the "neck" of a leg or arm is its "ankle" or "wrist" in Quiche.

PART THREE

*(162) let's just drink to the telling: The verb stem for "drink" here is camuh; I follow Edmonson in reading it as a variant of kumuh, "to drink" (The Book of Counsel, p. 58). Andres Xiloj liked this reading and pictured the narrator as seated on the tomb of One Hunahpu and Seven Hunahpu, on a day bearing the name Hunahpu. On many such days contemporary Quiche cemeteries look like crowded picnic grounds; whole families come to the graves of their ancestors, sprinkling flower petals, burning offerings, reciting prayers, and eating and drinking, all this in a respectful but festive mood.

*(163) One Hunahpu and Seven Hunahpu, as they are called: The MS. leaves out Seven Hunahpu here; I assume that this is an error, given that everything else in the sentence is in the plural, and given that One and Seven Hunahpu are named together two sentences later.

*(164) a partner: This is laquel [la3el]. V. gives an example of the use of this term in which a woman may refer to another woman who

shares the same man with her as nula3el (nu- is "my").

*(165) flautists, singers, and writers; carvers, jewelers, metalworkers: Note that in these two sets of three skills each, writing is grouped with the performing arts rather than with handicrafts. Whatever writing system or systems were employed by the Quiche, the grouping of writing with flute playing and singing points to its close association with oral recitation [see also note *(57)]. "Writers" is my translation of ahtzib [ah4,ib], "person-who-does-writing," in which 4,ib also covers painting.

*(166) The four ballplayers: These words are supplied; the text only indicates "they."

*(167) "They're really determined to run right over us!": This is xax quehiquic uloc [ulok] pacauí [pakauí], literally "certainly they-cut-straight hither above-us."

*(168) to draw blood from people: Andres Xiloj commented: "When there is strife, when people begin to fight, they strike one another. The blood comes out, and Xibalba receives this blood. We see that it fell, but it fell into the flasks of the evil ones. It is like their food."

*(169) to make pus come out of their legs, to make their faces yellow, to cause jaundice: "Jaundice" is 3anal, "yellowness." This passage could refer not only to hepatitis but to yellow fever (if yellow fever was present in pre-Columbian times), whose symptoms include jaundice. The pus in the legs would be sores spread out along the lymphatic system.

*(170) to reduce people to bones ... until they die from emaciation and edema: The first of these ailments is ziaah bac [bak], in which the first word may be a form of ziy, "extended" (E.), and the second is "bone"; B. gives ziyah bak as "skeleton" and ziyah bakil as the name of an unspecified illness; X. gives bakil, literally "bony," as "thin, weak." The second ailment is xupan, "dropsy" (V. and G.), better known today as "edema," swelling caused by excess fluid in the tissues or cavities of the body. According to Andres Xiloj, the contemporary shamans called ahmesa, "keepers of the table," sometimes go bad and practice a ritual called chakih mesa, "dry table," in which they ask Xibalba to cause emaciation: "They put bones into the body of a person by means of prayers, in order to dry him up. They put a skull into the body of a person. They dry up the whole body." He told of a recent case in Momostenango in which a man was brought to court because "there were skulls, and bones of the arms and legs, in the place where this man burned his offerings. It was by means of these things that he screwed people up." Edema is caused by a separate ritual, called rax mesa, "fresh (or unripe, sudden, strong) table." Don Andres continued: "This, too, is done with bones. They put the bone in water, or whatever they put it in, and this same bone comes to be left in the body of the person, then he swells up. It's like an injection, but the evil is contained by this bone. The moment it is put in the body, the evil befalls one."

*(171) to catch up with people: The verb here is culuachih [4uluachih], "to come about" (B.), "to strike with misfortune" (V.).

*(172) whenever they have filth or grime in the ... house: According to Andres Xiloj, the best way to keep the agents of Xibalba out of one's house is to keep the place swept out and not allow trash to accumulate. See the story in note *(175) for a case in which a house

is cleaned out as a way of ending the deeds of a Xibalban.

*(173) in the doorway of the house, the patio of the house: This is chirih ha, "at the back of the house," and chuua ha, "at the face of the house." In Quiche terminology, as Andres Xiloj explained, the "back" of a house is the side that has a door or entrance way giving access to a public road or path, while the "face" is the side that gives onto a patio (whether enclosed on all four sides or not).

*(174) that people should die in the road, just "sudden death": This affliction is rax camical, "fresh (or unripe, sudden, strong) death." According to Andres Xiloj, it is like edema [see note *(170)] in that it is caused by practices that come under the heading of rax mesa: "They come to frighten one in the road, and now one doesn't arrive home. Suddenly one may fall in the ditch, rax camical. As it says here in the Popol Vuh, 'Blood comes to the mouth,' it is as if one had pneumonia, suddenly one begins to vomit blood, and one dies in a moment. It is a matter of the rax mesa. They put a bone in the lung, and it is damaged in a moment. One begins to vomit pure blood. They carry their materials on their shoulders, as it says here: 'The load on his shoulders.' When they are encountered in the road, they can kill one. But it isn't the ahmesa directly, but rather his genius [see the Glossary] or uin [were animal]." See note *(170) for more about the ahmesa.

*(175) Such are those who shared their thoughts: At this point Andres Xiloj was reminded of a story, which he told on the spot. It is about a young man who gets aggravated with his wife almost to the point of taking a machete to her, all because an emissary of Xibalba keeps sneaking hairs or bits of rag or even bugs into the food she prepares. Moving in for the kill, the Xibalban tells the young man he has just seen his wife serving lunch to another man. Sure enough, when he gets home for lunch and asks his wife to give him the breast of the chicken she has prepared, she cannot find it in the pot. Later the young man is seized with the idea of climbing a tree; the earth rumbles and he suddenly finds himself looking down on the spot where the lords of Xibalba regularly assemble to banquet on blood that has been spilled by violence. He sees Blood Gatherer (the head lord) come out, and the last one to arrive, named Jodido (a Spanish word roughly translatable as "screwed-up"), turns out to be the very Xibalban who has been plotting against him. Jodido brags about how he sneaked the chicken breast out of the pot and tells the others they will soon enjoy the blood of the poor woman who was cooking it. After the Xibalbans leave, the young man returns home and throws boiling water in each corner of his house. Returning to the banquet spot in time to see the Xibalbans reassemble, he sees Jodido come in very late, barely able to move because of the scalding he has received. After this no more foreign objects appear in the young man's food.

*(176) they were piqued and driven: This is xetzaixic, "they were salted (spiced)" (X.), and xecotobax, "they were pursued" (B.).

*(177) And these messengers of theirs are owls: Andres Xiloj remarked: "At times an owl suddenly arrives near the house and begins to sing. This is a warning. Yes, it is a warning from Xibalba."

*(178) repeated their words, reciting the exact words: This is ta xquizac [xquitzak] cut [4ut] quitzih xauí xere ucholic utzih. B. gives tzaconizah ri tzih as "to fulfill words," and V. gives tzakantic as

"deliver up, render, regurgitate"; xauí xere is "yet the same," and ucholic is "to say in an ordered way" (V.).

*(179) "Don't the lords ... speak truly?": That this line is part of the dialogue rather than part of the narrative is made obvious by the next line, which is clearly a reply.

*(180) "We're going, ... even though we've just arrived": "Even though" is my translation of xaet, which B. gives as "in vain, uselessly." Antitheses are rather frequent in the speech of Hunahpu and Xbalanque.

*(181) "just play and just sing": The playing here (tzuan-) is specifically on the flute.

*(182) where the rapids cut through: This is chuchi halha ziuánub, in which the first word is "at-its-mouth"; the second is "rapid, violent river" (B.); and the third may be an error for ziuánuh, "to open a ditch" (V.).

*(183) "Morning": This is calah [3alah], literally "clear, bright, plainly visible," used as a morning greeting in classical Quiché. Today the preferred greeting for the morning is zakiric, "it is getting light (or dawning)."

*(184) they got no relief: This is maui xeyacamáric, in which maui is negative; B. gives yacamáric as "be relieved, alleviated."

*(185) the laughter rose up like a serpent in their very cores: Cumatz or "serpent" is a term for various kinds of disabling cramps (see B. Tedlock, *Time and the Highland Maya*, pp. 54, 56). Concerning the present case of "serpent," Andrés Xiloj said the following: "There are people who begin to make an uproar when one passes by, they die laughing. This is because those of Xibalba are among them; it is as if they had been ordered to do this. This is a work of Xibalba, and this is what the Popol Vuh is talking about. People get a serpent (cumatz) here in the breast [indicates a diagonal through his trunk, from one shoulder to the opposite hip] for having laughed so hard. Now one can't bear laughing because of the pain of the serpent; now it doesn't let one breathe. We could go out in the street right now. There could be a group of people there. They could begin to make an uproar, killing themselves laughing, and we couldn't hear what they were laughing about. But Xibalba would know what they were saying."

*(186) down to their blood and bones: This is chí quiqui [quiqui4] quib, chí quiba [quibak] quib, literally, "that they-blooded themselves, that they-boned themselves." That is, they became nothing but blood and bones, having laughed their flesh away; in idiomatic English, "they laughed themselves sick."

*(187) This ball of theirs is just a spherical knife: This is are cu [4u] ri quichah [chaah] xa coloquic cha, "this-is then the their-ball just rounded knife." Chaah often means "ball game" in the P.V.; wherever it is used for the ball itself, as it is here, it refers to the ball of Xibalba, whereas the ball used by One and Seven Hunahpu (and later by Hunahpu and Xbalanque) is always called quic [qui4], literally "blood (or sap)," but "rubber [ball]" in the context of the ball game. I suspect that chaah was a generic term and therefore translate it (wherever it refers to the ball) as just plain "ball," as contrasted with "rubber ball."

*(188) their torch was brought: The torch is chah, literally "pine"; in the present context it is the Quiché term for what is more widely known in Mesoamerica as ocote (a Nahuatl-derived term), a split-off

stick of extremely resinous pine wood, still widely used for torches and kindling.

*(189) they were cowering: The verb here is chocochoh, which means to crouch "in a cowering manner" (B.).

*(190) whistling with drafts, clattering with hail: This is zac [zak] xuruxuh, zac caracoh [4aracoh], in which zak may be shortened from zakbach, "hail." The first verb is similar to xururic, "the penetration of cold" (into a house) or "a sharp whistling" (X.); the second is similar to 4ararem, "the sound of hail falling" (X.). My translation retains the drafts and the hail while at the same time preserving the onomatopoeia.

*(191) The blades are moving back and forth: "Back and forth" is zacleloh, which B. gives as "in alternation."

*(192) "Put his head in the fork of the tree that stands by the road": Andres Xiloj read xol che [chee] as "in the fork of a tree," as did Ximenez long before him. Given that the head of One Hunahpu is Venus as evening star (see D. Tedlock, "The Sowing and Dawning"), the form of the tree has two different astronomical interpretations. On the one hand, it could represent the forked or crossed sticks that Mesoamerican astronomers used for sighting heavenly bodies; on the other hand, it could be part of a tree constellation lying somewhere along the zodiac. Once the calabash tree of the story bears fruit, the head of One Hunahpu cannot be told apart from the fruit, which suggests a conjunction between Venus (as evening star) and a number of closely grouped stars. For example, it could be that this particular evening star spent part of its period of visibility between the horns of Taurus, which point upward when Taurus is on the western horizon.

*(193) "'Its fruit is truly sweet!" they say, 'I hear.": The words "they say" translate cacha [cachaa], whose use following a statement in Quiche marks that statement as general hearsay. A more literal translation would be "it says" or "it is said," but I have chosen "they say" because that is what a speaker of English would be likely to use when citing hearsay. Blood Woman is repeating something that was already marked as hearsay by the time she heard it, so she adds a further layer of quotation with "I hear." As Andres Xiloj pointed out, the hearsay in question here is misinformation, since the fruit referred to is not only not sweet, but is not even edible (see calabash tree in the Glossary). For a general discussion of how the writers of the P.V. address the epistemological questions raised by their text, see D. Tedlock, *The Spoken Word*, chap. 12.

*(194) "Stretch out your right hand here": Andres Xiloj explained that the right side of the body (whether that of a male or female) is symbolically male, while the left is female. Further, the hands unite the fingers, which symbolize the living members of a family, graded from babies (the little finger of each hand) on up to the elderly (thumbs). The fact that Blood Woman receives the sign from the head of One Hunahpu in her right hand already points toward the bearing of a male child; in fact she will bear male twins.

*(195) "It is just a sign I have given you, my saliva, my spittle": Because of the mention of "sign" (retal) here, Andres Xiloj remarked, "Then this is a dream." Asked what would be augured by being spit on in a dream, he said, "This is two matters. It depends on whether the saliva is good or bad. When it is good it has a lot of

foam; when it is just clear water it is bad. But here in the Popol Vuh, one isn't told which kind of saliva it is."

*(196) "Keep the word": The stem of the verb here is oc-, which can carry the sense of "keeping to something" (V.).

*(197) they were of one mind: This is xauí quinaoh, "same their-thoughts."

*(198) "It's just a bastard": "Bastard" is hoxbal, literally "fornication-instrument," glossed as "bastard" by B.

*(199) "Get her to open her mouth": This is chacoto uchi [uchii], literally "Dig it out of her mouth," an idiom for close questioning. In terms of the somatic mapping of actual or potential speech, as conceived by Quiches, this implies that she knows perfectly well what her father wants her to say; if her word were "in her belly," on the other hand, it would mean that she could not readily articulate a response even if she wanted to. See also notes *(246) and *(259).

*(200) "there is no man whose face I've known": This statement is not only true in its figurative reference to Blood Woman's sexual innocence, but in its literal sense: she has never known the (fleshly) face of the man responsible for her miraculous pregnancy. For the importance of a man's "face" (and personal identity) in sexual encounters, see Part Four of the present translation, "And they sent the two of them,..."

*(201) "take it in their hands": This is quicololeh [qui4ololeh], a reduplicative form of 4oleh, "have something round in the hand" (V.); B. gives colola as "revolve, turn around."

*(202) "So please stop": The verb here is queque; B. gives quequeba as "stop, detain."

*(203) "they will make themselves familiar with its composition": This is xchiquihunam uachih utzaquic [u4,akic], "will-they-compare appearance its-being-made (or constructed)"; X. gives hunamanic as "compare" and B. gives hunamah uach as "to make friends."

*(204) "nor will your homes be here": In the biological sense, this means that future owls will be free to move around the surface of the earth. If I am right in suspecting that the messenger owls of Xibalba correspond to the planet Mercury, the astronomical sense of this same statement would be that Mercury appears above the horizon on more days than it remains below (the average ratio for a given Mercury cycle is 76:40)

*(205) "only blood": "Blood" is a literal translation of quic [qui4], which also refers to gums and resins from trees (including latex), in this case the blood-red resin of the cochineal croton (see croton in the Glossary).

*(206) "use the fruit of a tree": This is a figurative reference to nodules of sap from the cochineal croton.

*(207) it formed a surface like blood: This is quehe cu [4u] ri quic [qui4] rih xuxic, "like then the blood its back (or upper or outer surface) became."

*(208) "nodules of blood": This is quic [qui4] holomax. For a discussion of "blood" in this context, see notes *(205)-*(207). Holomax would seem to be composed of a verbal form of holom, "head," with a passive suffix (-x); in the present context it would mean something like "headed-up," hence "nodules."

*(209) and when he lifted it up with his fingers: This is ta xuchuieh cu [4u] acanoc [a3anok], "when he-lifted-with-fingers and

upward"; B. gives chuieh as "to lift with the fingers."

*(210) they leaned over it intently: This is xechique [xechike] chuui, in which xe- is "complete-they" and chuui is "over (or on top of)"; V. gives chiker as "to be inclined pensively."

*(211) the mother of One Monkey and One Artisan: In fact the mother (in the literal sense) of One Monkey and One Artisan has already died by this time; in the present passage the term "mother" is being used in its role-designating sense rather than in its genealogical sense. One Monkey and One Artisan are living alone with Xmucane, their father's mother, at this point; she is the only person they have who could fill the role of "mother."

*(212) "mother, madam": This is lal chichu, in which lal is "you (singular polite)," here translated as "madam." I cannot locate chichu in any dictionary, colonial or modern, nor did Andres Xiloj know it, but it resembles chuch, "mother." It is not the ordinary term for mother-in-law; that is alib, which is used by Blood Woman later on in this same dialogue.

*(213) I'm your daughter-in-law and I'm your child": The use of "child" here is metaphorical. A Quiche daughter-in-law takes up residence with her husband's family; in offering herself not only as a daughter-in-law but as a "child," Blood Woman both seeks the kind of acceptance a daughter would have and makes an offer of loyalty.

*(214) "my lastborn children": Given that Xmucane is never mentioned as having had any children other than One and Seven Hunahpu, she may be using chipa [4hipa] or "lastborn (youngest)" endearingly, in effect calling her sons, who were adults when they left home, "my little babies."

*(215) "They have merely made a way for the light to show itself": "A way ... to show itself" is ucutbal [u4utbal] rib, literally "its-showing-instrument." The immediate reference, as the rest of the sentence makes clear, is to the symbolic survival of the dead through their offspring, "light" being a metaphor for birth. But "light" may also be taken literally here: Blood Woman's twin sons will account for Venus (in some of its cycles) and, in time, the sun and moon (or at least the full moon) (see D. Tedlock, "The Sowing and Dawning").

*(216) "Truly, what I say to you is so!": I take it that this sentence belongs to Blood Woman rather than Xmucane, given that it is followed with utz bala, "Very well," which signals the beginning of a reply and definitely belongs to Xmucane.

*(217) "since you are already my daughter-in-law": The grandmother isn't so much accepting Blood Woman's claim to kinship here as she is saying (with sarcasm) something like, "If you say you're my daughter-in-law, then act like one." Quiche daughters-in-law, who live with the families of their husbands, are subject to the commands of their mothers-in-law, who give them heavy household tasks to do.

*(218) she went to the garden: "Garden" is abix, often translated "milpa." Maize is the principal plant in the highland Mayan milpa, but it is interplanted with beans and squash. Each of these crops has different characteristics in its response to wet or dry conditions at various points in its growth cycle; interplanting assures that when one crop suffers during a given season, another part will prosper.

*(219) but there was only one clump: In Mesoamerica corn is properly grown in thick clumps, not stalk by stalk in single file; clumps

survive high winds better.

*(220) "Come thou, rise up, come thou, stand up": This is tatul ualoc tatul tacaloc. In tatul, ta- suggests Cakchiquel "you" (singular familiar in V.) and -at- suggests Quiche "you" (singular familiar), while -ul would be "come" in either language. For the rest, ual- is "get up" (B.) and tacal- is "stand up, present oneself" (B.), while -oc [-ok] carries an urgent or imperative force. Throughout the P.V., I translate the first person singular familiar pronoun as "thou" in prayers but as "you" in conversation.

*(221) they were rowdyish and flushed with jealousy: For these two qualities the MS. has quichaquimal and qui3a3 [quicak] uachibal, in which qui- is "their." B. gives chaquimal as "tumult, clatter, fuss, disturbance; clamor of boys." X. gives quiak [cak] uachinic, which would literally be "red in appearance," as "zeal, jealousy."

*(222) the successors: This is quexel [4exel], "substitute." This may be a reference to the fact that Mars, the planet of One Monkey and One Artisan, sometimes serves as morning star in the absence of Venus, which in one of its five cycles is the planet of One and Seven Hunahpu (see D. Tedlock, "The Sowing and Dawning"). When Venus and Mars appear in the east together Mars remains long after Venus has descended into the underworld, just as One Monkey and One Artisan remained on the face of the earth when One and Seven Hunahpu went to Xibalba.

*(223) The anger in their hearts came down on their own heads: Andres Xiloj remarked, "We see a person; we speak behind his back and he doesn't hear what we are murmuring. Then this murmur doesn't fall upon that person, but we are the ones who pay for it." A daykeeper, taking on the task of defending a person who has been the victim of witchcraft, asks in prayer that "the one who did this work should be the one to receive it."

*(224) They were decoyed: The verb here is poizaxic [poyizaxic]; if English "doll" were a verb, this could be translated literally as "to be dolled"- that is, to be misled by a doll. Today poyizaxic is most commonly employed with reference to the use of scarecrows in fields.

*(225) "but our birds just got hung up in a tree": When birds are shot they sometimes close their feet around the branch where they were sitting and then hang there, dead.

*(226) "We'll just turn their very being around": The verb here is catzolcomih, which Andres Xiloj read as catzol3omih, "to turn around."

*(227) "Just as they wished us to be slaves here": This is quehe ri ala xohpe ui uloc [ulok] chiqui4ux, "like the slaves we-came location here in-their-hearts," in which I take xohpe chiqui4ux to be an idiom analogous to the one given in B. as chi nucux [4ux] petinac [petinak], literally "in-my-heart come-from-perfect" but glossed as "of my own will." Ala ("slaves") is shortened here from alabil, which is the form given in a later and similar passage (translated "slaves").

*(228) "How can we grab hold?": The verb stem here is chanic, translated on the basis of chanih, "keep in the fist" (B.). The tree is too thick for One Monkey and One Artisan to use their hands in coming down.

*(229) "simply shameless": This is rax quiuach, "fresh (or raw or green) their-faces"; B. gives rax uach as "shameless."

*(230) "Will you please not laugh": Among the contemporary

Jacalte Maya there are myths in which the hero tricks his elder brother or his mother's brothers into going up a tree that grows taller and maroons them, after which they turn into monkeys. The hero's mother then tries to reverse this transformation but fails (Morris Siegel, "The Creation Myth and Acculturation in Acatan, Guatemala," pp. 122-24; Oliver La Farge, Santa Eulalia, pp. 53-56), in one case because she disobeys an admonition not to laugh (La Farge, pp. 51-53).

*(231) the patio of the house: See note *(173) for a discussion of the parts of a house.

*(232) the skinny little things below their bellies: This is *chixiriric xe quipam*; Ximenez translated *xiriric* as "that which is thin," and Andres Xiloj read it as "round little thing," chuckling as he did so. This refers not to the "bellies" of the monkeys (*quipam*) but to what is "below" or "at the bottom of" (*xe*) their bellies.

*(233) and their tails wiggling in front of their breasts: This is *chichilita he pu chuchi qui4ux*, "that wag tails and at-edge-of their-breasts." Andres Xiloj read *chuchi* as "up against" in this context. Spider monkeys and howler monkeys both have very long prehensile tails; howlers are seldom observed, but spider monkeys are given to winding their tails around to the front of their bodies and all the way up to their chins.

*(234) thin red lips: This is *ca3 [cak] ruxruh uchi [chii]*, "red thin his-mouth (or lips)"; *ruxruh* may be a reduplicative form of *ruxaa*, "thin" (X.).

*(235) with faces blank: "Blank" is my translation of *tac [ta3]*, "deafened" (B.) or "fool" (X.) or "flat" (various sources).

*(236) puckering their lips: "Puckering" is my translation of *mutzumac [mutzumak]*, based on the gloss offered by Andres Xiloj: "to make small, like a trumpet." This passage reminded don Andres of the contemporary Monkey Dance in Momostenango: "These monkeys, when they come out here in the fiesta, they scratch themselves, and do their mouths this way [touches himself all around the mouth], as if they had fleas and lice." They also climb a high pole and do acrobatics on a tightrope above the plaza.

*(237) wiping their mouths and faces: The verb stem here is *mal*; B. gives *mala-* as "to touch lightly" and Andres Xiloj read it as "to clean."

*(238) suddenly scratching themselves: This is *macama [makama] chiquihoquih chique*; Andres Xiloj read *hoquih* as *ho3oh*, "to scratch"; *chique* is "to them," possibly referring to the mouths and faces of the monkeys.

*(239) their mattock, their hoe: These tools are *mixquina* and *xoquem*, respectively; I have rendered the former word as "mattock" because B. glosses it as a "large" hoe.

*(240) leveling ... the trees: "Leveling" is my translation of *3a3chacachoh*, based on *cakchachoh*, "thrown down by the wind" (V.).

*(241) stalks and brambles: "Stalks" is my translation of *tum*, based on *tun*, "shoot (of a plant)" (V.); "brambles" translates *quixic*, based on *4ix*, "spine (or thorn)" (X.).

*(242) dumps wood chips on his head: The verb here is *puquih*, translated on the basis of *pu4unic*, "dunk" or "throw" (X.); the "wood chips" are *uebalche [uebalchee]*, glossed as such by B.

*(243) they massage, they stretch their legs, their arms: Andres

Xiloj, who is a uikol bak or "bonesetter" in addition to being a daykeeper, remarked here that he uses a combination of massage and stretching to treat sprains.

*(244) fox, coyote: The fox is yac in Quiche; it is sometimes called gato del monte or "mountain cat" in rural Guatemalan Spanish, which has caused much confusion among speakers of English. Foxes are more like cats than like dogs in their fur and in their graceful leaps. But in Quiche, as in English, the fox is nevertheless thought of together with the coyote (utiu), as in the case of the present list, whereas cats are covered by the "puma, jaguar" pair of terms occurring earlier in the list.

*(245) "Arise, conjoin, you trees! / Arise, conjoin, you bushes!": This is iac lin che [chee] iac lin caam [4aam], in which iac is "for inciting someone" (V.) and is probably related to yacalic, "be up high" (X.); lin is "to squeeze, press together" and is used for tamping the weft in weaving (B.).

*(246) "My word is in my belly": Here and in a later passage the animal who makes this statement is assigned its characteristic food in exchange for a message. For the contemporary Quiche diviner, words that are "in the belly" of a person are words that person is unable to bring to consciousness and articulate; words that are higher up, in the chest or the head, are more likely to be spoken, and those that are in the throat or mouth or on the tongue are at the very point of actually being said. As for animals, their utterances are regarded as clear to other members of the same species but very difficult for a human to understand. The fact that the animals in the P.V. have their word in their bellies is not only an indication of their interest in being given food but an indication of the difficulties of understanding what animals have to say. They may be able to make sounds, but the meaning of these sounds is as hidden as are the crucial facts a human client may find difficult to articulate when a diviner asks probing questions. See also notes *(199) and *(259).

*(247) "up under the roof of the house": This is chuui ha, "at-its-top house," which, as Andres Xiloj explained, means the attic. He pointed out that this is the part of the house where tools are kept today, along with the stored harvest.

*(248) "But what will your grandmother say if she sees me?": Andres Xiloj commented: "When the rat speaks it isn't understood what he says, 'Ui4,, ui4,, uit4,.' When a boy is born, then the rat doesn't cry, 'tis said. He is content, because the boy is the one who sows the garden. Now, if a woman is born, then the rat cries, 'tis said, because when the rat is near a woman in the kitchen she grabs a stick to kill him."

*(249) they were just fooling: "Fooling" is michbal [mi4hbal], literally "means of plucking," an idiom for deception. Note that in a later story the victims of deception are literally plucked.

*(250) loosening the ball: The verb here is colon, translated on the basis of colo, "to free" (B.).

*(251) These were taken away: The verb stem here is mahix, "be-taken," translated on the basis of mahinic, "to take" (X.).

*(252) a louse fell on her elbow: I read chucayac as "elbow" on the basis of 4hucah, the entry for "elbow" in X., and picture Xmucane with her head buried in her arms. The louse, of course, falls from her head.

*(253) "My word is contained": "Contained" is 4oba, translated on the basis of coba, "to contain" or "keep to oneself" (B.).

*(254) "bent over": This is pe, translated on the basis of pe4elic, "to sag" (X.).

*(255) when he had been united with the toad: The verb here is xrixtaxic, a complete and passive form of the verb given by B. as riquitahic, "to join."

*(256) on the rim of the ball court: "Rim" is zutzil (in which -il is adjectival), translated on the basis of tzutz, "to finish weaving" (E.) or "to finish weaving by filling out the space at the edge" (V.). I take it that the falcon alighted at the top of the wall enclosing the ball court.

*(257) "Wak-ko! Wak-ko!": This is uac co, uac co in the MS. The bird in question, the uac or laughing falcon (see Glossary), makes two different sounds: a long call consisting of a single, rapidly repeated syllable, resembling laughter, and a short song that makes use of two different syllables. L. Irby Davis transcribes a typical phrase of the song as woo-o ka-woo (A Field Guide to the Birds of Mexico and Central America, p. 25), which is close to the way the P.V. has it. Michael Coe has called my attention to the fact that the Aztecs, like Hunahpu and Xbalanque in the present passage, took the sounds of this falcon (called oactli in Nahuatl) to be portentous. The call, which they heard as uncontrolled laughter, was a bad omen, but the song was good (Sahagun, Florentine Codex, book 5, pp. 153-55). Hunahpu and Xbalanque, in a move the original hearers of their story may have found humorous, take the matter of the omen into their own hands, bringing the bird down and demanding to know exactly what message it carries. The song would seem to be a good omen for them, despite the dangers implied by the message that lies behind (or inside) it; they are like the twin heroes of North American Indian myths in fearlessly taking immediate action whenever a new adventure presents itself. But their grandmother, like her own North American counterpart, is filled with apprehension.

*(258) their blowgun shot: The "shot" of the blowgun is ubac [ubak], literally "its bone" or "its pit" (in the sense of the pit of a fruit).

*(259) "My word is contained in my belly": See note *(246) for a discussion of the meaning of words in bellies. What is notable in the present context, where the hawk contains the snake that contains the toad that contains the louse who has the message, is a symbolic acting out of the structure of the speech of messengers. Again and again the messengers of the P.V. deliver their news in the form of multiply embedded quotes; in the present episode each animal corresponds, as it were, to a pair of quote marks, one pair inside the next.

*(260) he just sort of drooled: This is xa quehe chucaxh, "just like that-he-drooled"; I translate the verb stem, caxh, on the basis of caxahinic, "to drool" (B.).

*(261) they kicked him: The verb stem here is iic, translated on the basis of yicbal, "kick with the foot" (B.). I have spared the reader the redundancy of the original phrasing, which goes on to specify that the kicking was indeed done with the foot.

*(262) they crushed the bones: The verb stem here is cah [4ah], translated on the basis of 4ahinic, "to crumble" (X.).

*(263) it was right there in his mouth: In terms of the somatic mapping of speech, as conceived by Quiches, this implies that the toad knew perfectly well what the message was; it was not buried in his belly, a realm of the unconscious or the dimly perceived, but right up front in his mouth [see notes *(246) and *(259)].

*(264) Each of us will plant an ear of corn: These are not kernels (ixim) but ears (ah) that are planted (tic), and as will be made clear, they are "planted" not in the earth but above it, in the attic of the house, where harvested corn is stored. Andres Xiloj recognized this as one of the rituals he carries out in his capacity as a mother-father [see also the notes immediately below and *(331)-*(334), as well as the Introduction].

*(265) When the corn dries up: "Corn" has been supplied here; the original sentence does not specify what is drying (chakihic). It might be the ears of corn Hunahpu and Xbalanque left in the center of their house, but Andres Xiloj took it to be the ripening of a corn crop in their field, which would coincide with the arrival of the dry season.

*(266) when the sprouting comes: This is ta chi pe utux, "when there-comes its-shoot." It would not be the sprouting of the ears of corn left in the center of the house by Hunahpu and Xbalanque, but of a new crop in the field [see notes *(331)-*(334)].

*(267) Hunahpu planted one and Xbalanque planted another: This makes it sound as though there were two ears of corn, but today it would be four: one yellow, one white, one spotted, and one blue. Note that the ears planted by Hunahpu and Xbalanque, however many of them there may have been, are later given four different names.

*(268) where the earth is damp: This is rax uleu, literally "green (or raw) earth," in contrast with the chaquih [chakih] uleu or "dry earth" mentioned in this same sentence; my translation follows the reading offered by Andres Xiloj.

*(269) in the middle of the inside of their house: This is chunicahal [chuni4ahal] upa cochoch, "at-its-middle its-inside their-house." Andres Xiloj was quite definite that this could only mean indoors, not in the patio. See note *(173) for further information on the parts of a house.

*(270) the roads of Xibalba: Apparently all four roads eventually lead to or through Xibalba, but in an earlier passage "the" Road of Xibalba, and specifically of its lords, is the Black Road (see Glossary).

*(271) "What is it, Wing?": "Wing" has been provided.

*(272) each one named by the one ranking above him, and naming in turn the name of the one seated next to him: This is huhun chiholoman ubixic cumal are chibiin ubi hun ri cubul chuxucut, "each-one from-ahead being-named by-them this-one naming his-name one that seated at-his-side." I interpret chiholoman as referring to differences in rank, with chi- as prepositional and holom as "head" in the sense of leadership (a sense given by V. under the entry for ui). In the dialogue that follows each lord is indeed named by the one ranking immediately above him and in turn names the next one down the line; the only exception is One Death, who has no one above him and must therefore be named by Seven Death.

*(273) "These aren't lords! These are manikins, woodcarvings!": Strictly speaking this remark refers to the two manikins, or

woodcarvings, who are seated first in the sequence, but may also be taken as slyly referring to the entire group of lords. They are waiting for a good laugh, like the one they had earlier at the expense of One Hunahpu and Seven Hunahpu, but instead the joke is on them.

*(274) "here's our rubber ball," said the Xibalbans: This is one of the few points at which *qui4*, "rubber ball," is used with reference to the ball belonging to Xibalba, which is otherwise called *chaah*, a generic term for "ball" [see note *(187)], or else by its proper name, White Dagger (see Glossary). Given the general air of duplicity in the present passage, we may assume that the Xibalbans are falsely using the term *qui4*.

*(275) "just a decorated one": This is *xa huchil* [*hu4hil*], in which I take *hu4hil* to be an adjectival form of *hu4hunic*, "to stripe, put on a design" (X.). The ball of Xibalba (see White Dagger in the Glossary) is fundamentally different from the rubber ball used by Hunahpu and Xbalanque, but the Xibalbans are claiming that it is merely decorated.

*(276) "just a skull": The ball of Xibalba is surfaced with crushed bone (see White Dagger in the Glossary).

*(277) "We've said enough,": This is *coh4hachic*, "we-stop-talking," translated on the basis of forms like *chach* and *chachachi* in B., which have to do with the cessation or hushing of talk. Others have treated *coh* as a separate word here, in which case it would mean "puma," but that leaves *4hachic* hanging.

*(278) "Death is the only thing you want for us! Wasn't it you who sent a summons to us?": This is an ironic reference to the names of One and Seven Death. To put it in other words, "Given that you are named *came* (Death), no wonder you want our *camic* (death)!" Hunahpu and Xbalanque play on the name *came* again in a later episode. See One Death, Seven Death in the Glossary for a discussion of their name.

*(279) "One bowl of red petals": "One bowl" is my translation of *huticab*, in which I take *-ticab* to be a numeral classifier for counting by the bowlful, similar to *-tuc* in *hutuc*, "one jarful" (T.); the bowls in question here (*zel*) are mentioned just before this. "Petals" translates a word given as *muchih* the first time and *muchit* thereafter, which Andres Xiloj read as *muchic*, referring to the "undoing" of flowers to get their petals off, rather than as *mu4h*, which is an herb (known as *chipilin* in Spanish) whose leaves are used as a seasoning in beans. Today flower petals are sprinkled on tombs and may be used to adorn shrines before offerings are burned.

*(280) "Whip-poor-will!" and "Poor-willow!": The bird calls here are *xpurpuuec* and *puhuyu*, respectively. Andres Xiloj recognized *xpurpuuec* as the call of the bird named *perpuuak*, which he described as a ground-dwelling bird that calls out at night. This is obviously a *whippoorwill*; phonetically the Quiche rendition of its call is not that different from the English version, except for the final consonant (for an ornithologist's technical description of the call see Davis, *A Field Guide to the Birds of Mexico and Central America*, pp. xiii-xv). I interpret *puhuyu* as a similar but somewhat simpler call, belonging to a related species, and translate it as "poorwill" when it is used as a species name rather than as a call.

*(281) the nibbling at their own tails,... wings: This may be a reference to the fact that the tails and wings of *whippoorwills* and *poorwills* are marked with bands, bars, and spots that give them a

mottled appearance.

*(282) an acrobatic performance: This is tiquitoh, translated on the basis of tiquita, "to dance audaciously in front of others" (B.).

*(283) all the Xibalbans looked sick, they paled: The key forms here are zaccahe [zakcahe], "be discolored in sickness" (V.), and zacbu [zakbu], "pallid" (B.).

*(284) their mouths were split wide: Whippoorwills and poorwills are night-jars (Caprimulgidae), all of which have small bills but mouths that gape very wide.

*(285) countless drafts, thick-failing hail: For more about the drafts (teu), see note *(190). The hail is zacbocom [zakbokom], based on glosses offered by B. and by Andres Xiloj.

*(286) a house of fire: This is hun ha chi 3a3, a descriptive phrase not constructed in the same way as the proper names given the other houses- balami ha, "Jaguar House," for example. It is omitted from the earlier list of five test houses and is the most briefly described of the houses in the present sequence; it may be a secondary elaboration, based on the immolation undergone by Hunahpu and Xbalanque in a later episode. That would leave five proper test houses in both passages, probably corresponding to segments of five different kinds of Venus cycles (see Bat House in the Glossary and D. Tedlock, "The Sowing and Dawning").

*(287) "Can you see how long it is till dawn?": "How long" is my translation of hanic, "How much?" (B.).

*(288) "What's going on?": This is my reading of huchalic, based on hucha, "How?" or "What's this?" (B.).

*(289) Xbalanque despaired: The verb stem here is quixbih, translated on the basis of 4ixbeh, "to have shame" (V.) and considerations of context.

*(290) "Alas!": This is acaroc [probably akarok], which Ximenez translates as "Ay! Ay!" Elsewhere akarok begins a song of lament, where I again translate it as "Alas!" But when it begins prayers I render it as "Wait!" on the basis of akar, "wait" (V.) and the apparent imperative suffix (-ok). A person at prayer is said to "cry" (o3ic) and "call out" (zi4ih); to translate akarok as "Alas!" emphasizes the emotional tone, while "Wait!" emphasizes the attempt to get attention.

*(291) He brought a squash: What the coati brings is written as coc, which must be 3o3, "squash," rather than cooc, "turtle." As Edmonson has pointed out (The Book of Counsel, p. 124), turtles do not have seeds, and I would add that a turtle would not burst open when hitting the floor of a ball court.

*(292) then brains came from the thinker, from the sky: I follow Edmonson (The Book of Counsel, p. 124) in reading tzatz as tzatz 3or, "brains" (literally "thick dough"). According to the riddling "language of Zuyua" in the Book of Chilam Balam of Chumayel, the "brains" of the sky consist of copal (Roys, The Book of Chilam Balam of Chumayel, pp. 90, 96). That raises the possibility that "thinker," which is ahnaoh (ah- is occupational) in the present passage, could be a pun on naoh [nooh], which is a variety of copal (X.). For a discussion of punning in the language of Zuyua, see Brian Stross, "The Language of Zuyua."

*(293) His strength was just the same: "Strength" is chuuc here, translated on the basis of chu3a, "strength" or "force" (V.).

*(294) "Possum is making streaks": This is caxaquin uuch [caxakin uu4h], "he-is-making-black-streaks possum." V. has an entry for xakin uu4h, "a darkness before dawn," which confirms that uuch should be uu4h, "possum"; Ximenez translated "vulture," as if the text had read 4uch. Andres Xiloj read the verb stem as xakin, "make black stripes"; V. has "stripe with carbon" as a gloss for xakih. Don Andres commented: "At four-thirty in the morning it is as if black clouds were placed there at the end of the sky [the horizon], they are like a sea, they are in grades or levels, alternating yellow and black. Then, according to the hour, as it clears up, the black becomes blacker, blacker, blacker, and what was yellow becomes redder, as the sun comes nearer. Then it changes, these black clouds are no longer there, now there is only the light of the sun. These black clouds appear to be over the earth, they go far [to the left and right], all the way to wherever. The stripes signal that the sun is already shining; they are a reflection. When one gets up at four or four-thirty in the morning, cak chuui xecah, 'it is red over the end of the sky.' At first only one black band is there, then it divides up. One can see all this in the dry season, but not at this time of year" (as he said this his voice was almost drowned out by the sound of rain). The possum who made the black streaks or bands in the P.V. is called mama, "old man (or grandfather)," which identifies him as one of the so-called "year-bearers" (see the Introduction). The year-bearers announce the coming of a new solar year, just as the black streaks announce the coming of a new day.

*(295) "You should just make lots of threats": The verb stem here is yecuh, "be in a threatening attitude" (under the entry for yecoh in B.).

*(296) "Stay there in the oaks": These are pixc, "oaks" or "acorns" (V., G.), not pix, "tomatoes."

*(297) having recovered the ball from among the oaks: "Oaks" has been supplied here. I picture Hunahpu and Xbalanque standing among the oaks, pretending they have found the ball when in fact they have traded it for a squash.

*(298) The squash was wearing out: The verb stem here is pucabin [pu3abin], translated on the basis of pu3, "wear down" (V.).

*(299) bringing to light its light-colored seeds, as plain as day: This is zaquiram cu ri uzaquilal [zakiram 4u ri uzakilal], literally "becoming-light (or white) then the its-lightness-own." Zakir- is also "to dawn," and zakil is the term for squash seeds; in the translation I have added the word "seeds" and the phrase "as plain as day" in order to make these dimensions more obvious to the reader. Further, zakir- is a metaphor for the sprouting of plants, but the phrase "bringing to light its light-colored seeds" turns that metaphor inside out. When the squash bursts and causes a "dawning" of seeds, it is a "dawning" that comes from the harvested fruit of a plant rather than from the planted seeds. To put it another way, the seeds burst forth rather than being sown.

This passage probably has an astronomical dimension as well. Keeping in mind that Hunahpu and Xbalanque, in their Venus or ballplayer aspect, cannot stray from the zodiac, we may speculate that the splattered squash seeds correspond to a constellation, and that this constellation is closer to being "in bounds" with respect to the zodiac than the oaks (or acorns) discussed in note *(296). The

Pleiades are within the zodiac, but they would seem to be accounted for by the Four Hundred Boys. But the seeds of the burst squash could at least be somewhere near the Pleiades, since the Four Hundred Boys may be rabbits (see under their name in the Glossary) and since it is a rabbit who leads the Xibalbans away from the ball court.

*(300) if we dumped their bones in the canyon: T. J. Knab informs me that in the lore of contemporary Nahuatl speakers in the Sierra de Puebla, this is precisely the procedure that would be used to put a permanent and complete end to a person. On the other hand, grinding the bones and putting them directly into water (which is what is finally done with Hunahpu and Xbalanque) would ensure continued life in some form.

*(301) since you would see their faces: This is an allusion to what happened when the head of One Hunahpu was put in a tree.

*(302) sprinkle them: The verb stem here is *icah*, "sprinkle" (B.).

*(303) "You'll never put that one over on us": The verb stem here is *mich* [mi4h], "pluck," but in the present context a literal translation would not make sense in English [see note *(427) for a case in which deception involves literal plucking of the victim].

*(304) They grabbed each other by the arms and went head first into the oven: Hunahpu and Xbalanque do not ascend as the sun and moon until later in Part Three of the translation, but their self-immolation here is obviously the act that opens the way to that event. In Aztec mythology the sun and moon are again a pair of males, Nanahuatzin and Tecuciztecatl, though apparently not brothers. They do not jump into the flames arm in arm; instead, the former jumps in because the latter is afraid to, and then the latter follows out of shame. At first they rise as two identical suns, but then Tecuciztecatl is dimmed and becomes the moon (Sahagun, Florentine Codex, Book 7, pp. 2-7).

*(305) raising their shouts, raising their cheers: Andres Xiloj remarked, "It's like they held a fiesta, complete with a marimba."

*(306) The two of them looked like channel catfish: For the identification of the fish, see the Glossary. There is a classic Maya vase on which a figure that has been positively identified as Hunahpu by Floyd Lounsbury ("The Identities of the Mythological Figures in the 'Cross Group'") is shown in profile with a barbel growing out of his cheek (see illustration: "Sacrifice yet again, even do it to yourselves!"). The scene depicted takes place not far beyond the one in the present passage [see notes *(317)-*(321)]. It should be noted that among the Pokomchi Maya Xbalanque gave his name to a fish of the perch and bass family (see Xbalanque in the Glossary), whose members lack the barbels that characterize catfish and (unlike catfish) have spiny fins. It may be that for speakers of Quichean languages (who include the Pokomchi) Hunahpu manifested as a catfish and Xbalanque as a perch or bass, but it remains to be seen whether their classic counterparts might be sorted out between two different fish.

Taking our cue from the fact that other P.V. episodes involve the establishment of customs by Hunahpu and Xbalanque, we may guess that the casting of their bones in the water (an event they themselves planned) may have established a fishing ritual. Many fishing cultures on the northwest coast of North America, for example- have rituals

in which the casting of fish bones back in the water results in the reincarnation of the fish to which they belonged. When we combine this possibility with the fact that Hunahpu and Xbalanque also established a ritual for the perpetuation of the life of corn plants, it brings to mind the raised-field complex among the classic lowland Maya, who harvested fish from the same ditches that drained their cornfields (see Hammond, *Ancient Maya Civilization*, pp. 160-63). Contemporary Quiches do not link corn with fish, but the founders of the leading Quiche lineages came from the Gulf-coast lowlands, and a later generation of lords obtained the hieroglyphic P.V. from the lowlands.

*(307) vagabonds: This is my translation of meba, given by B. and X. as "poor person"; I have chosen "vagabonds" because Hunahpu and Xbalanque later disclaim any attachment to a particular place. At this point in their career they probably correspond to the so-called "year-bearers" or "possum actors" of the lowland Maya, and this is probably the point at which they earned the epithets Hunahpu Possum, Hunahpu Coyote (see Glossary).

*(308) They seemed unrefined: This is mana chibananta quiuach, literally "not-yet that-get-to-be-done their-faces"; ban uach is an idiom meaning "polished, adorned" (B.).

*(309) Now Xibalba was full of admiration: The "admiration" is cayic, translated on the basis of cai3, "watch admiringly" (B.).

*(310) Next they would sacrifice themselves, one of them dying for the other: This would seem to indicate that either of the twins could assume either role in this act. When the P.V. describes the act, it is Xbalanque who sacrifices Hunahpu, but the classic Maya vase that portrays this scene shows it the other way around (see illustration:

"Sacrifice yet again, even do it to yourselves!"). In terms of consistency within the P.V. the former arrangement makes more sense, since the sacrifice includes decapitation and since it is otherwise Hunahpu who gets dismembered; by this time he has already suffered a decapitation by a snatch-bat, having previously lost his arm to Seven Macaw.

*(311) had to keep coming back: The verb stem here is machcay, translated on the basis of machcai3, "to come and go repeatedly" (B.).

*(312) Feigning great humility: This is quemochochic; B. gives mochochic as "to humble oneself hypocritically."

*(313) they bowed their heads all the way to the ground: This is chiquixulela quiuach, in which the second word is "their faces"; B. gives xulela as "throwing the face on the ground."

*(314) down to the rags, to the tatters: The "rags" are mayoquih, translated on the basis of maquih, "to throw out"; the "tatters" are atziac [a4,iak], which carries this meaning in both classical and modern Quiche.

*(315) their mountain: This is quihuyubal, "their-mountain-place." Huyubal is a metonym for almost any settlement, but especially a fortified town or "citadel" (tinamit), located on a defensible elevation.

*(316) And they showed its roundness: This is xquicoloba cut [xqui4oloba 4ut] chiquiuach, "they-positioned-round-thing then to-their-faces."

*(317) his legs, his arms were spread wide: The verb here is

xperepoxic, apparently a complete (x-), passive (-xic), and reduplicated form of pere-, "to put a wide thing somewhere" (V.); B. has an entry for perrepic, "wide." The limbs of Mesoamerican sacrifice victims were indeed spread wide.

*(318) was smothered in a leaf: This is xcheque [xcheke] chuuach tzalic [4,alic], "stanced in-face-of leaf-wrapping." X. gives 4hekelic as "stop the flow of" and 4,alic as "leaves for wrapping." This line has caused much confusion, but Andres Xiloj found it crystal clear. He commented that 4,alic refers to any leaves used to wrap tamales, of which there are several different kinds.

*(319) "Do it to us! Sacrifice us!": Here Andres Xiloj remarked, "It didn't please them that they were perfectly well; what pleased them was to be butchered."

*(320) "After all, aren't you Death?": Edmonson has pointed out the irony of this statement (The Book of Counsel, p. 138). "Death" is cam here, lacking any suffixes, which leaves it open to various interpretations: caminak, "dead person"; camical, the ordinary term for "death"; or came, "Death" as the proper name of a day on the calendar and of the two highest lords of Xibalba, One and Seven Death. Hunahpu and Xbalanque also played on the name came in an earlier passage [see note *(278)].

*(321) heart sacrifice: The stem here is xaraxo-; B. gives xaraxoh as "cut or open the chest and take out the heart."

*(322) countless ants: This may or may not be metaphorical; if not, it may be that the fate of the vassals of the lords of Xibalba was to become the ants of today. In any case it is very unusual for "vassals" to come downward to get to where their lords are; it would seem that the domain of Xibalba is the reverse of earthly domains, where lords are situated in citadels rather than at the bottoms of canyons.

*(323) no cleanly blotted blood for you: This is chahom quic [4hahom qui4], literally "washed blood." I take this to be a reference to autosacrifice, in which the blood that flowed from self-inflicted pricks and wounds was blotted up with paper or leaves. This is no longer done today, but Andres Xiloj pointed out that it is still said of the Xibalbans that they collect blood that is spilled on the ground- that is, dirty blood.

*(324) just griddles, just gourds, just brittle things broken to pieces: The "griddles" are xot, for toasting tortillas; the "gourds" are acam, translated on the basis of akem, "gourd" (V.); the "brittle things" are chuch, which B. glosses as "delicate, thin"; and "broken to pieces" is xheraxic, translated on the basis of hera-, "crumble" (V.). This list suggests the contemporary ritual of the days Seven 4,ii and Eight Ba4, (Seven Dog and Eight Monkey) at Momostenango, in which novice daykeepers are initiated. On the eve of Eight Monkey, the novice is visited at home by his or her teacher, who breaks a large and previously unused jar and burns copal incense in the shards; the ashes of the copal are put in a small gourd. The next day the shards and the gourd are taken to a shrine called 4huti Zabal or "Little Place of Declaration" and deposited there (see B. Tedlock, Time and the Highland Maya, pp. 65-66 for more details). But this ritual is dedicated primarily to the Mundo (earth deity) and the ancestors; there is no mention of Xibalba in its liturgy. Perhaps the Quiche elite of pre-Columbian times was given

to defaming the indigenous highland Guatemalan religion as Xibalban in the same way that Christian missionaries have since defamed it as Satanic.

*(325) born in the light, begotten in the light: Andres Xiloj pointed out that only human beings can be referred to in this way; note the contrast with "creatures of the meadows and clearings" in the previous sentence. The point is that the lords of Xibalba will henceforth be denied proper human sacrifices.

*(326) the blame is clear: The idiom here is *chac umac*, "to make clear one's sin" (B.).

*(327) And you will hear petitions over headed-up sap: This is *quixtaon puch chuui ri quic* [qui4] *holomax*, "you-listen and over the blood (sap) headed-up." Elsewhere I have translated *qui4 holomax* as "nodules of sap." What this sentence means is that henceforth, when people pray to the Xibalbans, they will burn nodules of the sap of croton trees (see croton in the Glossary) as offerings.

*(328) they are inciters to wrongs and violence: Andres Xiloj commented: "They are the ones who send one to do evil. It is as if, in spirit, they enter us, into the head. I think, 'I'm going to do such-and-such a thing,' but I don't know who put this bad idea into me."

*(329) masters of perplexity: This is *ahlatzab*, consisting of *ah-*, "person or owner of"; *latz*, "embarrassed, perplexed" (B.); and *-ab*, plural.

*(330) crying and calling out: What the grandmother of Hunahpu and Xbalanque does is *coquic caziquin* [co3ic cazi4in], translated literally here, but in both classical and contemporary Quiche the combination of the verb stems *o3-* ("cry") and *zi4-* ("call out"), used in that order, refers to the act of praying. This is generally done in a mildly insistent tone rather than a sorrowful one, but the petitioner is nevertheless thought of as seeking pity; the amplitude of the voice is generally low to moderate, but those who are addressed by a prayer are thought of as being summoned from a distance.

*(331) the corn ears they left planted: These are the corn ears Hunahpu and Xbalanque dedicated when they left for Xibalba. "They left planted" is *xquitic canoc* [canok], "they-plant left," an idiom referring to the establishment of a ritual obligation. Andres Xiloj recognized one of the obligations of the contemporary mother-father (patrilineage head) in this passage: "What was 'left planted' was a custom. They left it 'planted' that because of the corn, they would never be forgotten. Now, this is the *uinel* [a pair of shrines located near a cornfield, one above it and the other below]. When the corn is ripe one has to give thanks, to burn copal in the *uinel*. One gives thanks so that the seeds will have to sprout again; one carries the corn there to have it at the burning place, and when one is finished praying one passes the ears through the smoke of the copal, saying *are 4u ua ru4ux* [this here is that which is its heart]. This is what their grandmother must have done in the Popol Vuh. And after the ears are passed through the smoke they are placed in the center of the house, in the middle of our crop. They are not eaten until another crop is ripe." Although these dedicated ears are not used as seed corn, they are thought of as alive, and it is because "the heart of the corn has not died" that the seed corn is able to sprout and that even the stored corn is able to continue multiplying.

It would seem that Hunahpu and Xbalanque, in addition to their aspects as Venus, year-bearing vagabond actors, and (eventually) the sun and moon, are also maize deities. The rites of the uinel are performed on two successive days bearing the names Queh and 3anil, "Deer" and "Yellowness (or Ripeness)," with the latter being the principal day (B. Tedlock, *Time and the Highland Maya*, pp. 77, 80). There are fixed rites each 260 days on Seven Deer and Eight Yellowness; planting rites are carried out on the Deer and Yellowness days nearest the actual planting time, and harvest rites are carried out on the days nearest the actual harvest. The day corresponding to Yellowness (named Lamat in Yucatec) also figures prominently in the Venus table of the Dresden Codex, where it is the first day of the morning star that begins the third of five full Venus cycles and the first day of disappearance for both morning and evening stars during the fourth Venus cycle. It may be that at least portions of these Venus cycles symbolize the life cycle of the maize plant; indeed, the lowland Maya maize god is actually depicted at the bottom of the page dealing with the third cycle.

*(332) And this was when their grandmother burned something: That is, when the corn dried up (ripened), coinciding with the burning of Hunahpu and Xbalanque in the oven.

*(333) the ears were deified by their grandmother: "Were deified" is xcabauilax [x4abauilax], "complete-deify-passive," which could also be translated "made into an idol," not in the sense of an image but as an object of adoration.

*(334) the corn ears had been placed up above an earthen floor: This is chuui chata [4hata] uleu quitic ui ah, "above bed (or slab or table) earth they-plant to corn-ear," which makes it quite clear that the corn was not "planted" in any ordinary sense of the word- not that one would plant corn ears in the first place.

*(335) their father: Note that the term for father (kahau) is extended to Seven Hunahpu in this passage; he is the younger brother of One Hunahpu, who is the actual father of Hunahpu and Xbalanque. In a sense One Hunahpu (or at least his head) has long since come back to life, but Seven Hunahpu, whose head and body were both buried at the Place of Ball Game Sacrifice, has been dead all this time. Therefore Hunahpu and Xbalanque's attempt at a revival of the dead is directed at Seven Hunahpu.

*(336) he was asked to name everything: The notion here is that articulate speech, with clearly enunciated words, is analogous to a clearly recognizable human face. Seven Hunahpu is not able to articulate the names of all the parts of his face because he has very few parts beyond the ones he does name, having been reduced to bones. The "meat" of his face is irreversibly lost, just as One Hunahpu has said the meat of a dead man's face would be lost.

*(337) each of his former parts: This is ri uhunal puil, "the its-each formerness"; I translated puil on the basis of puhil, "antiquity" (B.).

*(338) "You will be prayed to here": Andres Xiloj saw this as the beginning of the veneration of the dead. He explained that when there is a death in the patrilineage, the funeral rites are not complete until the mother-father goes to the lineage shrines on a Hunahpu day that falls after the actual death. There he prays that the lingering soul of the deceased, which is a spark of light, might

pass on into the cool, dark room of the underworld, from which it may later have the good fortune to rise into the sky. The number of the Hunahpu day is chosen according to the age and importance of the deceased, with a very low number for a small child and a high one for a very old person who occupied important offices. With or without a recent death Hunahpu days are appropriate for visiting the graves of relatives, where prayers are said and offerings are burned in much the same way as at lineage shrines, except that the entire family can go along and make a day of it, taking along a picnic lunch and strong drink.

*(339) "you will be the first to have your day kept": This may refer specifically to the day Seven Hunahpu, but it probably means Hunahpu days in general, regardless of their number prefix.

*(340) "your name will not be lost": Andres Xiloj, who is the mother-father for his own patrilineage, remarked: "This is just the way it is with our family. The first man who lived in this place was named Gaspar Xiloj, but we are still remembering him right now. Gaspar is the first generation, the second is Juan, the third is Sabino, the fourth is Antonio, the fifth is ourselves, but we are still remembering all of them. That's what it's talking about here in the Popol Vuh." He added that ideally, a mother-father would be able to call upon nine or even thirteen generations of predecessors, all of them having lived on the same lands (see the Introduction for a discussion of the naming of predecessors within the P.V. itself). The list of people invoked in prayers should also include the spouses of all these men (with their maiden names); the writers of the P.V. name the women only for the first generation.

*(341) the sun belongs to one and the moon to the other: This is hun cu [4u] quih [3ih] hun nai pu ic [i4] chique, "one then sun one also and moon to-them." The text does not say that they literally became the sun and moon. From the general order of mention of Hunahpu and Xbalanque and the order of mention of the sun and moon in the present passage, it would appear that the sun pertains to Hunahpu and the moon to Xbalanque. But Thompson noted that except for this passage and a contemporary Cakchiquel myth, all the sources on Mayan peoples (including the contemporary Quiche) cast the moon as a woman, and he argued that the male moon of the P.V. was the result of an influence from outside Mayan culture (Maya History and Religion, pp. 234, 368). Lounsbury, following Thompson, argues that Xbalanque in particular is properly a solar rather than a lunar deity, one of his principal pieces of evidence being that among the contemporary Kekchi Maya, one of the names of the sun god is Xbalam3e, in which 3e is "day" and once meant "sun" ("The Identities of the Mythological Figures in the 'Cross Group']"). As for Hunahpu, Thompson associates him with both the sun (Maya History and Religion, p. 234) and Venus (p. 368), whereas Lounsbury casts Xbalanque as "the" Maya sun god and assigns Hunahpu (or the equivalent of Hunahpu at Palenque) to Venus alone.

There are at least three major problems with any attempt to give unambiguous astronomical assignments to Hunahpu and Xbalanque- or to their counterparts at Palenque, the gods designated G-I and G-III. The first is that a single celestial light need not be assigned to a single god; in the P.V., at least, one of the five Venus cycles, the first, is assignable neither to Hunahpu nor Xbalanque but to their

father, One Hunahpu (see the Introduction), and Thompson notes that the classic Maya personification of the sun takes several different forms (Maya History and Religion, pp. 237, 239, 281). The second problem is the converse of the first, which is that a single god need not be limited to a single astronomical assignment. The P.V. treats a given celestial phenomenon as a "sign" (retal) or (in the case of the rising sun) a "reflection" (lemo) of a past event; given that Hunahpu and Xbalanque undergo various transformations and take on various disguises in the course of their adventures, there is no reason to suppose that if the sun and moon (or aspects thereof) are signs or reflections of their past actions, all other celestial phenomena are thereby eliminated.

A third major problem with giving simple assignments to Hunahpu and Xbalanque is that Quiches do not limit the use of 3ih, "sun" or "day," to words or expressions for solar phenomena, and the same may have been true of writers who used glyphic elements meaning "sun" in classic inscriptions. In the P.V. the morning star is called iko3ih, "day (or sun) bringer" (see the Glossary), and contemporary Quiches use 3ih as a figure of speech for the full moon (see the Introduction). A colonial source reports an occasion on which the Quiches "saw three suns in one day" (Carmack, The Quiche Mayas, p. 129); this was probably a day that began with Venus as the morning star and ended with the rising of the full moon. Returning to the P.V., the fact that Xbalanque (or Xbalan3e) may have "sun" in his name need not mean that he is "the" Maya sun god, nor does it disqualify him from having a lunar aspect. And given that balan can mean "hidden" in classic inscriptions and is used to designate human lords who have passed into the underworld at death (Schele, Notebook, p. 118), it could be that Xbalanque was specifically responsible for the night-time sun (the one in the underworld), and that he became visible on the surface of the earth once a month as the full moon. That would leave the daytime sun open to Hunahpu.

*(342) They became the sky's own stars: Earlier we were told that the Four Hundred Boys correspond specifically to the Pleiades.

PART FOUR

*(343) they sought and discovered: The root of the latter verb is canaizah, translated on the basis of caneizah, "discover, find" (B.).

*(344) the animals who brought the food: Andres Xiloj pointed out that all four of these animals eat corn. Of the birds he said, "There are birds that take the kernels from the crop and carry them off to hide them. When the time comes they still know where they are and go to eat them. When they don't find where they left them, a garden is created there."

*(345) Xmucane did the grinding nine times: Andres Xiloj commented: "The first time corn is ground it is broken open. The second time, it is somewhat fine. The third time is finer." He indicated that ordinarily corn would not be ground nine times; that would be very fine indeed.

*(346) the water she rinsed her hands with: This is ha ropenal in the MS.; Andres Xiloj read it as the haa (water) a woman uses to wash off rupenal, which is the corn meal that sticks to the hands during grinding.

*(347) with yellow corn, white corn alone for the flesh: This reminded Andres Xiloj of a saying used today: uhral 3anuach, xolob,

"We are the children [specifically a woman's children] of yellow-faced corn, spotted corn."

*(348) They walked, they worked: The second verb here is xechapanic, literally "they grasped," but Andres Xiloj suggested "worked," since work is done with the hands. Quiches think of the extremities together; walking and using the hands are the physical counterparts of articulate speech. Note that the linking of speech and walking is made explicit in the statement "Isn't your speech good, and your walk?"

*(349) It was as if they were asleep: Note that this passage seems to allude to Genesis, but that it disagrees with Genesis on four crucial points. First, it was only "as if" (quehe) the men were asleep when the women were made, and they were "wider awake" afterward- qui xe4aztahic, "really (or very) they-got-to-be-alive (or awake)." Second, there were four men and then four women, not one and one. Third, the women were not made from parts of men but were made separately from men. Fourth, sexual differences already existed among the gods.

*(350) ladies of rank: This is xoccohauab [xokohauab], literally "women-lords."

*(351) penitents and sacrificers: This is ahquix (sometimes ahquixb) ahcahb [ah4ixb ah4ahb], in which ah- is occupational; V. gives 4ixb as "shame" and E. gives 4ahb as "sacrifice, idolize." 4ixb is probably a verbal form of 4ix, "spine," and 4ahb probably has the same root as 4ahinic, "punish" (X.). The reference is to the penitential autosacrifice of blood, a widespread practice in pre-Columbian Mesoamerica.

*(352) thirteen allied tribes, thirteen principalities: This is oxlahuh uca amac [ama3] oxlahuh tecpan, in which oxlahuh is "thirteen" and ama3 is "tribe." Tecpan is Nahua for "royal house or palace" or "put something in order" (D.); in the Quiche context it seems to be a term for a tribe that is organized under a recognized noble house, but a house that is tributary (at least ideally) to the larger Quiche state. The tecpan list in this passage contains fifteen names rather than thirteen; some of the names may be subdivisions of larger entities, or some may be synonyms, or else the number thirteen is simply an ideal figure rather than a literal count.

That leaves the question of how to translate uca, which requires appeal to the only other passage in the entire P.V. that combines ama3 and tecpan in parallel construction (Part Five, "And Bearded Place is the name of..."): uuc amac [ama3] quib quiticpan [quitecpan] quib, in which quib is "themselves." It stands to reason that uca in the first passage should be the same as uuc in the second passage. By itself the latter form might be read as ukub, "seven," but that is disconfirmed by the fact that there are thirteen uca ama3 in the earlier passage. I translate both uca and uuc as "allied" on the basis of two entries in B.: uuquih [probably uu4ih], "to make a friend," and uuq [probably uu4], "friend"; these forms are probably related to the prepositional root -u4, "with."

*(353) each one a division of that citadel: This is probably a reference to Tulan Zuyua, a place that will not be properly discussed until later.

*(354) And there were mountain people: Here the P.V. follows the lines of Toltecan myths of national origin, exemplified by the claim of the powerful Aztecs (or Mexicans) to a humble past as Chichimec

hunters and gatherers. The ancestors of the Quiches and related tribes will later be described as being "adorned with mere animal hides," and the Quiche ancestors in particular will be described as hunters of deer, birds, and larvae who stay apart from more populous tribes.

*(355) for all the mountain people there was just one language: I have supplied "mountain people" here; the intent seems to be to separate the mountain people (including the Quiche ancestors) from others who were in the east, including "people of many languages."

*(356) They did not yet pray to wood and stone: That is, they had not yet received the objects whose spirit familiars would become their tribal gods.

*(357) lifting their faces to the sky: Andres Xiloj explained: "When one prays, as here, asking for things, one looks to heaven; afterwards, when waiting for the blessing, one looks to earth."

*(358) "as long as there is day, as long as there is light": This is an alternate translation of the line discussed in note *(154) ("in the course of the days"). In the present context Andres Xiloj commented: "Today one says kabe 3ih, kabe zak [our-road day, our-road light]. This is the time that goes forward; it is the road of time, the number of years one is going to live, or the number of times there will be until the end of the world."

*(359) "will it be": This line has been translated as a question because it begins with quita, which B. gives as "what" or "how."

*(360) "a good life and beginning": Andres Xiloj commented: "These words would be used in prayer when someone was setting up a new household."

*(361) they made their fasts: The verb stem here is quilonic, translated on the basis of 3ilonic, translated on the basis of 3ilonic, "avoid, abstain" (X.).

*(362) watching intently: This is zelauachin, translated on the basis of zelauachih, "to view with close attention" (listed under zelevachih in B.).

*(363) He pivoted inside his sandal: The verb phrase here is xubac uloc [xubak ulok], "he drilled hither"; V. gives bak as "to drill." Just as he promised, Tohil gave his followers fire even when others had lost theirs; his "sandal" was presumably the platform of a fire drill. The classic Maya antecedent of Tohil, who also possesses fire, is the personage designated only as G-II or God K in the past literature, but whose name at Palenque is now known to have been Tahil, "Torch Mirror" or "Obsidian Mirror" (Linda Schele and Floyd G. Lounsbury, personal communications); he is typically shown with a burning torch sticking out of the mirror he wears on his forehead. As Michael Coe had previously pointed out (The Maya Scribe, pp. 16, 116), God K is the Mayan cognate of the Nahuatl god named Tezcatlipoca or "Smoking Mirror." The Tohil of the P.V. is like Tezcatlipoca in demanding human sacrifice; it remains to be seen if the same was true of Tahil at Palenque. Tahil often takes the form of the "manikin scepter" (Thompson, Maya History and Religion, pp. 225-26), an object carried by classic rulers (see illustration: "They've come to ask for your fire"). In this form he is like Tezcatlipoca in having only one leg (the other "leg," when present, takes the form of a serpent). This suggests that Tohil may be a manifestation of Hurricane or Hurakan (literally "One leg"); see also note *(516).

*(364) they got no response: The verb here is xeculaxic, "they were [not] answered"; B. glosses cula as "respond."

*(365) place of emergence: This is tzuquibal [4,uquibal], in which -bal is "place of"; V. glosses 4,uc as "spring forth, sprout."

*(366) And then a person showed himself: At this point in the MS. Ximenez, who otherwise confines his own parenthetical remarks to the Spanish translation in the right-hand column of each page, inserts a remark into the left-hand column, otherwise reserved for the Quiche text. As if avoiding an impropriety, he uses Latin, writing "Demonio loquens eis." The writers of the P.V. probably intended their own allusion to Christian demonology in this passage, since they describe the person under discussion as having the wings of a bat and as coming from Xibalba (the underworld), but note that they make this allusion at the expense of the Cakchiquels, the principal rivals of the Quiches, whose god, they say, "looks like a bat." To this day a great many Cakchiquel men wear jackets with a bat motif on the back.

*(367) the representation: This is quexuach [4exuach], literally "substitute-face," which B. glosses as "resemblance" (under the entry for quexel); Andres Xiloj offered the same reading.

*(368) They were simply overwhelmed: This is xa quiculu, in which xa is "just" and qui- is "they"; culu is translated on the basis of culum [4ulum], "dismay" (B.).

*(369) groping along: The verb stem here is chacchot, translated on the basis of chacacha, "to go like a blind person" (B.).

*(370) they had covetous mouths and covetous faces: This is chiquimah quichi [chii] chiquimah quiuach. The combination of mah ("rob") with chii ("mouth") and uach ("face") is an idiom meaning "to be pained by not having something to trade with or something one has need of" (under mah in V.). A more literal translation of the present example would be something like "They had thieving mouths and thieving faces."

*(371) "Wasn't it found and wasn't it revealed": This is a divinatory phrase, much like the one used by Xpiyacoc and Xmucane at the beginning of their divinatory question concerning the making of humans from wood. The verb stems in both cases are culu [4ulu] and rico [riko], "encounter" and "find." In the present context the implication is that those who want fire claim a kinship with those who already have it on the basis of some past divinatory reading rather than on the basis of a clear genealogy. This is what anthropologists call "fictive kinship"; it may have been standard practice in highland Guatemala to include divinatory readings in the negotiation of such relationships.

*(372) "Don't they want to be suckled?": Throughout this passage I follow Edmonson in translating tunic [tuunic] as having to do with suckling (The Book of Counsel, p. 168), a meaning found in both classical and modern Quiche. In the present context the suckling is a metaphor for sacrifice by removal of the heart. It may be the horror of this metaphor that has caused translators to pass over it heedlessly; even Edmonson's note on the subject suggests that mere sacrifice by self-bleeding is meant. The place where Tohil desires to do his suckling is "on their sides and under their arms," which fits with what is known about Mesoamerican heart sacrifice: the incision ran all the way to the sides of the chest (Francis Robicsek

and Donald Hales, "Maya Heart Sacrifice"). The next sentence, "Isn't it their heart's desire to embrace me?" is not only a statement about motivation but a further reference to heart sacrifice. Tohil is no mere suckler of breasts; what he wants from those who embrace him is deep inside the breast, and he wants the whole thing.

*(373) They made no delay: The text has maui xquiquiyaluh, in which I take the second word to be an error for xquiyaluh; yaluh is "to delay oneself" (B.), giving "not complete-they-delay" for the whole phrase.

*(374) This deed had not yet been attempted: The verb stem here is tihou, translated on the basis of tihouic, "try, practice" (X.).

*(375) the new daybringer: "New" is my translation of raxa, which could also be "raw"; I assume that the reference is to the first appearance of Venus as morning star after a period of invisibility.

*(376) they left the east: The verb stem here is canah, "to leave" (B.).

*(377) "where we belong": This is cohtique ui, "incomplete-we-stop"; B. glosses tequeic as "to stop."

*(378) "bleeding your ears and passing a cord through your elbows": The verbs here are hutic, "to let blood" (B.), and ziza, translated on the basis of tzizo, "to sew a seam, to string [like beads]; formerly, to let blood for sacrifice to idols" (B.). The "ears" and "elbows" are xiquin and chuc [4huc]. Ears are well attested throughout Mesoamerica as sites for the drawing of blood in rites of self-sacrifice, but elbows are mentioned only for the Quiche, in both the P.V. and in B. (under the entry for tzizo). Michael D. Coe has pointed out to me that the penis was a primary site for the drawing of blood among the classic Maya. In the present passage chuc (if it is not 4huc) could conceivably be related to chu3a or chu3ab, "strength, energy, vigor" (V. and X.), and thus allude to the penis, but this seems unlikely, given that B. confirms the elbow as a site for drawing blood.

*(379) camping on the road: This is xucanahibeh ri pa be, literally "it was left in the road."

*(380) In unity: This is chiquihunam uach, "in-their-one face," an idiom given in X. as hunam quiuach, "in agreement," and in B. as hunamah uach, "to make friends."

*(381) They were just smelling the tips of their staffs: Andres Xiloj commented: "Perhaps these staffs had some secret. Perhaps they were of a wood like cherry, which has the odor of the fruit."

*(382) packed ... on their backs: The verb stem here is eca [eka], "to carry on the shoulders or back" (B.).

*(383) above a great red river: This is chuui hun nima ca3ha [cakhaa], "on-top one great red-river." Given that the writers of the P.V. usually transcribe both "house" (ha) and "water (or river)" (haa) as ha, this could also be "great red house." Red was perhaps the commonest color for the stuccoed exteriors of Mayan public buildings, going all the way back to the pre-classic.

*(384) on a bare mountain: This is zaqui [zaki] huyub, literally "white mountain," but zaki is sometimes used to mean "plain" (in the sense of unadorned). I take it that the writers mean to contrast the situation of Hacautitz with that of Aulix and Tohil, both of whom seem to be "in a great forest" even though the latter, like Hacautitz, is on a mountain.

*(385) Masses of serpents ... jaguars, rattlesnakes, yellowbites were there in the forest where he was hidden: Today in Momostenango the shrines on the high mountains that bound the community, together with the shrine (atop a very high waterfall) used by those who organize and play parts in the Monkey Dance, are all said to be haunted by dangerous animals. Such animals appear to those whose ritual office does not entitle them to visit a particular shrine; they also appear to those who have a right to visit but have failed to abstain from sexual or violent acts (whether verbal or physical) on the day of their arrival at the shrine.

*(386) they stopped there: The verb stem here is tacotob, translated on the basis of ta3atobic, "to stop and not move forward" (under ta3aba in B.).

*(387) They cried their hearts and their guts out: Asked why, Andres Xiloj said, "They were sad in the darkness, there was no light, no day, no night, all the time it was dark." The Quiche do not think of night as simply "dark" as opposed to "light" [see in the early dawn in note *(69)]. The conditions before the first dawn of the P.V. were so bad that one could not even speak properly of night, with its moon and stars and even a faint trace of dawn, to say nothing of the full light of day.

*(388) the gods who were ... just out in the bromelias, in the hanging mosses, not yet set on pedestals: Today bromelias and hanging mosses (see Glossary) are standard materials in the construction of temporary outdoor arbors or archways for saints; the present passage would seem to mean that the gods were put beneath such arbors, not that they were put up in the trees where bromelias and hanging mosses actually grow. Only later were the gods "set on pedestals," presumably in the "houses" at the tops of pyramids.

*(389) their strategies: This is quichacabal [qui4hacabal], "their-win-instrument."

*(390) Their hearts did not yet harbor ill will: This is mana chilic cayal ta qui4ux, in which mana is "not yet," ta is a further marker of the negative, and qui4ux is "their hearts." B. glosses both chilic and cayal as "ill will, anger."

*(391) they incensed: The verb stem here is zacbiza, translated on the basis of za3bizah, "to incense" and "to wag [a tail]" (B.). In the next sentence I have translated the same verb as "they shook." A pottery censer of the kind used in Mesoamerica must be shaken or swayed back and forth to keep the incense burning.

*(392) it is only his reflection that now remains: What might lie behind this statement is revealed by a contemporary Mopan Maya tale in which Lord Kin (the sun) goes from his home in the east to the center of the sky and then back to the east again; it appears that he goes clear across the sky because he has placed a mirror at its center (Thompson, *Ethnology of the Mayas of Southern and Central British Honduras*, p. 132). To interpret the movements of the sun in this manner is to model it on Venus as morning star, which both rises and sets in the east.

*(393) Tohil, Auilix, and Hacauitz were turned to stone, along with the idols of the puma, jaguar, rattlesnake, yellowbite, which the White Sparkstriker took with him into the trees: The "idols" here are ucabauilal [u4abauilal], "its-god-own," 4abauil being translated elsewhere as "god." The White Sparkstriker is named immediately

after the yellowbite and could be included in the list of beings who are turned to stone, but in terms of what is known about him (or her) today (B. Tedlock, "El C'oxol: un simbolo de la resistencia quiche") it makes much more sense to treat the name as the subject of the sentence that follows it, xa xuchap chi uca [u4ah] rib pa che [chee], "just he/she took that to-accompany him/herself into trees." Today the White Sparkstriker is the keeper of volcanic concretions and ancient artifacts that resemble animals; these objects, which are said to have been petrified when the sun first rose, are called mebil (the same as the name of the shrine in which they are kept) in Momostenango and 4amauil in the eastern Quiche area.

Andres Xiloj commented on the passage at hand as follows: "When all the birds, animals were converted into stone, they remained as mebil. When the moment comes and one is able to acquire one of these, this is the mebil. Birds, rabbits, in sum, all the different kinds of stones. Now the 4oxol [Sparkstriker], this one, yes, he has money, 'tis said. When one has luck, the 4oxol presents himself. If he takes off his shoe and leaves it thrown away, then there is the money; or his little bag- because he has a little bag, and if he leaves it thrown away, there is the money. This is the mebil of a person; it is the luck." Lucas Pacheco said that the 4oxol lost his/her shoe when the sun first rose; the 4oxol escaped petrification by running into the trees, but the shoe did not.

*(394) Perhaps we would have no relief from the voracious animals today- the puma, jaguar, rattlesnake, yellowbite-... if the original animals hadn't been turned to stone: "Voracious animals" is tionel chicop, "biting (or meat-eating) animals." The MS. erroneously adds the White Sparkstriker to the list of animals in this sentence; apparently Ximenez (or a copyist) interpreted the previous naming of the White Sparkstriker (see above) as part of a list of animals and then assumed that the name must be missing from the present list. Andres Xiloj commented: "The 4oxol [Sparkstriker] has to take care of the animals; he doesn't allow them to go out, because they are harmful. He keeps them, he has them in a corral." This is the Sparkstriker in his role as gamekeeper (see B. Tedlock, *Time and the Highland Maya*, pp. 181-87); today the dangerous animals only attack people who have failed in their ritual duties. According to Lucas Pacheco, the corral where the Sparkstriker keeps his animals is located deep within a branch of the cave beneath the ruins of Rotten Cane; in that context they take the form of small stones. The fortunate may be allowed to take some of these; the unfortunate fall into a great, wide mouth.

*(395) And the language has differentiated in the case of the Cakchiquels: In this passage the P.V. presents a theory that linguistic differentiation correlates with differences in the names originally assigned to tribal gods. The linguistic observations are themselves quite accurate (see the Introduction).

*(396) their stay: This is quiabulic, translated on the basis of yabulic, "to stop" (B.).

*(397) the masking of Tohil: The "masking" is cohbal, "mask-instrument," apparently referring to the deer costumes discussed later.

*(398) they bowed down: The verb here is uonouoh, "contract, as in joining the chin with the knees" (B.).

*(399) Now it was only a manifestation of his genius that spoke when the penitents and sacrificers came before Tohil: That is to say, the words came not from the stone itself but from an apparition of its spirit familiar, which in this case would be a youth.

*(400) All they burned before their gods was resin, just bits of pitchy bark, along with marigolds: That is to say, they burned things gathered in nature rather than proper copal (see Glossary). The resin is 3ol, which may be gathered in gummy nodules from the trunks of various trees. The bits of pitchy bark are rachak nooh, literally "leavings of pine resin," pieces of bark on which a hard red resin has been formed as a result of the holes bored by worms. The species of marigold in question is a common roadside herb (see Glossary). According to Andres Xiloj, all of these things are burned as offerings today in Momostenango, but they constitute a poorer offering than copal. Earle reports the use of marigolds in the eastern Quiche area as well ("La etnoecologia quiche"), and I have seen the unburned remains of bits of bark at a shrine near Chichicastenango.

*(401) Do not reveal us to the tribes: Andres Xiloj compared this hiding of the gods (or the stones that contain their geniuses) to the proper treatment of the valuable objects that are called mebil in the Quiche dialect of Momostenango: "These stones are like mebil. When one finds one, one must not show it to another person, because it's for oneself directly. There are persons who find some little things; they may show them to others, but this mebil won't allow it, now it won't give good fortune to the person who found it. It withdraws. If there is some little thing, an ancient coin found in the woods, or a stone, then one must guard it." See also note *(68).

*(402) "they search for us": This is coh3a3anih rumal, "us-watch-closely by-them"; the verb stem is translated on the basis of 3a3alinic, "ambushed, surveyed closely" (Q.).

*(403) "don't you let us be hunted down": This is maui cohiralahobizah, "not incomplete-us-you-hunt (or trap)-cause."

*(404) "female deer and female birds": "Female" is xnam here; V. gives xnam as "female deer," but in the present passage xnam appears as an adjective with both "deer" and "birds": xnam queh xnam 4,iquin.

*(405) "deer costumes": These are u queh at the first mention and cu queh thereafter. B. gives cuu as "clothing"; it should probably be 4uu on the basis of its resemblance to 4ul, which several other sources gloss as "clothing."

*(406) "They belong to us already": This is a reference to the long-standing promise the tribes made in order to get fire, namely, that they would allow themselves to be "suckled"- that is, to have their hearts cut out.

*(407) they would then go to anoint the mouth of the stone of Tohil or Auilix with the blood of the deer or bird: In the eastern Quiche area today, the mouths of stones (now called 4amauil rather than 4abauil as here) are more commonly given drinks of distilled liquor than of blood, but the blood of sacrificed chickens is sometimes given in the area of Chichicastenango. Drinks of liquor are also put into the mouths of saints. Ideally the liquid offered should quickly disappear, as if actually swallowed by the stone or saint; in the words of the P.V., "And the bloody drink was drunk by the gods."

*(408) just the larva of the yellow jacket, the larva of the wasp,

and the larva of the bee: Andres Xiloj described these insects, the uonon, zital, and akah, as follows: "The uonon is large and striped yellow and black; there is honey in its hive, and it stings. The zital is bigger and has red stripes. Its bite is more serious than that of the uonon; it causes a large swelling and one could even die. It, too, has honey. The akah is small, a little bigger than a fly, and stings. It makes a nest, with thousands of akah. If one can get it down with a stick the akah stay up there, then one can get whatever pieces of honey there are." At present the larvae are eaten only in the case of the akah.

*(409) "Your right": This is icolbal iuib, in which i- is "you" and iuib is yourselves" (both plural familiar); B. gives colbalib as "liberty." This is a reference to the agreement the tribes made to allow themselves to be sacrificed (see the next note).

*(410) the suckling: This is ri 4,um; some have taken it to be "pelt," but I translate it on the basis of tzumah [4,umah], "to suckle" (B.), and take it to be a further reference to the "suckling" (heart sacrifice) pledged by the tribes (see the previous note).

*(411) the tracks were merely those of animals: This is cacan [cakan] ri xa quipich, "their tracks that just their feet," in which "feet" (pich) is specifically "the feet of quadrupeds" (V.).

*(412) dark and rainy: This is quecal [3ekal] hab, literally "black rain," but referring (according to Andres Xiloj) to a storm that is so intense that the sky gets very dark. This supports the notion that Tohil is an aspect of Hurricane [see note *(363)], who caused a "black rain" when he destroyed the wooden people. In the view of Lounsbury (personal communication), Tahil, the classic equivalent of Tohil at Palenque, was also a rain god.

*(413) misty and drizzly: This is muzmul hab, "misty rain." Andres Xiloj explained: "These are days when it doesn't rain strongly; instead the drops are small, little bits of water fall. It is muzmul."

*(414) they singled them out and cut them down: The MS. has echalamicat, in which the only certainty is e, "they." My reading is based on chala "to pick out among many" (B.), and (following Edmonson, The Book of Counsel, p. 192) 4at, "cut" (in the sense of "reap").

*(415) "in full blossom": This is chaom, "blossom," a "metaphor meaning beauty" according to B.

*(416) "radiate preciousness": This is zaclocoh [zaklo3oh], a combination of "light" (zak) and "valuable" or "precious" (lo3oh). Andres Xiloj pictured the maidens as twelve to fifteen years old.

*(417) on their hands and knees: This is chacachaxinac [chacachaxinak], with passive and perfect suffixes (-xinak), which I translate on the basis of chacachotic, "go on all fours" (B.).

*(418) Tohil and the others: Here and elsewhere in this story I have supplied "and the others"; the name Tohil is often used to mean all three gods and may be combined with a plural verb prefix.

*(419) there must come a sign as to whether you really saw their faces: Note that when Blood Woman went before the head of One Hunahpu, he gave her a "sign" by spitting in her hand, which made her pregnant; in this case the signs will be quite different, intended not for the women but for their fathers.

*(420) they spotted: This is xil quiuach, in which x- is complete and qui- is "they," translated on the basis of ilauachih, "to look

with attention" (B.).

*(421) on a smooth surface: This is chiyulinic uuach, "on-smooth its-face"; B. gives yulunic as "a smooth thing." The paintings were on "the inside" (upam) of the cloaks, and it was this side that went next to the body of the lord who was then stung by wasps, despite the "smooth surface."

*(422) He turned around: The verb stem here is zolouic, translated on the basis of zololic, "to give turns" (B.).

*(423) unfurling it: This is catzonon ucuxic [u3uxic], literally "he-undresses his-being-covered"; B. gives tzonolic as "undressed." I take it that this lord opened up his cloak so that everyone could see the eagle on the inside of it.

*(424) It then became the profession of Xtah and Xpuch to bark shins: "Bark shins" is my translation of hoxol chec [4hek], based on the comments of Andres Xiloj: "4hek is the shin bone. Hoxol is 'one who wounds.' It is the wound that they [the girls] gave them. A girl or a boy comes to know how the world is [laughs]. Let's suppose we are now old people. We can deceive a girl of fifteen or sixteen years, and there is the wound. The violence. And so a woman can deceive a boy of fifteen or fourteen years, then there it is. The old woman wounded the boy [laughs]. This is hoxol 4hek, 'the wounder of shins.' Only now we say xuporo rakan, 'she burned his legs.'"

*(425) those spirit boys: I have supplied "spirit" to make it clearer that the reference is to Tohil, Auilix, and Hacauitz.

*(426) their fortress: Ximenez translates catem as "fortification" here; B. gives cateh as "to block passage."

*(427) Their eyebrows were plucked out, along with their beards: The "plucking" here is mich [mi4h], which is elsewhere a metaphor for deception; this time plucking carries both its literal and metaphorical meanings.

*(428) made a fence: The "fence" is coxtun, "wall, castle, fence" (B.). In the next paragraph I translate this same word as "parapet" on the basis of context.

*(429) They just made a palisade of planks and stakes: The materials for this structure are tzalam and chut, respectively glossed as "board" and "stake" by B.; the verb for the making of the palisade is quehbeh, translated on the basis of quehom che, "palisaded" (B.). This was definitely not stonework.

*(430) around their citadel: This is rih quitinamit, which is misleading when translated literally as "its-back their-citadel." Rih, when applied to a house, means the side or sides that face the outside world, whereas uuach, "its-face," means the side or sides that face the patio; I assume that the same scheme was analogously applied to a citadel. That is to say, a citadel turned its "back" to the outside world and its "face" inward. This interpretation is confirmed by the entry for cotoh chirih tinamit in B., literally "surround at-its-back citadel" but glossed (following European reckoning) as the "face of a fortress."

*(431) They surrounded the citadel: The verb stem here is cotcomih, a reduplicated form meaning "surround" (B.).

*(432) eight hundred score, ... thirty times eight hundred: This is my attempt to translate Mayan numbers into English without completely converting them from the vegesimal system to the decimal one; "score" in English is of course a remnant of vegesimal reckoning.

The numbers in the text are cachui and oxchui, "2 x 8,000" and "3 x 8,000," 8,000 being the third power of 20 and filling the same place in a vigesimal system that 1,000 fills in a decimal system.

*(433) they just enjoyed the spectacle: The verb stem here is cai, "to watch admiringly, like watching dances" (listed under cai3 in B.).

*(434) their legs, their arms: As Andres Xiloj pointed out, this is an idiom meaning "all over their bodies."

*(435) they were doubling over: The verb stem here is uon, translated on the basis of uonih, "to be doubled over so that the knees meet the chin" (B.).

*(436) stumbling: The verb stem here is lahahic, a reduplicated form, translated on the basis of lahab, "snare" (B.).

*(437) they were hit: Edmonson has qiyac [kiyak], "poisoned," here (The Book of Counsel, p. 208), but the MS. has cac, which I translate on the basis of ca3o, "hit with stones" (B.).

*(438) gasping for breath: This is quehilouic quepolou, probably an idiom for heavy or laborious breathing; hilouic is "sigh of tiredness" and polou is "breath" (both in B.).

*(439) "our own tribal place": This could be all the way back at the place where they were before arriving at Tulan Zuyua.

*(440) "Again it is the time of our Lord Deer": "It is the time" is my translation of cholan, "order" (in the sense of sequence). "Our Lord Deer" is a reference to one of the twenty day names of the 260-day divinatory cycle. At present a day addressed in prayer is always prefaced with the title "Lord," but the number prefix of the day is specified- for example, ahau hun queh, "Lord One Deer." One of the few contexts in which days may be addressed or referred to by name alone is that of prayers to or stories about the mam, the only four day names that can serve to mark a new solar year. Deer is one of these days, and it seems likely that the present passage refers to the day named Deer in its capacity as a mam. For speculation that the specific day in question was One Deer, see the Introduction.

*(441) "Go see the place where we came from": Given that Jaguar Quitze and the others have already said that they themselves are going to "our own tribal place," it is difficult to interpret their instructions to their sons. Perhaps the answer is that the fathers are going in spirit, whereas their sons will make a pilgrimage in the flesh. Also, the sons will not go until some time later. In any case, the irreducible difference between the journey of the fathers and that later undertaken by the sons is that the former are never seen again.

*(442) "for making requests": This is tanabal [taanabal], "asking-instrument." Andres Xiloj remarked, "It's like a place to burn offerings. But this word is only used for places that are open to the public, not for shrines that only a mother-father [patrilineage head] can visit."

*(443) "fiery splendor": This is my translation of 3a3al, "fire-ness" or "hot-ness," a frequent metaphor for the glories and splendors of lordly dominance over others.

*(444) downtrodden: This is yocotahinac, translated on the basis of yo3o, "step on" (B.).

*(445) All those on Hacauitz: This phrase has been supplied in order to distinguish the inhabitants of the citadel of Hacauitz from the "broken and downtrodden" tribes.

*(446) the day of the bundle: This may have been the day named Deer, mentioned by the departing Quiche ancestors on the same occasion as the presentation of the bundle. Today this day is associated, above all others, with mother-fathers, the priest-shamans who perform rites for lineages, cantons, and an entire town (according to their rank). All mother-fathers, as well as the ordinary daykeepers who rank just below them, possess a sacred bundle, but this bundle contains divining paraphernalia and is opened frequently.

PART FIVE

*(447) who represented all the Cauecs: This is *rech ronohel cauquib*, literally "of (or belonging to) all the Cauecs." There are similar phrases in the sentences dealing with the Greathouses and Lord Quiches in this same passage.

*(448) judge: This is *catol [3atol] tzih*, at present *3atal tzih* (X.) or (in the dialect of Momostenango) *3atbal tzih*, "reap-instrument [of] words."

*(449) From across the sea, they brought back the writings about Tulan. In the writings, in their words, they spoke of having cried: The MS. reads as follows: *xquicam [xqui4am] ula ri chaca [chaka] palo utzibal [u4,ibal] tulán utzibal xe4ha chire quioquinac [quio3inac] chupan chupan quitzih*. The repetitions of *utzibal* and *chupan* make no sense unless we assume a scribal transposition; moving the second *utzibal* to a position immediately after the first *chupan* gives the following reading: "they-brought back the from-across sea its-writings Tulan, they-talked about having-cried inside its-writings, inside their-words." The writers of the P.V. do not specify whether the "writings about Tulan" and the Council Book (P.V.) itself were one and the same, but it seems likely, given that one of the epithets of the Council Book is "The Light That Came from Across the Sea."

*(450) There were actually four mountains: "Mountains" (*huyub*), in referring to settlement, could mean prominences in close proximity and of any size; for symbolic purposes even a small mound can be called "mountain" in Quiche.

*(451) they examined: This is *xeico chiri chuui*, literally "they passed there above," but Andres Xiloj read it as an idiom meaning "to look over."

*(452) But their faces did not die: This is *mana xucam quiuach*, translated almost literally. The reference is to the eschatology set forth by One Hunahpu in his lecture to Blood Woman, in which he says, "Neither dimmed nor destroyed is the face of a lord."

*(453) pain and affliction: This is *caxcol [4ax4ol] rail*, translated on the basis of entries in B., where the two words are treated as synonyms, and on the basis of the entry for *4ax4ol* in X.

*(454) They ground their gypsum, their plaster: This seems to be a metonym for major construction. It may not mean that previous Quiche sites lacked gypsum plaster, but in the present context it combines with such phrases as "excellent citadel," "the root of fiery splendor," and "lords of singular genius" to indicate that the building of Bearded Place represented a whole new level in the rise of the Quiche lords.

*(455) one in each: This is my interpolation.

*(456) and that the other lord be allied with them: This is *xa cu [4u] hun ahau xrah cu [cuu] quib*, "just then one (other) lord

was-wanted to-keep themselves," in which the translation of cuu is based on B. The lord in question here is Iztayul, as the next sentence makes clear; in the present sentence he is being distinguished from Cotuha.

*(457) the Ilocs wanted him as their disciple: This is xrah tihox cumal ilocab, "was-wanted disciple by-them Ilocs"; B. gives tihoxel as "disciple."

*(458) First they invaded the citadel: This is xcoquibeh nabe tinamit, literally "they-entered first citadel"; B. gives oquibeh tinamit as "scale a fortress."

*(459) This was in payment: The "payment" is tohbal, "pay-instrument," which in this context is a sound play on Tohil, the principal god before whom the Ilocs were sacrificed, and on the day name Toh, which was the day of Tohil. This day is still interpreted by diviners as having to do with the payment of debts; in making this interpretation they utilize a sound play on the day name similar to the one used here, moving from toh as a proper name to the verb tohonic, "pay" (see B. Tedlock, *Time and the Highland Maya*, p. 155).

*(460) the canyon and the citadel: This is the first of a number of joint appearances of ziuan, "canyon," and tinamit, "citadel"; taken together, they seem to encompass both a citadel proper (see Glossary), in the sense of a high, fortified place with temples and palaces, and what lies around or below that citadel as well. The effect is to extend the sense of settlement or community beyond its fortified core, with temples and palaces, to the surrounding population, creating a compound concept meaning something like "town" or "city." T. J. Knab (personal communication) suggests that this expression might be the Quiche equivalent of the Nahua term for town or city, which also involves a juxtaposition of the low with the high (in that order): altepetl, compounded of al (from atl), "water," and tepetl, "mountain" (D.). The Quiche also use a water-mountain pairing, but it is applied not to towns but to outdoor shrines, which (ideally) exist in low-high pairs (see B. Tedlock, *Time and the Highland Maya*, pp. 76, 80). In sum, the Quiche and Nahua terms for "town," along with the Quiche pairing of shrines, all involve a juxtaposition of the low and the high, in that order. Both languages construct their term for town by pairing complementary metonyms for a town rather than by reducing the complexity of a town to a unitary abstraction.

*(461) lords of singular genius: "Singular" is humah, translated on the basis of hunah, "make oneself unique" (B.).

*(462) nothing happened to make fools of them: "To make fools" is my translation of alachinak, which is given by B. as "joke."

*(463) or to ruin the greatness: This is xaui banol rech nimal, in which xaui indicates "the same as the aforesaid" and links this clause to the negative one preceding it; banol is translated "to ruin" on the basis of banoh, "disaster" (V.); rech is "of their"; and nimal is "greatness."

*(464) the blossoming of their daughters: The verb stem here is ziih, "to flower" (X.), and fits with an earlier floral metaphor for young women [see note *(415)].

*(465) ate their corn: The verb here is uech, which refers specifically to the eating of foods made of corn, and what I have translated "corn" is ua, which refers to these same things,

primarily to tamales (which are often made of nothing but corn dough in Guatemala).

*(466) our way of being thankful and grateful: The former is camouabal [4amouabal], "thanks-instrument," and the latter is pacubal, translated on the basis of pa3uh, "be thankful for" (B.).

*(467) allied tribes ... principalities: See note *(352) for a discussion of these terms.

*(468) The Lords Cotuha and Plumed Serpent: The Cotuha mentioned here is probably not the one who ruled as Keeper of the Mat at Bearded Place, but the Cotuha who was Keeper of the Reception House Mat when Plumed Serpent was Keeper of the Mat.

*(469) There had been five changes and five generations: This is xroquexoc xrolea puch, in which x- is complete, ro- is "five," and puch is "and." The rest is translated on the basis of quexoc, "change, return," and le, "generation" (both in B.).

*(470) their separation, when they quarreled among themselves, disturbing the bones and skulls of the dead: The scribe got into a tangle here, writing as follows (the items in parentheses were written in the margin with their places of insertion marked by daggers): quihachouic quib ta xqui (tzolbeh quib) tzol (cacbeh) bac uholom caminac xquicacbeh quib. The only way I can make sense of this is to assume that the scribe meant to cross out the final xquicacbeh quib and move it (except for xqui-) to a position immediately following the dangling xqui he had already written, and to insert a missing beh after tzol. In the process he unnecessarily repeated tzol before -beh and then inverted the order of cacbeh and tzolbeh, meanwhile forgetting to cross out the final xquicacbeh quib. If I am right, the text should read, quihachouic quib ta xquicacbeh [xquicakbeh] quib tzolbeh bac [bak] uholom caminac [caminak], "their-sorting-out themselves when they-quarreled themselves turning-over bone its-head dead-person."

*(471) the lord bishop: This is Sr. obicpo, the first Spanish to appear in the text since Part One. The person referred to here is Francisco Marroquin, who blessed the ruins of Rotten Cane in 1539, fifteen years after the place had been burned by Alvarado.

*(472) And now to show their faces: This is cate [4ate] chic chiuachin uuach, "next now that-show his-face," singular in Quiche in order to agree with "each of them" in the previous sentence. The notion of "face" is intimately tied up with personal identity in Quiche; a person's day of birth, for example, is called uuach u3ih, "its-face his/her-day," and a number of Quiche lords were named after the days of their birth. A later passage mentioning the "faces" of lords precedes a list of the names of individual lords. I have put dots following both of these mentions of faces to indicate that graphic elements might be missing here, something that was in the manuscript Ximenez discovered but which he did not reproduce. If that manuscript was like the Book of Chilam Balam of Mani, there may have been a graphic device, at least partially based on hieroglyphic writing, corresponding to each lord. In the Mani book the device is a line drawing of a face with a European crown, a latter-day version of the much more stylized face that composes the glyph meaning ahau or "lord," but the individual name of each lord is written in block letters on a scroll beneath the head rather than rendered hieroglyphically (Eugene R. Craine and Reginald C. Reindorp, The Codex

Perez and the Chilam Balam of Mani, pp. 79-86).

*(473) a crowded life, crowded with petitions: "Crowded" translates molomox, a passive form of molomanic, "many join together" (B.). "Petitions" translates utabal tzih, in which the stem of utabal is taba, "supplicate" (B.), and tzih is "words."

*(474) The birthdays: This is uquih [u3ih] ralaxic, "its-day his-being-born," the phrase still used for "birthday."

*(475) On one occasion: This is hu uuc, a phrase most translators have taken to be hu uuk and to mean "one seven" (literally) and "seven days" (idiomatically). But "seven" should be ukub, not uuk, and there is nothing in the colonial dictionaries of Quichean languages that would allow for its combination with hu. The solution I offer is based on considerations of context and on uu3ul, a form that refers to pauses or interruptions in the normal course of events (V.); I take the present phrase to be hu uu3 and to mean something like "during one interval," or (idiomatically) "one time" or "on one occasion."

*(476) serpentine.... aquiline ... feline: At some moments this passage claims that Plumed Serpent became an "actual" (quitzih) serpent (cumatz) or eagle (cot) or jaguar (balam), but at other moments it would seem that he took on the qualities of these animals. Wherever I translate with English words ending in -ine, the MS. has cumatzil, cotal, and balamil, each of which has a suffix meaning something like "-ness."

*(477) The news spread: This is xpaxin rib utaic, "it-scattered itself its-being-heard."

*(478) he became the sole head: "Sole" here is huquizic, translated on the basis of hu4izic, "only" (V.).

*(479) went down on their faces or flat on their backs: This is xuleic, xpacaic, translated on the basis of xuleic, "throw face down" (B.), and pa4alic, "face up" (X.).

*(480) Their lineages came to be bled, shot full of arrows at the stake: This is xeoc chinamit xelotzic xecacquic chiche [chichee], in which xeoc is literally "they-entered" but idiomatically "it was their time," and chichee is "at-tree" or "at-pole." Xelotzic, in which xe- is "complete-they," is translated on the basis of lotzo, "to let blood" (B. and V.). Xecacquic (with a passive suffix) is translated "they were shot with arrows" by Ximenez; B. has cacoqueh (with an active suffix), "hunt with arrows." This passage confirms that Quiche rituals included arrow sacrifice, a practice better known from central Mexico.

*(481) Projectiles alone were the means for breaking the citadels: The weapon here is 4ha [sometimes 4hab] in the MS., "arrow" and (judging from V.) the spear thrown by an atlatl (spear-thrower). 4ha or 4hab is distinct from cha or chaa, which is the term for any lithic projectile point or cutting instrument and (today) for glass (see 4ha and chaa in V., chab and cha in B., and 4hab and cha in X.). In Mixtec codices, towns (or citadels) are identified by place signs whose basic element is a mountain; the conquest of a town is signified by showing its place sign pierced with a projectile (Mary Elizabeth Smith, *Picture Writing from Ancient Southern Mexico*, p. 33 and fig. 51). The present passage sounds like a literal reading of a codex of this style. It may also be that such codices depict a ritual practice in which the very earth or native stone of a conquered citadel was actually pierced or broken. Whatever the case with

codices, people from the towns conquered by the Quiche came to Petatayub, "carrying in their hands the signs of the citadels," which "look as though they had been split with an axe."

*(482) one ... after another: This is libah chi, given by B. as "step by step."

*(483) the gum tree: I follow Edmonson in reading col che as 3ol chee, "gum (or resin) tree" (The Book of Counsel, p. 236), rather than as a place named "Colche," partly because the name of the place under discussion in this passage is otherwise accounted for.

*(484) carrying in their hands: This is chelah, translated on the basis of 4helenic, "to carry with the hands" (X.).

*(485) cut stones: I have supplied "stones" here, assuming that they are still the subject of the discussion; "cut" is my translation of xcatatahic [x3atatahic], "complete-cut-result-passive." Reading the verb stem as 3ata, "cut," fits with xchoi chi icah, "split with an axe," later on in this same sentence, and with the general sense of the paragraph up to this point.

*(486) there on the flat: Ximenez translates tacah [ta3ah] as "the coast," meaning the long Pacific coastal plain of Guatemala, but this term can refer even to very small flats. See Petatayub in the Glossary for a further discussion.

*(487) "and like doubles for our own lineages": This is quehe pu cacachinamit, which I read as quehe pu kacacab chinamit, "like and our-pair lineages."

*(488) "send for us to come and kill them": Here the text has both nu, the first person singular, and ca [ka], first person plural. The text reads chulibiih chibe nu ca camizah, in which ca is written somewhat above the line, just after nu; for this reason, and because the statement quoted here is attributed to three people, I take nu to be an error the scribe forgot to cross out when he added ca.

*(489) nor did any of them have his own god: That is to say, those who were sent to occupy the conquered citadels did not have stone gods (4abauil) of the kind that were brought from Tulan Zuyua. We do not know whether the previous lords of these citadels had such stones or what might have been the fate of their stones. It is interesting to note that the present-day term 4amauil, which covers large stones found in outdoor shrines, is used only in the region around the ruins of Rotten Cane. Shrines in the western Quiche area lack such stones, and the small stone objects collected for household altars are called by a different term, mebil.

*(490) "the ennobling of the lookout lineages": The "ennobling" is quecalem [quekalem], in which qu- is "their"; B. gives ecalem as "dignity" or "nobility." The root eka- has to do with taking a load on the shoulders; it is used today in various expressions having to do with the taking on of responsibilities, such as those of mother-fathers for people they train as daykeepers, or those of daykeepers for the clients they are currently praying for.

*(491) "we'll induct": This is cachapa [kachapa], literally "we-take-hold-of," but V. notes that chapa is also an idiom for "putting into lordship."

*(492) "which is mine ... which is yours": This translates ue, "of mine," and aue, "of yours (singular familiar)"; others have missed the sense of this sentence, trying to make these two pronouns agree; Edmonson has ui for the ue of the MS. (The Book of Counsel, p. 240).

*(493) in concord: This is hunam uach, literally "equal face," an idiom meaning "to be in concord" (under the entry for hun in B.).

*(494) a fortress around Quiche: In effect, the entire Quiche state was conceived as a gigantic fortress, an enlargement of the citadel at its center.

*(495) house of sacrifice: This is cahbaha, which I take to be composed of cahb, "sacrifice" [see the note *(351)], and ha, "house." Some have taken cahbaha to be a reference to the place called Sajcabaja today, but that is written zacabaha or zaccabaha in the P.V. (see Plaster House in the Glossary) and combines ha with zakcaba, "plaster."

*(496) they nurtured and provided for the Keeper of the Mat and Keeper of the Reception House Mat: The gods are spoken of at various points as needing nurturers and providers; the present passage means that the relationship between lords and vassals was conceived in the same terms as that between gods and humans. Note here that the text goes right on to emphasize the greatness of the lords under discussion.

*(497) everything they saw was clear to them: That is to say, they were able to recover the clairvoyance that the first humans had before "they were blinded as the face of a mirror is breathed upon."

*(498) there was a place to see it, there was a book: The "place to see it" is ibal re, earlier written as ilbal re. With the book the lords are able to recover the full vision of the first humans; such vision, as this passage makes clear, reached into future time.

*(499) a way of cherishing: This is locbal [lo3bal], "love (or desire or value) instrument." Andres Xiloj suggested "something that shows esteem or expresses a sense of value."

*(500) For nine score days they would fast: "Nine score" is beleh uinac [uinak]; Edmonson is correct in reading this as 9 x 20 rather than "nine persons" (The Book of Counsel, p. 243). As he has observed, 180 is half a tun, the 360-day cycle (distinct from the solar year) used by the lowland Maya in reckoning chronologies. The "thirteen score" (or 260) mentioned next is the length of the so-called divinatory cycle, while the "seventeen score" (or 340) is the combined length of the 90- and 250-day segments of the Venus cycle (see the notes to the Introduction).

*(501) They would only eat zapotes, matasanos....: For identifications of the tropical fruits listed here, see the Glossary. Of this kind of diet, Andres Xiloj said, "This was so that they would have strength. This Tecum Umam [hero of Quiche resistance to the Spanish] didn't eat cooked things, only raw [or green] things. Because of this, the people of that time were muscular. Whatever place they went, whatever kind of fruit they found, they ate in place of tamales."

*(502) abstinence: This is auazinic, translated on the basis of auazim, "forbidden" (in B. under auatz).

*(503) there weren't any women with them when they slept: This does not mean that women were not present at all. When people "keep the days" at present, the abstinence always includes sexual contact but never avoidance of all interaction with the opposite sex. If the fasts described here were like those of the first four Quiche ancestors, it was not only the lords who fasted but their wives as well.

*(504) "On this blessed day": This is atooob uquih [u3ih], in which u3ih is "its-day"; B. gives atob as "good."

*(505) "ripeness and freshness": literally 3anal, "yellowness," and raxal, "greenness." Andres Xiloj commented: "When one prays, 3anal means to have corn, to have money, to do business. Yes, it is like 'yellow' but it isn't yellow, but rather that it ripens. Raxal is like a plant that is green, it is developing to give fruit. 3anal is when it ripens."

*(506) "spread thy stain, spill thy drops / of green and yellow": This is a fairly literal translation of chatziloh, chamaquih uloc [cha4,iloh, chama4ih ulok] araxal, a3anal. Andres Xiloj commented: "4,iloh is to use [sexually]; now they are going to have a family. Ma4ih is the sin. The man looks for his companion, there it is. And there is that liquid [semen]. And the green [raxal], there it is, it is the son or daughter, and the yellow [3anal]; and they, in turn, have to produce again. Here it is like a plant, the sowing of a plant, and its ripening."

*(507) "that they might multiply" [chipo3tah]: Andres Xiloj commented: "Po3tah is that it produces. Like a seed: when we cast it, we say to it, capo3 la, 'Come out [sprout], produce more.'" Commenting on the prayer as a whole, he said, "We're using this now; it's just that the language has changed somewhat."

*(508) "may they neither be snared nor wounded, / nor seduced, nor burned, / nor diverted below the road nor above it": "Burned" is paired with "seduced" here because, as Andres Xiloj pointed out, the act of seducing an innocent person may be expressed in the phrase xuporo rakan, "He (or she) burned her (or his) legs." He suggested that a contemporary prayer for safety in the road might include the following lines:

Do not let us fall into the hands
of this person, this neighbor,
who has a pistol, who has a dagger,
who has a knife, who has a revolver;
keep away the legs and arms
of people at the corners, on the streets.

Contemporary prayers also include numerous passages with lists of negative requests; here is an example from a prayer by Esteban Ajxub, a professional ahbix or "singer":

May there be no pain,
may there be no trouble,
may there be no jail,
may there be no prison,
may there be no weakness,
may there be no feebleness,
may there be no stiffness,
may there be no lies and gossip.

*(509) "secrets or sorcery of thine": This is acuil auitzmal, in which a- is your (singular familiar)." Andres Xiloj read cuil as 4uyil, "hidden"; itzmal is translated on the basis of itzim, "witched" (X.). Don Andres commented, "God gives all the good and all the evil."

*(510) "before thy mouth and thy face": Placement "before" someone's "face" is the commonest Quiche way of saying something like English "in" someone's "presence"; sometimes this is elaborated, as here, by adding "mouth" to "face," in which, if "face" is a metonym for the

whole front of the body, "mouth" is a metonym for the whole face. In the present context "mouth" has an additional connotation, given that it refers in part to Heart of Earth, the deity called Mundo today. This is the great Mesoamerican earth deity, the ultimate swallower of all living things, depicted in classic Maya art (in the Palenque relief panels, for example) as an enormous pair of jaws upon whose lips even the feet of great lords must rest in precarious balance, and into whose throat even great lords must fall. Turning to the contemporary scene, daykeepers who visit the cave beneath the ruins of Rotten Cane, the last Quiche capital, speak of the danger of falling into "the open mouth of the Mundo" there, which is said to be more than four yards wide.

*(511) carrying the tribes and all the Quiche people on their shoulders: This is re3alaxic [rekalaxic] amac [ama3] ru4 ronohel queche uinac [uinak], "its-being-carried (on the shoulders) tribe, with all-of Quiche people."

*(512) they became lords: The verb stem here is ahauaric, "to make oneself a lord" (B.).

*(513) gathered in gifts: This is xquicac cochih, in which xqui- is "complete-they"; the rest is translated on the basis of 4a4, "to gather" (E.), and cochih, "to receive a gift." (B.).

*(514) food and drink: This is uain ucaha, translated on the basis of the reading offered by Andres Xiloj, who uses the phrase uaim o4aha, "food, drink," in his own prayers.

*(515) falsify: This is tzuba, translated on the basis of tzubu, "deceive" (B.).

*(516) drops ... that measured the width of four fingers or a full fist across: "Drops" is my translation of racan [rakan], literally "its leg" but also a term for the large drops of rain that begin or end a thunderstorm (see Hurricane in the Glossary). The measurements are cahcab [cah3ab], translated on the basis of cah3a, "measured with the four fingers together" (under 3a in V.), and tuic, translated on the basis of tuuic, "measurement of the fist with the thumb out" (B.).

*(517) green and red featherwork: This is raxon cubulchactic. Raxon, literally "greened," is a synonym for 3u3, "quetzal feather." Cubulchactic is a "thing made of feathers" (G.) or a "garland" (R.); B. lists chactic as "a species of red bird."

*(518) rise and growth: The MS. has unimaric ri unimaric puch, in which the second unimaric is probably an error for uuinakiric, giving "its-big-becoming its-growth and."

*(519) two by two: In the list of Cauec lords that follows, the pairing of lords will not actually begin until the fourth generation.

*(520) succeeds: This is camiheic, which Ximenez translates this way; B. has 4amibeh, "continue" (listed after camibeh).

*(521) the faces ... of each of the Quiche lords: Again, it would seem that something is missing here; perhaps the MS. Ximenez copied had name glyphs for the lords in the list that follows this statement.

*(522) Great Reception House: The MS. repeats this title after Mother of the Reception House and leaves out Great Lolmet Yeoltux, the final name on an earlier list of titles belonging to the Greathouses.

*(523) great in being few: This is nim zcaquin u4oheic, "great few (or little bit) its-being-there."

*(524) the original book and ancient writing: This is simply nabe

oher, "original (or first) ancient" in the MS., abbreviated from a phrase near the opening of the P.V., nabe uuhil, oher tzibam [4,ibam] puch, translated as "the original book and ancient writing." I have repeated the full phrase here to make the echo of the opening more obvious. In general the closing paragraph is rather terse, as if the hand that wrote it were running downhill toward the finish.

GLOSSARY

GLOSSARY

ABOVE THE HOT SPRINGS Chuui miquina [mi3inaa], "above (or on top of) hot water." The town known today as San Miguel Totonicapan, capital of the Department of Totonicapan, formerly located on one of the hilltops above the present site. Once a citadel of the White Earths (Mam Mayas), conquered by the Quiche lords during the reign of Quicab. Today the inhabitants speak Quiche.

ABOVE THE NETTLES Chuui la, "above (or on top of) the nettles." The town more widely known today as Chichicastenango, a Nahuatl name meaning "Nettles Citadel." Formerly a Cakchiquel citadel, conquered by the Quiche lords during the reign of Quicab. Today the inhabitants speak Quiche.

ACUL PEOPLE Acul uinac [uinak], in which uinac is "people." A people belonging to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east.

ANCIENT WORD Oher tzih, also translatable as "Prior Word." A word, whether in the narrow sense of a single word or in the broad sense of an extended discourse, that carries the authority of tradition rather than being mere hearsay. At the beginning the writers of the P.V. claim this authority for their entire work, though they occasionally assign their later statements to hearsay.

ANONAS Cauex [3auex]. A tropical fruit (*Anona* spp.), sometimes called "cherimoya" or "custard apple" in English. Heart-shaped, green outside and creamy inside, segmented, and incredibly sweet.

ARMADILLO Yboy. The name of a dance done by Hunahpu and Xbalanque in their guise as vagabonds.

ARMADILLO DUNG Achac [achak] iboy, "dung armadillo." Crier to the People for the Lord Quiches when Quicab was Keeper of the Mat; possibly a nickname for one of the Lord Quiche lords listed in Part Five of the present translation.

ARM GUARD Pachcab [pa4h3ab], composed of pa4h, "tighten, fasten" (X.), and 3ab, "arm." Part of the equipment necessary for the ball game played in the P.V. (see gaming equipment). The players of the pre-Columbian ball game are usually depicted with a wrapping on the lower arm (often the right arm only).

ATOLE A ixim, "water corn-kernel," is the Quiche term for the corn-gruel drink more widely known in Mesoamerica by its Nahuatl name, atole.

AUILIX Often aulix in the MS. Patron deity of the Greathouse lineage, given to Jaguar Night at Tulan Zuyua and eventually placed in Concealment Canyon, "the great canyon in the forest", in a location that came to be named Pauilix, literally "At Auilix"; the Greathouses were there when the dawn first came. Auilix was also the name of the temple that housed the god Auilix in the citadel of Rotten Cane, at the east side of the main plaza. It consisted of a pyramid

with a single stairway (on the west side) and topped by a single thatch-roofed room with its door facing west across the plaza, toward the temple that housed the god Tohil; at present its ruins are the site of an active shrine. And finally, Auilix or Lord Auilix was the title of the priest of the god Auilix; he was seventh in rank among the lords of the Greathouses and headed one of the nine great houses into which their lineage was divided after the founding of Rotten Cane.

BALL COURT Hom. The I-shaped courtyard in which the Mesoamerican ball game was played. The playing field was paved with stone and bounded by stone walls; the side walls of the narrow part (connecting the two ends of the I) sloped upward in opposite directions from the playing surface, resembling grandstands in appearance but in fact constituting part of the area where the ball was in play. The ball court at Rotten Cane (see Councilor of the Ball Court) ran east-west, but many Mesoamerican ball courts ran north-south. Today hom is the Quiche term for "graveyard," which suggests the deadly nature of the game described in the P.V., at least when it is played in the underworld court of the lords of Xibalba (see also Place of Ball Game Sacrifice). It should be noted that the playing fields of the ball courts in Mesoamerican archaeological sites typically lie on a lower plane than that of the nearby plazas or courtyards.

BARK HOUSE See Thorny Place.

BAT HOUSE Zotzi [zo4,i] ha. One of the tests of Xibalba, fourth or sixth in the sequence of tests. If the test of fire that comes fifth in the later list is discounted as a redundant elaboration based on the eventual immolation of Hunahpu and Xbalanque (which does not take place in a house), then Bat House would come fifth in the later sequence and both sequences would total five houses. These houses may correspond to the five different kinds of complete Venus cycles plotted out in the Maya calendar; each cycle includes a ninety-day period during which Venus has disappeared as the morning star and has not yet reappeared as the evening star. Bat House is also the name of a lordly Cakchiquel lineage whose founders steal fire from the Quiches rather than pledge themselves as sacrifice victims.

BEARDED PLACE Chi izmachi, "at bearded." Citadel of the Quiche lords after they left Thorny Place and before they built Rotten Cane, founded by Jaguar Conache. When the Cauecs, Greathouses, and Lord Quiches left for Rotten Cane, Bearded Place was left to the Tams. The ruins are located one kilometer south of Rotten Cane, separated from the latter by a canyon.

BEARER, BEGETTER Alom 4aholom, "one who bears children, one who begets sons," sometimes pluralized (e alom, e 4aholom). Names or epithets for the gods who make the earth, plants, animals, and humans. The bearing and begetting is metaphorical, since these gods do their work by means of words, genius, and sacrifice rather than through procreation. The same gods are also called Maker, Modeler, and they include Sovereign Plumed Serpent.

BEFORE THE BUILDING Chuua tzac [4,ak], "in-front-of building (of earth or stone)." The town more widely known today as Momostenango, a Nuhua name meaning "Citadel of Shrines," formerly located five kilometers northwest of its present site. Conquered by the Quiche lords during the reign of Quicab.

BIRD HOUSE Tziquina [4,iquina] ha. The palace, at Rotten Cane, of the Keeper of the Reception House Mat, second in rank among all the Quiche lords. Not to be confused with the ah4,iquina ha, "those of the Bird House," a people known today as the Tzutuhil. They speak a language of the Quichean family and are located south and west of Lake Atitlan. They belong to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east.

BLACK ROAD Quecabe [3ekabe]. One of four cosmic roads (see Crossroads and Road of Xibalba).

"BLAME IS OURS, THE" Camacu [kamacu], "our blame or wrong." A song sung by Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar, in which they lamented being separated from the other peoples who were together at Tulan Zuyua before the first dawn. They especially lamented leaving the Yaqui people behind, presumably Nahua speakers of the Gulf coast.

BLOOD GATHERER Cuchuma quic [qui4], "gathering (or uniting) blood." Fourth-ranking lord of Xibalba; by this same name he figures in present-day Quiche tales, in which he heads the banquet table where the other lords of Xibalba bring together all human blood that has been lost by violence or illness since their previous banquet.

BLOOD RIVER Quia or quiquia [qui4 yaa], "blood water." A river that crosses the road to Xibalba (the underworld). This name, along with Pus River, might have been an actual toponym, referring to a large, muddy river of the kind that originates in the Guatemalan highlands and flows into the northern lowlands. For today's Quiche the region that drops off toward the Atlantic in the vicinity of Coban is still an abode of evil.

BLOOD WOMAN Xquic [xqui4], composed of x-, archaic in Quiche but "she of" or "small" in Cholan (K.), and qui4, "blood"; by way of sound play the name also suggests i4, "moon." Daughter of Blood Gatherer, one of the lords of Xibalba, and mother of Hunahpu and Xbalanque. She is probably the moon but perhaps not the full moon (see Xbalanque).

BLOODY TEETH, BLOODY CLAWS Quic [qui4] re, quic rixcac [rix4ak], "blood his teeth, blood his claws." These two lords of Xibalba are omitted from earlier lists but appear as the eleventh- and twelfth-ranking lords in later lists. The situation is just the opposite for Trash Master and Stab Master, who appear only in the earlier lists and may be these same two lords under different names.

BONE FLUTE, BIRD WHISTLE Zubac [zubak], in which zu is "flute" and bak is "bone," and chamcham, possibly a reduplicated form derived from 4hanin, referring to the trilling and warbling of birds (V.). Among the emblems of lordship given out by Nacxit.

BONE SCEPTER, SKULL SCEPTER 4hamia bac [bak], 4hamia holom, "staff bone, staff skull (or head)." Seventh- and eighth-ranking lords of Xibalba.

BRACELET OF RATTLING SNAIL SHELLS Macutax tot tatam, in which macutax is probably from Nahua mahcuetlax, "bracelet" (C.); tot is "snail"; and tatam may be related to totaanic, "shake" (X.). One of the emblems of lordship given out by Nacxit.

BROKEN PLACE, BITTER WATER PLACE Pan paxil, pan cayala [cayalaa], in which pan is an archaic or non-Quiche form of pa, "at" or "in"; paxil probably has the same root as paxinic, "to break" (used with pottery); and cayal may be like modern 4ayil, "bitter," combined

with -aa for "water." A mountain or citadel where the Makers and Modelers got the corn and water needed to make the bodies of the first true humans; its interior was filled not only with corn but with a variety of tropical fruits. The name Broken Place suggests the Nahua myth in which a mountain containing the corn needed for human flesh was split open by a thunderbolt.

BROMELIAS Ec [e4]. Tillandsia spp., air plants abounding in the trees of highland Guatemala, except in arid regions. In some species the flowers have pointed petals and grow at the ends of stiff stalks that jut out from the rest of the plant; hence their use by Hunahpu and Xbalanque in constructing the arms and claws of an artificial crab. Today, bromelias and Spanish moss are among the principal materials used in constructing outdoor arbors for saints.

BUNDLE OF FLAMES Pizom 3a3al, "wrapped fieriness or heat." A sacred relic left to the Quiche lords by Jaguar Quitze. Like the sacred bundles of the North American Indians, a sort of cloth-wrapped ark with mysterious contents.

CACAO Caco. Theobroma cacao, a higher grade of cacao than pataxte. The seeds of cacao, which is native to the New World, were and are used by Mesoamerican Indians to make cocoa and chocolate.

CAKCHIQUELS 3a3chequeleb or ca3chiqueleb, in which che is from chee, "tree"; the first syllable would be "fire" (3a3), judging by the spelling in the P.V., but in the etymology offered by the Annals of the Cakchiquels it is cak, "red." This is the name (still used today) of a people who border the Quiches on the south and east; they speak a language of the Quichean family. They belong to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east. One of the Cakchiquel citadels, Above the Nettles, was conquered by the Quiche lords during the reign of Quicab.

CALABASH TREE Zima [tzimah]; tzimah is Cholan for "gourd" (K.), but in Quiche this is a term for a lowland tree with fruit resembling gourds (Crescentia cujete). It did not bear fruit until the head of One Hunahpu was placed in a fork of its branches. According to Andres Xiloj, the "gourds" of this tree are indeed the size of a human head; they have a woody or bonelike rind and are halved to make bowls.

CALM SNAKE Chamalcan, in which chamal may be derived from chaman, "calm" (V.), and can is Yucatec for "snake." That the writers of the P.V. were aware of the meaning of can is hinted at by the fact that they comment, after mentioning the name chamalcan, "but it looks like a bat." The name of the god of the Bat House lineage of the Cakchiquels.

CANOPY, THRONE Muh, "canopy" (literally "shade"), and 3alibal, "presiding chair" (G.). Among the emblems of lordship given out by Nacxit. The Keeper of the Mat was entitled to have four canopies over him, the Keeper of the Reception House Mat three, the Lord Minister two, and the Crier to the People one.

CAOQUES Caoqueb, an untranslatable proper name with a plural suffix (-b). A tribe whose citadels once included Plaster House, which was among the places conquered by the Quiche lords during the reign of Quicab. Possibly the Caoques are the ancestors of the people who speak the Quichean language called Uspantec today and whose present territory begins only ten kilometers north of Plaster House.

CAUATEPECH A Nahua name of uncertain translation. Keeper of the Reception House Mat in the eleventh generation of Cauec lords.

CAUECS Cauiquib [cauikib], singular cauec [cauek]. First-ranking Quiche lineage, founded by Jaguar Quitze and divided into nine segments or great houses after the founding of Rotten Cane.

CAUINAL See Thorny Place.

CAUIZIMAH Keeper of the Reception House Mat in the seventh generation of Cauec lords.

CAUIZTAN COPAL Cauiztan pom, in which pom is "copal incense" and the rest is a Nahua name of uncertain translation. The kind of copal used by Jaguar Night to incense the direction of the rising sun.

CAVE BY THE WATER Pecul ya; V. gives rupecul as "cave at the edge of a river or lake," and ya is "water." One of the volcanoes made by Zipacna. It may be the Volcan de Agua, eleven kilometers south of Antigua Guatemala, which once had a lake at its summit.

CELEBRATED SEAHOUSE Caha [3aha] paluna, from 3ahar, "be famous"; palu, an archaic or non-Quiche form of plo or palo, "sea"; and na, Yucatec for "house." One of the first four human females; wife of Jaguar Quitze.

CHANNEL CATFISH Uinac [uinak] car, "person fish," identified by G. as the bagre or channel catfish. One of the forms assumed by Hunahpu and Xbalanque. Catfish barbels are shown coming out of the cheeks of the classic Maya equivalent of Hunahpu.

CHIMALMAT A Nahua-derived name in which chimal is from chimalli, "shield." The word chimalli also entered Yucatec; M. gives chimal as "shield" and chimal ek ("shield stars") as "the guards of the north (Ursa Minor)," but the constellation in question might well have included Draco (to form the border of the shield). Chimalmat is the wife of Seven Macaw and the mother of Zipacna and Earthquake. Her astronomical identification fits with Seven Macaw's (he is the Big Dipper).

CHULIMAL A place three kilometers north of Chichicastenango, occupied by vassals of the Quiche lords during the reign of Quicab.

CHURNING SPIKES, RIVER OF Halha ha [haa] zimah; B. has halha ha as "waters that join and revolve"; zimah is "sharpened or pointed things." One of the rivers that crosses the road to Xibalba (the underworld).

CITADEL Tinamit, from Nahua tenamitl, "enclosure, or wall of a city" (D.). A town in a defensible position, whether on top of a hill or mountain or between two canyons; any points of easy access were walled or stockaded. Under Spanish rule most such towns were relocated to weaker sites as a matter of colonial military policy; today tinamit (or tinimit) is the general Quiche term for "town," regardless of location.

CO- 4o- or co- in the MS., probably related to the co- in two forms given in B.: cobic, "to have an epithet," and cobizah, "to praise." Co- begins the names of a large number of Quiche lords (see below), especially the earlier ones, and probably has an honorific effect.

COACUL First-ranking lord in the second generation of Greathouse lords.

COACUTEC Second-ranking lord in the second generation of Greathouse lords. He represented the Greathouses on the pilgrimage to the lord Nacxit.

COAHAU Co-, an honorific prefix, with ahau, "lord." First-ranking lord in the second generation of Lord Quiche lords. He represented the Lord Quiches on the pilgrimage to the lord Nacxit.

COATI Tziz. *Nasua narica*, an omnivorous, tree-dwelling, raccoon-like mammal with a long, flexible nose and a long, erect tail, ranging from southern Arizona to South America; confined to the lowlands in Guatemala.

COCAIB Co-, an honorific prefix, with caib, "two." First-ranking lord in the second generation of Cauec lords. He represented the Cauecs on the pilgrimage to the lord Nacxit. According to the Title of the Lords of Totonicapan, his generation was already the fourth one (starting with Jaguar Quitze) rather than the second.

COCAMEL Crier to the People for the Lords in the seventh generation of Lord Quiche lords.

COCAUIB Second-ranking lord in the second generation of Cauec lords and brother of Cocaib. According to the Title of the Lords of Totonicapan, the generation of these brothers was already the fourth one (starting with Jaguar Quitze) rather than the second. While Cocaib was on the pilgrimage to the Lord Nacxit, Cocauib fathered a child, Jaguar Conache, with Cocaib's wife. On his return, Cocaib nevertheless recognized Jaguar Conache as his own legitimate successor in the first-ranking Cauec lordship.

COCHAHUH First-ranking lord in the third generation of Greathouse lords.

COCHINEAL See croton.

COCOZOM Crier to the People for the Lords in the fourth generation of Lord Quiche lords.

COHAH A people belonging to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east.

COLD HOUSE Teuh ha. One of the tests of Xibalba, also called Rattling House; it is second or third in the sequence of test houses. These houses may correspond to the periods when Venus is invisible between its appearances as morning and evening star (see Bat House).

COMAHCUN Crier to the People for the Lords in the fifth generation of Lord Quiche lords.

CONACHE See Jaguar Conache.

CONCEALMENT CANYON Euabal ziuan, "hiding place (or place of putting into shadow) canyon." A great canyon in a forest; location of Pauilix, where Jaguar Night placed the god Auilix. After Jaguar Quitze had placed the god Tohil on a mountain in this same vicinity, Concealment Canyon received the epithet Tohil Medicine.

COPAL Pom, from proto-Mixe-Zoque (C.). The Quiche term for a type of incense widely used in Mesoamerica to this day, better known as copal (from Nahuatl *copalli*). The basic ingredient is the resin from the bark of the palo jiote tree (*Hymenaea verrucosa*).

CORAL TREE, CORAL SEEDS Tzite [4,ite]. A tree known in Spanish as palo pito (*Erythrina corallodendron*), or its hard, red, beanlike seeds. The seeds are used by Xpiyacoc and Xmucane in performing calendrical divination for the gods who seek the proper materials for the human body; the wood of the tree is then used in making an experimental male figure.

CORNTASSEL HOUSE Tzutuha [4,utuha], composed of 4,utuh, "tassel of the maize plant," and ha, "house." Temple of the patron deity of the Zauic lineage, who was probably called 4,utuh, at Rotten Cane or perhaps at a site now known as El Resguardo, one kilometer to the east. Lord Corntassel House was the title of the first-ranking lord of

the Zauqic lineage, who headed one of the two great houses into which that lineage was divided; he must have been the priest of the Corn tassell god.

CORTES, DON JUAN Lord Keeper of the Reception House Mat in the fourteenth generation of Cauec lords, alive when the P.V. was written. His title was recognized by the Spanish, but he was unsuccessful in his attempt to restore the full powers of the Cauec lords to don Juan de Rojas (Keeper of the Mat) and himself, an effort that took him all the way to Spain.

COTUHA Co-, an honorific prefix, probably with tuh, "sweatbath," and ha, "house." Keeper of the Mat in the fourth generation of Cauec lords. There were two plots against his life, in the second of which he was ambushed at his sweatbath, according to the Title of the Lords of Totonicapan; the latter source does not make it clear whether this second plot succeeded, but the P.V. implies that it did. A second Cotuha was Keeper of the Reception House Mat in the fifth generation of Cauec lords, helping Plumed Serpent to found Rotten Cane. Still other Cotuhas served as Lord Minister in the fifth, eighth, and eleventh generations of Greathouse lords.

COTZIBAHA Co-, an honorific prefix, probably with 4,iba, "write, paint," and ha, "house." Second-ranking lord in the third generation of Greathouse lords.

COUNCIL BOOK Popo uuh or popol uuh, in which pop is "mat," -ol has the effect of "-ness," and uuh (or vuh) is "paper" or "book." In classical Quiche, popol occurs in many phrases in which it has the effect of "public" or "in common"; popoh, a verb built on the same root, was "to hold a council" (V.), and the pronouncements of a council were popol tzih, in which tzih is "word." Popol, literally "matness," would be a metonymic reference to a council, referring to the mat on which a council sat; at the very same time it could be a metaphor for the way councils were structured, weaving diverse interests together. Alternative readings of popol uuh would be "Common Book" or "Council Paper."

COUNCILOR OF THE BALL COURT Popol uinac [uinak] pahom tzalatz, "council person in-courtyard long-and-narrow"; the second time this title is mentioned the name Xcuxeba is added (untranslatable). Title of the lord who was eighth in rank among the Cauecs and head of one of the nine great houses into which their lineage was divided after the founding of Rotten Cane. The ball court at Rotten Cane ran east-west and was located immediately south of the Great Monument of Tohil, with its east end forming part of the west side of the main plaza. The north wall of the ruins of the ball court is at present the site of an active shrine.

COUNCILOR OF THE STORES Popol uinac [uinak] chituy, "council person at-stack"; in B., tuyuba is "put one thing on top of another." Title of the lord who was sixth in rank among the Cauecs and head of one of the nine great houses into which their lineage was divided after the founding of Rotten Cane.

COYABACOH Crier to the People for the Lords in the eighth generation of Lord Quiche lords.

CRIER TO THE PEOPLE Ahtzic uinac [ahtzi4 uinak], "person who [or person whose occupation is] calling out to people"; G. gives ahzi4 as "crier" (in the sense of "town crier"), and tzi4 could be an archaic form of zi4, "to call out." Crier to the People or Crier to

the People for the Lords was the title of the lord who ranked first among the Lord Quiches and headed one of the four great houses into which their lineage was divided after the founding of Rotten Cane. He ranked fourth among the four lords who jointly ruled the Quiche state from Rotten Cane, with the Keeper of the Mat, Keeper of the Reception House Mat, and the Lord Minister above him. A title with a slightly different wording, Lord Crier to the People, pertained to the lord who ranked second among the Greathouses and headed one of the nine great houses of that lineage.

CRISTOBAL, DON Lord Minister in the twelfth generation of Greathouse lords, still in office by September of 1554.

CROSSROADS Cahib xalcat be, "four junction roads"; xalcat refers to any joining or forking of roads, and cahib makes this junction a "crossroads." There are two lists of the names of the four roads that lead away from this junction. The earlier list has Red, Black, White, and Yellow roads; it seems consonant (in terms of both sequence and colors) with the lowland Maya color-directional scheme, in which red is east, black west, white north, and yellow south. The later list has Black, White, Red, and Green roads; this may be a separate scheme for which the Milky Way (rather than the sun's path) is the key. In the P.V. the Black Road is also the Road of Xibalba, which corresponds to the cleft in the Milky Way. Whenever the cleft is visible, the opposite end of the Milky Way is undivided where it intersects the horizon; the undivided part is called White Road (see below), which could explain why Black and White (rather than Red and Black) are paired in the later list of roads. Since characters corresponding to Venus (One and Seven Hunahpu and later Hunahpu and Xbalanque) travel a path that intersects the Black Road, the Crossroads would seem to be the point at which the cleft is crossed by the zodiac. Note that both the Milky Way and the zodiac shift positions with respect to the horizon; we are not dealing so much with a system of cardinal points fixed to the terrestrial plain as with a complex system of navigation.

CROTON 3a3che [cakchee] or chuh 3a3che, "red tree" or "cochineal red tree." A croton called sangre de dragon in Spanish (Croton sanguifluus). Cochineal is a red dye made from scale insects that feed on the prickly pear cactus; in the present context the Quiche word for this dye is used simply as a color term. When the "cochineal red tree" is cut open, the sap that flows looks like blood and dries in scabrous nodules. A large nodule of this sap is passed off as the heart of Blood Woman by the messengers of Xibalba, and the burning of such nodules is established as an appropriate offering to the lords of Xibalba.

CRUNCHING JAGUAR Cotzbalam [co4,balam], composed of co4,ih, "grind" (V.), and balam, "jaguar." One of the monsters who ends the era of the wooden people.

CULBA See Thorny Place.

CUT ROCK Xay (or xoy) abah, possibly composed of choy, "cut," and abah, "rock." The town known today as Joyabaj, occupied by vassals of the Quiche lords during the reign of Quicab.

CUTTING ANTS, CONQUERING ANTS Chai zanic, chequen [4hequen] zanic; chai refers to cutting instruments made of stone. Ants summoned by Hunahpu and Xbalanque to help them cut the flowers of Xibalba; possibly two names for the same species. V. lists he chay as ants that

go in swarms; Andres Xiloj identified 4hequen zanic as very large leaf-cutting ants seen only in the lowlands, called zampopo in Guatemalan Spanish.

DARK HOUSE Que3uma [3ekuma] ha. One of the tests of Xibalba, first in the sequence of test houses. These houses may correspond to the periods when Venus is invisible between its appearances as morning and evening star (see Bat House).

"DAWN OF LIFE, THE" Zac [zak] 4azlem, "light (or dawn) life." An epithet for the P.V., referring to the period after the first light of dawn and of the sun itself, as contrasted with the previous period, which is referred to by the epithet, "Our Place in the Shadows." An alternative reading of the present epithet would be "The Life in the Light."

DAYBRINGER Icoquih [iko3ih in both T. and V.], composed of iko- (or eko-), "to carry a burden," and 3ih, "sun" or "day." The morning star.

DAYKEEPER Ahquih [ah3ih], "keeper (or person of) day (or sun)," referring to diviners who count the days of the 260-day calendar using coral seeds (see above). The daykeepers in the P.V. are the husband and wife Xpiyacoc and Xmucane.

DEER DANCE PLAZA Xahba quieh, "dance-place deer." A place six kilometers northwest of Chichicastenango, occupied by vassals of the Quiche lords during the reign of Quicab.

DRY PLACE See Thorny Place.

EARTHQUAKE Cabracan [cabrakan], "earthquake" in both classical and modern Quiche. This name has been etymologized as cab-, "two," -r-, "his," and -akan, "leg," but "two" is caib in classical Quiche and Cakchiquel and takes the form cabi- as a prefix. The Cakchiquel equivalent of this name, cabarakan, makes it even harder to read "two" and instead suggests caba, "pile up a quantity of earth" (V.). In that case -rakan, which can mean not only "leg" but "trunk" or "pillar," suggests that the body of cabarakan provides the pillar (or pillars) that hold up the earth, and that earthquakes are caused by his movements. Earthquake is the second son of Seven Macaw and the younger brother of Zipacna. He gives his name to a place nine kilometers southeast of Rotten Cane, occupied by vassals of the Quiche lords during the reign of Quicab.

EIGHT CORDS Uahxaqui caam [uahxaquib 4aam]. Keeper of the Mat in the tenth generation of Cauec lords.

EIGHTEEN Uaxalahuh. A place of unknown location, occupied by vassals of the Quiche lords during the reign of Quicab.

EMBLEMS OF LORDSHIP Uuachinel rahauarem, "its-face-agentive his-lord-inchoative-substantive." The symbols of Toltecan lordship given by Nacxit to Cocaib, Coacutec, and Coahau, listed as bone flute, bird whistle; bracelet of rattling snail shells; canopy, throne; gourd of tobacco; head and hoof of deer; nosepiece; paint of powdered yellow stone; parrot feathers, heron feathers; and puma's paw, jaguar's paw (see also under each of these headings).

FALCON Uoc, a bird that probably resembles the laughing falcon (uac) listed elsewhere. A divine name paired with Hunahpu in a prayer. Uoc is also the term used for the bird that serves as a messenger for Heart of Sky, flying over One and Seven Hunahpu, as well as One Monkey and One Artisan, while they play ball, (translated as "falcon"); uac is the term for the bird that later brings a message to Hunahpu and Xbalanque at the same ball court. The two falcons may be

the planets Jupiter and Saturn; given that the uoc seems to be given greater importance, he may be Jupiter, which is brighter than Saturn.

FIRE MOUTH Chicac [chi3a3], "mouth fire." One of the volcanoes made by Zipacna. Generally thought to be the Volcan de Fuego, nineteen kilometers southwest of Antigua Guatemala.

FISHKEEPERS Chah [4hah] car, "guard fish." A people, also known as Sovereign Oloman, who stayed in the east when the Quiche ancestors left, but who later participated in a plot against them while they were settled in the citadel of Hacautitz.

FOUR HUNDRED BOYS Omuch [omu4h] 4aholab, "four-hundred boys (or sons of a male)." The boys who attempt to kill Zipacna but are killed by him instead, eventually becoming the Pleiades (see Hundrath). They die while in a drunken stupor, just as the four hundred rabbits of Nahua mythology do, and like those rabbits they were probably the patron deities of an alcoholic beverage (see sweet drink) and of drunkenness.

GAMING EQUIPMENT Etzabal [e4,abal], "play-instrument." The gear used by One and Seven Hunahpu and by their sons, Hunahpu and Xbalanque, in the Quiche version of the Mesoamerican ball game. The items mentioned in the P.V. include a kilt, yoke, arm guard, panache, headband, and rubber ball (see also under each of these headings).

GENEROUS WOMAN, HARVEST WOMAN, CACAO WOMAN, CORNMEAL WOMAN Xtoh, xcanil [x3anil], xcacau, ix pu tziya, in which the x- or ix is archaic in Quiche but "she of" or "small" in Cholan (K.); toh may be related (given the horticultural nature of the accompanying names) to tohohohenic, "to give in abundance" (X.); 3anil is "yellow" or "harvest"; cacau is "cacao"; and tziya is "corn flour." Apparently these are all names or epithets for the single goddess who guards the crops of One Monkey and One Artisan.

GENIUS Naual. From a Nahua term (usually written nagual) referring to the animal alter ego of a person. In Quiche usage naual is much broader, referring to the spiritual essence or character of a person, animal, plant, stone, or geographical place; this corresponds to English "genius" in its older sense as "spirit familiar." In the P.V. naual is sometimes paired with puz, a word of Mixe-Zoque and possibly Olmec origins (C.) that refers to the cutting open of flesh with a knife and is the primary term for the act of heart sacrifice. When used together, puz and naual are metonyms for shamanic power, referring to the ability to make genius or spiritual essence visible or audible by means of ritual.

GODLY COPAL Cabauil [4abauil] pom, "god copal." The kind of copal incense used by Mahucutah to incense the direction of the rising sun.

GOUGER OF FACES Cotcouach [4ot4ouach], composed of 4ot4o, a reduplicated form of 4oto, "to carve out," and uach, "face." One of the monsters that ends the era of the wooden people. Andres Xiloj gave the modern name as 4ot quiuach, "gouges out their faces," and identified it as a kind of animal, commenting that "they still exist, but I don't know whether in the sky or the forest. They stay in the darkness, and when the sun doesn't shine they come out." In the P.V. the Gouger of Faces accompanies a great, dark rainstorm.

GOURD OF TOBACCO 4uz buz, from Yucatec cuz or cutz, "tobacco," and bux, referring to a small gourd used for keeping tobacco (R.). One of the emblems of lordship given out by Nacxit.

GRANARY Cuha, "granary for maize." The palace, at Rotten Cane, of the Keeper of the Mat, first in rank among all the Quiche lords.

GRANDMOTHER OF DAY, GRANDMOTHER OF LIGHT Ratit quih [3ih], ratit zac [zak], "its-grandmother day (or sun), its-grandmother light." Epithets for Xpiyacoc and Xmucane, despite the fact that Xpiyacoc is described in other contexts as a grandfather (mama). Andres Xiloj explained that a grandmother of "day" and "light" would be a grandmother from the beginning of light "until the end of the world," that is, for as long as light lasts. In this context, then, "day" and "light" are a dyadic and less direct way of referring to what Indo-European languages reduce to the unitary concept of "time."

GREAT ABYSS AT CARCAH Nim xob carcah or nim xol. If these two forms both referred to the same place, and if xob were correct, then the translation of nim xob would be "great respect (or shame)." But if xol were correct, then the translation would be something like "great insertion"; xolobachan is given as "abyss" by B. Finally, carcah suggests the town called San Pedro Carca, located eight kilometers east of Coban on a river that descends rapidly into a canyon and thence to the lowlands. Nim xob carcah is the ball court where One and Seven Hunahpu played (followed later by Hunahpu and Xbalanque) before they were summoned by the lords of Xibalba. The route from this ball court to Xibalba is described as descending very steeply; perhaps it was poised at the edge of the "great abyss." Nim xol (translated "Great Abyss" in Part Four of the present translation) refers to a place located somewhere between Staggering and Place of Advice on the Quiche route of migration. Note that San Pedro Carca is located far to the east of the area presently inhabited by the Quiches- that is, in the direction from which the P.V. says the Quiches came- and that One and Seven Hunahpu are responsible for the morning star, which appears and disappears in the east.

GREAT HOUSE Nim ha. A term for a formally organized and named lineage segment (within a larger patrilineage) with a person of lordly rank at its head, and for the palace that served as headquarters for that segment (see also lineage).

GREATHOUSES Nihaib, composed of ni- from nima, "great"; ha or hai, "house"; and -ib or -b, plural. Second-ranking Quiche lineage, founded by Jaguar Night and divided into nine segments or great houses after the founding of Rotten Cane.

GREAT LOLMET YEOLTUX See Lolmet.

GREAT MONUMENT OF TOHIL Nima tzac [4,ak] tohil, literally "great building [specifically of stone or earth] Tohil." The temple that housed the god Tohil in the citadel of Rotten Cane, on the west side of the main plaza. It consisted of a pyramid with stairways on three sides (all but the west) and topped by a single thatch-roofed room with its door facing east across the plaza, toward the temple of Auilix; at present its ruins are the site of an active shrine. It is not clear whether the Great Monument of Tohil housed the original Tohil stone brought from Tulan Zuyua by Jaguar Quitze or whether that stone was left on the mountain of Patohil (see Tohil) and was represented by some secondary object in Rotten Cane. In today's ritual practice, one can use a shrine close at hand to summon up a deity whose proper residence is another and quite distant shrine. The diviners of El Palmar, a community whose inhabitants emigrated from

Momostenango, have named their local shrines after those of their parent town but address the shrines of Momostenango itself from a distance; they try to make a pilgrimage to the parent shrines once each 260 days. In a like manner, the priest of Tohil at Rotten Cane might have addressed the mountain named Patohil while he was actually on the pyramid of Tohil, making periodic pilgrimages to the mountain itself.

GREAT RECEPTION HOUSE Nima camha [4amha], "great receive-house." Title of the lord who was fourth in rank among the Greathouses and head of one of the nine great houses into which their lineage was divided after the founding of Rotten Cane.

GREAT TOASTMASTER Nim chocoh, "great convener of banquets." E. gives choc- as "invite to a banquet"; G. and V. give chocola a similar meaning, with V. specifying a banquet in which a drink prepared from cacao was consumed. Each of the three ruling Quiche lineages had a lord with this title, and each one of these lords was the head of one of the great houses of his respective lineage. The Great Toastmaster ranked third among the Cauec lords, sixth among the Greathouses, and third among the Lord Quiches; these three Great Toastmasters came together for meetings. They are described as being like fathers and like "givers of birth" to the other lords, and as being Mothers of the Word, Fathers of the Word (see below); they may be the authors of the Popol Vuh. During the reign of Quicab the title of Great Toastmaster was bestowed upon the heads of eleven vassal lineages.

GREAT WHITE PECCARY, GREAT WHITE TAPIR Zaqui [zaki] nim ac [ak], zaqui nima tziz, "white great peccary, white great tapir (or coati)"; in abbreviated form, "Great White Peccary, Tapir" or "Great Peccary, Great Tapir." These are epithets for Xpiyacoc and Xmucane, respectively. That the ak is "great" and "white" identifies it as the white-lipped peccary (Tayasu pecari), which has white jowls and is markedly larger than the collared peccary (Tayasu tajacu); the white-lipped peccary is strictly a lowland species, ak being the Cholan term for the male (K.). That the tziz is "great" and "white" identifies it as the tapir (Tapirella bairdii), which is enormously larger than the coati and has white hair all over its jowls, cheeks, and chest; no Quiche term for the tapir has been reported in dictionary sources, but tzimin is "tapir" in Cholan (K.). Like the white-lipped peccary, the tapir is a lowland species. What the coati or tziz (see coati) and the tapir or tzimin have in common, in addition to the first syllable of their names, is a very long and very flexible snout. What the tapir and peccary have in common, in addition to long, flexible snouts, is that they are ungulates.

GREEN ROAD Raxabe. In a prayer quoted in the P.V., the petitioner asks for the Green Road and does not mention roads of any other color (see also the "greening road" in a previous prayer). The Green Road also appears in the later of two lists of the four cosmic roads, where it replaces the Yellow Road mentioned earlier. In the lowland Maya color scheme green did not correspond to any of the four directions, but to the center, a sort of fifth direction. The Green Road of the P.V. may be a paradoxical fifth road, synthesizing the other four roads or passing vertically through the spot where they cross. See also Crossroads.

GUARDIANS OF THE SPOILS Canchahaleb [can4hahaleb], composed of can-

from canab, "spoils of war" (B.); 4hahel, "guardian"; and -eb, plural. A people belonging to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east.

HACAUITZ Uitz is Cholan for "mountain" (K.) and the rest is of uncertain derivation. Patron deity of the Lord Quiche lineage, carried by Mahucutah from Tulan Zuyua and eventually placed "above a great red river" on a mountain that then took the name Hacauitz. The Lord Quiches were there when the first dawn came, and the same mountain was the site of the first Quiche citadel, built by Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar and abandoned after their deaths. Hacauitz was also the name of the temple that housed the god Hacauitz in the citadel of Rotten Cane, with its back marking the south side of the main plaza. It consisted of a pyramid with a single stairway (on the south side) and topped by a single thatch-roofed room with its door facing south onto a courtyard considerably smaller than the main plaza. Lord Hacauitz was the title of the priest of the god Hacauitz; he was fourth in rank among the lords of the Lord Quiches and headed one of the four great houses into which their lineage was divided after the founding of Rotten Cane.

HANGING MOSSES Atziyac [a4,iak], literally "clothing." *Dendropogon usneoides*, an air plant commonly called Spanish moss in English. See bromelias for a discussion of its use.

HEAD AND HOOF OF DEER Holom pich queh, "head (or skull) hoof deer." Among the emblems of lordship given out by Nacxit.

HEADBAND Uach zot, in which uach is "face" and zot is "to make circular, like a crown or ring" (V.). Part of the gear needed by players of the ball game in the P.V. (see ball court and gaming equipment), probably corresponding to the wreaths or turbans worn at forehead level by the players in the ball-court reliefs of Chichen Itza.

HEART OF SKY, HEART OF EARTH U4ux cah, u4ux uleu, "its-heart sky, its-heart earth." Heart of Sky, sometimes followed by Heart of Earth (which never appears by itself), is an epithet for the god or gods otherwise named Hurricane, Newborn Thunderbolt, and Raw Thunderbolt. These epithets are no longer used in Quiche prayers, but Andres Xiloj compared the notion of u4ux uleu to that of u4ux puuak, "Heart of Metal," which is applied to found objects that are either ancient artifacts or stones that happen to resemble life forms. Some of these objects (especially artifacts shaped by flaking) are said to have been formed where lightning struck the ground, which suggests that it was lightning that provided the conceptual link between the Hearts of Sky and Earth for the Quiches of the P.V.

HEART OF THE LAKE, HEART OF THE SEA U4ux Cho, u4ux palo, "its-heart lake, its-heart sea." These are epithets that may cover all the gods who were in or on the sea before the raising of the earth; they are also known as Maker, Modeler and as Bearer, Begetter, and they include Sovereign Plumed Serpent. Their counterparts, with whom they cooperate in making the earth, are covered by a contrasting pair of epithets: Heart of Sky, Heart of Earth.

HOT SPRINGS See Above the Hot Springs.

HOUSE CORNER Xiquiri pat; in Pokomchi Maya (a language of the Quichean family), xiquin pat is "corner of a house" (Z.). Third-ranking lord of Xibalba. According to Andres Xiloj, it is at the

corners of a house that the evil influences of Xibalba enter. When a house is under construction in Momostenango, eight skulls are painted on the outside walls (two at each corner); they are something like scarecrows.

HULIZNAB One of the volcanoes made by Zipacna; location uncertain.

HUMMINGBIRD HOUSE Tzununiha [4,ununiha], in which 4,unun is "hummingbird" and ha is "house." One of the first four human females; wife of Mahucutah.

HUNAHPU Composed of hun, "one"; ah-, occupational; and pu, from pub, "blowgun" (B.); thus the name as a whole could be read as "One Blowgunner." This is one of the twenty day names of the 260-day divinatory calendar; since a speaker of Quiche no more takes note of the "blowgunner" contained in Hunahpu than a speaker of English takes note of the "Thor" in Thursday, the name has been left untranslated in the body of the present work. The hun is so embedded in the name that in both classical and modern Quiche, the particular Hunahpu day that bears the number one is called hun hunahpu, literally "One One-blowgunner." In the P.V., Hunahpu without any number prefix is the name of the elder brother of Xbalanque; the two of them are twins, the sons of One Hunahpu and Blood Woman and nephews of Seven Hunahpu. Hunahpu and his twin succeed their father and uncle at controlling the morning-star aspect of Venus, playing ball at an eastern site on the brink of Xibalba. Hunahpu is most like his father in losing his head (twice) in Xibalba; as in the case of his father, his detached head is probably the evening-star aspect of Venus. Ultimately he becomes the sun, or at least the sun belongs to him. Hunahpu is also the name of one of the volcanoes made by Zipacna; this could be the Volcan de Amatenango, five kilometers north of the Volcan de Fuego (Fire Mouth in the P.V.), since the Annals of the Cakchiquels describes Hunahpu as standing beside Fire Mouth.

"HUNAHPU MONKEY" Hunahpu coy [4oy]. Title of a tune played on the flute by Hunahpu and Xbalanque; One Monkey and One Artisan, having been turned into monkeys, danced and did acrobatics to it, climbing up over their grandmother's house instead of using the door. Today there are numerous Guatemalan Indian towns whose fiestas include a Monkey Dance. The version done in Momostenango seems to confirm the celestial aspect of One Monkey and One Artisan: two monkeys, with stars on their costumes, climb a high pole and do acrobatics on a tightrope.

HUNAHPU PLACE Chi hunahpu, "at Hunahpu." A place of unknown location, occupied by vassals of the Quiche lords during the reign of Quicab.

HUNAHPU POSSUM, HUNAHPU COYOTE Hunahpu uuch [uu4h], hunahpu utiu. Epithets for Hunahpu and Xbalanque in their guise as vagabond dancers and magicians. The year-bearers of the lowland Maya are the so-called possum actors, strolling players who appear at the transition point between two solar years. Hunahpu and Xbalanque do not assume their guise as performers until shortly before Hunahpu becomes the sun. In the Venus tables of the Dresden Codex, day names with solar implications do not appear until the last two divisions in a series of five Venus cycles, reaching a crescendo in the fifth cycle. In this last cycle, the descent of the morning star into the underworld on a day associated with a year-bearing possum actor (the day Eb in Yucatec and E in Quiche) would correspond to the

appearance of the vagabond Hunahpu and Xbalanque before the lords of Xibalba.

HUNDRATH Motz, the Pleiades; the astral form of the Four Hundred Boys. Motz appears to be an archaic form of omu4h, "four hundred"; for that reason it is translated here as "Hundrath," the archaic (Old Norse) source of English "hundred." In today's Quiche thought the Pleiades symbolize a fistful of seeds. The planting season for high-altitude maize, in March, is marked by evening settings of the Pleiades, which leave them invisible for most of the night; by May, when low-altitude maize is planted, the Pleiades enter a period of complete invisibility. In the P.V., the Pleiades' first fall into the earth corresponds to Zipacna's defeat of the Four Hundred Boys.

HURRICANE Huracan [hurakan]. The god who causes the rain and flood that end the era of the wooden people; his aspects include thunderbolt gods (see Newborn Thunderbolt, Raw Thunderbolt) and the first-ranking patron deity of the Quiche people (see Tohil), and his epithets include Heart of Sky, Heart of Earth (see above). The name can be read as hu[n]rakan, "one-his-leg," but Andres Xiloj pointed out that it could also mean "one out of a group" or "one of a kind," since -rakan is a numeral classifier used in counting things that belong to collectivities. V. gives rakan hab as "the drops of a rainstorm when it begins or ends," apparently referring to the very large drops that precede or follow a thunderstorm; thus hurakan could be an abbreviated form of a phrase meaning "one large raindrop." All of these readings point to the classic Maya god who is one-legged when he takes the form of the so-called manikin scepter, whose names include Hunab Ku or "Solitary God," and who is sometimes referred to as the itz or "drop of liquid" (M.) of the sky, though he causes torrential rainstorms. Another name for this classic god is Tahil, "Torch Mirror" or "Obsidian Mirror" (see Tohil). This name, together with his one-leggedness and his rains, make him cognate, in turn, with the Nahua god named Tezcatlipoca or "Smoking Mirror," who was (among other things) a god of the hurricane. Whatever the etymology of the word hurakan, it may well have included the meaning "hurricane" in the Mayan language spoken in the Gulf coast region where the Quiches came from, a region susceptible to frequent hurricanes. Throughout the West Indies and along the north coast of South America, especially among Carib and Arawakan peoples, there is a god of the hurricane and thunderbolt whose name is cognate with hurakan; in the Guianas he is one-legged. Dictionary compilers favor a Taino (Arawakan) origin for the word "hurricane" (which came into English from Spanish or French) over a Mayan origin, but the Taino word itself could have been borrowed from the Quiche homeland, which was a center of far-reaching maritime trade.

ILOCS Ilocab (singular iloc). One of the allied groups of lineages called "the three Quiches," the other two members being the Quiche proper (comprising the Cauecs, Greathouses, and Lord Quiches) and the Tams.

IZTAYUL Sometimes ztayul or ztayub in the MS.; from Nahua izta, "white, salt," and yol, "heart" (C.). Keeper of the Reception House Mat in the fourth generation of Cauec lords, with Cotuha as Keeper of the Mat. A second Iztayul was Keeper of the Reception House Mat in the fifth or sixth generation of Cauecs, with Tepepul as Keeper of the Mat. A third Iztayul was Lord Minister in the seventh

generation of Greathouse lords. See also Xtayub.

JAGUAR CONACHE Balam conache or simply conache. The first to rule with the title of Keeper of the Mat, coming in the third generation of Cauec lords; a contemporary of Nine Deer, who was Lord Minister in the fourth generation of Greathouse lords. According to the Title of the Lords of Totonicapan, Jaguar Conache was the son of Cocaib's wife but was fathered by Cocaib's brother Cocaub while Cocaib was on his pilgrimage to the Lord Nacxit. Nevertheless Cocaib officially recognized Jaguar Conache as his legitimate successor in the first-ranking Cauec lordship. But after Jaguar Conache's death the descendants of Cocaub were shifted to the second-ranking lordship, supplying Keepers of the Reception House Mat (beginning with Jaguar Conache's own son Iztayul), while the first-ranking title of Keeper of the Mat reverted to the direct descendants of Cocaib.

JAGUAR HOUSE Balami ha. One of the tests of Xibalba, third or fourth in the sequence of test houses. These houses may correspond to the periods when Venus is invisible between its appearances as morning and evening star (see Bat House). Jaguar House is also the name of a people belonging to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east.

JAGUAR NIGHT Balam acab [a3ab]. One of the first four human males and founder of the Greathouse lineage.

JAGUAR QUITZE Balam quitze in the MS.; balam is "jaguar" and quitze (or better 4itze) could well be an archaic form of 4iche, "Quiche." One of the first four human males and founder of the Cauec lineage.

JAGUAR ROPES Balam colob, composed of balam, "jaguar"; colo, "rope" (B.); and -b, plural. A people belonging to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east.

JOCOTES Quinom [3inom], also meaning "richness." A tropical fruit (Spondias purpurea), yellow in color and resembling small plums.

KEEPER OF THE BAT MAT Ahpo zotzil [zo4,il], "keeper-mat bat-ness." A Cakchiquel lineage whose god was Calm Snake.

KEEPER OF THE DANCER MAT Ahpo xa [xahil in other sources], "keeper-mat dancer." A Cakchiquel lineage.

KEEPER OF THE MAT Ahpop, "person of [or person whose occupation is] mat," a woven mat being a metonym for a council (whose members sat on a mat or mats) and probably, at the same time, a metaphor for a council (whose members might have been thought of as being interwoven like a mat or asserving to interweave those whom they represented). Keeper of the Mat or Lord Keeper of the Mat was the title of the lord who ranked first among the Cauecs and headed one of the nine great houses into which their lineage was divided after the founding of Rotten Cane. He also ranked first among the four lords who jointly ruled the Quiche state from Rotten Cane, with the Keeper of the Reception House Mat, the Lord Minister, and the Crier to the People for the Lords coming below him. The signs or emblems that accompanied these four titles (or at least the first two of them) were given out by Nacxit, the lord of a "populous domain" located in "the east"; the Keeper of the Mat was entitled to have four superimposed canopies over his head, with the others having three, two, and one, respectively. During the reign of Quicab, the title of Keeper of the Mat was conferred upon the heads of twenty vassal lineages, presumably lineages that were specifically vassals of the Cauecs.

KEEPER OF THE PLUMED SERPENT Ahcucumatz [ah3ucumatz], "person of [or person whose occupation is] quetzal serpent." Title of the priest of the god Sovereign Plumed Serpent at Rotten Cane; he was fourth in rank among the lords of the Cauecs and headed one of the nine great houses into which their lineage was divided after the founding of Rotten Cane. The temple of Sovereign Plumed Serpent was a round tower near the center of the main plaza, halfway between the temples of Tohil and Auilix. Its circular foundation, whose outline is still visible in the pavement of the plaza, is the site of an active shrine.

KEEPER OF THE RECEPTION HOUSE MAT Ahpop camha [4amha], person of [or person whose occupation is] mat receive-house." That the cam- of the MS. should be 4am-, "receive," rather than 3am-, "stairway," is indicated by V. and G., both of whom list an analogous Cakchiquel title as 4amahay. The Keeper (or Lord Keeper) of the Reception House Mat ranked second among the Cauec lords and was the head of one of the nine great houses into which the Cauecs were divided after the founding of Rotten Cane. He ranked second among the four lords who jointly ruled the Quiche state from Rotten Cane, coming below the Keeper of the Mat and above the Lord Minister and the Crier to the People for the Lords. If there was a council connected with the "Reception House Mat," it might have consisted of the Keeper of the Reception House Mat himself (representing the Cauecs), the two Mothers of the Reception House (one each for the Cauecs and Greathouses), and the Minister of the Reception House and the Great Reception House (both representing the Greathouses). If these lords were like the Cakchiquel 4amahay, their business was the collection of tribute.

KEEPER OF TOHIL Ahtohil, "person of [or person whose occupation is] Tohil." Title of the priest of the god Tohil at Rotten Cane; he was third in rank among the lords of the Cauecs and headed one of the nine great houses into which their lineage was divided after the founding of Rotten Cane.

KILT 4,uum, "hide." The protective kilt worn by players of the ball game in the P.V. (see ball court and gaming equipment); this kilt is clearly shown to be a hide in classic Maya art of the lowlands.

LAKE-SEA Chopalo, composed of cho, "lake," and palo, "sea," but pronounced as a single word. In this context "lake" and "sea" are complementary metonyms that together produce a term for all pooled water, but without any final reduction of the difference between lakes and seas. This composite term is used in contemporary Quiche prayers.

LAMACS Lamaquib, in which -ib is plural. A people belonging to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east.

LAUGHING FALCON Uac; its cry is uac co, uac co in the text. In Tzotzil Maya, the laughing falcon is vakos and its cry is vakvon (L.). That vakos and uac are the same bird is confirmed by the fact that Hunahpu and Xbalanque patch the wounded eye of the uac with gum; the laughing falcon has a black patch around the eye. It is amusing to note that the uac of the P.V. catches a snake; the scientific name of the laughing falcon is *Herpetotheres cachinnans*. This bird is obviously closely related to the uoc mentioned elsewhere; both birds are messengers, and there are reasons for thinking the uoc corresponds to Jupiter and the uac to Saturn (see Falcon).

"LIGHT THAT CAME FROM ACROSS THE SEA, THE" Zac petenac chaca palo

[zak petenak 4haka palo], "light come-from-perfect other-side sea." An epithet for the P.V., alluding to the fact that the sons of the first Quiche lords, returning from a pilgrimage to the great lord named Nacxit, "brought back the writings about Tulan" from "across the sea." "Sea" is probably a hyperbole for "lagoon" here; other Quiche documents call the body of water in question both a "lake" and a "sea."

LINEAGE Chinamit, from Nahua chinamitl, "hedge or enclosure of cane plants" (D.). In Quiche this refers to an organized and named patrilineage (or segment thereof) or to its lands; in the P.V. chinamit seems to be synonymous with nim ha or "great house" in most contexts.

LOLMET Each of the three ruling lineages of the Quiche included one lord whose title incorporated this word; in G., lolmay is "he who is sent on business," suggesting "emissary" as a possible translation of Lolmet. Lolmet Quehnay was the title of the lord who ranked seventh among the Cauecs and headed one of the nine great houses into which their lineage was divided after the founding of Rotten Cane. Great Lolmet Yeoltux was the title of the lord who ranked ninth among the Greathouses and headed one of their nine great houses; this title is omitted in the second of the two lists of Greathouse lords. Lord Lolmet or Lolmet of the Lords was the title of the lord who ranked second among the Lord Quiches and headed one of their four great houses.

LORD QUICHES Ahau quiche [4iche]. Third-ranking Quiche lineage, founded by Mahucutah and divided into four segments or great houses after the founding of Rotten Cane.

MACAMOB Possibly from macamo, "to do something suddenly" (V.). One of the volcanoes made by Zipacna; location uncertain.

MACAW HOUSE Caquixaha [cakixaha]. One of the first four human females; wife of True Jaguar.

MACAW OWL Caquix [cakix] tucur, in which cakix is specifically the term for the scarlet macaw. Third-ranking Military Keeper of the Mat for the lords of Xibalba, a messenger. This is clearly the so-called Moan bird of classic Maya vase paintings, who seems to have the head and wings of an owl but the tail of a macaw. Along with three other owl messengers, he may correspond to the planet Mercury (see Shooting Owl).

MAHUCUTAH Possibly ma, "not," with hucotah, "right away, in a moment" (B.), giving something like "nonmomentary." One of the first four human males and founder of the Lord Quiche lineage.

MAKER, MODELER Tzacol bitol [4,akol bitol], consisting of an agentive suffix, -ol, added to two different verb stems. In both classical and modern Quiche, 4,ak- has to do with making things out of clay, plaster, cement, or stone; the objects made range through bricks, walls, monuments, mounds of earth, and buildings of all sizes. Bit-, on the other hand, has to do with making definite shapes out of a pliable and otherwise formless material, as when vessels are shaped out of clay. Andres Xiloj said of 4,ak- (whose agentive form would be 4,akal today), "This is to make or construct, like a building, a wall." Of bit- he said, "This bitic is to form, as when we were small and played with mud; we made forms. Kabitic, 'we form it'." He saw 4,akol and bitol as referring, respectively, to the amassing of clay and then its shaping into forms such as vessels or figures. In

the P.V. these two words are names or epithets for the gods who make the earth, plants, animals, and humans. The same gods are also called Bearer, Begetter, and they include Sovereign Plumed Serpent.

MAKER OF THE BLUE-GREEN PLATE, MAKER OF THE BLUE-GREEN BOWL
Ahraxa la3 [lak], ahraxa tzet, "person-of-blue-green plate, person-of-blue-green bowl." First used as an epithet for Xpiyacoc and Xmucane; later appears in a list of the arts and crafts practiced by their grandsons, One Monkey and One Artisan. The plate and bowl may refer ultimately to the earth and sky; the term raxa covers both the green of a verdant landscape and the blue of the sky. Andres Xiloj pointed out that when the head of a contemporary patrilineage (who is always a diviner) dies, his successor must be installed in office by the head of a neighboring lineage, who is hired as an ah4hahbal lak, ah4hahbal tasa, "washer of the plate, washer of the cup." Before the new lineage head can take office, the "washer" must go to all that lineage's shrines and clean out the ashes of all the offerings burned by the deceased lineage head. Such shrines are lined and covered with slabs of stone and pieces of pottery, which are spoken of as "plates" and "cups." In the P.V., Maker of the Blue-Green Plate, Maker of the Blue-Green Bowl would refer to Xpiyacoc and Xmucane in their general roles as those who look after (and even create) shrines, or it might refer to pottery vessels used for burning incense rather than to shrines as such.

MARIGOLD Yia [iya]. A species of marigold called pericon in Guatemalan Spanish (*Tagetes lucida*), a common roadside herb in the highlands, with all-yellow flowers. In the P.V. (as among today's Quiche) the burning of marigolds, together with yarrow (see below), constitutes a more modest offering than the burning of copal incense.

MATASANOS Ahache [ahachee]. A tropical fruit (*Casimiroa edulis*), large, pulpy, thin-skinned, yellow inside and chartreuse outside; called matasanos in Guatemalan Spanish.

MEAUAN The mountain beneath which Hunahpu and Xbalanque defeated Earthquake. Possibly located within the great bend of the Rio Negro or Chixoy, north of Rabinal.

METEOR Cabicac or chabicac [4habi3a3], "globe of fire" (T.), literally "arrow fire"; a comet, by contrast, is uhe 4humil, "star's tail." A place of unknown location, occupied by vassals of the Quiche lords during the reign of Quicab.

MIDDLE OF THE HOUSE, MIDDLE OF THE HARVEST, LIVING CORN, EARTHEN FLOOR Nicah [ni4ah] ha, nicah bichoc [bichok], cazam [4azam] ah, chatam [4hatam] uleu, "middle house, middle shucked-corn, living corn-ear, bed (or slab) earth"; the gloss of bichoc is from B. When Hunahpu and Xbalanque left their grandmother to go to Xibalba, they "planted" ears of corn in the middle of their house, up above its earthen floor. For their grandmother, the drying (or ripening) and renewed sprouting of corn served as a sign of their death and rebirth, and she burned copal incense before ears of corn as a memorial to them. As Andres Xiloj pointed out, her act corresponds to the present-day customs of a patrilineage shrine called the uinel, located near a cornfield.

MIDDLE OF THE PLAIN Nicacah tacah [ni4ah ta3ah], "middle plain." Name of the god received by True Jaguar at Tulan Zuyua.

MIDMOST SEERS Nicuachinel [ni4uachinel], composed of ni4, "middle"; uachin, "see with one's own eyes" (V.); -el, agentive. A term for

diviners, applied both to Xpiyacoc and Xmucane and to Xulu and Pacam. It could mean that a diviner sees into the middle of things, or it could mean that a diviner recovers the vision that the first humans had when they could see everything from the spot where they were, without having to walk around.

MILITARY KEEPER OF THE MAT Rahpop achih, "its-keeper-mat soldier." Title held by the four owls who served as messengers for the lords of Xibalba. One of the titles conferred upon the heads of vassal lineages during the reign of Quicab.

MILITARY MINISTER U3alel achih, "its-minister soldier." One of the titles conferred upon the heads of vassal lineages during the reign of Quicab.

MILITARY WALLS, MILITARY CORNERS Rahtzalam [rah4,alam] achih, utzam [utzaam] achih, "his-keeper-wall soldier, his-corner (or angle) soldier." 4,alam is "wall" in V., while other sources give "plank"; the "walls" and "corners" here are undoubtedly those of a stockade. Military Walls and Military Corners are among the titles conferred upon the heads of vassal lineages during the reign of Quicab; they seem analogous to the "sides" and "corners" of the sky-earth, suggesting that a fortified town was seen as a microcosm.

MINISTER 3alel, possibly from 3alunel, "one who holds something in his arms." Lord Minister was the title of the lord who ranked first among the Greathouses and headed one of the nine great houses into which their lineage was divided after the founding of Rotten Cane. He also ranked third among the four lords who jointly ruled the Quiche state from Rotten Cane, coming below the Keeper of the Mat and the Keeper of the Reception House Mat and above the Crier to the People for the Lords. During the reign of Quicab, when Quema was Lord Minister of the Greathouses, the title of Minister was conferred upon the heads of twenty vassal lineages, presumably lineages that were specifically vassals of the Greathouses.

MINISTER FOR THE LORDS 3alel ahau, "minister lord," with ahau referring, as it does when it ends other titles, to the Lord Quiche lineage. One of the titles conferred upon the heads of one or more vassal lineages during the reign of Quicab, when Armadillo Dung was Lord Crier to the People for the Lord Quiches. Presumably these would have been vassals of the Lord Quiches in particular, although Minister is not listed as one of the titles actually held by their lineage.

MINISTER FOR THE ZAQUICS 3alel zaquic. Title of the lord who ranked second among the Zaquics and headed one of the two great houses into which their lineage was divided after the founding of Rotten Cane. The Zaquics may not have acquired this title until the reign of Quicab, two generations after the founding of Rotten Cane, since it is elsewhere listed as one of the titles conferred on the heads of vassal lineages during the reign of Quicab. It could also be that the Zaquics themselves ennobled one or more lineages subordinate to themselves, titling them Ministers for the Zaquics in order to distinguish them from the Ministers created by the Greathouses at this same time.

MINISTER OF THE RECEPTION HOUSE 3alel 4amha, "minister receive-house." Title of the lord who ranked third among the Greathouses and headed one of the nine great houses into which their lineage was divided after the founding of Rotten Cane.

MIXTAM COPAL Mixtam pom, in which pom is "copal incense" and the

rest is a Nahua name of uncertain translation. The kind of copal incense used by Jaguar Quitze to incense the direction of the rising sun. Andres Xiloj suggested that this might be Ixtahuacan pom, a kind of copal from the area of Ixtahuacan and Cuilco (Mam towns) that is highly valued by the Quiche today.

MONKEY HOUSE Batza [ba4,a], composed of ba4,, "howler monkey," and ha, "house." Lord Minister in the sixth generation of Greathouse lords.

MOTHER-FATHER Chuchcahau [chuchkahau], composed of chuch, "mother," and kahau, "father," but pronounced as a single word. In this context "mother" and "father" are complementary metonyms that together produce the sense of "parent," but without any final reduction of the difference between motherhood and fatherhood. In the P.V., the composite term thus produced is used as a metaphor for the gods called Maker and Modeler and less figuratively for the first four human males, three of whom become founders of patrilineages. In several present-day Quiche towns the heads of patrilineages, who are daykeepers and are also responsible for lineage shrines, are called mother-fathers even though they are all males (see also Mothers of the Word, Fathers of the Word).

MOTHER OF THE RECEPTION HOUSE Uchuch camha [4amha], "its-mother receive-house." Title of the ninth in rank among the Cauec lords (also titled Sovereign Yaqui) and head of one of the nine great houses into which their lineage was divided after the founding of Rotten Cane. The fifth-ranking lord of the Greathouses, who headed one of the nine great houses of their lineage, was also titled Mother of the Reception House.

MOTHERS OF THE WORD, FATHERS OF THE WORD Uchuch tzihi, ucahau [ukahau] tzihi. An epithet of the Great Toastmasters, suggesting that they were ritual heads of patrilineages (see mother-father) and that they may have been responsible for the Word (see Ancient Word) that is set forth in the Popol Vuh itself.

MOUNTAIN-PLAIN Huyubtacah [huyubta3ah], composed of huyub, "mountain (or hill)," and ta3ah, "plain (or flat)," but pronounced as a single word. In this context "mountain" and "plain" are complementary metonyms that together produce the sense of "earth," but without any final reduction of the difference between mountains and plains. In modern Quiche ritual language, at least, huyubta3ah (or huyub by itself) is a common metaphor for the human body. In the P.V. the gods conceive humans at the same time they conceive the earth, but a great deal of time passes before they succeed in actually making humans.

NACXIT From Nahua nauī, "four," and ikxītl, "foot" (C.). In Nahua sources this is a title held by the king named Quetzalcoatl; in the Book of Chilam Balam of Chumayel, a lord named Nacxit Xuchit is mentioned in connection with events that sound like part of the Nahua legend of Quetzalcoatl. In the P.V. Nacxit gives out the emblems of lordship to Cocaib, Coacutec, and Coahau, who come to him on a long pilgrimage.

NANCE Tapal. A tropical fruit (Byrsonima crassifolia), small, yellow and purple.

NECK CANYON Cu [ku] ziuan, "neck, narrow place" (from kul) "canyon." A canyon crossed by the road to Xibalba (the underworld).

NET WEAVE TRIBE Amac [ama3] uquin cat [4at], composed of ama3,

"tribe"; u-, "its"; quin, "do the warp in weaving" (B.); and 4at, "net." Place where the Ilocs gave a home to their patron deity, not far from where the Tams, Cauecs, Greathouses, and Lord Quiches did the same; also the place where the Ilocs were when the dawn first came.

NEWBORN NANAHUAC, RAW NANAHUAC Chipi [4hipi] nanauac, raxa nanauac, in which 4hipi is "youngest child"; raxa is "green, blue" or "raw, fresh"; and nanahuac seems to be the Quiche equivalent of Nanahuatzin, who in Nahua mythology throws the thunderbolt that opens up the mountain filled with the corn needed to make human flesh (see Broken Place). In the P.V., Newborn Nanahuac and Raw Nanahuac are alternative names for Newborn Thunderbolt and Raw Thunderbolt.

NEWBORN THUNDERBOLT, RAW THUNDERBOLT Chipa [4hipa] caculha [cakulha], raxa caculha in which 4hipa is "youngest child"; raxa is "green, blue" or "raw, fresh"; and cakulha is specifically a bolt of lightning (with the accompanying thunder), as contrasted with coyopa, which is sheet lightning (seen in the distance and without distinguishable bolts or audible thunder). Gods who are included under the Heart of Sky, Heart of Earth rubric and make up a threesome when combined with the name Hurricane. Lucas Pacheco recognized their names and said that in today's prayers they also go under the names of two archangels, Michael and Gabriel.

NINE DEER Beleheb queh. Lord Minister in the fourth generation of Greathouse lords, when Jaguar Conache was Keeper of the Mat. Another Nine Deer was Lord Minister in the ninth generation. At least the first of these two was apparently born on the day Nine Deer on the divinatory calendar; the second was probably named after the first. Today such a birth date would augur a domineering, articulate, and masculine character with shamanic inclinations, and because of the relatively high number these qualities should be obvious.

NINE DOG Beleheb tzi [4,ii]. Keeper of the Reception House Mat in the twelfth generation of Cauec lords, apparently born on the day Nine Dog on the divinatory calendar. Today, such a birth date would augur confusion, weakness, promiscuity, and ill fortune. According to the P.V. Nine Dog was hanged by the Castilians; other sources have him burned at the stake. In any case he and Three Deer were executed by Alvarado in 1524, immediately following the fall of Rotten Cane.

NOSEPIECE Caxeon, possibly derived from kaxah [3axah], "to run through, as with an arrow" (T.); -on could be the substantive suffix or it could be related to onih, "to nail" (E.). One of the emblems of lordship given out by Nacxit; the Annals of the Cakchiquels mentions that noses were pierced when the emblems were given out but does not refer to the ornament itself. Of the various names given to the emblems in the P.V., caxeon is the most likely candidate as a term for this particular item.

ONE DEATH, SEVEN DEATH Hun came, uucub [uukub] came, in which hun and uukub are "one" and "seven." Came is one of the twenty day names of the divinatory calendar; it shares the same root with such forms as camel, "dead person," but it is not the ordinary term for "death" (that would be camic or camical). One and Seven Death rank first and second among the lords of Xibalba. They are treated in the narrative as two persons, as are One and Seven Hunahpu (see below), but their numbers show that they represent all thirteen possible days bearing the name came, as Andres Xiloj pointed out (see the notes to the Introduction).

ONE HUNAHPU, SEVEN HUNAHPU Hun hunahpu, uucub [uukub] hunahpu. The sons, elder and younger respectively, of Xpiyacoc and Xmucane; One Hunahpu is the father (by Xbaquiyalo) of One Monkey and One Artisan, later becoming the father (by Blood Woman) of Hunahpu and Xbalanque. One and Seven Hunahpu, as their numbers show, represent all thirteen possible days bearing the name Hunahpu (see the notes to the Introduction). They are responsible for Venus in its aspect as a morning star that first rises on a day bearing the name Hunahpu; such a morning star appears at the start of each fifth Venus cycle. One Hunahpu's severed head, when placed in the fork of a tree by the lords of Xibalba, becomes Venus in its aspect as an evening star that first rises on a day bearing the name Came or "Death"; this is the particular evening star that follows after a Hunahpu morning star.

ONE-LEGGED OWL Huracan [hurakan] tucur, "one-his-leg owl." As Andres Xiloj pointed out, owls stand on only one leg at a time. Second-ranking Military Keeper of the Mat for the lords of Xibalba, a messenger. Along with three other owl messengers, he may correspond to the planet Mercury (see Shooting Owl).

ONE MONKEY, ONE ARTISAN Hun batz [ba4,], hun chouen, in which hun is "one"; ba4, is "howler monkey"; and chouen is Yucatec for "artisan" and archaic Yucatec for "howler monkey." The sons of One Hunahpu and Xbaquiyalo; patron deities of flautists, singers, writers, carvers, lapidaries, jewelers, sawyers, carpenters, incense makers, and metallurgists. Hunahpu and Xbalanque (their younger half-brothers) leave them marooned in a tall tree, where they become monkeys; this is also the beginning of their celestial career (see "Hunahpu Monkey"). They probably correspond to the planet Mars.

ONE TOH Hun toh, a day on the divinatory calendar. The god of the Rabinals, declared by the writers of the P.V. to be equivalent to the Tohil of the Cauacs, Ilocs, and Tams.

"OUR PLACE IN THE SHADOWS" Camuhibal [kamuhibal], "our-being-shaded-place." An epithet for the P.V., referring to the period (lasting about two-thirds of the book) before the first sunrise is seen; the following period is referred to by another epithet, "The Dawn of Life." The implication of "shadows" in the present epithet is that the light of dawn and of sunrise were really there (somewhere) all along, but that "our" position as humans with respect to this light was such that we remained in darkness.

PAINT OF POWDERED YELLOW STONE Tatil canabah [3anabah]; tatil may be the same as titil, "bright powder" (B.); 3anabah is an unidentified "yellow stone" (V.) and a paint applied to the body (R.). One of the emblems of lordship given out by Nacxit.

PANACHE Iachuach, B. gives yachuachibeh as "to crown." Part of the gear needed by players of the ball game in the P.V. (see ball court and gaming equipment), probably corresponding to the long bunch of feathers shown attached to the crowns of the heads of the players in the ball-court reliefs of Chichen Itza.

PARROT FEATHERS, HERON FEATHERS Chiyom, "parrot feathers" (R.), and aztapulul, which is partly derived from aztatl, a Nahua term for a white heron (D.). Among the emblems of lordship given out by Nacxit.

PATAXTE Pec. Theobroma bicolor, a lower grade of cacao than cacao proper (or caco in Quiche), more widely known in Mesoamerica by its Nahua name, pataxte. The seeds of pataxte and cacao, which are native to the New World, were and are used by Mesoamerican Indians

to make cocoa and chocolate.

PATOHIL See Tohil.

PAUILIX See Auilix

PERSON OF BAM Uinac [uinak] bam, "person," followed by an untranslatable proper name. Crier to the People for the Lords in the ninth generation of Lord Quiche lords.

PETATAYUB Partly from Nahua petatl, "mat" (C.). A flat place (ta3ah) where a "mountain" (huyub) of shattered stones from conquered citadels was piled up during the reign of Quicab. Ximenez takes this flat to be the south coastal plain of Guatemala, but ta3ah can refer to any level place, down to the size of a cornfield. Petatayub may be the spot known today as Altar Place (chi mumuz), a prominent pile of broken stones on an otherwise stoneless flat eight kilometers northwest of San Pedro Jocopilas. On the south side of this pile is an active shrine.

PLACE OF ADVICE Chi pixab, "at advice (or counsel)." A mountain where the Quiches and other tribes held a council during their migrations. It is a peak, still known by this name, of the Montana los Achiotos, about seven kilometers west of San Andres Sajcabaja.

PLACE OF BALL GAME SACRIFICE Pucbal Chah [puzbal chaah]; B. gives puzbal as "place of sacrifice," and chaah is "ball game." The place where the decapitated body of One Hunahpu and the complete body of Seven Hunahpu were buried by the lords of Xibalba. Probably not a place name, but rather a name for the altar where losing ball players were sacrificed. That such altars were in or near ball courts is indicated by the fact that the classical Quiche term for a ball court, hom, is today the term for a graveyard. Hunahpu and Xbalanque, addressing the remains of Seven Hunahpu (their paternal uncle), tell him, "You will be prayed to here"; today, as Andres Xiloj pointed out, people visit graveyards on days bearing the name Hunahpu.

PLACE OF SPILT WATER See Spilt Water.

PLANK PLACE Chitemah, "at-plank"; tema is a bench or a roofing beam. A place of unknown location, occupied by vassals of the Quiche lords during the reign of Quicab.

PLASTER HOUSE Zaccabaha [zakcabaha], composed of zakcaba, "plaster" (B.), and ha, "house." The town known today as San Andres Sajcabaja. Formerly a Caoque citadel, conquered by the Quiche lords during the reign of Quicab. Today the inhabitants speak Quiche.

PLUMED SERPENT Cucumatz [3ucumatz], from 3u3, "quetzal bird" or "quetzal feathers," and cumatz, "serpent." Keeper of the Mat in the fourth or fifth generation of Cauec lords, named after the god listed elsewhere as Sovereign Plumed Serpent. The P.V. mentions Cotuha (not the same Cotuha who preceded Plumed Serpent as Keeper of the Mat) as the Keeper of the Reception House Mat who corresponded to Plumed Serpent in a number of places, but elsewhere states that Plumed Serpent served as both Keeper of the Mat and Keeper of the Reception House Mat; perhaps Cotuha died during the reign of Plumed Serpent and was not replaced until after the latter's death. However that might be, it was Plumed Serpent and Cotuha who together founded Rotten Cane. Both of them were regarded as lords of genius- that is, as lords with powerful spirit familiars- and Plumed Serpent in particular put on miraculous demonstrations of shamanic power. Here, as in the case of his central Mexican counterpart (Quetzalcoatl), it is difficult to separate Plumed Serpent as king from Plumed Serpent as deity.

POINT OF THE ARROW, ANGLE OF THE BOWSTRING Uchi 4ha, uchi cam [4aam], "its mouth arrow, its mouth cord"; Andres Xiloj pointed out that in Quiche, the "mouth" of an arrow is its tip, while the "mouth" of a bowstring is the point at which the butt end of the arrow is pulled back against it. Epithets for the vanguard lineages sent out to occupy conquered citadels during the reign of Quicab.

POORWILL, DANCE OF THE Xahoh puhuy, "dance poorwill." The name of a dance done by Hunahpu and Xbalanque in their guise as vagabonds.

POPOL VUH See Council Book.

PRAWN HOUSE Chomiha, composed of chom, "shrimp" (B.), and ha, "house." One of the first four human females; wife of Jaguar Night. The "prawn" etymology- as opposed, for example, to 4humil or "star"- lets the four women's names fit together in a pattern, making for two with maritime names (Celebrated Seahouse and Prawn House) and two with avian names (Hummingbird House and Macaw House).

PUMA'S PAW, JAGUAR'S PAW Tzicuul [4,icuul] coh, tzicuul balam; V. gives 4,ic as "heel of hand," and coh and balam are "puma" and "jaguar." Among the emblems of lordship given out by Nacxit.

PUS MASTER, JAUNDICE MASTER Ahal puh, ahal 3ana, "owner pus, owner yellowness." Fifth- and sixth-ranking lords of Xibalba.

PUS RIVER Puhia [puhial], "pus water." A river that crosses the road to Xibalba (the underworld). This name, along with Blood River, might have been an actual toponym, referring to a large, muddy river of the kind that originates in the Guatemalan highlands but flows into the northern lowlands. For today's Quiche the regions that drop off toward the Atlantic, especially in the area of Coban, are an abode of evil.

QUEHNAY See Lolmet.

QUEMA Also spelled queema in the MS. Lord Minister in the tenth generation of Greathouse lords. Yet he is also mentioned among the contemporaries of the Keeper of the Mat named Quicab, who ruled in the sixth or seventh generation of Cauec lords.

QUENECH AHAU From Yucatec Kinich Ahau, "sun-eye lord" (C.), one of the names of the lowland Maya sun god. In the P.V. this is the name of a people belonging to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east.

QUETZAL Cuc [3u3]; according to G., raxon, literally "blued" or "greened" (and translated "blue green"), is a synonym for 3u3. "Quetzal," the name by which this bird is best known, is from Nahuatl quetzalli. Pharomachrus mocinno, the most spectacular bird in the New World, confined to localized cloud forest habitats scattered from Chiapas to Panama; red breast but otherwise mostly green (with blue iridescence). The two-foot-long tail coverts were a major item of tribute and a major feature of lordly regalia throughout Mesoamerica.

QUIBA HOUSE, THOSE OF Ahquibaha, in which ah- is "persons from" and ha is "house." A people belonging to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east.

QUICAB Possibly 4i, "many," with 3ab, "hand" or "arm." Keeper of the Mat in the sixth or seventh generation of Cauec lords. Quicab greatly expanded the Quiche state, destroying the citadels of neighboring peoples and occupying them with vassal lineages drawn from the immediate vicinity of Rotten Cane. He ennobled the heads of many vassal lineages, including those who had served him well in his conquests, but members of this new nobility later perpetrated a revolt

(as described in both the Title of the Lords of Totonicapan and the Annals of the Cakchiquels but not in the P.V.). They failed in an assassination attempt, but the lineages with military titles (see under Military) gained in power.

QUICHE Quiche [4iche] and sometimes queche [4eche], possibly from 4i, "many," and chee, "trees," thus carrying approximately the same meaning as Cuautemallan, the Nahua name for what is now called Guatemala. Quiche is used in several different senses in the P.V. As a people, the Quiche proper consist of those who descend from Jaguar Quitze, Jaguar Night, and Mahucutah- that is to say, the Cauec, Greathouse, and Lord Quiche lineages- and who worship the gods Tohil, Auilix, and Hacautiz. "The three Quiches" include the Quiche proper, as just described, together with two further lineages whose god was Tohil, the Tams and Ilocs. This Quiche threesome is said to have been inseparable since its members were all at Tulan Zuyua together, and to have shared the same language- a language which is also called Quiche. Late in the narrative Quiche becomes a toponym referring to the vicinity of Rotten Cane, covering Rotten Cane itself, the modern site of Santa Cruz (three kilometers to the east of Rotten Cane), and probably also Bearded Place (half a kilometer to the south of Rotten Cane). By metonymic extension, Quiche also becomes the name for the conquest state formed by the Quiche threesome after the founding of Rotten Cane.

QUITZALCUAT Equivalent to Nahua Quetzalcoatl, "quetzal serpent." One of the names of the god of the Yaqui people, who is said by the writers of the P.V. to be the same as Tohil.

RABINALS Rabinaleb, in which -eb is plural. The people known today as the Achi, whose principal town is Rabinal. Their language, Achi, may be considered either a dialect of Quiche or a separate language of the Quichean family; its speakers are located to the northeast of the speakers of Quiche proper. They belonged to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east. One of the Rabinal citadels, Spilt Water, was conquered by the Quiche lords during the reign of Quicab.

RATTLING HOUSE Xuxulim ha; B. gives xuxulim as a continuous buzzing or humming. This is one of the tests of Xibalba, also called Cold House; it rattles because of continuous drafts and hail. This test comes second or third in the sequence of test houses. These houses may correspond to the periods when Venus is invisible between its appearances as morning and evening star (see Bat House).

RAZOR HOUSE Chaim ha; chay or cha refers to cutting instruments or projectile points made by percussion techniques, probably obsidian blades in the present context. One of the tests of Xibalba, fifth or second in the sequence of test houses. These houses may correspond to the periods when Venus is invisible between its appearances as morning and evening star (see Bat House).

RED BANNER Ca3lacan [cakla3an], with cak, "red"; B. gives la3am as "banner." Crier to the People for the Lords in the third generation of Lord Quiche lords.

RED ROAD Cacabe [cakabe]. One of four cosmic roads (see Crossroads).

ROAD OF XIBALBA Ri be xibalba, "the road Xibalba," also called Black Road (see Crossroads). The road that beckoned to One and Seven Hunahpu when they were on their way to Xibalba and led to their

deaths. At present ube xibalba, "its-road Xibalba," is the Quiche term for the black cleft in the Milky Way. From the identity of One and Seven Hunahpu (or their rubber ball) as Venus, and from the fact that they go down to Xibalba from a ball court located far in the east, it may be deduced that they descended at a time when Venus was ending its period of visibility as the morning star in a sidereal position that was in or near the Milky Way cleft. Venus takes five complete cycles to repeat its sidereal position, which is the same number of cycles it takes for its periodic reappearance as a morning star to return to a day bearing the name Hunahpu.

ROBLES, DON PEDRO DE Lord Minister in the thirteenth generation of Greathouse lords, in office when the P.V. was written. Since his predecessor was still in office in September of 1554, the P.V. must have been written after that time.

ROCK ROWS, FURROWED SANDS Cholo chic abah, bocotahinac [bocotahinak] zanaieb, composed of a reduplicated form of cholo-, "to order, put in a row"; abah, "rocks"; boco-, "uproot"; tahii-, "cultivate, plough"; -nak, perfect; and zanaieb, "sands." The place where Jaguar Quitze, Jaguar Night, Mahucutah, and True Jaguar crossed through a palo or "sea" on their migration from Tulan Zuyua. The name is, in effect, a description of a lowland Maya causeway.

ROJAS, DON JUAN DE Lord Keeper of the Mat in the fourteenth generation of Cauec lords, in office when the P.V. was written. His title was recognized by the Spanish; he retained his serfs, was given a reception room in the Royal Palace at Santiago Guatemala, served as a sort of minister of native affairs, and attempted to regain jurisdiction over the towns that had been conquered by the Quiche state before the arrival of the Spanish. He was still in office in 1554; since he was no longer signing documents by November of 1558, the P.V. must have been written before that date.

ROTTEN CANE Cumaracaah [3umarakah], "rotten-plural-cane plant." The citadel built by the Quiche lords after they left Bearded Place, founded by the Keeper of the Mat named Plumed Serpent. At Bearded Place there had been only three great houses or lordly lineages, but after the founding of Rotten Cane the Cauecs divided into nine parts, the Greathouses into nine parts, the Lord Quiches into four parts, and there were also two divisions of Zaquics (not mentioned at Bearded Place). Except for the two divisions of the Zaquics, which shared a single palace, each of these lineage segments apparently had a separate palace, making twenty-three palaces in all. It was from Rotten Cane that Quicab greatly expanded the Quiche state, and it was Rotten Cane that was burned by Pedro de Alvarado in 1524. The ruins, better known by their Nahuatl name, Utatlan, are located three kilometers west of Santa Cruz Quiche (see also Great Monument of Tohil, Auilix, Hacauitz, Keeper of the Plumed Serpent, Councilor of the Ball Court, Granary, and Bird House).

RUBBER BALL Qui4, literally "blood" but also referring to rubber, rubber balls in particular. Europeans saw rubber balls for the first time in the West Indies and Mesoamerica. In the P.V. a rubber ball is part of the gaming equipment (see under that heading) used by One and Seven Hunahpu and by their sons, Hunahpu and Xbalanque. The ball used by their opponents in Xibalba is not called qui4 (except by a falsehood that fails to deceive Hunahpu and Xbalanque) but is rather referred to by its proper name (see White Dagger) or by the term

chaah, which is also a term for the ball game itself (whatever kind of ball it is played with).

SANTA CRUZ Bishop Francisco Marroquin gave this name to Rotten Cane in 1539, but the town that came to be known as Santa Cruz Quiche was not built on the ruins of Rotten Cane itself but three kilometers east of there.

SERPENTS Cumatz, A people belonging to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east.

SEVEN CANE Uucub [uukub] ah, "seven cane plant." Crier to the People for the Lords in the sixth generation of Lord Quiche lords. Apparently born on the day Seven Cane on the divinatory calendar; today such a birth date would augur good luck in all the affairs of life and a potential career as a dutiful priest-shaman or official.

SEVEN CAVES, SEVEN CANYONS Uucub [uukub] pec, uucub ziuan. An epithet for Tulan Zuyua, the citadel where the ruling Quiche lineages acquired their patron deities. Uucub pec is a Quiche translation of Chicomoztoc, the "seven caves" of the mythic Nahua place of origin. The ruins of both Teotihuacan and Xochicalco have natural caves beneath them; Rotten Cane has an artificial cave that penetrates to a point beneath the main plaza.

SEVEN MACAW Uucub caquix [uukub cakix], in which the term for macaw is composed of cak, "red," and perhaps quix, "feathers." A lord who falsely claimed to be both the sun and moon during the era of the wooden people, causing offense to Hurricane; husband of Chimalmat and father of Zipacna and Earthquake. From his red feathers and from his nose that "shines white", the macaw in question could only be the scarlet macaw (*Ara macao*), which displays more red feathers than the military macaw (*Ara militaris*) and contrasts with the latter in having a white beak. The P.V. does not specify Seven Macaw's actual astronomical identification (as contrasted with his false claim to be the sun), but A. gives it as Ursa Major, whose prominent stars (comprising the Big Dipper) number seven. In West Indian Carib myths the Big Dipper has a feathered headdress that shows by day as the rainbow, which suggests that Seven Macaw might also have a rainbow aspect. What the Big Dipper has in common with the rainbow is that its appearance marks the end of storms, only it does so seasonally. In the latitudes of Mesoamerica and the Caribbean, the hurricane season (mid-July to mid-October) begins with nights on which the Big Dipper is already in steep descent at twilight and disappears entirely for as much as half the night, and it ends with the first nights on which all seven stars of the newly ascending Big Dipper appear before dawn. To put this in terms of the P.V., when Hunahpu and Xbalanque (acting on behalf of Hurricane) bring Seven Macaw down out of his tree (or below the horizon), they open the way for the great rain that destroys the people for whom Seven Macaw was the sun.

SEVEN THOUGHT Uucub noh [uukub naoh]. Keeper of the Mat in the eleventh generation of Cauec lords, apparently born on the day Seven Thought on the divinatory calendar. Today, such a birth date would augur an ability to solve problems, potential leadership, and a markedly masculine character.

SHIELD DANCE Pocob, "shield," not only an implement of war but "an ancient dance" (B.). A dance performed by the Quiche lords while they were settled at Bearded Place.

SHOOTING OWL 4habi tucur, in which tucur is "owl"; 4ha is "arrow," but better yet, B. gives chabih as "stoop like a hawk." First-ranking Military Keeper of the Mat for the lords of Xibalba, a messenger. The four owls of Xibalba are able to reach the eastern ball court used by One and Seven Hunahpu and by One Monkey and One Artisan, but in contrast with Falcon, the messenger of the Heart of Sky, or Hurricane, they are not described as being able to reach the place where the Heart of Sky is located. They may correspond to the planet Mercury, with perhaps one pair of owls for its morning star aspect and the other for its evening star aspect.

SKULL OWL Holom tucur, "head (or skull) owl." Fourth-ranking Military Keeper of the Mat for the lords of Xibalba, a messenger. Along with the other three owl messengers, he may correspond to the planet Mercury (see Shooting Owl).

SKY-EARTH Cahuleu, composed of cah, "sky," and uleu, "earth," but pronounced as a single word. In this context "sky" and "earth" are complementary metonyms that together produce the sense of "world," but without any final reduction of the difference between sky and earth. This composite word is used in contemporary Quiche prayers.

SNATCH-BATS Camazotz [4amazo4,], composed of 4ama, "take," and zo4,, "bat." The bats that inhabit the Bat House of Xibalba. B. lists camotzoh as "an animal that eats the moon." Andres Xiloj commented, "These are not animal bats, but the bats of Xibalba." Today in Rabinal the dance-drama of San Jorge includes a character of this same name.

SORREL GUM Lotz quic [qui4], in which qui4 (literally "blood") is the term for latex or other plant products of a gummy consistency.

SOVEREIGN OLOMAN Tepeu oloman or oliman, from Nahua tepeuani (see Sovereign Plumed Serpent) and ollomani, "ballplayer" (D.). A people, also called Fishkeepers, probably from the Gulf coast of Tabasco or eastern Veracruz. They stayed in the "east" when the Quiche ancestors left there, but later, during the time the Quiches were settled in the citadel of Hacautitz, they participated in a plot against them.

SOVEREIGN PLUMED SERPENT Tepeu 4ucumatz [3ucumatz], in which tepeu is an honorific title and the second word is composed of 3u3, "quetzal bird or quetzal feathers," and cumatz, "snake." Tepeu is from Nahua, in which tepeuani is "conqueror or victor in battle" (D.); Quiche tepeual, a participial form (marked by -al), is translated by B. as "majesty, dignity." 3ucumatz is the equivalent in Quiche of Yucatec Kukulcan and Nahua Quetzalcoatl, both of which names mean "quetzal-plumed serpent." As a god, the Plumed Serpent is nearly always prefixed with tepeu in the P.V.; he numbers among the gods who are covered by the names or epithets Maker, Modeler; Bearer, Begetter; and Heart of the Lake, Heart of the Sea. In the primordial scene these gods, unlike the god or gods called Heart of Sky, Hurricane, Newborn Thunderbolt, and Raw Thunderbolt, are on or in the sea. Just as the Nahua Quetzalcoatl cooperates with Tezcatlipoca in making the present earth in the midst of the sea, so the Quiche Sovereign Plumed Serpent cooperates with Hurricane; the difference is that the Nahua earth in question was the fifth, whereas the P.V. seems to have it as the first. By the time Rotten Cane was founded, Sovereign Plumed Serpent numbered among the most important of Quiche gods, judging from the fact that the Keeper of the Plumed Serpent

was among the five heads of lordly lineages who were priests, the others being priests of Tohil, Auilix, Hacautitz, and Corntassel. But the writers of the P.V. neither give the story of Sovereign Plumed Serpent's origin nor elaborate his divine attributes, and scarcely a trace of him remains in today's Quiche oral narratives.

SOVEREIGN YAQUI Title of the lord who was ninth in rank among the Cauecs and head of one of the nine great houses into which their lineage was divided after the founding of Rotten Cane; he was also called Mother of the Reception House.

SPILT WATER Maca [ma4aa] or pamaca [pama4aa], composed of pa, "at" or "in"; ma4, "spill or fall"; and aa, "water." The town known today as Zacualpa, formerly located two kilometers southeast of its present site. Once a Rabinal citadel, conquered by the Quiche lords during the reign of Quicab. Today the inhabitants speak Quiche.

STAGGERING Zilizib; zilizab is "sway, swing, stagger" (B.). The place where the tribes (other than the Cakchiquels) pledged themselves to be "suckled" (or to have their hearts cut out) by Tohil in exchange for fire; the name of this place is not mentioned until later.

STAR HOUSE, THOSE OF Ahchumilaha [ah4humilaha], "persons-from-star-house." A people belonging to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east.

SUDDEN BLOODLETTER Camalotz, probably composed of cahmah, "fright, surprise attack" (V.), and lotz, "to let blood." One of the monsters that ends the era of the wooden people.

SUN-MOON Quihic [3ihi4], composed of 3ih, "sun," and i4, "moon," but pronounced as a single word. In this context "sun" and "moon" are complementary metonyms that together produce an abstraction encompassing major heavenly bodies (and major markers of time), but without any final reduction of the difference between sun and moon. The composite concept of sun-moon would include Venus as morning star as well, since the latter has 3ih in its Quiche name (see daybringer).

SWALLOWING SWORDS Xtzul [x4,ul], a proper name of uncertain etymology. The name of a dance done by Hunahpu and Xbalanque in their guise as vagabonds. B. describes it as a dance in which masked performers with tortoise-shell rattles put sticks or daggers in their mouths. V. (who specifies 4,, the glottalized tz), describes the masks as small and says that the dancers are two in number (as they are in the P.V.), wear the tails of macaws down their backs, put sticks down their throats and bones into their noses, and give themselves hard blows on their chests with a large stone.

SWEATBATH HOUSE Tuhalha. The people who inhabit the area around Sacapulas today, belonging to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east; they speak a highly distinctive dialect of Quiche. One of the four sections of the town of Sacapulas still bears the name Tuhali.

SWEET DRINK Qui [quii], "sweet," "poison," and (according to G.) "wine or chicha," chicha generally being an alcoholic beverage made by fermenting corn. It is not known for certain what went into the making of quii; the pulque of Mexico (made from maguey) is not reliably reported for indigenous Guatemala, nor is the drink the Yucatec Maya called balche (partly made from honey). What is known about quii is that it required cooking at some stage, that it took three days to

ferment, and that the Four Hundred Boys went "out of their senses" drinking it. The making of balche does not involve cooking, but at least one kind of pulque does (a variety in which maguey cuttings are boiled together with honey prior to fermentation). Pulque and balche are both sweet to the taste before fermentation and bitter afterward; perhaps the seemingly contradictory meanings of quii reflect the paradox of a drink that started out sweet and harmless and ended up bitter and (in sufficient quantities) sickening.

TALK HOUSE Uchabaha [u4habaha], "its-talk-place-house." A people belonging to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east.

TAMAZUL From Nahua tamazolin, "toad" (C.); the Quiche term for this animal is xpek. The name of the toad that swallowed the louse that carried the message of Xmucane.

TAMS Tamub (singular tam). One of the allied groups of lineages called "the three Quiches," the other two members being the Quiche proper- comprising the Cauecs, Greathouses, and Lord Quiches- and the Ilocs.

TAM TRIBE Amac [ama3] tan, composed of the term for "tribe" and an archaic pronunciation of tam. Place where the Tams gave a home to their patron deity, not far from where the Ilocs, Cauecs, Greathouses, and Lord Quiches did the same; also the place where the Tams were when the dawn first came.

TEARING JAGUAR Tucumbalam, probably composed of tucun, "scratch" (V.), and balam, "jaguar." One of the monsters that ends the era of the wooden people.

TECUM A Nahua name of uncertain translation. Keeper of the Mat in the ninth generation of Cauec lords; a second Tecum held the same position in the thirteenth generation. The latter Tecum was taken hostage when Rotten Cane fell to the Spanish in 1524; he was the son of Three Deer, the Keeper of the Mat who was executed by Alvarado. Tecum's accession to his father's title was later recognized by Alvarado, who made that position subordinate to himself, but Tecum plotted rebellion and was eventually hanged. He is not to be confused with the warrior named Tecum Umam, who died in a battle with Alvarado's forces before the attack on Rotten Cane took place.

TEPEPUL From Nahua tepe, "mountain," and pol, "big" (C.). Keeper of the Mat in the fifth or sixth generation of Cauec lords; taken prisoner in an attack on the Cakchiquels. Another Tepepul was Keeper of the Mat in the eighth generation of Cauec lords, and still others were Keepers of the Reception House Mat in the ninth and thirteenth generations of Cauec lords. This last Tepepul, along with the last Tecum, was taken hostage when Rotten Cane fell to the Spanish in 1524; he was the son of Nine Dog, the Keeper of the Reception House Mat who was executed by Alvarado. Tepepul's accession to his father's title was later recognized by Alvarado, who made that position subordinate to himself, but Tepepul plotted rebellion and was hanged in 1540.

THORNY PLACE Chiquix [chi4ix], "at thorns." Citadel of the Quiche lords after they left Hacauitz and before they built Bearded Place. It was divided into four parts or "mountains": Dry Place, Bark House, Culba, and Cauinal. Dry Place is chichac [chichak], "at dryness"; Bark House is humetaha, composed of humeta, "bark," and ha, "house." Thorny Place doubtless corresponds to the archaeological site known today

as Cauinal (beneath a mountain of the same name), on the Rio Blanco near its confluence with the Rio Negro or Chixoy, about twenty kilometers northwest of Rabinal. The site has four main plazas, two on each side of the Rio Blanco; it is located in a dry region dominated by xerophytic vegetation, in which it contrasts with most of the area occupied by the Quiches today.

THREE DEER Oxib quieh. Keeper of the Mat in the twelfth generation of Cauec lords, apparently born on the day Three Deer on the divinatory calendar. Today such a birth date would augur a domineering, articulate, and masculine character, with possible shamanic inclinations, but because of the low number, these qualities would be present in only moderate quantity. According to the P.V. Three Deer was hanged by the Castilians; other sources have him burned at the stake. In any case he and Nine Dog were executed by Alvarado in 1524, immediately following the fall of Rotten Cane.

THRONG BIRDS 4,iquin molai, "birds joined together." Possibly a mythic species, or possibly referring to a flock rather than a species. One of the obstacles on the road to Xibalba (the underworld).

TOHIL Patron deity of the Cauec, Tam, and Iloc lineages; the name sometimes covers the patron deities of the Greathouse and Lord Quiche lineages as well, Auilix and Hacautitz. Apparently the name is composed of Toh, one of the twenty day names of the 260-day calendar, and -il, "having the quality of"; Toh may be related to Cholan tohokna, "the way in which clouds join," and tohmel, "thunder" (C.), but the classic Maya predecessor of Tohil at Palenque carries the name Tahil, meaning "Torch Mirror" or "Obsidian Mirror" (S.). Tahil is shown with a burning torch sticking out of the mirror on his forehead; Tohil is a giver of fire, pivoting inside his own sandal like a fire drill. The one-leggedness suggested by the fire drill, together with the fact that Tohil can cause great rainstorms, identify him as an aspect of Hurricane (see above). The stone whose genius or spirit familiar was Tohil was carried in a backpack by Jaguar Quitze, founder of the Cauecs, when he left Tulan Zuyua. He placed this stone on a mountain that came to be called Patohil, literally "At Tohil," apparently located above or near Concealment Canyon, where the god Auilix was placed. A temple dedicated to Tohil was later built at Rotten Cane (see Great Monument of Tohil); those bringing tribute to Rotten Cane, which was probably payable on days named Toh, gave offerings to Tohil before they made their presentations to the Quiche lords. The present character of the day Toh seems to reflect its past connection with tribute. One of the divinatory mnemonics for the meaning of this day is tohonic, "to pay," indicating that the client owes offerings to the gods and the ancestors. In visits to shrines, daykeepers use Toh days to make up for delinquent ritual obligations.

TOHIL MEDICINE Cunabal tohil, "cure-instrument Tohil." An epithet given to Concealment Canyon after Tohil was placed nearby on the mountain called Patohil. This epithet may be based on a bilingual pun on the place name Patohil; Nahuatl patli means "medicine" (D.).

TOHIL'S BATH Ratinibal tohil, "his-bathing-place Tohil." During the time when the Quiche lords occupied the citadel of Hacautitz, the spirit familiars of Tohil, Auilix, and Hacautitz were regularly seen bathing at this place (location unknown).

TONATIUH Donadiu, a Nahua word meaning "sun." This was the name

given by the Indians of central Mexico to Pedro de Alvarado before he came to Guatemala.

TORTILLA GRIDDLE Xot. A round and slightly concave pottery griddle, used in toasting tortillas; better known in Mesoamerica as the comal, from Nahua comalli.

TRASH MASTER, STAB MASTER Ahal mez, ahal tocob [to3ob], "owner filth (or trash), owner puncture wound." These lords of Xibalba rank ninth and tenth in earlier lists but are omitted from later ones. See also Bloody Teeth, Bloody Claws.

TRUE JAGUAR Iquibalam, with balam, "jaguar," possibly prefixed with iki- (V.) or iqui- (X.). This prefix can be combined with a3ab, "hand," to give "right hand," and with tzih, "word," to give "truth" (V.); it is probably present in the expression of affirmation given by B. as iquiquih. True Jaguar was one of the first four human males, but he had no son and therefore did not found a lineage.

TULAN From Nahua tollan, "Place of Reeds (or Cattails)." A term widely used in Mesoamerica to prefix the names of places where the investiture of Toltecan lords could take place. The P.V. states that the Quiches, Cakchiquels, and various other tribes were assigned their patron deities at Tulan, before the first sunrise; it locates Tulan in the east, perhaps recalling the direction from which the Quiches happened to be moving immediately before coming into the region of their present home rather than the absolute spatial relationship between that home and Tulan. Tulan is nearly always joined to the name Zuyua in the P.V. (see below).

UNDER TEN Xelahuh, "under (or below) ten"; the full name (not given in the P.V.) is xelahuh queh, "Under Ten Deer." This town is still called Xelaju or Xela in everyday Guatemalan speech, whether in Spanish or in an indigenous language, but in government documents and on maps it is known by a slightly altered form of its Nahau name, Quezaltenango (it should be spelled Quetzaltenango, meaning "Quetzal Citadel"). Its former location, when it was truly a citadel, must have been on one of the hilltops in the vicinity of the present town, but the exact site is not known. It was among the citadels conquered by the Quiche lords during the reign of Quicab.

UNDER THE TWINE, UNDER THE CORD Xebalax, xecamac, in which xe- may be "under" but could also be a verb prefix indicating completed action and the third person plural; balax may be a passive form of bal, "to make or twist a cord" (V.), and camac may be 4aamak, a perfect form of 4aamah, "to cord (measure land with a cord)." A place in Chulimal or perhaps an epithet for Chulimal. This is where the heads of vassal lineages were elevated to lordship and assigned to conquered territories during the reign of Quicab; the name may allude to the setting of boundaries for these territories.

VASSALS Al4ahol, "children," a composite term made up of al, "child (of a woman)," and 4ahol, "son (of a man)." The term for members of commoner lineages owing fealty to lordly lineages. Vassalage was a sort of kinship by adoption, but note that the term clouds or averts the issue of lineality by including the term for a woman's children. During the reign of Quicab the first-ranking male members of many vassal lineages were elevated to lordship.

WALKING ON STILTS Chitic, "to go on stilts" (B.). The name of a dance done by Hunahpu and Xbalanque in their guise as vagabonds.

WEASEL, DANCE OF THE Xahoh cux, "dance weasel." The name of a dance

done by Hunahpu and Xbalanque in their guise as vagabonds. B. mentions a dance (cux) done with weasel skins.

WHITE CORNMEALS Zacahib [zak4ahib], "white-cornmeal-plural." A people belonging to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east. They must have settled in the area of the present town of Salcaja, which is called zak4aha in Quiche.

WHITE DAGGER Zaqui toc [zaki to3]; V. gives to3 as "knife" or "stab"; it is the Cholan term for implements of flaked stone (K.), which are cha in Quiche. The name of the sacrificial knife belonging to the lords of Xibalba and of the ball (containing this knife) they are anxious to use in their game with Hunahpu and Xbalanque.

WHITE EARTHS Zaculeuab [zakuleuab], "white-earth-plural." A tribe named after the citadel of Zakuleu (located five kilometers west of the present town of Huehuetenango) and comprising part or all of the speakers of the Mayan language known today as Mam. The P.V. does not claim that the Quiche lords conquered Zakuleu itself, but rather a separate citadel belonging to the White Earths, named Above the Hot Springs.

WHITE RIVER Zaqui ya [zaki yaa], "white water." A place four kilometers west of Chichicastenango, occupied by vassals of the Quiche lords during the reign of Quicab.

WHITE ROAD Zaquibe [zakibe]. One of four cosmic roads (see Crossroads). Today, at least, this is the term for the solid white portion of the Milky Way, as opposed to the Road of Xibalba (see above), which is the portion divided by a dark cleft.

WHITE SPARKSTRIKER Zaqui coxol [zaki 4oxol], composed of zaki, "white"; 4oxo, a verb stem used for the act of striking stones together "to start a fire" (V.); and -l, agentive. In the P.V. this being escapes into the shelter of the woods when the sun first rises, taking along the animals that were petrified by the sun; in the present-day Quiche dance-drama of the Conquest, he or she (the sex is ambiguous) escapes into the woods to avoid Spanish domination. In the drama the White Sparkstriker appears as a dwarf dressed entirely in red, but may have silver clothing in dreams and visions. When the sun rose and petrified the first animals, the White Sparkstriker escaped into a tree and is now the keeper of the petrified animals (iron concretions that resemble animals) and may be encountered in caves, in deep woods, and at night. In some manifestations the White Sparkstriker carries a stone hatchet- the one he-she used to strike sheet lightning into the bodies of the first daykeepers, according to Vicente de Leon Abac.

WHITE VULTURE Zac cuch [zak 4uch]. The king vulture (Sarcoramphus papa), a lowland species which has a naked red head and black flight feathers but is otherwise white.

WILLOW TREE Tzolohchee, "willow tree." The town known today as Santa Maria Chiquimula. One of the citadels conquered by the Quiche lords during the reign of Quicab.

WING, PACKSTRAP Xic [xi4], patan, "wing, packstrap," the latter referring to a strip of hide used to protect the forehead when a load is carried with a tumpline. These lords of Xibalba rank eleventh and twelfth in earlier lists and ninth and tenth in later ones.

XBALANQUE The younger brother of Hunahpu and the son of One Hunahpu

and Blood Woman; the full meaning of his name remains uncertain. X- is archaic in Quiche but means "she of" or "small" in Cholan (K.); balan is from balam, "jaguar"; que could be from queh, "deer," or it could be like 3e in the Kekchi Maya term for "sun," zak3e, which is composed of zak, "light," and 3e, "day" (F.). It has been reported that one of the names of the sun god among the contemporary Kekchi is xbalam3e (F.), which recalls the fact that Hunahpu and Xbalanque become the sun and moon in the P.V. If the name Xbalanque literally means "Little Jaguar Sun" in the P.V., it could refer specifically to the full moon, which is metaphorically called "sun" by contemporary Quiches; that would leave other phases of the moon to his mother, Blood Woman. In Pokomchi Maya, xbalanque or xbalamque is the term for species of fish of the family that includes perch and bass (Z.), which recalls the fact that Hunahpu and Xbalanque are described as taking the form of channel catfish after their ground bones are thrown in water; perhaps it was specifically Hunahpu who became a catfish, whereas Xbalanque became a bass.

XBAQUIYALO The x- is archaic in Quiche but "she of" or "small" in Cholan (K.); the rest is of uncertain derivation but could include bak, "bone" or "pit (of a fruit)." The wife of One Hunahpu and the mother of One Monkey and One Artisan.

XCANUL [X4anul], in which the x- is archaic in Quiche but "she of" or "small" in Cholan (K.). In the P.V. this is a proper name for what is now called the Volcan Santa Maria (note the feminine gender), nine kilometers south of Quezaltenango, but in the present-day vocabulary of the western part of the Quiche-speaking region it is a generic term for volcano.

XCUXEBA See Councilor of the Ball Court.

XIBALBA Probably derived, in part, from the same root as xibih, "frighten"; the -al might have been participial and the final -ba could have been -bal, "place of." The underworld, located below the face of the earth (uuach uleu) but at the same time conceptualized as being accessible by way of a road that descends cliffs and canyons, probably in the general direction of the lowlands that lie to the Atlantic side of the Guatemalan highlands. In Yucatec Maya, Xibalba is one of the names for the lord of the lowest underworld. See also Road of Xibalba.

XPIYACOC, XMUCANE Divine grandparents, probably older than all the other gods; parents of One and Seven Hunahpu; patrons of the diviners known as daykeepers (see above). Their epithets include Grandmother of Day, Grandmother of Light (though Xpiyacoc is male); Maker of the Blue-Green Plate, Maker of the Blue-Green Bowl; Great White Peccary, Great White Tapir; and Bearer twice over, Begetter twice over (as if to make them even older than the gods who are simply called Bearer, Begetter). They are also described (respectively) as a midwife and matchmaker, which are specialized subfields of contemporary daykeepers (female and male respectively). That Xpiyacoc is named first, reversing the normal feminine-masculine order of Quiche phrasing, may reflect the fact that the two of them are the Quiche counterparts of Cipactonal and Oxomoco, an old divining couple named in masculine-feminine order in Nahuatl. The meaning of the Quiche names is unclear, except that the initial x-, though archaic in Quiche, means "she of" or "small" in Cholan (K.). The feminine aspect of Xpiyacoc recalls the fact that contemporary

daykeepers (of either sex) are symbolically androgynous, female on the left side of the body and male on the right. Andres Xiloj suggested that the -pi- in Xpiyacoc might be -pe-, "to come," and he derived -yac- from yequic (yaquic in some dialects), "to be put in order, to be lifted up," a verb diviners use with reference to the problems of clients. In classical Quiche yaco is a numeral classifier for counting tribute (B.); the yaco in Xpiyacoc could refer to the counting (and manipulation) of the divining seeds rather than to the "lifting up" of the client. In the case of Xmucane, Xiloj derived mucane from moconic, "to do something requested" or "to do a favor"; he pointed out that a diviner who has ascertained the cause of a problem may then be hired to make prayers and offerings on behalf of the client. To this day, a daykeeper ideally has a spouse who is also a daykeeper, and the divinations with the clearest outcomes are the ones they do together.

XTAH, XPUCH The x- is archaic in Quiche but "she of" or "small" in Cholan (K.). The two women sent (by tribes hostile to the Quiches) to seduce Tohil, Auilix, and Hacautitz. On the positive side, -tah could be read as "goods, riches, gifts" (V.), and xpuch could be read as a borrowing from Nahua ichpuchtli, "maiden" (D.). On the other hand, tahi is "to sin many times" (V.), and puchu is "to smash, disembowel" (B.).

XTAYUB Possibly a variant spelling of Iztayul (see above). Keeper of the Reception House Mat in the eighth generation of Cauec lords.

XULU, PACAM Names of the diviners consulted by the lords of Xibalba on the question of how to dispose of the remains of Hunahpu and Xbalanque. V. describes xulu as "[spirit] familiars appearing alongside rivers"; an ahxulu, or "keeper of Xulu," is a curer (V.) or a diviner (B.). Pacam could be composed of pa, "at" or "in," and cam, "bridge" (B.).

YACOLATAM, OR EDGE OF THE ZACLATOL MAT Yacolatam, utzam pop zaclatol; yaco- is "to lift," and V. gives yac as a particle for counting tribute; utzam pop is "its-edge (possibly fringe) mat"; zac is likely zak, "white" or "light"; the rest is untranslatable. Yacolatam is listed by itself the second time it is mentioned. Title of the lord who ranked eighth among the Greathouses and was head of one of the nine great houses into which their lineage was divided after the founding of Rotten Cane.

YAQUI PEOPLE Yaqui uinac [uinak], in which yaqui is Nahua for "gone, departed" (C.) and uinak is Quiche for "people." This refers to Nahua speakers who were present in the citadel of Tulan Zuyua at the same time the Quiches, Rabinals, Cakchiquels, and those of the Bird House (Tzutuhils) were there; according to the P.V., their god (called Yolcuat and Quitzalcuat) was equivalent to Tohil. See also "The Blame Is Ours."

YAQUI SOVEREIGN Probably the same as the Yaqui people (see above).

YARROW Holom ocox, "head of mushroom." A common aromatic herb in the Guatemalan highlands, named for the shape of its composite flower head, which consists of numerous tiny, closely spaced white blossoms; probably Stevia eupatoria, called pericon blanco in Spanish. In the P.V. (as among today's Quiche) the burning of this herb, together with marigolds (see above), constitutes a more modest offering than the burning of copal incense.

YELLOWBITE Canti [3anti], in which 3an is "yellow" and ti is from the same root as tiinic, "to eat (meat)." The snake commonly known

as the fer-de-lance, which has a yellow zone around the mouth.

YELLOW ROAD 3anabe. One of four cosmic roads (see Crossroads).

YELLOWWOOD Cante [3ante], in which 3an is "yellow" and te is Cholan for "wood" or "tree" (C.). A. gives 3ante as the madre cacao (Gliricidia sepium), a large tree that is planted to provide shade in cacao plantations. Hunahpu and Xbalanque send One Monkey and One Artisan up this tree in order to transform them into monkeys.

YOKE Bate, from Cholan bat, which is today "ax, shovel, blade," and te, "wood, tree" (C.). Part of the equipment necessary for the ball game played in the P.V. (see gaming equipment). Each player in the Mesoamerican ball game had a yoke-shaped object of wood riding on his hips; it was with this yoke that he returned the ball, which could not be touched with the hands while it was in play. The upper, outer rim of this yoke is often depicted with a mildly sharpened edge. Among all the words for the gaming equipment in the P.V., bate is the best candidate as a term for the yoke. First of all, bate is used as a term for the game itself over wide areas of Mesoamerica; since the yoke is one of the most distinctive features of the game, it could well have given its name to the game itself at some remote point in the past. Second, it was the bate with which Hunahpu and Xbalanque received and returned the ball when they played the game against the lords of Xibalba.

YOKE HOUSE, THOSE OF Ahbatenaba, "person-from-yoke-plural-house." A people belonging to a group of thirteen allied tribes the Quiches regarded as having come (like themselves) from the east.

YOLCUAT From Nahua yol, "heart," and coatl, "snake" (C.). One of the names of the god of the Yaqui people, who is said by the writers of the P.V. to be the same as Tohil.

ZAPOTES Tulul. A tropical fruit (Lucuma mammosa), sometimes called "sapota" in English. The tan skin resembles suede; the flesh is chocolate-colored.

ZAQUIC A lordly lineage divided into two great houses after the founding of Rotten Cane; not mentioned as having come from the east with the lordly Quiche lineages or as having been present at Tulan. The Zaquics may have been indigenous to the area around Chinique, and they may have been adopted by the Cauecs, Greathouses, and Lord Quiches to fill out an ideal foursome that was left short by the fact that True Jaguar (one of the first four human males) had no sons.

ZAQUICAZ V. gives zaki3az as "a very thick snake that flees when it sees people, making a noise with its belly." This is the snake that swallows the toad that swallows the louse that carries the message of Xmucane.

ZIPACNA Derived from the same source as Nahua cipactli, referring to a mythological animal, with the features of a crocodile and sometimes those of a shark, that gives its name to the Nahua day corresponding to Imox on the Quiche calendar. That Zipacna hunts fish and crabs from a position on shore fits the crocodile identification, but the Quiche term for crocodile, ayin, does not occur in the P.V. Zipacna is the son of Seven Macaw and Chimalmat and the elder brother of Earthquake; he claims to be the maker of mountains and even of the earth in general.

ZIYA HOUSE Ziyaha, in which -ha is "house." A place of unknown location, occupied by vassals of the Quiche lords during the reign of Quicab.

ZUYUA In the P.V. this name (sometimes rendered as zuua) always appears as part of the compound name Tulan Zuyua, referring to the town where the Quiches and related peoples are said to have been given the stones containing the spirit familiars of their patron deities (see also Tulan). Zuyua was probably on the system of lakes, lagoons, and estuaries that stretches from southwestern Campeche through Tabasco to eastern Veracruz, known in Nahuatl as Nonoalco. The etymology of the name remains unsolved.

ACKNOWLEDGEMENTS

This volume is the culmination of nearly twenty-five years of collaboration with friends and colleagues who have been more than generous with their time, expertise, encouragement, and at times, sympathy. It has become a somewhat clichéd and expected thing to claim that a work would not be possible without such support. It is nonetheless true, at least from my experience, and I am indebted to all those who helped move the process along.

First and foremost, I would like to express my sincerest gratitude to my Maya teachers, colleagues, and friends who have selflessly devoted their time and knowledge to help carry out this project. Without their efforts, none of it would have ever gotten off the ground. I would like to particularly recognize in this regard don Vicente de León Abac, who, with patience and kindness, guided me through the complexity and poetry of K'iche' theology and ceremonialism. Without his wisdom, I would have missed much of the beauty of ancestral vision that is woven into the very fabric of the *Popol Vuh*. I dearly miss him. I would also like to acknowledge the profound influence that Antonio Ajtujal Vásquez had on this work. It was his kind and gentle voice that I often heard when I struggled at times to understand the ancient words of this text. Others who have aided this work include Diego Chávez Petzey, Nicolás Chávez Sojuel, Felix Choy, Gregorio Chuc, Juan Mendoza, Francisco Mendoza, and Juan Zárate.

I am deeply indebted to Jim Mondloch for his extraordinary generosity in offering to read through the translation. His depth of knowledge with regard to K'iche' grammar, syntax, and

modern usage were invaluable. I purchased a copy of his “Basic Quiché Grammar” in 1976 to help in my quest to learn the language at a time when such aids were very rare. The book was a steadfast friend and companion during the next few years. Not only was it a brilliant work but it proved to be just the size and weight to dispatch mosquitos on the wall of my adobe shack. I thus owe to him, not only much of my initial knowledge of the K'iche' language, but my red blood cell count in those days as well.

I am also grateful to John Robertson for his guidance, particularly with regard to the orthography of the text. He was a patient educator to me when I began work with the K'iche' language nearly twenty-five years ago, helping to prepare a dictionary and grammar. He was an ideal boss and a wise teacher. It is a great honor for me to occupy the office next door to his at the university.

I am sincerely indebted to my friend and colleague Ruud van Akkeren who went to extraordinary lengths to share with me his profound understanding of highland Maya ethnohistory. I value his knowledge, experience, and generosity in reading through various versions of this volume and offering his insights.

As in much of what I do that is of worth in the academic world, I acknowledge the influence of my mentor, Linda Schele. As a graduate student, Linda encouraged me to complete the translation of the *Popol Vuh* at a time when I was content to throw up my hands after I had worked through the mythic sections. It was her love for the Maya people and passion for their language that reminded me why we take on overwhelming tasks such as this, and why it's worth the price in life and heart that we put into them.

Among the many who have contributed in invaluable ways to this project, I would like to recognize with my sincerest thanks the following individuals: Claude Baudez, Karen Bassie, James Brady, Linda Brown, Margaret Bruchez, Michael Carrasco, Garrett Cook, Doris Dant, John Early, Sam Edgerton, Enrique Florescano, John Fox, David Freidel, Stephen Houston, Kerry Hull, Julia G. Kappelman, Peter Keeler, Justin Kerr, Bob Laughlin, Bruce Love, John Monaghan, Dorie Reents-Budet, Julia Sanchez, Joel Skidmore, Carolyn Tate, Mark Van Stone, Bob Walch, Andrew Weeks, Jack Welch, and Diane Wirth.

I would also like to thank my graduate students who keep me constantly on my toes and challenged with their curiosity and energy. Among these students, Spencer Jardine helped

with the initial transcription of the text used in this volume, and Scott Brian created the beautiful maps. I am indebted to them for their efforts.

TRANSLATOR'S PREFACE

A little over twenty years ago I helped to compile a dictionary in the Quiché-Maya language in the mountains of northwestern Guatemala near a small village called Chihul. At the time, Quiché was almost completely an orally-communicated language, with very few native speakers who could read or write it. One summer evening, after a long day of work with one of my best sources, I realized that I had lost track of time and needed to hurry down to the valley where I had a small home before it got dark. The region had no electricity and hiking steep mountain trails at night was dangerous, particularly because of the numerous packs of wild (and often rabid) dogs that roamed freely about. I therefore started down a small footpath that appeared to be a more direct route than the usual winding road taken by buses.

About a third the way down the mountainside, I passed an isolated adobe and thatch house built in a clearing surrounded by pine forest. A small group of men were seated on a low wooden bench in front of the house conversing. When they saw me, they called out a greeting and beckoned me to join them. After introductions were properly exchanged, a requirement in formal Quiché conversation, I was offered a warm cup of toasted corn coffee and a space on the bench was opened up for me to sit down.

One of the men had heard that there was a fair-skinned young man that people called *raqän us* (mosquito legs) who was visiting in Chihul, and he asked if that would be me. My name is difficult to pronounce in Quiché, so I had been given that rather unfortunate nickname, derived no doubt from my lanky physique in those days. I told him that I was the one they had heard about. They asked what I was doing, and I explained that I was interested in collecting the words of his people so that I could carry them with me back to my own town beyond the mountains to the north. Another of the men was curious as to how I could “collect” words and carry them away, since he assumed that his language could only be

spoken, not written.

Quichés in that area had, of course, seen documents and books like the Bible written in Spanish but had little conception at that time that it was possible to use phonetic letters to record their own language. This is a great tragedy, because until about five hundred years ago the Maya were the most literate people in the Americas, preserving their history and culture with a sophisticated hieroglyphic script in hundreds of folded screen books. The Spanish conquest in the early sixteenth century was a devastating blow to Maya literacy in Mexico and Guatemala. Christian missionaries burned great numbers of hieroglyphic texts in an attempt to eradicate indigenous religious practices. Native scribes were singled out for persecution to such an extent that within one hundred years, the art of hieroglyphic writing had virtually disappeared from among the Maya people.

My new friends were therefore very interested in the notes I had written that day in their language. Excited by the possibility of preserving their own thoughts in written form, they asked me to demonstrate how to write a number of words and phrases. After writing a few phrases for them in Quiché, I asked the oldest of them if he would like me to write something for him. He said that he did and I waited a long time for the words he wished me to write. Finally he asked me to record a few brief words of counsel for his son. I didn't know it at the time but his five year old boy was the last of twelve children, all of whom had died in childhood, mostly to tuberculosis. That week his last surviving child had begun to cough up blood and he knew that his hope for posterity would inevitably die with him.

By this time I knew I would never make it down to the valley before dark so my elderly friend invited me to stay in his corn loft. Before the others left for the night, I asked if they would like to hear the words of their fathers. This was greeted with indulgent smiles of disbelief, since few of their parents were alive and they were sure that I couldn't have known them. But I told them that it wasn't their fathers' words that I carried with me, but rather those of their fathers' fathers' (repeated many times) fathers, dating back nearly five hundred years. I happened to have with me a copy of the *Popol Vuh* manuscript, a book that was compiled in the mid-sixteenth century at a town that still exists less than thirty miles from where we sat. I began to read from the first page of the book:

THIS IS THE ACCOUNT of when all is still silent and placid. All is silent and calm. Hushed and empty is the womb of the sky.

THESE, then, are the first words, the first speech. There is not yet one person, one animal, bird, fish, crab, tree, rock, hollow, canyon, meadow, or forest. All alone the sky exists. The face of the earth has not yet appeared. Alone lies the expanse of the sea, along with the womb of all the sky. There is not yet anything gathered together. All is at rest. Nothing stirs. All is languid, at rest in the sky. There is not yet anything standing erect. Only the expanse of the water, only the tranquil sea lies alone. There is not yet anything that might exist. All lies placid and silent in the darkness, in the night.

All alone are the Framer and the Shaper, Sovereign and Quetzal Serpent, They Who Have Borne Children and They Who Have Begotten Sons. Luminous they are in the water, wrapped in quetzal feathers and cotinga feathers. (*Popol Vuh*, pp. 67-69)

After I had read a page or two from the account of the creation of the earth, I stopped and waited for their reaction. No one spoke for some time. Finally, the elderly man with the sick boy asked if he might hold the unbound pages of the manuscript copy for a moment. He gently took it from my hands and with great care turned its pages.

“These are the words of my ancient fathers?” he asked.

“Yes.”

“Do you know what you have done for them?” I wasn’t quite sure what he meant, so I didn’t answer at first. “You make them live again by speaking their words.”

The word he used was *k’astajisaj*, meaning “to cause to have life,” or “to resurrect.” The written word has the power to survive the death of its author, to preserve the most precious souvenirs of human existence—thoughts, hopes, ideals, and acquaintance with the sacred. We tend to take writing for granted. The Maya do not. The ability to write words and have them preserved long after the death of the author is a miracle.

Many of the larger highland Maya communities possess wooden chests containing books and clothing owned by their ancestors which they revere as precious relics. These objects are said to bear the *k’ux*, or “heart” of the ancestors. On special occasions, the contents are

removed ceremonially to “feed” them with offerings of incense and prayers. Many of these books are of great antiquity. I attended the opening of one of these old chests in the town of Santiago Atitlán which contained a number of loose manuscript pages, birth and death registries, and several bound leather books, one of which I could see was a seventeenth century missal.

When brought out into the open, such books are reverently offered incense and prayers, but no attempt is made to open them or read them. Partly this is because few contemporary Maya know how to read the early script of the colonial period, and partly out of respect for the words themselves. When the words of the ancestors are read, or spoken aloud, it is as if that person had returned from death to speak again. Reading ancient texts is therefore a very delicate matter, filled with peril if the words are not treated with sufficient respect.

While working as an ethnographer and translator in the Guatemalan highlands, I collaborated with a number of Maya shaman-priests called *aj q'ijab'* (they of days, or daykeepers). Prior to reading the words of ancient Maya manuscripts like the *Popol Vuh*, it was customary for one of them, don Vicente de León Abac of Momostenango, to first purify my xeroxed copy of the text by waving copal incense smoke over it and asking forgiveness of the ancestors who had written the original for disturbing them. When I asked why he did this, he replied that to read the thoughts of ancient ancestors is to make their spirits present in the room and give them a living voice. Such power must be approached with great seriousness, and all care taken to be faithful to their original ideas in any transcription or translation. At the end of our work sessions, he politely dismissed the gods and ancestors involved in that day's reading with his thanks and asked pardon for any offense we might have given.

Most of the people who lived on the American continents prior to the arrival of Europeans lacked a written script. Even in Mesoamerica, where there was a long tradition of hieroglyphic writing among some of the ancient cultures of the region, such as the Maya and Zapotecs, other neighboring cultures preserved their history and theology principally through the spoken word, passed from generation to generation. This was true even of highly sophisticated cultures such as the Aztecs, whose painted texts relied primarily on a rebus or picture form of writing incapable of recording abstract ideas phonetically. Yet the concept of

oral poetry held by the Aztecs is exemplary of the view of such discourse throughout Mesoamerica, including the Maya.

For the ancient Aztecs the highest form of sacred communication was poetry, what they called *xochicuicatl* (“flower-song”). These were delicately beautiful hymns meant to be recited orally, often to musical accompaniment. In paintings, Aztec poets are depicted with speech scrolls issuing from their mouths. These scrolls are often colored a rich blue or green, symbolic of the precious nature of the poets’ words as if they were composed of jade or sacred quetzal feathers. Aztecs looked upon poetry as the actualization of a creative act inspired by divinities who were called upon to be present at the performance. Thus the poet Ayocuan Cuetzpaltzin of Tecamachalco believed that his songs came from heaven, but lamented that his own words could not express them as they came undefiled from the gods:

From within the heavens they come,
The beautiful flowers, the beautiful songs.
Our longing spoils them,
Our inventiveness makes them lose their fragrance. (León-Portilla 1980, 257)

Such songs exist only at the moment of their performance, their sound hanging briefly in the air, then fading to silence. It is only when they are spoken that they reveal their divine origin, transforming the poet into a messenger of deity:

Now I am going to forge songs,
Make a stem flowering with songs,
Oh my friends!
God has sent me as a messenger.
I am transformed into a poem. (León-Portilla 1969, 80)

Most poems were learned by heart and were lost forever if forgotten. Thus Aztec poetry had no permanent reality of its own, no more than a dream. It is only by an accident of history that we know of them at all. Soon after the Spanish conquest of the Aztec empire in 1521, a few Spanish missionaries such as Fr. Andrés de Olmos and Fr. Bernardino de Sahagún attempted to preserve long transcriptions of ancient Aztec history, theology, and poetry utilizing the Latin script. Olmos and Sahagún relied for these accounts on elderly

members of the Aztec nobility who had memorized them in their youth. Unfortunately these invaluable books were vigorously suppressed soon after their completion for fear that the Indians would learn of them and use them as an excuse to revert to their former paganism. Sahagún himself faced censure in 1577 for his work during the reign of King Philip II, who ordered his representative in Mexico to gather all copies of Sahagún's transcriptions of Aztec texts and secrete them away:

It seems that it is not proper that this book be published or disseminated in those places.... We thus command that, upon receiving this Cedula, you obtain these books with great care and diligence; that you make sure that no original or copy of them is left there; and that you have them sent in good hands at the first opportunity to our Council of Indies in order that they may be examined there. And you are warned absolutely not to allow any person to write concerning the superstitions and ways of life of these Indians in any language, for this is not proper to God's service and to ours. (León-Portilla 1980, 38)

The Spanish authorities realized that preserving a record of the literary heritage of the Aztecs constituted an intolerable danger to their own political and religious domination of the region. By suppressing cultural memory, missionaries could more effectively extirpate it from the life of the people they sought to convert to Christianity.

The suppression of indigenous culture was far more difficult among the Maya who did not have to rely on the spoken word to preserve their literary heritage. More than fifteen hundred years prior to the Spanish conquest, the Maya developed a sophisticated hieroglyphic script capable of recording complex literary compositions, both on folded screen codices made of bark paper as well as texts incised on more durable stone or wood. The importance of preserving written records was a hallmark of Maya culture as witnessed by the thousands of known hieroglyphic inscriptions, many more of which are still being discovered in the jungles of southern Mexico and northern Central America.

Being a phonetic script rather than a pictorial form of writing, Maya hieroglyphs were capable of recording any idea that could be spoken. Ancient Maya scribes were among the most honored members of creative society. They were often important representatives of the royal family, and as such were believed to carry the seeds of divinity within their blood. Among the titles given to artists and scribes in Classic period Maya inscriptions were *itz'aat*

(“sage”) and *miyaatz* (“wise one”). In an important royal tomb at Tikal (Burial 116), an incised bone depicts a deified scribe’s hand emerging from the gullet of an open-mouthed creature. In Classic Maya art, the open jaws represent a portal that leads from this world to the world of the gods. In his or her hand is a calligraphic paintbrush used to both write and illustrate the ancient Maya codex books. The message of this incised bone is that the activities of the scribe come closest to those of the gods themselves, who paint the realities of this world as divine artists.

The Spanish conquest of the Maya region in the sixteenth century resulted in the abrupt destruction of indigenous political power as well as many of its cultural institutions. Christianity was formally established in Guatemala in 1534 under Bishop Francisco Marroquín, who sent out priests with portable altars to the various highland Maya towns and villages in an effort to baptize the indigenous population and to destroy any remnants of “idolatry” that they might find. Ancient temples, as well as the carved and painted images which they contained, were systematically destroyed, their stones used to build Christian churches. Missionaries singled out hieroglyphic codices for destruction in an effort to protect the Indians from their former religious beliefs. Alonso de Zorita wrote that in 1540 he saw numerous such books in the Guatemalan highlands which “recorded their history for more than eight hundred years back, and which were interpreted for me by very ancient Indians” (Zorita 1963, 271-2). Fr. Bartolomé de las Casas lamented that when found, such books were destroyed:

These books were seen by our clergy, and even I saw part of those which were burned by the monks, apparently because they thought [they] might harm the Indians in matters concerning religion, since at that time they were at the beginning of their conversion. (Las Casas 1958, 346)

One of the most zealous of these early missionaries was Fr. Diego de Landa who burned hundreds of ancient Maya books while serving as the bishop at Maní in northern Yucatán:

We found a large number of books of these characters, and as they contained nothing in which there were not to be seen superstition and lies of the devil, we burned them all, which they regretted to an amazing degree and which caused them much affliction. (Landa 1941, 78)

Of the numerous hieroglyphic books that once existed in the Maya lowlands, all that escaped the Spanish purges of the sixteenth century are four incomplete codices. Of those written in the highlands of Guatemala, not a single Precolumbian codex is known to have survived.

But these tragic acts of destruction did not mean that Maya literacy ended with the arrival of the Europeans. Soon after the Spanish conquest, literate members of the highland Maya nobility made a number of transcriptions of their Precolumbian books utilizing a modified Latin script in an effort to preserve what they could of their recorded history and culture before they could be destroyed or lost. By far the most important extant example of such a transcription is the *Popol Vuh*, a lengthy document composed by anonymous members of the Quiché-Maya aristocracy in Guatemala soon after the fall of their capital city to the Spanish conquerors. The authors of the manuscript described the text as an *ilb'al* (instrument of sight) by which the reader may “envision” the thoughts and actions of the gods and sacred ancestors from the beginning of time and into the future. The opening chapters of the *Popol Vuh* describe the creation of all things as if it were occurring in the immediate present, time folding back upon itself to transport the reader into the primordial waters of chaos at the very moment the first land emerged:

THIS IS THE ACCOUNT of when all is still silent and placid. All is silent and calm. Hushed and empty is the womb of the sky.... The face of the earth has not yet appeared. Alone lies the expanse of the sea, along with the womb of all the sky. There is not yet anything gathered together. All is at rest. Nothing stirs. (*Popol Vuh*, p. 67)

This passage is written in present progressive tense, suggesting that the narrator *sees* it before him as he writes. This is consistent with the way stories are told in contemporary Quiché households. The storyteller invites the listener to imagine the setting of his tale, and nearly always tells the story as if it were happening right then, even if it happened in the distant or mythic past.

The text of the *Popol Vuh* was kept hidden by indigenous elders for centuries in the town of Chichicastenango in Guatemala. So successful were these efforts to preserve early Colonial texts that two hundred years after the Conquest, a Spanish priest living in

Chichicastenango named Francisco Ximénez wrote that the people of that town possessed many ancient books, including the manuscript of the *Popol Vuh*. Ximénez wrote that these books were kept in secret so that local Christian authorities would not learn of them. Far from being forgotten tales, he found that these texts were “the doctrine which they first imbibed with their mother’s milk, and that all of them knew it almost by heart” (Ximénez 1929-31, I.i.5). Ximénez was able to convince the elders who kept the *Popol Vuh* manuscript to allow him to borrow it for the purpose of making a copy.

After Ximénez made his copy, the original text was presumably given back to the Maya although it has not been seen since the early 1700s. Today we, in the Western world, know of this great book only through Ximénez’s transcription, which has become one of the principal resources used by European and American scholars who study Maya history and theology. It is unfortunate, however, that the great majority of Maya people have not had access to it for centuries in their own language. Literacy has slowly eroded away among the contemporary Maya such that few are literate in their native tongue. The sacred records of the Maya were forcibly taken from them and destroyed in the fires of the Spanish conquest. It is only in the past hundred years or so that fragments of what they have lost are beginning to be rediscovered and read widely. For the Maya each ancient word, whether read or spoken aloud, is life-giving in its power to reach across the centuries. The Maya people can understand the preciousness of such documents in ways that we who have never been denied literacy can hardly imagine.

In preparing this translation of the *Popol Vuh*, I often remembered that evening near Chihul when I had the opportunity to read passages from this great book to its authors’ descendents. The words were meant for them, not me. In translating the text, I have tried to bear in mind that this process gives voice to the ancients so that their words may be heard again. It is my sincerest hope that I have been faithful to their voices.

This work is published in two volumes. The first consists of an English translation of the *Popol Vuh* with commentary aimed at elucidating the meaning of the text in light of contemporary highland Maya speech and practices, as well as current scholarship in Maya linguistics, archaeology, ethnography, and art historical iconography. No text can be translated from one language into another without losing a certain amount of the beauty and

nuance of the original. The poet Stéphane Mallarmé felt that his poetry should never be translated because the symbolism, flow, and sound of the words were so closely bound to the French language. To convey even a portion of the associated meaning that colored his poems would require extensive explanatory notes, and for Mallarmé “to *name* an object is to suppress three-quarters of the enjoyment to be found in the poem, which consists in the pleasure of discovering things little by little: *suggestion*, that is the dream” (Lucie-Smith 1972, 54).

To a great extent, this is also true of the language found in the *Popol Vuh*, which is replete with esoteric language, plays on words, and phrases chosen for their sound and rhythm as much as for their meaning. I’ve tried to adhere as closely as possible to the tone and syntax of the Quiché text, however, certain liberties are unavoidable in order to make the narrative understandable in the English language. For example, the Quiché language stresses passive verb constructions, which when translated into European languages are difficult to follow. The authors of the *Popol Vuh* also routinely used passive forms to create gerunds that are hopelessly awkward in English. Thus, the words “manifestation, declaration, and expression” in lines 11-13 are actually written, “its being manifested, its being declared, its being expressed.”

To partially compensate for the inadequacy of a grammatic English version to adhere precisely to the wording of the original, the second volume of this work contains a “literal” word for word translation of the text. I have chosen to use this arrangement because I believe that language is reflective of the flavor of the culture that utilizes it. When the original phraseology and grammatical construction of the ancient text is preserved, subtle nuances of meaning become evident. The first line of the *Popol Vuh* declares the book to be *u xe’ ojer tzij*, which may be translated literally as “its root ancient word.” The phrase indicates that this is the beginning of the ancient history of the Quiché people. The remainder of the book is thus seen as growing like a plant from this “root.” The imagery is a beautiful expression of the Quiché world view as an agricultural society.

One of my hopes for this project was to make the original Quiché text of the *Popol Vuh* available to the Quiché people themselves in a form that is consistent with the modern script taught in the Guatemalan school system. I have therefore utilized in the literal translation an

entirely new transcription of the original Quiché text using modern orthography. I have also included a transcription of the Latin orthographic version of the *Popol Vuh* as it was written by its Quiché authors in the sixteenth century for comparative purposes.

The *Popol Vuh* is the most important example of Precolumbian Maya literature to have survived the Spanish conquest. Its significance may be seen in the numerous versions of the text that have been published. In the past three hundred years, the *Popol Vuh* has been translated approximately thirty times into seven languages. Unfortunately most of these translations were not based on the original Quiché-Maya text, but rather on various Spanish versions derived from it. The translation contained in this book is entirely new, based primarily on my own knowledge of the language, as well as dictionaries and grammars compiled in the last century by García Elgueta (1892, ca. 1900, ca. 1910), Sáenz de Santa María (1940), León (1954), Edmonson (1965), Alvarado López (1975), Mondloch and Hruska (1975), Siméon (1977), García Hernández and Yac Sam (1980), Ajpacaja Tum, Chox Tum, Tepaz Raxuleu and Guarchaj Ajtzalam (1996), López Ixcoy (1997), Pérez Mendoza and Hernández Mendoza (2000), and Par Sapón and Can Pixabaj (2000). I have also relied on consultations with native Quiché speakers in the highland Guatemalan towns of Momostenango (and the surrounding aldeas of Santa Ana, Canquixaja, Nimsitu, and Panca), Totonicapán (and its aldeas of Nimasak, Chuxchimal, and Cerro de Oro), Nahuala, Cunén (and its aldeas of Los Trigales, Xesacmalha, Xetzak, Las Grutas, Chitu, and Xepom), and Chihul.

It is fortunate in this regard that the Quiché language has changed surprisingly little in the centuries since the *Popol Vuh* was composed. With important exceptions, most of the vocabulary is still understandable to modern Quichés. For terms and phrases associated with Maya religion and ritual, I have also worked with a number of Quiché *aj q'ijab'*, who continue to conduct traditional calendric and divinatory rites in a manner little different from that practiced at the time the *Popol Vuh* was compiled. I am particularly indebted to don Vicente de León Abac of Momostenango for his wisdom and patience with me in this regard.

For archaic and non-Maya loan words which are no longer used by modern Quichés, I have relied on dictionaries, grammars, and theological treatises prepared by Spanish priests in the early Colonial period, principally those compiled by Fr. Domingo de Vico (ca. 1555),

Bishop Francisco Marroquín (ca. 1560), Fr. Alonso de Molina (1571), Fr. Marcos Martínez (ca. 1575), Fr. Antonio de Ciudad Real (ca. 1590), Fr. Tomás de Coto (ca. 1656), Fr. Bartolomé de Anléo (ca. 1660), Fr. Tomás de Santo Domingo (ca. 1690), Fr. Benito de Villacañas (1692), Fr. Domingo de Basseta (ca. 1698), Fr. Francisco de Vare[ll]a (1699), Fr. Translation is an art whose cloth is woven from a variety of threads. Any defects are solely the fault of the weaver. Its beauty is solely dependent on the threads themselves.

Allen J. Christenson

Provo, December 27, 2002

INTRODUCTION

Quiché History:

The *Popol Vuh* was written by anonymous members of the Quiché-Maya nobility, a branch of the Maya that dominated the highlands of western Guatemala prior to the arrival of Spanish conquerors in 1524. Their present population is something over half a million, spread thinly through a series of market towns and smaller agricultural villages in the modern Guatemalan states of Quiché, Totonicapán, and Quetzaltenango. Their homeland is some of the most beautiful country in the world, dominated by a range of high mountains, volcanoes, and steep-walled plateaus, wrapped in green pine forest, and watered by numerous rivers and waterfalls. Its high elevation keeps the climate comfortably cool in the summer, while its location in the tropics prevents the extreme cold temperatures usually associated with mountainous environments. Guatemala's boast of being the "Land of Eternal

Spring” is no exaggeration.

Although the highland Maya have lived in this area for more than two thousand years, the *Popol Vuh* suggests that they came to be dominated by a militaristic group of relative newcomers, led by the Cavec-Quiché lineage, who claimed to have come from somewhere in the East where the sun rises (*Popol Vuh*, pp. 204-205), likely the Maya lowlands during the early Postclassic phase (ca. AD 900-1200). During this period of history, many of the most important Maya ruling lineages throughout the region were multilingual and heavily influenced by ideas from beyond their borders, particularly from Nahua speakers, the language of central Mexico. According to Bernardino de Sahagún, a Spanish priest who worked among the Aztecs soon after the Spanish conquest, the lowland Maya area was known as Nonoualcat (land of the dumb) because it was occupied by non-Nahua speakers, although he asserted that many could speak Nahua as a second language (Sahagún 1959-63, Book X, 170; cf. Carmack 1981, 46). Nahua, the language of the Toltecs and later Aztecs, had become a kind of *lingua franca* among elite groups throughout Mesoamerica by the last centuries prior to the Spanish conquest. The highland Maya in particular remembered the legendary Toltecs, the ruling class of central Mexico in the early Postclassic period, as the greatest of artists and sages (*Popol Vuh*, p. 80n.102) and adopted many Nahua words that reflect political as well as esoteric ceremonial concepts.

In the Terminal Classic (AD 800-900) and Early Postclassic (AD 900-1200) phases, central Mexican influence spread rapidly through much of Mesoamerica (Thompson 1970, 18-21; Fox 1978, 274). The most impressive center of Mexican influence in the Maya world during this time was Chichen Itza, located in the northern region of the Yucatán Peninsula. Diego de Landa, one of the first Spanish priests to work among the Maya of Yucatán, was told that the city was visited by a non-Maya priest-ruler who came from across the Gulf of Mexico named Kukulcan (Yucatec: “Feathered Serpent”). This legend dovetails well with similar myths recorded in Aztec sources concerning the Toltec priest-ruler Topiltzin Quetzalcoatl who sailed across the Gulf of Mexico toward Yucatán at approximately the same time (ca. AD 978 according to Aztec chronicles) (Landa 1941, 20-23; Coe 1987, 132). Yet central Mexican influences at Chichen Itza are much older than this legendary visit by Kukulcan. The supposedly Toltec-inspired Great Ballcourt at Chichen was dedicated on a

date corresponding to November 18, 864, and current archaeological evidence indicates that all of the principal buildings of the city were completed well-before AD 1000 (Schele and Mathews 1998, 200).

Rather than the result of a single event, such as the arrival of Kukulcan, central Mexican influence in the Maya world should be seen as a long continuum of mutual interaction extending back to at least the third or fourth century with the arrival of merchants and perhaps military invaders from the great central Mexican city of Teotihuacan. There is clear evidence of the presence of armed warriors from Teotihuacan who arrived at the largest of lowland Maya centers, Tikal, in AD 378. There the foreigners oversaw the establishment of a new dynasty of heavily Mexican-influenced rulers, if not Teotihuacanos themselves (Martin and Grube 2000, 29-36). That this was no isolated event is attested by the presence at about the same time of Teotihuacan architectural, ceramic, and artistic influences throughout the Maya world, particularly in the Guatemalan highlands centered at the major site of Kaminaljuyu (Kidder, Jennings, and Shook 1946; Sanders 1977; Michels 1979; Hatch 1997) and in the Tiquisate area (Hellmuth 1975, 1987; Bove 1989).

Despite these influences from central Mexico, Tikal and its neighbors maintained their fundamentally Maya character and within a brief time reestablished their own native dynasties. Chichen Itza as well, notwithstanding its taste for central Mexican motifs and concepts, was also likely ruled by native Maya lineages. Their claims to “Toltec” ancestry were part of the political climate of the age where such legendary Mexican connections were essential to establishing legitimacy based on ancient precedent. Schele and Mathews suggest that the Itza-Maya rulers of Chichen Itza used central Mexican imagery as a means of proclaiming themselves the legitimate inheritors of Toltec power in the same way that kings throughout Europe declared themselves to be successors to the Holy Roman Empire, regardless of their familial and social histories (Schele and Mathews 1998, 201). Indeed the Cavec Quiché lineage that produced the *Popol Vuh* likely had Itza-Maya connections (Akkeren 2000). Chichen Itza dominated the Yucatán peninsula and southern Gulf Coast regions, establishing a tradition of Toltec-inspired power and spiritual mystique that persisted long after Toltec rule, centered at Tula Hidalgo, collapsed in approximately the twelfth century. By the time of the Spanish conquest nearly all Maya rulers prided

themselves on their Nahua/Toltec heritage (Morley, Brainerd and Sharer 1983, 166).

The ruling lineages of highland Guatemala were no exception. The *Popol Vuh* claims that the divine creators who formed the first ancestors of the Quichés were *Aj Toltecat* (Toltecs) (p. 80n.102; line 568). The text also emphasizes that the Quichés were “brothers” with the Yaqui (a general term for Nahua speakers) of Mexico and that the Quichés’ principal god, Tohil, was in fact equivalent to the Mexican god Quetzalcoatl (Nahua: “Feathered Serpent”) (p. 231). This affinity for foreign Mexican culture helps to explain the many Nahua loan words in the *Popol Vuh* (Campbell 1970, 8; Carmack 1983, 17-18).

According to the *Popol Vuh*, the founders of the various Quichean lineages traveled a great distance eastward “across the sea” to an epi-Toltec city called Tulan Zuyva where they received their titular gods and tokens of kingship (pp. 209-212, 256-259). Tulan is a Nahua word meaning “place of reeds,” or more broadly “city,” in the sense that it is filled with a great multitude of people as reeds crowd the shores of a lake or river. Many major Toltec-influenced ceremonial and administrative centers were therefore called Tulan. As a result, it is difficult to identify precisely which Tulan the Quiché progenitors saw as the origin of their power, although it was likely located somewhere on the Yucatán Peninsula (Carmack 1981, 48; Akkeren 2003). Chichen Itza, or its successor Mayapan, are good possibilities for this Tulan.

Carmack suggests that the founders of the Quiché ruling lineages arrived in Guatemala about the time of Chichen Itza’s collapse, which Yucatec Maya histories date around AD 1221. More recent archaeological evidence suggests that this date should be pushed back significantly in time, and that, in any case, the ultimate downfall of the city was preceded by a long period of decline after the tenth century (Morley, Brainerd, and Sharer 1983, 167; Schele and Mathews 1998, 197-255; Akkeren 2000, 314-315). Chichen Itza had been the dominant force in the lowland Maya world. Its collapse disrupted the traditional politics and interregional trade of the region, resulting in the displacement of numerous groups of people seeking new power bases and economic opportunities (Fox 1978, 2). Many of these groups claimed authority based on the old Mexican-influenced symbols of power and prestige (Roys 1967, 88-98; Schele and Mathews 1998). It is possible that elements of what would become the ruling Cavec-Quiché lineage and related highland Maya progenitors were part of this

human wave.

Thus, at Tulan, the founding lineages of the various highland Maya kingdoms were given their titular gods, as well as tokens of “Toltec” rule (many of which bore Nahua language names) and commissioned to leave in search of places to conquer (pp. 213, 257-260). Numerous highland Maya documents speak of this pilgrimage to Tulan as a means of securing tokens of power and legitimacy. This account is from the *Annals of the Cakchiquels*:

Then we arrived at Tulan in the darkness and in the night. Then we gave the tribute, when the seven tribes and the warriors carried the tribute. We took our places in order at the left part of Tulan.... And after the seven tribes had arrived, we the warriors came. So they said. And commanding us to come, they said to us, our mothers, and our fathers: “Go, my daughters, my sons. I will give you your wealth, your domain; I will give you your power and your majesty, your canopy and your throne. Thus shall they pay tribute to you.... Truly, your glory shall be great. You shall not be disparaged. You shall become great with the wealth of the wooden shields. Do not sleep and you shall conquer, my daughters, my sons! I will give your domain to you, the thirteen chiefs, to all of you equally: your bows, your shields, your domain, your majesty, your greatness, your canopy, and your throne. These are your first treasures.” Thus they spoke to the Quichés when the thirteen groups of warriors arrived at Tulan. (Recinos and Goetz 1953, 50)

The authors of the *Popol Vuh* wrote that their brethren scattered in many different directions after departing from Tulan (pp. 230-232). Indeed, the Quichés described their ancestors more as refugees than as well-prepared and organized military colonists:

This is what preoccupied their hearts as they passed through their great afflictions. They did not have food or sustenance. They would only sniff the bottoms of their staffs to feel as if they were eating. But they did not eat when they came. (p. 221)

As outlined in the text, the Quiché forefathers were gradually able to dominate most of western Guatemala and set up their own militaristic kingdom which ultimately extended from the Pacific Coast in the west to the borders of the Petén rain forest in the east. The Quichés soon adopted the language and traditions of the more numerous highland Maya

inhabitants of the places they conquered, retaining only a few lowland Maya and Nahuatl words which had no local equivalent, particularly those related to military, political, and theological concepts.

The *Popol Vuh* account of a simultaneous mass migration of all the major Quichean lineage groups into the Guatemalan highlands should not be taken literally. Rather, this was more likely a slow process carried out over a period of several centuries involving a complex series of historical and social interactions (Carmack 1981, 43-74). Indeed, many of these lineages had always lived in the highlands, although their authority to exercise military or political authority may have been obtained from outside centers of power. The confederation of people known as the Quiché was more likely a complex and linguistically diverse group of lineages composed of native highland Maya, Mexicanized clans from nearby Pacific Coastal areas, and immigrants (particularly the Cavec) from the Maya lowlands (Akkeren 2000). The interrelationship between these groups was dynamic and changed significantly over time. The *Popol Vuh* does not contain what we would call “objective history.” It is instead a collection of traditions, partly based in historical fact and partly based on mythic interpretation, to describe the rise to power of their own ancestral lineages, specifically that of the Cavec who came to dominate the highland Maya region in the fifteenth century. This mixture of highland Maya, lowland Maya, and Mexican-influenced cultures ultimately gave birth to the traditions contained in the *Popol Vuh*.

The arrival of the Spaniards in the early sixteenth century resulted in the abrupt disruption of Quiché-Maya rule. Hernán Cortés, conqueror of the Aztec empire in Mexico, heard reports of rich lands to be had southward in Guatemala. He therefore sent one of his captains, Pedro de Alvarado, to subdue any resistance in that direction and claim the area for the Spanish Crown. In his first letter to Cortés, Alvarado described Guatemala as “the wildest land and people that has ever been seen.... We are so far from help that if Our Lady does not aid us, no one can” (Alvarado 1979, 105). Following a brief, yet bloody campaign, Alvarado entered the Quiché capital at Cumarcah (also known by its Nahuatl name, Utatlan) without resistance on March 7, 1524, at the invitation of the lords Oxib Quieh and Beleheb Tzi. Once inside the city, Alvarado suspected a trap and ordered the arrest and execution of its rulers:

As I knew them [the Quiché lords] to have such ill will toward the service of

His Majesty, and for the good and tranquility of the land, I burned them, and I commanded to be burned the town of Utatlan to its foundations, for it was dangerous and strong.... All they that were taken prisoners of war were branded and made slaves. (Alvarado 1979, 102-3)

During the early Spanish Colonial period, the population of Guatemala declined by as much as 85% as a result of war, forced labor, and disease. Fortunately, President Alonso López Cerrato, the successor to Pedro de Alvarado, was more tolerant:

During this year [1549] the Lord President Cerrado arrived.... When he arrived, he condemned the Spaniards, he liberated the slaves and vassals of the Spaniards, he cut the taxes in two, he suspended forced labor and made the Spaniards pay all men, great and small. The lord Cerrado truly alleviated the sufferings of the people. I myself saw him, oh, my sons! (Recinos and Goetz 1953, 137)

Christianity was formally established in Guatemala in 1534 under Bishop Francisco Marroquín, who sent out priests with portable altars to the various Indian towns and villages to baptize the Maya and destroy any remnants of “idolatry” and “paganism” which might have survived the Conquest. To aid in the process of conversion, missionary priests gathered the Maya into towns, each with a church to administer Catholic rites and instruct them in the Christian faith. Because Cumarcah had been all but destroyed during the war, the remnants of its population were moved to a new settlement nearby in ca. 1555, which the Spanish authorities called Santa Cruz del Quiché (Holy Cross of the Quiché). It was likely here that the *Popol Vuh* was compiled in the form that we have today.

Precolumbian *Popol Vuh*:

In the preamble to the *Popol Vuh*, its Quiché authors wrote that the contents were based on an ancient book from across the sea (p. 64). In a later passage, the source of these writings is identified as Tulan, which they located across the sea to the east (p. 259), apparently a reference to the Maya lowlands of the Yucatán Peninsula. The Quiché lords held these “writings of Tulan” in great reverence and consulted them often (p. 287).

The Maya lowlands had a tradition of literacy dating back to at least AD 200, centered on a sophisticated hieroglyphic script. If the Precolumbian version of the *Popol Vuh* was like other ancient texts from the lowlands, it was painted on long strips of bark paper or deer skin which were given a thin coating of lime plaster to create a smooth writing surface, and then folded accordion style into a codex book. A number of such ancient painted codices were seen by the first Spanish missionaries and administrators who arrived in Guatemala. Bartolomé de las Casas saw several hieroglyphic books about 1540. He wrote that they contained the history of the people's origins and religious beliefs, written with "figures and characters by which they could signify everything they desired; and that these great books are of such astuteness and subtle technique that we could say our writing does not offer much of an advantage" (Las Casas 1958, 346).

Las Casas was particularly impressed by the fact that the Maya could write "everything they desired." The Maya were, in fact, the only people in the New World who had a writing system at the time of the Spanish conquest which had this capability. Maya hieroglyphs are partly phonetic (glyphs which stand for individual sounds) and partly logographic (picture writing in which a glyph stands for an entire word or concept). Because of their phonetic nature, Maya glyphs may be placed together to form any word which can be thought or spoken. There is no evidence that such a script was ever developed or used in the Guatemalan highlands after the Late Preclassic, however, the authors of the *Popol Vuh* made clear that they based their writings on an imported text from the Maya lowlands. It is likely that some few scribes at the Quiché court were familiar enough with such books in their possession that they could read them in at least a cursory way.

Beginning in March 1555, a judge from the province of Mexico named Alonso de Zorita began a tour of inspection through the province of Guatemala in order to moderate tribute levies and correct administrative abuses inflicted on the local Maya population. As part of his duties, Zorita visited the ancient city of Utatlan to learn what he could about the ancient political system of the Quichés. There he was shown "paintings that they had which recorded their history for more than eight hundred years back, and which were interpreted for me by very ancient Indians" (Zorita 1963, 271-2).

There must have been hundreds of hieroglyphic books in the Maya world at the time of

the Spanish conquest. It is one of the great tragedies of New World history that the vast majority of these were destroyed. Las Casas witnessed the destruction of a number of such books which were burned to “protect” the Maya from their traditional religion:

These books were seen by our clergy, and even I saw part of those which were burned by the monks, apparently because they thought [they] might harm the Indians in matters concerning religion, since at that time they were at the beginning of their conversion. (Las Casas 1958, 346)

Diego de Landa was particularly zealous in his efforts to destroy any hieroglyphic books which he could find in northern Yucatán: “We found a large number of books of these characters and, as they contained nothing in which there were not to be seen superstition and lies of the devil, we burned them all, which they regretted to an amazing degree and which caused them much affliction” (Landa 1941, 78).

Only four lowland Maya codices are known to have escaped these purges. We can only add our own laments to those of the Maya over the irretrievable loss of a people’s literary heritage. Of the many hieroglyphic books that once existed in the highlands, including the Precolumbian version of the *Popol Vuh*, not a single one is known to have survived.

The fact that the contents of the original *Popol Vuh* predated the Spanish conquest gave them an aura of mystery and power. Its authors referred to the ancient book upon which the *Popol Vuh* was based as an *ilb'al*, meaning “instrument of sight or vision” (p. 64; lines 51-52). The word is used today to refer to the clear quartz crystals that Quiché priests use in divinatory ceremonies. It may also be used to refer to magnifying glasses or spectacles, by which things may be seen more clearly. Thus the rulers of the Quichés consulted the *Popol Vuh* in times of national distress as a means of seeing the future:

They knew if there would be war. It was clear before their faces. They saw if there would be death, if there would be hunger. They surely knew if there would be strife. There was an instrument of sight. There was a book. Popol Vuh was their name for it. (p. 287)

Ancient Maya books were periodically displayed on state occasions as an assertion of legitimacy by the rulers who possessed them (Carmack 1973, 17-18). Diego de Landa wrote

that “the most important possession that the nobles who abandoned Mayapan took away to their own country was the books of their sciences” (Landa 1941, 39). Even today the possession of old books and manuscripts is highly prestigious among the highland Maya. La Farge and Byers observed that the titles and papers of the community of Todos Santos were kept in a chest which “is highly revered, if not worshiped, by the Indians, and is carried in a solemn procession on New Year’s day, when the new officials take office” (La Farge and Byers 1931, 14).

The Precolumbian version of the *Popol Vuh* has unfortunately been lost. Even the authors of the sixteenth century manuscript copy wrote that the more ancient book could no longer be seen in their day, and that what they compiled was based on the original (p. 64). It should not be assumed that this was a word for word transcription, however. The few Precolumbian Maya codices that survive, as well as the numerous inscriptions found on stelae, altars, architectural wall panels, etc., all bear texts that are highly formalized and condensed references to dates, persons, and events that briefly outline the stories they wish to tell. These are often accompanied by illustrations to further elucidate the otherwise terse prose. No known Precolumbian text contains the kind of long storytelling devices, descriptive detail, commentary, and extensive passages of dialogue found in the *Popol Vuh*. It is more likely to have been a compilation of oral traditions based to one degree or another on mythic and historical details outlined in a Precolumbian codex with their associated painted illustrations.

Authors of the *Popol Vuh*:

The authors of the *Popol Vuh* were anonymous. In the text they refer to themselves only as “we” (p. 64), indicating that there were more than one who contributed to its compilation. The anonymity of the authors is unusual since most Colonial period highland Maya documents were prepared for some official purpose, and were duly signed by their authors as testimony of their veracity. For whatever reason, those who were responsible for compiling the *Popol Vuh* did not wish their identities to be known.

The authors were traditionalists, in the sense that they recorded the history and theology of the ancient highland Maya people without adding material from European sources. The *Popol Vuh* thus contains very little direct Christian influence. By its own account it is a

faithful record of the contents of the ancient *Popol Vuh* text which could no longer be seen (p. 64). Although the traditions of the book were compiled after the Conquest, “under the law of God and Christianity” (ibid.), its Quiché authors venerated their traditional Maya gods as luminous, wise beings who brought life and light to the world through their creative works. The statement that the *Popol Vuh* was composed within Christianity immediately follows a declaration that the Maya gods “accomplished their purpose in purity of being and in truth” long before the arrival of the Christian God (p. 63). Thus the *Popol Vuh* contrasts its “ancient word” (pp. 59, 64) which contains light and life, with that of the more recent voice of Christianity. In highland Maya society, antiquity denotes authority. A modern priest-shaman in Momostenango once told me that the Maya “Earth God” is greater than Christ and the saints because he was worshiped by his people for centuries before the arrival of the Europeans.

Such unapologetic reverence for the ancient gods would have been offensive to the Spanish missionaries. During the early decades of the Spanish conquest, the most obvious expressions of Maya religion and literature were either destroyed or forced into hiding. Old hieroglyphic books were singled out as dangerous hindrances to the conversion of the people and were actively sought out and destroyed. Those who were found in possession of such books were persecuted and even killed. As much as two hundred years later, Ximénez wrote that many ancient books were still kept in secret by the Quichés so that the Spanish authorities would not learn of them (Ximénez 1929-31, I.i.5).

It was the loss of such precious books as the hieroglyphic *Popol Vuh* which may have prompted Quiché scribes to preserve what they could of their literature by transcribing their contents into a form which would make them safer from the fiery purges of Christian authorities. The authors of the *Popol Vuh* may have recognized the danger in this and cloaked themselves with anonymity to protect themselves. The preamble to the *Popol Vuh* may hint at this when it declares that “the original book exists that was written anciently, but its witnesses and those who ponder it hide their faces” (p. 64). It is therefore he who “witnesses and ponders” the ancient book who is in hiding, perhaps an indirect reference to the authors of the *Popol Vuh* manuscript who did not wish their identities known for fear that the authorities might do harm to them or the book in their possession.

The *Popol Vuh* was likely composed in its present form at Santa Cruz del Quiché, a new city founded by the Spanish conquerors near the ruins of Cumarcah/Utatlan, the ancient capital of the Quichés. The majority of its inhabitants were members of the old ruling classes which had been resettled from Cumarcah to aid in their conversion to Christianity and to more easily supervise their activities. The authors of the text were most likely members of the Quiché nobility who may have retained some Precolumbian manuscripts from the royal archives that survived the Conquest.

The *Popol Vuh* does provide some clues as to who its authors may have been. In an extended passage placed immediately after the dynastic list of the Quiché kings themselves, the text declares that the three *Nim Ch'okoj* (Great Stewards) of the principal Quiché ruling lineages were “the mothers of the word, and the fathers of the word” (p. 305). “The word” is used in the text to describe the *Popol Vuh* itself (p. 59; lines 1-4), indicating that the *Nim Ch'okoj* were likely the authors of the book. *Nim Ch'okoj* was a relatively minor position within the Quiché nobility, charged with certain duties at royal banquets, perhaps including the recitation of tales dealing with the gods, heroes and past rulers of the Quiché nation.

The *Popol Vuh* lists don Juan de Rojas and don Juan Cortés as the contemporary Quiché kings of the ruling Cavec lineage when the manuscript was written (p. 297). These men were grandsons of the two kings burned by Pedro de Alvarado during the conquest of the Quiché nation. If the authors of the *Popol Vuh* were the three *Nim Ch'okoj* of the major Quiché lineages in the days of Juan de Rojas and Juan Cortés, then at least one of their names is known. The contemporary *Título Totonicapán* was completed during the reign of these same two kings. One of the signatories of the document was Adon Cristóbal Velasco, *Nim Chocoh Cavec*” (Great Steward of the Cavec) (Chonay and Goetz 1953, 195; Carmack and Mondloch 1983, 200). Thus don Cristóbal Velasco was likely one of the elusive authors of the *Popol Vuh* as well.

Whoever they may have been, the authors of the *Popol Vuh* manuscript were trained in the use of European letters. Soon after the formal establishment of Christianity in highland Guatemala, Christian missionaries began to teach representatives of the various Maya lineages of Guatemala to read and write their languages using a modified Latin script developed by Fr. Francisco de la Parra. The first bishop of Guatemala, Francisco Marroquín

strongly advocated this policy as a means of aiding the conversion effort to Christianity. The authors of the *Popol Vuh* undoubtedly learned to read and write with the Latin alphabet under the direction of Christian missionaries who were actively establishing schools for this purpose in major Maya towns, undoubtedly including Santa Cruz del Quiché.

History of the *Popol Vuh* Manuscript:

Although the *Popol Vuh* is undated, internal evidence points to the work being completed between the years 1554 and 1558. The manuscript mentions that Juan de Rojas and Juan Cortés, grandsons of the kings burned by Alvarado during the Conquest, were alive and recognized as rulers when the *Popol Vuh* was written. The signatures of these kings appear on the last page of the *Título Totonicapán*, which is dated September 28, 1554 (Chonay and Goetz 1953, 194-5). The *Popol Vuh* must have been written prior to 1558, because by that date don Juan de Rojas had disappeared from Colonial records and had presumably died. Thus the *Royal Title of Don Francisco Izquin Nehaib*, dated November 22, 1558, is signed by Don Juan Cortés and Don Martín, kings of the Quiché at Santa Cruz (Recinos 1957, 115). The *Popol Vuh* also refers to one don Pedro de Robles as the current “Lord Magistrate” of the Nihai lineage (p. 301). Pedro de Robles is known to have taken office soon after 1554, therefore the *Popol Vuh* must have been written sometime between the years 1554 and 1558.

This decade was one of great impoverishment in the town of Santa Cruz del Quiché. Despite a dramatic decline in population in the area following the Conquest, Spanish officials continued to drain its resources with heavy tribute levies and extortion. This became particularly severe with the accession of the Spanish king Philip II in 1556. The new king was desperate to augment royal revenues by any means possible to alleviate Spain’s acute financial difficulties. As a result, the Crown sought to limit where possible the traditional tribute rights and other privileges which had been the chief means of support for the Quiché nobility, while seizing their assets (Carmack 1973, 20).

Alonso de Zorita, a judge from the *Audiencia* of Mexico, travelled through Guatemala in 1555. While there, he visited Santa Cruz del Quiché and inquired of the native rulers concerning their government. He was amazed to find that those who were at one time “lords of Utatlan” were:

as poor and miserable as the poorest Indian of the town, and their wives fixed the tortillas for dinner because they had no servants, nor any means of supporting them; they themselves carried fuel and water for their houses. The principal lord was named Don Juan de Rojas, the second, Don Juan Cortés.... They were all extremely poor; they left sons who were all penniless, miserable tribute-payers, for the Spaniards do not exempt any Indians from payment of tribute. (Zorita 1963, 272)

Spanish conquerors had divided up much of the land they had seized as spoils of war in the form of an *encomienda*, an institution whereby the Crown authorized Spaniards who participated in the Conquest to collect tribute and demand labor from the Indians in return for services such as military duty and providing for the spiritual welfare of Indians under their control (Orellana 1983, 137). Members of the Maya nobility protested this confiscation of their property, claiming traditional rights as rulers under Colonial law. Spanish courts tended to respect land claims and tribute rights held by important noble lineages if these could be documented based on written proof of genealogy and history. Many highland Maya texts were prepared specifically as “royal titles,” and were duly signed by native rulers as legal documents. Where possible, these titles were based on Precolumbian books whose antiquity served to bolster their authenticity in court.

The Quiché lord, don Juan Cortés, travelled to Spain in 1557 to directly press his case for royal privileges at the court of Philip II. This endeavor was unsuccessful as he was judged to be unworthy of special rights, being the son of an idolator. It was also suspected that he was not whole-heartedly converted to the Christian faith, and that it would require “very little to restore their ceremonies and attract their former subjects to himself” (Tedlock 1996, 56). This reflects the general mood of the Spanish authorities in Guatemala who sought to limit the rights of native rulers. The governor of Guatemala, Alonso López Cerrato, wrote to the Spanish king on May 25, 1552, that the Maya prior to the Conquest “reverenced” their rulers “as gods, and if this were to continue, the lords could raise the land in rebellion easily” (Carmack 1973, 379. Translation by author).

The fate of the sixteenth century transcription of the *Popol Vuh* is unknown for the next 150 years. At some time during this period, it was taken from Santa Cruz del Quiché to

the nearby town of Chuvila, now known as Santo Tomás Chichicastenango.

Chichicastenango had long since eclipsed Santa Cruz in size and importance, and most members of the old nobility had transferred their residence there. Today it is still famed for its spectacular mountain scenery, and its preservation of traditional Quiché culture.

Between 1701 and 1704, a Dominican monk named Francisco Ximénez, the parish priest of Chichicastenango, came to obtain the manuscript. Ximénez had served since 1694 in various Maya communities where he learned a number of dialects and studied Maya grammar so that he could teach it to newly-arrived clerics. He was particularly impressed with the Quiché language, calling it the “principal one of the world.”

Ximénez was interested as well in the ancient traditions of the Quichés. He noted that in his parish the people still conserved ancient “errors” which they had believed prior to the arrival of the Spaniards (Ximénez 1929-31, I.i.54). His curiosity concerning ancient Quiché history and religion may have overcome the suspicion of the guardians of the *Popol Vuh* manuscript, who allowed him to see it and make a copy. Ximénez wrote that other such texts were also in their possession:

It was with great reserve that these manuscripts were kept among them, with such secrecy, that neither the ancient ministers knew of it, and investigating this point, while I was in the parish of Santo Tomás Chichicastenango, I found that it was the doctrine which they first imbibed with their mother’s milk, and that all of them knew it almost by heart, and I found that they had many of these books among them. (Ximénez 1929-31, I.i.5)

Ximénez transcribed the Quiché text of the *Popol Vuh*, and added a Spanish translation of its contents. It is unknown what happened to the sixteenth century manuscript, although presumably Ximénez returned it to its Quiché owners. It is possible that the original may still survive in the possession of village elders or in the town archives of Chichicastenango.

Ximénez’s manuscript lay forgotten in parish archives until the Guatemalan Civil War of 1829 when all religious orders were expelled from the country. Books and papers formerly housed in convents and monasteries were subsequently transferred to public libraries, government repositories, or the collections of private individuals. Ximénez’s copy of the *Popol Vuh* manuscript apparently ended up in the library of the University of San Carlos in

Guatemala City. An Austrian traveler named Carl Scherzer saw it there in 1854 and had a copy made to take with him back to Europe. In part, Scherzer commissioned this copy to be made due to the poor condition of the manuscript. He described it as having been “written in such light ink that the original might very well become illegible and useless in a few years” (Scherzer 1856, 9). Lamentably, this faded copy of the Ximénez transcription of the *Popol Vuh* has since vanished from public records. Scherzer published Ximénez’s Spanish version of the text in 1856, the first time the *Popol Vuh* had appeared in print. The book was greeted with a great deal of excitement in Europe and America, where interest in ancient cultures was widespread.

In 1861, four years after Scherzer’s book, the Quiché version of the *Popol Vuh* was published for the first time, along with a rather flowery French translation by Father Charles Etienne Brasseur de Bourbourg. This publication was based on yet another copy of the Ximénez transcription which Brasseur had obtained from a Quiché man, named Ignacio Coloch, who resided in the town of Rabinal. This manuscript is of supreme importance because it is the oldest known Quiché version of the *Popol Vuh* text which has survived. Ximénez was in charge of the parish of Rabinal from 1704-1714, immediately following his years in Chichicastenango. It is unknown whether Ximénez prepared the “Rabinal Manuscript” during this period of his ministry or brought it with him from Chichicastenango.

The Rabinal Manuscript of the *Popol Vuh* bears the cumbersome title, *Empiezan las historias del origen de los Indios de esta provincia de Guatemala, traduzido de la lengua quiché en la castellana para más comodidad de los Ministros del Sto. Evangelio, por el R.P.F. Franzisco Ximénez, Cura doctrinero por el Real Patronato del Pueblo de Sto. Tomás Chuilá* (Beginning of the histories of the origin of the Indians of this province of Guatemala, translated from the Quiché language to Spanish for the greater convenience of the Ministries of the Holy Gospel, by the Reverend Father Franzisco Ximénez, Parish Priest for the Royal Patronage of the Town of Santo Tomás Chuilá). It is handwritten in a clear, flowing cursive script arranged in two columns, Quiché on the left and Ximénez’s Spanish translation on the right. Fortunately the ink used has remained well-preserved, and the paper is in remarkably good condition with almost no lacunae due to stains, tears or holes. It was placed at the end of a series of linguistic studies made by Ximénez which he entitled *Arte de*

las tres lenguas Cacchiquel, Quiché y Tzutuhil (Art of the three languages Cacchiquel, Quiché and Tzutuhil). These studies include a brief grammar, confessional, and Catechism in each of the three languages.

Brasseur brought the Rabinal Manuscript to Europe as part of a large corpus of native American documents which he had collected in his travels through Mexico and Guatemala. The bound volume containing the Ximénez transcription of the *Popol Vuh* was purchased after Brasseur's death by the American collector, Edward E. Ayer, who eventually donated it to the Newberry Library in Chicago, Illinois, where it is catalogued as Ayer MS 1515.

The Poetic Nature of the *Popol Vuh*:

The *Popol Vuh* is not only the most important highland Maya text in terms of its historical and mythological content, it is also a sublime work of literature, composed in rich and elegant poetry. In this respect it can be compared with other great epic poems of the ancient world such as the *Ramayana* and *Mahabharata* of India, or the *Iliad* and *Odyssey* of Greece.

Quiché poetry is not based on rhyme or metrical rhythms, but rather the arrangement of concepts into innovative and even ornate parallel structures. Seldom are the authors content with expressing a single idea without embellishing it with synonymous concepts, metaphors, or descriptive epithets. The Quiché poet is much like the composer of classical music who begins with a simple melody and then weaves into it both complementary and contrasting harmonies to give it interest and depth. Thus endless variations on a given theme are possible.

Books such as the *Popol Vuh* were not simply records of dry history, but universal declarations of the purpose of the world and man's place in it. The written words were thus intended to conjure up an image in the mind, to give new life and breath to the gods and heroes each time the story was read. The beauty of the work depends not only on the story itself, but on how the story is told. As Munro Edmonson points out, Mayan texts are meant to be "read and pondered rather than skimmed over" (Edmonson 1982, xiii).

Yet the beauty of Quiché poetry may sound awkward and repetitive when translated into European languages. Some translators in the past have ignored or failed to recognize the

poetic nature of the *Popol Vuh*, particularly its use of parallelism, and have tried to improve its seemingly purposeless redundancy by eliminating words, phrases, and even whole sections of text which they deemed unnecessary. While this unquestionably helps to make the story flow more smoothly, in keeping with our modern taste for linear plot structure, it detracts from the character of Quiché high literature. Welch points out that “in many ancient contexts, repetition and even redundancy appear to represent the rule rather than the exception” (Welch 1981, 12).

The first modern scholar to recognize parallelism in Maya literature was Sir J. Eric Thompson, who noticed that Precolumbian hieroglyphic texts seemed to contain redundant glyphs. Because the ancient Yucatec Maya books of Chilam Balam have similar redundancies, he concluded that these parallel glyphs were intended as a “flowing harmony,” and were “interpolated to improve the cadence of a passage” (Thompson 1950, 61-62).

Miguel León-Portilla was the first translator to arrange portions of Quiché and Yucatec Maya documents into poetic verse (León-Portilla 1969, 51-55, 75, 92-93). His recognition of the literary nature of Maya texts was a significant advance over previous translations which virtually ignored the presence of poetry. Nevertheless, his criteria for separating individual poetic lines, or cola, was somewhat haphazard, and he failed to recognize the presence of most forms of parallelism in the text.

In his translation of the *Popol Vuh*, Munro Edmonson arranges the entire text into parallel couplets. He asserts that “the *Popol Vuh* is primarily a work of literature, and it cannot be properly read apart from the literary form in which it is expressed” (Edmonson 1971, xi). While he has been criticized for failing to identify other types of poetry in his work (D. Tedlock 1983, 230), it is still the only translation of the full text of the *Popol Vuh* which has emphasized the poetic nature of the text. It is also true that by far the most common arrangement in the *Popol Vuh* is the parallel couplet. Edmonson himself recognized that his arrangement of the text was not the last word on the literary structure of the *Popol Vuh*: “I am certain that my reading does not exhaust either the poetry or the sense that is expressed, and that the *Popol Vuh* contains more of both beauty and meaning than I have found in it” (Edmonson 1971, xiii).

For the purposes of the second volume of this monograph, I have arranged the literal

translation of the *Popol Vuh* according to its poetic structure. Lines which are parallel in form or concept have been indented an equal number of spaces from the left margin of the page.

TYPES OF PARALLELISM IN THE *POPOL VUH*:

1. **Identical Parallelism:** The repetition of identical elements. Example, lines 794-795:

Sooty our mouths,	Xaq qa chi',
Sooty our faces.	Xaq qa wach.

2. **Synonymous Parallelism:** The repetition of elements which are similar in meaning or significance. Example, lines 58-59:

Witness of it,	Ilol re,
Ponderer of it.	B'isol re.

3. **Antithetic Parallelism:** The contrast of one element with an opposite or antithetical element. Example, lines 730-1:

Day rain,	Q'ijil jab',
Night rain.	Aq'ab'al jab'.

4. **Associative Parallelism:** The correlation of elements which are complementary to one another. This association may be material, familial, functional, or gender-based.

a. Material association, in which the substance of the elements is similar in nature.

Example, lines 243-244:

Its cypress groves,	U k'isisil,
Pine forests its face.	U pachajil u wach.

b. Familial association, in which elements are related by kinship. Example, lines 5129-5130:

First our grandfathers,	Nab'e qa mam,
Our fathers,	Qa qajaw,

c. Functional association, in which two elements act in a similar manner. Example, lines 137-138:

Merely alone the Framer ,	Xa u tukel ri Tz'aqol ,
Shaper ,	B'itol ,

d. Gender association, in which two elements are paired as male and female representatives of a parallel occupation. Example, lines 287-288:

Says the She Who Has Borne Children ,	Kacha' ri Alom ,
He Who Has Begotten Sons :	K'ajolom :

5. **Augmentive Parallelism**: Parallel elements in which one word or phrase clarifies or augments the meaning of another. Example, lines 151-152:

Thus surely there is the sky ,	Keje' k'ut xax k'o wi ri kaj ,
There is also its Heart Sky .	K'o nay puch u K'ux Kaj .

6. **Causative Parallelism**: Parallel elements in which the first word or phrase directly effects or precipitates the associated words or phrases. Example, lines 716-7:

He came Striking Jaguar ,	Xpe Tukum B'alam ,
He struck them .	Xtukuwik .

7. **Epithetic Parallelism**: The association of an element with a complementary noun or adjective which serves to define the nature of that element. Example, lines 591-2:

This the grandfather ,	Are' ri mama' ,
This master of tz'ite ,	Are' aj tz'ite ,

8. **Alliterative Parallelism**: Elements which parallel one another in sound when read aloud. In lines 486-7, the verbs *yoj* and *yoq'* were apparently chosen for their similar sounds, in addition to their synonymous meaning:

Then they undid it therefore,	Ta xkiyoj k'ut,
--------------------------------------	------------------------

They toppled it again

Xkiyoq' chik

9. Grammatical Parallelism: Elements which are grammatically parallel in construction, such as the following example from lines 11-13, in which the same passive verb form is used as a gerund in each line of the strophe:

Its **being manifested**,

U **k'utunisaxik**,

Its **being declared**,

U **q'alajob'isaxik**,

Its **being expressed** as well,

U **tzijoxik** puch,

10. Alternative Parallelism: Parallelism in which elements appear in an alternating arrangement, such as the following example from lines 591-7, which is arranged ABCA'B'B'C'.

This the grandfather,

Are' ri mama',

This master of tz'ite,

Are' aj tz'ite,

Xpiyacoc his name.

Xpiyakok u b'i'.

This therefore the grandmother,

Are' k'u ri ati't,

Mistress of Days,

Aj Q'ij,

Mistress of Shaping at its foot,

Aj B'it chi raqan,

Xmucane her name.

Xmuqane u b'i'.

11. Chiasmus, or Reverse Parallelism: Parallelism in which the first element of a strophe parallels the last, the second element parallels the next to last, etc. This arrangement tends to focus attention on the central elements, thus asserting their importance. It is a rather common poetic form in sixteenth century Maya literature, particularly in the Guatemalan highlands, however, none of the known documents composed after 1580 contain passages of chiasmus. Several of these later texts might otherwise be expected to contain ancient poetic forms, since they include significant sections of Precolumbian history and culture. Among these are the *Título Zapotitlan*, the *Título Santa Clara*, the *Título Chauchituj* and the *Título Uchabaja*. By 1580, however, scribes who possessed ancient codices and were familiar with their contents were for the most part gone. Perhaps by this time the old poetic literary forms were

already forgotten or had fallen into disuse (Christenson 1988). The first chiasm that I was able to identify within the *Popol Vuh* appears in lines 32-35:

Midwife,	I'yom,
Patriarch,	Mamom,
Xpiyacoc	Xpiyakok,
Xmucane, their names,	Xmuqane, u b'i',

The name of the “Midwife” in line 32 is Xmucane, which appears in line 35. The name of the “Patriarch” in line 33 is Xpiyacoc, which appears in line 34. The descriptions and proper names of this couple thus appear in a chiastic arrangement. Edmonson, who believed that the *Popol Vuh* is arranged entirely in paired couplets, was confused by the order of the names Xpiyacoc and Xmucane: “It is odd that this frequent couplet places the male first, the reverse of the usual Quiché order; indeed, if the reconstructed forms are correct, they would make better sense reversed” (Edmonson 1971, 5 n. 35). Recognition of the chiasmus in this passage clears up the confusion (see also lines 538-541 for a repetition of this arrangement).

Chiasms may appear within a single line or extend for several lines, as in the following ten line example which is placed at the conclusion of the account of the creation of the first humans (lines 5171-5180), and which is arranged in the form ABCDEE'D'C'B'A'.

Then they were multiplied,	Ta xpoq'otajik,
There at its coming out sun.	Chila' chi releb'al q'ij.
Truly their names came to be the people:	Qi u b'i' xuxik ri winaq:
Sovereign,	Tepew,
Ballplayer,	Oloman,
Masker,	K'ojaj,
Sun Lord,	K'enech Ajaw,
Would be called now their names people.	Chuchax chik u b'i' winaq.
There its coming out sun	Chila' releb'al q'ij
They were multiplied.	Xpoq'otajik.

Within the *Popol Vuh*, entire sections may appear in chiastic form. The account of the first creation is arranged as a single, large chiasm. Each phase of the creation is outlined in

detail from primordial stillness to the formation of the face of the earth, along with its mountains and rivers. The final portion of this section then recapitulates the events of the creation in reverse order:

Creation begun with a **declaration of the first words** concerning the creation (lines 97-117)

The **sky** is in suspense and the **earth is submerged in water** (lines 118-136)

The creation is to be under the direction of **Its Heart Sky** (lines 137-192)

The **creation** of all things begun (lines 193-201)

The creation of **earth** (lines 202-232)

The creation of **mountains** (lines 233-255)

The **division of the waters** into branches (lines 256-258)

“Merely **divided** then existed **waters**,” (line 259)

“Then were revealed great **mountains**.” (line 260)

“Thus its creation **earth** this,” (line 261)

“Then it was **created** by them” (line 262)

“**Its Heart Sky**, [who first conceived the creation]” (lines 263-267)

“It was set apart the **sky**, it was set apart also **earth within water**,” (lines 268-269)

“Thus its **conception** this, when they thought, when they pondered” (lines 270-274)

12. Envelope Parallelism: The repetition of parallel elements at the beginning and end of a long stanza or section of poetry. This has the effect of tying together the introduction and conclusion of a passage to set it apart from that which precedes and follows it. Example, lines 5147-5148 initiate the envelope:

These therefore their names

Are' k'u ki b'i'

Their wives these:

Kixoqil wa':

This introductory couplet is followed by four couplets listing the wives of the Quiché progenitors. The section is then concluded with a parallel enveloping couplet in lines 5157-5158:

These therefore their names

Are' k'ut u b'i'

Their wives.

Kixoqil.

Such envelopes may appear at the beginning and end of much larger sections as well. The account of the second creation begins with lines 275-276, describing the formation of the wild animals of the earth:

THEN they conceived again	TA xkino'jij chik
Its animals mountain ,	U chikopil juyub' ,

The account concludes with lines 432-3, which recapitulate the introductory couplet with a parallel envelope:

The animals that are here	Ri chikop k'o waral
On its face earth .	Chuwach ulew .

13. **Merismus:** The expression of a broad concept by a pair of complementary elements which are narrower in meaning. Thus, in lines 64-65, “**sky-earth**” represents all creation as a whole. Lines 240-241 use “**mountain-valley**” to include the face of the earth as a whole. Lines 338-339 use “**deer-birds**” to describe all wild animals, while lines 748-749 use “**dogs-turkeys**” to describe all domesticated animals.

14. **Emblematic Parallelism:** The use of simile to compare elements, often with the use of words such as “like” or “as.” Example, lines 832-833:

These therefore the spider monkeys ,	Are' k'u ri k'oy ,
Like people they would appear.	Keje' ri' winaq chiwachinik.

15. **Combination of Parallel Arrangements:** The use of two or more types of parallelism in a single strophe. The following example from lines 4948-4956 is a combination of parallel couplets arranged into chiasmic form (AABBCB'B'A'A'):

MERELY framed ,	XA tz'aq ,
Merely shaped they are called.	Xa b'it ke'uchaxik.
There was no their mother ,	Maja b'i ki chuch ,
There was no their father .	Maja b'i ki qajaw .
Merely lone men we would say.	Xa u tukel achij chiqab'ij.

Nor surely woman gave them birth,	Ma na ixoq xe'alanik,
Nor also were they begotten	Ma nay pu xek'ajolaxik
By the Framer,	Rumal ri Aj Tz'aq,
Shaper,	Aj B'it,

Lines 5063-5070 combine alternate parallelism with parallel couplets placed in the third position (ABCCA'B'C'C'):

Not therefore good	Ma k'u utz
They heard it,	Xkita'o,
The Framer,	Ri Aj Tz'aq,
Shaper.	Aj B'it.
“Not good	“Mawi utz
This they said,	Ri' mi xkib'ij,
Our framing,	Qa tz'aq,
Our shaping:	Qa b'it:

16. **Monocolon:** An isolated line which does not parallel any associated line, thus standing on its own. Because monocolons are relatively rare within the *Popol Vuh*, they are all the more powerful when they do occur. In general they are used when the author desires to give extra emphasis to a passage. Thus line 200 appears as an isolated declaration:

Then be it so.	Ta' chuxoq.
----------------	-------------

STROPHIC LENGTHS:

The various types of parallelism in the *Popol Vuh* may appear within a pair of lines, or they may extend through multiple lines of text. While the parallel couplet is the standard poetic form in the *Popol Vuh*, it is by no means the only one. Tedlock recognized this in his work with highland Maya literature: “To measure all Mayan texts by the single standard of the couplet is to miss the very essence of Mayan verse rhythms, which move in twos, and sometimes threes, and once in a while arch over to produce a four” (D. Tedlock 1983b, 230). I would only add that such verse rhythms may also extend beyond four lines to form

quintets, sextets, and even longer arrangements.

The following are examples of the various strophic types in terms of length found within the *Popol Vuh*:

1. Parallel Couplets (Bicolon): By far the most common strophic length in the *Popol Vuh* is the couplet, consisting of two parallel lines. Example, lines 165-166:

Then they thought,	Ta xena'ojinik,
Then they pondered.	Ta xeb'isonik.

In modern Quiché speech, formal prayers and even everyday conversation tend to utilize parallel couplets. The following selection is from a prayer made by a Quiché priest-shaman in Momostenango as recorded by Barbara Tedlock (B. Tedlock 1982, 197). The translation, orthography and punctuation have not been altered from Tedlock's transcription, although I have arranged the prayer into couplet form:

Pardon my sin God.	Sachaj la numac Tiox.
Pardon my sin Earth.	Sachaj la numac Mundo.

I am giving my fine,	Quinya'o ri numulta,
my present	nu presenta

before you God,	chiwäch la Tiox,
before you Earth.	chiwäch la Mundo.

I am giving my wax candle,	Quinya'o wa' jun nuceracandela,
my stake	nu tac'alibal

toward the legs	pa ri akän
arms of God	k'äb la Tiox

at the rising of the sun,	chirelebal k'ij,
at the setting of the sun	chukajibal k'ij

the four corners of sky,	cajxucut kaj,
the four corners of earth,	cajxucut ulew.

Come here then my work,	Sa'j la rech c'ut nuchac,
my service.	nupatan.

2. Parallel Triplets (Tricolon): Three parallel lines of text. Example, lines 374-376:

“Speak!	“Kixch'awoq!
Call upon us!	Kojisik'ij!
Worship us!” they were told.	Kojiq'ijila!’” xe'uchaxik.

3. Parallel Quatrains (Tetracolon): Four parallel lines of text. Example, lines 5034-5037:

We speak,	Kojch'awik,
We listen,	Kojta'onik,
We ponder,	Kojb'isonik,
We move.	Kojsilab'ik.

One interesting phenomenon which appears frequently within longer series of parallel lines is “gapping,” in which an expected word or clause is omitted in one line, although it is implied by the parallelism of the series. Gapping is used in modern Quiché to break up the monotony of a long series of parallel elements. An example in the *Popol Vuh* appears in lines 66-69, in which the word “four” is expected in the third line, but is not expressed:

Its four cornerings,	U kaj tz'ukuxik,
Its four sidings,	U kaj xukutaxik,
Its measurings,	Retaxik,
Its four stakings,	U kaj che'xik,

4. Longer parallel series: The following is an example of a parallel sextet in lines 464-469:

Merely it would come undone,	Xa chiyojomanik,
------------------------------	------------------

Merely crumbled,	Xa tzub'ulik,
Merely sodden,	Xa neb'elik,
Merely mushy,	Xa lub'anik,
Merely fallen apart,	Xa wulanik,
Merely as well it would dissolve.	Xa pu chi'umarik.

The *Popol Vuh* is fundamentally based on these various forms of parallelism. Recognition of the presence of parallelism in a given text helps to focus attention on what the authors feel is important. By pairing each thought with complementary ones, the authors are able to develop their ideas with greater clarity. They may compare elements, contrast them, elaborate upon their significance, or add layers of meaning which would not otherwise be obvious.

Parallelism is also the primary means used by Quiché authors to give order to their thoughts. The words of the *Popol Vuh* were not arranged into sentences and paragraphs as in modern literature. The use of periods, commas, and capitalization to separate independent concepts was inconsistent at best, reflecting the authors' lack of familiarity with European devices for punctuation. Parallelism provided a means of structuring the book's ideas into distinct and coherent entities.

Much of Quiché literature was based in whole, or in part, on oral tradition. Parallelism is a common mnemonic device used in many ancient cultures to help narrators remember the flow and direction of their tale. This is particularly true of the chiasmic type of parallelism, which may give order to large sections of a story. It also gives the listener an opportunity to hear a recapitulation in reverse order of what had been said, while reminding him of the central themes that are of special importance.

The presence of parallelism in the *Popol Vuh* is also a tremendous, though unintended, boon to modern translators. By comparing an ambiguous word or passage with its associated line, its general meaning is often clarified. This is especially important when interpreting a word which has more than one possible meaning, or which is poorly transcribed through scribal error.

Perhaps the most important reason that I have stressed the poetic nature of the *Popol Vuh*

in this translation is the insight it gives into the mind of the ancient Quiché author. We can see how he organized his thoughts as he took pen or brush in hand to set them down in permanent form. Far from being the random musings of an unlearned storyteller, the *Popol Vuh* can be appreciated as the eloquent creation of a master poet with a sophisticated literary heritage.

Orthography:

The Quiché version of the *Popol Vuh* transcribed by Ximénez was written using a modified Latin alphabet to represent Quiché sounds. Thus *x* is used to represent the *sh* sound of English; *h* represents the hard Spanish *j*; and *v* represents the English *w*. For the most part, the letters used were based on those standardized by the Franciscan priest Francisco de la Parra in 1545. The orthography is therefore consistent with the writing system taught by Christian missionaries during the early Spanish Colonial period, although the *Popol Vuh* text is much less consistent in its use of the Parra alphabet than other contemporary documents such as the *Título Totonicapán* (Carmack and Mondloch 1983) or the *Título Yax* (Carmack and Mondloch 1989). Variant spellings of words occur throughout the manuscript and glottalized sounds in particular are haphazardly distinguished at best. Even when used faithfully, however, the Parra alphabet presents a number of problems in interpretation, since the Quiché language includes several sounds which have no equivalents in this system.

Long and short vowels are treated as separate letters in Quiché and should be distinguished when written. The Ximénez transcription of the *Popol Vuh* seldom makes such distinctions. For example, the word transcribed as *vach* might be read with a long vowel *vach* (“my companion”), or with a short vowel *väch* (“my face”).

The Quiché language utilizes both a palatal stop (*k*) and a uvular stop (*q*). The *Popol Vuh* manuscript uses a single letter (*c*) to represent both these sounds. In addition, each of these has a glottalized form (*k'*) and (*q'*), pronounced by occluding the vocal apparatus momentarily and then opening it forcefully to create a mildly-explosive release of sound. Because the Latin alphabet has no equivalent for glottalized sounds, Parra invented letters to represent them. The *Popol Vuh* manuscript however does not consistently use the Parra glottalized letters for the palatal and uvular consonants. In most cases it either ignores

glottalization altogether, representing them with the letter *c*, or uses the letter *q* to represent both glottalized forms. As a result, the single letter “c” may have four equally plausible readings.

For example, the word *cac* might be read as *kak* (their gourd); *kaq* (red); *kaq* (their peccary); *kak'* (their turkey); *qak* (our gourd); *qak'* (our turkey); *qaq* (our peccary); *kaq'* (their tongues); *qaq'* (our tongues); *k'ak'* (new); *k'aq* (to throw); *q'ak* (flea); or *q'aq'* (fire). Four other combinations are possible which have no known meaning in modern usage, but which might have existed in the archaic language of the sixteenth century.

The glottalized forms of other consonants and vowels are also either ignored or used inconsistently in the Ximénez manuscript. Thus there is often no difference between the written form of *che* (toward him/her) and *che'* (tree). Imagine the difficulties for the reader when the words *tzaq* (to thrown down) and *tz'aq* (to frame or build) appear with the same spelling.

If this weren't confusing enough, words which appear to be contextually the same may appear with variant spellings. The Quiché authors who composed the text in the sixteenth century were pioneers in the use of a foreign alphabet to represent their language in written form. They did not have the luxury of officially recognized dictionaries with standardized spellings, nor did they have computers to scan for errors. In light of the enormous difficulties involved in its composition, the *Popol Vuh* manuscript is remarkably consistent, although discrepancies in spelling inevitably appear in the text.

It is impossible to know how many variant spellings crept into the text as a result of scribal errors made by Ximénez when he copied his version from the original manuscript. At one point, Ximénez copied eleven lines of the same passage of text twice (folio 8r). He caught his mistake and crossed out the repeated section. If no scribal errors were made, the two transcriptions should be identical, yet Edmonson found an average of one discrepancy every five lines in the duplicated section (Edmonson 1971, 46). Without the original document composed by the Quichés, a perfect reading of the text is impossible to verify.

Since the sixteenth century, a number of writing systems have been invented for Quiché in an attempt to avoid the confusion inherent in the Parra alphabet. Unfortunately, this has resulted in the proliferation of a great many competing systems without a consensus as to

which should be the standard. Many of these utilize letters not found in the modern European alphabet, making them impossible to use with most typewriters and computer keyboards.

In 1986 the Guatemalan Ministry of Public Education set up a commission to standardize alphabets for the twenty-one recognized highland Maya languages. This standardization effort had become particularly important due to the Guatemalan government's proposed "Program of Bilingual Education" in Mayan communities, designed to improve literacy and promote native American cultures and languages. This program included the publication of bilingual dictionaries, school textbooks, and official translations of the Guatemalan Constitution in the various highland Maya languages.

The results of this commission were officially endorsed by the Guatemalan government and signed into law as Governmental Decree Number 1046-87 by President Marco Vinicio Cerezo Arévalo on November 23, 1987.

The following is a list of the modified Latin letters developed by Parra as used in the *Popol Vuh* text, along with the modern orthographic equivalents and a guide to pronunciation:

Parra	Modern	
a, aa	a	As in the <i>a</i> of "father."
a	ä	As in the <i>o</i> of "mother."
b	b'	Similar to the English <i>b</i> , but pronounced with the throat closed while air is forcefully expelled to produce a glottal stop.
ch	ch	As in the <i>ch</i> of "child."
qh, ch but the	ch'	Pronounced with the tongue in the same position as for the <i>ch</i> , throat is closed and air forcefully expelled to produce a glottalized <i>ch</i> .
e, ee	e	As in the <i>a</i> of "late."
i, ÿ, ii	i	As in the <i>ee</i> in "eel."
h	j	Pronounced like the English <i>h</i> , but deeper in the throat. Similar to the

Spanish *j* or the German *ch* (as in the proper name “Bach”).

c, q	k	Similar to the <i>k</i> in “king.”
c, q	k'	Pronounced with the tongue in the same position as for the <i>k</i> , but the throat is closed and air forcefully expelled to produce a glottalized <i>k</i> .
l	l	Pronounced like the English <i>l</i> , but with the tongue moved forward to contact the upper incisor teeth. When appearing as the terminal letter in a word, this sound is immediately followed by the <i>h</i> as in the English word “hot.”
m	m	As in the <i>m</i> of “mat.”
n	n	As in the <i>n</i> of “net.”
o, oo	o	As in the <i>o</i> of “home.”
p	p	Pronounced like the English <i>p</i> but shortened in length.
c, q	q	Pronounced from further back in the throat than the letter <i>k</i> , similar to the <i>kh</i> in the Egyptian word <i>ankh</i> .
ε, c, q	q'	Pronounced with the tongue in the same position as for the <i>q</i> , but the throat is closed and air forcefully expelled to produce a glottalized <i>q</i> .
r	r	Similar to the Spanish <i>r</i> , pronounced with a brief tap of the tongue against the roof of the mouth.
z	s	As in the <i>s</i> of “sit.”
t	t	Similar to the English <i>t</i> but shortened in length.
d, t	t'	Pronounced with the tongue in the same position as for the <i>t</i> , but the throat is closed and air forcefully expelled to produce a glottalized <i>t</i> .
tz	tz	As in the <i>ts</i> of “mats.”

tz, q,	tz'	Pronounced with the tongue in the same position as for the <i>tz</i> , but the throat is closed and air forcefully expelled to produce a glottalized <i>tz</i> .
u, v, uu	u	As in the <i>oo</i> of “root”
v, u	w	As in the <i>w</i> of “wind.”
x	x	Pronounced like the <i>sh</i> in “shy.”
y, i	y	As in the <i>y</i> of “yellow.” When appearing as the terminal letter in a word, it is pronounced like the <i>ee</i> in “eel,” immediately followed by English <i>h</i> as in “hot.”
	'	Glottalization mark for vowels. For example <i>a'</i> would be similar to the pronunciation of the <i>ott</i> in the Scottish pronunciation of “bottle.” Generally there is no equivalent for glottalized vowels in the <i>Popol Vuh</i> , although occasionally a double vowel may have been intended to serve this purpose.

I have used the modern alphabet in my literal translation and transcription of the Quiché text. When pronouncing Maya words, the emphasis is always on the final syllable. When pronouncing Nahuatl words, the emphasis is always on the next to last syllable.

Due to the haphazard nature of commas and periods in the *Popol Vuh* text, I have altered the punctuation to conform with modern usage, but otherwise the grammatical constructions and word order of the original manuscript have not been altered in the literal translation. In order to avoid interpretations of spelling with regard to proper names, which in many cases would be little more than a guess, I have left them in their original Parra Latin spelling. To maintain consistency in this regard, I have used *Quiché* throughout this book, the spelling found in the original manuscript rather than the modern *K'iche'*.

POPOL VUH

PREAMBLE¹

THIS IS THE BEGINNING² OF THE ANCIENT TRADITIONS³ of this place called Quiché.⁴

HERE we shall write.⁵ We shall begin⁶ to tell the ancient stories of the beginning, the origin of all that was done in the citadel⁷ of Quiché, among the people of the Quiché nation.⁸

¹ lines 1-96

² The Quiché word *xe'* (root) is used here to describe the beginning or foundation of the authors' words concerning the history of the Quiché people. The subsequent narrative is thus seen as growing like a plant from this "root" (lines 4-6).

³ The *Popol Vuh* manuscript does not utilize capitalization or punctuation to differentiate sentences. Capitalization is, however, used to mark the beginning of what the authors consider to be the major divisions of their story. In general, only the first word of each new section is capitalized. In this translation, I have marked these divisions by capitalizing the first word of the introductory line where appropriate. In two instances (lines 1 and 97), the entire introductory line is capitalized in the manuscript. Line 1 introduces the preamble of the text, while line 97 is the first line of the body of the story itself.

⁴ The authors at various times refer to the land, the nation, the capital city, and the people themselves as Quiché (K'iche' in the modern orthography of the Maya languages), meaning "many trees" or "forest." The homeland of the Quiché people in western Guatemala is mountainous and heavily forested.

⁵ The authors here state that they are "writing" this history. The people of ancient Mesoamerica (roughly the area of Central Mexico southward to Guatemala, Belize, and parts of Honduras and El Salvador) were the only literate Precolumbian cultures in the New World. Following the Spanish conquest, native Americans were discouraged from using their own ancient writing systems in favor of the Latin script. The manuscript of the *Popol Vuh* was thus written in the Mayan language of the Quichés, but with a European script. It is this set of circumstances that has preserved the *Popol Vuh* in a fully readable form when so many other native American texts were either destroyed or written in an as yet incompletely decipherable glyphic form.

⁶ *Tikib'a'* is literally "to plant." "The beginning," also in this sentence, is therefore literally "the planting."

⁷ Based on *tinamit*, a Nahuatl-derived word meaning "fortified town, citadel, or fortification wall" (Campbell 1983, 85). Although in modern Quiché, *tinamit* simply refers to a town or city, the word is used in the *Popol Vuh* text to specify fortified centers occupied by ruling lineages (Carmack 1981, 23). Here the citadel of the Quiché people is also called Quiché, apparently referring to the heartland region of their nation. This would include the capital city, Cumarcab, as well as its surrounding territory.

Here we shall gather the manifestation, the declaration, the account of the sowing⁹ and the dawning¹⁰ by¹¹ the Framer¹² and the Shaper,¹³ She Who Has Borne Children and

⁸ *Amaq'* may refer to a geographic entity such as a town or region, as well as the group of people who occupy that territory. It may also describe a group of people unified by a common language and/or ethnic origin, such as a lineage, clan, or tribe (Hill 1996, 64; Akkeren 2000, 24). Thus Cook defines *amaq'* as composed of endogamous landholding communities subordinate to the lord or patrilineage head centered at his *tinamit* (2000, 27). Hill and Monaghan identify the *amaq'* as an alliance of confederated lineage groups (1987, 74). *Amaq'* also implies something that is permanent, fixed, stable, secure, or settled. I have chosen to use the word "nation" as this is the currently preferred term for Native American groups as well as their territorial possessions.

⁹ The manuscript reads *euaxibal* (obscurity, that which is hidden in darkness). This is likely a transcription error for *auaxibal* (sowing, that which is sown), a concept that is paired with "dawning" throughout the text as a metaphor for the creation (see pp. 71, 78-82, 110, 206-207, 227; lines 196-197, 209-210, 442-443, 543-544, 612-613, 1653-1654, 5091-5092).

¹⁰ The primary focus of the creation is to form humanity (cf. pp. 70-71; lines 213-218). The "sowing" and "dawning" of this couplet may refer in a literal sense to a new beginning, but may also be interpreted in human terms. In addition, *tz'uk* (germinate/sprout) is used as a metaphor for human birth (Coto). Among the Quichés, when a woman becomes pregnant, the event is announced by a respected elder of the community at certain lineage shrines. This ceremony is referred to as "the sowing" of the future child (B. Tedlock 1982, 80). In Santiago Atitlán, when an infant is born it is said that "he (or she) sprouted" (Carlsen 1997, 54). The "dawning" also refers to the dawn of humanity, as indicated by the reference to "anyone" rather than "anything" on p. 71. In the Quiché language, to give birth is "to dawn" or "to give light" (*-ya' saq*). In Chichicastenango children are called *alaj q'ij* (little sun) or *alaj q'ij saq* (little ray of sun) when they are referred to in ritual contexts (Schultze-Jena 1954, 25).

¹¹ The following is a long list of deities, arranged in pairs, which the Quichés believed to have participated in the creation at the beginning of time. The list consists of not only the names of separate gods, but their titles and secondary names as well. It is thus difficult to distinguish how many gods are really involved. In some cases, titles are definitively assigned to individual gods later in the text. In other cases, gods can be assumed to be separate individuals when they appear simultaneously in different locations or when they engage in conversation as distinct entities. When these instances are taken into consideration, there appear to be only three pairs of gods who actively participate in the creation—the Framer and the Shaper, Sovereign and Quetzal Serpent, and Xmucane and Xpiyacoc. Without their titles, the same six names appear together planning the creation on p. 68 (lines 137-144) and again in connection with the creation of humankind on p. 197 (lines 4963-4968). Later in the account, yet another god, Heart of Sky, will be named as the presiding deity who oversees the work (pp. 70-72; lines 183-184).

¹² *Tz'aqol* (Framer) refers to one who makes something by putting things together (i.e., a building from stone or adobe, a meal from various ingredients, or a woven cloth from individual threads).

¹³ *B'itol* (Shaper) refers to one who makes something by modeling (i.e., pottery from clay, or a sculpture from carved stone), thus giving shape to an otherwise amorphous substance. The Framer and the Shaper are the most frequently mentioned gods involved in the creation of the world and its inhabitants. Their names imply that the creation involved giving frame and shape to matter that already existed rather than conjuring something out of nothing. This pair of gods was so important that soon after the Spanish conquest, Father Domingo de Vico used their Quiché names to refer to the God of the Old Testament (Carmack and Mondloch 1983, 206).

He Who Has Begotten Sons,¹⁴ as they are called; along with Hunahpu Possum¹⁵ and Hunahpu Coyote,¹⁶ Great White Peccary¹⁷ and Coati,¹⁸ Sovereign¹⁹ and Quetzal Serpent,²⁰ Heart of Lake and Heart of Sea,²¹ Creator of the Green Earth and Creator of the Blue Sky,²² as they are called.

¹⁴ These are titles for the divine couple, Xmucane and Xpiyacoc (see p. 80; lines 557-558). Ximénez translated their Quiché names, Alom and K'ajolom, as simply "Mother" and "Father." A more accurate translation for Alom, however, is "She Who Has Borne Children," from the perfect aspect of the root verb *al* (to bear children). The name of the male god, K'ajolom, specifically indicates his having begotten male offspring, thus "He Who Has Begotten Sons." Fray Bartolomé de las Casas wrote in the sixteenth century that the people of Guatemala worshiped as their principal gods "the Great Father and the Great Mother that were in heaven," apparently referring to this divine couple (Las Casas 1967, III.cxxiv.650).

¹⁵ Hunahpu Possum and Hunahpu Coyote are also likely titles for the gods Xpiyacoc and Xmucane (see pp. 79-80; lines 498-501). For a discussion of the etymology of the name Hunahpu, see footnote 163. *Wuch'* is the opossum (*Didelphis yucatanensis*), which appears later in the text presiding over the moments immediately preceding the rising of the sun (pp. 173-174; lines 4144-4151). In the Dresden Codex (Lee 1985, folios 25-28, pp. 51-52), the aged deity Mam, likely a lowland Maya version of Xpiyacoc, is depicted as a possum presiding over the five days of the Uayeb prior to the beginning of the new year. Father Thomás Coto, who compiled a dictionary of the closely related Cakchiquel-Maya language in the seventeenth century, mentions under the Spanish word *Escuridad*, that *wuch* is the darkness of night just prior to the dawn (Coto 1983, 207-8).

¹⁶ *Utiw* is the coyote (*Canis latrans*), an animal also associated with the night.

¹⁷ Saqi Nima Aq (Great White Peccary). The word *saqi* may be translated as "light, bright, or white." Later in the text (p. 98; line 1055), this same god is described as having very white hair due to his advanced age; thus "white" is the most likely translation here. In that same passage, "Great White Peccary" is given as one of the names or titles of the patriarchal creator god Xpiyacoc mentioned in the next paragraph. There are two species of peccary, or wild pig, living in Central America—*Peccari angulatus yucatanensis* (Collared Peccary) and *Tayassu pecari* (White-lipped Peccary). The latter is perhaps intended here because it is the larger of the two and is decorated with white facial markings.

¹⁸ This is another name or title for the female creator goddess Xmucane, mentioned in the next paragraph (see p. 62; line 1056). The coati, or coatimundi, which inhabits tropical Central America is *Nasua narica yucatanica*. It is a raccoonlike animal with a long tail and a long, pointed, flexible snout.

¹⁹ *Tepew* (Sovereign) is one of several words in the *Popol Vuh* that were borrowed from the central Mexican group of languages, Nahuatl, variants of which were spoken by both the epi-Toltec and Aztec nations. This word is the Quiché form of the Nahuatl *tepeuh*, meaning "conqueror" or "majesty" (Campbell 1970, 4). Coto and Basseta record that in the Colonial era, the Quichés recognized the word as referring to "majesty, dignity, lordship, power." Tedlock and Recinos translate the word as "sovereign," which I prefer to the more descriptive "majesty" used by Edmonson.

²⁰ Q'ukumatz may be translated as "Quetzal Serpent" or, less accurately, as "Feathered Serpent." *Q'uk'* refers to the quetzal bird, *Pharomacrus mocinno*, one of the most beautiful birds in the world. It inhabits the cloud forests of southern Mesoamerica between 3,000 and 4,000 feet in elevation. Both male and female have brilliantly colored iridescent blue/green feathers on their wings, tail, and crest, while their breasts are a bright crimson. The shade of blue or green depends on the angle of light striking its feathers.

These collectively are evoked and given expression as the Midwife²³ and the Patriarch,²⁴ whose names are ²⁵Xpiyacoc²⁶ and Xmucane,²⁷ the Protector²⁸ and the

The male quetzal's tail feathers were highly prized by Maya royalty for their beauty and size, often reaching three feet in length. The unique coloration of the bird carried profound religious significance for the Maya. Its predominant blue/green feathers represented sky and vegetation, both symbols of life. Its red breast represented fire, the force that quickens life. *Kumatz* is a general term for "snake" or "serpent." The serpent was a common Maya symbol for regeneration or rebirth because of its tendency to periodically shed its skin to reveal a newer and brighter one. The combination of an avian lord of the skies with a serpentine lord of the earth and underworld gave this god power over all levels of the Maya universe. He is undoubtedly related to the well-known god Quetzalcoatl (Nahua for "Quetzal Serpent") worshiped by the Aztecs of Central Mexico.

²¹ These are likely titles for Sovereign and Quetzal Serpent, who are associated with water (see p. 68; lines 140-143; Recinos and Goetz 1953b, 76). *K'ux* may refer to either "heart" or "spirit." This pair of deities thus embodies the inward powers of large, standing bodies of water. The *Popol Vuh* states that prior to the creation the world consisted of a vast expanse of placid waters from which all things emerged (p. 67; lines 129-136).

²² These are likely titles for Xpiyacoc and Xmucane (see p. 80; lines 565-566). They literally mean "blue/green plate" and "blue/green bowl." The Quiché language has only one word, *räx*, for both blue and green. When distinguishing between the colors, modern Quiché people are forced to say "*räx* like the sky" for blue, or "*räx* like a tree" for green. This same type of dichotomy appears here. The "blue/green plate" refers to the green surface of the earth covered with vegetation, and the arch of the sky is envisioned as an inverted "blue bowl." The earth is specifically likened to a plate on p. 71 (lines 205-206).

²³ Midwife and Patriarch are titles for Xmucane and Xpiyacoc (see p. 80; lines 536-537). *I'yom* may be literally translated as "She Who Has Had Grandchildren," but the word is also commonly used as an affectionate title for a midwife. I have chosen this interpretation here. The title of the goddess implies that she assists in the "birth" of the world.

²⁴ *Mamom* may also be translated as "He Who Has Had Grandchildren." In this case, it is more likely a title of respect for the god as a grandfatherly patriarch who oversees the creation. In modern Quiché society, *mamom* is a title used on occasion to refer to the head of patrilineage groups. They are often consulted on important family matters. They also participate directly in the rituals of marriage, the blessing and naming of children, and the consultation of dead ancestors to determine their will. Tedlock translates *Mamom* as "Matchmaker," since one of the intercessory tasks that such individuals have is to petition for the hand in marriage of a prospective bride on behalf of a member of his lineage (D. Tedlock 1996, 63, 217). This translation seems somewhat limited in its scope, however, considering the range of responsibilities held by the lineage patriarch.

²⁵ The names of the Midwife and Patriarch are given here as Xpiyacoc and Xmucane, but in reverse order. Throughout the *Popol Vuh*, female deities are listed before male deities when paired in parallel couplets. It thus makes little sense that Xpiyacoc, the name of the grandfather god, would be written before that of Xmucane, his female counterpart. This is an example of chiasmus, a form of reverse parallelism in which the first element of a strophe parallels the last, the second element parallels the next to last, etc. This arrangement, rather common in the text (see introductory section on poetics), tends to focus attention on the central elements, thus asserting their importance. The passage is thus arranged in the following way in lines 32-35 of the literal translation:

Midwife,
Patriarch,
Xpiyacoc,

I'yom,
Mamom,
Xpiyakok,

Xmucane, their names.

Xmuqane, u b'i'.

The name of the “Midwife” in line 32 is Xmucane, which appears in line 35. The name of the “Patriarch” in line 33 is Xpiyacoc, which appears in line 34. Edmonson, who believed that the *Popol Vuh* is arranged entirely in paired couplets, was confused by the order of the names Xpiyacoc and Xmucane: “It is odd that this frequent couplet places the male first, the reverse of the usual Quiché order; indeed, if the reconstructed forms are correct, they would make better sense reversed” (Edmonson 1971, p. 5, n. 35). Recognition of the chiasmic nature of this passage clears up the confusion (see also p. 80; lines 538-541 for a repetition of this arrangement with regard to Xpiyacoc and Xmucane).

²⁶ Xpiyacoc is the male deity, while Xmucane serves as the divine female principal that brings about the creation. The derivation of the name Xpiyacoc is problematic. Edmonson suggests that it is based on the Nahuatl *yex-pa-ococ(an-e)*, which he reads as “thrice in another two places,” and relates it to the next phrase of the text in which this deity is referred to as “twice patriarch.” Tedlock prefers that it should be read as a Quiché name, and that it is based on the verb *yekik/yakik*, which his Quiché collaborator interpreted as “to be put in order, to be lifted up” with regard to the problems of clients who are under treatment by *qj q'ij* priests. Perhaps the most likely derivation of this name is found at Rabinal where there is a design woven into textiles which locals call *piyakok* and identify as a turtle (Akkeren 2000, 207, 261-264). *Kok* is “turtle” in both lowland and highland Maya languages, making this an intriguing possibility. At Chichen Itza as well as Mayapan (both post-Classic sites likely contemporary with the early history of the Quichés), the aged grandfather earth deity (God N, Pauhahtun, Bacab, Mam) wears a turtle carapace and bears up the sky (Taube 1992, 92-99; Schele and Mathews 1998, 214-218). Among the contemporary Kekchi and Pokomchi, this god is identified as the Mam (Grandfather), an earth deity who oversees the five day Uayeb period prior which precedes the beginning of the new year in the ancient calendric system. It is possible that Xpiyacoc is the Quiché version of this deity. Ultimately, a definitive etymology is impossible to determine. When proper names are passed down through generations of time, they often tend to become altered in their pronunciation, and perhaps their original meaning as well. If Xpiyacoc is derived from a Nahuatl original, it had certainly become mangled to the point where an Aztec envoy at the Quiché court would have had a difficult time coming up with an obvious meaning for it in his language. The same is true for Yucatec, Cholan, or Mam derivations for the name. There are similar-sounding words in each of these languages, although none are a precise fit. It is thus possible that the Quichés of the sixteenth century preserved the archaic spelling because they saw it simply as a proper name, without necessarily preserving memory of its original derivation (see also footnote 163 with regard to this phenomenon). I have chosen to leave such names untranslated.

²⁷ The name Xmucane may be derived from *x-* (feminine marker, diminutive) plus *muqik* (to bury, to cover, plant in the ground), thus giving a possible reading of “She Who Buries or She Who Plants,” referring to the planting of a seed in the earth or a developing child in the womb. Ximénez wrote that native priests in his day called upon Xmucane and Xpiyacoc for inspiration, particularly concerning the birth of infants and midwifery (Ximénez 1929-31, I.i.6). Alternatively the name may be derived from the verb *muqunik* (to see, look). Xmucane and Xpiyacoc are referred to as seers several times in the text (see pp. 79-80; lines 511-517; 522-23). Akkeren suggests that the name should be derived from Yucatec and read as “Curved/Buried is your Tail.” He associates her with a scorpion deity based on the name of a scorpion textile motif at Rabinal—*muqje* (tail in highland Maya languages is *je*, however its lowland Maya equivalent is *ne*), as well as an entry in the *Ritual of the Bacabs* referring to a scorpion entity as *bul moc a ne* (well-curved is your tail) (Arzápalo Marín 1987, 385-386; Akkeren 2000, 262-264). It may be fruitless to seek for a single meaning for such deity names as these. Particularly with regard to names and archaic words used in ceremonial contexts, Quichés derive a host of meanings from them, including puns and other word plays. Thus Barbara Tedlock points out that each named day in the traditional highland Maya calendar has a range of potential meanings, all of which are equally valid depending on context. For example, in interpreting a divinatory outcome, the meaning of the day *C'at* may be derived from *c'atic* (to burn), *pa c'at* (in nets), or *c'asaj c'olic* (to be in debt) (B. Tedlock 1982, 110). This is one reason I prefer to leave such names untranslated. Xmucane is likely the Quiché version of the grandmother goddess of the Maya lowlands (Goddess O, Chac Chel, Ix Chel). Like God N, the grandmother Goddess O is associated both with the forces of destruction and creation. On folio 74 of the Dresden Codex she is shown pouring

Shelterer,²⁹ Twice Midwife and Twice Patriarch, as they are called in Quiché traditions.

They gave voice to all things and accomplished their purpose in purity of being and in truth.³⁰

This account we shall now write under the law of God³¹ and Christianity.³² We shall bring it forth because there is no longer the means whereby the *Popol Vuh* may be seen,³³ the means of seeing clearly that had come from across the sea—the account of our

out water from an inverted jar, symbolic of the destruction of the world by flood (Lee 1985, 77; Taube 1992, 101; Thompson 1972, 99). A skeletized version of this goddess wearing a crossed-bone skirt is paired with God N on the columns of the Lower Temple of the Jaguars at Chichen Itza. She is paired with God N as well on the upper columns of the Temple of the Warriors, suggesting a close association. Despite her destructive aspect, Goddess O is also considered the great creatrix, the principle deity of creation, divination, medicine, childbirth, midwifery, and weaving (Tozzer 1941, 129, 154; Taube 1992, 101; Akkeren 2000, 241), all aspects characteristic of the grandmother goddess Xmucane.

²⁸ Edmonson translated *matzanel* as “shelterer,” while Tedlock translated it as “defender.” A more literal translation would be “embracer,” but with the implication that this embrace is meant to be protective in nature.

²⁹ The root verb, *ch'uq*, means “to cover.” Thus, the translation “shelterer” refers to a deity who provides a protective shelter or cover.

³⁰ The phrase is *saqil k'olem*, *saqil tzij*. *Saqil* is a word laden with implied meanings in the Quiché language. These include “light, clarity, whiteness, brightness, and purity.” *K'olem* is “existence, being,” as well as the “nature or essence” of a thing. *Saqil tzij* is literally “white word, or truth,” but it may also refer to “posterity, generation, or dynastic succession within a royal family.” As a verb it means “to light” a fire or candle.

³¹ *U ch'ab'al Dios* (his speech/language God). This phrase is often used in Roman Catholic sermons to refer to the doctrine, or preaching, of the Christian God. It also has a legalistic interpretation (law, declaration, proclamation), without religious overtones. The latter reading seems preferable as the *Popol Vuh* text is not written as a Christian doctrinal treatise.

³² Here, the authors of the *Popol Vuh* confirm that they are compiling the ancient traditions of their people under the law of Christianity, imposed following the Spanish conquest. Surprisingly, *Dios* (God) and *Christianoil* (Christianity) are the only examples of Christian or Spanish-derived words in the *Popol Vuh* until the end of the text, where the arrival of the Spaniards is described. This lack of intrusive Spanish words argues for the purity of the text as an accurate record of Precolumbian cosmology and history. The *Popol Vuh* therefore stands in marked contrast to other post-Conquest highland Maya texts such as the *Annals of the Cakchiquels* and the *Título Totonicapán*, which contain numerous biblical and European cultural allusions using borrowed Spanish words. Although this passage acknowledges that the Quiché nation is subject to Christianity, the authors unabashedly describe the glory and wisdom of their ancient gods. Page 63 of the text (lines 44-45) declares that the Quiché gods act “in purity of being and in truth,” perhaps indirectly contradicting the Christian missionaries of the time, who characterized such Maya deities as devils or demons.

obscurity, and the means of seeing life clearly, as it is said. The original book exists that was written anciently,³⁴ but its witnesses and those who ponder³⁵ it hide their faces.³⁶

Great is its performance³⁷ and its account of the completion and germination³⁸ of all the sky and earth—its four corners and its four sides. All then was measured and staked out into four divisions, doubling over and stretching the measuring cords of the womb of sky and the womb of earth.³⁹ Thus were established the four corners, the four

³³ *Vuh* refers to Maya books, or codices painted on deerskin or bark paper. *Popol* is derived from the root *pop*, meaning “mat.” Thus a literal translation would be “book that pertains to the mat.” Within ancient Quiché society, a woven mat was used as a royal throne from which the king gave counsel to his people. The mat symbolized the power not only of the ruler, but also of his subjects. In this sense, the interlaced fibers of the mat represented the unity of the members within the community, linked inseparably in a common purpose. Thus Ximénez translated *popol* as “community,” and the Motul Dictionary glosses *popol na* as a “community house.” *Popol Vuh* might then be interpreted as “Book of the Community” or “Counsel Mat Book.” I have chosen to leave the title untranslated, because no literal English equivalent could convey adequately its full meaning. I have kept the traditional spelling of the book’s name, *Popol Vuh*, rather than the more modern orthographic spelling, *Popol Wuj*, since it is the original form used by the Quiché authors in the sixteenth century manuscript.

³⁴ This line apparently refers to a painted version of the *Popol Vuh* written prior to the Spanish conquest, which served as the inspiration for the text that survives today.

³⁵ *B'isonel* is generally “one who mourns or is unhappy.” Coto notes that it may also refer to one who “ponders, considers, or has compassion.”

³⁶ It is significant that this passage affirms that it is the “witness” and “ponderer” of the ancient book who “hide their faces,” not the book itself. The authors of the *Popol Vuh* were anonymous, perhaps out of fear of persecution should the manuscript be discovered by the Spanish authorities. Edmonson suggests that the “witness” who hides his face may have been the author himself (Edmonson 1971, 7 n. 56). This reading also suggests that the Precolumbian version of the *Popol Vuh* may have still existed when the Quiché authors were compiling their alphabetic version.

³⁷ *Pe'oxik* refers to something which has been hired or rented. Dennis Tedlock convincingly suggests this refers to the hiring of persons to perform the text of the *Popol Vuh* as a drama (D. Tedlock 1996, 219, n. 63).

³⁸ *Tz'uk* is a term used for any type of birth (Coto), although it most often refers to the “birth” of plants in the form of germination or sprouting (Basseta, Varea).

³⁹ The gods thus laid out the extent of their creation by measuring its boundaries, driving stakes to mark its four corners, and stretching a measuring cord between the stakes. Andrés Xiloj, a modern Quiché *aj q'ij* priest who worked with Tedlock on his translation of the *Popol Vuh*, recognized the terminology of this passage and explained that the gods were measuring out the sky and earth as if it were a maizefield being laid out for cultivation (D. Tedlock 1996, 220). Vogt quoted a Tzotzil-Maya from Zinacantan as saying that the universe is “like a house, like a table,” representing that which is systematic, and well-ordered (Vogt 1993, 11). Wisdom also recorded that the Chortí-Maya of Guatemala considered both the squared maize field and the shamanic altars on which traditionalist Maya priests conduct their divination rituals to be the

sides,⁴⁰ as it is said, by the Framer and the Shaper, the Mother and the Father⁴¹ of life and all creation,⁴² the giver of breath⁴³ and the giver of heart,⁴⁴ they who give birth and give heart to the light everlasting,⁴⁵ the child of light born of woman and the son of light born of man,⁴⁶ they who are compassionate⁴⁷ and wise in all things—all that exists in the sky and on the earth, in the lakes and in the sea.

world in miniature (Wisdom 1940, 430). By laying out the maize field, or setting up a ritual table, the Maya transform secular models into sacred space. With regard to the maize field, this charges the ground with the power of creation to bear new life. In a similar way, the divinatory table provides a stage on which sacred geography may be intimately studied, and even altered. Note that on pp. 81-82 (lines 565-623) the creator deities carry out a divinatory ceremony in an attempt to create the first human beings. A prominent Quiché *aj q'ij* priest, named Don Vicente de León Abac, described his work to me in this way: “When I am seated at my table, I am *aj nawal mesa* [of, or pertaining to, the spirit essence of the table]. My body is in the form of a cross just like the four sides of the world. This is why I face to the east and behind me is the west. My left arm extends out toward the north, and my right arm points to the south. My heart is the center of myself just as the arms of the cross come together to form its heart. My head extends upward above the horizon so that I can see far away. Because I am seated this way I can speak to Mundo [World].”

⁴⁰ Coto defines *xukut* as “side.” Basseta defines it as “corner,” in which case this would be synonymous with the preceding *tz'uk* (corner, angle).

⁴¹ When paired together, *chuch-qajaw* (mother-father) is the title for the highly respected head of a patrilineage group or the patriarchal founder of a patrilineage. If this couplet is meant as a single title, then the Framer and the Shaper are being addressed as the great founders of the family of all living. In modern Quiché society, traditionalist *aj q'ij* priests may refer to deity and ancestors as *chuch tat* (mother fathers) in their ritual prayers (Schultze-Jena 1954, 99).

⁴² This word is a gerund derived from the verb *winaqirik*, which may be translated “to create or to generate.” The root, *winaq*, means “people”; therefore a more literal translation would be “to people.” The creation is thus seen as similar to the way people come to be, a natural process of giving birth.

⁴³ “Breath” is also a metaphor for “spirit,” or that which constitutes a person’s life force.

⁴⁴ *K'uxlanel* (literally “heartener”). The heart is the central defining essence of a person, or what might be referred to as the soul. Thus the creators are those who ensoul living things. In addition, the Quichés use “hearten” to refer to someone who provides for, looks after, tends to, or counsels someone. The verbal form of this word also has the sense of “to remember.” In English this would be “bear in mind,” but for the Quichés this would be conceived as “bear in heart.”

⁴⁵ *Amaq'il*, when used as an adjective, is something that is “eternal, perpetual, everlasting.”

⁴⁶ These are likely metaphors for the living. Thus in modern Quiché prayers, priests refer to the dead as *may k'ij may sákj*, “they who are hidden from the sun, hidden from the light” (Schultze-Jena 1954, 52).

⁴⁷ This is the same term, *aj b'is*, used to describe the “ponderer” of the *Popol Vuh* text in line 59. Coto notes that it not only describes one who ponders, but who does so with sympathy or compassion.

THE PRIMORDIAL WORLD⁴⁸

THIS IS THE ACCOUNT of when all is still silent and placid.⁴⁹ All is silent and calm.⁵⁰ Hushed⁵¹ and empty is the womb of the sky.

THESE, then, are the first words, the first speech. There is not yet one person, one animal, bird, fish, crab, tree, rock, hollow, canyon, meadow, or forest. All alone the sky exists. The face of the earth has not yet appeared. Alone lies the expanse of the sea, along with the womb of all the sky. There is not yet anything gathered together. All is at rest. Nothing stirs. All is languid, at rest in the sky. There is not yet anything standing erect. Only the expanse of the water, only the tranquil sea lies alone.⁵² There is not yet anything that might exist. All lies placid and silent in the darkness, in the night.

All alone are the Framer and the Shaper, Sovereign and Quetzal Serpent, They Who Have Borne Children and They Who Have Begotten Sons. Luminous⁵³ they are in the water,⁵⁴ wrapped in quetzal feathers and cotinga⁵⁵ feathers. Thus they are called

⁴⁸ lines 97-154

⁴⁹ The authors place the following description of the primordial world in the present tense, thus painting a picture of the stillness that existed prior to the creation as if in vision before their eyes.

⁵⁰ In the sixteenth-century Cakchiquel-Maya dictionary compiled by Francisco de Varea, *silee* refers to the calming of the wind after a storm (Varea 1929).

⁵¹ *Lolinik* refers to hushed, undifferentiated sounds such as the rustling of leaves in the wind or the soft hum of insects in the night.

⁵² This description of the world prior to the first creation is similar to Mixtec tradition as recorded by Fray Gregorio García in his *Origen de los Indios del Nuevo Mundo e Islas Occidentales*: “In the year and in the day of obscurity and utter darkness, before there were days and years, the world being in deep obscurity, when all was chaos and confusion, the earth was covered with water, there was only mud and slime on the surface of the earth” (León-Portilla 1980, 145).

⁵³ In his *Vocabulario de lengua quiche*, Domingo de Basseta interprets *zaktetoh* as “the brightness that enters through cracks.” Thus the brightness of the gods is seen as shining between the feathers that envelop them.

Quetzal Serpent. In their essence, they are great sages, great possessors of knowledge.

Thus surely there is the sky. There is also Heart of Sky,⁵⁶ which is said to be the name of the god.⁵⁷

THE CREATION OF THE EARTH⁵⁸

THEN came his word. Heart of Sky arrived here with Sovereign and Quetzal Serpent in the darkness, in the night. He spoke with Sovereign and Quetzal Serpent. They talked together then. They thought and they pondered. They reached an accord,⁵⁹

⁵⁴ “Quetzal Serpent,” whose Quiché name is traditionally written Qucumatz in colonial documents, is associated with water in most ancient highland Maya texts. According to the *Annals of the Cakchiquels*, a group of highland Maya called themselves Qucumatz because “they said that there was salvation only in the water” (Recinos and Goetz 1953, 59). Gagavitz, a legendary ancestor of the Cakchiquels, transformed himself into Qucumatz by throwing himself into a lake, thus causing a storm to agitate the water and form a whirlpool (Recinos and Goetz 1953, 76). Nuñez de la Vega wrote that the Quichés believed that Qucumatz is a serpent with feathers that moves in the water (Recinos 1950, 81 n. 2). The ancient Maya generally associated standing water with the underworld. Thus, the god Quetzal Serpent combines the contrasting powers of a celestial bird with a terrestrial serpent, the darkness of deep waters with the light of the upper world. Thus he transcends all levels of existence.

⁵⁵ The *räxon* (*Cotinga amabilis*), commonly known as the Lovely Cotinga, is a dovelike tropical bird with turquoise-blue plumage and a purple breast and throat. According to the *Annals of the Cakchiquels*, the highly prized feathers of the Lovely Cotinga were given as tribute by the Cakchiquel clans to the lords of Tulan in the East (Recinos and Goetz 1953, 48).

⁵⁶ *U K'ux Kaj* (Heart of Sky—also called Huracan, cf. p. 70; lines 183-189), appears to be the principal god in the *Popol Vuh* account. He is the only deity to appear in every phase of the creation, as well as throughout the mythologic and historical portions of the text. *K'ux* refers to the heart as the source of the “vital spirit” of a thing, or that which gives it life. According to Coto’s dictionary, it is also believed to be the center of thought and imagination. This deity, therefore, combines the powers of life and creativity, which are believed to exist in the midst of the heavens. During each creative period, Heart of Sky is the deity who first conceives the idea of what is to be formed. Other deities then carry out his will by giving it material expression.

⁵⁷ *K'ab'awil* (god) refers to the general concept of deity in the *Popol Vuh*. The word is used to refer to ancient gods such as Heart of Sky, as well as to the wood or stone effigies carved to represent them. Soon after the Spanish conquest, Dominicans chose the word *k'ab'awil* to refer to the Christian “God.” Franciscans, on the other hand, rejected this usage of the word because of its earlier association with Precolumbian religion. This difference was a frequent point of contention between the two missionary orders during the early Colonial Period.

⁵⁸ lines 155-274

⁵⁹ Literally “they found themselves.”

bringing together their words and their thoughts.⁶⁰ Then they gave birth, heartening one another. Beneath the light, they gave birth to humanity. Then they arranged for the germination and creation⁶¹ of the trees and the bushes, the germination of all life and creation, in the darkness and in the night, by Heart of Sky, who is called Huracan.⁶²

First is Thunderbolt Huracan, second is Youngest Thunderbolt,⁶³ and third is Sudden Thunderbolt.⁶⁴ These three together are Heart of Sky.⁶⁵ Then they came together with Sovereign and Quetzal Serpent. Together they conceived light and life:

⁶⁰ The creation is described as a unified effort by a number of gods, all acting in concert with one another after careful deliberation and planning. None can act alone without the direction and assistance of other deities. In Quiché society, lack of unity is seen as one of the chief causes of misfortune and failure. Disagreements are therefore quickly resolved through direct discussion or mediation by a respected elder.

⁶¹ *Winaqirik*. The root of this verb is *winaq* (people), making it something like “to people.” It is used however, to refer to the creation not only of humanity, but the earth, vegetation, animals, etc. Tedlock translates it as “generation” (D. Tedlock 1996, 65).

⁶² The etymology of this god’s name is too complex and obscure to give a definitive translation. In its simplest interpretation, *Juraqan* means “One Leg.” Belief in a one-legged god was widespread throughout Precolumbian Mesoamerica. An important example was the Maya god K’awil (God GII of the Palenque Triad, who was often depicted with one anthropomorphic foot and the other a serpent), associated with kingship and the sky. *Raqan*, however, may also refer to the length or height of an object. The following line uses the name to refer to a bolt of lightning as a long flash of light. Coto interprets *raqan* as something “long or gigantic in size.” According to Dennis Tedlock’s Quiché collaborators, “leg” may also be used as a means of counting animate things, in the same way that we refer to the counting of “head” of cattle. “One Leg” might therefore mean “one of a kind” (D. Tedlock 1983a, 138). The god’s name would thus refer to his unique nature as the essential power of the sky. In addition, the homophonous word *huracán* was used along the Gulf Coast of Mexico and the West Indies to refer to powerful swirling winds. The modern English hurricane may be derived from the Taino version of this word (Recinos 1950, 83 n. 7; Hunt 1977, 242; D. Tedlock 1996, 223). This interpretation is consistent with the god’s nature as the “heart of the sky,” the eye of the hurricane forming the divine axis around which time and creation revolve in endless repetitive cycles of birth and destruction.

⁶³ *Ch’i’p* refers to the youngest member of the family or the smallest member of a group.

⁶⁴ *Räxa* (green, new, fresh, sudden). This is a sudden flash or bolt of lightning (Coto 1983, 479). It may also refer to the lightning’s ability to renew or regenerate. In Santiago Atitlán, traditionalists believe that it is lightning that splits open maize seeds to allow them to germinate and bear new life (Christenson 2001, 72-74, 134).

⁶⁵ These three gods comprise the powers of the sky, symbolized by various aspects of the thunderbolt. Thunderstorms combine the elements of water (rain) and fire (lightning), which Quichés see as essential to all life. Lightning is also considered the force that fertilizes the earth and promotes the growth of crops. In modern Quiché society, lightning is believed to be the inspirational force of the sky. Modern *aj q’ij* priests take note of sensations within their bodies, which they call “lightning in the blood,” and interpret them as

“How shall it be sown? When shall there be a dawn for anyone? Who shall be a provider?⁶⁶ Who shall be a sustainer?⁶⁷

“Then be it so. You are conceived. May the water be taken away, emptied out, so that the plate of the earth may be created—may it be gathered and become level. Then may it be sown; then may dawn the sky and the earth. There can be no worship, no reverence given by what we have framed and what we have shaped, until humanity has been created, until people have been made,” they said.

Then the earth was created by them. Merely their word brought about the creation of it. In order to create the earth, they said, “Earth,” and immediately it was created. Just like a cloud, like a mist, was the creation and formation⁶⁸ of it.

Then they called forth the mountains from the water. Straightaway⁶⁹ the great mountains came to be. It was merely their spirit essence,⁷⁰ their miraculous power,⁷¹ that

revelatory messages (B. Tedlock 1982, 133-147). Although Quiché gods are normally named in pairs, there are occasional appearances of a trinity, as in this case. The principal gods of the three ruling Quiché lineages were Tohil, Auilix, and Hacavitz (see p. 223). Quiché temples generally had three entrances (for reconstruction drawings of such temples, see Carmack 1981, 270, 273). The idea of a trinity in Maya cosmology may be very ancient. The largest of the Maya centers built prior to the birth of Christ was El Mirador, located in the central Petén rain forest of Guatemala. Characteristic of its temples was a unique triadic pattern consisting of huge platforms, each surmounted by three pyramids.

⁶⁶ *Tzuqul* is a provider of any kind, although generally in the sense of food. Barbara Tedlock notes that one of the names for priest-shamans in Momostenango is *tzunel* (feeder) because he symbolically “feeds” the Mundo [Spanish “World,” the principal earth deity] and his own ancestors with their ceremonies (B. Tedlock 1982, 114). A fundamental aspect of indigenous highland Maya religion is the belief that human beings stand as essential mediators between this world and that of their patron deities and ancestors. Sacred ritual, performed at the proper time and in a manner established by ancient precedent, is necessary to maintain this link or all creation runs the risk of collapse.

⁶⁷ *Q'o'l* is one who provides sustenance, primarily in the form of nourishment, but also nurtures in any other way, such as a mother caring for an infant.

⁶⁸ There is no English equivalent for the verb *pupuje'ik*. According to the colonial era dictionary compiled by Fr. Domingo de Basseta, the word means “the way in which clouds rise up from mountains.”

⁶⁹ *Ju suk'*. Basseta translates this as “quickly, instantly.” It literally means “one straight,” somewhat like our English phrases “straightaway,” or “directly.”

brought about the conception of the mountains and the valleys.⁷² Straightaway were created cypress groves and pine forests to cover the face of the earth.

Thus Quetzal Serpent rejoiced:

“It is good that you have come, Heart of Sky—you, Huracan, and you as well, Youngest Thunderbolt and Sudden Thunderbolt. That which we have framed and shaped shall turn out well,” they said.

First the earth was created, the mountains and the valleys. The waterways were divided, their branches coursing among the mountains. Thus the waters were divided, revealing the great mountains. For thus was the creation of the earth, created then by Heart of Sky and Heart of Earth, as they are called. They were the first to conceive it. The

⁷⁰ *Nawal* also has no English equivalent. In Quiché theology, all things, both living and inanimate, have a spirit essence which they call *nawal*. This spirit essence is believed to give them power to act or communicate on a supernatural plane, for example, to transform their usual form into that of a powerful animal or force of nature. Father Coto ascribes this power to the devil, defining the word *nawal* as “the magical means whereby the devil spoke to the Quichés through their idols. Thus they would say that the life of the tree, the life of the stone, of the hill, is its *nawal*, because they believed there was life in these objects. If a man asks his wife for something to eat or drink when there is nothing in the house, the wife would reply, *xa pe ri tin naualih?* (Do you expect me to perform miracles?)” (Coto 1983, 328, 369). Although *nawal* is borrowed from the Nahuatl language, where it means “to transform” (Campbell 1983, 84), the Quiché interpretation of the word is derived from the root *na'*, meaning “to feel” or “to know.” Thus the creation took place by means of the power of the gods’ spirit essence or divine knowledge rather than by physical action.

⁷¹ *Pus* is a loan word from ancient Mixe-Zoque (Campbell 1983, 83), likely the language of the Olmecs who dominated the Gulf Coast region from ca. 1500-400 BC. It refers to the cutting of flesh, and specifically to the practice of human sacrifice. In Colonial period Quiché texts, the word is often paired with the word *nawal* to describe the supernatural power of deities to accomplish what ordinary humans cannot. In the first years after the Spanish conquest, Roman Catholic missionaries adopted the word to describe the power of the Christian God to forgive sins and offer his body as a sacrament (Coto 1983, 424). This use of the word was soon abandoned, however, because of the word’s association with ancient Maya gods and their ceremonies. Father Coto thus defines *pus* as “magic, enchantment, necromancy, or witchcraft,” thereby associating the people’s belief in the power of the Quiché gods with evil and sorcery (Coto 1983, 74, 180, 328, 369).

⁷² *Juyub'-Taq'aj* (Mountain-Plain) is an example of merismus, the expression of a broad concept by a pair of complementary elements that are narrower in scope. This pairing is commonly used among present-day Quichés to refer to the earth as a whole. This not only comprises the physical contrast of elevations versus valleys, but also the notion of wilderness versus cultivated land (Cook 2000, 75).

sky was set apart. The earth also was set apart within the waters. Thus was conceived the successful completion of the work when they thought and when they pondered.

THE CREATION OF THE ANIMALS⁷³

THEN were conceived the animals of the mountains, the guardians of the forest,⁷⁴ and all that populate the mountains—the deer⁷⁵ and the birds, the puma⁷⁶ and the jaguar,⁷⁷ the serpent⁷⁸ and the rattlesnake,⁷⁹ the pit viper⁸⁰ and the guardian of the bushes.

She Who Has Borne Children and He Who Has Begotten Sons then asked:

“Shall it be merely solitary, merely silent beneath the trees and the bushes? It is well that there shall be guardians for them,” they said.

Thus they considered and spoke together, and immediately were created the deer and the birds. Having done this, they then provided homes for the deer and the birds:

⁷³ lines 275-339

⁷⁴ Quichés believe that the wild animals of the forest serve as guardians and caretakers for the god of the earth, who is usually referred to as *Juyub'-Taq'aj* (Mountain-Plain) or *Dios Mundo* (Spanish for “God Earth”). He is often described as a kindly, old, white-haired man who lives in the uninhabited forests. When hunting deer, drinking from a mountain stream, or clearing a field for planting crops, permission must first be obtained from the earth god and appropriate payment made in the form of prayers and offerings. If the proper offerings are not made, the earth god might send one of his wild animals to attack the ungrateful person or to raid his property.

⁷⁵ Most likely the white-tailed deer (*Odocoileus americana toltecus*).

⁷⁶ The Central American mountain lion or cougar (*Felis concolor*).

⁷⁷ *Panthera onza*.

⁷⁸ This may refer to the boa constrictor (*Constrictor constrictor*) or the venomous bushmaster (*Lechesis muta*).

⁷⁹ *Crotalus durissus*.

⁸⁰ *K'an Ti'* (Yucatec or Cholan: “Yellow Mouth”) is a pit viper, likely the cantil or *fer-de-lance* (*Trionocephalus specialis*), which is extremely poisonous (Cook 2000, 166). Its name is perhaps derived from the yellow markings around the mouth of the *fer-de-lance* (D. Tedlock 1996, 228 n. 66). Basseta records that it may be any venomous serpent and lists specifically the coral snake. I have used pit viper which covers the range of venomous vipers living in the Maya region.

“You, deer, will sleep along the courses of rivers and in the canyons. Here you will be in the meadows and in the orchards. In the forests you shall multiply. You will walk on all fours, and thus you will be able to stand,” they were told.

Then they established the homes of the birds, both small and great.

“You, birds, you will make your homes and your houses in the tops of trees, and in the tops of bushes. There you will multiply and increase in numbers in the branches of the trees and the bushes,” the deer and the birds were told.

When this had been done, all of them received their places to sleep and their places to rest. Homes were provided for the animals on the earth⁸¹ by She Who Has Borne Children and He Who Has Begotten Sons. Thus all was completed for the deer and the birds.

THE FALL OF THE ANIMALS⁸²

THEN it was said to the deer and the birds by the Framer and the Shaper, She Who Has Borne Children and He Who Has Begotten Sons:

“Speak! Call! Don't moan or cry out. Speak to one another, each according to your kind, according to your group,” they were told—the deer, the birds, the pumas, the jaguars, and the serpents.

“Speak therefore our names. Worship⁸³ us, for we are your Mother and your Father. Say this, therefore: ‘Huracan, Youngest Thunderbolt, and Sudden Thunderbolt,

⁸¹ No animals other than the deer and birds are mentioned as having received their homes and sleeping places. Thus the deer and birds represent all the animals of the earth, indicating their symbolic importance as the primary guardians of earth and sky.

⁸² lines 340-433

Heart of Sky and Heart of Earth, Framer and Shaper, She Who Has Borne Children and He Who Has Begotten Sons.’ Speak! Call upon us! Worship us!” they were told.

But they did not succeed. They did not speak like people. They only squawked and chattered and roared. Their speech was unrecognizable,⁸⁴ for each cried out in a different way.

When they heard this,⁸⁵ the Framer and the Shaper said, “Their speech did not turn out well.”

And again they said to each other:

“They were not able to speak our names. We are their Framer and their Shaper. This is not good,” said She Who Has Borne Children and He Who Has Begotten Sons to each other.

They were therefore told:

“You shall be replaced because you were not successful. You could not speak. We have therefore changed our word. Your food and your sustenance, your sleeping places and your places to rest, that which belonged to you, shall be in the canyons and the forests.

“Nevertheless, because you have not been able to worship us or call upon us, there will yet be someone else who may be a worshiper. We shall now make one who

⁸³ *Q'ijarisaj* (to worship) is derived from the root *q'ij* (day or sun) in a transitive imperative verb form (cause to be). If such a word existed in English, it might be something like “dayify” (to honor their day, perhaps through calendric ceremonies) or “sunify” (to glorify the gods like the glory of the sun). The gods’ purpose in carrying out the creation seems to be to provide beings who will be able to speak intelligibly. Only in this way could the gods be worshiped properly—through the articulation of their names with human speech. Page 80 (lines 534-535) emphasizes that “words” are the gods’ support.

⁸⁴ Literally “not appeared its face their speech.”

⁸⁵ Literally “try again their day.” *Q'ij* (day, sun) has a host of associated meanings. As Barbara Tedlock writes, “each day has ‘its face,’ its identity, its character, that influences its events; a person’s luck of the moment, or even his fate in general, is called ‘the face of his day’ (B. Tedlock 1982, 2).”

will give honor. Your calling will merely be to have your flesh eaten. Thus be it so. This must be your service,”⁸⁶ they were told. Thus were commanded the animals, both small and great, that were upon the face of the earth.

Then they wanted to test again their fate. They wanted to make another attempt. They wanted to try again to arrange⁸⁷ for those who would worship them.

The speech of the animals could not be understood. Because of the way they were made, they were not successful.⁸⁸ Therefore their flesh was brought low. They were made to serve. The animals that were on the face of the earth were eaten and killed.

THE CREATION OF THE MUD PERSON⁸⁹

THUS there was another attempt to frame and shape man by the Framer and the Shaper, by She Who Has Borne Children and He Who Has Begotten Sons:

“Let us try again before the first sowing, before the dawn approaches. Let us make a provider, a sustainer for us. How shall we then be called upon so that we are remembered upon the face of the earth? We have already made a first attempt with what we have framed and what we have shaped. But we were not successful in being worshiped or in being revered by them. Thus, let us try again to make one who will honor us, who will respect us; one who will be a provider and a sustainer,” they said.

⁸⁶ *Patan* in this context is a required service, the same word being used for tribute payments.

⁸⁷ *Nuk'* is to arrange for something, but it also means “to experiment or test,” implying a level of uncertainty that matches the previous two phrases, forming a triplet.

⁸⁸ The principal reason for the downfall of the first created beings was their inability to communicate in human speech, so the gods could not be worshiped with intelligible words. Each subsequent unsuccessful creation will be destroyed for the same reason.

⁸⁹ lines 434-517

Then was the framing, the making of it. Of earth and mud was its flesh composed. But they saw that it was still not good. It merely came undone and crumbled. It merely became sodden and mushy.⁹⁰ It merely fell apart and dissolved. Its head was not set apart properly.⁹¹ Its face could only look in one direction. Its face was hidden. Neither could it look about. At first it spoke, but without knowledge.⁹² Straightaway it would merely dissolve in water, for it was not strong.

Then said the Framer and the Shaper:

“We have made a mistake; thus let this be merely a mistake.⁹³ It cannot walk, neither can it multiply. Then let it be so. Let it be merely left behind as a thing of no importance,”⁹⁴ they said.

Therefore they undid it. They toppled what they had framed, what they had shaped.

Then they said again:

“How then will we truly make that which may succeed and bear fruit; that will worship us and that will call upon us?” they asked.

Then they thought again:

⁹⁰ *Lub'anik* refers to vegetables that have been boiled so long they have become soft and mushy.

⁹¹ The fact that the head was not placed apart from the body indicates that it did not have a neck with which to turn its head.

⁹² When the first Spanish missionaries arrived among the Maya they vigorously suppressed Precolumbian documents such as the *Popol Vuh* and replaced them with doctrinal treatises based on the Bible. Many of these, such as the *Theologia Indorum* by Domingo de Vico, stressed the creation account of Genesis. I can't help but wonder if the first Maya to hear these sermons found it strangely logical that these foreign priests, who burned their books and did not speak their language, were declared to be “formed from the dust of the ground,” made soft by a mist that “watered the whole face of the ground” (Genesis 2:6-7). Did the Maya think, “Ah, they're mud people. They speak but without knowledge and understanding.”

⁹³ *Lab'e* is a “mistake, fault, defect, deformed child, or monster.” It is also used to indicate a bad omen.

⁹⁴ According to Coto, *na'oj chi ri'* means “leave behind; of little importance.”

“We shall merely tell Xpiyacoc and Xmucane, Hunahpu Possum and Hunahpu Coyote, ‘Try again a divination,⁹⁵ a shaping,’” said the Framer and the Shaper to each other.

Then they called upon Xpiyacoc and Xmucane, and in this manner were the seers⁹⁶ addressed: “Grandmother of Day, Grandmother of Light!” In this way, they were addressed by the Framer and the Shaper, for these are the names of Xpiyacoc and Xmucane.

THE CREATION OF THE EFFIGIES OF CARVED WOOD⁹⁷

HURACAN, along with Sovereign and Quetzal Serpent, then spoke to the Master of Days⁹⁸ and the Mistress of Shaping, they who are seers:

“It shall be found; it shall be discovered how we are to create shaped and framed people who will be our providers and sustainers. May we be called upon, and may we be remembered. For it is with words that we are sustained, O Midwife and Patriarch, our Grandmother and our Grandfather, Xpiyacoc and Xmucane. Thus may it be spoken. May

⁹⁵ *Q'ijixik*, which might be translated “dayification,” refers to a divinatory ceremony in which a handful of *tz'ite* beans or grains of maize (cf. 573-574) are cast and then interpreted by a sequential counting of the days of the Quiché ritual calendar. Thus the outcome of the creation is to be ritually determined through a divinatory “counting of days.” This practice was apparently widespread in ancient Mesoamerica. The Codex Borbonicus from Central Mexico depicts two aged deities casting seeds of maize or *tz'ite* in a divinatory ceremony (folio 21). Calendar divination is still a common practice among the highland Maya.

⁹⁶ According to Basseta, *nicvachinel* refers to a “soothsayer, diviner, fortuneteller,” based on the root verb *nicoh* (to see, or look ahead). Coto adds that a *niq vachinel* is one who sees well, or divines by means of lots, which, in fact, Xpiyacoc and Xmucane practice on pp. 81-82 (lines 583-623). The implication is that Xpiyacoc and Xmucane were able to see with divine foresight.

⁹⁷ lines 518-679

⁹⁸ *Aj q'ij* is still the title used by Quiché priests who divine the will of deity through a ritual counting of the days in the sacred calendar. The title means literally “he/she of days,” or “master of days,” although modern ethnographers often refer to them as “daykeepers.” Because Xmucane and Xpiyacoc assisted in the creation of the universe at the beginning of time, thus setting in motion the endless cycles of day and night, birth and death, sowing and harvest, they stand as the ideal interpreters through divination of these cycles.

it be sown. May it dawn so that we are called upon and supported, so that we are remembered by framed and shaped people, by effigies⁹⁹ and forms¹⁰⁰ of people. Hearken and let it be so.

“Reveal your names, Hunahpu Possum and Hunahpu Coyote, Great She Who Has Borne Children and Great He Who Has Begotten Sons, Great Peccary and Great Coati, Jeweler and Worker in Precious Stones, Sculptor and Wood Worker, Creator of the Green Earth and Creator of the Blue Sky, Incense¹⁰¹ Maker and Master Artist,¹⁰²

⁹⁹ *Poy* is any type of created image that resembles a human— an effigy, doll, manikin, scarecrow, etc.

¹⁰⁰ According to Basseta, *anom* is something that is created in the image of something else, a “model or form,” often made by means of a mould. It is also used to refer to a “fool, buffoon, or someone who is lightminded and unserious.” These words presage the falseness and lack of intelligence characteristic of the wooden effigies that are soon to be created.

¹⁰¹ *Q’ol*. This is tree sap, the most common source of incense among the Maya. This word most commonly refers to pine resin incense, although it may be used for other types as well.

¹⁰² The Quiché title *Aj Toltecat* is given to anyone who is highly skilled in art, science, religion, and creative endeavors in general. *Toltecat* refers specifically to the ancient Toltecs, who, under the legendary priest-ruler Topiltzin Quetzalcoatl, founded the city of Tula in Central Mexico in the tenth century a.d. Although the city fell some two centuries later, the fame of its people was passed from generation to generation, undoubtedly embellished significantly with each retelling. At the time of the Spanish conquest, the ancient Toltecs had achieved an almost mythic reputation as masters in all the arts. The Aztecs gave the following description in folio 172v of the Codex Matritensis:

The Toltecs were a skillful people;
all of their works were good, all were exact,
all well made and admirable.

Their houses were beautiful, with turquoise mosaics,
the walls finished with plaster,
clean and marvelous houses, which is to say
Toltec houses, beautifully made,
beautiful in everything...

Painters, sculptors, carvers of precious stones,
feather artists, potters, spinners, weavers,
skillful in all they made....

The Toltecs were truly wise;
they conversed with their own hearts....
They played their drums and rattles;
They were singers, they composed songs
and sang them among the people;

Grandmother of Day and Grandmother of Light. Thus shall you all be called by that which we shall frame and shape. Cast¹⁰³ grains of maize and *tz'ite*¹⁰⁴ to divine how what we shall make will come out when we grind and chisel out its mouth and face in wood,”¹⁰⁵ so it was said to the Masters of Days.

Thus began the divination ceremony, the casting of grains of maize and of *tz'ite*, the revelation of days and of shaping. Then spoke the one Grandmother and the one Grandfather to them.

For this was the Grandfather, the Master of the *Tz'ite*, Xpiyacoc by name. And this was the Grandmother, the Mistress of Days¹⁰⁶ and Mistress of Shaping who is at the foot,¹⁰⁷ who is called Xmucane.

Thus they began to speak, to carry out their divination ceremony:

“May it be discovered. May it be found. Say it! Our ears hear you. Speak! Tell it! May the tree be found that is to be carved and chiseled out by the Framer and the Shaper.

They guarded the songs in their memories,
they deified them in their hearts. (León-Portilla 1980, 207)

¹⁰³ *Mala'* (to cast) refers not only to the scattering of the grains of maize or *tz'ite*, but also to the act of gently passing the hand over the pile of grains to mix them prior to their use in divination ceremonies (for a description of this ceremony see Schultze-Jena 1954; B. Tedlock 1982).

¹⁰⁴ *Tz'ite* is the bright-red beanlike seed of the coral tree (Spanish: *palo de pito* tree; *Erythrina corallodendron*). The seeds are used in divination ceremonies. Just as in the *Popol Vuh* manuscript, modern Quiché *aj q'ij* priests may use maize kernels or *tz'ite* seeds for such divinations. *Tz'ite* seeds are often referred to metaphorically as maize as well (Schultze-Jena 1954, 84; B. Tedlock 1982, 84).

¹⁰⁵ Each of the first three creative attempts used a different class of material—animal (wild beasts and birds), mineral (mud), and vegetable (wood).

¹⁰⁶ In Momostenango the ideal is for married couples to act as the agents in such ceremonies, similar to the tradition of Xpiyacoc and Xmucane (B. Tedlock 1982, 85).

¹⁰⁷ *Chi raqan* may mean either “at the foot” or “at the leg” since the Quiché language does not distinguish between the foot and the leg. Although Dennis Tedlock translates this phrase somewhat inaccurately as “who stands behind others,” I agree with his interpretation that Xmucane in her role as a female *aj q'ij* (daykeeper) positions herself at the feet of the petitioner so as to give assistance “as a daykeeper does when praying and giving offerings on behalf of a client, or a midwife does when assisting a birth” (D. Tedlock 1996, 234 n. 70).

If this is to be the provider and the sustainer, then may it now be sown that the dawn may come. You, grains of maize, and you, *tz'ite*; you, days, and you, the shaping—you are called,¹⁰⁸ you are summoned.”¹⁰⁹ Thus it was said¹¹⁰ to the grains of maize and the *tz'ite*, to the days and the shaping.

“Bring it to a conclusion,¹¹¹ O Heart of Sky. Do not punish them further.¹¹² Do not cause any more suffering for Sovereign and Quetzal Serpent,” they said.

Then they spoke straight to the point:¹¹³

“May these effigies of wood come out well. May they speak. May they communicate there upon the face of the earth. May it be so,” they said.

¹⁰⁸ According to Basseta, *chokonik* refers to “calling,” in the sense of being called upon to carry out an errand.

¹⁰⁹ *Taqentaj* is “to be summoned, commissioned, dispatched, given a task to fulfill, or be sent out as a messenger.”

¹¹⁰ Modern *aj q'ij* priests also speak directly to the *tz'ite* as they carry out their divinatory ceremonies, urging them to give an accurate and true answer to their petition.

¹¹¹ *K'ix* is “to complete, finish, conclude, or come to a solution” (Varea). As a noun, the word refers to a thorn, spine, or insect sting. When used as a verb, it is one of the words used to describe drawing blood in auto-sacrificial ceremonies. In this passage, it is possible that both meanings are intended. In Mesoamerican theology, gods of the creation often sacrifice themselves in order to provide the sacred blood necessary to produce new life.

¹¹² The phrase *mak'ajisaj u chi', u wach* (don't grind up his mouth, his face) is a common expression meaning something like “don't punish him” or “don't teach him a hard lesson.” Heart of Sky is thus being counseled not to cause Sovereign and Quetzal Serpent any more grief with further failures to successfully create beings who can worship and support them. Perhaps a bit of frustration at the gods' lack of success up to this point is evident in this address by Xpiyacoc and Xmucane to Heart of Sky. The Quichés are known for their directness in prayer. When a perceived injustice takes place in the life of a petitioner, he/she may well complain directly to the god who has responsibility for that malady and insist bluntly that things be made right. Bunzel suggests that Quiché deities are generally neutral entities, and thus “subject to bribery, cajolery and threats” (Bunzel 1952, 267). I heard one farmer bitterly accuse the earth god of taking a tool of his, even though the man had made all the appropriate offerings, and demand that it be returned immediately. Modern *aj q'ij* priests repeatedly admonish the gods to tell the truth and not *b'an tzij* (make words or lie).

¹¹³ Literally “they spoke its straightness.”

And when they had spoken, straightaway the effigies¹¹⁴ of carved wood were made. They had the appearance of people and spoke like people as well. They populated the whole face of the earth. The effigies of carved wood began to multiply, bearing daughters and sons.

Nevertheless, they still did not possess their hearts nor their minds. They did not remember their Framer or their Shaper.¹¹⁵ They walked without purpose.¹¹⁶ They crawled on their hands and knees and did not remember Heart of Sky. Thus they were weighed in the balance. They were merely an experiment, an attempt at people. At first they spoke, but their faces were all dried up. Their legs and arms were not filled out. They had no blood or blood flow¹¹⁷ within them. They had no sweat or oil. Their cheeks were dry, and their faces were masks.¹¹⁸ Their legs and arms were stiff. Their bodies were rigid.¹¹⁹ Thus they were not capable of understanding¹²⁰ before their Framer and their Shaper, those

¹¹⁴ *Poy* refers to any effigy fashioned in the likeness of a human, such as a doll or scarecrow. Tedlock translates the word as “manikin,” Recinos as “figure,” and Edmonson as “doll.”

¹¹⁵ Again, the cause of the downfall of this attempt at humanity is their failure to *remember* the gods and thus worship them properly.

¹¹⁶ According to Basseta, *xalok'* is something “without cause, without purpose, in vain.” Tedlock’s Quiché collaborator remarked that this phrase indicates that the wooden effigies were “like animals,” because humans must ask permission of the gods to travel any significant distance (D. Tedlock 1996, 234, n. 70).

¹¹⁷ The text lists two parallel words here, *kik'el* and *komajil*, both of which mean “blood.” Basseta mentions that *komaj* may specifically refer to menstruation, or menstrual blood flow.

¹¹⁸ Quichés consider the face to be the symbol for the personality or essence of a person. The fact that the wooden effigies had masks rather than faces implies that they were false by nature.

¹¹⁹ The word *yeyoj* means both “rigid” as well as “stubborn.”

¹²⁰ *Na'wik*. This is the capacity to understand, notice, observe, perceive. Thus it is the wooden effigies’ inability to learn and grow in knowledge that destroys them. *Na'b'al* (understanding, knowledge, memory) is a uniquely human trait. A resident of Santiago Chimaltenango noted that even a newborn baby has *naab'l*. But although animals may have a kind of awareness, they lack *naab'l* (Watanabe 1992, 82). Watanabe suggests that the notion of *naab'l* includes the larger concepts of soul, socialization, learning, and conventions of Chimalteco morality (Ibid., 100). Thus, the effigies of wood lack the essential awareness,

who had given them birth and given them hearts. They were the first numerous people who have lived here upon the face of the earth.

THE FALL OF THE EFFIGIES OF CARVED WOOD¹²¹

THEN came the end of the effigies carved of wood, for they were ruined, crushed,¹²² and killed. A flood was planned by Heart of Sky that came down upon the heads of the effigies carved of wood.¹²³

The body of man had been carved of *tz'ite* wood¹²⁴ by the Framer and the Shaper. The body of woman consisted of reeds¹²⁵ according to the desire of the Framer and the

and understanding that are characteristic of human beings. In this sense, they are like the animals who were not able to remember or honor the gods properly and were thus destroyed.

¹²¹ lines 680-837

¹²² *Q'utuxik* is "to be crushed or pulverized," generally with reference to dried vegetables like chili peppers.

¹²³ The destruction of the earth by flood prior to our present age was a widespread tradition in Mesoamerica: "There was among them information of the flood and of the end of the world, and they called it Butic, which is the word which means flood of many waters and means 'judgment,' and so they believe that another Butic is about to come, which is another flood and judgment, not of water, but of fire, which they say would be the end of the world, in which all the creatures would reprove, especially those which serve man, like the stones on which they grind their corn and wheat, the pots, the vessels, giving to understand that they will turn against man, and that the moon and sun would be eclipsed, saying that they would be eaten" (Las Casas 1967, III.ccxxxv.507; cf. III.cxxiv.650. Translation by author). The Yucatec Maya *Book of Chilam Balam of Chumayel* records that the people of that age "were buried in the sand at the shore of the sea, in the waves. Then in a great sheet of water the waves came. When the great serpent was taken away, the heavens fell and the earth was submerged" (León-Portilla 1969, 50; cf. Roys 1967, 170). Aztec tradition also has the inhabitants of the fourth age of the earth destroyed by flood: "These are those who lived in the fourth Sun, called 4-Water. They lived 676 years, until they were destroyed. They were swallowed up by the waters and became fish. The heavens collapsed upon them and in a single day they perished" (Velázquez 1945, 119-120). Although the *Popol Vuh* has the wooden effigies destroyed in a flood (see also p. 85; lines 706-709, 728-731), lines 710-723 have them crushed and devoured by monstrous beasts, while lines 736-823 describe their ruin at the hands of their own domesticated animals, grinding stones, utensils, and other possessions.

¹²⁴ In highland Guatemala, the wood of the *tz'ite* (coral tree) is still considered to have extraordinary power, including the ability to speak (Orellana 1984, 98). In the Tz'utujil-Maya village of Santiago Atitlán, traditionalists venerate an effigy carved of *tz'ite* wood that they call Maximon (Ancient One Who Is Bound) or alternatively Mam (Ancient One). The trunk of this effigy is approximately 2.5 feet in height and 6-8 inches thick, with separate pieces of wood attached to form the head and legs. A carved mask with a roughly hewn face is tied about the head (cf. p. 84; lines 668-669). This effigy is said to be more ancient

Shaper. But they were not capable of understanding and did not speak before their
Framer and their Shaper, their makers and their creators.

Thus they were killed in the flood. There came a great resin down from the sky.¹²⁶

There came the ones called Chiselers of Faces, who gouged out their eyes.¹²⁷

There came Death Knives,¹²⁸ which cut off their heads. There came Crouching¹²⁹ Jaguar,
who ate their flesh. There came Striking¹³⁰ Jaguar, who struck them. They smashed their
bones and their tendons.¹³¹

Their bones were ground up. They were broken into pieces. Their faces were
ground up¹³² because they proved to be incapable of understanding before the face of
their mother and the face of their father, Heart of Sky, Huracan by name.¹³³

than Christ, having been created “in the beginning of time, or of the world” (Mendelson 1959, 58, 60). Maximon is considered old and often malignant, standing in opposition to the established order of the community. He is thus associated with forgetfulness (B. Tedlock 1982, 101; cf. p. 83; lines 652-653, 656-657), hunger, sterility, sexual depravity (Thompson 1970, 299; Mendelson 1958b, 9), and opposition to life deities. He is particularly prominent during Easter celebrations, in which he presides over the death and entombment of Jesus Christ (Mendelson 1959, 1965; Tarn and Prechtel 1997; Christenson 2001, 176-191). The Maximon figure may be a remembrance of the chaotic world prior to the creation of humankind, when the gods were not remembered or worshiped properly by effigies carved from *tz’ite* wood. Cook suggests that Maximon’s opposition to Christ represents a kind of “underground survival of powers from earlier, superseded epochs” (Cook 2000, 139-140).

¹²⁵ This is the type of reed commonly used for weaving mats in Guatemala (*Typha angustifolia*).

¹²⁶ Some confusion appears in the text as to the nature of the flood that destroyed the wooden effigies. Here the flood is composed of resin, sap, or turpentine (secretions of pine trees). Page 87 (lines 728-731) however describes a watery flood caused by heavy rainfall.

¹²⁷ *U b’aq’ u wach* (its seed his/her face) refers to the eyes.

¹²⁸ *Lotz* is a knife used in butchering or surgery, although the word may also refer to the act of cutting flesh.

¹²⁹ “Crouching,” as if lying in ambush.

¹³⁰ *Tukuj* is “to strike something violently, with the intention of breaking it.”

¹³¹ *Ib’och’il* may refer to “tendons, blood vessels, or nerves.” I have chosen “tendons” because this word best parallels bones as a stiff supporting structure of the body.

¹³² To “grind someone’s face” is a metaphor for inflicting punishment.

Thus they caused the face of the earth to be darkened, and there fell a black rain,¹³⁴ a rain that fell both day and night. The small and the great animals came in upon them.¹³⁵ Their faces were crushed by the trees and the stones. They were spoken to by all their maize grinders and their cooking griddles,¹³⁶ their plates and their pots, their dogs¹³⁷ and their grinding stones.¹³⁸ However many things they had, all of them crushed their faces.

Their dogs and their turkeys¹³⁹ said to them:

“Pain you have caused us. You ate us. Therefore it will be you that we will eat now.”

¹³³ The violent destruction of the wooden effigies is perhaps commemorated in the dismemberment of the Maximon figure at Santiago Atitlán (see previous note on the *tz'ite*-wood figures). Maximon is a figure of carved *tz'ite*-wood prominently displayed at times of crisis, such as during the death of Christ at Easter or at harvest time, when the crops are ceremonially “killed.” When Christ rose from the dead and life restored to the world at the climax of such festivals, Maximon was ritually defeated by disassembling the wooden pieces of his body, removing his mask, and placing it upside down so that he cannot harm anyone and so that he will be left “without power of speech” (Mendelson 1965, 123). In other highland Maya communities, figures representing Maximon are torn apart, hung from trees, or burned. I saw one particularly evil-looking Maximon near the town of Sololá slashed repeatedly with a machete and thrown out onto a highway so that cars and buses would run over it.

¹³⁴ “Black” in the sense that the storm was so severe that the sky was darkened with clouds.

¹³⁵ The implication is that the wild animals of the mountains entered into the houses of the wooden effigies. The Quichés believe that when a wild animal enters their home it is to deliver a message from the earth god, who is the master of the animals. In this case, the message is a foreshadowing of the destruction that is soon to come upon the wooden effigies.

¹³⁶ *Xot* (griddle) is a round, flat clay piece upon which tortillas or slices of steamed maize dough are cooked.

¹³⁷ There were very few domesticated animals in Precolumbian Mesoamerica. Those that have been documented are the dog, turkey, and honeybee. The dog mentioned here is a small, fat, nearly hairless variety that does not bark and that was eaten in addition to being kept as a pet.

¹³⁸ This is the *metate*, upon which maize and other grains are ground. It is usually made from a single block of heavy volcanic stone, quadrangular in shape, and supported by three short stone legs.

¹³⁹ In modern Quiché usage, *ak'* refers to chickens, which were introduced by the Spaniards soon after the Conquest. The Precolumbian *ak'* was the domesticated turkey (*Meleagris ocellata*). Colonial period dictionaries often refer to the turkey as *kitzih ak'* (true *ak'*) to distinguish it from the chicken introduced from Europe. The dog and turkey together represent those domesticated animals raised by the Quichés and thus under their direct care and supervision. The wooden effigies thus reaped the vengeance of their own animals as a result of their cruelty and thoughtlessness.

Then the grinding stones said this to them:

“We were ground upon by you. Every day, every day, in the evening and at dawn, always you did *holi, holi, huki, huki*¹⁴⁰ on our faces. This was our service for you who were the first people. But this day you shall feel our strength. We shall grind you like maize. We shall grind up your flesh,”¹⁴¹ said their grinding stones to them.

Then their dogs said this to them:

“Why was it that you didn’t give us our food? All we did was look at you, and you chased us away. You threw us out. You raised sticks against us to beat us while you ate.¹⁴² Thus you have spoken to us.¹⁴³ We could not speak; therefore we received nothing from you. How could you not have understood this?¹⁴⁴ You did understand. We were forgotten because of you. This day, therefore, you shall try the teeth that are in our mouths. We shall eat you,” said the dogs to them. Thus their faces were crushed.

¹⁴⁰ The phrase *holi, holi, huqui, huqui* has been translated in a variety of ways in the past. Raynaud translates it as “strip, strip, tear, tear.” Edmonson interprets it as “Crunch, crunch! Scrape, scrape!” Tedlock uses “R-r-rip, r-r-rip, r-r-rub, r-r-rub.” *Juk’i* may, in fact, be translated “scrape” or “rub,” but *jol* has no relevant meaning in this passage. I have chosen to leave the phrase untranslated, because I believe the authors intended the words to convey the sound that is produced when maize is ground on a *metate* stone. The initial h of each of the words is pronounced harshly, like a Spanish j or a German ch, creating a coarse sound remarkably like that of stone scraping rhythmically against stone.

¹⁴¹ It is poetic justice that each of the household possessions of the wooden effigies chose to punish their owners with the same torments that they had suffered previously at their hands. Thus the grinding stones grind the faces of the wooden people in the same way that their own faces had been ground upon day in and day out (p. 87; lines 767-769). The dogs who had been eaten now eat their masters (p. 88; lines 784-789). The griddles and pots, which had been placed on the fire each day, now throw their owners into the fire to be burned (p. 88; lines 799-800). The stone tools and hearthstones pound the heads of the wooden effigies as they had been beaten upon (pp. 88-89; lines 800-807).

¹⁴² Even today domesticated dogs are often treated very carelessly among the Quichés. Most are emaciated and in constant fear of beatings and harsh words.

¹⁴³ The purpose of the creation has been to create people who were capable of speech in order to sustain the gods. The dogs are pointing out that, instead, their speech has been limited to beatings and violence. Thus the wooden effigies have also failed in their purpose.

¹⁴⁴ *Na’wik* is to “understand, know, notice, observe, or perceive.” Any of these might fit this context. Pages 84-86 (lines 673, 724-725) assert that it was the lack of ability in the wooden effigies to “understand” that condemned them.

Then spoke also their griddles and their pots to them:

“Pain you have caused us. Our mouths and our faces are sooty. You were forever throwing us upon the fire and burning us. Although we felt no pain, you now shall try it. We shall burn you,” said all of their pots. Thus their faces were all crushed.

The stones of the hearth flattened them. They would come out from the fire, landing on their heads and causing them pain. They fled. They hurried away. They wanted to climb up on top of the houses, but the houses would fall apart beneath them and they were thrown off. They wanted to climb up to the tops of the trees, but the trees would not support them. They wanted to hide in caves, but the mouths of the caves closed up before their faces.

Thus the framed people, the shaped people, were undone. They were demolished and overthrown as people. The mouths and the faces of all of them were ruined and crushed.

It is said that the spider monkeys¹⁴⁵ that are in the forest today are descendents¹⁴⁶ of these people. This was their heritage because their flesh was merely wood when it was created by the Framer and the Shaper. Therefore the spider monkeys appear like people, descendents of one generation of framed and shaped people. But they were only effigies carved of wood.

¹⁴⁵ *K'oy* refers to the spider monkey (*Ateles vellerosus* or *Ateles geoffroyi*). Central Mexican traditions are remarkably similar. The *Anales de Cuauhtitlan* relate the tradition that in the fourth age of the earth “people were turned into monkeys. They were scattered over the mountains, and the monkey-men lived there” (León-Portilla 1980, 138).

¹⁴⁶ *Etal* is generally used to mean “sign, symbol, or manifestation.” Coto notes that it may also refer to “descendents, son, heritage, or succession.” The latter interpretation seems to fit the context better in this passage.

THE PRIDE OF SEVEN MACAW BEFORE THE DAWN¹⁴⁷

WHILE the face of the earth was only a little brightened,¹⁴⁸ before there was a sun, there was one who puffed himself up¹⁴⁹ named Seven Macaw.¹⁵⁰ There was a sky and an earth, but the faces of the sun and moon were dim.¹⁵¹ He therefore declared himself to be the bright sign for those who were drowned in the flood.¹⁵² He was like an enchanted person in his essence.

¹⁴⁷ lines 838-907

¹⁴⁸ This translation is based on the Quiché word *natatic*, which refers to the first faint rays of light at dawn. Basseta likens it to the dim light cast by the moon.

¹⁴⁹ *Nimarisaj rib'* (to aggrandise self) is a common Quiché expression for pride or boastfulness. The *Popol Vuh* repeatedly describes this as forbidden or evil (see for example pp. 94, 96; lines 915-916), and those who are guilty of it are severely punished under the direction of the god Heart of Sky.

¹⁵⁰ The scarlet macaw (*Ara macao*) is a large species of parrot with beautiful, bright-red plumage. Seven Macaw is portrayed as a boastful individual whose ultimate downfall is ordained by Heart of Sky because of the excessive pride he had in his glorious appearance.

¹⁵¹ The verb *moymot* (dim) refers to something giving off a dim or shadowy light, such as a sputtering candle flame or the sky at twilight.

¹⁵² The account of Seven Macaw is set at the time prior to the flood that destroyed the wooden effigies, as described in the previous section (see also p. 93; lines 901-902). This episode may have political overtones as well. According to the *Books of Chilam Balam* the founder of Izamal, one of the principal Yucatec centers in the Postclassic period, was a semi-deified lord named Kenech Kukmo (Sun-faced/eyed Fire Macaw) (Roys 1967, 82, 141, 160 n. 2; Craine and Reindorp 1979, 83-84 n. 78). This lord was also the ancestor of a number of the principal lineages of Yucatán who worshiped him as a god. So important was this god/ruler that the *Chilam Balam of Maní* refers to him as the personification of all northern Yucatán (Craine and Reindorp 1979, 156). Cogolludo wrote of him: "They had another temple on another mount in the northern part of the city, and this, from the name of an idol which they worshiped here, they called Kinich Kakmo, which means the sun with a face. They say that the rays were of fire and descended at mid-day to consume the sacrifice, as the vacamaya flies through the air (which is a bird something like a parrot, though larger in size, and with finely colored feathers). They resorted to this idol in time of mortality, pestilence, or much sickness, both men and women, and brought many offerings. They say that at mid-day a fire descended and consumed the sacrifice in the sight of all. After this the priest replied to their inquiries about the sickness, famine, or pestilence, and thus they learned their fate (Cogolludo 1957, IV.8.198; cited in Craine and Reindorp 1979, 83 n. 78). Izamal was eventually conquered by Kak-u-pacal (Fire His Shield) of Mayapan. Gaspar Antonio Chi wrote that "in course of time the inhabitants of the said town (Izamal) were conquered by Kak-u-pacal and a hundred valorous captains formerly of the town of Mayapan, and that those who founded this place were called Kinich-Kabul, Kinich Kakmo and others from whom descend the Xool, Mo and Coyi <families>, Indians so named in this province" (cited in Roys 1967, 160 n. 2). Mayapan is a good candidate for the Tulan mentioned in the *Popol Vuh* as the sacred city from which the ancestors of the Quiché rulers derived their authority to rule (pp. 210-213). Thus this account of the boastfulness of a sun-faced/eyed macaw who declared himself to be a sun and moon god, but who ultimately fell at the hands of the ancestors of the Quichés (who eventually became apotheosed as the true

“I am great. I dwell above the heads of the people who have been framed and shaped. I am their sun. I am also their light. And I am also their moon.”¹⁵³

“Then be it so. Great is my brightness. By the brilliance of my silver and gold¹⁵⁴ I light the walkways and pathways¹⁵⁵ of the people.

“My eyes sparkle with glittering blue/green jewels.¹⁵⁶ My teeth as well are jade stones,¹⁵⁷ as brilliant as the face of the sky. This, my beak, shines brightly far into the distance like the moon.”¹⁵⁸

sun and moon—see p. 191) may be a mythic recollection of this historical incident. It is perhaps significant as well that the conquest of Izamal was carried out by Kak-u-pacal (Fire His Shield), while the titular god of the Quichés, Tohil, was primarily a fire deity (pp. 213-217). In addition, the progenitors of the Quiché ruling lineages bore the title *K'enech Ajaw* (Sun-faced/eyed Lord—see p. 203n.505), the legitimate sun lords as opposed to the false sun of Seven Macaw.

¹⁵³ Although the predominant emphasis in this passage is on the light of the sun and moon, the authors of the text apparently also meant to emphasize that Seven Macaw saw himself as the means of marking the passage of time. *Q'ij* means both sun and day; *Ik'il* may refer to the moon, but more often this form of the word refers to month. Calendrics are a vital part of highland Maya culture and ritual because passages of time are believed to be manifestations of deity. Notice that at the end of the chapter the authors refer to the “days and months” before the sun and moon could be seen.

¹⁵⁴ *Puwaq* refers to any type of precious metal. In modern usage, the word requires a color modifier to determine its specific type—*q'an puwaq* (yellow precious metal) for gold or copper, *saq puwaq* (white precious metal) for silver, etc. In this case, Seven Macaw compares his brilliance to that of shiny metal.

¹⁵⁵ *B'inib'al* (walkway) and the parallel word *chakab'al* (pathway) both end in the suffix *-b'al*, which indicates a facilitative object. The root of *b'inib'al* is *b'inik* (to walk); therefore, the word may refer to anything which facilitates the act of walking. This may be a well-cleared walkway, a walking stick, or a torch to illuminate one's path in darkness. *Chakab'al* has a similar usage, although its root, *chakanik*, refers to the act of walking on all fours, or crawling. The same two verbs are used to describe the travel of animals (p. 74; lines 312-314), as well as that of the wooden effigies before their destruction in the flood (p. 83; lines 654-655). Tedlock's collaborator, Andrés Xiloj, indicated that these two words “are in the prayers we say at the *warabal ha* [patrilineage shrines], to ask permission for anyone who goes out of the house to whatever place” (D. Tedlock 1985, 261). Seven Macaw is thus boasting that he stands as the only “way and light” for all creation in the darkness of the predawn world.

¹⁵⁶ *K'uwal* may refer to any rare gemstone. It is derived from a root word meaning “to be hidden or covered up.” Colonial period dictionaries often give “emerald” as the specific definition of the word, and emerald appears to be the blue/green jewel described here.

¹⁵⁷ *Xit* is the word for greenstone. Green or blue stones like jade, serpentine, nephrite, and turquoise were highly prized in ancient Mesoamerica, their value surpassing that of gold. Maya lords often decorated their teeth with jadeite or nephrite inlays as a token of their power and prestige. Such inlays were so meticulously carved and fitted into prepared incisor teeth that no significant gaps between tooth and stone are detectable.

“My throne is gold and silver. When I go forth from my throne, I brighten the face of the earth.

“Thus I am the sun. I am the moon as well for those who are born in the light, those who are begotten in the light.

“Then be it so. My vision¹⁵⁹ reaches far,” said Seven Macaw.

Now Seven Macaw was not truly the sun, but he puffed himself up in this way because of his plumage and his gold and his silver. His vision did not reach beyond where he sat. It did not really reach everywhere beneath the sky.

Thus Seven Macaw puffed himself up in the days and months before the faces of the sun, moon, and stars could truly be seen. He desired only greatness and transcendence before the light of the sun and moon were revealed in their clarity. This was in the era when the flood was made because of the effigies of carved wood.

Now we shall tell how Seven Macaw died; how he was defeated at the time when people were made by the Framer and the Shaper.

THE FALL OF SEVEN MACAW AND HIS SONS¹⁶⁰

THIS is the beginning of his defeat. This is the shaking¹⁶¹ of the day of Seven Macaw by the twins,¹⁶² named Hunahpu¹⁶³ and Xbalanque.¹⁶⁴ They were simply gods. As

¹⁵⁸ The scarlet macaw has a shiny white beak.

¹⁵⁹ *Wach*. I base this reading on various compounds of the word that refer to vision or sight, such as *solwachij* (to gaze, stare fixedly). *Wach*, however, is a complex word that comprises all the aspects of a thing that give it its essential nature. As such it may be translated as “face, countenance, image, or visage.” Vision is one of the primary aspects of this nature because it is the means by which knowledge is gained (see pp. 197-200; lines 4983-5123).

¹⁶⁰ lines 908-984

¹⁶¹ *Yiqoxik* is literally “to be shaken,” but with the implication of being troubled, disturbed, harassed, disquieted, or fearful.

¹⁶² Literally “two sons/boys.” *K'ajol* (son) is often used in the text to refer to a young man or boy without necessarily emphasizing the parentage of the individual.

¹⁶³ Here we are introduced for the first time to the twin heroes, Hunahpu and Xbalanque, who will be the central focus of much of the remainder of the mythological portions of the *Popol Vuh*. Hunahpu has generally been translated in the past as “One Master of the Blowgun” or “One Blowgun Hunter” on the assumption that *pu* is a shortened version of *[p]ub'* (blowgun). This may well be the original etymology of the name. In this section of the text, Hunahpu is described as a great blowgun hunter. On the other hand, the authors of the *Popol Vuh* text consistently wrote the word for blowgun as *ub'* or *wub'*, not *pu*. It is therefore unlikely that the Quiché authors of the text had “blowgun” in mind when they wrote the name of this deity. If the Quiché scribes had meant to make it clear that he was a “blowgunner,” they would have used the word currently in use at the time. I believe that they remembered the name as it was handed down to them over the generations and simply preserved the archaic spelling because that was simply his proper name. Hunahpu is treated as a single proper name elsewhere in the text, much like Taylor and Cooper are used as family names without necessarily calling to mind the professions of clothier or barrel maker. The father of the culture hero Hunahpu is named Hun Hunahpu, which if translated literally would mean “One One Master of the Blowgun,” a needlessly redundant reading unless Hunahpu were meant to be read as a single untranslated name. Schele and Mathews have proposed an alternative reading based on a Cholan-Maya language etymology, the language of the Classic Maya (ca. AD 250-900) that dominated the lowland region from Palenque and Calakmul as far south as Copan (Schele and Mathews 1998, 74, 295). Inscriptions from this period refer to the Central Mexican city of Teotihuacan as *Puh* (Place of Cattail Reeds). This is the Maya language version of *Tollan* (Nahuatl for “Place of Cattail Reeds), the legendary founding place of the arts and sciences, as well as of political power and legitimacy. This title was given to a number of major centers, including Teotihuacan, Cholula, Chichen Itza, and Tenochtitlan. It is likely that the concept is even older, dating to Olmec traditions in the southern Gulf Coast region, tied to legends of the birth of the world from the primordial sea. The reeds represent the first life to emerge from this place of origin (Schele and Mathews 1998, 200). If *Hunahpu* is related to this concept, the title could be interpreted as “One/First He of the Place of Cattail Reeds,” meaning that the deity pertains to the legendary founding place of Mesoamerican civilization, or the place of original creation. Hunahpu is also one of the named days of the 260-day sacred calendar still used by the Quichés. This day is associated with the underworld realm of the dead and with rebirth from that realm. I have chosen to leave the name untranslated, as it is used in this context as a proper name, rather than a descriptive term.

¹⁶⁴ The derivation of the name Xbalanque is problematic. The prefix *x-* is a diminutive as well as a feminine indicator. Thus, depending on the context, it may mean “young, small, little,” or it may be used as a female title, such as “lady.” The latter usage has led to some speculation that Xbalanque may have been the twin sister of Hunahpu, acting as the female counterpart to the male powers of the hunter. This theory is not supported by the text, however, which consistently refers to the twins as “sons” or “boys.” Hunahpu himself often carries the *x-* prefix, although not as consistently as his brother (see lines 4307, 4550, 4576, 4586, 4646, 4725). *B'alan* is undoubtedly an archaic spelling of *b'alam* (jaguar), m/n letter substitutions being fairly common in Quiché. Indeed, Vico transcribed the name in his *Theologia Indorum* as Xbalamquej (Carmack and Morales Santos 1983, 6-8). Known for its ferocity and cunning, the jaguar is the largest predator in Mesoamerica. Rulers decorated their thrones with jaguar symbols and wore jaguar pelts to emphasize lordly power. In addition, the jaguar is associated with ritual powers of transformation and prophecy. The terminal *ke* is more difficult to interpret. The most likely derivations are *kej* (deer) or *q'ij* (sun or day). The latter possibility is intriguing. The Maya closely identified the jaguar with the sun, particularly in its journey through the underworld at night. The story of Xbalanque and his brother focuses on their passage through the underworld, where they defeat the lords of death, ultimately to become the apotheosed sun and moon in the sky. Father Bartolomé de las Casas was told in the sixteenth century that Exbalanquen was a god from the area of the Guatemalan Alta Verapaz who made war with the lords of hell and returned as a great ruler (Las Casas 1958, 427). The word for sun in the Kekchi-Maya dialect of the

a result they saw evil in this prideful one who acted according to his own desires before the face of Heart of Sky.¹⁶⁵

Thus the boys said:

“Good shall never come of this. People will never be able to live here on the face of the earth. Thus we will try to shoot him with our blowguns.¹⁶⁶ When he flies over his food, we will shoot him, thus causing him to be afflicted. Then his jade, his gold and silver, his jewels, his glittering things, and all things over which he keeps vigil, will come to an end.

“May it be done thus, for people cannot be created where only gold and silver are glory.¹⁶⁷ Then be it so,” said the boys. And each one shouldered his blowgun.

Now this Seven Macaw had two sons. His firstborn was Zipacna,¹⁶⁸ and his secondborn was Cabracan.¹⁶⁹ Chimalmat¹⁷⁰ was the name of their mother, the wife of Seven Macaw.

Alta Verapaz region is *q'e*, and Xbalamq'e is still remembered by the Kekchi as a sun god (D. Tedlock 1996, 239 n. 77). If this name is purely of Kekchi origin, Balamq'e may be read in that language as “hidden sun, or the night sun” (Ibid.). The most likely translation of the name would therefore be “Young Hidden/Jaguar Sun.”

¹⁶⁵ The text makes it clear that the twin heroes Hunahpu and Xbalanque did not act alone or without authority. All their actions were first ordained by the god Heart of Sky (also called Huracan—cf. p. 70; lines 183-189), and were carried out under his direction.

¹⁶⁶ The shooting of a bird deity by twin boys armed with blowguns is a frequent subject of Maya art at least as far back as the Early Classic period (AD 200-600), indicating that the theological foundation of this incident is of great antiquity.

¹⁶⁷ *Q'aq'al* is a word laden with culturally-significant implications. Literally it is derived from the root *q'aq'* (fire, flame), but in this form it refers to “glory, power, majesty.” Thus the twins suggest that the creation of human beings cannot be successful when material wealth such as gold and silver are the sole source of glory and power in the world.

¹⁶⁸ Zipacna is most likely derived from the Nahuatl *cipactli*, a monstrous crocodile whose spiny back symbolized the mountainous earth floating on the primordial sea. This probability is consistent with the *Popol Vuh* account in which Zipacna declares himself to be the caretaker of the mountains and creator of the earth. Cipactli is also a day on the Central Mexican calendar, suggesting that like other names in the *Popol Vuh*, this character has calendric associations. This is a long hill in the center of the Rabinal valley

Zipacna was he that sustained the great mountains—Chigag,¹⁷¹ Hunahpu,¹⁷² Peculya,¹⁷³ Xcanul,¹⁷⁴ Macamob,¹⁷⁵ and Huliznab.¹⁷⁶ These are the names of the mountains that existed at the time of the dawn. In a single night, they were created by Zipacna.

Cabracan was he who would shake the mountains, both small and great, causing them to tremble.

But it was only the pride of the sons of Seven Macaw:

“This is what I am. I am the sun!” said Seven Macaw.

roughly the shape of a crocodile. It is still called Sipac and the people of Rabinal associate it with a crocodile (Akkeren 2000, 60).

¹⁶⁹ The Quiché name *Kab'raqan* may be literally translated “Two His Legs.” In modern usage, this is the common word for “earthquake,” and this interpretation fits Cabracan’s role as a shaker of mountains (p. 96; line 961). Together, the brothers Zipacna and Cabracan comprise a dichotomy of opposites, the one claiming to create the mountains and the other destroying them.

¹⁷⁰ Chimalmat is almost certainly derived from the Nahuatl *chimalmatl*, meaning “shield bearer,” a fairly common name for female deities. In Aztec legend, she was the mother of the Toltec priest-ruler Ce Acatl Topiltzin Quetzalcoatl. Chimalmat is also one of the names for the mother of the Aztecs’ patron god, Huitzilopochtli, as well as the female bearer of cult objects in Aztec migration accounts. Alternatively, the name may be Quiché in origin, consisting of *chi* (preposition “at, in, to, on, from, etc.”) and *malmat* (Bassetta: to walk with haste) or *malmot* (Coto: “to appear unexpectedly,” particularly with regard to a phantasm).

¹⁷¹ “Mouth Fire,” a volcano in the district of Sacatepequez, Guatemala, nineteen kilometers southeast of Antigua. It is better known by its Spanish name, Volcán de Fuego (Volcano of Fire).

¹⁷² Edmonson and Recinos identify this volcano as Volcán de Agua (Spanish: Volcano of Water), also located in the district of Sacatepequez, southeast of Antigua. Tedlock identifies it with Volcán de Acatenango, located in the same district (D. Tedlock 1996, 241 n. 77). In either case, it must be a volcano located near Chigag as the *Annals of the Cakchiquels* describes it as “standing abreast” of Chigag (Recinos and Goetz 1953, 61).

¹⁷³ Volcán Acatenango, in the district of Sacatepequez, located southwest of Antigua. Tedlock suggests that this is Volcán de Agua (D. Tedlock 1996, 241 n. 77).

¹⁷⁴ Volcán Santa María, southwest of Quetzaltenango, Guatemala. *Xkanul* is also a general term for volcano in Quiché.

¹⁷⁵ Volcán Zunil in the district of Quetzaltenango, Guatemala.

¹⁷⁶ The identity of this mountain is unknown. Edmonson identifies it with Tajumulco, a volcano in the district of Huehuetenango, Guatemala (Edmonson 1971, 36 n. 938).

“This is what I am. I am the maker of the earth!” said Zipacna.

“And I am he who fells the sky and causes the earth to tumble down!” said Cabracan. Now these, the children of Seven Macaw, received their greatness from their father. The boys, Hunahpu and Xbalanque, therefore saw evil in them before the creation of our first mother and our first father. Thus the boys planned their deaths and their loss.

THE DEFEAT OF SEVEN MACAW¹⁷⁷

THIS, then, is the blowgun shooting of Seven Macaw¹⁷⁸ by the twins.¹⁷⁹ We shall now tell the story of the defeat of each of the prideful ones.

This is Seven Macaw and a great nance tree.¹⁸⁰ This, then, is the food of Seven Macaw. Each day he would rise up to the top of the tree to knock down some of the fruit of the nance tree, and it is there that he was seen by Hunahpu and Xbalanque.

The twins watched for him beneath the tree, hidden in its leaves. At length Seven Macaw perched on the nance tree to feed and was shot by them. Hunahpu¹⁸¹ directed a

¹⁷⁷ lines 985-1188

¹⁷⁸ At the beginning of this section, the authors point out certain elements of the story as if they could be seen by the reader. This feature may be evidence that in the Precolumbian version of the *Popol Vuh* the text was accompanied by painted illustrations.

¹⁷⁹ Literally “two sons or boys.”

¹⁸⁰ The nance (*Byrosinima crassifolia*) is a smooth-skinned, yellow tropical fruit about the size of a cherry.

¹⁸¹ Throughout this section on the shooting of Seven Macaw, the authors of the text refer to the first of the twins as One Hunahpu, which is also the name of his father. To avoid confusion, the authors generally shortened the name of the son to Hunahpu or Xhunahpu (Little Hunahpu). For the same reason, I have left the name as Hunahpu.

pellet straight from his blowgun into his jaw. Seven Macaw cried out,¹⁸² sailing over the top of the tree and landing on the ground.

Quickly, Hunahpu ran out to grab him. But instead Seven Macaw tore off the arm of Hunahpu. He wrenched it back, bending it back at the shoulder until it was torn free from Hunahpu.

Still, it was good what they did. This first episode will not result in their defeat by Seven Macaw, even though he took away the arm of Hunahpu.

So then Seven Macaw went to his home, holding his jaw in his palms.

“What have you got there?” asked Chimalmat, the wife of Seven Macaw. “What is it?”

“Two demons¹⁸³ shot me. My jaw was dislocated by them,¹⁸⁴ and now my teeth torment me with pain. This I have brought to hang over the fire. It will dangle over the fire until they come to take it back again. Truly they are demons,” said Seven Macaw as he hung the arm of Hunahpu.

Then Hunahpu and Xbalanque planned again. They went to speak to the one Grandfather, whose hair was now truly white, and also the one Grandmother, who was now truly humble. They were people who now walked bent over with age. Great White

¹⁸² Literally “he broke open his mouth,” a common Quiché expression meaning “to scream, shout, or cry out.” In this case, it is a play on words as well, considering Seven Macaw’s broken jaw.

¹⁸³ *K’axtok’* (demon, deceiver) is a derogatory term for harmful beings, either human or supernatural, particularly when the harm is some form of deception or trickery. In the colonial period, Christian missionaries used the word to refer to devils, and this is still the most common usage in modern Quiché communities. “Demon” or “rascal” is perhaps closer to the ancient authors’ intent, since “devil” carries inappropriate European religious overtones. Tedlock uses the word “trickster.”

¹⁸⁴ Perhaps this incident is meant to explain the peculiar bent beak of the macaw, as well as the fact that the lower beak is much smaller than the upper beak.

Peccary was the name of the Grandfather, and Great White Coati was the name of the Grandmother.

The boys then spoke to the Grandmother and the Grandfather:

“We would like you to accompany us to retrieve our arm from Seven Macaw. We will just follow along behind you. You will say to him, ‘Suffer these our grandsons that accompany us. Their mother and father are dead, thus they follow along there behind us. We provide for them by removing worms from teeth,¹⁸⁵ which is our profession.’ Thus Seven Macaw will see us merely as children, even while we are giving you our instructions,” said the twins.

“Very well,” they said.

Thus they came to where Seven Macaw was seated on the edge of his throne. The Grandmother and the Grandfather passed below the home of the lord while the twins played behind them.

Now Seven Macaw was crying out because of his teeth. When he saw the Grandfather and Grandmother journeying together, he asked them:

“From where do you come, our grandfather?” he asked.

“We are just making a living, thou¹⁸⁶ lord,” they replied.

“How do you make your living? Are not those your children that accompany you?”

¹⁸⁵ *Chikopil* is the collective term for any type of animal. I have chosen “worm” because the Maya believe that toothaches are caused by parasitic worms or insect larvae. Perhaps this is a result of the wormlike appearance of dental pulp seen within broken teeth.

¹⁸⁶ Throughout the following passage, Seven Macaw is addressed using the formal *lal* (somewhat akin to the English “thou”), rather than the more familiar *at* (“you”). In modern usage, this is a mode of speech reserved for respected officials, lineage patriarchs, or the elderly. Thus the “grandparents” are at least feigning recognition of Seven Macaw’s lordly status. Seven Macaw addresses the elderly grandparents using the familiar “you,” indicating he considers himself more important.

“They are not, thou lord. These are our grandsons. But surely we take pity on them and give them a portion. We give them our scraps, thou lord,” said the Grandmother and the Grandfather.

The lord was by then nearly finished off because of the pain in his teeth. Therefore it was with great effort that he spoke again:

“I beg of you, take pity on me. What medicines¹⁸⁷ would you make? With what medicines would you cure?” asked the lord.

“We would merely remove worms from teeth, cure eye ailments, and set bones,¹⁸⁸ thou lord,” they replied.

“Very well. Cure then my teeth, for truly they ache constantly, and I can no longer bear it. I cannot sleep because of them, and the same goes for my eyes. Two demons shot me with a blowgun, and since then I have not been able to eat because of it. Thus take pity on me, for my jaw and my teeth cause me anguish.”

“Very well, thou lord. It is a worm that causes the pain. We will merely replace them. Thy teeth will have to come out.”

“It is perhaps not a good thing that my teeth come out, for it is only because of them that I am lord. My teeth, along with my eyes, are my finery.”

“We shall replace them then with this ground bone.”

But instead of ground bone, they were mere white grains of maize that were to be placed.

¹⁸⁷ The word *ki'* may be translated as “medicine, sweet, *pulque*, alcoholic beverages, poison, or venom.” Only by looking at the context can its meaning be discerned.

¹⁸⁸ Bonesetters are still an important group of ritual specialists in many highland Maya communities. In addition to setting bones, they are generally also initiated *aj q'ij* (daykeeper) priests (B. Tedlock 1982, 57, 74).

“Very well then, take them out. Help me,” he said therefore.

So then the teeth of Seven Macaw were taken out. As a substitute they placed mere white grains of maize, mere shiny white grains of maize, and immediately his face fell. No longer did he appear as a lord. At length all of the brilliant blue/green jewels in his mouth were removed.

Then the eyes of Seven Macaw were treated. His eyes were plucked,¹⁸⁹ thus completely removing the precious metal from them. He surely felt no pain. He just stared instead.

Thus the basis for his pride was completely taken away according to the plans of Hunahpu and Xbalanque. When at length Seven Macaw died, Hunahpu retrieved his arm. Then also Chimalmat died, the wife of Seven Macaw.

Thus the wealth of Seven Macaw was lost, for the healers took it away—the jewels, the precious stones, and all that which had made him proud here upon the face of the earth.¹⁹⁰ It was truly the enchanted Grandmother and the enchanted Grandfather that did it. Then the boys retrieved their arm and implanted it back into its socket, making it whole again.

They had desired the death of Seven Macaw, and they were able to do it. For they saw pride as evil¹⁹¹ and went to do these things according to the word of Heart of Sky.

¹⁸⁹ As a butcher trims meat, or a barber trims hair. It may also refer to the plucking of feathers from a chicken prior to cooking, which is likely the meaning in this passage. This is an explanation for the large white eye patch and unusually small eyes of the scarlet macaw, which appear as if something had been taken away.

¹⁹⁰ The *Popol Vuh* makes it clear that the power and authority of Seven Macaw were based on his wealth rather than his own abilities. When his riches were taken away, he was susceptible to defeat.

¹⁹¹ *Itzel*. It is difficult to discern how this word was understood prior to the Spanish conquest. Colonial dictionaries associate it with witchcraft and evil, and this is still a major connotation of the word in modern Quiché usage. This interpretation likely has Spanish Christian influences, however, which did not exist in

THE DEEDS OF ZIPACNA AND THE FOUR HUNDRED BOYS¹⁹²

THESE now are the deeds of Zipacna, the firstborn son of Seven Macaw.

“I am the maker of mountains,” said Zipacna.

Now this Zipacna was bathing on the banks of a river when there passed by four hundred boys,¹⁹³ dragging a tree to be used as a supporting beam for their hut. These four hundred were walking along, having cut down a great tree for a lintel.¹⁹⁴

Zipacna therefore came to the four hundred boys and asked them:

“What are you doing, boys?”

“It’s just this tree; we cannot lift it to our shoulders to carry it.”

“I will carry it on my shoulders. Where does it go? What use does it have in your hearts?”

“It is to be the lintel for our hut.”

“Very well,” he said therefore.

Thus he carried it on his shoulders up to the doorway¹⁹⁵ of the hut of the four hundred boys.

Precolumbian Quiché culture. Coto also lists under this word “falseness, filth, ugliness, error, perversion, and worthlessness.” Basseta simply interprets it as “bad.”

¹⁹² lines 1189-1385

¹⁹³ The Maya system of numbers is vigesimal, based on twenty. *O' much'* is literally five sets of eighty, or four hundred.

¹⁹⁴ The lintel of a structure is ritually significant. The world is conceived by the Maya as a great house, its corners being the four cardinal points, its roof the sky, and its foundation the underworld (Vogt 1976, 58). The lintel represents the principal access point of the interior space and was often ornately decorated in Precolumbian times. Such beams are therefore seen as endowed with great power, particularly those used in the homes of spiritual leaders. Zipacna’s brazen usurpation of the great wooden beam may indicate that he is taking upon himself the power of this sacred access point without authority or ritual preparation. If this interpretation is correct, Zipacna’s ultimate destruction as ordained by the creator god, Heart of Sky, is more understandable.

¹⁹⁵ Literally “its mouth hut.”

“Stay with us, boy. Do you have a mother or a father?”

“There is no one,” he replied.

“Surely we beseech you then to help us, for tomorrow another tree will be raised as a supporting beam for our hut.”

“Fine,” he said again. Then the four hundred boys made their plans:

“This boy, what will we do to him? We will kill him. For it is not good what he does, just lifting the tree all by himself. Let us therefore dig a great hole, and then we shall abandon¹⁹⁶ him there. We will say to him, ‘Go dig out the earth from the bottom of the hole.’ And when he is bent over down there in the hole, we will hurl down the great tree, and thus he will die there in the hole,” said the four hundred boys.

And so they dug a great hole that went down very deep. Then they sent for Zipacna:

“We entrust you to go now to dig in the ground, for we are not able to do it,” he was told.

“Very well,” he replied.

Thus he went down into the hole.

“Call when you have finished digging up the earth, for you must go down deep,” he was told.

“Fine,” he replied.

Then he began to dig in the hole. But this hole was to be his own salvation. He had learned that he was to be killed, and therefore he had dug a branching hole to one side. It was in this secondary hole that he was saved.

¹⁹⁶ *Tzaq* may mean “to throw down, to lose, or to abandon” something. The latter interpretation is closer to what actually occurred.

“How far are you into it?” he was asked by the four hundred boys.

“I am digging it quickly. When I shall call up to you there, then the digging will have been successfully completed,” called Zipacna from the hole.

But he did not dig his own tomb there at the bottom of the hole; rather he dug the means for his own salvation. Therefore, when Zipacna called up, he had already saved himself there inside the hole:

“Come and take the earth away—the dirt that I have dug up from the hole. Truly deep have I dug down. Can you not hear my call? Your voices just echo away as if you were a long way off when I hear them,” said Zipacna from his hole.

Thus he was already sheltered when he called up from inside the hole. The boys then dragged over the great tree and hurled it down into the hole.

“He is no more. He does not speak. When he cries out, we will know that he shall be dead,” they whispered to each other.

For they each hid their purpose when they hurled down the tree.

So when he spoke he cried out with a loud voice, he called out one more word when they dropped down the tree.

“Aha, we have succeeded! Truly good! We have done it to him. He died. What kind of omen would it have been if he had persisted in carrying out his deeds, his work? Then he might have become first among us, placing himself over us, even us the four hundred boys,” they said.

And so they rejoiced:

“For three days we will merely make sweet drink.¹⁹⁷ And when three days have passed, we will drink to our dwelling, to our hut, even us the four hundred boys!” they said.

“Tomorrow and the next day we will see if ants don’t come forth from the ground when he begins to stink and decompose. Then will our hearts be comforted, when we will drink our sweet drink,” they said.

But Zipacna heard this down there in the hole when they said this. And on the second day, the ants assembled themselves. They walked about. They swarmed beneath the tree. Everywhere they carried in their teeth the hair as well as the nails of Zipacna.

Now when the boys saw this, they said to each other:

“The demon is finished. Look at the ants. They have gathered together. They have assembled here, and everywhere they carry his hair in their teeth. Surely they can be seen carrying his nails. We have done it at last,” they said to each other.

But Zipacna was still alive. He had merely cut the hair off his own head and gnawed off his own nails to give to the ants. Thus the four hundred boys thought that he had died.

¹⁹⁷ *Ki’y* may refer to an alcoholic beverage, something sweet, medicine, poison, or even snake or insect venom. In this context, *ki’y* refers to an intoxicating drink, likely some form of *chicha*, a home-made fermented drink popular in the Guatemalan highlands made from various fruits, berries, cane, or maize. Alternatively it may be *pulque*, made from the fermented sap of the maguey (agave, or century plant). *Pulque* is viscous, milky-white, and slightly foamy. It ferments very quickly, generally within twelve hours and has an alcohol content of 6%, approximately the same as the average beer. A distilled form of this ancient drink is sold today as mezcal or tequila, although the distillation process was not known prior to the Spanish conquest. In Aztec mythology, *pulque* is personified by gods known as the Centzon Totochtin (400 Rabbits), who appear frequently in painted manuscripts such as the Codex Magliabechiano. These gods are also associated by the Aztecs with the four hundred youths slain by the god Huitzilopochtli as ritual sacrifices. The deaths of the four hundred youths in the *Popol Vuh* account may thus have had ritual significance. The beverage referred to could also possibly be *balche*, made from fermented honey and the bark of the *balche* tree. Alcohol is a prevalent part of highland Maya society, used both socially as well as a necessary component of ceremonial observances.

On the third day, they started in on their sweet drink. All the boys became drunk. All four hundred boys thus were drunk and didn't feel anything when Zipacna collapsed their hut down upon their heads. As a result, all of them were finished, struck down every one of them. Not even one or two of the four hundred boys were saved.

Such was the death of these four hundred boys at the hands of Zipacna, the son of Seven Macaw. It is said that they became the constellation known as the Pleiades,¹⁹⁸ but perhaps this is merely a fable.¹⁹⁹

Now we will tell the story of the defeat of Zipacna by the twins, Hunahpu and Xbalanque.

THE DEFEAT OF ZIPACNA²⁰⁰

THIS now is the overthrow and death of Zipacna. He was defeated by the twins, Hunahpu and Xbalanque, whose hearts were offended by the deaths of the four hundred boys at the hands of Zipacna.

Now this Zipacna would spend each day wandering in search of his food, only fish and crabs, which he looked for in the rivers. By night, however, he would carry mountains on his back.

Thus Hunahpu and Xbalanque transformed for him a great crab. For this purpose, they used a bromelia flower,²⁰¹ the kind of bromeliad that may be picked in the forests, to

¹⁹⁸ *Motz*. The Pleiades are a cluster of stars in the constellation of Taurus (composing a spot on the Bull's shoulder). It is derived from the word meaning to gather together in large numbers.

¹⁹⁹ Literally "whiteness word." This is a play on words, fable, or fantastic story.

²⁰⁰ lines 1386-1524

make the open claws. For its shell and backside, they used a hollowed-out stone. This shell they placed at the bottom of a cave below a great mountain. Meauan²⁰² was the name of this mountain where he was defeated.

When the boys came, they found Zipacna by the river:

“Where are you going, boy?” they asked Zipacna.

“I’m not going anywhere. I’m just searching for my food,” replied Zipacna.

“What is your food?”

“Only fish and crabs, but I haven’t found any yet. It has been two days since I have eaten, and now I cannot bear the hunger,” said Zipacna to Hunahpu and Xbalanque.

“There is a crab there below the canyon. It is truly a great crab. Why don’t you try your luck with it?” asked Hunahpu and Xbalanque. “Perhaps you will be able to eat it. It merely bit us when we tried to catch it, so we are afraid of it. But he will not go away and you could catch it.”

“Take pity on me. Guide me there, boys,” said Zipacna.

“We do not want to. Just go along yourself. There is no way that you will get lost if you just follow the course of the river until you reach the base of the great mountain. There it will be, situated below the canyon. Just go along over there,” said Hunahpu and Xbalanque.

²⁰¹ *Ek’* (bromelia) is a parasitic tropical flower. It grows from the branches of trees and has long, pointed red petals that look somewhat like the legs of a crab. The Quiché today use bromelia flowers to decorate festive arches and the shrines of Christian saints.

²⁰² Meauan was identified by Brasseur and Recinos as a mountain west of Rabinal, Guatemala (Brasseur 1858, 128; Recinos 1950, 102 n. 3). It is likely the mountain known today as Miagua, located some 20 km. northwest of Rabinal and bordering the Chixoy River (Akkeren 2000, 299). If this identification is correct, Akkeren suggests that Meauan may be a contracted form of *me’al ajaw* (daughter lord), the Quiché version of the Kekchi origin of the town’s name, *Rab’inal* (Place of the Lord’s Daughter) (2000, 60, 66).

“Please take pity on me. I will never find it, boys. You go first as my guides. I know where there are many birds that you could shoot with your blowguns,” said Zipacna.

He humbled himself before them, promising to reward them. He wept before them.

“Perhaps you will not be able to catch it. Then you would return like we did. Because not only were we not able to eat it, but it would straightaway bite us. We went in there headfirst on our stomachs,²⁰³ but it became frightened. A little later we went in lying on our backs, but we couldn’t find it again. Thus it would be good if you went in lying on your back,” he was told.

“Very well,” replied Zipacna.

Thus they left, accompanied by Zipacna. At length they arrived below the canyon where the crab was placed, its surface bright red there at the base of the canyon. This was their deception.²⁰⁴

“That’s good,” rejoiced Zipacna.

He wanted to put it straight in his mouth because he was truly famished and wanted to eat it. He just wanted to go in headfirst on his stomach.²⁰⁵ But the crab climbed high up, and Zipacna came back out.

²⁰³ *Jupulik* is to lie face down/on one’s stomach. It may also be used to indicate “headfirst.” Both meanings are likely applicable in this context.

²⁰⁴ The word used here is *kumatzij*, which is a pain caused by cramps, arthritis, etc. It is derived from *kumatz* (serpent, twisted). My reading is based on the assumption that the word is actually a contraction of two words, *kumatz tzij* (twisted word—deception, lie).

²⁰⁵ The implication of the story is that the Twins had tried to get Zipacna to enter the cave on his back where he would be prone and helpless. If Zipacna was a crocodile, as his name implies (Zipacna is likely derived from the Nahuatl *cipactli*—crocodile), he would be helpless because crocodiles cannot move well

“Didn’t you get it?” he was asked.

“No. It climbed high up and after awhile I couldn’t find it again. Perhaps it would be good then if I went in again lying on my back,” he said therefore.

Then he went back in again lying on his back. He went all the way in until only his kneecaps showed outside. Thus he was completely swallowed up. The mountain then settled down onto his chest so that he could not turn over again. Zipacna became stone. Thus was the defeat of Zipacna at the hands of the boys, Hunahpu and Xbalanque.

Such is the ancient account of the first son of Seven Macaw, the Maker of Mountains, as he was called, who was defeated beneath the mountain called Meauan.²⁰⁶ It was merely enchantment by which this second prideful one was defeated.

Now we shall tell the tale of another.

THE DEFEAT OF CABRACAN²⁰⁷

THE third prideful one was the second son of Seven Macaw, Cabracan by name.

“I am the wrecker of mountains,” said he.

when flipped over on their backs. Despite the Twins’ admonition, however, Zipacna did the natural thing and rushed headlong on his belly into the cave to reach the crab. Just as the Twins had predicted, the crab was frightened and climbed up high out of his reach. In this position he could not look up nor lift his arms above his head. Zipacna thus took the Twins’ original advice to go back in and try again on his back, perhaps giving him hope that he could then reach up to grab the crab as it climbed upward. When the mountain settled down on his prone form, he was unable to flip back over again.

²⁰⁶ This association between Zipacna and earthquakes continued well-after the Conquest. Coto wrote the following under the heading of *estremesçerse* (Spanish: tremor): “*Cabrakan* [Quiché: earthquake] is the tremor of the earth. They once believed, and continue to believe today, that beneath the earth there is a giant who holds up the earth who they call Çipacnay, and when he moves the earth trembles, and that this is the god of earthquakes” (Coto 1983, 224. Translation by author). In the contemporary Rabinal version of the myth, a hungry creature who moved mountains and volcanoes without any effort was lured into a cave by a woman from Coban where there was a crab hiding. Once inside, the mountain collapsed on him and he became the hill visible today (Shaw 1971, 46-51; Akkeren 2000, 70).

²⁰⁷ lines 1525-1720

It was simply because of Hunahpu and Xbalanque that Cabracan was defeated. Then Huracan, Youngest Thunderbolt, and Sudden Thunderbolt spoke to Hunahpu and Xbalanque, saying:

“According to my word, the second son of Seven Macaw must also be defeated. For it is not good what they have done upon the earth. They surpass the sun in greatness and importance,²⁰⁸ and this is not as it should be. Thus, lure him away there to the East, where the sun rises,” said Huracan to the twins.²⁰⁹

“Very well, thou lord. It has always been thus, that we do not approve of him.²¹⁰ For he is not lifted up where thou art, thou Heart of Sky,” the boys replied when they received the word of Huracan.

Now this Cabracan occupied himself as a wrecker of mountains. He would simply tap his foot a little on the surface of the earth, and straightaway mountains, both small and great, would tumble down.²¹¹

Then he was met by the twins:

“Where are you going, boy?” they asked Cabracan.

“I’m not going anywhere. I am merely a feller of mountains. I will wreck them as long as there is sun and light,”²¹² he said when he spoke to them.

²⁰⁸ Literally “weightiness.” According to Basseta, *nimal* (greatness) and *alal* (weightiness, importance) together form a couplet that refers to “power.”

²⁰⁹ Thus it is Huracan (also known as Heart of Sky) who directs the actions of the twins in overthrowing the pride of Seven Macaw and his two sons.

²¹⁰ Literally “not good we see them,” a common Quiché expression for “not liking or disapproving” of something.

²¹¹ *B’ulij* describes the mountains cascading or tumbling down like water from a mountain spring.

²¹² This is a common Quiché expression still used today in a somewhat shortened form, *chi b’e q’ij saq*, meaning roughly “as long as there is sun and light” or simply “forever.”

Then Cabracan spoke again to Hunahpu and Xbalanque:

“Where have you come from? I do not know your faces. What are your names?” asked Cabracan.

“We have no names.²¹³ We have just been blowgunning and trapping in the mountains. We are just poor orphans, for there is nothing that is ours, boy. We just wander in the mountains, both small and great. There is one great mountain that we saw that keeps growing until truly high it ascends. It simply rises up, far above the peaks of all the mountains. We could not catch even one or two birds before its face. Is it really true that you fell all mountains, boy?” asked Hunahpu and Xbalanque of Cabracan.

“Is it true that you saw this mountain of which you speak? Where is it? You shall surely see that I will fell it. Where did you see it?”

“There it is in the East, where the sun rises,” said Hunahpu and Xbalanque.

“Good. You lead the way,”²¹⁴ the twins were told.

“No, you just take the middle place between us, one on your left and one on your right hand. We have our blowguns, and if there are any birds, we will shoot them,” they said.

They rejoiced that they could practice their shooting. But there were no clay pellets in their blowguns. When they shot them, they merely blew at the birds. Thus Cabracan was amazed.

²¹³ In many ancient cultures, revealing one’s name was not taken lightly; it was believed that to do so was to relinquish power.

²¹⁴ Literally “take our road” or, as paraphrased in a somewhat similar English phrase, “lead the way.”

Then the boys used a twist drill to make their fire, upon which they roasted the birds. They covered the skin of one of the birds with quicklime until it was coated with white earth.

“We will give this to him when he becomes ravenous with hunger.²¹⁵ When he savors the aroma of our birds, he will be defeated. We will put earth on its skin. We will cook it in earth. In the same way, therefore, he himself will be buried in the earth. This must be if the great sage, the one to be framed and shaped, is to be sown and to have his dawn,” the boys said.

“Cabraacan shall desire with all his heart²¹⁶ to eat what we will cook. This shall be the desire of the heart of Cabraacan,” said Hunahpu and Xbalanque to each other.

Then they roasted the birds until they had been cooked to a golden brown. They would drip with fat from their skins and give off a fragrant aroma. Thus Cabraacan desired to be fed. His mouth watered. He just gulped and drooled saliva and spittle because of the fragrance of the birds.

Thus he begged of them:

“What is it that you are eating? Its aroma is truly delicious to smell. Give me a little,” he said therefore.

Then they gave to Cabraacan a bird, and this was his defeat. When he had finished the bird, they went on their way again until they arrived in the East. There they came to the great mountain.

²¹⁵ *Jiq'onoq* is “to be ravenous, gluttonous, excited with desire.”

²¹⁶ *K'uxilal* is a “longing for something with all one's heart, a desire for something above all else.”

But by now the legs and arms of Cabracan had become weak.²¹⁷ Never again would he be strong because of the earth coated on the skin of the bird he had eaten. He could no longer do anything to the mountains. He did not succeed in causing them to fall apart.

Then the boys tied him up. They tied his hands behind his back. The boys were mindful to make sure that his hands were well bound. They also tied his ankles²¹⁸ together. Then they hurled him down into the earth and buried him.²¹⁹

Thus Cabracan was defeated at the hands of Hunahpu and Xbalanque. Innumerable were their deeds here on the face of the earth.

Now we shall tell of the birth of Hunahpu and Xbalanque, having first given the account of the defeat of Seven Macaw along with Zipacna and Cabracan here upon the earth.

THE TALE OF THE FATHER OF HUNAHPU AND XBALANQUE²²⁰

WE shall now name the name of the father of Hunahpu and Xbalanque. We shall retell it.²²¹ We shall merely repeat the tale, the account of the engendering of Hunahpu

²¹⁷ The word is often used to describe old or wornout clothing in addition to something that is weak.

²¹⁸ Literally “its neck his legs.” In Quiché phraseology, the neck of the arm is the wrist, and the neck of the leg is the ankle.

²¹⁹ Even today the Quichés associate earthquakes with a bound giant buried beneath the mountains. The following story was recorded by Ruth Bunzel at the Quiché town of Chichicastenango: “They say of the earthquake, that there is a giant under the earth, bound by his hands and feet, and when there is a slight tremor, it is because he has moved his hands or feet a little; and when he turns over on the other side is when there are strong earthquakes” (Bunzel 1952, 428).

²²⁰ lines 1721-1732

and Xbalanque. But we shall tell only the half of it, the smallest part of the tale of their father.

THE DEEDS OF ONE HUNAHPU AND SEVEN HUNAHPU ABOVE XIBALBA²²²

THIS, therefore, is the account of they whose names are One Hunahpu²²³ and Seven Hunahpu. For thus they are called. It was in the darkness, in the night, when One Hunahpu and Seven Hunahpu were born to Xpiyacoc and Xmucane.

Now this One Hunahpu had two children, both sons. One Batz²²⁴ was the name of his firstborn, and One Chouen²²⁵ was the name of his secondborn. The name of their mother was Xbaquiyalo.²²⁶ Thus she was called, the wife of One Hunahpu.

But Seven Hunahpu had no wife. He was merely a companion, merely secondary. By his nature, he was like a servant²²⁷ to One Hunahpu. They were great thinkers, for

²²¹ Literally “we shall retell its head.” This is a problematic passage. Tedlock follows Edmonson, who believes that the verb used in the text, *camuh*, is a scribal error and should be *cumuh* (to drink), implying that the authors of the text are proposing a kind of toast to the telling of the story of the fathers of Hunahpu and Xbalanque (Edmonson 1971, 58; D. Tedlock 1996, 91, 249 n. 91). Tedlock used this passage as evidence that the authors of the *Popol Vuh* were “Toastmasters” (D. Tedlock 1985), or “Masters of Ceremonies” (D. Tedlock 1996). I prefer to read the verb as a shortened version of *camuluh* (to retell, review, repeat, go over again).

²²² lines 1733-1918

²²³ *Junajpu* is a day on the traditional highland Maya calendar, dedicated to the memory of ancestors.

²²⁴ *B'atz'* is the Quiché word for the howler monkey. It is also one of the named days from the traditional highland Maya calendar.

²²⁵ *Chouen* is derived from the Yucatec Maya word *chuen*, meaning “howler monkey.” In addition, *aj chuen* is a title meaning “artisan” (Barrera Vásquez 1995, 110), a reading consistent with the artistic nature of these twins. Twin monkey scribes appear frequently in Classic Maya art as patrons of writing. It is also the Yucatec Maya day name that corresponds to the day B'atz' in the Quiché calendar.

²²⁶ Xbaquiyalo. The likely etymology of this name is *x-* (lady), *baqi* (bone), *ya'* (water/river), *lo* (perhaps), yielding Lady Bone Water. Tedlock notes that in Yucatec, *bak ha'* (also “bone water”) is the snowy egret or snowy heron, and thus translates the name as “Egret Woman” (D. Tedlock 1996, 250 n. 91).

²²⁷ *K'ajol* is literally “son,” or “boy,” but it is a common metaphor used throughout the text for servant, which seems to be the meaning in this context.

great was their knowledge. They were seers here upon the face of the earth. They were good by their nature, and in their birth as well.²²⁸

They revealed their talents²²⁹ to One Batz and One Chouen, the sons of One Hunahpu. Thus One Batz and One Chouen became flautists and singers, writers and sculptors, jade workers and precious metalsmiths.²³⁰

As for One Hunahpu and Seven Hunahpu, they would merely play dice and ball everyday. The four of them would pair off to oppose each other.

When they gathered together to play in the ballcourt, the Falcon would arrive to watch over them. This Falcon was the messenger of Huracan, Youngest Thunderbolt, and Sudden Thunderbolt. The face of the earth was not far for him. Nor was Xibalba²³¹ far for him. In an instant, he could return again to the sky with Huracan.

Thus they tarried here upon the earth. By then the mother of One Batz and One Chouen had died.

²²⁸ *Yake'ik* (to arise) is also a metaphor for birth, which is likely the connotation here.

²²⁹ *Na'wikil* is "talent, ingenuity, genius, skill, cleverness, inventiveness."

²³⁰ Tedlock believes that this list of six occupations should be divided into two sets of poetic triplets, thus grouping writers with flautists and singers as performing artists. Such a grouping would imply that the composition of literary texts such as the *Popol Vuh* is based more on an oral tradition than carved or painted inscriptions (D. Tedlock 1985, 269). I come to the opposite conclusion. The more likely arrangement for the list would be three sets of couplets, the preferred type of parallelism throughout the text. In addition, writers and carvers are paired without question on pp. 141, 147 (lines 2568-2569, 2714-2715). Thus the authors of painted codices are closely associated with those who carve inscriptions on stone monuments. Far from suggesting that the *Popol Vuh* is based on an oral tradition, this passage implies that the authors consider ancient writers to have set down their literary creations in a manual process. This implication strengthens the view that the *Popol Vuh* is based on a painted text.

²³¹ *Xib'alb'a* (Place of Fear) is the Quiché name for the underworld, ruled by lords of death and disease. Modern Quichés still use the word to describe an underground hell inhabited by demons who cause sickness.

Now it was on the path leading to Xibalba where they played ball. Thus the lords of Xibalba, One Death and Seven Death,²³² heard them:

“What is happening on the surface of the earth? They are just stomping about and shouting. May they be summoned here therefore. They shall come to play ball, and we shall defeat them. They have simply failed to honor us. They have neither honor nor respect. Certainly they act arrogantly²³³ here over our heads,” said therefore all those of Xibalba.

Then they whose names were One Death and Seven Death gathered all of their thoughts.

These, therefore, were the great judges, all of them lords. Each was given his task and his dominion by One Death and Seven Death:

These are the lords named Flying Scab²³⁴ and Gathered Blood.²³⁵ Their task is to sicken people in their blood.

These, then, are the lords Pus Demon and Jaundice Demon.²³⁶ Their dominion is to swell people up until pus oozes from the skin of their legs, and the skin of their faces

²³² *Kame* (Death) is a named day on the highland Maya calendar. The death lords thus both bear calendric dates as their names.

²³³ *Jikik* is to “act arrogantly, act insolently, insult, or mock”.

²³⁴ *Pat* is a “snare, trap” in Quiché. Campbell, however, suggests that this is likely a loan word from Kekchi, meaning “scab, crusted sore” (Campbell 1983, 82). This reading fits the context better in that it parallels the paired demon, Gathered Blood.

²³⁵ *Kuchuma Kik'* (Gathered Blood) is still known by Quiché storytellers as a cruel lord of the underworld who gathers blood shed upon the ground as a result of injury, illness, or violence. This blood is then served to his fellow lords at a banquet.

²³⁶ *Ajal Puj*, *Ajal Q'ana*. *Ajal* is likely a loan word from Chol, meaning “evil spirit” (Campbell 1983, 81). *Puj* is “pus,” and *q'ana* is “yellowness, jaundice.”

becomes yellow with jaundice, as it is said. Thus this is the dominion of Pus Demon and Jaundice Demon.

These, then, are the lords Bone Staff and Skull Staff, the staff bearers²³⁷ of Xibalba. Their staffs are mere bones. These staff bearers are they who skeletize people until they are truly bones and skulls. As a result, they would die having received only emaciated bones, bloated with starvation.²³⁸ These are they whose names are Bone Staff and Skull Staff.

These, then, are the lords whose names are Sweepings Demon²³⁹ and Stabbings Demon.²⁴⁰ Their task is simply to overtake people if they abandon sweepings and trash in back or in front of their houses. These would be overtaken and stabbed by them until they fall face down upon the earth and die. This, therefore, is the dominion of Sweepings Demon and Stabbings Demon, as they are called.

²³⁷ As emblems of office, Quiché political and religious leaders carry staffs that are often topped with ornate silver carvings symbolizing divine power.

²³⁸ “Emaciated bones, swelling he will receive.” This couplet refers to the end stages of starvation. Most of the body becomes emaciated, while the belly becomes distended from fluid collecting in the tissues due to a lack of protein. This latter condition is called ascites.

²³⁹ In modern usage, *mes* refers to “trash or garbage,” but more literally it refers to “sweepings.” The trash produced by Quichés is that which is swept away from a floor, pathway, or porch while cleaning. Thus a broom is referred to as a *mesb'al* (instrument of sweepings). Tedlock’s collaborator, Andrés Xiloj, pointed out that the best way to keep away the demons of Xibalba was to keep one’s house swept clean and not allowing trash to accumulate (D. Tedlock 1996, 253, n. 92). Diego Chávez, a prominent artist in Santiago Atitlán related the following story with regard to a carved wooden panel in his home that depicts a *cabecera* (head elder within the traditional confraternity system) administering justice: “It reminds me of the old days when people respected the Maya confraternity officials and we had no need for jails. Now all people know is killing and thievery. In this panel I show a woman accused of not respecting her family. At that time if she were found guilty, the *cabecera* would send her to sweep all of the dust around the church. In this way she would remember to sweep the uncleanness from her own life even as she swept the church for the benefit of the town” (Christenson 2000, 194).

²⁴⁰ Based on the root *toq'* (to stab, to gore).

These, then, are they whose names are Lord Wing²⁴¹ and Packstrap.²⁴² Their dominion is the people who die on the road as a result of sudden death, as it is called. Blood would come to their mouths, and they would die vomiting blood. Each one has his task, the burden he carries on his shoulders. They would simply wear out the necks and the hearts of these people so that they die on the road. They would cause this to happen outside. When people go out walking, they would come upon them. This, then, is the dominion of Wing and Packstrap.

These, therefore, gathered together their thoughts when One Hunahpu and Seven Hunahpu were persecuted and harassed.²⁴³ For the Xibalbans desired the gaming things of One Hunahpu and Seven Hunahpu—their leathers, their yokes,²⁴⁴ their arm

²⁴¹ The manuscript reads *xic*. If this is to be interpreted as *xik'*, this is “wing”; alternatively, if it is to be understood as *xik*, it is a “hawk.” I prefer the former reading only because hawks do not have underworld or malevolent associations in contemporary highland Maya communities.

²⁴² *Patan* is the tumpline or pack strap (Spanish *mecapal*) worn by porters across the forehead to secure burdens carried on the back. This lord causes the sudden death of people carrying heavy burdens on the road. Having myself carried loads in this way over miles of mountain trails, I have had many an opportunity to curse this particularly malevolent underworld lord.

²⁴³ Contemporary Quichés also believe that illness is caused by various underworld lords. The following is from a prayer for protection in which the lords of illness and death are invoked and propitiated with offerings at a shrine in the cemetery at Chichicastenango. Among these are the “lord of sickness and pain, of death and destruction in the roads and trails, of death and destruction through *aguardiente*, of death and destruction from food poisoning, of death and destruction from vomiting, of death and destruction from strain and exertion—come hither, be seated before this World of the cemetery! And also the master of pain and misfortune, of wounds from pistols and knives and cutlasses, from Remingtons and Mausers, come hither, be seated before this World of the cemetery! And also the lord of vomiting and indigestion, the lord of fever and dysentery, and also the lord of cold sweat (malaria) and green chill (tuberculosis), of swellings of the abdomen (cancer), of influenza and bronchitis, and also the lord of all the minor illnesses; and also the lord of smallpox, come hither before this mountain shrine of the cemetery! Be seated here, however many may be your manifestations; look upon us here before this World. Be seated, all of you. Lords, pardon my trespass” (Bunzel 1952, 390).

²⁴⁴ Unfortunately *b'ate* does not appear in any early colonial dictionaries, perhaps because the ballgame ceased to be played soon after the Spanish conquest. Thus the names for the equipment used in the game fell out of usage. From the description found later in the *Popol Vuh* text, the ball bounces off of this article in the process of playing the game. I have chosen to translate the word as “yoke,” a well-known article of ballgame equipment throughout Precolumbian Mesoamerica. It is a U-shaped apparatus worn about the hips and used for striking the ball to keep it in play. Yokes were probably made of wood, although

protectors,²⁴⁵ their headdresses, and their face masks—the finery of One Hunahpu and Seven Hunahpu.

Now we shall tell of their journey to Xibalba. One Batz and One Chouen, the sons of One Hunahpu, remained behind. Their mother had died. Later One Batz and One Chouen will be defeated by Hunahpu and Xbalanque.

THE SUMMONS OF ONE HUNAHPU AND SEVEN HUNAHPU TO XIBALBA²⁴⁶

THEN was the arrival of the messengers of One Death and Seven Death:

“Go you war councilors²⁴⁷ to summon One Hunahpu and Seven Hunahpu. Tell them when you arrive, ‘Thus say the lords: They must come, say the lords to you. They must come here to play ball with us that we may be invigorated by them. Truly we are amazed greatly at them. Thus they must come, say the lords. May they bring hither their implements—their yokes, their arm protectors, and their rubber ball²⁴⁸ as well. Thus say the lords,’ tell them when you arrive there,” the messengers were told.

intricately carved stone replicas have been found in many parts of ancient Mesoamerica, particularly along the Gulf Coast of Veracruz.

²⁴⁵ Depictions of Precolumbian ballplayers in ancient Maya art often show the lower arms wrapped with a protective device.

²⁴⁶ lines 1919-2032

²⁴⁷ *Raj pop achij* (he of the mat of warriors). *Aj pop* is a title given to lords or rulers, as well as to those who sit on ruling councils. *Achij* is literally “man” but is generally used in the *Popol Vuh* text to refer to soldiers/warriors.

²⁴⁸ *Kik'* is the vital fluid of any living thing (blood for animals, sap for trees, etc.). Rubber, as well as a ball made from rubber, is also called *kik'* since it is made from the sap of the rubber tree (*Castilla elastica*).

These messengers were the owls²⁴⁹—Arrow Owl, One Leg Owl, Macaw Owl, and Skull Owl—for so the messengers of Xibalba were called.

This Arrow Owl was like the arrow, piercing.²⁵⁰

This One Leg Owl merely had one leg, but there were his wings.

This Macaw Owl had a red back, and there were also his wings.

Now this Skull Owl only had a skull with no legs; there were merely wings.

The burden²⁵¹ of these four messengers was to be the war councilors.

Thus they arrived there from Xibalba. They arrived suddenly, perching atop the ballcourt.²⁵² One Hunahpu and Seven Hunahpu were playing ball at the court that was called Honor and Respect²⁵³ at Carchah²⁵⁴ when they came. The owls, therefore, alighted atop the ballcourt, where they delivered in order the words of One Death and Seven

²⁴⁹ Owls continue to be regarded as heralds of sickness and death by the Quichés, and they are extremely unwelcome anywhere near homes (Oakes 1951, 46; Bunzel 1952, 272, 343; Schultze-Jena 1954, 84; Watanabe 1992, 68).

²⁵⁰ Based on the root *kopij*, *kopik* is something that “strikes, pierces, or causes harm.” In this context, “pierce” fits the arrow analogy best.

²⁵¹ *Eqalem*, is a burden carried on the back. Metaphorically, the Maya use the word for “burden” (Spanish *cargo*) to refer to an “office or responsibility.”

²⁵² Maya ballcourts were generally bounded by high stone walls. The owls apparently alighted on top of one of these.

²⁵³ *Nim* (Honor) *Xob'* (Respect). Notice that on page 115 (lines 1818-1819), the lords of Xibalba complained that those who were playing ball above their heads did not give them proper “honor” or “respect,” the same two words which comprise the name of the ballcourt in these lines. Nimxor is listed in the *Annals of the Cakchiquels* as a place near Carchah in the Alta Verapaz region, thus this is likely a play on words (Recinos and Goetz 1953, 64).

²⁵⁴ Kar Cha'j (Fish Ballcourt/Ashes). This may be a play on words between ashes (*chaj*) and ballcourt (*cha'j*). It is likely a reference to the Kekchi-Maya town now known as San Pedro Carchá located near Cobán, a city east and somewhat north of Quiché territory. Modern Quichés have vague notions of the entrance to the underworld being located in the Alta Verapaz region inhabited by the Kekchis. It is perhaps significant that later in the story the sons of One Hunahpu also descended into Xibalba to confront the lords of death in the underworld ballcourt. They ultimately died by hurling themselves into a furnace. Their ashes were then cast into a river which resulted in their being revived as “people-fish.”

Death, Pus Demon and Jaundice Demon, Bone Staff and Skull Staff, Flying Scab and Gathered Blood, Sweepings Demon and Stabbings Demon, Wing and Packstrap. For these are the names of all the lords. Thus the owls repeated their words.

“Are these not the words of the lords One Death and Seven Death?”

“Those are the words that they said,” replied the owls. “We shall surely be your companions. ‘You shall bring all the gaming things,’ say the lords.”

“Very well. But wait for us while we leave instructions behind with our mother,” they said.

Thus they went to their home to speak to their mother, for their father had died:

“We must surely go, our mother. The messengers of the lord have just arrived to take us. ‘They must come,’ we were told. Thus the summoners have spoken. But this, our rubber ball, shall remain behind,” they said.

Then they went to tie it up above the house.

“We will surely return to use it again. Until then, merely play the flute and sing, write and carve.” In this way One Batz and One Chouen were instructed. “Thus you shall warm our home, and you shall warm the heart of your grandmother.”

But their mother, Xmucane, wept bitterly.²⁵⁵

“We must go, but we will not die. Do not grieve,” said One Hunahpu and Seven Hunahpu as they left.

²⁵⁵ The manuscript reads *quz quz*. Coto writes that the expression *euzeuh que'in oe* means to “cry much, with great pain.”

THE DESCENT OF ONE HUNAHPU AND SEVEN HUNAHPU INTO

XIBALBA²⁵⁶

THEN went One Hunahpu and Seven Hunahpu, guided by the messengers as they descended along the path to Xibalba. They went down steep steps until they came out again upon the banks of turbulent river canyons. Trembling Canyon and Murmuring Canyon were the names of the canyons that they passed through.

They also passed through turbulent rivers. They passed through Scorpion River, where there were innumerable scorpions. But they were not stung.

Then they arrived at Blood River. They were able to pass through it because they did not drink from it.

Then they arrived at Pus River, which was nothing but a river of pus. Neither were they defeated here but simply passed through it as well.

At length they arrived at a crossroads,²⁵⁷ and it was here at the four crossing roads that they were defeated. One was Red Road and another was Black Road; White Road was one while another was Yellow Road.²⁵⁸ Thus there were four roads.

Now this, the black road said:

“Me! Take me, for I am the lord’s road.” Thus spoke the road.

²⁵⁶ lines 2033-2267

²⁵⁷ Crossroads are considered to be extremely dangerous by the Maya because they are focal points for the unseen powers of all directions. Ximénez wrote that the ancient Quichés ceremonially collected the sins of their community and abandoned them at crossroads (Ximénez 1929-31, pp. 84-85).

²⁵⁸ The Maya associated the cardinal directions with colors. The Quichés associated white with north, red with east, yellow with south, and black with west. Modern rituals often begin by placing candles with these corresponding colors at the cardinal directions in order to symbolically delimit the corners of the world. Thus the brothers were tricked into following the black, or west, road—a premonition of their defeat and death since this is the road that the sun takes when it sinks into the underworld.

But it was there that they were defeated. They started then on the road to Xibalba. At last they arrived at the council place of the lords of Xibalba, and there again they were defeated.

They who were seated first in order were mere effigies of carved wood, adorned²⁵⁹ by the Xibalbans. It was these, then, that they greeted:

“Morning,²⁶⁰ One Death,” they said to the first effigy.

“Morning, Seven Death,” they said again to the carved wood.

Thus they did not prevail. Instead, the lords of Xibalba roared²⁶¹ with laughter. They merely roared with laughter, all the lords, because they had completely prevailed. In their hearts, they had defeated One Hunahpu and Seven Hunahpu.

And after they had laughed, One Death and Seven Death spoke:

“It is good that you have come. Tomorrow you shall put to use your yokes and your arm protectors,” they were told.

“Sit down on our bench,”²⁶² they were told.

But the bench that they were offered was nothing but a very hot stone, and they were burned when they sat on it. Truly they spun around on top of it. Neither did they find relief. Truly they leaped up when their seats²⁶³ were burned.

²⁵⁹ *Wutalik* is “adorned, dressed up, fitted out.”

²⁶⁰ The greeting *q'ala'* means literally “be it clear.” It is somewhat akin to the common Quiché greeting at the beginning of the day, *saqirik* (it brightens or it dawns), referring to the arrival of morning.

²⁶¹ *jumujub'* (to roar) is based on *jumumik*, which denotes the sound of an earthquake, a passing truck, or a powerful wind.

²⁶² *Tem* is a long, flat wooden or stone bench. Rooms of ancient Maya palaces contained such benches arranged along their interior walls. The seating arrangements along these benches were determined by rank within the ruling hierarchy.

²⁶³ Literally “sitters, or means of sitting.”

Thus the Xibalbans laughed again. They laughed until their insides hurt and their chests became cramped from their laughter.²⁶⁴ All the lords of Xibalba grabbed themselves and rolled around in their laughter.

“Now just go to the house. Someone will come to deliver your torch²⁶⁵ and your cigars²⁶⁶ there at the sleeping place,” they were told.

Thus they arrived in the House of Darkness. There was nothing but darkness inside that house.

Then the Xibalbans gathered their thoughts:

“Tomorrow we will merely sacrifice them. They only have to make a mistake and straightaway they will die by means of our gaming things that we use to play ball,” said the Xibalbans to each other.

For their ball was merely a round blade. White Dagger²⁶⁷ was the name of the ball of Xibalba. Their ball was sharp, shattered bones pierced through the ball of Xibalba.

Thus One Hunahpu and Seven Hunahpu entered into the House of Darkness. At length one came to give them their torch, which was already lit. It had been sent by One Death and Seven Death, along with cigars for each of them which had also already been lit.

²⁶⁴ Literally “serpent laughter.” *Kumatz* (serpent) is used here to refer to cramps in the body, an association still current among modern highland Maya. The lords of Xibalba thus laughed so hard that they were getting side aches.

²⁶⁵ These are pine wood torches. Such torches are still used today and are made from a very resinous pine wood called *ocote* in Spanish. The resin of the wood is easy to ignite and keeps the torch burning without rapidly consuming the wood itself.

²⁶⁶ Smoking tobacco is a very ancient Maya tradition and carries important religious significance. Stone carvings and painted codices frequently depict gods and humans smoking cigars that could be grotesquely huge in size. The English word “cigar” is likely derived from the verb *sik'arik* (to smoke).

²⁶⁷ The name of this dagger implies that it is a sacrificial knife (see p. 132; lines 2409-2410).

These, then, were sent by the lords to One Hunahpu and Seven Hunahpu. They were seated cross-legged there in the darkness when the courier arrived to give to them their torch and their cigars. The torch was brightly burning when it arrived, and with it were lit each one of the cigars:

“These are to be returned at dawn. They are not to be used up. Instead, they are to be collected again intact. Thus say the lords to you,” they were told.

Therefore they were defeated. For they used up the torch as well as the cigars that had been given to them.

Xibalba is crowded with trials, for there are many kinds of trials there.

The first of these is the House of Darkness, where nothing but darkness exists within.

The second is named Shivering House, for its interior is thick with frost. A howling wind clatters²⁶⁸ there. An icy wind whistles through its interior.

The third is named Jaguar House, where there are nothing but jaguars inside. They bare their teeth, crowding one another, gnashing and snapping their teeth together. They are captive jaguars within the house.

The fourth trial is named Bat House, for there are none but bats inside. In this house they squeak. They shriek as they fly about in the house, for they are captive bats and cannot come out.

The fifth, then, is named Blade House,²⁶⁹ for there are only blades inside—row upon row of alternating blades that would clash and clatter there in the house.

²⁶⁸ The wind clatters because it is laden with frost and hail. The verb used refers to the sound of grains falling on a hard surface or hail falling on a roof.

Thus there are many trials in Xibalba. One Hunahpu and Seven Hunahpu did not enter into them. These are merely the names of each of the houses of trial.

Thus One Hunahpu and Seven Hunahpu came out and appeared before One Death and Seven Death:

“Where are my cigars and my torch that were given to you last night?” they were asked.

“We finished them off, O lord.”

“Very well then, now your day is at an end. You are to die.”

Thus they were lost. They were broken as well.

“Here your faces shall be hidden, for you are to be sacrificed,” said One Death and Seven Death.

Then they were sacrificed and buried. It was at the place named Crushing²⁷⁰ Ballcourt that they were buried. The head of One Hunahpu was cut off, while the rest of his body was buried with his younger brother.

²⁶⁹ These are blades made of either flint or obsidian, a dark volcanic glass that when properly flaked can produce a razor-sharp edge. Obsidian blades were a major trade item throughout the history of ancient Mesoamerica, being one of the principal materials used in weapons, cutting tools, mirrors, sacrificial knives, and bloodletting instruments.

²⁷⁰ *Puk'b'al* (Crushing). The root verb for *puk'b'al* has a variety of possible interpretations. It may mean “to crush, to grind to a very fine consistency, to kick up dust, to sift, to beat, to spill, to spread abroad, to scatter, to disentangle, or to card wool. *Puk'b'al* may thus refer to the dustiness of the ballcourt or the tendency to kick up dust during vigorous play. It may also imply that this ballcourt is where opponents are “ground down, beaten, or sifted.” This latter interpretation is intriguing, because “to crush” is often used in the text to refer to the destruction or violent death of people (pp. 85, 87-88, 291; lines 682, 743, 789, 801, 8454). Father Coto notes that a synonymous word for “to crush,” *k'ajb'ik*, refers specifically to human sacrifice, which is the likely implication here as well. It is also possible that the word should be read as *pukb'al*, which also has a variety of meanings depending on context. It means literally “to fall from overripeness or decay (fruit, flowers, teeth), or to be plucked out (hair, feathers).” Metaphorically the word when applied to humans means “crestfallen, melancholy, disdained, contemptible, or scorned.” In this case such an interpretation may refer to the humiliation and misery of those who lose in the ballcourt. Both interpretations may apply here considering the Maya’s fondness for plays on words and puns. Alternatively, the word may be a scribal error for *puzbal* (place of sacrifice), a reading which fits the context of this passage well.

“Place his head in the midst of the tree that is planted by the road,” said One Death and Seven Death.

Now when they went to place his head in the midst of the tree, the tree bore fruit.²⁷¹ The tree had never borne fruit until the head of One Hunahpu was placed in it. This was the tree that we now call the calabash.²⁷² It is said to be the head of One Hunahpu.

One Death and Seven Death marveled at the fruit of the tree, for its round fruit was everywhere. Neither could the head of One Hunahpu be seen clearly, for his face had become identical in appearance with the calabashes.

This was seen by all Xibalba when they came to look at it. In their hearts, they perceived the greatness of the essence of that tree, for it was accomplished immediately when the head of One Hunahpu entered into its midst.

Thus the Xibalbans spoke one to another, “Let no one cut the fruit, nor enter beneath the tree,” they said.

²⁷¹ Contemporary Tz'utujil burial practices at Santiago Atitlán may be related to this mythic account. Once placed in the grave, Atitecos raise a small mound of earth over the body and plant a tree on top which represents the soul of the dead reborn to new life. The community cemetery has long rows of graves bearing trees, giving the appearance of a great orchard or grove. Ximénez described a similar practice in highland Guatemala at the beginning of the eighteenth century and noted that persons were frequently buried in the maize fields, an indication that the dead were reborn as maize (1929-1931, I, 100). This is particularly significant with regard to Atiteco traditions of one of their principal culture heroes, Francisco Sojuel, who is believed to have set the pattern for many of the contemporary ritual practices observed today: “When Francisco Sojuel was being persecuted by his enemies they tried to kill him by cutting him into little pieces and sprinkling them with lemon juice and salt. But when they came back the next day they found that his coffin was empty and from it grew a giant zapote tree filled with fruit. People plant zapote trees over the graves of their family in memory of Francisco Sojuel because he did not die” (Christenson 2001, 207). The association between ancestors and fruit trees is also characteristic of ancient Maya thought. The sides of the sarcophagus of K'inich Janab Pakal at Palenque depict ten of the king's ancestors emerging out of a cleft in the groundline marked with *kaban* (earth) signs. Behind each ancestor is a fruit-bearing tree, indicating that they are rising from their graves in a fashion parallel to the sprouting of world trees (Schele and Freidel 1990, 221; McNany 1995, 43).

²⁷² The calabash tree (*Crescentia cujete*) yields a large gourd with a hard, bonelike rind that is sometimes dried to make bowls. When dried, the gourd is whitish in color and approximately the size of a human skull.

Thus they restricted themselves. All the Xibalbans restrained themselves. For the head of One Hunahpu was no longer clear, having become identical with the fruit of the tree whose name is the calabash. Great is the account of it.

Now a maiden heard of it. Thus we shall now tell of her arrival there.

THE MAIDEN LADY BLOOD AND THE TREE OF ONE HUNAHPU²⁷³

THIS, therefore, is the account of a maiden, the daughter of the lord named Gathered Blood.

A MAIDEN, the daughter of a lord, had heard of it. Gathered Blood was the name of her father, while the name of the maiden was Lady Blood.²⁷⁴

When she heard the account of the fruit of the tree as told by her father, she was amazed by the tale:

“Can I not come to know it by seeing the tree that has been spoken of? I hear that its fruit is truly delicious,” she said.

Thus she went alone beneath the tree that was planted at Crushing Ballcourt:

“Ah! What is the fruit of this tree? Is not the fruit borne by this tree delicious? I would not die. I would not be lost. Would it be heard if I were to pick one?” asked the maiden.

Then spoke the skull there in the midst of the tree:

²⁷³ lines 2268-2374

²⁷⁴ In Maya society, blood is the most precious substance because it bears within itself the spirit or essence of the ancestors and thus, by extension, of the founding deities from whom they descended. It is therefore the repository of life which transcends individuals to include the ancestral dead. It is consistent with this view that “Lady Blood,” daughter of an underworld lord, is the means by which the skull of One Hunahpu is able to produce new life out of death.

“What is it that you desire of this? It is merely a skull, a round thing placed in the branches of trees,” said the head of Hunahpu when it spoke to the maiden. “You do not desire it,” she was told.

“But I do desire it,” said the maiden.

“Very well then, stretch out hither your right hand²⁷⁵ so that I may see it,” said the skull.

“Very well,” said the maiden.

And so she stretched upward her right hand before the face of the skull. Then the skull squeezed out some of its saliva, directed toward the hand of the maiden. When she saw this, she immediately examined her hand. But the saliva from the skull was not in her hand.

“My saliva, my spittle, is merely a sign that I have given to you. This head of mine no longer functions, for it is merely a skull that cannot work.²⁷⁶ The head of a truly great lord has good flesh upon his face. But when he dies, the people become frightened because of his bones. In like manner, his son is like his saliva, his spittle. He is his essence. If his son becomes a lord, or a sage, or a master of speech, then nothing will have been lost. He will go on, and once more become complete. The face of the lord will not be extinguished nor will it be ruined. The warrior, the sage, the master of speech will remain in the form of his daughters and his sons.²⁷⁷

²⁷⁵ The Quichés associate the right side of the body with maleness and the left with femaleness. Lady Blood’s impregnation through her right hand is thus destined to produce male offspring.

²⁷⁶ I base this reading on *chak* (work), which is consistent with the previous phrase and thus serves as a couplet of ideas, the most common poetic form in the *Popol Vuh*. Sam Colop suggests that it should rather be *ch’aq’* (flesh), thus reinforcing the idea of a fleshless skull (Colop 1999, 68 n. 165). Either reading is consistent with the context of One Hunahpu’s discourse, and possibly it is meant to be a play on words.

“Thus may it be so, as I have done to you. Climb, therefore, up there to the face of the earth. You will not die, for you have entered into a promise. Thus be it so,” said the skull of One Hunahpu and Seven Hunahpu.

Now in this they merely carried out the thoughts and words of Huracan, Youngest Thunderbolt, and Sudden Thunderbolt.

²⁷⁷ Seeds are referred to as small bones or skulls in many highland Maya languages. The reverse is also true, human bones are seen as seeds, the source of new life as expressed in succeeding generations. Thus Schultze-Jena wrote, “when they [Quichés] ask for a young girl in marriage, they refer to progeny and make mention of human bones. It is probable that they have in mind the comparison of bones with the seeds of plants, and that human bones are bearers of life in the succession of the generations” (Schultze-Jena 1954, 52. Translation by author). Ruth Bunzel noted that the Quichés of Chichicastenango claimed that their formalized speech and ceremonies were attributed to ancient ancestral precedent and that this is a means of preserving the lives and knowledge of their ancestors: “And now this rite and custom belongs to the first people, our mothers and fathers.... This belongs to them; we are the embodiment of their rites and ceremonies” (Bunzel 1952, 232, 238). When performed at appropriate times and under appropriate circumstances, such ceremonies are perceived as a means for dead ancestors to manifest themselves. In Santiago Atitlán, a priest extracts certain garments that once belonged to the ancestors and wears them as he dances to the four cardinal directions to recreate the limits of the cosmos. Following the performance of this dance in 1998, the priest sought me out to ask if I had seen “the ancient *nuwals* [revered, powerful ancestors] giving birth to the world.” He explained that they had filled his soul with their presence as he danced, guiding him in his steps, and now everything was new again. In the eyes of the priest, the dance was not a symbol of the ancestral dance, but a genuine creative act in which time folded inward on itself to reveal the ancestors themselves (Christenson 2001, 24). In a more literal sense, highland Maya see their descendents as their “replacements.” Carlsen writes that much of Tz’utujil society is based on the principle of change as manifested in the transition from birth to death and back again (Carlsen 1991, 26; 1997, 50-55). Generational changes represent the transferral of life from the grandparents to their grandchildren. Thus when a baby is born, Tz’utujils say “he/she sprouted,” or “he/she returned,” implying that the spirit of a dead ancestor, like a newly-sprouted plant from the dead husk of a maize kernel, has returned to occupy a new body. In most highland Maya languages, the word for grandfather, *mam*, is also the word for grandchild, suggesting an equivalent relationship (Cook 2000, 257 n. 22, 260 n. 35). It is common for parents to name their children after their grandparents to reinforce this idea of substitution. Houston and Stuart also note that among the Classic Maya royal names tend to skip one or more generations, perhaps an allusion to this principle of generational substitution (Houston and Stuart 1996, 295). On a panel from Palenque now housed in the Dumbarton Oaks collection in Washington D.C., K’an Hok’ Chitam dances out of the underworld in the guise of the god Chak Xib Chak. He is named in the accompanying text as the *k’exol* (“replacement”) of an ancestor with the same name who died 92 years earlier (Schele and Miller 1986, 274). At Santiago Atitlán, this principle of substitution may be applied to single generation changes: “One’s child is sometimes actually addressed as ‘parent,’ and males will address their fathers as *nuk’jol*, or ‘my son.’ Likewise, a woman will often call her father *wal*, which translates as ‘child.’ As replacements are necessary for the grandparents’ regeneration, the *k’ex* naming pattern has more than superficial significance” (Carlsen 1997, 55).

Thus the maiden returned again to her home, having been given many instructions. Straightaway her children were created in her womb²⁷⁸ by the mere saliva. Thus was the creation of Hunahpu and Xbalanque.

Now when the maiden had arrived at her home and six moons were completed, she was noticed by her father, Gathered Blood by name.

THE ASCENT OF LADY BLOOD FROM XIBALBA²⁷⁹

THEN the maiden was discovered²⁸⁰ by her father, for he saw that she was now with child. Thus all the lords, One Death and Seven Death along with Gathered Blood, gathered their thoughts:

“This my daughter is with child, O lords. It is merely the result of her fornication,”²⁸¹ said Gathered Blood when he met with the lords.

“Very well then. Question her²⁸² about this, and when she doesn’t tell, she will be sacrificed. She will go far away to be sacrificed.”

“Very well, ye lords,” he replied.

He therefore questioned his daughter:

²⁷⁸ The cycle of birth, death, and rebirth is one of the most prominent motifs in ancient Mesoamerican art and literature. The Maya saw death as a necessary part of life. For maize to grow and produce, a seed must first die and be buried in the earth. It was thus necessary for One Hunahpu to descend into the underworld to die before a new generation could appear and be capable of overcoming death. The maiden, Lady Blood, stood as an intermediary. As the daughter of one of the principal lords of death, she belonged to the darkness of the underworld. As the consort of One Hunahpu, she had the potential to create new life from death.

²⁷⁹ lines 2375-2509

²⁸⁰ *Na'tajik* is generally “to recall, remember,” but it may also refer to the discovery of something secret, a more appropriate reading for this context.

²⁸¹ This is glossed by Basseta as “bastard.”

²⁸² Literally “dig at her mouth.” This is a common Quiché expression for questioning or interrogating a person closely. Thus the father will try to dig the truth out of his daughter’s mouth.

“Who is responsible for the child that is in your womb, my daughter?” he asked.

“I have no child, my father,” she replied. “I have not known the face of any man.”²⁸³

“Very well then. It is true that you are a fornicator.”²⁸⁴

“Sacrifice her,²⁸⁵ you war councilors,” the four owls were told. “Then bring back her heart inside a bowl so that the lords may examine it this day.”

And so they went, carrying the bowl and lifting up the maiden in their talons. They took with them the White Dagger, the instrument of her sacrifice.

“You will not succeed in killing me, you messengers, for this that is in my womb was merely created and is not the result of fornication. Rather it is the result of my admiration for the head of One Hunahpu which is at Crushing Ballcourt. Thus do not sacrifice me, you messengers,” said the maiden when she spoke.

“But what shall we give as a substitute for your heart? For we were told by your father, ‘Bring hither her heart so that the lords may examine it and be satisfied with its form. Bring hither the bowl quickly, and place her heart inside it.’ Were we not told this?

²⁸³ This is a polite expression for sexual intercourse. Quichés in traditional communities are very prudish when it comes to sexual matters, rarely referring to sex directly and seldom engaging in public displays of affection. Lady Blood’s statement is accurate both figuratively (she never having engaged in sexual intercourse) and also literally. As Tedlock points out, she never saw the living face of One Hunahpu, only his skull (D. Tedlock 1996, 262 n. 100).

²⁸⁴ *Joxol ch’ek* (scratcher knee). This is a play on words, a particularly prevalent Maya practice when referring to sexual things as a way of speaking about it indirectly. *Jox* is “to have sex,” and also “to hoe or to scratch.” A “knee scratcher” is a fornicator, prostitute, or one who wishes to seduce someone to have sex. The more common expression today is “leg burner” which also means seductress or prostitute.

²⁸⁵ Violations of custom with regard to adultery and other forms of illicit sex are considered very serious in traditional Quiché society, although in most cases punishment is left in the hands of the ancestors or deity: “The Quiché Indians have a firm belief and conviction that the ancestors punish adultery on behalf of the man, as well as his spouse if she tolerates it in her house, with sickness, affliction, and even death” (Schultze-Jena 1954, 23. Translation by author). Sexual transgressions in particular are believed to subject those involved to the whims of the lords of various illnesses who live in the underworld and who “feed” on the lives of those who do not live in accordance with societal rules.

Therefore, what will we put in the bowl? For above all else, we do not want you to die,” said the messengers.

“Very well. The heart will not be theirs. At the same time, your homes will no longer be here. No longer will you lure people by force to their deaths.²⁸⁶ Only the true fornicator will be subject to One Death and Seven Death. Mere croton tree sap²⁸⁷ will be theirs henceforth. Thus be it so. It will be this that you shall burn before their faces. It will not be this, the heart, that you will burn before their faces. Thus be it so. Take what the tree produces,” said the maiden.

Then the red secretions²⁸⁸ of the tree were collected in the bowl. There it congealed and became round. The red tree, therefore, oozed forth the substitute for her heart. The sap of the red tree was thus like blood when it came out. It was the substitute for her blood.²⁸⁹

²⁸⁶ According to Basseta, *chi’j* is “to forcefully lure, lead away, or captivate.”

²⁸⁷ Thus the lords will receive not human blood, but rather the red sap of the croton tree (*Croton sanguifluus*; Spanish: *Sangre de Dragón*—Dragon’s Blood Tree). Vázquez de Espinosa wrote that “there is a tree in this province of Chiapa and of Guatemala that is called dragon. It is tall like the almond tree; the leaves are white and the stems are of the same color, and if it is struck with a knife it weeps blood, as natural as if it were human” (Vázquez de Espinosa 1969, 1st.I.iv.590, p. 147. Translation by author). Both blood and tree sap have the same name, *kik’*, in Quiché.

²⁸⁸ *Wa’l* is the general Quiché term for the liquid secretions or fluid content of plants and animals. Thus *u wa’l baq’ wach* (its secretions eyes) are tears, *u wa’l pix* (its fluid tomatoes) is tomato sauce, *u wa’l alanxax* (its fluid oranges) is orange juice, and here *u wa’l che’* (its secretions tree) is another word for tree sap.

²⁸⁹ Offerings, including blood sacrifices from chickens or turkeys, are still seen as “substitutes” for the offerer so that deity will not take them through illness or death (Bunzel 1952, 360). Landa wrote that in the Yucatec month of Mac, the pre-Conquest Maya “took out a great many of the hearts of the animals and birds and threw them into the fire to burn. And if they were unable to get large animals like tigers (jaguars), lions (pumas) or crocodiles, they made their hearts out of their incense; but if they had killed them, they brought their hearts for that fire” (Landa 1941, 163). It is likely that following the Spanish conquest, incense continued to represent a substitute for the blood sacrifice Precolumbian Maya once offered to deity. At the beginning of the eighteenth century Fray Antonio Margil recorded an incident in which a sick man consulted a Quiché shaman after falling ill in a forest. The shaman informed him that the “Lord of the Forest” had made him ill, but that there was a remedy: “Do not worry, because I go now to pray to the Lord of the Forest for you, and will take him his food [copal incense] in your name” (Hill 1992, 144). The

Thus she collected the sap, the secretion of the red tree. Its surface became like bright red blood in the bowl when the maiden cut open the tree called the Sacrifice Red Tree.²⁹⁰ She named this “blood,” and blood croton it is still called.

“There on the face of the earth you will be esteemed, for it is become yours,” she said therefore to the owls.

“Very well then, you maiden. We shall go then upward to hide you. But first we shall give the substitute for your heart before the faces of the lords,” said the messengers.

And so they arrived before the faces of the lords, who were all awaiting them expectantly.²⁹¹

“Was it not successful?” asked One Death.

“It was successful, O lords. This is surely her heart here in the bottom of the bowl.”

“Very well. I would see it therefore,” said One Death.

Then he lifted it up with his fingers,²⁹² dripping with blood from its surface. It was bright red with blood.

“Stir well²⁹³ the face of the fire and place it over the fire,” said One Death.

shaman thus used incense to purchase the health of the man by offering it as a replacement to assuage the appetite of the Lord of the Forest.

²⁹⁰ *Chuj* is the Yucatec Maya word for “sacrifice.” If this is the correct reading of the word, it would serve as further evidence that significant elements of the early mythology recorded in the *Popol Vuh* have a lowland origin. Alternatively, if the word is to be read as *ch'u'j*, this is the Quiché word for the scarlet-colored dye made from the cochineal insect, *Coccus axin*. In this case, the word would modify *kaq* (red), indicating that it is a bright, vivid red.

²⁹¹ *Tz'elewachin* is “to await, expect” (Coto).

²⁹² *Chuyej* is “to lift something with one’s fingers” (Basseta).

²⁹³ *Lu'* is “to stir a fire to revive it” (Basseta).

Then they dried it over the fire, while the Xibalbans savored its fragrance. They all rose up to lean over it, for truly delicious was the smell of the blood to them.

Now while they were bent over, the owls went to guide the maiden up to the hole leading above the earth. Then the guides returned back down again.

Thus the lords of Xibalba were defeated, for the maiden had tricked them all.²⁹⁴

LADY BLOOD AND THE MIRACLE OF THE MAIZE²⁹⁵

THIS, therefore, is the mother²⁹⁶ of One Batz and One Chouen.

Then arrived the woman, Lady Blood by name, who came to the mother of One Batz and One Chouen. Her children were still in her womb, however, it wasn't long before the birth²⁹⁷ of Hunahpu and Xbalanque.

So then the woman came to the Grandmother. She said to the Grandmother:

"I have come, thou lady,"²⁹⁸ she said when she arrived there with the Grandmother. "I am thy daughter-in-law and thy child,²⁹⁹ thou lady."

²⁹⁴ *Moywachixik* (to be blinded faces) is a Quiché expression meaning "to be tricked, deceived."

²⁹⁵ lines 2510-2663

²⁹⁶ Actually she is their grandmother, but because the real mother of One Batz and One Chouen had died by this time (p. 118; line 1913), Xmucane is acting as their mother.

²⁹⁷ Literally *yake'ik* (they arise), which is glossed as a metaphor for birth in Coto.

²⁹⁸ *Chichu'* (lady) simply means "woman, female." It is most commonly used, however, in titles of respect, such as *ajawinel chichu'* (ruler female, queen) or *alib' chichu'* (parent-in-law female).

²⁹⁹ Traditionally, a new bride moves into the home of her mother-in-law, at least temporarily, to get acquainted and to ensure that she learns the skills necessary to run a household. By declaring herself to be the daughter-in-law and child of Xmucane, she is presenting herself as a claimant to familial hospitality. In contemporary Quiché households, marriage severs a woman permanently from her parent's influence, suggesting that Lady Blood really had nowhere else to go: "When the girl leaves for her husband's house, she takes with her nothing but her personal clothing.... Theoretically, the girl is now completely cut off from her blood kin. In going from her father's side she forfeits her rights to inherit. She is discouraged from

“From where have you come? Do my children yet exist? Did they not die in Xibalba? Only these two are left as their sign and their word.³⁰⁰ One Batz and One Chouen are their names. If you see that you have come, go back the same way,”³⁰¹ the maiden was told by the Grandmother.

“But it is true that I am thy daughter-in-law. These are surely his. These that I am carrying belong to One Hunahpu. One Hunahpu and Seven Hunahpu are alive. They are not dead. That which they have done is merely a manifestation of their light,³⁰² thou mother-in-law. Thus you shall see it. You shall see his face in these that I am carrying,” she told the Grandmother.

Now One Batz and One Chouen gloried in these things.³⁰³ Only the flute and song did they do. Only writing and carving was their work every day. And so they comforted the heart of the Grandmother.

Thus the Grandmother spoke to her:

“I do not want you. You are not my daughter-in-law. It is merely the result of your fornication that is in your womb. You are a deceiver. My children that you spoke of have died,” the Grandmother said again.

“They are truly his, I say to you.”

visiting her parents, and her relations with her family assume a purely formal character. It is assumed that she will never again return to their house” (Bunzel 1952, 28).

³⁰⁰ Both of these terms are also metaphors for “descendents, progeny.”

³⁰¹ Edmonson sees this as a humorous response to the common Maya greeting, “I have arrived” (Edmonson 1971, 81 nn. 2451-2452). The polite response is “you have arrived,” but in this case, the grandmother turns the answer around and orders her to go away.

³⁰² “Merely his self-manifestation light.” In other words, One Hunahpu and Seven Hunahpu will show themselves once again in the light when their sons are born. “To appear in the light” is a common Quiché metaphor for birth.

³⁰³ Literally “inflames,” with the implication that it gives glory, power, majesty.

“Very well then, I hear you that you are my daughter-in-law,” the maiden was told. “Go then to get food that these may eat. Go and harvest a great netful of maize and return with it.³⁰⁴ Then you will surely be my daughter-in-law, just as you have said.”

“Very well,” she replied.

Then she went to the maizefield³⁰⁵ that belonged to One Batz and One Chouen, along the path that had been cleared by them. The maiden thus started out and arrived there at the maizefield. But there was only a single ear³⁰⁶ of maize³⁰⁷ in the field. There was not even one or two or three more. Although there was maize there, it was but a single ear that had been produced.

Then the heart of the maiden sank:³⁰⁸

“See, I am a sinner!³⁰⁹ I am a debtor!³¹⁰ Where shall I obtain the netful of food that is asked for?” she asked.

³⁰⁴ It is customary in Quiché society for a new bride to be given heavy tasks by her in-laws to prove her ability to provide for a family. In this case, Lady Blood is given a great net which is to be used to carry the maize for the family’s food. In Maya theology, the net is a significant symbol for the divine order of the universe. Its fixed pattern represents the regularity of the seasons in the fabric of time. Thus Maya goddesses are often depicted weaving on a cosmic loom.

³⁰⁵ *Ab’ix* may refer to the maizefield or a single maize plant, as in line 2604.

³⁰⁶ *Wi’* (head). The Maya think of ears of maize as “heads.”

³⁰⁷ *Jal* is an ear of maize, dry and ready to harvest.

³⁰⁸ Literally “finished therefore her heart.”

³⁰⁹ *Makol* (sinner). Modern Quiché prayers and ceremonies generally begin with a long litany of sacred beings and objects who are invoked to be present. This is followed by the phrase *sacha’ la nu mak* (take away my sin), often repeated several times. This is not a reference to specific sins, but a request to take away any flaws in the body or character of those present that might taint the results of the ceremony. I recorded this prayer by an *aj q’ij* priest at a healing ceremony in Momostenango in the late 1970s: “We call upon you Earth, we ask you Lord of the Day 11 *No’j*, we ask you Lord 5 *No’j*... We ask a favor of you; we ask you a favor because there is sickness among us, there is a sick little girl. Take away my sin, King of the World, Savior of the World, so that you may speak—the Seven Skies, the Seven Earths. Take away my sin that there may be light, that there may be clarity. Take away my sin I ask you, the great mountains and the small mountains; the great plains and the small plains; the great animals who are lords of the mountains and you small animals who are in the mountains. Take away my sin, our people, our mothers and fathers, our

Thus she called upon the guardians of the food:

“Come, arise. Come, stand up Lady of the Day Toh,³¹¹ and Lady of the Day Canil,³¹² Lady Cacao³¹³ and Lady of the Day Tzi,³¹⁴ you the guardians of the food of One Batz³¹⁵ and One Chouen,” said the maiden.

grandmothers and our grandfathers. Take away my sin and witness us here today at this table. It has its service, to bring out the transformation, to bring out the mother-fathers. This is its service. Take away my sin.”

³¹⁰ *K'asb'ol*. According to Father Coto, *qazbal* means “sinner, transgressor, debtor” In modern usage, the term refers to a person who is indebted to someone else, either financially or socially. This is perhaps the reason why the day name *Toj* is listed first in the following passage, a day associated with the payment of debts. Coto also lists *qazbol macol*, obviously related in some way to the paired couplet here, and notes that the two words taken as a pair refer to the merchant trade.

³¹¹ This passage likely refers to female manifestations of three of the days in the traditional highland Maya calendar—*Toj*, *Q'anil*, and *Tz'i'* (Ruud van Akkeren, personal communication). These are consecutive days, although the order should be *Q'anil*, *Toj*, and then *Tz'i'*. Modern *aj q'ij* priests invoke the days of the calendar in their prayers and ceremonies as lords and attribute to them specific power to bless or to punish. Thus they conceive of the days as living beings with personalities and specific spheres of influence. *Toj* is “tribute or payment.” Metaphorically it may also be “punishment or illness” caused by sin. In her note on *Toj*, as one of the named days in the traditional Quiché calendar, Ruth Bunzel quotes an *aj q'ij* priest collaborator: “*T'oj* (*enfermedad*, sickness). Symbolizes the suffering which is caused by sin. ‘This is a bad day, a day of sickness. On the day *t'oj* one burns incense in the house for the Lord of Sickness. *T'oj* is also a day for calling sickness to punish an enemy. If divination comes out in 7 *qanil*, 8 *toj*, 9 *ts'i'* it is bad. These are bad days. The content of *qanil* is corn, or the milpa, *toj* is sickness, *ts'i'*, “dog,” some shameless act. When one has a sickness of the body that is like a worm eating the flesh, we call this *xu jut qanil*, which is a worm that is found sometimes in the *milpa* [maizefield]. When this worm gets into the body and eats at the flesh then it is because of these days. For this sickness comes from stealing corn or else it may be due to sorcery, for they are the days of sorcery also. For instance, if a man finds that his *milpa* has been robbed he goes to his *milpa* at midnight, breaks off an ear of corn and places a candle between the two halves, and asks San Jacinto and San Agustín, the patrons of the *milpa* to punish the robber, and he calls the days 7 *qanil*, 8 *t'oj*, 9 *ts'i'* to punish him. Then after a time the man who has stolen the corn will suffer from this disease, which is like cancer and ulcers. This is the meaning of these days” (Bunzel 1952, 282-283).

³¹² *Q'anil*, Literally “Yellowness,” referring specifically to the yellow of ripe maize, and is sometimes used as a metaphor for the fruitfulness of the earth in general. Bunzel: “*Qanil* (*milpa*, cornfield). Symbolic of the regeneration of the earth, of rebirth after death, as exemplified in the growth of corn. ‘*Qanil* is the day of the milpa, a good day. It is a day to give thanks for one’s *siembres* [plantings], for harvest and planting. After the harvest one waits for the day *qanil*, either 2 or 3 *qanil*, to give thanks. And likewise after planting. This is optional. But it is obligatory for all people to give thanks for their food and their land on the day 8 *qanil*. And each year one does this, until one dies” (Bunzel 1952, 55, 282). Barbara Tedlock adds that one of the mnemonics used for this day by *aj q'ij* priests in Momostenango is *cak'anaric uwäch ulew* (“harvest”—literally, “the face of the earth becomes yellow”), and adds that “on these days, the lineage priest-shaman, depending on whether planting or harvest time is closer, passes seeds saved from the previous year, or else fresh corn ears that have been chosen as seed ears for the next year, through the copal smoke. In so doing, he is symbolically feeding (*tzukunic*) both the Mundo [Spanish “World,” the principal earth deity] and his own ancestors” (B. Tedlock 1982, 114).

Then she took hold of the cornsilk, the cornsilk atop the ear of ripe maize,³¹⁶ and pulled it upward. She did not pick the ear of maize, but it multiplied there in the net until the great net overflowed. Then when the maiden returned, the animals carried the net for her as she returned. But when she arrived and saw her grandmother, they gave back her pack frame,³¹⁷ and she perspired as if she had carried it.

Now when the Grandmother saw the food, the great netful, she said:

“Where did you come by this food? From where was it stolen? I will surely go to see if you have finished off the maize plant and brought it all here,”³¹⁸ said the Grandmother.

³¹³ *Kakaw* is the true cacao (*Theobroma cacao*) from which chocolate is made. Cacao was highly prized in Precolumbian Mesoamerica, where it was used to make a spiced chocolate beverage. So precious was the bean of the cacao that it was used as the most common form of currency in purchasing goods and services. Ruud van Akkeren (personal communication) notes that one of the prime areas of cacao cultivation in the region is Tiquisate/Nahualate on the Pacific coast. This is also the area of the Toj and Q'anil lineages. Several highland Maya documents mention the taking of women as captives from these lineages. There are also several *terra cotta* renderings of women with cacao pods growing from their body found in this area that are now located in the *Popol Vuh* Museum in Guatemala City.

³¹⁴ *Tz'i'a* (Dog) is a metaphor for shamelessness. Bunzel: “*T'si'* (*chucho*, dog). This symbolizes sin, especially sexual impurity. ‘*t'si'*, ‘dog,’ a bad day, the worst of all. The day of shameless and beastly actions (especially sexual). This is the meaning of *t'si'* in the divinations. There are no ceremonies for this day, because it is evil. But if one wishes to ask forgiveness of one’s evil acts, one asks it on the next day (9 *bats*)” (Bunzel 1952, 283).

³¹⁵ Perhaps it is not a coincidence that the day immediately following *Q'anil*, *Toj*, and *Tz'i'*, is *B'atz'* in the traditional calendar.

³¹⁶ *Jal* is a dried ear of maize ready to be harvested.

³¹⁷ *Ko'k* is a wooden boxlike frame used to haul things on the back.

³¹⁸ It is still customary among contemporary Quichés to carry harvested maize in large nets and to bring them home at one time wherever possible: “The whole harvest from a field is brought in at one time even if extra laborers must be hired to carry it. If it must be carried any distance, the bearers run the whole way, shouting. When they enter the house, the owner and his wife meet them. When the harvest from the large estate of Don Náches, a wealthy Ladino was brought into his town house more than fifty bearers were hired for the occasion. They ran into town in single file, shouting, encircled the plaza before taking the corn to the owner’s house, and the church bells were rung” (Bunzel 1952, 51). The arrival of the harvested maize is always an important event, even in smaller households. This episode suggests that Lady Blood had brought an entire harvest, though the Grandmother knew that no such field of maize existed in her family’s plot.

Thus she went to see the maize plant. But there was the single ear of maize still on the maize plant, and it was clear where the net had been placed beneath it.

The Grandmother thus rushed back to her home and said to the maiden:

“This is but a sign that you are in truth my daughter-in-law. I will surely watch your deeds, for they that are to be my grandchildren are enchanted already,” the maiden was told.

HUNAHPU AND XBALANQUE IN THE HOUSE OF THE GRANDMOTHER³¹⁹

NOW we shall relate the tale of the birth of Hunahpu and Xbalanque.

THIS, therefore, is the account of their birth that we shall tell. When the day arrived, the maiden Lady Blood gave birth. The Grandmother did not see it when they were born, for these two arose³²⁰ suddenly. Hunahpu and Xbalanque were their names. They arose in the mountains, but when they were taken into the house they did not sleep:

“Take them away and abandon them, for truly shrill are their mouths,” said the Grandmother.

Thus they were placed on an anthill, and there they slept blissfully.

Then they were taken out again and placed on a thornbush. This was done by One Batz and One Chouen, for they would have had them die there on the anthill and on the thornbush.³²¹ They wanted this because of the treachery³²² and jealousy³²³ of One Batz and One Chouen.

³¹⁹ lines 2664-2899

³²⁰ *Xeyake'ik* (they arose). This is a metaphor for birth according to Coto.

³²¹ This treatment of the twin sons of One Hunahpu and Lady Blood is a serious breach of highland Maya attitudes toward children, particularly infants. Despite poverty and private concerns, children are always accepted as a “gift” in Quiché homes and treated with patience and indulgence. Infants and small

Thus at first their younger brothers were not accepted in the house. They were not known. Therefore they just grew up in the mountains.

Now One Batz and One Chouen were great flautists and singers. They had grown in greatness. They had passed through great affliction and misfortune, and thus they had become great. They were sages. They were not only flautists and singers, but they had also become writers and carvers. Everything they did was successful for them.

For they knew of the circumstances of their birth, and certainly they were ingenious. They were the substitutes for their father who had gone to Xibalba and had died. Thus One Batz and One Chouen were great sages. In their hearts, they knew everything from the first, even before their younger brothers were created.

But nothing ever came of these enchanted abilities³²⁴ because of their envy. The abuses³²⁵ born in their hearts merely fell upon their own backs and nothing came of them.³²⁶

children are never left alone under any circumstances. Whenever possible babies accompany their mothers, who carry them on their backs everywhere as they go about their work. Toddlers and small children are cared for solicitously by their older siblings who also carry them about wherever they go. “[Quichés] care for them tenderly and reproach themselves if the child falls ill. There is no infanticide; that would be a violation of all their moral ideas” (Bunzel 1952, 99). This attitude is so pervasive in highland Maya society that it is difficult to believe that it would have been otherwise at the time the *Popol Vuh* was composed. It is likely that the “treachery” of One Batz and One Chouen toward their half-brothers would have been recognized as sufficient grounds for the punishment they later received when they were turned into monkeys. It is significant in this regard that monkeys were earlier described as descendents of the wooden people who “did not possess their hearts nor their minds,” “walked without purpose,” “did not remember Heart of Sky,” and “were not capable of understanding” (pp. 83-90). It was the cold and dry hearts of the wooden people that had led to their ultimate destruction.

³²² *Ch'aqimal* is “treachery, lies, calumny, slander, falsehood, or mockery.” Basseta wrote that it may also refer to the loud shouting of young men. In modern usage it suggests something that festers and spreads, such as an abscess, gangrene, or smallpox.

³²³ Literally “red or fiery countenance,” a common Quiché expression for jealousy.

³²⁴ *Na'wikil* is derived from the word for enchantment, or unusual power of knowledge. It is also used to refer to extraordinary abilities or talents.

³²⁵ *Yog'* is an “abuse, insult, or affront.”

Thus they were ignored³²⁷ by Hunahpu and Xbalanque, who went out every day to hunt with their blowguns. They were not loved by their grandmother, nor by One Batz and One Chouen. Nor were they given any food. When meals were prepared for them, One Batz and One Chouen would eat it all before they returned.

But they did not become enraged³²⁸ or angry. They tolerated it, for they knew their own nature, and this was a light by which they could see.

Thus when they returned each day, One Batz and One Chouen would take away their birds and eat them. They did not give anything to the twins, Hunahpu and Xbalanque. One Batz and One Chouen merely played the flute and sang.

³²⁶ Tedlock's Quiché collaborator, Andrés Xiloj, commented on this passage: "We see a person; we speak behind his back and he doesn't hear what we are murmuring. Then this murmur doesn't fall upon that person, but we are the ones who pay for it" (Tedlock 1996, 265 n. 105). Bunzel recorded the following explanation from a Quiché seeking justice from a slander inflicted on him: "Now I have a clean heart, my wife is satisfied, and the woman also has set everything right. Now I can go before the ancestors to ask justice. But if I go before them with my sins still upon me, and quarreling with my wife or relatives, then I shall die at once, before my enemy, for the justice which I ask for him will fall upon me" (Bunzel 1952, 376).

³²⁷ The root of this verb is derived from *poy*, which has been used previously to describe the wooden effigies that were destroyed. Today the word is used for scarecrows, dolls, or statues. Each of these is something that resembles reality but is false. Basseta writes it is to be "discounted, ignored, displeased, dissatisfied" as well as to be "perverted, corrupted."

³²⁸ Literally "inflamed." The tolerance of the twins to the injustice of their older siblings is characteristic of Quiché practice. There are certainly rivalries among family members. Bunzel noted that the calm that prevails in all households is somewhat superficial, often hiding bitterness and discord with a "smooth surface of respectful courtesy" (Bunzel 1952, 12). Particularly among older family members, there is often an atmosphere of intense rivalry and mistrust. This antagonism seldom if ever erupts into open conflict, however, for fear of retribution from deceased ancestors who do not tolerate such behavior: "The ancestors and 'the idols' stand ready to punish the blows or harsh words that violate the sanctity of the house. The injured 'weep before the idols' demanding revenge, and the ever present fear of sorcery stays the free expression of antagonism. Within the house quiet and dignity prevail. All intercourse is marked by elaborate etiquette" (Ibid., 120). Thus one of her collaborators who was preparing for a ceremony told her: "It is better that I go out of the house before I am provoked to retort. There is nothing I can do, I must not quarrel or argue. For I am asking justice before the spirits, and if I do anything, they will immediately drag me out of this life" (Ibid., 380). Children are seldom chastened by their parents in traditional Quiché households, but it is made clear from a very early age that open expressions of anger or physical abuse between siblings is not tolerated and that when it does occur such behavior invites retribution by the ancestors in the form of illness or even death.

Then one day Hunahpu and Xbalanque returned without bringing any birds. The Grandmother was enraged because of this:

“What is the reason that you have not brought any more birds?” Hunahpu and Xbalanque were asked.

“This is why, our grandmother. Our birds are just stuck up in the top of the tree,” they said. “There is no way to climb to the top of the tree to reach them, our grandmother. Therefore we would like our older brothers to go with us to bring down the birds,” they said.

“Very well,” said their older brothers. “We will go with you at dawn.”

Thus they were defeated. The two of them had planned for the defeat of One Batz and One Chouen:

“We shall merely overturn their nature. This is the essence of our words. Thus be it so, for great is the affliction that they have caused us. If it had been according to their desires, we, their younger brothers, would have died and been lost. In their hearts, we are looked upon as slaves, as if we worked for them. Instead, we shall make of them an example,” they said one to another.

Thus they went there below the tree whose name is Yellow Tree,³²⁹ in company with their older brothers. As they went, they began to shoot with their blowguns, for there were innumerable birds in the top of the tree singing riotously. Their older brothers marvelled at this when they saw the birds. But not one of these birds that they saw fell down beneath the tree:

³²⁹ *Can Te* (Lowland Maya: Yellow Tree). Recinos (1950, 128 n. 6) and Campbell (1983, 82) identify this as *Gliricidia sepium*, known in Central America as *Madre de cacao* (Spanish: Mother of Cacao). The Maya extracted a yellow dye from this tree (Roys 1967, 161 n. 8).

“Our birds do not fall down here. Just go and bring them down,” they said to their older brothers.

“Very well,” they said.

And they climbed up to the top of the tree. But the tree began to grow larger. It swelled in size. Thus when they wanted to come back down, One Batz and One Chouen couldn’t climb down from the top of the tree.³³⁰

They therefore called down from the top of the tree:

“What can we say, our younger brothers? Take pity on us. This tree is truly frightening to see, our younger brothers,” they called down from the top of the tree.

Thus Hunahpu and Xbalanque called back to them:

“Loosen your loincloths³³¹ and retie the long end below your bellies. Pull out the tail end³³² behind you. Then you will be able to walk freely,” they were told by their younger brothers.

“Fine,” they said.

And so they pulled out the ends of their loincloths,³³³ and these immediately became tails. They appeared just like spider monkeys. Thus they went up into the tops of

³³⁰ Akkeren (2000, 65, 303-304) suggests that this tale is the origin of the famous *Palo Volador* in which dancers dressed as monkeys climb a tall pole, tie long ropes to their ankles, and spin downward as the ropes gradually unwind (Cook 2000, 107-118). In many communities this popular dance has been banned because of the danger involved.

³³¹ Ximénez identifies *we’x* as short trousers worn by men, but likely they were loincloths prior to the Spanish conquest based on the description in the text of their being loosened and retied. *Weexj* is the name for the traditional white trousers worn in Santiago Chimaltenango (Watanabe 1992, 93)

³³² This is a good example of a play on words. The text uses the term *je’* here to describe the end of the brothers’ loincloths. While *je’* may be used to refer to the end of something, it also means “tail,” presaging the transformation that would soon take place.

³³³ *To’q*. This word is still in use in the highlands as a generic term for underwear (Mondloch, personal communication).

the trees there in the small mountains and the great mountains. They went out into the forests, howling and chattering loudly in the branches of the trees.

Thus was the defeat of One Batz and One Chouen at the hands of Hunahpu and Xbalanque. It was merely by their enchantments that it was done.

Now when they arrived back at their home, they spoke with their grandmother and mother:

“Our grandmother, something has happened to our older brothers. Their faces have changed.³³⁴ They go about like animals now,” they said.

“If you have done something to your older brothers, you will cause me misery and anguish. Let this not be what you have done to your older brothers, my grandsons,” said the Grandmother to Hunahpu and Xbalanque.

They replied then to their grandmother:

“Do not grieve, our grandmother. You shall see again the faces of our older brothers. They will come back. But this is a test for you, our grandmother. Please do not laugh, for we will test their fate,” they said.

Thus they began to play the flute. They played “Hunahpu Spider Monkey” on the flute.

³³⁴ *Rax ki wach* (new their faces). This is a physical reality, in that the brothers now have monkey faces, but it also has a host of implied meanings. Basseta records that this suggests “without shame.” Coto adds that it refers to one that has “gone astray, lost self-control, is impudent, outside the bounds of justice, talks nonsense, babbles, or chatters.”

THE FALL OF ONE BATZ AND ONE CHOUEN³³⁵

THEN they began to sing, to play the flute, and to play the drum.³³⁶ And when they had taken up their flute and their drum, the Grandmother sat down with them as well. Thus they played the flute, calling them with the music. In song they called out their names, with the music whose name is “Hunahpu Spider Monkey.”

Then arrived One Batz and One Chouen, dancing as they came. But when the Grandmother looked at them, she saw their ugly faces³³⁷ and laughed, for she could not contain her laughter.

Therefore they immediately went away. Their faces could not be seen anymore, for they had gone back into the forest.

“What now will you do, our grandmother? We shall try it four times in all. Only three times more we shall call them with flute music and song. But you must truly contain your laughter when we try it again,” said Hunahpu and Xbalanque.

Then they played the flute again, and again they came dancing in the middle of the house patio. Animatedly they did it, tempting their grandmother to laughter.

Thus immediately the Grandmother began to laugh again. For the faces of the spider monkeys were truly funny. They were paunchy³³⁸ and naked below their chests.³³⁹

³³⁵ lines 2900-3023

³³⁶ *Q'ojom* is a general term for any kind of percussion instrument, although “drum” is the most common interpretation in colonial dictionaries. In most modern Quiché communities, the word refers to the marimba, which has become extremely popular but which most likely did not exist in Precolumbian Guatemala. The flute and drum are still the instruments used to accompany traditional native dances and processions.

³³⁷ *Itzel u wach* (evil his face) and *k'ax u wach* (painful his face) are common expressions used by the Quichés to describe an ugly person.

³³⁸ *Xiririk -pam* is “pot-bellied, big bellied, paunchy” according to Basseta.

And when they came, she laughed a great deal, which made them depart again into the mountains.

“Surely, what more can we do, our grandmother? This third time we shall try it again,” said Hunahpu and Xbalanque.

Thus they played the flute again, and again they came dancing. But this time the Grandmother was able to contain well her laughter. They therefore scampered on the wall.³⁴⁰ Their mouths were very red, and their faces were foolish.³⁴¹ Their mouths were puckered³⁴² and bushy.³⁴³ Their faces were silly, and they snorted³⁴⁴ at them. Now when she saw this, the Grandmother again burst out laughing. Never again were their faces seen because of the laughter of their grandmother.

“But this once more, our grandmother, we shall call upon them.”

Thus for the fourth time they played their flutes again, but this time they did not come back. Instead they remained out in the forest.

Thus they spoke to their grandmother:

³³⁹ A polite way of saying that their genitals were exposed. This is a sign of disgrace, or dishonor among the ancient Maya.

³⁴⁰ *Tz'aq* is a wall or a large building.

³⁴¹ *Tak* denotes someone who is “foolish, stupid, crazy, hard of hearing, or quick to anger.”

³⁴² *Mutzuma'q* is “rounded,” in this case describing the brothers’ mouths as similar to the appearance of monkeys when they pucker their lips.

³⁴³ *Chik'imal* (bushy) is used to describe unkempt or uncombed hair that sticks out away from the head or face.

³⁴⁴ *Joq'ij* is to make sounds through the nose.

“We tried, our grandmother, and at first they came back. We have tried to call them back again. But do not grieve. We are your grandsons, and we are here. Just love³⁴⁵ our mother, O grandmother.

“Our older brothers will be remembered. Thus be it so. They were given names and also given titles. One Batz and One Chouen shall be called upon,” said Hunahpu and Xbalanque.

And since that time they have been called upon by the flautists and the singers. The ancient ones also called upon them, they who were the writers and the carvers.³⁴⁶ A long time ago, they became animals. They became spider monkeys because of their pride, for they had abused their younger brothers according to the dictates of their hearts. Thus they were ruined. One Batz and One Chouen were lost, becoming animals. Thus their community and their home is now among the flautists and the singers. For great were their accomplishments when they dwelt with their grandmother and their mother.

³⁴⁵ *Loq'oj* is to “love, esteem, appreciate, value, honor, or regard.” Thus the twins seek to replace the treachery and jealousy of the household with love and respect. In Quiché view, this is not merely the establishment of a more comfortable home environment, but an essential prerequisite for the proper expression of divine will. In contemporary Quiché thought, ancestors and deity do not tolerate open anger, jealousy, or pride and punish such severely. Until these characteristics are eliminated from the house of their mother and grandmother, the twins would not be able to act in concert with Heart of Sky, identified in the text as the inspiration for the twins subsequent actions in defeating death and restoring their father/ancestor to power. Note that even in victory, Hunahpu and Xbalanque show a degree of honor and respect for the legitimate accomplishments and titles of their older siblings, acknowledging that they will be remembered.

³⁴⁶ Las Casas wrote that in the early Colonial period, these two brothers were the patrons of all the arts: “All the skilled artisans, such as painters, featherworkers, carvers, silversmiths, and others like them, worshiped and made sacrifices to those younger sons called Huncheven and Hunahan, so that they would grant them the skill and mastery to carry out their work in an accomplished and perfect way; but although they worshiped them as divine men, they were not held as gods in general, nor superior to all others” (Las Casas 1967, III.ccxxxv, 506. Translation by author).

HUNAHPU AND XBALANQUE IN THE MAIZEFIELD³⁴⁷

THEN they began again to accomplish their deeds, to manifest themselves before the face of their grandmother and before the face of their mother. First they worked the maizefield:

“We are going to farm the maizefield, our grandmother and our mother,” they said.

“We are the substitutes for our older brothers,” said Hunahpu and Xbalanque.

Thus they took up their axes and their hoes,³⁴⁸ carrying them on their shoulders. Each of them also shouldered his blowgun and departed their home, having first left instructions with their grandmother to bring their food:

“At midday come to give us our food, grandmother,” they said.

“Very well then, my grandsons,” said their grandmother.

Then they arrived there to farm the maizefield. They merely stuck the hoe into the ground, and it truly began to plow the earth. All by itself the hoe did the plowing for them.

As for the axe, they just stuck it into the fork³⁴⁹ of a tree, and by its own strength it would fell it. Thus the one axe chopped and felled all the trees and bushes, feverishly working to cut down the trees all by itself.

Now this, the hoe, would break up countless stalks and briars. Just the one hoe would clear countless mountains, both small and great, as it went.

³⁴⁷ lines 3024-3272

³⁴⁸ *Mixk'ina'*. A wooden hoe according to Basseta.

³⁴⁹ Literally the “armpit” of the tree.

Then they gave instructions to an animal, Turtle Dove by name. Hunahpu and Xbalanque placed it atop a great stump and spoke to it:

“When you see our grandmother coming to bring our food, immediately cry out that she has arrived. Then we will take up the hoe and the axe.”

“Very well,” said the Turtle Dove.

Thus they merely hunted with their blowguns. They didn’t truly farm the maize. And when the Turtle Dove cried out, they came quickly, the one taking up the hoe while the other one took up the axe.

They would then put field debris on their heads and rub dirt on their hands. The one would dirty his face as if he had truly farmed the maizefield, while the other one would scatter wood chips on his head as if he had truly been cutting down trees.

In this way they were seen by the Grandmother, and thus they were given to eat. They did not truly farm the maize, and so it was unmerited that she went to give them their food.

And when they returned home they would say, “We are truly tired, our grandmother.” And they would rub and stretch their legs and arms in front of their grandmother to deceive her.

But on the second day, they arrived at the maizefield to find that all the trees and bushes had been raised up again. All the stalks and briars had again fastened themselves together.

“Who is playing tricks on us?”³⁵⁰ they asked therefore.

³⁵⁰ Literally “who is plucking at us?” Metaphorically this is to deceive or to play a trick on someone, although not in a playful way.

Now it was all the animals, both great and small, that had done it—the puma and the jaguar, the deer and the rabbit, the fox and the coyote, the peccary and the coati, the small birds and the great birds. These had done it. In a single night they did it.

Thus they began again to farm the maize. Again the earth was broken up. The trees were cut down. There they gathered their thoughts, over by the cut trees and the broken ground:

“We will just watch over our maizefield tonight, and thus we will discover whatever it was that has done this,” they said when they gathered together their thoughts.

So when they returned to the house, they said:

“Someone perhaps has been playing tricks on us, our grandmother. When we arrived a while ago at our maizefield, we found that it had become a great field of grass and a great forest once again,” they said to their grandmother and their mother.

“Therefore we shall go back and watch over it by night. For it is not good what has been done to us,” they said.

Thus they concealed themselves. They went out again to cut down the trees, and then they hid themselves there, taking cover.

At length all the animals gathered together, coming together³⁵¹ as one. All the small and great animals arrived in the very heart of the night,³⁵² chattering as they came. And this was their speech:

“Arise trees; arise bushes,” they said when they came.

Thus they congregated beneath the trees and the bushes, emerging where they could be seen before their faces.

³⁵¹ This is to join together disparate pieces, or gather in a mixed group.

³⁵² Literally “zenith its heart night,” meaning midnight.

The first of these were the puma and the jaguar. The boys wanted to grab them, but they would not give themselves up.

Then emerged the deer and the rabbit. They grabbed them by their tails, but these just broke off, leaving the tail of the deer behind in their hands along with the tail of the rabbit. Thus they still have shortened tails.³⁵³

Neither would these give themselves up—the fox or the coyote, the peccary or the coati. All the animals just passed on by in front of Hunahpu and Xbalanque.

Thus their hearts were troubled because they weren't able to catch any of them.

But one more came along behind all the rest. He scurried when he came, and they netted him. They snared the rat in a net. They caught him and squeezed him behind the head. According to their desire, they strangled him and burned his tail over a fire. Because they did this to the tail of the rat, their tails still do not have hair on them. And their eyes are the way they are because the boys, Hunahpu and Xbalanque, strangled him.

“I must not die by your hands. Your task is not to be maize farmers. But there is something that is yours,” said the rat.

“Where is that which is ours? Speak then,” the boys said to the rat.

“Will you first let me go?” asked the rat. “My word is here in my belly.³⁵⁴ I will tell it to you if you first give me a little food.”

“We will give you your food later, but tell us first,” he was told.

³⁵³ The Guatemalan varieties of the white-tailed deer (*Odocoileus americana*) and cottontail rabbit (*Sylvilagus floridanus yucatanicus*) both have short tails. They are paired in this couplet because they were the most commonly hunted game animals in the Maya area.

³⁵⁴ The implication is that the rat's information cannot be expressed until his belly has been satisfied with something to eat.

“Very well then. It is what belonged to your fathers, One Hunahpu and Seven Hunahpu by name, who died in Xibalba. They left behind their gaming things hanging above the house³⁵⁵—their yokes, their arm protectors, and their rubber ball as well. Your grandmother did not show these to you, for it was because of them that your fathers died.”

“Is it not true? Do you truly know this?” the boys asked the rat.

Thus they rejoiced in their hearts when they heard from the rat the news about the rubber ball.

This, therefore, was given to the rat as his food—grains of maize, squash seeds, chili peppers, beans, pataxte, and cacao.

“These, then, are yours. If anything has been swept out with the trash and has become exposed, then it is yours. You shall gnaw on it,” said Hunahpu and Xbalanque to the rat.

“Very well then, boys. But what will I say if your grandmother sees you?” he asked.

“Don’t be disheartened,”³⁵⁶ they said to the rat. “We are here. We know what to say to our grandmother. We will lift you up onto the corner of the house to fetch them.

³⁵⁵ This would be the rafters beneath the roof. This is a common place for storing tools, old clothing, and harvested maize. I have passed many a night sleeping in the “maize loft” as a guest in Quiché homes. The rat would know lofts are storage places since rats are to be found in every loft I have ever been acquainted with. On cold nights, they like to share bedding as uninvited sleeping companions.

³⁵⁶ Literally “may it not fall your heart.”

Straightaway you will go up to where the things are hanging. We will be able to see it in the rafters of the house, reflected in our sauce.”³⁵⁷

Thus Hunahpu and Xbalanque gathered their thoughts and instructed him all night. And when it was truly midday,³⁵⁸ they arrived.

HUNAHPU AND XBALANQUE DISCOVER THE GAMING THINGS³⁵⁹

THE rat they carried could not be seen clearly when they arrived. While one went into the house, the other went around to the corner of the house and immediately lifted up the rat.

Then they asked their mother for their food:

“Just prepare for us a bite to eat,” they said. We desire chili sauce, our grandmother.”

Thus their bite was prepared, and a plate of sauce was placed before them. But this was just a trick they were playing on their grandmother and their mother. They drained the water jug dry:

“We are truly thirsty. Bring us something to drink,” they said to their grandmother.

“All right,” she replied.

Thus she left, leaving them behind to eat. But it was not true that they were hungry. It was merely a deception so that they could see the rat reflected in their chili

³⁵⁷ *Ti'* (bite) as in a bite to eat. This refers to a snack, rather than a full meal. This turns out to be a bowl of mashed chili sauce.

³⁵⁸ Literally “zenith sun.”

³⁵⁹ lines 3273-3338

sauce. There the rat was, behind the rubber ball where it hung above the house. This they saw reflected in their chili sauce.

Then they sent forth a mosquito. The mosquito is an insect similar to a small biting fly.³⁶⁰ It went to the river and pierced the front of the Grandmother's jug.

Thus the water that she had raised leaked out from the front of the jug. Try as she might, the face of the jug would not be sealed.³⁶¹

"What is our grandmother doing? We are gasping for water. We are parched with thirst!" they said to their mother.

Thus they sent her away.

Then the rat clawed at the ropes that held the rubber ball from the thatch roof above the house until it fell, along with the yokes, the arm protectors, and the leathers. They carried them away and hid them along the road leading to the ballcourt.

Then they went back to where their grandmother was at the river, and there they found their grandmother and mother busily trying to seal the face of the jug. Thus they arrived at the river, each carrying his blowgun:

"What have you been doing? Our hearts became weary, so we came," they said.

"Look at the front of my jug. It cannot be sealed off," replied their grandmother.

³⁶⁰ *Us*. Both *xa'n* (mosquito) and *us* may refer to mosquitos, but they can also be the small biting flies that congregate on the banks of rivers.

³⁶¹ The ancient lowland Maya worshiped an aged female deity named Ixchel (Goddess O of the codices), who is often depicted with a jug from which she pours out water in the form of rain. Ixchel was also a patroness of medicine, fertility, childbirth, midwifery, and the art of divination. The grandmother goddess Xmucane was apparently the Quiché equivalent of Ixchel, associated with the powers of creation (pp. 60-62; line 35), divination (pp. 79-82; lines 569-599), midwifery (p. 62; lines 32, 38), medicine (p. 99; lines 1112-1119), childbirth (p. 113; lines 1736-1742), and now the leaking water jug.

Immediately then they sealed it, and together they returned once more, leading the way before their grandmother.

Thus was the discovery of this rubber ball.

THE SUMMONS OF HUNAHPU AND XBALANQUE TO XIBALBA³⁶²

AND so they went rejoicing as ballplayers to the ballcourt. For a long time they played ball there alone, sweeping clear the ballcourt of their father.

Then the lords of Xibalba heard it:

“Someone has begun to play again over our heads. Have they no shame, stomping about up there? Did not One Hunahpu and Seven Hunahpu die when they desired to puff themselves up before us? Go then to summon them here once again,” said One Death and Seven Death, along with all the lords.

“Summon them here,” they said to their messengers. “Tell them, ‘They must come, say the lords. Here we shall play ball with them. In seven days, we will play, say the lords.’ Tell them this when you arrive there,” the messengers were told.

Thus they came along the great cleared pathway, the road that led to the home of the boys. The messengers pursued³⁶³ them into the home of the Grandmother, but the boys were still playing ball when the messengers of Xibalba arrived.

“The lords say, ‘They must surely come,’” said the messengers of Xibalba.

Then the messengers of Xibalba set the date:

“In seven days, they will be expected.” Such was the word left with Xmucane.

³⁶² lines 3339-3469

³⁶³ *Tog'oj* is to pursue with the intention of importuning, persecuting, harassing, or vexing someone.

“Very well then,” replied the Grandmother. “They shall go as summoned, you messengers.”

Thus the messengers returned again, leaving the Grandmother heartbroken:

“How shall I tell my grandsons of their summons? Were these not truly from Xibalba? They are just like the messengers who arrived in the past when their fathers went away to die,” said the Grandmother.

Thus she wept bitterly in the house alone.

Then a louse fell down on her. It itched, so she picked it up and put it in her hand. The louse scuttled as it went along.

“My grandchild,” she asked the louse, “would you like me to send you to summon my grandsons at the ballcourt?”

Thus he left as a summoner with this message:

“Messengers have arrived with your grandmother saying that you are to come. The messengers of Xibalba declare, ‘In seven days you are to come,’ says your grandmother.”

Such was the message given to the louse. And so he went, scuttling along the way. Now sitting in the road was a youthful toad by the name of Tamazul.³⁶⁴

“Where are you going?” asked the toad of the louse.

“I am going to give the boys a message that is in my belly,” said the louse to Tamazul.

³⁶⁴ The name Tamazul is derived from the Nahuatl *tamasolli* (toad), perhaps indicating a Central Mexican origin for portions of this tale.

“Very well then, but I see that you are not going very fast,” the toad said to the louse. “Wouldn’t you like me to swallow you? Then you would see how fast I could go. We would get there quickly.”

“Very well,” said the louse to the toad.

Thus he was licked up by the toad, who went hopping along his way. But he did not go fast. Presently, he was met by a great snake whose name was White Life.³⁶⁵

“Where are you going, boy Tamazul?” asked White Life.

“I am a messenger with a message in my belly,” said the toad to the snake.

“But I see that you aren’t going very fast. Perhaps I would arrive there more quickly,” said the snake to the toad.

“Go right ahead,” he was told.

Thus the toad was swallowed up by White Life. The snake, then, received his food and they still swallow toads today.

Now this snake went quickly along his way. Then again the snake was met by the falcon, a great bird.³⁶⁶ And the snake was swallowed by the falcon.³⁶⁷ Then he arrived

³⁶⁵ *Saqiq'as* is identified as a large snake by Varea.

³⁶⁶ *Wak*. The name of this bird is closely related to the Nahuatl word for falcon, *oactli*. It is likely the bird known as the Laughing Falcon (*Herpetotheres cachinnans*), which makes a sound similar to this call (Tedlock 1996, 270 n. 114). Bassie-Sweet points out that the call of the laughing falcon is an indication of the coming of the rains in Mesoamerica (personal communication). She suggests that the twins’ clearing of the maize field implies the dry season when the fields are cleared for burning. The subsequent descent into Xibalba would coincide with this period of death and sterility. The call of the laughing falcon may presage the return of rain and agricultural rebirth.

³⁶⁷ This humorous story may have prophetic significance as well. The louse represents corruption and decay. The toad is associated with the watery underworld and the fertility of the earth’s interior as a source of renewal. The serpent is a common symbol of regeneration because of its tendency to periodically shed its old skin to uncover a new one. Finally, the falcon is a common symbol of the reborn sun at dawn. Thus the sequence of animals may presage the death and corruption of the twins in the underworld, followed by their rebirth to new life and apotheosis as the sun and moon. Literally then, death would be swallowed up by the ultimate triumph of Hunahpu and Xbalanque.

atop the ballcourt. Thus the hawk received his food, so that he still eats snakes in the mountains.

When the falcon arrived, he alighted atop the edge of the ballcourt while Hunahpu and Xbalanque were rejoicing and playing ball.

Then the falcon cried out:

“Wak-ko! Wak-ko!” was the cry of the falcon.

“What is that which is crying out? To our blowguns!” they said.

HUNAHPU AND XBALANQUE RECEIVE THE SUMMONS TO XIBALBA³⁶⁸

SO then they shot the falcon. The pellet from the blowgun buried itself straight into his eye,³⁶⁹ knocking him down. Thus he fell, and they went out to grab him and question him:

“Why have you come?” they asked the falcon.

“I have a message in my belly.³⁷⁰ But surely you must first cure my eye, and then I will tell it,” said the falcon.

“Very well then,” they replied.

So they took off a little of the surface of their rubber ball and put it in the face of the falcon.³⁷¹ This they called Sliced Rubber. Immediately he was cured by them, making good again the sight of the falcon.

³⁶⁸ lines 3470-3556

³⁶⁹ This is a play on words in the original Quiché, since “eye” is *u b'aq' u wach* (its pellet or seed his face).

³⁷⁰ The irony is that this expression is literally true, since the message is contained in the animals that he had swallowed.

³⁷¹ The laughing falcon has a black patch around the eyes.

“Tell it then,” they said to the falcon.

Thus he vomited the great snake.

“Speak!” they said again to the snake.

“All right,” he replied. And so he vomited the toad.

“What is your errand? Speak!” the toad was told.

“My message is here in my belly,” said again the toad.

Then he tried to throw up, but he did not vomit. His mouth just drooled. He tried, but nothing did he vomit. Thus the boys wished to beat him.

“You are a deceiver,” he was told.

Then they squashed his rear end with their feet, crushing the bones of his backside with their feet.

Again he tried, but he just salivated at the mouth. So they pried open the mouth of the toad. It was pried open wide by the boys. They searched in his mouth and found that the louse was merely stuck in front of the toad’s teeth. He was just in his mouth. He hadn’t really been swallowed. It was merely as if he had been swallowed.

Thus the toad was defeated. As a result, it is not obvious what food was given to him. He could not go fast; thus he merely became spoil for the snake.

“Speak!” the louse was told.

Thus he spoke his word:

“The Grandmother says to you boys, ‘Go and summon them. Messengers have arrived from Xibalba, the messengers of One Death and Seven Death. ‘In seven days³⁷²

³⁷² The number seven has ritual significance in Maya theology. In this case, it may refer to the seven levels of the earth that were believed to exist above the underworld (Thompson 1971, 214). Thus the twins were allowed a day to pass through each of these layers on their journey downward into Xibalba. It may

they will come here to play ball with us. They must bring their gaming things—the rubber ball, yokes, arm protectors, and leathers. They will liven up this place, say the lords.’ ‘This is their word that has come,’ says your grandmother. ‘Thus you must come,’ the Grandmother truly says. Your grandmother weeps. She calls out that you must come.”

“Is it not true?” they asked in their hearts when they heard this. And immediately they returned to advise their grandmother.

THE DESCENT OF HUNAHPU AND XBALANQUE INTO XIBALBA³⁷³

“SURELY we must go, our grandmother. But first we will advise you. This is the sign of our word that we will leave behind. Each of us shall first plant an ear of unripe maize³⁷⁴ in the center of the house.³⁷⁵ If they dry up, this is a sign of our death. ‘They have died,’ you will say when they dry up. If then they sprout again, ‘They are alive,’ you will say, our grandmother and our mother. This is the sign of our word that is left with you,” they said.

also refer to the seven sacred directions of the Maya universe—the four cardinal directions plus the sky, center, and underworld.

³⁷³ lines 3557-3993

³⁷⁴ *Aj*. This is an ear of unripe maize, or maize that is still soft on the cob. Alternatively, it may also refer to the stalk of the maize plant.

³⁷⁵ Although this incident seems odd, it is consistent with the ancient Maya conception of the universe in which all creation is seen as a house. The four corners represent the cardinal directions while its walls and ceiling form the vault of the sky. The foundation posts thus form the boundaries of the underworld. The maize plant is often depicted as a divine axis mundi standing at the center point of the universe with its roots extending downward into the underworld while its stalk reaches into the sky. The ancient Maya often erected colossal stone monuments of their revered kings decorated with tree and maize elements to emphasize the rulers’ identity with this sacred living center. Thus the Quichés would see nothing odd in the twins identifying themselves with a maizestalk planted at the center of a divine household.

Thus Hunahpu planted one, and Xbalanque planted another in the house. They did not plant them in the mountains or in fertile ground. It was merely in dry ground, in the middle of the interior of their home, that they planted them.

Then they left, each with his blowgun, and descended to Xibalba. They quickly went down the steps, passing through various river canyons. They passed through the midst of many birds. “Flocks” was the name of the birds.

And again they passed over Pus River and Blood River. In their hearts, the Xibalbans had intended these as traps. But they were not troubled. They just passed over them, floating on their blowguns.

When they came to the four crossroads, they already knew the roads of Xibalba—the Black Road, the White Road, the Red Road, and the Blue/Green Road.

Then they sent an insect named Mosquito. They sent him on ahead to obtain for them what he could hear:

“You shall bite each one of them in turn. Bite the first one seated there and then keep on biting them until you have finished biting all of them. It will be truly yours then to suck the blood of people on the road,” the mosquito was told.

“Very well then,” said the mosquito.

So then he went along the Black Road until he alighted behind the effigies of carved wood. The first ones were all dressed up. He bit the first one, but there was no response. Then he bit the second one seated there, but he did not speak either.

Next he bit the third one seated there, who was One Death—“Ouch!” said each one when he was bitten. “What?” was their reply:

“Ow!” said One Death.

“What, One Death? What is it?”

“I am being bitten!”

“It’s just . . . Ow! What was that? Now I am being bitten!” said the fourth one seated there.

“What, Seven Death? What is it?”

“I am being bitten!”

Next, the one seated fifth said, “Ow! Ow!”

“Flying Scab,” asked Seven Death, “what is it?”

“I am being bitten!” he said.

Then the sixth one seated there was bitten. “Ow!”

“What, Gathered Blood? What is it?” asked Flying Scab.

“I am being bitten!” he said.

Next, the seventh one seated there was bitten. “Ow!” he said.

“What, Pus Demon? What is it?” asked Gathered Blood.

“I am being bitten!” he said.

Then the eighth one seated there was bitten. “Ow!” he said.

“What, Jaundice Demon? What is it?” asked Pus Demon.

“I am being bitten!” he said.

Then the ninth one seated there was bitten. “Ow!” he said.

“What, Bone Staff? What is it?” asked Jaundice Demon.

“I am being bitten!” he said.

Then the tenth one seated there was bitten. “Ow!”

“What, Skull Staff? What is it?” asked Bone Staff.

“I am being bitten!” he said.

Then the eleventh one seated there was bitten. “Ow!” he said next.

“What, Wing? What is it?” asked Skull Staff.

“I am being bitten!” he said.

Next, the twelfth one seated there was bitten. “Ow!” he said.

“What, Packstrap? What is it?” asked Wing.

“I am being bitten!”

Next was bitten the thirteenth one seated there. “Ow!”

“What, Bloody Teeth? What is it?” asked Packstrap.

“I am being bitten!” he said.

Then the fourteenth seated one was bitten. “Ow!”

“What, Bloody Claws? What is it?” asked Bloody Teeth.

“I am being bitten!” he said.

Thus their names were named. Each of them revealed the name of the other. Each of the individuals in order of their rank had his name revealed by the one who sat next to him.³⁷⁶ Not one of their names was missed until all of the names were named when they were bitten by a hair that Hunahpu had plucked from the front of his knee. It wasn't really a mosquito that had bitten them. And so Hunahpu and Xbalanque heard the names of all of them.

Thus they came to where the Xibalbans were.

³⁷⁶ There is a definite hierarchy among the lords of Xibalba, exemplified by the order in which they are seated on the palace bench. In traditional Maya confraternity houses, such as at Santiago Atitlán, there is a bench where, on ceremonial occasions, elders sit in the order of their rank of authority.

“Hail these lords who are seated there,” said a tempter.

“These are not lords. These are merely effigies carved of wood,” they said. Then they hailed each one of them:

“Morning, One Death. Morning, Seven Death.³⁷⁷

Morning, Flying Scab. Morning, Gathered Blood.

Morning, Pus Demon. Morning, Jaundice Demon.

Morning, Bone Staff. Morning, Skull Staff.

Morning, Wing. Morning, Packstrap.

Morning, Bloody Teeth. Morning, Bloody Claws,” they said when they arrived there.

All of them had their faces revealed, for all of their names were named. Not one of their names was missed. When they were called upon, they gave the names of each one without leaving any of them out.

“Sit down here,” they were told, for it was desired that they sit on top of the bench. But they didn’t want to:

“This isn’t a bench for us. It is merely a heated stone,” said Hunahpu and Xbalanque. Thus they were not defeated.

“Very well then, just go into that house,” they were told.

So then they entered into the House of Darkness. But they were not defeated there either. In their hearts, the Xibalbans ordained that they would be defeated there in this, the first of the trials of Xibalba.

³⁷⁷ The greeting in each case is *q'ala ta*. *Q'ala* is a shortened version of “it is clear,” related to the common modern Quiché greeting in the morning, *saqirik* (it has dawned). *Ta* may simply mean “then,” a frequently used word in the text. It may also be a shortened form of *tat* (father), a term commonly used when addressing highly ranked or older persons.

Thus they entered first into the House of Darkness. There the messenger of One Death gave to them a torch, already burning, and a cigar for each of them. And the messenger said when he arrived:

“Thus says the lord: ‘Here is their torch. It must be given back at dawn along with the cigars. They must return them.’”

“Very well,” they replied.

But they didn’t light the torch. They just placed the red tail feather of a macaw on it as a substitute for flame. Thus the night watchmen saw it as if it were burning.

As for the cigars, they just put fireflies on their tips. All night they would glow brilliantly because of them.

“We have defeated them,” said the night watchmen.

But the torch was not used up, for it was only an illusion. Neither did the cigars have anything burning on them. It was merely an illusion as well. Thus they returned them whole to the lords:

“What becomes of them? Where did they come from? Who begat them? Who gave them birth? Truly our hearts are troubled, for it is not good what they are doing to us. Their appearance as well as their nature are unique,” they said one to another.

Then they summoned all of the lords:

“Let us play ball, boys,” they were told.

But first they were questioned by One Death and Seven Death:

“Where did you really come from? Would you tell us, boys?” they were asked by the Xibalbans.

“We must have come from somewhere, but we don’t know.” Only this they said.

They told them nothing.

“Very well then. We will just go and play ball,³⁷⁸ boys,” the Xibalbans said to them.

“Fine,” they replied.

“Here is our rubber ball that we will use,” said the Xibalbans.

“No, we will use ours,” said the boys.

“Not so. We will use this one that is ours,” said again the Xibalbans.

“Very well,” said the boys.

“It appears to be a skull, but it is merely drawn on the ball,”³⁷⁹ said the Xibalbans.

“It is not. It is a skull we tell you,” said the boys.

“Not so,” replied the Xibalbans.

“Very well then,” said Hunahpu.

³⁷⁸ The ballgame was played throughout Mesoamerica beginning at least by the time of the Olmecs ca. 1500 B.C. Although the rules varied over time and from region to region, it generally involved opposing teams of two or more players attempting to bounce a solid rubber ball without the use of hands through a ring placed vertically along the ballcourt’s walls. Sahagun described a similar type of ballgame among the Aztecs in the sixteenth century:

These balls... were solid, of a certain resin or gum which is called *ulli* [rubber] which is very light in weight and bounces like an inflated ball.... The ballgame was called *tlaxtli* or *tlachtli*. The court consisted of two walls with some twenty or thirty feet of distance between them and each was up to forty or fifty feet in length. The floor and walls were heavily plastered, the latter having some one and a half *estados* [nearly ten feet] in height. In the middle of the court was a line made especially for the game; and in the middle of the walls, halfway down the playing stretch, were two stones like millstones perforated in the middle, facing each other, and they each had holes wide enough that the ball could fit into each of them. And whoever placed the ball there won the game. They did not play with their hands but hit the ball with their flanks. For playing they wore gloves on their hands and a leather apron on their flanks to hit the ball (Sahagún 1938, II.viii.10, pp. 297-298).

³⁷⁹ The verb root, *juch'* means “to draw lines or to adorn with figures” according to Coto. Thus the Xibalbans try to convince the twins that their ball looks like a skull only because it has had skull-like features drawn on it.

Thus the Xibalbans threw down their rubber ball, which landed before the yoke of Hunahpu. And when the Xibalbans saw this, the White Dagger came out of their rubber ball. It clashed about over the ground of the entire ballcourt, threatening the boys.

“What is that?” asked Hunahpu and Xbalanque. “You just want death for us. Did we not answer your summons when your messenger came? Have pity on us. We will just go, then,” said the boys to them.

It was their desire that the boys would straightaway die there because of the blade. They were to have been defeated. But it was not so. It was the Xibalbans who were now defeated by the boys.

“Don’t go, boys. We will just play with your ball,” the boys were told.

“Very well then,” they replied.

Thus they took out their rubber ball, and it was thrown down. Then their prizes were chosen:

“What will we win?” the Xibalbans asked.

“Surely it is your choice,” the boys said.

“Our prize³⁸⁰ shall be merely four bowls of flowers,” said the Xibalbans.

“Very well. What kinds of flowers?” the boys asked the Xibalbans.

“One bowl of red petals,³⁸¹ one bowl of white petals, one bowl of yellow petals, and one bowl of the large ones,” said the Xibalbans.

“Very well,” replied the boys.

³⁸⁰ This is likely a play on words between *ch'ako'n* (prize, spoils) and related words such as *ch'akom* (cuttings of flowers or plants), and *chakaj* (bouquet, bunch of flowers according to Varea).

³⁸¹ This reading for *much'ij* is based on *much'* (to break apart, crumble, break into pieces). Flower petals are commonly given as offerings in modern highland Maya ceremonies, often broken off the flower as part of the ceremony as prayers are made. It would be much easier for the ants to carry away petals than whole flowers. Alternatively, it may be related to *mucheche*, which Basseta defines as “a fragrant flower,” and a “sign of love.”

So then the ball was dropped into play. They were equal in strength, but the boys made many plays with the ball for they played with all their hearts. At last, the boys gave themselves up to be defeated, and the Xibalbans thus rejoiced at their defeat:

“We have done well. We have already defeated them at the first attempt,” said the Xibalbans. “Where shall they go to get the flowers?” they asked in their hearts.

“You will give to us the flowers as our prize early in the morning,” the boys Hunahpu and Xbalanque were told by the Xibalbans.

“Very well. We will play ball again early in the morning,” they said. Then they made their plans together.

Thus the boys entered into Blade House, the second trial of Xibalba. Here it was desired that they would be sliced apart by the blades. They were to have died quickly in their hearts. But they did not die. They spoke to the blades, instructing them in this way:

“Yours shall be the flesh of animals,” they said to the blades.

Thus they stopped moving. As one they all lowered the points of their blades.

And while they were passing the night in Blade House, they called out to all the ants:

“Cutting ants,³⁸² conquering ants, come! Go and get flower blossoms as prizes for the lords.”

“Very well,” they said.

Then the ants went to get flowers from the garden of One Death and Seven Death. Now the Xibalbans had previously instructed the guardians of their flowers:

³⁸² These are large, leaf-cutting ants, known in Guatemala as *zompopos*.

“Look after our flowers with all vigilance. Do not allow them to be stolen. For by these we have defeated the boys. What if they were able to obtain these as our prize? Thus do not sleep all night.”

“Very well,” they said then.

But the guardians of the garden did not notice anything. They would just cry out aimlessly in the branches of the trees. They just toddled along through the garden repeating their song:

“Shpurpuwek, shpurpuwek,”³⁸³ said the one when he called.

“Puhuyu, puhuyu,” said the other, the whippoorwill by name, when he called.

These two were the guardians of the garden of One Death and Seven Death. They didn’t notice the ants stealing that which they were guarding. They swarmed³⁸⁴ and thronged, carrying away the flowers. They went to cut down flowers from the tops of trees, gathering them together with those from below the trees. All this they did while the guardians were crying out, not noticing that their tails and wings were being gnawed on as well.

The flowers were thus loosened until they fell down to be gathered up. The four bowls were thus quickly filled with their flowers. By dawn they had all been collected.

Then the messengers arrived to summon them:

“‘Come!’ says the lord. ‘May they straightaway bring hither our prize,’” the boys were told.

³⁸³ Tedlock interprets this as the call of the whippoorwill (D. Tedlock 1996, 274 n. 123). Interestingly enough, the Quiché version of the call is phonetically very similar to the English name for the bird as well as to its song.

³⁸⁴ *B'olowik* is literally “to boil.” It is also used to describe the swarming of insects according to Coto.

“Very well,” they answered.

For they had collected the flowers into the four bowls. Thus they went, arriving before the lords. Now the lords received the flowers with woeful faces. Thus the Xibalbans were defeated. The boys had just sent ants, and in one night they had collected the flowers in the bowls. Thus the Xibalbans all turned pale. Their faces were pallid because of the flowers.

And so they summoned the flower guardians:

“For what reason have you allowed our flowers to be stolen? These flowers that you see are ours,” the guardians were told.

“We noticed nothing, O lords. But our tails have surely suffered³⁸⁵ for it,” they replied.

Then their mouths were split open³⁸⁶ as punishment for allowing that which they were guarding to be stolen. Thus One Death and Seven Death were defeated by Hunahpu and Xbalanque. And this is the reason why the mouths of whippoorwills gape wide open to this day.

Then the ball was dropped into play again, but the game was even. And when they had finished playing ball, they planned together once more:

“At dawn again,” said the Xibalbans.

“Very well,” said the boys when they had finished.

³⁸⁵ *Kuyu* is “to suffer, or endure.” It is also used to describe something “bent, crooked, crippled, or lame.” Either reading would be applicable here. Whippoorwills have very short wing and tail feathers.

³⁸⁶ This is apparently meant as a play on words. The whippoorwills are said to have “cried out,” in song when they should have been guarding the gardens of Xibalba. The Quiché phrase is “they broke open their mouths.” Now the Xibalba lords “split open their mouths” as the punishment chosen to match the birds’ crime.

HUNAHPU AND XBALANQUE IN THE HOUSE OF COLD³⁸⁷

AND so they now entered the House of Cold. The cold here was immeasurable. The interior of the House of Cold was thick with hail.

But straightaway the boys caused the cold to dissipate.³⁸⁸ They did it in. They ruined and destroyed the cold. Thus they did not die, but rather were alive when it dawned again. The Xibalbans had wanted them to die there, but this was not to be. Instead they were just fine when the dawn came.

So then their guardians came again to summon them.

“What is this? Haven’t they died?” asked the lords of Xibalba.

And again they marveled at the deeds of the boys, Hunahpu and Xbalanque.

HUNAHPU AND XBALANQUE IN THE HOUSE OF JAGUARS³⁸⁹

NEXT they entered into Jaguar House, which was crowded inside with jaguars:

“Do not eat us. We will give you what is yours,” the jaguars were told.

Then they scattered bones before the beasts, who voraciously crunched them.³⁹⁰

The hearts of the night watchmen found this sweet, saying, “They are finished. They have given themselves up. They have eaten their hearts, and now these are their skeletons that are being gnawed upon.”

³⁸⁷ lines 3994-4017

³⁸⁸ *Tzaj* is to “evaporate, dry up, dissipate, exhaust.”

³⁸⁹ lines 4018-4037

³⁹⁰ *Paq'aq'ik* refers to the sound of crunching, gnawing, or eating rapidly. It is also used to describe the sound of walking over dry leaves. Alternatively it may also refer to the sound of something being rent or split.

But they didn't die. They were just fine when they came out again from Jaguar House.

"What kind of people are these? Where have they come from?" asked all the Xibalbans.

HUNAHPU AND XBALANQUE IN THE HOUSE OF FIRE³⁹¹

NEXT they went into the fire, for there was a House of Fire. There was nothing but fire inside. But they were not burned. They were to have been roasted and set aflame. Instead they were just fine when dawn came. It had been desired that they would straightaway die when they passed through there, but it was not so. Thus all the Xibalbans lost heart as a result.

HUNAHPU AND XBALANQUE IN THE HOUSE OF BATS³⁹²

NEXT they were put inside Bat House, which had only bats inside. It was a house of death bats. These were great beasts with snouts like blades that they used as murderous weapons.

When they arrived there, they were to be finished off. They had to crawl inside their blowguns to sleep so that they would not be eaten there in this house.

Nevertheless, it was because of a single death bat that they gave themselves up in defeat. It came swooping down. But this was merely a way to manifest themselves when it occurred.

³⁹¹ lines 4038-4051

³⁹² lines 4052-4177

Thus they pleaded for wisdom all that night as the bats made a din with their flapping wings.

“Keeleetz! Keeleetz!” they said all night long.

At length things quieted a little, and the bats became motionless.

Thus one of the boys crawled to the end of his blowgun. Xbalanque said, “Hunahpu, do you see the dawn yet?”

“I will go and see for certain if has happened,” he replied.

Hunahpu truly wanted to look out of the mouth of his blowgun to see the dawn. But when he did so, his head was cut off by the death bat,³⁹³ leaving the greater part of his body behind.

“What? Hasn’t it dawned yet?” asked Xbalanque. But Hunahpu did not move.

“What is going on? Hunahpu wouldn’t have left. What then has he done?”

But nothing moved; only the rustling of wings was heard. Thus Xbalanque was ashamed:

“Alas,³⁹⁴ we have given in already,” he said.

At the word of One Death and Seven Death, the head was placed atop the ballcourt. Thus all the Xibalbans rejoiced because of the head of Hunahpu.

Then Xbalanque summoned all of the animals—the coati and the peccary, and all the animals both small and great—while it was still dark, early in the morning. He then entreated them for their food:

³⁹³ The ability of bats to cut down fruit from trees while in flight associated them in the mind of the ancient Maya with decapitation sacrifice. Bats are often seen painted on ancient Maya vessels as underworld denizens of death, decorated with crossed bones and extruded eyeballs that have their optic nerves still dangling from them.

³⁹⁴ Ximénez translates *akarok* as “Ay! Ay!” In English the more common expression of lament would be “Alas!”

“I send each of you to bring the food that belongs to you,” said Xbalanque to them.

“Very well,” they said.

Then they all went to obtain what was theirs. When they returned they were many. One brought back rotten things, another brought leaves, another brought stones, and yet another brought dirt. Thus the animals, both small and great, each brought their various foods.

Now after many had come, the coati arrived last of all bringing a chilacayote squash. She³⁹⁵ came rolling it along with her nose. This was to be transformed into the head of Hunahpu. Immediately its eyes were carved upon it. Numerous sages came down from the sky. For Heart of Sky, he who is Huracan, appeared here. He arrived here in Bat House.

But the face wasn’t completed successfully in time. Only its beautiful covering had appeared. It only had the ability to speak by the time the horizon of the sky began to redden, for it was about to dawn.

“Blacken it again with soot, old man,”³⁹⁶ the possum³⁹⁷ was told.

³⁹⁵ The coati is consistently associated with females in the text, just as the peccary is associated with males. They are particularly identified as the grandmother and grandfather deities respectively (pp. 60-61, 80, 98; lines 22-23, 559-560, 1055-1056). Akkeren cites a possible ethnographic survival of this association between the coati and gourds. In the Yucatec village of Xcocal, a ceiba tree is cut down in the forest and re-erected as a “tree of abundance” in the center of the main plaza. An actor dressed as a coati climbs the tree and scatters squash seeds while tying fruit to its branches (Akkeren 2000, 296).

³⁹⁶ *Ama’* is a general term for “male,” whether human or animal. In this case, it is used as a nickname for the aged possum deity. Because of the possum’s gray coat, awkward gait, and snaggly teeth, the Maya associated this animal with old age (Miller and Taube 1993, 128).

³⁹⁷ Father Coto lists under the Spanish word *Escuridad*, that *vuch* (possum) is the darkness of night just prior to the dawn (Coto 1983, 207-8). This is perhaps a manifestation of the creator deity Xpiyacoc, one of whose principal titles is Hunahpu Possum (Karen Bassie-Sweet, personal communication; see pp. 60, 79-80; lines 20, 500, 555). In the Tzotzil area, a grandfather possum, called “Old Man Possum,” is associated

“Fine,” replied the Grandfather.

And he blackened the sky with soot until it was dark again. Four times the Grandfather blackened it with soot. Thus today people say, “The possum blackens it with soot.”

Finally the sky succeeded in turning red, and then blue when it began its existence.

“Is it not good?” Hunahpu was asked.

“Yes, it is good,” he replied.

For his head was well supported. It became just like a true head. Then they planned a deception;³⁹⁸ they took counsel together:

“Don’t play ball. Just look threatening. I will surely be the one to accomplish it,” said Xbalanque to him.

Then he instructed a rabbit:

“Be there at the head of the ballcourt in the tomato patch,”³⁹⁹ the rabbit was told by Xbalanque. “And when the rubber ball comes your way, hop away until I accomplish my task,” the rabbit was told. Thus he was given his instructions there in the night.

with the dawn at the beginning of the planting season, and that the red light of the east is said to be one of his manifestations: “Uch [Possum] is greatly respected, because it has fire, because at dawn it lights up the hills. It is not the sunlight, for the sun rises later.... 'Uch is as God because it has light, a red light, that later disappears to give place to the God, the sun. Neither 'Okinahual nor 'Uch are evil, but they must be respected as a God. God must be respected, but he is not bad. Perhaps he punishes when he is overlooked” (Guiteras-Holmes 1961, 195-197; cf. 33, 206, 292). Akkeren compares this passage with the New Years pages of the Dresden Codex in which a possum deity presides over the five days of the Wayeb at the close of the annual cycle. In the *Popol Vuh* account, however, the possum is associated not with the annual change of the solar year, but “the moment of the new Sun-era” (Akkeren 2000, 290).

³⁹⁸ *Xkib'an ki tzij* (they made their words). To “make” words is to deceive or to lie.

³⁹⁹ There is some confusion as to where the rabbit was told to be. The manuscript here reads *pixc*, which Tedlock reads as *pixik'* (acorn or oak). This is contradicted, however, by lines 4197 and 4217, which read *pix* (tomatoes, or tomato patch), a reading given by most translators. The confusion may be due to a play on

And when it dawned, the both of them were well.⁴⁰⁰

THE HEAD OF HUNAHPU IS RESTORED⁴⁰¹

SO the ball was again dropped into play. The head of Hunahpu was first placed atop the ballcourt.

“We have already triumphed. You are finished. You gave in, so give it up,” they were told.

But Hunahpu just called out:

“Strike⁴⁰² the head as if it were a rubber ball,” they were told. “No harm will come to us now, for we are holding our own.”

Thus the lords of Xibalba threw down⁴⁰³ the ball where it was met by Xbalanque. The ball landed before his yoke and bounced away. It sailed clear over the ballcourt. It just bounced once, then twice, landing in the tomatoes. Then the rabbit came out, hopping along.⁴⁰⁴ All the Xibalbans thus went after him. The Xibalbans all went after the rabbit, shouting and rushing about.

words, a practice beloved by the Maya. *Pixk'onik* is the verb for “to hop (like a rabbit or flea),” while the rabbit is *pixab'ax* (instructed) in lines 4164 and 4174.

⁴⁰⁰ Literally “good their faces both of them,” the standard way of saying that they were “fine,” but also in this context a clever play on words considering the newly-made “face” of Hunahpu.

⁴⁰¹ lines 4178-4241

⁴⁰² The action referred to is, unfortunately, not clear. According to Coto, *k'aqa* may be “to strike, to throw,” or even generally “to play ball.”

⁴⁰³ This is a case where the limitations of the Latin alphabet in which the manuscript was written are apparent. The text reads *xetzacou*. If this is to be read as *xetzaqow*, it would mean that the Xibalbans “threw out” the ball into play. Alternatively, if it is to be read as *xetzak'ow*, it would mean that the Xibalbans “struck” the ball. It is impossible to know which of these alternatives is correct, although it would be helpful to our understanding of how the game was played.

⁴⁰⁴ The hopping of the rabbit thus confuses the lords of Xibalba into thinking it is the bouncing ball.

Thus the twins were able to retrieve the head of Hunahpu, replacing it where the chilacayote squash had been. They then placed the chilacayote squash on the ballcourt, while the true head of Hunahpu was his once more. Therefore they both rejoiced again. While the Xibalbans were out searching for their rubber ball, the twins retrieved it from the tomato patch. And when they had done so, they called out:

“Come on! We found our rubber ball!” they said. Thus they were carrying the round ball⁴⁰⁵ when the Xibalbans returned.

“What was it that we saw?” they asked.

And so they began again to play ball, both teams making equal plays until at last Xbalanque struck the chilacayote squash, strewing it all over the ballcourt. Thus its seeds were scattered before them.⁴⁰⁶

“What is this that has been brought here? Where is he that brought it?” asked the Xibalbans.

Thus the lords of Xibalba were defeated by Hunahpu and Xbalanque. They had passed through great affliction, but despite everything that had been done to them, they did not die.

THE DEATHS OF HUNAHPU AND XBALANQUE⁴⁰⁷

THIS, then, is the memorial to the deaths of Hunahpu and Xbalanque. We shall now tell it in memory of their death.

⁴⁰⁵ *Ki k'olem* (they were carrying a round thing). This is undoubtedly a reference to the ball, although it is not specified (James Mondloch, personal communication).

⁴⁰⁶ A play on words is made here between *saqiram* (scattered) and *saqilal* (squash seeds). If one did not recognize the pun in the original Quiché, the choice of words would be confusing.

⁴⁰⁷ lines 4242-4365

What they had planned to do, they had done despite all their afflictions and misfortunes. Thus they did not die in the trials of Xibalba. Neither were they defeated by all the ravenous beasts that lived there.

And then they summoned two seers. Visionary persons they were. The names of these sages were Descended⁴⁰⁸ and Ascended:

“The lords of Xibalba may inquire of you concerning our death. They are even now putting together their thoughts on the matter, because we have not yet died. We have not been defeated. We confounded their trials. Nor have the animals seized us. This, therefore, is the sign that is in our hearts. Heated stones will be the means by which our murder will be accomplished. Thus when all Xibalba has gathered together to determine how to ensure our death, this shall be the idea that you will propose. If you are asked about our death when we are burned, this is what you shall tell them, you, Descended and you, Ascended, if they should speak to you about it:

“‘Wouldn’t it perhaps be good if we scatter their bones in the canyon?’

“Then you are to say, ‘This would not be good, for they would merely arise again to new life.’⁴⁰⁹

“Then they will say to you, ‘Perhaps it would be good to merely hang them in the top of a tree?’

⁴⁰⁸ The Colonial period Varea dictionary lists *Xulu* (Descended) as “[spirit] familiars appearing alongside rivers.” Basseta lists *ah xulu* as “a diviner,” consistent with the statement in the *Popol Vuh* that he is a visionary seer. The paired figures “Descended” and “Ascended” likely refer to the common modern expression “to go down and up,” which means to “go all over, or everywhere” (Jim Mondloch, personal communication).

⁴⁰⁹ Literally “would be revived their faces.”

“You will then reply, ‘Certainly that would not be good, for you would see their faces before you.’

“Then the third time they will say, ‘Would it be a good thing if we merely scatter their bones in the course of the river?’

“If then you are asked this, you will reply, ‘It is good that they should die. And it would be good if their bones were ground upon the face of a stone like finely ground maize flour. Each one of them should be ground separately. Then these should be scattered there in the course of the river. They should be sprinkled on the river that winds among the small and great mountains.’

“This, then, is what you will say. Thus will be made manifest what we have said to you in counsel,” said Hunahpu⁴¹⁰ and Xbalanque.

For when they had thus counseled them, they already knew of their death. The Xibalbans were even then putting together the great heated stones in the form of a pit oven,⁴¹¹ placing large hot coals within it.

Then came the messengers of One Death and Seven Death to accompany them:

“The lords say to us: ‘May they come! Bring them so that they may see what we have cooked up for them.’⁴¹² This is the word of the lords unto you, boys,” they were told.

“Very well,” they replied.

⁴¹⁰ The manuscript reads Xhunahpu (Little Hunahpu) which is the diminutive form of Hunahpu. It is perhaps used in this section to distinguish him from his father One Hunahpu, who had also died in Xibalba.

⁴¹¹ *Chojib'al* (pit oven) is dug into the ground and filled with hot stones or coals to roast meat.

⁴¹² This is a play on words. *Chojij* means “to cook, broil, or set fire to something”; but it also means “to straighten out, take a direct route, or rectify something.” Thus the Xibalbans were trying to trick the twins by saying that they were going to settle things, while at the same time hinting at the means by which they intended to kill them.

Thus they went quickly to the mouth of the pit oven. There the Xibalbans wanted to force them into playing with them:

“Let us jump over this our sweet drink. Four times each of us will go across it, boys,” they were told by One Death.⁴¹³

“You cannot trick us with this. Do we not already know the means of our death, O lords? You shall surely see it,” they said.

Then they turned to face one another, spread out their arms and together they went into the pit oven. Thus both of them died there. Then all the Xibalbans rejoiced at this. They contentedly shouted and whistled:

“We have defeated them. None too soon have they given themselves up,” they said.

Then they summoned Descended and Ascended, with whom word had been left by the boys. And the Xibalbans divined of them what was to be done with their bones. Thus according to their word, the bones were ground up and strewn along the course of the river. But they did not go far away; they just straightaway sank there beneath the water. And when they appeared again, it was as chosen boys, for thus they had become.

⁴¹³ The Xibalbans are lying about the purpose of the pit. They are suggesting that it is an underground vat for making some intoxicating drink, whereas in reality it is a pit oven into which they hope to trick the twins into falling.

THE RESURRECTION OF HUNAHPU AND XBALANQUE⁴¹⁴

ON the fifth day they appeared again. People saw them in the river, for the two of them appeared like people-fish. Now when their faces were seen by the Xibalbans, they made a search for them in the rivers.

And on the very next day, they appeared again as two poor orphans.⁴¹⁵ They wore rags in front and rags on their backs. Rags were thus all they had to cover themselves. But they did not act according to their appearance when they were seen by the Xibalbans. For they did the Dance of the Whippoorwill and the Dance of the Weasel. They danced the Armadillo and the Centipede.⁴¹⁶ They danced the Injury, for many marvels they did then. They set fire to a house as if it were truly burning, then immediately recreated it again as the Xibalbans watched with admiration.

Then again they sacrificed themselves. One of them would die, surely throwing himself down in death. Then having been killed, he would immediately be revived. And the Xibalbans simply watched them while they did it. Now all of this was merely the groundwork for the defeat of the Xibalbans at their hands.

⁴¹⁴ lines 4366-4398

⁴¹⁵ *Meb'a'* literally means “poor,” but it may also apply to one who has met with misfortune, such as an orphan, widow, or beggar. The twins reappear as youths that have no parents (p. 182; lines 4459-4468), suggesting that “orphan” may be an appropriate translation. On the other hand, they are obviously poor (p. 182; line 4428-4430), dressed in rags (p. 180; lines 4373-4375), and in need of resources (p. 182; lines 4489-4490). I have chosen “poor orphans” because it includes both meanings.

⁴¹⁶ *Xtz'ul* is a centipede. The Varea dictionary lists *xts'ul* as “a dance with small masks and macaw tail feathers.” During this dance, participants put sticks down their throats (like sword swallows), bones in their noses, and give themselves hard blows on their chests with a large stone. Basseta also defines this as a dance, in which masked performers with tortoiseshell rattles put sticks or daggers in their mouths (like sword-swallowers). A variant name for centipede is *Q'uq'kumatz* (Feathered Serpent), indicating that this may be a dance in honor of that creator deity (Coto 1983, 128).

THE SUMMONS OF HUNAHPU AND XBALANQUE BEFORE THE LORDS⁴¹⁷

AT length the news of their dances came to the ears of the lords One Death and Seven Death. And when they had heard of it, they said:

“Who are these two poor orphans? Is it truly delightful? Is it true that their dancing and all that they do is beautiful?”

For the lords were delighted with the account when they heard it. Thus they entreated their messengers to summon them to come:

“Say this to them: ‘May they come so that we may watch them, for we marvel at them,’ say the lords.”

Thus the messengers went to the dancers and repeated the words of the lords to them.

“We don’t want to, for in truth we are timid. We would be ashamed to enter into such a lordly house! Our faces are truly ugly,⁴¹⁸ and our eyes are just wide in poverty. Don’t they see that we are merely dancers? What then would we say to our fellow orphans? We have responsibilities. They also desire our dances, for they revive their faces with us. It is not right that we should do the same with the lords. Therefore we do not want to do this, O messengers,” said Hunahpu and Xbalanque.

But they were pestered, threatened with misfortune and pain. And so they went with apprehension,⁴¹⁹ for they didn’t want to be going any too soon. Many times they had

⁴¹⁷ lines 4399-4447

⁴¹⁸ Literally “evil/bad/filthy our faces,” a common expression for “ugly” among modern Quichés as well.

⁴¹⁹ Literally “red misfortune they went.”

to be prodded because they just walked along slowly, making little progress, while the messengers who brought them led the way to the lords.

HUNAHPU AND XBALANQUE DANCE BEFORE THE LORDS OF XIBALBA⁴²⁰

AT length they arrived before the lords. They pretended to be humble,⁴²¹ prostrating themselves⁴²² when they came. They humbled themselves, stooping over and bowing. They hid themselves with rags, giving the appearance that they were truly just poor orphans when they arrived. Then they were asked where their home mountain was⁴²³ and who their people were. They were also asked about their mother and their father:

“Where do you come from?” they were asked.

“We do not know, O lord. Neither do we know the faces of our mother or our father. We were still small when they died,” they just said. They didn’t tell them anything.

“Very well then. On with the spectacle. What do you want us to give you as payment?” they were asked.

“We don’t want anything. Truly we are frightened,” they said again to the lord.

“Do not be afraid or timid. Dance! First you will do that dance in which you sacrifice yourselves. Then burn down my home. Do everything that you know. We would

⁴²⁰ lines 4448-4573

⁴²¹ *Moch'och'ik* is “to humble one’s self hypocritically” (Basseta).

⁴²² “To throw one’s face on the ground” (Basseta).

⁴²³ The Quichés still give directions by indicating which mountain is located nearby the destination. It is not uncommon to ask the location of a town or a person’s house and be told, “go two mountains to the west and one to the north.”

watch this, for it was the desire of our hearts that you be summoned. Because you are poor orphans, we will pay whatever you ask as your price,” they were told.

Thus they began their songs and their dances, and all the Xibalbans came until the place was overflowing with spectators.⁴²⁴ They danced everything. They danced the Weasel. They danced the Whippoorwill. They danced the Armadillo.

Then the lord spoke to them:

“Sacrifice my dog, then revive him again,” they were told.

“All right,” they replied.

So they sacrificed his dog and then revived him once more. The dog was truly happy when they revived him. He vigorously wagged his tail when they brought him back to life.

Then the lord spoke again to them:

“Now you must surely burn my home,” they were told.

So then they burned the home of the lord. The house was overflowing with all the lords, yet none were burned. Immediately it was restored again. Thus the home of One Death was not lost after all.

All the lords marveled, therefore, and greatly rejoiced at their dances. The lord thus spoke again to them:

⁴²⁴ The *Título Pedro Velasco* records that prior to the Spanish conquest, the highland Maya of Guatemala conducted dances in special “guest houses” in which their rulers danced in honor of their gods: “Each of the lineages had a house to hear the word and to administer judgment. There the lords danced the Junajpu C’oy and the Wukub Cak’ix, the Awata Tun, and the Jolom Tun. Each lineage had divisions, each with a house” (Carmack and Mondloch 1989, 178). Fray Gerónimo de Mendieta wrote that “one of the principal things which existed in this land were the songs and dances, to solemnize the festivals of their demons which they honored as gods, as well as to rejoice and find solace. The house of each principal lord thus had a chapel for singers and a place for dances. The great dances were held in the plazas or in the house patios of the great lords, for all had large plazas” (Mendieta 1993, 140). These special houses are likely analogous to confraternity houses today, where traditionalist Maya continue to conduct dances in honor of deity.

“Now kill a person. Sacrifice him, but not so that he really dies,” they were told.

“Very well,” they said.

So they grabbed a person and sacrificed him. They extracted the heart of one of them and placed it before the lords. Now One Death and Seven Death marveled at this, for immediately that person was revived again by them. When he had been revived, his heart greatly rejoiced. And again the lords marveled at it:

“Now sacrifice yourselves. We would see this. Truly it is the desire of our hearts that you dance,” said again the lords.

“Very well then, O lord,” they replied.

So then they sacrificed themselves. Hunahpu was sacrificed by Xbalanque. Each of his legs and arms was severed. His head was cut off and placed far away. His heart was dug out and placed on a leaf.⁴²⁵ Now all these lords of Xibalba were drunk at the sight, as Xbalanque went on dancing.

“Arise!” he said, and immediately he was brought back to life again. Now the lords rejoiced greatly. One Death and Seven Death rejoiced as if they were the ones doing it. They were so involved that it was as if they themselves were dancing.

THE DEFEAT OF THE LORDS OF XIBALBA⁴²⁶

FOR it was the desire of the lords to abandon their hearts to the dances of Hunahpu and Xbalanque. Then came the words of One Death and Seven Death:

“Do it to us! Sacrifice us!” they said.

⁴²⁵ *Tz'alik* is a leaf used for wrapping maize tamales. The implication is that the heart was placed on a leaf prior to wrapping it as an offering. An alternative reading would have this word derived from *tz'alam* a flat stone or altar.

⁴²⁶ lines 4574-4639

“Sacrifice us in the same way,”⁴²⁷ said One Death and Seven Death to Hunahpu and Xbalanque.

“Very well then. Surely you will be revived. Are you not death? For we are here to gladden you, O lords, along with your vassals and your servants,”⁴²⁸ they said therefore to the lords.

The first to be sacrificed was the very head of all the lords, One Death by name, the lord of Xibalba. He was dead then, this One Death. Next they grabbed Seven Death. But they didn’t revive them. Thus the Xibalbans took to their heels when they saw that the lords had died. Their hearts were now taken from their chests. Both of them had been torn open as punishment for what they had done. Straightaway the one lord was executed and not revived. The other lord had then begged humbly, weeping before the dancers. He would not accept it, for he had become disoriented:

“Take pity on me,” he said in his regret.

Then all of their vassals and servants fled into the great canyon. They packed themselves into the great ravine until they were piled up one on top of the other. Then innumerable ants swarmed into the canyon, as if they had been driven there. And when the ants came, the Xibalbans all bowed themselves down, giving themselves up. They approached begging humbly and weeping. For the lords of Xibalba were defeated. It was just a miracle, for the boys had transformed themselves before them.

⁴²⁷ The manuscript reads *junal taj* (“the same way” or possibly “one by one”). The particular form of this word is somewhat odd. It seems to be a play on words with *junalik/junelik* (forever), thus hinting that the sacrifice would not be so much “the same” as was done before, but would be permanent. A further pun is seen in the phrase at the beginning of this section, “it was the desire of the lords to abandon their hearts,” thus foreshadowing the means of their death.

⁴²⁸ Literally your “child of mother” and your “sons of men.” In this case, these are metaphors that are used frequently in the text for vassals and servants.

And then they declared their names. They revealed their names before all Xibalba.

THE MIRACULOUS MAIZE OF HUNAHPU AND XBALANQUE⁴²⁹

“HEAR our names!⁴³⁰ We shall now declare them. We shall also declare the names of our fathers to you. We are they whose names are Hunahpu and Xbalanque. Our fathers are they who you killed, One Hunahpu and Seven Hunahpu by name. We are the avengers of the misfortune and affliction of our fathers. For this reason, we have endured all the tribulations that you have caused us. Thus we shall now destroy you all. We will kill you, for none among you shall now be saved,” they were told.

Then all Xibalba begged humbly, weeping.

“Take pity on us, you, Hunahpu and Xbalanque. Truly we have wronged your fathers that you have named—they who are buried at Crushing Ballcourt,” they said.

“Very well. Here then is our word that we declare to you. Hearken all you of Xibalba; for never again will you or your posterity be great. Your offerings also will never again be great. They will henceforth be reduced to croton sap.⁴³¹ No longer will clean blood be yours.⁴³² Unto you will be given only worn-out griddles and pots,⁴³³ only flimsy⁴³⁴ and brittle things.

⁴²⁹ lines 4640-4772

⁴³⁰ It was traditional in Mesoamerican societies to declare one’s name when a victory has been won in battle or when superiority has been established.

⁴³¹ This fulfills the prophecy of Lady Blood, in which she declared that the lords of Xibalba would no longer be allowed to receive human hearts in sacrifice but rather would have to accept the red sap of the croton tree (pp. 132-133; lines 2444-2445).

⁴³² The ancient Maya offered their own blood to the gods to give them a portion of their life force. This would be fresh, clean blood. Tedlock’s collaborator, Andrés Xiloj, commented that the Xibalbans are

“You shall surely eat only the creatures of the grass and the creatures of the wastelands. No longer will you be given the children of the light, those begotten in the light. Only things of no importance⁴³⁵ will fall before you.

“Only the sinner and the malevolent, the wretch and the molester who clearly have sinned, will be given to you. No longer will you be able to seize suddenly just any person.⁴³⁶ You will be called upon only over the sap of the croton,” they were told, all they of Xibalba.

Thus began their devastation, the ruin of their being called upon in worship. Their glory was not great in the past, for they wanted only conflict with the people of ancient times. Surely they were not true gods. Their names merely inspired fear, for their faces were evil.⁴³⁷ They were strife makers, traitors,⁴³⁸ and tempters to sin and violence.⁴³⁹ They were also masters of deception,⁴⁴⁰ of the black view and the white view. They were

allowed to collect only blood that has been spilled on the ground (through injury, illness, or violence), thus making it dirty (D. Tedlock 1996, 283 n. 138).

⁴³³ At the end of each ritual year, broken bits of pottery are left at shrines to symbolize the passing of one age to another. New pots and utensils represent a new beginning and an opportunity for a fresh start in life.

⁴³⁴ The adjective *ch'uch'* describes something that is soft and flimsy and thus unable to hold its shape.

⁴³⁵ According to Basseta, these are “things of no importance,” or “abandoned things.”

⁴³⁶ The Quichés believe that the lords of Xibalba have power only over those who have truly committed punishable offenses and have thus submitted themselves to the powers of the underworld.

⁴³⁷ *Itzel ki wach* may mean “evil their faces,” or “ugly their faces.”

⁴³⁸ *Aj tukur*. Basseta records that *ah tucur* (literally “owl master”) is “traitor.” The name may also refer to the inhabitants of the Alta Verapaz region, which was called the “land of the owls” or Tecolotlán (Recinos 1950, 114 n. 6).

⁴³⁹ *Lab'al* is “war, violence, offense.” In modern Quiché society it refers to a savage or violent person.

⁴⁴⁰ Literally “masters of the buried heart.”

called masters of harm⁴⁴¹ and vexation. Fundamentally their faces were hidden. Thus their greatness and glory were destroyed. Never again would their dominion become great. This was the accomplishment of Hunahpu and Xbalanque.⁴⁴²

Now at the same time, the Grandmother was weeping, crying out⁴⁴³ before the ears of unripe maize that had been left planted. They had sprouted, but then they dried up when they were burned in the pit oven. Then the ears of maize had sprouted once again, and the Grandmother had burned copal incense⁴⁴⁴ before them as a memorial. The heart of their grandmother rejoiced when the maize sprouted a second time.⁴⁴⁵

⁴⁴¹ *Mox wach* is “left face” or “crazy face.” In modern usage it may refer to insanity, however Coto and Basseta both relate this to “violence, harm, or mischief.”

⁴⁴² Las Casas recorded a similar myth that he collected in the Verapaz region of Guatemala: “Among other tales, they say that he [*Exbalanquén*], went to hell to make war, fought with all the people there, defeated them, and captured the king and many of his army. Upon his return to earth, *Exbalanquén* brought the king of hell with him, but when they were only three or four steps from the light, he begged not to be taken away; and so the victorious *Exbalanquén*, with much anger, gave him a kick and said to him, ‘Go back and may yours be all that is rotten, discarded, and stinks’” (Las Casas 1967, III, cxxiv, p. 650. Translation by author).

⁴⁴³ The verb roots in this couplet, *oq'* (to weep) and *sik'ij* (to call), when used together in this order imply fervent prayer, such as is done by priests at native altars (D. Tedlock 1996, 284 n. 139). As a goddess of fertility and the seasons, the weeping of Xmucane may have been associated by the Quichés with life-giving rains that helped the dry maizestalks to sprout again.

⁴⁴⁴ *Pom* (copal incense) is made from the resin of the *palo jiote* tree (*Bursera verrucosa*). Copal is still burned by the Quichés as an offering to both Christian and traditional Maya deities.

⁴⁴⁵ This incident is perhaps paralleled by contemporary agricultural practices among the highland Maya. The following is a description of a traditional planting ceremony as told by Nicolás Chávez Sojuel, a Tz'utujil Maya from Santiago Atitlán:

After preparing the ground, but before planting, four candles are placed at the corners of the maize field representing the four directions of the earth—in the east so that light will shine on the seeds; in the west so that the maize won't be burned by the sun; in the north so that the maize seed will be protected; and in the south so that the harvest will be abundant.... At the center he then places a special kind of maize ear called *yo'x* (twins) which splits at the end to form extra little cobs. These have been previously blessed by a shaman in the Confraternity of San Juan where the *ruk'ux' way* (heart of food) is kept in a wooden chest. many *yo'x* cobs hang from the ceiling there because that is where maize is born. These cobs are burned and their ashes are buried beneath the ground so that they can come back to life and make more maize (Christenson 2001, 117).

Thus they were deified by their grandmother. She named it Center House, Center Ancestral Plot,⁴⁴⁶ Revitalized Maize, and Leveled Earth.

She named it Center House and Center Harvest for it was in the very center of the interior of their home where they had planted the ears of maize.

She named it Leveled Earth and Revitalized Maize for it was upon level ground that the ears of maize had been planted. She named it Revitalized Maize because the maize had sprouted again. These names were given by Xmucane to what Hunahpu and Xbalanque had left planted. This was a memorial to them by their grandmother.

Now their fathers, One Hunahpu and Seven Hunahpu, had died long ago. They now went, therefore, to see the face of their father there at Xibalba. Their father spoke to them when Xibalba was defeated.

THE APOTHEOSIS OF THE SUN, MOON, AND STARS⁴⁴⁷

HERE now is the adornment of their father by them, along with the adornment of Seven Hunahpu. For they went to adorn them at Crushing Ballcourt.

They merely wanted his face to be restored. Thus they asked him to name everything—his mouth, his nose, and his eyes. He was able to recover the first name, but

The hole in the center of the maizefield into which the ashes of the *yo'x* maize cobs are buried is called the *rumuxux* (navel), the same name applied to a small hole in the nave of the town's church which the Tz'utujil believe to be an access point to the underworld realm of the dead. The Atiteco practice of first burning and then burying split cobs of maize, which they call "twins," recalls the history of the twins in the *Popol Vuh* who also descended into the underworld where they were burned to ashes and eventually rose to new life, parallel with the maize plants in the grandmother's household.

⁴⁴⁶ This reading is based on the work of Adrián Chávez, a prominent Quiché scholar who understood *b'ichok* as a *solar*, the Spanish word for an ancestral dwelling, or the plot of land once owned by ancestors (Chávez 1997, 63).

⁴⁴⁷ lines 4773-4821

then little more was said. He did not say the corresponding names for that which is above the mouth.⁴⁴⁸ Still, this had been said, and thus they honored him.

Thus the heart of their father was left behind at Crushing Ballcourt. His sons then said to him:

“Here you will be called upon. It shall be so.”

Thus his heart was comforted.

“The child who is born in the light, and the son who is begotten in the light shall go out to you first. They shall worship you first. Your name shall not be forgotten.⁴⁴⁹ Thus be it so,” they said to their father when they comforted his heart.

“We are merely the avengers of your death and your loss, for the affliction and misfortune that were done to you.” Thus was their counsel when they had defeated all Xibalba.

Then they arose as the central lights. They arose straight into the sky. One of them arose as the sun, and the other as the moon. Thus the womb of the sky was illuminated over the face of the earth, for they came to dwell in the sky.

The four hundred boys who had died at the hands of Zipacna also rose up to become their companions. They became a constellation of the sky.

⁴⁴⁸ The skull of One Hunahpu would have had a mouth, but not a nose or eyes, which would have been only empty holes and sockets.

⁴⁴⁹ Hunahpu is one of the twenty named days of the Quiché calendar. It is dedicated especially to the memory of ancestors. When there is a death within the family, the patrilineage priest goes to the family shrine on a Hunahpu day that falls after the day of death to pray for the person's soul (La Farge and Byers 1931, 157-165, 173-175; Bunzel 1952, 280; Schultze-Jena 1954, 71; B. Tedlock 1982, 124-125; D. Tedlock 1996, 286 n. 141). Hunahpu days are also the chosen times to visit the graves of relatives and leave offerings of food, drink, flower petals, or incense. The twins are instituting this practice, beginning with the burial place of One Hunahpu himself.

THE CREATION OF HUMANITY⁴⁵⁰

THIS, then, is the beginning⁴⁵¹ of the conception of humanity, when that which would become the flesh of mankind was sought.⁴⁵² Then spoke they who are called She Who Has Borne Children and He Who Has Begotten Sons, the Framer and the Shaper, Sovereign and Quetzal Serpent:

“The dawn approaches, and our work is not successfully completed. A provider and a sustainer have yet to appear—a child of light, a son of light. Humanity has yet to appear to populate the face of the earth,” they said.

Thus they gathered together and joined their thoughts in the darkness, in the night. They searched and they sifted. Here they thought and they pondered. Their thoughts came forth bright and clear. They discovered and established that which would become the flesh of humanity. This took place just a little before the appearance of the sun, moon, and stars above the heads of the Framer and the Shaper.

THE DISCOVERY OF MAIZE⁴⁵³

IT was from within the places called Paxil⁴⁵⁴ and Cayala⁴⁵⁵ that the yellow ears of ripe maize and the white ears of ripe maize came.⁴⁵⁶

⁴⁵⁰ lines 4822-4861

⁴⁵¹ Literally “planting.”

⁴⁵² The Aztecs of Precolumbian Central Mexico believed that the earth had passed through five separate creations, each with the intent of forming beings capable of human expression. Only the fifth and final attempt was successful. *The Annals of Cuauhtitlán* records the Aztec version of the fifth creation: “Thus it is told, it is said: There have already been four manifestations and this one is the fifth age. So the old ones knew this, that in the year 1-Rabbit heaven and earth were founded. And they knew this, that when heaven and earth were founded there had already been four kinds of men, four kinds of manifestations. Also they knew that each of these had existed in a Sun, an age” (León-Portilla 1980, 137). The *Popol Vuh* is consistent with this tradition in describing five separate creation attempts—the mountains and rivers, the animals and birds, the mud person, the wooden effigies, and now humankind.

⁴⁵³ lines 4862-4939

THESE were the names of the animals that obtained their food⁴⁵⁷—fox and coyote,⁴⁵⁸ parakeet and raven.⁴⁵⁹ Four, then, were the animals that revealed to them the yellow ears of maize and the white ears of maize. They came from Paxil and pointed out the path to get there.

Thus was found the food that would become the flesh⁴⁶⁰ of the newly framed and shaped people. Water was their blood.⁴⁶¹ It became the blood of humanity. The ears of

⁴⁵⁴ *Paxil* means “broken, split, or cleft.” Father Coto wrote that it refers in particular to the breaking in two of an ear of maize. *Paxil* is described as an “excellent mountain” filled with the maize that would eventually be used to form the flesh of humanity (p. 194; lines 4886-4889). This was a widespread belief in ancient Mesoamerica, particularly among the Maya (Freidel, Schele, and Parker 1993, 138-139). According to the Central Mexican *Codex Chimalpopoca*, it was Quetzalcoatl himself who brought the first maize out of the mountain Tonacatepetl (the mountain of our flesh or our sustenance) from which he created the first men (León-Portilla 1980, 122 n. 42). The Pipil of Guatemala relate that maize was discovered when the mountain in which it was hidden was split open by the youngest of the rain dwarfs (Schultze-Jena 1935, 31-33). Contemporary Mam still identify one of their local mountains as Paxil, saying that it is “where a flea brought the first grains of maize through a narrow crevice to give their ancestors corn” (Wagley 1941, 20; Oakes 1951, 244; Watanabe 1992, 67).

⁴⁵⁵ *K'ayala'* means “bitter or stagnant water.” This is perhaps related to the notion of the primordial waters of creation which the highland Maya often associate with seawater or brackish ponds, out of which the first mountains emerged. Among modern Quichés, *k'ayala'* is the water mixed with lime that women use to add to ground maize dough (Akkeren, personal communication).

⁴⁵⁶ These are the dry ears of maize, ready for harvest. Colors carry great symbolic significance in highland Maya theology. Yellow is associated with the south, misfortune, death, and the dry season (Gossen 1974, 33; Tam and Prechtel 1990, 75; Watanabe 1992, 131, 232 n. 6; Carlsen and Prechtel 1994, 85, 92). White is associated with the north, new life, and the rainy season. This passage may therefore refer to the inauguration of the agricultural cycle of harvest and new growth. This maize ultimately is used to create the flesh of mankind. As a result, the color of the grains may presage man’s destiny to live and die in endless cycles. Modern Quichés also see yellow and white corn as representing female and male identities. Thus at Chichicastenango yellow and white ears are never left lying together to dry in the patio lest they “cohabit” and produce speckled offspring (Bunzel 1952, 45, 50). This passage may thus suggest that the different colored ears will be used to produce the flesh of males and females.

⁴⁵⁷ The word *echa'* (food) refers to the principal or staple food upon which a person or animal depends for survival. In the case of the Quichés this would be maize, by far the most important part of their diet.

⁴⁵⁸ Both the fox and coyote are cunning nocturnal animals that the Quichés associate with discovering and digging up hidden or secret things.

⁴⁵⁹ The bright blue/green parakeet may be connected with the blue sky of day as well as the living green of growing maize. The black raven, in contrast, represents the darkness of night and the interior of the earth where the maize seed is planted, germinates, and first begins to grow.

maize entered into their flesh by means of She Who Has Borne Children and He Who Has Begotten Sons.

Thus they rejoiced over the discovery of that excellent mountain that was filled with delicious things, crowded with yellow ears of maize and white ears of maize. It was crowded⁴⁶² as well with pataxte⁴⁶³ and chocolate, with countless zapotes⁴⁶⁴ and anonas,⁴⁶⁵ with jocotes⁴⁶⁶ and nances,⁴⁶⁷ with matasanos⁴⁶⁸ and honey.⁴⁶⁹ From within the places

⁴⁶⁰ When a male child was born, the seventeenth century Maya of Guatemala burned blood shed from its severed umbilical cord and passed an ear of maize through the smoke. The seeds from this ear were then planted in the child's name in a specific area of the maize field. Parents used the maize from this small patch of land to feed the child "until he reached the age when he could plant for himself, saying that thus he not only ate by the sweat of his brow but of his own blood as well" (Fuentes y Guzmán 1932-33, I.281. Translation by author). Mothers in Santiago Atitlán place an ear of maize into the palm of their newborns and eat only dishes made from maize while breast-feeding to ensure that the child grows "true flesh." Once the child is weaned, it is given only food prepared with maize for several months. The Quichés refer to themselves as *qas winaq* (true people) and consider that they are literally of a different flesh than those who do not eat maize. Fuentes y Guzmán noted the extreme importance of maize in the cultural life of the Maya: "Everything they did and said so concerned maize that they almost regarded it as a god. The enchantment and rapture with which they look upon their maize fields is such that on their account they forget children, wife, and any other pleasure, as though the maize fields were their final purpose in life and the source of their happiness (1932-33, I.xii.3. Translation by author).

⁴⁶¹ Humankind is distinguished by having blood, in contrast to the wooden effigies, which lacked it (cf. p. 84; lines 664-665).

⁴⁶² *Tzatz* means "thick," like a particularly concentrated beverage or porridge. It is also used to refer to a room crowded with people or a chest tightly packed with objects.

⁴⁶³ *Pataxte* (*Theobroma bicolor*) is an inferior grade of cacao (from which chocolate is made) used to sweeten foods and drinks, such as the maize-based drink *chorote*. Its name is derived from the Nahuatl *pataxtli*.

⁴⁶⁴ The *zapote* (*Lucuma mammosa*) is a sweet tropical fruit which grows in warm, lowland areas of southeastern Mexico as well as the Guatemalan coast. It is oblong in shape, measuring 10-15 cm in length. Its skin is tough and brownish-red, while its meat varies from dark red to brown and has a delicious, aromatic flavor. Based on Quiché traditions of its association with the creation and because of its abundant fruit, Father Domingo de Vico chose the *zapote* to represent the paradisiacal Tree of Life in his writings (Carmack and Mondloch 1983, 207-208).

⁴⁶⁵ The *anona* is the collective name for a variety of tropical fruits of the genus *Anona*. It has a yellowish-green skin with a very sweet yellowish-white pulp and black seeds.

⁴⁶⁶ *Spondias purpurea*. A species of sour yellow plum. Its Spanish name, *jocote*, is derived from the Nahuatl *xocotl* (sour).

⁴⁶⁷ *Byrosinima crassifolia*. A smooth, yellow fruit about the size of a cherry.

called Paxil and Cayala came the sweetest foods in the citadel. All the small foods and great foods were there, along with the small and great cultivated fields. The path was thus revealed by the animals.

The yellow ears of maize and the white ears of maize were then ground fine with nine grindings⁴⁷⁰ by Xmucane.⁴⁷¹ Food entered their flesh, along with water to give them strength.⁴⁷² Thus was created the fatness of their arms. The yellowness⁴⁷³ of humanity came to be when they were made by they who are called She Who Has Borne Children and He Who Has Begotten Sons, by Sovereign and Quetzal Serpent.

Thus their frame and shape were given expression⁴⁷⁴ by our first Mother and our first Father. Their flesh was merely yellow ears of maize and white ears of maize.⁴⁷⁵ Mere food were the legs and arms of humanity, of our first fathers. And so there were four who were made, and mere food was their flesh.

⁴⁶⁸ *Casimiroa edulis*. A sour tropical fruit.

⁴⁶⁹ Honeybees were domesticated by the ancient Maya and are still raised by the Quichés, particularly in the mountain villages surrounding Momostenango.

⁴⁷⁰ Maize is usually ground two to four times, depending on the fineness of flour or meal desired. To grind the maize nine times would make an extremely fine consistency of flour. The number also carries great ritual significance to the Maya, being the number of moons (months) required to form a human child in the mother's womb.

⁴⁷¹ Xmucane acts as the creative power that prepares the maize dough and forms it into a suitable framework to contain the essence of mankind. This is the only instance in which Xmucane acts alone in a creative act without her consort Xpiyacoc. The unique ability of the female to form living flesh is thus emphasized.

⁴⁷² *Openal* is "vigor, strength, force, energy."

⁴⁷³ *Q'anal* (yellowness) is a metaphor for "abundance, richness, health." In this case it is likely a metaphor for fatness, paralleling the previous line (Mondloch, personal communication).

⁴⁷⁴ Literally "placed in words," an indication that the creators were able to bring their creation to successful completion by means of expressing words, just as in the creation of the earth at the beginning of the account.

⁴⁷⁵ In Nahuatl, the language of the Aztecs, "our flesh" is *tonacoyotl*, which is a phrase also used to refer to "maize" (León-Portilla 1980, 122 n. 41).

THE FIRST FOUR MEN⁴⁷⁶

THESE are the names of the first people who were framed and shaped: the first person was Balam Quitze,⁴⁷⁷ the second was Balam Acab,⁴⁷⁸ the third was Mahucutah,⁴⁷⁹ and the fourth was Iqui Balam.⁴⁸⁰ These, then, were the names of our first mothers and fathers.⁴⁸¹

⁴⁷⁶ lines 4940-4947

⁴⁷⁷ *B'alam Quitze*. *B'alam* is a relatively common Maya name, even today. In its most literal sense, *b'alam* means “jaguar”; however, when used as a title, it carries with it a host of implicit meanings. Because of the nature of the jaguar as the largest and fiercest animal of the Guatemalan jungle, *b'alam* is used to refer to anything powerful or mighty. The ancient Maya believed that four *balams* acted as supernatural protectors in the night (Roys 1967, 152 n. 8). *B'alam* is also the title used by Itzá-Maya priests who continued to worship the ancient gods after the introduction of Christianity (Roys 1967, 163 n. 2). In addition, *balam* is sometimes used to refer to priests or rulers with unusual spiritual or magical powers. *Kitze* appears to be the Mam form of *K'iche'*, meaning “forest,” and the Mam may have played a decisive role in the founding of the Quiché confederation (Akkeren 2000, 155). Thus the name of this progenitor may mean something like “Jaguar Forest,” “Jaguar Quiché,” or “Mighty Quiché.” The etymology of all the progenitors’ names is obscure, however, and I have therefore chosen to leave them untranslated. Balam Quitze was the ancestor of the most powerful Quiché lineage, the Cavecs, from which the *ah pop*, or principal lord, was chosen.

⁴⁷⁸ *B'alam Aq'ab'*. “Jaguar Night” or “Mighty Night.” Ancestor of the Nihaib lineage of the Quichés.

⁴⁷⁹ *Majukutaj*. The meaning of the name of this progenitor is problematic. Carmack believes that it is derived from the lowland Maya word for “Traveler,” or “One Who Does Not Stay” (Carmack 1981, 49). Tedlock translates it as “Not Right Now” based on the Quiché *ma*, “not,” and *jukotaj*, “right away/in a moment” (Basseta). Akkeren (personal communication) suggests that the name is derived from the Mam *jukotaj* (elder, eminent one). Coto lists *hu cotah* as “one crown, ring, or similar round object” (Coto 1983, 474). In many highland Maya languages, such as Tz’utujil, the prefix *Ma* may be honorific, meaning something like “mister, or sir.”

⁴⁸⁰ *Ik'i B'alam*. If this name is derived from lowland Maya languages, which is probable, it would be read as “Black/Dark Jaguar.” If it is derived from Quiché, it should likely be read as *Iq'i B'alam*, “Wind Jaguar” or “Wind Mighty.” No lineage was founded by this man. Although the *Popol Vuh* names his wife as Caquixaha, the *Titulo Totonicapán* records that he had no wife and therefore had no offspring (Carmack and Mondloch 1983, 175).

⁴⁸¹ Although the four progenitors were male, they are referred to as “our first mothers and fathers.” In modern Quiché communities, the highest ranking and most revered patriarchs hold the title of *chuch-qajawab* (mother-fathers) and are charged with the spiritual well-being of entire family lineages or villages.

THE MIRACULOUS VISION OF THE FIRST MEN⁴⁸²

IT is said that they were merely given frame and shape. They had no mother. They had no father. They were merely lone men, as we would say. No woman gave them birth. Nor were they begotten by the Framer or the Shaper, by She Who Has Borne Children or He Who Has Begotten Sons. Their frame and shape were merely brought about by the miraculous power and the spirit essence of the Framer and the Shaper, of She Who Has Borne Children and He Who Has Begotten Sons, of Sovereign and Quetzal Serpent.

Thus their countenances appeared like people. People they came to be. They were able to speak and converse.⁴⁸³ They were able to look and listen. They were able to walk and hold things with their hands. They were excellent and chosen⁴⁸⁴ people. Their faces were manly in appearance. They had their breath, therefore they became. They were able to see as well, for straightaway their vision came to them.

Perfect was their sight, and perfect was their knowledge of everything beneath the sky. If they gazed about them, looking intently, they beheld that which was in the sky and

⁴⁸² lines 4948-5010

⁴⁸³ The Maya perceive themselves as “maize people” and foreigners who eat bread as “wheat people.” Maya language is intimately bound with this concept. To be a *qas winaq* (true person) and speak the Maya language properly, a person must eat maize. This notion implies that the power of human speech is not merely a means of communication that may be imitated by memorizing grammar and vocabulary, but a function of the physical essence of the Maya as a people. Vogt noted the belief among the Tzotzil-Maya of Chiapas that “unless people eat maize tortillas, they are never fully socialized, nor can they ever speak BAZ’IK’OP (real word—the Tzotzil language) (Vogt 1976, 50). When I first began working as an ethnographer in Quiché communities, I found it curious that when I struck up a conversation in the Quiché language with someone I didn’t know, that person would sometimes interrupt me in mid-sentence and ask what I ate, specifically if I ate tortillas or bread. When I affirmed that I ate what they ate, including tortillas, they would nod as if that explained a great deal. After a number of such experiences I asked a friend why people were curious about what I ate. He replied, “I’ve never heard of anyone that isn’t Maya that can speak our language. I wondered if it was because you ate maize from here. If so then you have the flesh of the ancestors in your flesh and therefore can speak what they spoke.”

⁴⁸⁴ *Cha’om* (chosen), in the sense of being “beautiful” in appearance or “pure” (Coto).

that which was upon the earth. Instantly they were able to behold everything. They did not have to walk to see all that existed beneath the sky. They merely saw it from wherever they were. Thus their knowledge became full. Their vision passed beyond the trees and the rocks, beyond the lakes and the seas, beyond the mountains and the valleys. Truly they were very esteemed people, these Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam.

THE GRATITUDE OF THE FIRST MEN⁴⁸⁵

THEN the Framer and the Shaper asked them: “What is the nature of your existence? Do you know⁴⁸⁶ it? Do you not look and listen? Are not your speech and your walk good? Behold now, therefore, and see that which is beneath the sky. Are not the mountains clear? Do you not see the valleys? Try it then,” they were told.

Thus their vision of everything beneath the sky was completed, and they gave thanks to the Framer and the Shaper:

“Truly we thank you doubly, triply that we were created, that we were given our mouths⁴⁸⁷ and our faces.⁴⁸⁸ We are able to speak and to listen. We are able to ponder and

⁴⁸⁵ lines 5011-5071

⁴⁸⁶ *Na'* is “to know, sense, feel.” For the Quichés, *to know* and *to sense* something are the same concept. Thus the creators ask the first humans about their knowledge by determining what they see, hear, and feel.

⁴⁸⁷ Literally “we were mouthed.” In receiving their mouths, the Quiché progenitors thank the creator gods for giving them the means of expressing themselves. It is the ability to speak with intelligible words that distinguishes these new creations from the animals and the failed attempts at humanity which had previously been destroyed.

⁴⁸⁸ Literally “we were faced.” In Quiché, *wach* (face, countenance) carries the connotation of individual “self.” If something is pleasing to a person, it is said to “fall well upon the face” (*utz kaqaj chuwach*). To ask, “How are you?” the question would be phrased, “Is it good your face?” (*La utz a wach?*). Thus the first people thank the gods for having given them their identity, or sense of self. It is also intimately tied to vision. In the previous section, the first men’s extraordinary vision is what gave them their ability to gain knowledge.

to move about. We know much, for we have learned that which is far and near. We have seen the great and the small, all that exists in the sky and on the earth. We thank you, therefore, that we were created, that we were given frame and shape. We became because of you, our Grandmother, and you, our Grandfather,” they said when they gave thanks for their frame and shape.

Their knowledge of everything that they saw was complete—the four corners and the four sides, that which is within the sky and that which is within the earth.

But this did not sound good to the Framer and the Shaper:

“It is not good what they have said, they that we have framed and shaped. They said, ‘We have learned everything, great and small.’”

THE DISPLEASURE OF THE GODS⁴⁸⁹

THUS their knowledge was taken back by She Who Has Borne Children and He Who Has Begotten Sons:

“What now can be done to them so that their vision reaches only nearby, so that only a little of the face of the earth can be seen by them? For it is not good what they say. Is not their existence merely framed, merely shaped? It is a mistake⁴⁹⁰ that they have become like gods.

“But if they do not multiply or are increased, when will the first planting be? When will it dawn? If they do not increase, when will it be so? Therefore we will merely undo them a little now. That is what is wanted, because it is not good what we have found

⁴⁸⁹ lines 5072-5115

⁴⁹⁰ *Lab'e* is a “mistake, error, or bad omen.”

out. Their works will merely be equated with ours. Their knowledge will extend to the furthest reaches, and they will see⁴⁹¹ everything.”

Thus spoke Heart of Sky and Huracan, Youngest Thunderbolt and Sudden Thunderbolt, Sovereign and Quetzal Serpent, She Who Has Borne Children and He Who Has Begotten Sons, Xpiyacoc and Xmucane, the Framer and the Shaper, as they are called. Thus they remade the essence of that which they had framed and shaped.

THE CREATION OF THE MOTHERS OF THE QUICHÉ NATION⁴⁹²

THEIR eyes⁴⁹³ were merely blurred by Heart of Sky. They were blinded like breath upon the face of a mirror. Thus their eyes were blinded. They could see only nearby; things were clear to them only where they were.⁴⁹⁴ Thus their knowledge was lost. The wisdom of the first four people was lost there at their foundation, at their

⁴⁹¹ *Kilon* (they see). This form of the verb also has the implied meaning of “acquire, attain.”

⁴⁹² lines 5116-5360

⁴⁹³ *U b'aq' ki wach* (its seed their faces) refers to the eyes. Thus the gods clouded the eyes of the first men so that their vision would be limited.

⁴⁹⁴ Although the creator gods eventually clouded the vision of the first men, the progenitors of the Maya and their descendants nevertheless believe themselves to bear within their blood the potential for divine sight. Present-day *aj q'ij* priests believe that their divine ancestors, who set the pattern for contemporary rituals, continue to operate through them as conduits. It is this ancestral vision that allows the *aj q'ij* to “see” beyond the limits of time and distance. Evon Vogt noted that the Tzotzil-Maya of Zinacantan believe that anciently their people could see inside sacred mountains where the ancestors live. Today only shamans are recognized to have this ability (Vogt 1993, 205). Among the Maya there is no institutional religion to sanction the qualification of a person to become an *aj q'ij*. Every Maya man and woman potentially has this ability because it is inherent in their blood. The approach that experienced *aj q'ij* priests take in training their apprentices is to teach how to interpret signs and spirit communication, often described as lightning in the blood, that they had always received since young childhood but had not the experience to understand properly. In other cases, the *aj q'ij* receives no formal training. This account is from an *aj q'ij* from Santiago Atitlán: “When I was born, I already knew how to do these things. I had no teacher. I speak with the ancestors and ancient kings and they speak with me. They help me to know how to heal and solve problems for people.” Non-Maya do not necessarily have this kind of ability, because their blood does not originate from the same visionary ancestral source. In my own experience working with *aj q'ij* priests in Momostenango in the late 1970s, my frequent displays of ineptitude in learning divinatory and calendric skills was interpreted as the lack of Maya blood in my veins. I was not able to see with ancestral vision in the same way because I had a different lineage, likely not a very divine one.

beginning.⁴⁹⁵ Thus were the framing and the shaping of our first grandfathers and fathers by Heart of Sky and Heart of Earth.

Then their companions, their wives, also came to be.⁴⁹⁶ It was the gods alone who conceived them as well. As if it were in their sleep they received them. The women were truly beautiful who were with Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam. Thus when the men were brought to life, their wives truly came to be as well. At once their hearts rejoiced because of their mates.

These, then, are the names of their wives: Cahapaluna⁴⁹⁷ was the name of the wife of Balam Quitze. Chomiha⁴⁹⁸ was the name of the wife of Balam Acab. Tzununiha⁴⁹⁹ was

⁴⁹⁵ *U xe', u tikarib'al* (their root, their planting).

⁴⁹⁶ Marriage is considered essential in highland Maya society. No significant office may be held by a man or woman who is not married: "Only a married man is regarded as a complete person. On all strictly formal occasions, such as the rituals in the *cofradías* a man is invariably accompanied by his wife, even when the woman has no part in the ceremonies.... An extreme expression of this sentiment of unity between husband and wife is found in the initiation ceremonies of a *chuchqajau* ["mother-father," the principal priest within a lineage]. The profession of *chuchqajau* is a sacred profession; the practitioner must have a vocation which has been manifested in dreams and in sickness, he is believed to have personal occult power in divination. But at the concluding ceremonies in which the sacred bundle is finally delivered and the final sacrifices are performed, his wife participates in all the ceremonies, not as an assistant, but as an initiate. Throughout the ceremonies they are referred to as 'the young couple who are to receive the *vara* [sacred bundle]'" (Bunzel 1952, 122-123; cf. B. Tedlock 1982, 85). The death of one spouse causes significant "soul loss" for the other, often resulting in the widow or widower following their loved one to the grave soon after. Note that the creation of the world itself was carried out by the joint efforts of the female Xmucane and the male Xpiyacoc. They are not described as carrying out separate roles, but acting in concert and speaking with one voice (see pp. 62, 79-82, 200).

⁴⁹⁷ *Kaja Palu Na* (Sky Sea House). The *Título Totonicapán*, also composed in the sixteenth century by Quiché scribes, lists this wife's name as *Cakapaluma* (*Kaqa Paluma*, "Red Sea Turtle") (Carmack and Mondloch 1983, 175). Each of the wives of the progenitors include the word for "house" in their names, indicating that each is the founder of a lineage group. It is perhaps significant that Cahapaluna uses the lowland Maya spelling of the word for house, *na*, rather than the Quiché form of the word, *ja*. The preservation of this spelling may indicate the dimly recalled memory of the royal marriage of their most important Quiché ancestor with a royal princess from lowland Maya lands.

⁴⁹⁸ *Chomi Ja* (Shrimp House). This reading is based on *chom*, "shrimp, large thing, thick thing" (Basseta). If the reading of "shrimp" here is correct, it would parallel the "sea turtle" name of the previous wife based on the account in the *Título Totonicapán* (Carmack and Mondloch 1983, 175).

⁴⁹⁹ *Tz'ununi Ja* (Hummingbird House).

the name of the wife of Mahucutah. Caquixaha⁵⁰⁰ was the name of the wife of Iqui Balam. These, therefore, were the names of their wives, they who came to be our rulers. These were they who multiplied the nations both small and great.

This, therefore, was our foundation, we the Quiché people. There were many who came to be bloodletters⁵⁰¹ and sacrificers.⁵⁰² There are no longer merely four now, but four were the mothers of the Quiché people. Each of the people had different names when they multiplied there in the East. Truly these became the names of the people—Sovereign, Ballplayer,⁵⁰³ Masker,⁵⁰⁴ and Sun Lord.⁵⁰⁵ These are the titles of the people. It was there in the East that they multiplied.

⁵⁰⁰ *Kaqixa Ja* (Macaw House). No lineage group was founded by this couple. According to the *Título Totonicapán*, Caquixaha was the wife of Mahucutah, the third progenitor, while Iqui Balam was unmarried (Carmack and Mondloch 1983, 175). This is also the name of a Cakchiquel lineage.

⁵⁰¹ *Aj k'ixb'* may literally be translated as “he of the spines”; however, it refers here to the practice of letting blood by auto-sacrifice, paralleling the performance of sacrifice in the next line of the couplet. This was generally accomplished with a sharp spine, such as the tip of a maguey leaf or a stingray spine. Like most Mesoamerican groups, the ancient Maya offered their own blood as an offering to the gods. They believed that by so doing they returned a portion of their life force to the powers of the cosmos. Colonial dictionaries also gloss this as “penitent, confessor, shameful persons.” Such auto-sacrificial acts were performed in an effort to cleanse impurities as a penitential ritual. Although auto-sacrifice is no longer performed, this concept of doing penance, confession, and pleading for cleansing of personal impurities accompanies most offerings of candles, incense, flowers, sacrificed animals, etc. in modern-day Quiché rituals.

⁵⁰² *Aj k'ajb'* (sacrificers). *K'ajb'* is specifically blood sacrifice. Coto lists the word as referring to the type of human sacrifice performed by the Maya prior to the Spanish Conquest, but it may also be a sacrifice of one's own blood (Coto 1983, 502-503). A related verb may be *k'ajij* (to wound the knee). When the progenitors perform auto-sacrifice before their gods, it is by pricking their ears and their elbows. Thus this term and the one that precede it likely refer to auto-sacrificial rites whereby a person's own blood is offered to deity. Ximénez translates *k'ajb'* as “punishment.” The related word in Classic Maya texts, *ch'ahb'*, has two related meanings with regard to war contexts. In one sense, it refers to the punishment of captives, and at the same time the notion that captives destined for sacrificial death represent a kind of penitence by proxy. Thus Classic Maya lords saw in the person of the war captive their own penance and self-denial. In this way bloodletting and sacrifice represent a kind of penitence by proxy (Stephen D. Houston, private communication). Sacrificial victims were thus seen by the ancient Maya as substitutions for the sacrificer in payment for penitential blood debt (Taube 1994, 669-74).

⁵⁰³ *Oloman* (place of rubber) is derived from the Nahuatl word for rubber, *ol* (Campbell 1983, 84). I base my reading on the fact that for the Quiché, rubber and the rubber ball used in their games is the same word, *kik'*. There is likely a lineage component here as well, indicating that the ancestors of the Quichés came from, or were related in some way to people who inhabited, the “Place of Rubber.” At the time of the

The beginning of the Tamub and the Ilocab⁵⁰⁶ is known. As one they came from there in the East.

Balam Quitze was the grandfather, the father of nine great houses of the Cavecs.⁵⁰⁷ Balam Acab was the grandfather, the father of nine great houses of the Nihaibs. Mahucutah was the grandfather, the father of four great houses of Ahau Quichés. Thus there were three divisions of lineages⁵⁰⁸ that existed. The names of their

conquest, this was the name commonly used by Nahua speakers to refer to the southern coast of the Gulf of Mexico. Schele and Mathews suggest that the Oloman are related to the Olmeca-Xicalanca, a group centered in the Gulf Coast region who conquered Cholula in the eighth century (Historia Tolteca-Chichimeca), and built Cacaxtla (perhaps Xochicalco as well) as their capital (Schele and Mathews 1998, 293, 383 n. 4).

⁵⁰⁴ Masks were used by the Quichés in many of their ceremonies and are still worn in ritual dances. By wearing the mask of a god or legendary hero, the dancer takes upon himself the character and power of that figure.

⁵⁰⁵ *K'enech Ajaw* (Yucatec: “Sun-eyed/faced Lord”) is the Lowland Maya title given to the principal sun deity (Thompson 1970, 207, 228-229; Morley, Brainerd, and Sharer 1983, 470; Taube 1992, 50-56; Miller and Taube 1993, 106). *K'enech Ajaw* symbolized the sun’s daily journey across the sky and had been closely associated with the various Maya royal dynasties for more than a thousand years (Miller and Taube 1993, 106; Baudez 1996). In contemporary Yucatán, a deified ruler named Kinich Kakmo (Sun-faced Fire Macaw) was remembered as the founding ancestor of Izamal (Roys 1967, 82, 160 n. 2; Craine and Reindorp 1979, 83-84 n. 78). Apparently, Quiché lords also saw themselves as earthly manifestations of the sun deity. The use of this archaic, non-Quiché title may indicate the antiquity of the concept as well as the origins of its Cavec authors.

⁵⁰⁶ At the time of the Spanish conquest, there were three main branches of Quiché people: The ruling Nima Quichés (Great Quichés), descendants of the four first human beings just mentioned. They consisted of the Cavec, Nihaib, Ahau Quichés, and the Zaquic; the Tamub Quichés who lived in the area between Santa Cruz el Quiché and Patzite; and the Ilocab Quichés near present-day San Antonio Ilotenago (Carmack and Mondloch 1983, 309 n. 15). The *-ab* suffix in Ilocab functions as a pluralizer, however, I have chosen not to write the name of this lineage as “Ilocs” because the original derivation of the name is likely *ilolkab'* (beekeeper), an occupation characteristic of this group (Akkeren, personal communication).

⁵⁰⁷ There were three major divisions of ruling Nima Quichés (Great Quichés), each descendants of one of the progenitors—the Cavecs, descendants of Balam Quitze who became the dominant ruling lineage of the Quichés centered at their capital at Cumarcah; the Nihaib (or Nim Haib—Great Houses), descendants of Balam Acab who settled the area of Momostenango; and the Ahau Quichés (Lord Quichés), descendants of Mahucutah. The *Popol Vuh* does not mention any descendants for the last progenitor, Iqui Balam, although a fourth lineage group of Nima Quichés, the Zaquic, is sometimes mentioned. Their founding ancestor is not named in the *Popol Vuh* text.

⁵⁰⁸ *Chinamit*. This is a Nahua-derived word meaning literally “fence,” although it is used to in the Maya highlands as “lineage, family, tribe, or confraternity” (Campbell 1970, 3).

grandfathers and their fathers were not forgotten—they who multiplied and proliferated there in the East.

The Tamub and the Ilocab came as well, along with the thirteen allied nations, the thirteen houses:⁵⁰⁹ The Rabinals,⁵¹⁰ the Cakchiquels,⁵¹¹ and the Ah Tziquinahs,⁵¹² as well as the Zacahs⁵¹³ and the Lamacs,⁵¹⁴ the Cumatz⁵¹⁵ and the Tujalhas,⁵¹⁶ the

⁵⁰⁹ *Tecpan*. This is a Nahuatl term meaning “house,” or “royal palace” (Carmack and Mondloch 1983, 233 n. 191). Metaphorically it may also refer to a noble or royal line, as well as the town in which it resides. The remaining groups are non-Quichés, but related highland Maya groups. The principal alliance consisted of four groups—the Quichés, Rabinals, Cakchiquels, and Ah Tziquinahs. The Rabinals live in the area surrounding the modern town of Rabinal.

⁵¹⁰ *Rab'inal*. Akkeren (2000, 248; cf. Campbell 1983, 82) translates the name of this lineage as “Place of the Lord’s Daughter,” based on the Kekchi *rab'in* (daughter of male/princess) and *-al* (place of). Their principal center of occupation was in the area around present-day Rabinal.

⁵¹¹ At the time of the Spanish conquest, the Cakchiquels were centered at their capital city of Iximché. The Tlaxcalan allies of the Spaniards called this citadel *Quauhtemallan*, from which the present-day name of the country, Guatemala, is derived.

⁵¹² *Aj Tz'ikina Ja* (They of the Bird House) was the dominant lineage of the people today known as the Tzutuhils, who occupied the land from the southern shores of Lake Atitlán south to the cacao-growing land of the Pacific Coast. Their capital was Chiya' (now called Chutinamit), located on a small hill at the base of San Pedro Volcano just across the bay to the northwest of the modern community of Santiago Atitlán. The group was likely composed of two separate lineage groups (the *Ah Tziquinahs* and the *Tzutuhils*), which were at times openly hostile to one another (Orellana 1984, 81; Carlsen 1997, 75). The authors of the *Annals of the Cakchiquels* stated that the Tzutuhils succeeded in temporarily expelling the Ah Tziquinahs from their citadel south of Lake Atitlán in 1521 (Recinos and Goetz 1953, 117).

⁵¹³ *Saq Aj* (White Ear of Unripe Maize).

⁵¹⁴ The Lamacs, like the Cumatz with whom they are paired in this passage, apparently settled the area of present-day Sacapulas (Recinos 1950, 171 n. 6; Fox 1978, 76). There is a site known as Lamak-Zacapulas approximately five leagues north of Sacapulas (Villacorta and Villacorta 1930, 94; Fox 1978, 90).

⁵¹⁵ *Kumatz* (Serpent). The Cumatz also settled near the present-day town of Sacapulas (Recinos 1950, 171 n. 6). The Cumatz settlement may be the site of Chutixtiox, located on a hill at the center of the Sacapulas basin approximately three kilometers west of the modern town of Sacapulas (Fox 1978, 71-77). The Cumatz were subjugated by the Quichés early in the fifteenth century as part of Lord Quicab’s campaign of expansion (Recinos and Goetz 1953, 93; Recinos 1957, 141).

⁵¹⁶ The *Tujal Ja* (Sweatbath House) occupied the area surrounding the modern community of Sacapulas (Recinos 1950, 171 n. 6; Fox 1978, 76). Fox suggests that the settlement of this lineage may be identified with the ruins of Chutinamit, located just across the river and north of present-day Sacapulas, which once controlled the valuable salt springs nearby (Fox 1978, 81). The Tujalhas were conquered by Lord Quicab in the early fifteenth century at the same time as the rest of the Sacapulas Valley (Recinos and Goetz 1953, 93; 1957, 141-143; Carmack 1973, 369-371).

Uchabahas⁵¹⁷ and the Ah Chumilahas,⁵¹⁸ along with the Ah Quibahas⁵¹⁹ and the Ah Batenahas,⁵²⁰ the Acul Vinacs⁵²¹ and the Balamihis,⁵²² the Can Chahels⁵²³ and the Balam Colobs.⁵²⁴

Of these we shall speak only of the nations that became great among the allied nations. They who became great we shall declare.⁵²⁵ There were many others that came out of the citadel after them, each one of them a division. We have not written their names, but they also multiplied there in the East. Many people arrived in darkness in the days of their increase, for the sun was yet to be born. There was no light in the days of their increase. They were all as one, crowded together as they walked there in the East. There was no one to provide for their sustenance. They would merely lift up their faces to the sky, for they did not know where to go.

⁵¹⁷ *U Ch'ab'a Ja*. The name of this lineage could be “House of Arrows” (based on *ch'ab'*), or “House of Speech” (based on *ch'ab'al*). These also settled somewhere in the Sacapulas valley (Recinos 1950, 171 n. 6). Fox suggests that their principle settlement was the site of Pacot, approximately nine kilometers west of Sacapulas at the far edge of the Sacapulas Valley (Fox 1978, 84-87).

⁵¹⁸ *Aj Ch'umila Ja* (They of the Star House).

⁵¹⁹ *Aj Q'ib'a Ja* (“They of the Clever House). *Q'ib'* is “sharp, clever, student.”

⁵²⁰ *Aj B'atena Ja* (They of the Ballgame Yoke House).

⁵²¹ *Akul Winaq* (Acul People).

⁵²² *B'alami Ja* (Jaguar House). This lineage is clearly identified as the inhabitants of Aguacatán in a 1739 land-dispute document (Carmack 1978, 207). Their principal Precolumbian settlement was Tenam, located approximately three kilometers east of Aguacatán (Fox 1978, 101-107). This area was conquered by Lord Quicab at the same time as his campaign in and around Sacapulas (Carmack 1953b, 188; 1957, 145).

⁵²³ *Kan Chajeleb'* (War Captive Guardians).

⁵²⁴ *B'alam Kolob'* (Jaguar Rope).

⁵²⁵ It is important to remember that the *Popol Vuh* was written by representatives of the Nima Quiché nobility and there was little attempt at objective “history” in the modern sense. The authors’ purpose in compiling this record is, at least in part, to bolster the legitimacy and traditions of their own lineages, often at the expense of their neighboring rivals.

This they did for a long time there among the magueys; among the black people and the white people, the people of many appearances and many tongues.⁵²⁶ They were destitute in their existence at the edge of the sky's foundation. And there were mountain people. They were hidden, and without homes. Only among the small mountains and the great mountains did they go. It is as if they were lacking in direction,⁵²⁷ as they used to say. It is said that in those days they quarreled with the mountain people.

There they looked for the coming forth of the sun, when they had one common language. They did not yet call upon wood or stone.⁵²⁸ They remembered the word of the Framer and the Shaper, of Heart of Sky and Heart of Earth, it was said. They would merely plead for their heartening, their sowing and their dawning.⁵²⁹ These were people of esteemed words, of esteem, of honor, and of respect.⁵³⁰ They would lift up their faces to the sky as they pleaded for their daughters and their sons:

“Alas, you, Framer, and you, Shaper: Behold us! Hear us! Do not abandon us. Do not allow us to be overthrown.⁵³¹ You are the god in the sky and on the earth, you, Heart

⁵²⁶ I take this passage to mean that the area in which the progenitors lived was cosmopolitan, with diverse ethnic and language groups. It is unlikely that this is a description of the Quichés themselves because in the next section they describe themselves as being unified, with a common language.

⁵²⁷ *Ch'u'j* refers to someone who is “wayward, erratic, insane, or mad.”

⁵²⁸ As described later in the text, the gods did not manifest themselves as wooden or stone images until after the first dawn (pp. 229-230; lines 6137-6140).

⁵²⁹ This triplet recalls the purpose of the creation in which the creator deities were described as “hearteners” or “they who remember” (p. 66 n.44; lines 83-85), providing the foundation for the ultimate “sowing” and “dawning” of mankind (p. 71; lines 196-197).

⁵³⁰ In the creation account, the gods hoped to be able to provide people on the earth who would “honor and respect” them (p. 78; lines 454-455). This is another indication that the progenitors fulfilled the requirements set forth by the gods that successful people should have the capacity to worship them in an appropriate manner. “Honor and Respect” were also the names given to the ballcourt of Hun Hunahpu (p. 119; lines 1969-1972).

⁵³¹ *Pisk'alij* is “to turn inside out” (Basset).

of Sky, Heart of Earth. May our sign, our word,⁵³² be given for as long as there is sun and light.⁵³³ Then may it be sown, may it dawn. May there be true life-giving⁵³⁴ roads and pathways. Give us steadfast light that our nation be made steadfast. May the light be favorable that our nation may be favored. May our lives be favored so that all creation⁵³⁵ may be favored as well. Give this to us, you, Huracan, Youngest Thunderbolt, and Sudden Thunderbolt,⁵³⁶ Youngest Nanavac and Sudden Nanavac,⁵³⁷ Falcon⁵³⁸ and Hunahpu,⁵³⁹ Sovereign and Quetzal Serpent,⁵⁴⁰ She Who Has Borne Children and He Who Has Begotten Sons,⁵⁴¹ Xpiyacoc and Xmucane, Grandmother of Day and Grandmother of Light.⁵⁴² Then may it be sown. Then may it dawn,” they said.

⁵³² *Etal* (sign) and *tzijel* (word, as well as the act of lighting a candle or torch) when paired together refer to the posterity of children and grandchildren (Coto).

⁵³³ This is a common Quiché expression for “eternity” or “forever.”

⁵³⁴ *Raxal*. Literally “greenness” in the sense of being invigorating, refreshing, or life-giving.

⁵³⁵ *Winaqirem* may refer to “humanity,” but it is also the name given to “creation” itself, including the mountains, rivers, and animals. On pp. 65-66 (lines 80-81), it is paired with “life” as the ultimate goal of deity.

⁵³⁶ These three deities combined are referred to as “Heart of Sky” (see p. 70; lines 183-189).

⁵³⁷ The name is likely derived from the Nahuatl *a* (water), and *nawak* (near, close), giving the reading of “close to water” (Campbell 1983, 84). Schultze-Jena identified Nanavac with the Mexican god Nanahuatl/Nanahuatzin, a lightning deity who opened a cleft in the sacred mountain Tonacatepetl (Mountain of our Sustenance) to reveal maize (1944, 187; León-Portilla 1980, 142-143; Edmonson 1971, 5188-5192; D. Tedlock 1996, 294). This mountain is analogous to the mountain Paxil, wherein was discovered the maize that would become the flesh of the first humans (pp. 193-194; lines 4862-4881). Nanahuatl was also the name of the ugly god who threw himself into the divine fire at Teotihuacan in order to be transformed into the fifth sun, or the sun of this present age. In this latter role, he was closely related to Quetzalcoatl (León-Portilla 1963, 43-44; 1980, 143 n. 86; Akkeren 2000, 162, 333; Townsend 2000, 128-129).

⁵³⁸ This is likely a reference to the falcon deity, a messenger from Heart of Sky, that watched over One Hunahpu and Seven Hunahpu at their ballcourt (see p. 114; lines 1786-1796).

⁵³⁹ One of the Hero Twins, brother of Xbalanque.

⁵⁴⁰ Two of the creator deities (see pp. 61, 68-70; lines 24-25, 139-154).

Then they fasted and cried out in prayer. They fixed their eyes firmly on their dawn, looking there to the East. They watched closely for the Morning Star,⁵⁴³ the Great Star that gives its light at the birth of the sun. They looked to the womb of the sky and the womb of the earth, to the pathways of framed and shaped people.

Then spoke Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam:

“We shall surely await the dawn,” they said.

They were great sages and wise men,⁵⁴⁴ bloodletters and honorers, as they are called. There did not exist then wood or stone to watch over our first mothers and fathers. They were therefore weary in their hearts as they awaited the dawn.

There were many nations then, there with the Yaqui people,⁵⁴⁵ the bloodletters and sacrificers.

“Let us go and search, to look for one who may protect us. We may find one before whom we may speak. For here we only feign existence and there is not a guardian for us,” said therefore Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam.

They heard news of a citadel and there they went.

⁵⁴¹ Titles for the ancestor couple, Xmucane and Xpiyacoc (see p. 200; lines 5107-5110). They are arranged in reverse order, or as a chiasm, with the names of the grandparent deities that follow.

⁵⁴² These are titles for the grandmother goddess Xmucane (see pp. 79-80; lines 508-517).

⁵⁴³ *Ik'oq'ij* (passes before sun) is the planet Venus as morning star.

⁵⁴⁴ *Eta'manel* (sage) is one who understands or knows by means of thinking; *na'onel* (wise person, knower) is one who knows by means of the senses. We might use the terms “thinking” and “sensing,” but for the Quichés these are both related aspects of “to know.”

⁵⁴⁵ *Yaqui* is the Quiché name for the inhabitants of ancient Mexico.

THE ARRIVAL AT TULAN⁵⁴⁶

THIS, then, is the name of the mountain that they went to. Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam, along with the Tamub and the Ilocab, arrived at Tulan⁵⁴⁷ Zuyva.⁵⁴⁸ Seven Caves and Seven Canyons⁵⁴⁹ was the name of the citadel. There they arrived to obtain their gods.

⁵⁴⁶ lines 5361-5374

⁵⁴⁷ *Tulan* (Nahua *Tullan* or *Tollan*: “Place of Cattail Reeds”). In the Quiché language, *tulan* is a “palace, or manor-house” (Bassetta), while *tolan* is a city or house that has been abandoned, perhaps referring to the ruins of once great cities that dot the region and that belong to the legendary ancestors of the Maya people. In Aztec theology, Tollan was a mythic place located near Coatepec (Snake Mountain) where the ancestors of the Mexica received their patron god Huitzilopochtli. In this myth, Tollan was inhabited by the Toltecs, great sages who invented the sciences of astronomy, calendrics, agriculture, and medicine, as well as the arts of writing, painting, sculpture, metalwork, jade carving, and weaving (see footnote 102). Throughout Mesoamerica in the late Postclassic era (ca. 1200-1524), the legendary Toltecs were the bearers of political legitimacy. The Aztecs used the name *Tollan* to refer to their own legendary place of origin, as well as a general term for “city.” Thus *Tollan* was an alternative name for the ancient Aztec capital city Tenochtitlan, as well as Tula in Hidalgo, Teotihuacan, Cholula, and Chichen Itza (Schele and Mathews 1998, 38-39; Akkeren 2000, 62, 88). The Tulan mentioned here was likely either Chichen Itza, a major center of power during the Terminal Classic (800-900) and Early Postclassic (900-1200) periods, or its successor Mayapan (Recinos 1950, 63-69; Recinos and Goetz 1953, 65 n; Fox 1978, 1-2, 119-121; Carmack 1981, 46-48). Both would have been “across the sea” (the Gulf of Mexico) with respect to the Guatemalan highlands as described in the Popol Vuh (see pp. 221, 255-256, 259).

⁵⁴⁸ *Suywa* (Nahua: “Bloody Water”; Yucatec: “Confusion”). *Suy*, in lowland Maya languages, is a “whirlpool,” or something twisted. *Suywa* is “confusion,” and *suywa t'an* is “figurative or rhetorical language.” In the *Book of Chilam Balam of Chumayel*, the “language of Suywa” refers to a series of riddles and plays on words that only true lords are able to solve to prove their legitimacy (Roys 1967, 88-98). In Nahua, *Zuyua* is “Bloody Water,” a reading that is specifically recognized elsewhere in the *Chilam Balam of Chumayel* (Edmonson 1986, 172 lines 3580-3582). The *Annals of the Cakchiquels* agrees with the *Popol Vuh* in locating this area with the “Tulan in the East” (Recinos and Goetz 1953, 53). In the Yucatec Maya *Books of Chilam Balam*, *Zuyua* is identified with Xicalanco, an ancient port city on the shores of the Laguna de Términos in the Mexican state of Tabasco (Recinos and Goetz 1953, 53, 216; Campbell 1970, 7; Carmack 1981, 46).

⁵⁴⁹ The equivalent in Central Mexican mythology is Chicomoztoc (Seven Caves), the legendary origin place of the Early Postclassic Toltecs and the many Nahua groups who claim Toltec ancestry (Davies 1977, 35-37; Tezozomoc 1975, 14-15; Torquemada 1969, I.xiv.36-38). In all likelihood the Seven Caves legend predates the Toltec era. Beneath the Pyramid of the Sun at Teotihuacan is a partially-artificial cave consisting of a central tunnel and six branches that represents in physical form the ancient place of origin (Heyden 1975, 1981; Taube 1986; Millon 1993, 20-22).

THE PROGENITORS RECEIVE THEIR GODS⁵⁵⁰

THEY arrived there at Tulan, all of them. Innumerable people they were when they arrived. They walked in crowds when the gods came out to them in succession. First among them were Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam, who rejoiced:

“We have found that for which we have searched,” they said.

The god named Tohil⁵⁵¹ went out first, carried in his pack frame by Balam Quitze.

Then went out the god named Auilix,⁵⁵² carried by Balam Acab.

Next was Hacavitz,⁵⁵³ the name of the god received by Mahucutah.

⁵⁵⁰ lines 5375-5413

⁵⁵¹ *Tohil*. In the Quiché language, *tojil* refers to a “payment, debt, obligation, or tribute.” This is consistent with this god’s demand for tribute and sacrifice. Toj is one of the named days in the highland Maya calendar. During divination ceremonies the day Toj implies the need to pay a debt in a metaphoric sense. Barbara Tedlock notes that if a divination falls on the day Toj, this “indicates that one owes (*tojonik*) in the customs of the Mundo [Spanish “World”] or the ancestors, and by extension one may owe a favor, work, or money to another person. If the client is ill, this means that the pain (*c’äx*) is a punishment for this debt; the only way to cure it is to pay (*tojonik*) the Mundo, ancestors, or creditor what is owed, plus a penalty for the neglect” (B. Tedlock 1982, 115). Another possible derivation of the word is from Mixe-Zoque. In that language, *toh-mel* refers to “thunder” (Campbell 1983, 83). In the *Annals of the Cakchiquels*, the Quichés are called “thunderers” because they worship this god, supporting this latter reading:

Then we asked: “Where is your salvation?” Thus we said to the Quichés. “Since it thunders and resounds in the sky, in the sky is our salvation,” they said. Wherefore they were given the name of *Tohohils* (Recinos and Goetz 1953, 58).

⁵⁵² *Awilix*. In the Quiché language, this would read “you are watched over/cared for/commissioned.” Throughout the text, the Quichés promise to watch over and care for their gods, providing them with offerings, sustenance, and worship (p. 290; lines 8344-8346, 8379-8388). Tedlock suggests that it may be derived from the Kekchi, *kwilix/wilix*, “swallow” (the bird) and reads the full name as Lord Swallow (D. Tedlock 1996, 297 n. 152). More recently, Akkeren (personal communication) has suggested that the Nihai lineage originally came from the Pico de Orizaba area, known anciently by its Nahua name Awilizapan. It is possible that Awilix, the patron deity of the Nihai derived the name of their god from this region and its principle mountain which bore the same name.

⁵⁵³ *Jakawitz*. *Witz* is the lowland Maya word for “mountain.” In the *Titulo Yax* (Carmack and Mondloch 1989, folio 2r, 107 n. 135), which is far more consistent in their use of the modified Latin alphabet developed by Father Francisco de la Parra in the sixteenth century and used by scribes throughout highland Guatemala, the name of this deity is *Q’aq’awitz* (Fire Mountain). This suggests that Hacavitz, like Tohil, is primarily a fire deity. This reading is also consistent with the description of his mountain, *nima q’aq’ja* (great fire house) (see p. 224; line 5905). Another support for this reading is that *xq’aqwitz* means “yellow

Nicacah Tacah⁵⁵⁴ was the name of the god received by Iqui Balam.

Together with the Quiché people, the Tamub also received Tohil. This is the name of the god received by the grandfathers and fathers of the Tamub, as these lords are known today.

Third, then, were the Ilocab: Tohil was also the name of the god received by the grandfathers and fathers of the Ilocab, as these lords are known today.

THE PROGENITORS LEAVE TULAN⁵⁵⁵

THUS was the naming of the three Quichés. But in this they freed themselves because it was the same god's name, Tohil Quiché, for all of them. It was Tohil for the Tamub as well as for the Ilocab. There was only one name for god among them. Therefore the three groups of Quichés were not divided.

Three were they who were truly great in their nature: Tohil, Auilix, and Hacavitz.

Then all the nations entered therein—the Rabinals, the Cakchiquels, and the Ah Tziquinahas, along with the Yaqui people, as they are called today. It was there that the languages of the nations were changed. Their languages came to be different. They did not hear each other clearly when they came from Tulan, thus they split apart.

They came in crowds from the East. They were alike in the hides that they wore as coverings, for their dress was very poor. They had nothing of their own, but they were

wasp” in Mam (Akkeren 2000, 173-174), and the wasp is one of the principle symbols of this god and the lineage of Mahucutah (see p. 245; lines 6783-6787). Alternatively, the authors of the *Título Totonicapán* write the name as *Jaq'awitz* (Lying Down/Recumbent Mountain).

⁵⁵⁴ *Nik'akaj Taq'aj* (Center/Middle Plain/Valley). Because Iqui Balam failed to produce offspring, and thus a nation of descendents, this god does not appear again in the *Popol Vuh* account. The gods of the progenitors are listed as a trinity (Tohil, Auilix, and Hacavitz) subsequent to this passage.

⁵⁵⁵ lines 5414-5485

enchanted people in their essence when they came from Tulan Zuyva, the Seven Caves and the Seven Canyons, as they are called in the ancient account.

They did not have fire, only Tohil. This was the god of the nations when fire was first created. It was not clear how it was created, for the fire was already burning when Balam Quitze and Balam Acab saw it.

“Alas, fire has not come to be ours. We shall die of cold,” they said.

Then Tohil spoke:

“Do not mourn. The fire shall be yours again should you lose it. I have spoken,” Tohil said to them.

“Are you not truly god? You are our provider and strengthener. You are our god.” they said when they gave thanks.

And Tohil replied:

“Very well, I am truly your god. Then be it so. I am your lord. Then be it so,” the bloodletters and sacrificers were told by Tohil.

This therefore was the glory⁵⁵⁶ of the nations, and they rejoiced because of their fire.

THE NATIONS ASK FOR THEIR FIRE⁵⁵⁷

THEN it began to rain while the fire of the nations⁵⁵⁸ burned brightly. Hail fell thickly on the heads of all the nations and their fire went out because of the hail. Thus

⁵⁵⁶ *Q'aq'al*, derived from *q'aq'* (flame), means “glory, majesty, power.” This incident with the fire thus has far greater implications than simple comfort. It refers to the divine source of power for the Quiché people. Offerings made by contemporary Quiché *aj q'ij* priests are generally burned, transforming them into smoke that rises into the sky and is suitable for reception by divinity.

⁵⁵⁷ lines 5486-5601

their fire came to nought. Then Balam Quitze and Balam Acab pleaded again for their fire:

“O Tohil, truly the cold has finished us,” they said to Tohil.

“Very well. Do not mourn,” said Tohil.

Then he brought forth fire. He twist drilled⁵⁵⁹ inside his shoe. Thus Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam rejoiced as they warmed themselves.

But the fire of the nations was extinguished and the cold had nearly finished them. Thus they came to plead for fire from Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam. They could no longer bear it because of the cold and the hail. They shuddered and trembled. There was no life in them because of the shivering of their legs and their arms. Neither could they hold on to anything when they arrived:

“Truly we are not ashamed to come before you to ask for just a little bit of your fire,” they said when they arrived.

But they were not welcomed, and the nations cursed in their hearts. For now the language of Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam was different.

“Alas, is our language now abandoned? What have we done? We are lost. Where were we deceived? We had but one language when we came from Tulan. We had but one

⁵⁵⁸ At this point the text refers to the *Amaq'* (Nations) as a distinct entity from the Nima Quiché lineages consisting of an alliance of groups who become the enemies of the Quichés. These are likely a general term for the Poqom and Kekchi speakers of the Verapaz region (Recinos 1950, 171 n. 6; Akkeren 2000, 137), and perhaps the Mam speakers further west who had dominated the Guatemalan highlands prior to the rise of the Quichés. In the *Título Totonicapán*, they are called the *Vucamag* (Seven Nations/Tribes).

⁵⁵⁹ An ancient means of starting new fire, by spinning a wooden stick or drill on a hard wooden surface in order to produce sufficient heat to ignite kindling.

origin⁵⁶⁰ and creation. It is not good what we have done,” said all the nations beneath the trees and beneath the bushes.

Then a person⁵⁶¹ revealed himself before Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam. This messenger from Xibalba said to them:

“Truly Tohil is your god. He is your provider. He is also the substitute and remembrance of your Framer and your Shaper. Do not give, therefore, fire to the nations unless they first give something to Tohil in return. It is not to you that they shall give. Rather your desire must be to go before Tohil. Ask him what they shall give in return for the fire,” said the person from Xibalba. He had wings like the wings of a bat. “I am a messenger from your Framer and your Shaper,” said the person from Xibalba.

Thus they rejoiced. Tohil, Auilix, and Hacavitz became great in their hearts when the person from Xibalba spoke to them. Then suddenly he disappeared before their faces, although he was not destroyed.

Then the nations arrived. The cold had nearly finished them. It was thick with hail, with dark storms, and with hoar frost. The cold was too much to be conceived. All the nations covered themselves up, bending over, and crawling on their hands and knees because of the cold when they arrived before Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam. They were greatly troubled⁵⁶² in their hearts. Sorrowful were their mouths and their faces.

⁵⁶⁰ Literally “germination.”

⁵⁶¹ Father Ximénez, who transcribed the *Popol Vuh* manuscript, inserted at this point his only commentary anywhere in the text: *Demonium loquens cis* (Latin: “Demon speaking from here on”).

⁵⁶² *Q'atat* is “preoccupied, afflicted, troubled.”

THE NATIONS ARE DECEIVED INTO OFFERING THEMSELVES⁵⁶³

THUS they arrived as thieves before the faces of Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam.

“Truly, will you not take pity on us? We shall only ask for a small bit of your fire. Has it not been discovered? Has it not been found? Were we not of the same home? We were of the same mountain when you were framed and when you were shaped. Take pity therefore on us,”⁵⁶⁴ they said.

“What then will you give to us if we were to take pity on you?” they asked.

“Very well then, we will give precious metal to you,” the nations replied.

“We do not want precious metal,” said Balam Quitze and Balam Acab.

“What then do you truly want? We plead of you,” said therefore the nations.

“Very well, we will first inquire of Tohil, then we shall tell you,” they were told.

Then they asked Tohil:

“What are the nations to give, O Tohil?” asked Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam. “They have come to ask for your fire.”

“Very well then. This is what you will say: ‘Do they not want to give the breast⁵⁶⁵ beneath their shoulders and their armpits? Do they not desire in their hearts to embrace me—I, Tohil? If they do not want this, then I will not give to them their fire, says Tohil,’ you will say to them. ‘It will have a beginning, but it will not be today that they will give

⁵⁶³ lines 5602-5774

⁵⁶⁴ Literally “pity then our faces.”

⁵⁶⁵ This deception is based on a play on words that also works in English. The verb here is *tu'nik* (to give breast, to suckle, to nurture). On one level, the nations thought they had agreed to support or nurture the progenitors, which might logically be interpreted as a regular tribute of food and other necessities. As will soon become apparent, however, Tohil meant this much more literally in the sense that the nations were to offer their breasts/chests in the form of sacrifice by heart extraction.

the breast below their shoulders and their armpits, he says to you.’ This is what you will say.” This is what Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam were told.

Thus they spoke the word of Tohil to the nations.

“Very well then. The breast shall be given. It is good that we are to embrace him,” they replied.

In this way they responded, accepting the word of Tohil. Thus they were never again to increase. “Fine,” they said straightaway.

Thus they received fire and they were warmed. There was only one group that stole away the fire from within the smoke. This was the Zotzila.⁵⁶⁶ Chamal Can⁵⁶⁷ is the name of the god of the Cakchiquels. His image was merely that of a bat. They passed by in the smoke, moving stealthily as they passed. Thus when they arrived to take the fire, the Cakchiquels did not ask for it. They did not give themselves up in defeat as all the nations had done who were defeated.⁵⁶⁸

Thus the nations gave their breasts beneath their shoulders and beneath their armpits. This, then, was the breast-giving spoken of by Tohil—all the nations were to be sacrificed before him. Their hearts were to be carved out from beneath their shoulders and armpits. This thing had not heretofore been attempted. Thus Tohil foresaw the seizure of glory and majesty by Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam.

⁵⁶⁶ *Sotz'ila Ja* (Bat House), one of the principal lineages of the Cakchiquels.

⁵⁶⁷ Tedlock suggests that this name should be interpreted as “Snake Tooth,” derived from lowland Maya Cholan or Yucatec languages: *Cha'am* (molar) and *Kan* (snake) (D. Tedlock 1996, 300 n. 156).

⁵⁶⁸ This incident may have been included in the text in part to explain the independence and, from the Quiché viewpoint, treachery of the Cakchiquels who rebelled against the Quichés in the time of Lord Quicab. Subsequent to this rebellion, the Quichés were in a state of nearly constant warfare with the Cakchiquels, their former allies (p. 278; lines 7975-7987; Recinos and Goetz 1953, 94-118). The Cakchiquels garnered further animosity by allying themselves with the invading Spaniards under Pedro de Alvarado against the Quichés and other highland Maya groups in 1524 (Recinos and Goetz 1953, 119-121).

Now when they came from Tulan Zuyva, they did not eat. They fasted continuously. Yet they fixed their eyes on the dawn, looking steadfastly for the coming forth of the sun. They occupied themselves in looking for the Great Star, called Icoquih,⁵⁶⁹ which appears first before the birth of the sun. The face of this Green Morning Star⁵⁷⁰ always appears at the coming forth of the sun.

When they were there at the place called Tulan Zuyva, their gods came to them. But it was surely not then that they received their ultimate glory or their lordship. Rather it was where the great nations and the small nations were conquered and humiliated when they were sacrificed before the face of Tohil. They gave their blood, which flowed from the shoulders and the armpits of all the people.

Straightaway at Tulan came the glory and the great knowledge that was theirs. It was in the darkness, in the night as well, that they accomplished it. Thus they came. They were pulled up like weeds as they came out from there, leaving the East behind.

“This is not our home. Surely let us go to see where we shall begin,”⁵⁷¹ said Tohil. He truly spoke to Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam. “You shall

⁵⁶⁹ *Ik'oq'ij* (Accompanies/Bears/Passes Before Sun). This is the planet Venus as morning star. Las Casas wrote that “after the sun, which they held as their principal god, they honored and worshiped a certain star (I could not learn which star this was) more than any other denizen of the heavens or earth, because they held it as certain that their god, *Quezalcóvatl*, the highest god of the Cholulans, when he died transformed into this star” (Las Casas 1967, III, clxxiv, p. 201). Las Casas further noted that the Indians awaited the appearance of this star in the East each day, and that when it appeared their priests offered “many sacrifices and ceremonies,” including incense and their own blood (Ibid.). Although Las Casas could not identify which star this was, native Mesoamerican sources identify the Feathered Serpent deity Quetzalcoatl with Venus (Roys 1967, 159 n. 7; Nicholson 2001, 16, 47, 251-252).

⁵⁷⁰ *Raxa Ik'oq'ij*. *Rax* is “green, new, fresh, sudden, regenerated, revived.” It is unclear whether this refers to the green color of the planet Venus, or whether it refers to the life-generating power of the Morning Star to assist in the birth of the sun.

⁵⁷¹ *Kojtike'* (we plant, we begin).

first give thanks. You shall carry out your responsibilities first by piercing⁵⁷² your ears. You shall prick⁵⁷³ your elbows. This shall be your petition, your way of giving thanks before the face of god.”

“Very well,” they said.

Then they pierced their ears. They wept as they sang of their coming from Tulan. They wept within their hearts as they came, weeping for Tulan:

“Alas, it is not here that we shall see the dawn, when the sun will be born to illuminate the face of the earth,” they said as they came.

They merely stayed on the road. The people of each of the nations remained sleeping and resting together on the road. Yet always they looked for the star, the sign of the sun, the sign of the dawn in their hearts when they came from the East. They were truly united⁵⁷⁴ as they made their journey here, passing through Honor and Respect,⁵⁷⁵ as it is said today.

THE PEOPLE GATHER ON THE MOUNTAIN CHI PIXAB⁵⁷⁶

THEN they arrived atop a mountain. All the Quiché people gathered together, along with the nations. There they all came and counseled one with another. The

⁵⁷² *Jutik* in modern usage is “to insert or pierce,” such as a thread through the eye of a needle, or a string through a series of beads.

⁵⁷³ *T’is* is “to pierce with a needle,” such as a piece of cloth while sewing.

⁵⁷⁴ Literally “same face.”

⁵⁷⁵ This is the place where Hun Hunahpu and his sons played ball (see p. 119; lines 1969-1972). Thus the origin of the progenitors is defined as the homeland of the patron heroes described in the first half of the *Popol Vuh* text.

⁵⁷⁶ lines 5775-5796

mountain today is called Chi Pixab.⁵⁷⁷ This is the name of the mountain. Here they gathered together and here they gave to one another their names:

“I am this: I am a Quiché person.”

“You, then, are this: Tamub your name shall come to be,” the Tamub were told.

Then the Ilocab were addressed:

“You are Ilocab. This is the name that shall come to be yours. We, the three Quichés, will not be lost, for our word is one,” they said when their names were given.

THEIR SUFFERING ON THE MOUNTAIN CHI PIXAB⁵⁷⁸

Then the Cakchiquels were given their name. Cakchiquels came to be their name. Also Rabinals came to be the name of that people. And Ah Tziquinahas was the name by which that people are known today.

These, then, were the names of they who spoke together. It was there that they came to await the dawn. They would look for the first appearance of the star that precedes the face of the sun when it is born.

“We came from there, but we were split apart,” they said among themselves.

⁵⁷⁷ “Place of Counsel or Instruction.” Carmack identifies this as a mountain on the border between San Andrés Sajcabaja and San Bartolomé Jocotenango (Carmack 1981, 66). Here the nearby territory was divided between the major lineage groups—the Quichés, Tamub, and Ilocab settled the region to the north, centered on the mountain of Hacavitz; the Ah Tziquinahas (Tz’utuhils) settled the coastlands around Lake Atitlán; the Rabinals chose the mountains of the Rabinal basin to the east. The Cakchiquels at this time served as a lineage of vassal warriors and occupied a band of territory situated between the Quichés and the Ah Tziquinahas, centered on the mountains above Chichicastenango. These mountain redoubts were apparently chosen for their defensive potential.

⁵⁷⁸ lines 5797-5870

This is what preoccupied their hearts as they passed through their great afflictions. They did not have food or sustenance. They would only sniff the bottoms of their staffs to feel as if they were eating. But they did not eat when they came.

It was not clear how they passed over the sea to come here. It was as if there were no sea that they had to pass over. They merely passed over on the tops of stones for there were stones on the sand. Thus they named it “Lined Up Stones”; and “Piled up Sand” was also its name. Over these they made their passage here from within the sea. The water divided itself and through it they made their passage here.

They were preoccupied in their hearts when they took counsel together, for they had no food. They would drink only atole⁵⁷⁹ made of maize grains which they had borne to the top of the mountain named Chi Pixab. They had carried only Tohil, Auilix, and Hacavitz. Thus Balam Quitze observed a great fast along with his wife, named Cahapaluna; the same also did Balam Acab with his wife, named Chomiha; along with

⁵⁷⁹ *Uk'* is any kind of drink other than water. In this case the text specifies that it is a drink made from maize, or in other words, an atole. Maize atole is the principal drink offered on ceremonial occasions in contemporary highland Maya society (Bunzel 1952, 45, 233-234; B. Tedlock 1982, 65-66). At Santiago Atitlán, this ceremonial atole is called *maatzt'*. Unlike the usual type of maize drink which is made from watered-down corn dough, *maatzt'* is made from grain that has been toasted and then ground fine before it is mixed with two handfuls of ash and placed in a boiling pot of water. This procedure, the only time that Atitecos grind maize kernels into dry flour, or allow maize to come into direct contact with fire, matches the Popol Vuh description of the underworld lords grinding the burned bones of Hunahpu and Xbalanque “like finely ground corn flour” (Carlsen 1997, 57-59). Because traditionalist Atitecos believe that the preparation of *maatzt'* is fraught with danger, it is carried out under the direction of the Xo', the wife of the head of the confraternity in which it is to be consumed. A confraternity elder blesses her beforehand so that she will not be burned in the process. I was told by a prominent Atiteco that drinking *maatzt'* symbolizes victory over “death and the fires of the underworld” (Christenson 2001, 123-124). The resulting mixture is sometimes addressed as mother's milk or sperm, both associated with rebirth and regeneration (Freidel et al. 1993, 180). Although confraternity members frequently share food and drink in an atmosphere of informality sometimes bordering on the raucous, they drink *maatzt'* with great solemnity. The highest-ranking confraternity elder present distributes it to those present in order of their rank. As he does so he addressed each by name and title and calls on the patron saint of the confraternity to bless the recipient so that person's feet, knees, heart, arms, head, and thoughts will have power and nothing untoward will happen to the individual during the year. The great Atiteco culture hero Francisco Sojuel is said to have called *maatzt'* the true *ruk'ux way* (heart of food) and refused to eat anything else when carrying out important ceremonies (Mendelson 1957, 139).

Mahucutah, who observed a great fast with his wife, named Tzununiha; and also Iqui Balam and Caquixaha, which was the name of his wife. Thus they fasted in the darkness, in the night. Great was their sorrow when they were atop the mountain which is called Chi Pixab today.

Then spoke the gods there.

THE PROGENITORS AWAIT THE FIRST DAWN⁵⁸⁰

THEN spoke Tohil, Auilix, and Hacavitz to Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam:

“We must go now. We must rise up. For we are not meant to be here. Place us in hiding, for does not the dawn now approach? Would you not be pitiable if we should become the spoils of warriors?⁵⁸¹ Make for us a place that we may be with you, O bloodletters and sacrificers, and place each of us there,” they said when they spoke to them.

“Very well. Let us arise and search in the forests,”⁵⁸² they all said.

⁵⁸⁰ lines 5871-6043

⁵⁸¹ *Aj lab'al* (warriors) is now the word for “savages” in contemporary Quiché usage.

⁵⁸² Las Casas wrote that the Maya were accustomed to keep their deity images in “rugged places, dark and secret caves” in order to keep them in greater reverence by not having them constantly on public display. On special occasions, the images were carried in procession to the temples where they were placed in sanctuaries (Las Casas 1967, III.clxxvii, 216). It is likely that ancient temples themselves were conceived as effigy mountains and that their elevated sanctuaries represented the cave-like homes of the gods (Vogt 1969, 595; Hill 1992, 6, 91; Stone 1995, 27, 35-36; Bassie-Sweet 1996, 111-131; Schele and Mathews 1998, 43, 417). With the destruction of such temples in the Guatemalan highlands at the time of the Spanish conquest, as well as the subsequent evangelization efforts by Christian missionaries, the more obvious public forms of Precolumbian ceremonialism ceased abruptly in most communities. This did not, however, preclude the continued veneration of traditional Maya deities in cave shrines and other remote locales (Bassie-Sweet 1991, 78-79; Peterson 1993, 175-177; Cervantes 1994, 35). Fuentes y Guzmán lamented in the seventeenth century that the innumerable gods that were once worshiped in highland Maya temples and houses were still venerated in mountain caves where they were given offerings of incense and animal sacrifices (Fuentes y Guzmán 1932-33, 44). Thomas Gage discovered one such deity image in 1635 while

Then each of them took his god to be carried on his back. Auilix was taken into a canyon named Hidden Canyon, a great canyon in the forest. Pa Auilix⁵⁸³ is its name today. There he was left. He was left in the canyon by Balam Acab. He was the first to be left.

Then Hacavitz was left on top of a great fire house.⁵⁸⁴ Hacavitz is the name of the mountain today.⁵⁸⁵ This they made their citadel, and this was where the god's dwelling

serving as a priest in Mixco, Guatemala. The image was sequestered in a cave near a spring and a large pine tree:

When we came to it, we made very little more search, for near at hand was the cave, which was dark within, but light at the mouth. We found there more earthenware, with ashes in them, which assured us some frankincense had been burned. We knew not how far the cave might reach within, nor what might be in it, and therefore with a flint we struck fire and lighted a couple of candles and went in. At the entrance the cave was broad, and went a little forward, but when we were in, we found it turn on the left hand towards the mountain, and not far, for within two rods we found the idol standing upon a low stool covered with a linen cloth. The substance of it was wood, black shining like jet, as if it had been painted or smoked; the form was of a man's head unto the shoulders, without either beard or mustachios. His look was grim with a wrinkled forehead and broad startling eyes (Gage 1958, 280-281).

The image was surrounded by offerings of money, plaintains and other fruits, candles, pots of maize, honey, and little dishes of incense, the same offerings the Maya gave to the saints' images in the community church. Gage removed the image and publicly destroyed it the following sabbath, to the horror of those who worshiped it. Maya cave rituals remained for centuries a parallel theological system with that of the Roman Catholic church's pantheon of saints and deities and it continues to be an important element of traditional Maya worship in some communities (La Farge 1947, 124-128; Oakes 1951, 7; Vogt 1970, 13; B. Tedlock 1986, 128; Christenson 2001, 78-91).

⁵⁸³ *Pa Awilix*. "Place of Auilix."

⁵⁸⁴ The manuscript reads *hun nima caεha* (a great fire/red house). This is likely not a proper name because of the initial article *hun* (a, one), which indicates that this is a descriptive phrase. Tedlock suggests that this is a pyramid temple (D. Tedlock 1996, 159). This is a good reading, particularly because the ancient Maya often painted their temples red and considered them to be effigy mountains. I am not wholly convinced, however, that this wasn't a true mountain, or in this case a volcano (fiery mountain) as the authors suggest that it existed in their day as a recognized and named mountain place, identified in the same way as the mountains of the other two gods, Tohil and Auilix. Carmack and Fox identify this mountain with the site of Chitinamit, a fortified settlement located on a high hill at the western edge of the Chujuyup Valley overlooking the Queca River (Fox 1978, 57-58; Carmack 1981, 65). Although separate hilltop sites, Hacavitz, Pa Tohil, and Pa Auilix are mutually visible from one another. The Chujuyup region is rugged and relatively poor for agriculture, suggesting that it was chosen more for its defensive potential. Akkeren concurs that Pa Tohil and Pa Auilix were located in the Chujuyup Valley, however, he suggests that Hacavitz was located south of Chichicastenango (Akkeren 2000, 42).

came to be. Hacavitz it was called. Mahucutah did not leave his god behind, therefore.⁵⁸⁶

This was the second god that was hidden by them. It was not in the forest that Hacavitz dwelt, but rather it was on a cleared⁵⁸⁷ mountain where Hacavitz was hidden.

Then came Balam Quitze. He arrived there in the great forest to hide Tohil. Pa Tohil⁵⁸⁸ is the name of this great mountain today. Then they named the hidden canyon Healing Tohil.⁵⁸⁹ It was crowded with snakes as well as jaguars, rattlesnakes and pit vipers. There in the forest they were, hidden by the bloodletters and sacrificers.

They were as one, Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam. As one they awaited the dawn there on top of the mountain called Hacavitz.

Nearby was the god of the Tamub, along with the god of the Ilocab. Amac Tan⁵⁹⁰ was the name of the place where the god of the Tamub was. There it dawned. Amac

⁵⁸⁵ *Jakawitz* in Cholan languages means “First/Beginning Mountain” tying it to the first mountain of creation. In Quiché, the verb *jaq* means “to open,” which may recall the mountain of Paxil (Split Mountain) that contained the maize used to create the first human beings (see pp. 193-194; lines 4862-4939). In the *Titulo Yax* (Carmack and Mondloch 1989, folio 2r, 107 n. 135), which is far more consistent in their use of the modified Latin alphabet developed by Father Francisco de la Parra in the sixteenth century and used by scribes throughout highland Guatemala, the name of the deity placed on the mountain is *Q'aq'awitz* (Fire Mountain). This suggests that Hacavitz, like Tohil, is primarily a fire deity. This reading is also consistent with the description of his mountain, *nima q'aq'ja* (great fire house).

⁵⁸⁶ The god Hacavitz was not left behind, because his sanctuary was located within the settlement of the Quiché people, rather than in the mountains and forests as the other two gods had been.

⁵⁸⁷ *Saq*. This may be “white, clear, pure.” Although there are a great number of white mountains in the highlands, due to the prevalence of lime deposits in the soil, this is more likely to be read as “cleared or bald,” since it has already been described as red in color. The first citadel of the Quichés was built atop this mountain, necessitating the clearing of its trees and undergrowth if it was not deforested already.

⁵⁸⁸ “Place of Tohil.” This is likely the mountain still known today as Pa Tojil, located on the south side of Chujuyup Valley (Fox 1978, 58; Carmack 1981, 65).

⁵⁸⁹ “Healing/Medicine Tohil.” Quiché *aj q'ij* priests frequently go to mountain shrines to perform healing ceremonies at specific shrines dedicated to certain deities, or the lords of days of the traditional calendar.

⁵⁹⁰ *Amaq' T'an*. *Amaq'* is “nation;” *T'an* is “bald, lacking plumage.” Most likely, however, this is an alternate or archaic spelling for the Tamub lineage. Thus the name of the place is simply “Nation of the Tamub.” The Tamub lineage has a significant Pokom component, and in that language, Tamub may be read simply as “the descendents” (Akkeren 2000, 125). Carmack identifies this site with a series of ruins known

Uquincat⁵⁹¹ was the name of the place where the Ilocab dawned. The god of the Ilocab was there on a nearby mountain.

There all the Rabinals,⁵⁹² the Cakchiquels,⁵⁹³ and the Ah Tziquinahas,⁵⁹⁴ all the small nations and the great nations, arose as one. There was but one dawn. As one they awaited the coming forth of the Great Star, named Icoquih.

“First it will come forth before the face of the sun. Then it shall dawn,” they said.

They were as one, Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam. They did not sleep. They did not rest. Greatly did they weep in their hearts, in their bowels, for the dawn and for clarity. They came there surely as penitents, in great sorrow and great humility. They trembled because of the afflictions that they had passed through.

“Our coming has not been sweet. Alas! Would that we could behold the birth of the sun. What have we done? We were united in our mountains, but our natures have been changed,” they said.

They spoke a great deal among themselves concerning their sorrow, their humility, and their fervent prayers.⁵⁹⁵ Thus they spoke, for their hearts had yet to be comforted in the dawn.

as Cruz Che located along a slope of Telec'uch Mountain west of Hacavitz. The remains of a deity shrine still known by its ancient name, Saqirib'al (Place of Dawn), is located on a peak of the mountain (Carmack, Fox, and Stewart 1975, 66-70; Fox 1978, 57; Carmack 1981, 65).

⁵⁹¹ *Amaq' U Q'in K'at* (Nation Its Frame Net). Carmack suggests that this site was located on a slope of Telec'uch Mountain, separated from *Amaq' T'an* by a river canyon (Carmack 1981, 65).

⁵⁹² The Rabinals in this era settled the mountains above Joyabaj.

⁵⁹³ At this phase of their history, the Cakchiquels occupied the mountain region above the present-day town of Chichicastenango.

⁵⁹⁴ It is likely that this lineage had already begun to settle the southern shores of Lake Atitlán, which would remain the center of their territory into modern times.

But these, the gods, were comforted in the canyons and the forests. They were placed in bromelia flowers and hanging moss⁵⁹⁶ rather than on altars.⁵⁹⁷ Tohil, Auilix, and Hacavitz spoke from the first. Great was their day, their breath, and their spirit, above all the gods of the nations. Manifold were their spirit essences, their pathways, and their victorious means of chilling and frightening the very existence and hearts of the nations.

Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam gave comfort to the gods. They were not unhappy, nor did they bear ill will in their hearts for the gods that they had carried. These they had carried when they came from Tulan Zuyva, there in the East. But they were in the forest. There was the place of dawning on Pa Tohil, Pa Auilix, and Pa Hacavitz, as they are called today. It was there that our grandfathers and fathers were sown, when they dawned.

Now we shall tell of the dawning and the appearance of the sun, moon, and stars.

THE APPEARANCE OF THE FIRST DAWN⁵⁹⁸

THIS therefore is the dawn,⁵⁹⁹ the appearance of the sun, moon, and stars.

⁵⁹⁵ Literally “weeping and crying out.” This is a standard couplet used by contemporary Quichés to refer to ritual prayer.

⁵⁹⁶ *Atz'iaq* (hanging moss/Spanish moss). An epiphytic plant (*Tillandsia usneoides*) that forms long grayish green filaments that hang from trees in tropical environments. It is in the same family of plants as the bromeliads.

⁵⁹⁷ *Tz'alam* (Flat boards, flat stones). Most highland Maya altars constructed in the mountains consist of slabs of flat stones arranged into a table-like form, or alternatively, wooden tables.

⁵⁹⁸ lines 6044-6289

⁵⁹⁹ Throughout Mesoamerica the first dawn of the sun is a symbol, not only for the birth of a new age, but for the divine sanction of power to a lineage or allied group (León-Portilla 1969, 30-31; Akkeren 2000, 164).

GREATLY they rejoiced, Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam, when they saw the Morning Star. It came forth glittering before the face of the sun.

Then they unwrapped their copal incense, for the sun was to come forth. They unwrapped it with victory in their hearts. There were three types of incense that they burned as a means of expressing the gratitude in their hearts:

Mixtam⁶⁰⁰ Incense was the name of the copal incense carried by Balam Quitze.

Caviztan Incense was the name of the copal incense carried by Balam Acab.

And Cabavil⁶⁰¹ Incense, as it is called, was carried by Mahucutah.

These three were the copal incenses that they burned, waving their censers toward the rising sun. They wept bitterly as they waved their censers, burning the sacred copal incense before they saw and witnessed the birth of the sun.

And when the sun came forth, all the small animals and great animals rejoiced. They came up from the rivers and from the canyons. They were there on the mountain peak. As one they turned their faces toward the coming forth of the sun. Then the pumas and the jaguars cried out. The first bird to sing was the parrot, as it is called. All the animals truly rejoiced. The eagles and the white vultures, all the small and great birds, spread their wings.

The bloodletters and sacrificers were kneeling. They greatly rejoiced along with the bloodletters and sacrificers of the Tamub and the Ilocab, along with the Rabinals and

⁶⁰⁰ Campbell (1981) derives *Mixtam* from the Nahuatl *mixtan* (Place of Clouds); Carmack and Mondloch (1983, 232 n. 187) cite Domingo de Vico, who wrote that *mictan ajaw* was a “demon,” although this description was undoubtedly colored by Father Vico’s Roman Catholic bias. Edmonson derived *mixtam* from *mictlan*, Nahuatl for the underworld.

⁶⁰¹ *K’ab’awil* (god, divine). Classes of copal incense called *K’ab’awil* and *Mixtam* are still sold in Chichicastenango (Schultze-Jena 1954, 91).

the Cakchiquels, the Ah Tziquinahas and the Tuhalhas, the Uchabahas and the Quibahas, the Ah Batenas and the Yaqui Tepeus. However many nations there are today, innumerable people, they all had but one dawn.

Then also the face of the earth was dried by the sun. Like a person was the sun when he revealed himself. Hot was his face and thus he dried the surface of the earth. Before the sun had come forth the face of the earth was wet; it was soggy prior to the coming forth of the sun. But when the sun ascended upward, he was like a person. His heat could not be endured. This was but his self-revelation when he was born. What is left is but a mirror. What appears now is not the true sun, according to their account.

Then straightaway Tohil, Auilix, and Hacavitz became stone, along with the sacred images of the puma and the jaguar, the rattlesnake and the pit viper. Zaqui Coxol⁶⁰² took them and hid himself in the trees. When the sun, moon, and stars appeared,

⁶⁰² *Saqi K'oxol* (white/noisy/lively person). According to Basseta, this is the name given to any frightening spirit or phantasm, but specifically the *duende*, a dwarf-like denizen of the mountains and forests that the highland Maya believed to be the guardian of animals and messenger of the earth deity. Coto identifies him as a phantasm associated with mountains: "The *duende* who walks in the mountains they call: ru vinakil che [the person/personification/manifestation of tree], or çaki qoxol" (Coto 1983, 355-356). In the *Annals of the Cakchiquels*, he appears as a spirit within the Volcano of Fuego:

Afterwards they left there, they left Chiyol and Chiabak, and twice they traveled their road, passing between the volcanoes which stand abreast, those of *Fuego* [Fire] and *Hunahpu*. There they met face to face the spirit of the Volcano of Fire, he who is called *Zaquicoxol*. "Verily, the *Zaquicoxol* has killed many, and it is surely terrifying to see this thief," they said. There, in the center of the Volcano of Fuego was the guardian of the road by which they arrived and which had been made by *Zaquicoxol* (Recinos and Goetz 1953b, 61).

Stories about *Saqi K'oxol* are common in highland Guatemala today as well, where he is described as a mountain spirit. At times he can be merely mischievous, playing tricks on people for his own entertainment. He can also be quite dangerous or deadly if proper respect is not shown to the wild things of the mountains or to the earth god himself (Tax 1947; Bode 1961, 213; Cook 2000, 201). In the popular dance drama, "The Dance of the Conquest," performed by the Maya throughout the highlands, one of the main characters is *K'oxol*, who successfully predicts the Spanish conquest through a divinatory ceremony. Following the Conquest, he refuses baptism and escapes into the forest where he gives birth miraculously to the son (portrayed as a small doll dressed in red) of Tecum, the great Quiché warrior who died fighting the Spaniards (Bode 1961; *Baile de la Conquista* 1991; B. Tedlock 1982, 149-150). In Momostenango, the *K'oxol* is the patron of *aj q'ij* priests, the source of the divination power that awakens their blood (B.

they all turned to stone. Perhaps we would not be alive today because of the vicious⁶⁰³ animals—the puma and the jaguar, the rattlesnake and the pit viper, as well as Zaqui Coxol. It would not be our day if the sun had not come forth and turned the first animals to stone.⁶⁰⁴

Great was the joy in the hearts of Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam when it dawned. There were not many people then. There were only a few on top of the mountain of Hacavitz. There they dawned and there they burned incense, waving their censers toward the coming forth of the sun. This was their mountain, their plain. There came they who are named Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam. There they multiplied on the top of the mountain that was to become their citadel. There it was that the sun, moon, and stars truly appeared. Everything on the face of the earth and beneath the sky had its dawn and became clear.

Thus began their song called Our Burial.⁶⁰⁵ Their hearts and bowels wept as they sang. And this is what they said in their song:

“Alas we were lost! At Tulan we split ourselves apart. We left behind our older brothers and our younger brothers. Where did they see the sun? Where were they when it dawned?”

Tedlock 1982, 147-148; B. Tedlock 1986, 135; Cook 2000, 201). As such he represents the ancient power of traditional Maya worship, a survival of the world prior to the Spanish conquest. It is interesting that even for the Precolumbian Quichés, *Saqi K'oxol* was a survivor from a previous age.

⁶⁰³ Literally “biting.”

⁶⁰⁴ Barbara Tedlock notes that this tradition is still remembered in the community of Momostenango: “One diviner I know possesses the stone shoe of the original C’oxol or Tzitzimit; he found it in the mountains near Chinique and keeps it with his divining seeds and crystals. He explained that at the time the earth became hard, the Tzitzimit was hiding in a tree and dropped his shoe. Like the animals, it turned to stone. Momostecan diviners visit Minas, a foothill of the Cuchumatanes, where they find small stone concretions that are the animals who were turned to stone by the sun during the creation of the world. These concretions are placed in the family shrine called the *mebil*” (B. Tedlock 1982, 148).

⁶⁰⁵ *Muq* is “to be buried, covered, or hidden by earth, fog, cloud, etc.”

This they sang concerning the bloodletters and sacrificers of the Yaqui people. Tohil is the god of the Yaqui people, who they call Yolcuat Quitzalcuat.⁶⁰⁶

“We were separated there at Tulan Zuyva. We left them to come here. But we were complete⁶⁰⁷ before we came here.”

This they said among themselves when they remembered their older brothers and their younger brothers, the Yaqui people. These dawned there in Mexico, as it is called today. Thus surely a portion of them remained there in the East, they whose names are Tepeu⁶⁰⁸ and Oliman.⁶⁰⁹

“We left them behind,” they said.

Thus they were greatly troubled in their hearts there on top of Hacavitz.

The Tamub and the Ilocab felt the same. They whose name was Amac Tan were merely in the forest when the bloodletters and sacrificers of the Tamub dawned with their god.

Tohil is the sole name for the god of the three groups of Quiché people. This is also the name for the god of the Rabinals. Only a little bit different is his name: One Toh being the name of the god of the Rabinals. They say it this way because of their desire to make it one with the language of the Quichés.

⁶⁰⁶ Yolcuat (Nahua: *yol*—heart, *coat*—serpent) Quetzalcoatl (Nahua: *quetzal*—quetzal bird, quetzal feathers, *coat*—serpent). Quetzalcoatl, generally translated as “Feathered Serpent,” was a prominent deity in the pantheon of the Central Mexican Toltecs and Aztecs. Here the authors of the *Popol Vuh* suggest that this god of the Yaquis (Mexicans) was equivalent to their own patron deity, Tohil.

⁶⁰⁷ Literally “its completion/wholeness/perfection our faces.”

⁶⁰⁸ *Tepeu*. This people’s name is derived from Nahua, meaning “sovereign, power.”

⁶⁰⁹ *Oliman* (Rubber People/Ballplayers). This is likely a reference to the Olmeca-Xicalanca from the area of the southern Gulf Coast (see footnote 503).

There the language of the Cakchiquels was changed, for when they came from Tulan Zuyva, the name of their god was Chimalcan.⁶¹⁰ This was the god received by the Bat House⁶¹¹ people. Along with their god, this lineage also received their titles: Ahpo Zotzil⁶¹² and Ahpo Xahil⁶¹³ they are called. This god changed their speech when he was received there at Tulan. It was a stone that was the cause of the change in their speech when they came from Tulan in the darkness. Yet all the nations were sown as one when the names of the gods were given to each of the groups.

We shall now tell of their residence, their sojourn there on the top of the mountain. They were as one, the four of them—Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam. Their hearts cried out to Tohil, Auilix, and Hacavitz, who were amidst the bromelia flowers and the hanging moss.

OFFERINGS ARE MADE TO THE GODS⁶¹⁴

THESE, then, are the burnings and the offerings placed beneath Tohil when they went before the faces of Tohil and Auilix. They went there to see them and to worship

⁶¹⁰ The authors of the text apparently assert here that the god of the Cakchiquels is the same as theirs, but that he was called by a different name when their language changed. In the Cakchiquel language, *chamalqan* is a serpent of great size that moves calmly/quietly (Varea).

⁶¹¹ *Tzotz'i Ja* (Bat House) is the principal lineage of the Cakchiquels.

⁶¹² *Ajpo Sotz'il* (Bat Lords). *Ajpo* is a contracted form of *aj pop* (he/she of the mat), the highest office in highland Maya hierarchies, and may be loosely translated as “lord.” See footnote 33 on the significance of the mat. This was one of the principal Cakchiquel ruling lineages at the time of the Spanish conquest. They resided at Iximché.

⁶¹³ *Ahpo Xahil* (Dance Lords). The Xahil were the other principal lineage of the Cakchiquels. Their main center of occupation was at Sololá above the northern shores of Lake Atitlán. The Annals of the Cakchiquels was compiled under the direction of the Xahil (Recinos and Goetz 1953, 11).

⁶¹⁴ lines 6290-6503

them. They gave thanks before them for the dawn. They knelt humbly with heads bowed low⁶¹⁵ before the stones there in the forest.

It was only the revelation of the god's spirit essence that spoke when the bloodletters and sacrificers arrived before the face of Tohil. What they carried was not great, nor were their burnt offerings. It was only pine resin, the remnants of pitch, along with *pericón*⁶¹⁶ flowers that they burned before the face of their god.

Then spoke Tohil. It was only his spirit essence that gave knowledge to the bloodletters and sacrificers. Then the gods spoke:⁶¹⁷

"It is here that our mountain and our plain shall be. We have come to be yours. Great is our day. Great as well is our birth, because of all your people and all the nations. We shall surely be your companions then, your citadel. We shall give to you your knowledge. Do not reveal us before the nations when they come up to us. For truly they shall become many. Thus do not let them set traps for us. But give to us the children of the grasses and the fallen⁶¹⁸ grain. Bring to us a little of the blood of the female deer and the female bird. Take pity on us. Set the skins of the deer aside and watch over them. These shall be a means of concealing identity.⁶¹⁹ The deer will become the means by which you shall deceive them. These will surely be our substitutes before the faces of the

⁶¹⁵ *Wonowoj* is to humble oneself, bowing over so severely that the chin touches the knees (Basseta).

⁶¹⁶ *Iya'* (Spanish *pericón*) is a marigold-like plant with small yellow flowers (*Tagetes lucida*).

⁶¹⁷ From the end of this quotation, it is clear that all three deities—Tohil, Aulix, and Hacavitz—are speaking, not just Tohil.

⁶¹⁸ Grain that has "fallen from age or overripeness" (Basseta).

⁶¹⁹ Literally "buried/hidden/clouded face."

nations. When you are asked, ‘Where is Tohil?’ It will be this deerskin bundle⁶²⁰ that you shall show them. But do not reveal yourselves. Do this now and your existence shall become great. You shall conquer all the nations. They must bring to you their blood. Their flowing blood shall be brought before our faces. Let them come to us and embrace us. They are ours now,” said Tohil, Auilix, and Hacavitz.

The gods would appear as boys when they were seen, when offerings were burned before their faces. Thus they began to seek out the offspring of birds and deer which were taken and offered by the bloodletters and the sacrificers. They would find the birds and the young deer, and go to place their blood in the mouths of the stones. Tohil and Auilix drank this therefore. It was the bloody drink of the gods. Straightaway, then, the stones spoke when the bloodletters and sacrificers came to give their burnt offerings.

⁶²⁰ Sacred bundles of this type were well known by the indigenous people of Mesoamerica prior to the Spanish conquest. Fr. Juan de Torquemada cited the existence of a sacred bundle in central Mexico called the *Haquimilolli* which consisted of clothing believed to have been worn by the god Xolotl when he offered himself as an auto-sacrifice to enable the sun to rise for the first time. The mantles worn by the god were wrapped in a bundle along with certain green stones representing the god’s heart, as well as the skins of a serpent and a jaguar (Torquemada 1969, 6.xlii, 78). In Santiago Atitlán, deerskins are kept in a confraternity house dedicated to traditional Maya ceremonies. These skins, with the head and antlers still attached, are periodically worn in a dance honoring a powerful deity they call Martín, associated with animals, maize, and rebirth. Prior to the dance, a special priest dedicated to the veneration of Martín called the *nab’eysil* blesses the deerskins, addressing them as “King Martín, Lord of the Three Levels, Lord of Rain, Lord of Maize, and Lord of all the Mountains” (Christenson 2001, 160). Martín is referred to as “King Martín” because he is more ancient than any other god, and father to them all (Mendelson 1957, 462; 1958b, 5). The deer is his specific emblem, and a bundle kept in the confraternity house contains very old garments painted with designs associated with tufts of animal hair. The cult of Martín is likely associated with the ancient god Tohil and his deerskin bundle (Mendelson 1958a, 121, 124). The Great Dance of Tohil took place in the month of *Tz’ikin Q’ij*, just prior to the principal maize harvest in November, coinciding with the Dance of Martín on November 11 (Christenson 2001, 169-176). The Maya deity Martín is derived from St. Martin of Tours (November 11 is his day on the liturgical calendar), who is often depicted in Roman Catholic paintings and sculpture seated on a horse. The early Maya consistently confused horses with deer (Hill 1992, 151). Even today both animals bear the same name in most Maya languages.

They did the same before the deerskin bundles. They would burn pine resin, *pericón* flowers, and stevia⁶²¹ flowers. There was a deer skin bundle for each of them on the tops of the mountains.

The dwellings and the homes of our ancestors were not in the sun. They walked only in the mountains. And this is what they would eat: Only hornet⁶²² larvae, only wasp larvae, only bee larvae⁶²³ would they seek. At first they did not have good food or water. The pathway leading to their homes was not clear. Nor was it clear where their wives dwelt.

The other nations were crowded together. All of them would unite, joining together with one another. They would raise a din⁶²⁴ there on the roads. Their paths were clear.

But it was not clear where Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam were. When they would see the nations passing by on the roads, they would cry out on the peaks of mountains. They would cry out with the call of the coyote and the call

⁶²¹ *Jolom Okox* (Head Mushroom). This is not a mushroom, but an herb called stevia (Spanish *pericón blanco*), whose small white flowers resemble the head of a mushroom. Duncan Earle noted that the *pericón* and stevia are still given as minor offerings in rituals by the Quichés (Earle 1983, 294, 297; D. Tedlock 1996, 308 n. 164).

⁶²² *Wonon*. For modern Quichés this is the honeybee of the stinging type introduced from Europe. Many Quiché communities, particularly in the region around Momostenango, cultivate these bees for their honey. The Precolumbian Maya kept bees and harvested their honey, but these were of a stingless variety. As will become apparent later in the text, these insects could sting. Coto lists *wonon* as a hornet, or the stinger of a wasp or hornet.

⁶²³ *Aqal*. These are stingless, honey-producing bees that the Maya domesticated. Today the Quichés cultivate the stinging European type of bee for their honey, and *aqal* is now used to refer to a variety of wasps that live in nests. Nevertheless, many highland Maya languages retain memory of the honey produced by the older varieties of bee when referring to sticky, sweet substances such as honey or molasses, as *aqat* or *aqal*.

⁶²⁴ *B'olow* is the sound of a crowd all speaking at once (Coto).

of the fox. They would make the call of the puma and the jaguar. And when the nations heard this there was great discussion about it:

“This is merely the cry of the coyote and of the fox,” said the nations. “It is merely the puma and the jaguar,” the nations said.

The nations did not realize that these were people.⁶²⁵ It was merely a way of deceiving the nations that this was done. It was not the desire of their hearts to truly frighten them. Thus they would make the call of a puma or jaguar, and then when they would see one or two people out walking, it would be their desire to destroy them.

Each day they arrived at their homes with their wives bearing only hornet larvae, wasp larvae, and bee larvae. And each day also they went before Tohil, Auilix, and Hacavitz, saying in their hearts:

“We give merely the blood of deer and birds to Tohil, Auilix, and Hacavitz. We merely prick our ears and our elbows. We plead for our strength and our endurance to Tohil, Auilix, and Hacavitz. Who shall be responsible for the death of the nations? Shall we kill them only one at a time?” This they said to each other when they went before Tohil, Auilix, and Hacavitz.

Then they pierced their ears and their elbows before the faces of their gods. They scooped up their blood and rubbed it inside the mouths of the stones. Yet they had not truly become stones. Each of them appeared as young boys when they came. They rejoiced for the blood of the bloodletters and sacrificers.

Then came the sign of their deeds:

⁶²⁵ Literally “not like people in their hearts.”

“Conquer many lands. This is your authority.⁶²⁶ It came from Tulan when you brought us here,” they were told.

Then was given the breast⁶²⁷ at the place called Pa Zilizib.⁶²⁸ And behind⁶²⁹ it came blood, a rain of their blood as an offering for Tohil, along with Auilix and Hacavitz.

THE SACRIFICIAL KILLINGS BEGIN⁶³⁰

THIS is the beginning of the abduction of people from the nations by Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam.

THEN also was the killing of the nations. They were taken in this way:

Only one would go out walking, or two would go out walking. It was not clear how they were taken. Then they would be taken to be sacrificed before the faces of Tohil and Auilix. Afterward their blood and skulls⁶³¹ would be placed on the road. Thus the nations would say, “a jaguar ate them.” This they would say because only the tracks of a jaguar were left behind. They would not reveal themselves. Many were abducted from the nations until, after a long time, the nations came to their senses:⁶³²

⁶²⁶ Literally “self-liberation,” meaning the “authority, sanction, or right to act.”

⁶²⁷ *Tz'um* (woman's breast, skin). This continues the play on words whereby the nations were tricked into offering to *tu'nik* (give the breast, suckle, nurture), a metaphor for nurturing or giving sustenance. In reality, however, they were being tricked into offering their own breasts in the form of heart extraction sacrifice.

⁶²⁸ *Pa Silisib'* (Place of Staggering/Shaking).

⁶²⁹ This is an oddly-phrased sentence in the original because the authors are continuing with the play on words between breast as “suckling or nurturing,” and the physical breast that is being offered in sacrifice. The authors are saying that “behind” the breast is the source of the blood, and the rain of blood. In other words, that is where the heart is located that will be sacrificially extracted.

⁶³⁰ lines 6504-6597

⁶³¹ *Jolom* is the word for both “head” and “skull.” It is impossible to know which is meant here.

“Perhaps Tohil and Auilix have come after us. We shall merely seek out the bloodletters and the sacrificers. Let us follow their footprints⁶³³ when they go to their homes,” the nations all said when they planned⁶³⁴ among themselves.

Thus they began to follow the footprints of the bloodletters and the sacrificers. But they were not clear. They were only deer tracks and jaguar tracks that they would see. Their footprints were not clear. Nowhere was it clear where the tracks began. Their footprints were just like the pawprints of animals.⁶³⁵ It was merely confusion for them.

Neither was the pathway clear. None of the nations could see, because there would form clouds, there would form dark rain, there would form mud, and there would form drizzling rain. Thus they would weary their hearts searching. They would mourn, for great was the essence of Tohil, Auilix, and Hacavitz.

Thus this was done for a long time atop the mountain on the borders of the nations. They would kill them when the abductions began. These were murderous assaults when they would seize the people of the nations on the roads. They would then sacrifice them before the faces of Tohil, Auilix, and Hacavitz.

Thus the boys were preserved there on the top of the mountain. Tohil, Auilix, and Hacavitz had the appearance of three boys when they went out walking. These were the spirit essences of the stones.

⁶³² Literally “felt themselves.”

⁶³³ *Raqan* (their feet/legs). The Quiché language does not distinguish between feet and legs; nor does it distinguish between feet and the tracks they make.

⁶³⁴ Literally “gathered their thoughts.”

⁶³⁵ *Pich* are the feet (and the tracks they make) of animals, as well as infant humans who crawl on all fours.

There was a river where they would bathe along the banks as a way of revealing themselves. And this was what gave it its name: “Bath of Tohil” became the name of the river. Many times the nations would see them, but then suddenly they would vanish. When the people of the nations saw this, they would report where Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam could be found. Thus the nations plotted how to kill them.

THE NATIONS PLOT TO SEDUCE THE GODS⁶³⁶

ABOVE all else, the nations desired to plan for the defeat of Tohil, Auilix, and Hacavitz. All the bloodletters and sacrificers spoke before the nations. They assembled themselves together, summoning all of them. Not one group, nor two groups, were left behind. All of them gathered together, summoning one another. Then they gathered their thoughts. They spoke, asking one another:

“What would ensure the defeat of the Cavec Quiché people? For the children of our mothers, and the sons of our men are finished. It is not clear how they caused the loss of these people. But if these abductions continue we shall be finished. If Tohil, Auilix, and Hacavitz are to become great and glorious, then Tohil shall come to be our god. But we shall be preeminent. They will not succeed in defeating us. Are our people not many? And these, the Cavec, are there not but few of them?” This they asked when they all came together.

Then some of them spoke before the nations:

⁶³⁶ lines 6598-6699

“Who, perhaps, are they that bathe by the banks of the river each day? If they are Tohil, Auilix, and Hacavitz, then we shall surely defeat them first. Thus shall begin the defeat of the bloodletters and the sacrificers,” they said.

Then they inquired:

“How then will we defeat them?” they asked.

“This shall be our means of defeating them: Because the boys appear at the river, let two maidens go there that are truly chosen. They should be the fairest⁶³⁷ of maidens. Thus may they be objects of desire for them,” they said.

“Very well then. We shall search for two of the best maidens,” they said.

And so they sought among their daughters for the truly fairest of maidens. Then they instructed these maidens:

“Go, our daughters, to wash clothes⁶³⁸ at the river. If, then, you see the three boys, undress yourselves before their faces. And if their hearts should desire you, then you shall offer yourselves⁶³⁹ to them. When they shall say to you, ‘we shall come unto you,’ then you shall say, ‘yes,’ when you are petitioned. When they ask, ‘Where do you come from? Whose daughters are you?’ then you shall reply: ‘We are the daughters of lords.’ Then they will give something to you if they should desire you. And if so, then you shall surely give yourselves to them. If you do not give yourselves to them, then we will kill you. But our hearts will be content when you bring their sign here. This therefore will be a sign to

⁶³⁷ *Saqloq'oj*. The root of this word is *saq* (white, clear, bright, clean, pure, light), something like the English word “fair,” which does not necessarily refer to skin complexion.

⁶³⁸ *Kixb'ek ix qa mi'al ojich'aja' ri k'ul* (go our daughters to wash the clothes). In a literal sense, the daughters are told to physically wash clothes at the river. In Quiché, however, *ch'aj* (wash) is also used to describe menstruation (Ajpacaja et al. 1996, 61) and childbirth (Coto) indicating that these women are of child-bearing age and thus available for marriage.

⁶³⁹ *Chok* is “to invite, offer, entice.”

our hearts that they have come unto you.” Thus said the lords when they instructed the maidens.

These, then, were the names of the two: Lady Lust⁶⁴⁰ and Lady Weeping.⁶⁴¹ There were two of them.⁶⁴² Lady Lust and Lady Weeping were their names. These were sent there to the river, to the Bath of Tohil, Auilix, and Hacavitz. This was the plan of all of these nations.

THE SEDUCTION OF LADY LUST AND LADY WAILING⁶⁴³

THEN they went. They were adorned in finery, and truly they appeared beautiful when they went there to the place where Tohil bathes. They carried their wash⁶⁴⁴ on their

⁶⁴⁰ *Xtaj*. *X-* is the prefix indicating “female,” or a diminutive such as “little.” *Taj* is “sexual desire, lust, or promiscuity.”

⁶⁴¹ *Xpuch'*. In Quiché, *Puch'* is “weeping from illness or pain rather than sadness.” Tedlock suggests that this maiden is a Precolumbian precursor of the *Llorona* (Spanish: Weeper/Wailer), tales of which are told throughout Mesoamerica (D. Tedlock 1996, 310-311). In most versions of this tradition, the *Llorona* is the spirit of a wronged woman who seeks vengeance by searching in the night for children to murder or steal away. Akkeren suggests, however that the name is more likely derived from Kekchi or Poqom, languages spoken by the ancient *Amaq'* (Nations) lords. In these languages, *puch* is “washing clothes,” with the connotation of “menstruating,” meaning the girl is marriageable (Akkeren 2000, 103-105). This reading is fully consistent with the episode described here in which the maidens go to the River of Tohil to wash clothes.

⁶⁴² The *Título Totonicapán* also includes this episode in its account of Quiché history, however, it lists three maidens corresponding to the three deities who were to be enticed (Chonay and Goetz 1953, 174-175; Carmack and Mondloch 1983, 87-95, 179-181). The name of the third maiden in that version is *K'ib'atz'un Ja*. The most likely derivation of this name is from the verb *b'atz'*, which is to “tie up, wind, make thread.” It is also a euphemism, however, for a woman prostituting herself (Coto). Akkeren prefers to read this as a lineage name, *B'atz'* being the ruling lineage at Chichen, the principal center of the Alta Verapaz region during this period which was one of the centers of power for the *Amaq'* (Nations) lords (Akkeren 2000, 101-105).

⁶⁴³ lines 6700-6775

⁶⁴⁴ Ch'ajo'n may have a double meaning here. In its literal sense, it means “wash, laundry.” In a metaphoric sense it also refers to a young woman of child-bearing, and thus marriageable, age (Akkeren 2000, 134), as well as menstruation (Coto).

heads as they went. Thus the lords rejoiced because of their two daughters that they had sent there.

And when they arrived at the river, they began to wash. Each of them undressed herself and got down on her hands and knees before the stones.

Then Tohil, Auilix, and Hacavitz came together. They arrived there on the bank of the river. But they paid little attention⁶⁴⁵ to the two maidens that were washing. Straightaway therefore the maidens were ashamed when Tohil arrived. Tohil did not desire the two maidens.⁶⁴⁶ Then they inquired:

“Where do you come from?” they asked the two maidens. “What do you want by coming here to the bank of our river?” they were asked.

“We were sent here by the lords, therefore we came. ‘Go to see the faces of Tohil and speak with them,’ the lords said to us. ‘Thus may you receive a sign that you truly saw their faces,’ we were told.”

This is what the two maidens said when they explained their mission. This, then, had been the desire of the nations—that the maidens be violated⁶⁴⁷ by the spirit essence

⁶⁴⁵ Literally “only a little they passed by their faces.”

⁶⁴⁶ “Not therefore went their desire to the two maidens.” The “they” of this passage makes it clear that all three of the gods spurned the advances of the maidens, and not just Tohil. This is one of several instances in the text where the authors refer to Tohil, Auilix, and Hacavitz collectively as Tohil. Note that two paragraphs later the maidens state that their fathers told them to go to see “the faces” of Tohil. This may be of theological significance, in that the three gods are to be considered as one god. Or it may simply be a shorthand way of referring to all three. The latter interpretation is supported by the tendency of the authors in some cases to name only Balam Quitze (or Balam Quitze and Balam Acab) when referring to all four progenitors—Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam (see pp. 213-214, 216, 251; lines 5461-5462, 5492-5493, 5624-5625, 7147-7148).

⁶⁴⁷ *Jox* (to have sex, violate, disgrace). In both colonial dictionaries and contemporary Quiché usage, illicit sex is subject to strict social constraints. The most common way today of referring to sex is simply - *b'an mak* (to do sin), and the meaning is clear without further explanation. It is not known if this was also a characteristic of Precolumbian society, although the context of this episode would indicate that the daughters were being forced to do something beyond the bounds of propriety. In addition, the nations hoped that they could defeat the gods by enticing them into an act that would destroy their power in some

of Tohil. Thus said Tohil, Auilix, and Hacavitz when they spoke to Lady Lust and Lady Weeping (the names of the two maidens):

“It is good that you should take the sign of our word with you. You shall wait for it and give it to the lords,” they were told.

Thus they counseled with the bloodletters and sacrificers. They spoke with Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam:

“Paint⁶⁴⁸ three robes,⁶⁴⁹ writing upon them your essence.⁶⁵⁰ They shall be taken to the nations by means of the two maidens who are washing. Give these to them,” Balam Quitze, Balam Acab, and Mahucutah were told.

way. In contemporary Aztec society, violations of sexual morality bore heavy penalties including death. The severity of such violations may be seen in this series of admonitions given to a young Aztec girl by her father:

Look now at something else which I want to impress on you, communicate to you, my human creation, my little daughter. Do not permit the lords from whom you are born to be mocked. Do not throw dust or rubbish on them; do not cast any uncleanness on their history, on their black and red ink [writings], on their fame. Do not insult them in any way, such as wanting things of this earth, such as seeking to enjoy them out of season, those which are called sexual things. And if you do not withdraw from them, can you ever come near the gods? Better that you should perish immediately (León-Portilla 1969, 139).

⁶⁴⁸ *Tz'ib'aj*. In ancient Quiché, this refers to both writing and painting. This is logical since both were generally done with a paintbrush. In addition, however, the act of writing a word (*tz'ib'*) also metaphorically brings the thing referred to into material existence. Thus a written word, in this case a painted hieroglyph, is not conceptually different from a visual image of the thing, or even the thing itself. This will become apparent when the painted images on the robes come to life and defeat the lords of the enemy nations. This is much the same as the actions of the gods who brought the earth into existence simply by expressing the word “earth” (p. 71; lines 219-228).

⁶⁴⁹ *K'ul* (covering). It is difficult to know precisely what type of clothing this might have been in Precolumbian times. Basseta refers to it as a *manta*, a shawl or a blanket worn wrapped around the body like a cloak or robe.

⁶⁵⁰ *K'oje'ik* (existence, nature, essence, being).

THE NATIONS ARE DEFEATED BY THE PAINTED ROBES⁶⁵¹

THUS the three⁶⁵² of them painted. First, Balam Quitze painted the image of what came to be a jaguar. He painted it on the face of the robe.

Next Balam Acab painted the image of an eagle.

Then Mahucutah painted hornets all over it. Everywhere he painted the images of wasps on the face of the robe.

Thus the three of them finished their paintings. Three forms they painted on the robes and gave them to Lady Lust and Lady Weeping, as they are called.

Then said Balam Quitze, Balam Acab, and Mahucutah:

“This is the sign of your word. You shall go before the faces of the lords and say: ‘Truly Tohil spoke to us,’ you shall say. ‘This, then, is the sign we have brought,’ you shall say to them. Then they will wear the robes that you will give to them.” In this way were the maidens instructed.

So then they returned, carrying the painted robes. And when they arrived, straightaway the lords rejoiced when they saw their faces and that which was draped across their arms. Thus the maidens were entreated:

“Did you not see the face of Tohil?” they were asked.

“We did see him,” replied Lady Lust and Lady Weeping.

“Very well then. Where is the sign that you have brought? Is it not true?” the lords asked.

⁶⁵¹ lines 6776-6919

⁶⁵² Only Balam Quitze, Balam Acab, and Mahucutah are involved in this episode. Iqui Balam does not participate, likely because he did not have a patron deity or a posterity that survived.

For the lords felt it was the sign of their disgrace. Thus the maidens untied the painted robes. Everywhere there were jaguars, everywhere eagles, and everywhere hornets and wasps. The paintings inside the robes shone brightly. Thus they desired the faces of the robes and put them on about them.

The image of the jaguar did nothing at first around the lord. Then another lord put on the second painted robe with the image of the eagle. The lord felt good inside it. He turned about before them. He opened up his robe⁶⁵³ before them all. Then another lord put on the third painted robe with the hornets and wasps inside. And when he put it around him he was stung by the hornets and wasps. He could not bear it; he could not endure the stinging insects. Thus he cried out because of the painted images of the insects within the robe. This was the painting of Mahucutah, the third of the paintings. And thus they were defeated.

Then the lords rebuked the maidens, they who were named Lady Lust and Lady Weeping:

“What are these robes that you have brought here? Where did you go to get them? You are deceivers.” Thus the maidens were asked when they were rebuked.

⁶⁵³ Literally “he disrobes his covering before their faces all of them.” This may mean that he took off his own clothes publicly to put on the new robe. More likely he wrapped the new robe around him with the painted images inside, which he then opened up to display to the other lords present. If the third lord did the same, then the insects that came to life would be in close contact with his skin. Often times the Maya kept powerful tokens or images hidden in bundles or under clothing. The highland Maya today believe that inappropriate display of such objects is extremely dangerous. Thus in the town of Santiago Atitlán, a bundle of very old garments painted with designs reminiscent of animal pelts, which they call *Martín*, is kept hidden in a carved wooden chest except at rare times when it is taken out for display. The bundle itself is unwrapped only once a year, on November 11, by a special priest called the *nab'eysil*. The *nab'eysil* opens the bundle at midnight with all the electric lights turned off, and with the doors and windows closed and locked. He then wears the garments as he dances in a circular pattern around the inside of the darkened room by candlelight. He does this with his arms slightly apart to display the garment. Participants believe that if the bundle were opened with the windows or doors opened, wind would rush out and devastate the world (Mendelson 1965, 57; Christenson 2001, 162).

Thus all of the nations were defeated by Tohil. They had desired that Tohil would get gratification from Lady Lust and Lady Weeping. But these, then, became seductresses.⁶⁵⁴ They came to be temptations to the heart of the nations. Thus the nations did not achieve the defeat of the enchanted people—Balam Quitze, Balam Acab, and Mahucutah.

Then all the nations considered again:

“How can we do it? Truly great their natures have come to be,” they said.

Then they gathered their thoughts:

“We shall merely pursue them and kill them. We shall arm⁶⁵⁵ ourselves with arrows and with shields. Are we not many? There shall not be even one or two left of them,” they said when they gathered their thoughts.

Thus all the nations armed themselves. They were crowded with killers when all the nations gathered. They were killers.

Now Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam were on the top of the mountain Hacavitz. This was the name of the mountain where they were. Thus their sons were established on the top of the mountain. They were not many then. They were certainly not as numerous at first as the people from the nations. They occupied only a small part of the mountain top.

Thus the nations plotted to kill them. They all gathered together. They arrived, all of them having been summoned.

⁶⁵⁴ *Joxol ch'ek* (scratchers knee). This is a play on words, a particularly prevalent Maya practice when referring to sexual things as a way of speaking about it indirectly. *Jox* is “to have sex,” and also “to hoe or to scratch.” A woman “knee scratcher” is a fornicator, prostitute, or one who wishes to seduce someone to have sex. The more common expression today is “leg burner” which also means seductress.

⁶⁵⁵ Literally “adorn.”

THE NATIONS ARE HUMILIATED⁶⁵⁶

THUS all the nations gathered together. They were all armed with arrows and shields. Their precious metal adornments were innumerable. All of the lords and warriors were beautiful in their appearance. But in fact they were mere boasters,⁶⁵⁷ all of them. Truly they would all come to be enslaved.⁶⁵⁸

“This Tohil, he is a god. We also shall worship him. But we shall capture⁶⁵⁹ him,” they said among themselves.

But Tohil learned of it, and so too did Balam Quitze, Balam Acab, and Mahucutah. They heard what was being planned. They did not sleep, nor did they rest.

Thus all the warriors had adorned themselves. They rose up in the night with confidence in their hearts.⁶⁶⁰ But although they went out, they did not reach their destination. All the warriors merely slept in the road. Then was their defeat by Balam Quitze, Balam Acab, and Mahucutah. They merely slept in the road, completely senseless. All of them were exhausted with sleep. Then they began to have their eyebrows plucked,⁶⁶¹ along with their whiskers.⁶⁶² The precious metal was untied from

⁶⁵⁶ lines 6920-7075

⁶⁵⁷ *B'anoj tzij* (making words). These are liars, boasters, people that are “just talk, not doers.”

⁶⁵⁸ *Alab'il*. This is literally “stepsons, godsons.” It is also used to refer to war captives and slaves. In ancient Aztec warfare, once a captive had been taken in war, the victor seized his opponent by the hair and addressed him as “my beloved son,” indicating that the captive was subject to him with the loyalty due a father.

⁶⁵⁹ *Kanab'ij* is to capture, and also to make use of something.

⁶⁶⁰ *Xkokib'ej chi ki k'ux* (they believed in their hearts).

⁶⁶¹ *U mich'ik ki muquwach rumal* (its plucking their eyebrows by them). This phrase has a double meaning. On one level, “plucking” is a metaphor for tricking or deceiving someone. In a material sense, to pluck out facial hair is to show shame, contempt, disdain, or scorn.

their clothing, as well as from their headdresses and their necklaces. The precious metal was taken from the necks of their staffs. This was a punishment upon their faces, and a plucking as well. This was done as a sign of the greatness of the Quiché people.

And when they arose, straightaway they reached for their headdresses and the necks of their staffs. But now there was no precious metal on the necks of their staffs, nor on their headdresses.

“Who has taken us?⁶⁶³ By whom were we plucked? Where did they who stole our precious metal come from?” all the warriors asked. “Perhaps it was those deceivers⁶⁶⁴ that abduct people. But they will not succeed in frightening us. Surely we shall invade their citadel. We shall see again the face of our precious metal and once more make it ours,” said all the nations.

But this was merely boasting. Thus the hearts of the bloodletters and sacrificers were comforted on the top of the mountain. Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam merely exercised their wisdom.

Then Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam considered. They made a palisade around the edge of their citadel. They placed wooden planks and pointed stakes about their citadel. Then they made effigies that looked just like people. They arranged these on top of the palisade, arming them with shields and with arrows. They placed headdresses with precious metal on their heads. They adorned these effigies of

⁶⁶² *Kismachi'* (their whiskers). The Quiché language has only one word for facial hair, and thus does not distinguish between beards and moustaches.

⁶⁶³ This is a common Quiché expression, similar to the English “we’ve been taken” or “we’ve been had.” This parallels the following phrase, “by whom were we plucked?” which is an expression for “who deceived us?”

⁶⁶⁴ *K'axtok'* (demons, deceivers).

mere carved wood with the precious metal of the nations that they had taken on the road. With these they encircled the citadel.

Then also they entreated Tohil with their thoughts:

“What if we should die? What if we are defeated?” they asked.

Thus their hearts wept before the face of Tohil.

“Do not mourn. I am. You shall use these against them. Do not fear.” Thus he spoke to Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam. And they were given the hornets and wasps. So they went out to gather them, and they returned bearing them. And these they placed inside four great gourds, which they positioned in four places around the edge of the citadel. The hornets and wasps were closed up within the great gourds. They used these as weapons against the nations.

The citadel was being spied upon, watched in ambush, scrutinized as a target by the messengers of the nations.

“There are not so many,” they said.

And then they saw the effigies of carved wood which were motionless, carrying their arrows and their shields. They appeared to be true people. Like killers they appeared to be when the nations saw them. All the nations rejoiced then, for they did not see many of them. But there were crowds of people from the nations. Their people had countless warriors, killers, and murderers that had come against Balam Quitze, Balam Acab, and Mahucutah, who were on top of the mountain named Hacavitz.

We shall now speak of this invasion.

THE NATIONS ARE DEFEATED⁶⁶⁵

THERE they were, Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam, united on top of the mountain with their wives and their children.

Then came the warriors and the killers. There were not merely sixteen thousand or twenty-four thousand⁶⁶⁶ from the nations that encircled the citadel. They yelled, armed with their arrows and shields. They would cry out, clamoring, hustling about, shouting their mockery, and whistling.

But the bloodletters and sacrificers went inside beneath their citadel, fearing nothing. They merely looked to the palisade at the edge of their citadel as they gathered together with their wives and their children. Thus they were reassured,⁶⁶⁷ and the words of the nations were sweet to them.

Then the warriors ascended a little way up the face of the mountain. But it was only a little way, for they did not reach the entrance to the citadel. And then they opened the four gourds that were in the citadel, and out flew the hornets and the wasps. They were like clouds of smoke when they came out of each of the gourds. The warriors were thus finished off because of the insects. They landed on their eyes and on their noses; on their mouths, on their legs, and on their arms. Wherever they were, the hornets and wasps went to catch them. Wherever they were, these went to swarm around them. Everywhere there were hornets and wasps. They would swarm around them stinging their eyes. There were great numbers of insects around each of the people.

⁶⁶⁵ lines 7076-7206

⁶⁶⁶ *Ka chuy, ox chuy* (two eight thousands, three eight thousands).

⁶⁶⁷ *Ku'l ki k'ux* (seated their hearts). This is “to be reassured, confident, or have faith in something.”

Thus they became disoriented⁶⁶⁸ because of the hornets and the wasps. Neither could they now grasp their arrows or their shields. They hunched over with their faces to their knees on the surface of the ground. They were scattered. They fell senseless before the face of the mountain. Then they were struck with arrows and chopped with axes, although they were only pieces of dry wood that Balam Quitze and Balam Acab used on them.⁶⁶⁹ Their wives also came upon them as killers.

Thus only a portion of them were able to return. Only a few people from the nations were able to escape. At first they tried to flee, but when they were caught they were finished off. They were killed. And it was not just a few of the people who died. And of those that did not die, the insects came upon them and tormented their hearts. They were no longer able to wage war. They did not take up their arrows or their shields again. Thus all the nations were humiliated and begged humbly before the faces of Balam Quitze, Balam Acab, and Mahucutah:

“Pity us. Do not kill us,” they said.

“Very well then. Certainly you shall become obedient.⁶⁷⁰ You shall be servants⁶⁷¹ as long as there is sun and light,” they were told.

Thus was the defeat of all the nations because of our first mothers and our first fathers. It was done on the top of the mountain Hacavitz, as it is called today. This was

⁶⁶⁸ *Q'ab'arik*. In current Quiché usage this is “to be drunk, enebriated.” According to Basseta, however, it may also mean “to be disoriented, or to faint.”

⁶⁶⁹ The authors wish to emphasize that the victory was purely a matter of divine intervention, without need for conventional arms. Thus the pieces of wood acted as if they were arrows or axes.

⁶⁷⁰ *Kame'l* (humble, obedient). This is a play on words since *kamel* is “one who dies.” Thus the captives are saying that rather than be *dead*, they are to be humble and obedient.

⁶⁷¹ *Aj patan* (he/she of the pack strap) is a servant, or more specifically a bearer. *Patan* is both the pack strap worn by men around the forehead to carry loads, as well as metaphorically any task or errand. In a larger sense, the term may be used to describe someone who is subsidiary such as a vassal or tribute payer.

the beginning. There they multiplied and became many. They had daughters and they had sons on top of Hacavitz. They rejoiced then, for they had defeated all the nations there on top of the mountain. Thus they had done this. They had surely defeated the nations, indeed all the nations.

Thus their hearts were reassured. They spoke to their sons as the time approached when they would die. For they truly desired to die.

Now we shall tell of this also, of the deaths of they who are called Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam.

THE DEATHS OF THE FOUR PROGENITORS⁶⁷²

THEY sensed their impending death and disappearance.⁶⁷³ Thus they gave instructions to their sons. They were not ill, nor did they groan from sickness, nor did they breathe with difficulty. Yet they left behind their word with their sons. These, then, are the names of the sons:

Balam Quitze had two sons. Co Caib⁶⁷⁴ was the name of the firstborn, and Co Cavib⁶⁷⁵ was the name of the secondborn. These were the sons of Balam Quitze, the grandfather and father of the Cavecs.

⁶⁷² lines 7207-7360

⁶⁷³ Literally “loss.”

⁶⁷⁴ *K'o Kaib'* (Lord Two). *K'o* is an irregular verb construction meaning “there is, or he/she/it possesses.” However when used as a title it suggests “nobility, lordship, or authority.” Thus Coto lists *Qo ch'u vi* (there is on his head, or above) as “to be charged, or have jurisdiction/authority”; *Qo r'a* (there is breath) as “to have authority”; or *Qo u sij* (there is his day) as “to have authority, great thing, famous or glorious.” *Kaib'* is simply the number two. Thus this name would be something like “Lord or Sir Two.” When used as a verb, *kaib'aj* is “to multiply or divide.” The name may refer to the fact that he had a large posterity, or that his was a significant division of the lineage. Alternatively, the “Two” may simply mean that he represents the second generation of lords (Akkeren 2000, 53).

⁶⁷⁵ *K'o Kawib'* (Lord Adornment).

Balam Acab of the Nihaihs also had two sons. Co Acul was the name of his first son, and Co Acutec was the name of his second son.

Mahucutah had only one son, whose name was Co Ahau.⁶⁷⁶

These three had sons, but Iqui Balam had no sons.

These, then, were the names of their sons, who were true bloodletters and sacrificers.

The four of them were united as they sang of the pain in their hearts. Their hearts wept within their song. Our Burial was the name of the song that they sang. And these were the instructions that they gave to their sons:

“You, our sons, we shall go but we shall also return again. Words of light⁶⁷⁷ and counsels of light⁶⁷⁸ we give to you.”

And then they spoke to their wives:

“You have come here from a far away mountain, you, our wives,” they said.

Then they were counseled:

“We go to our people.⁶⁷⁹ Our Lord Deer is now established,⁶⁸⁰ mirrored in the sky. We shall thus return, for our work is accomplished, and our day is now finished.

⁶⁷⁶ *K'o Ajaw* (Lord/Sir Lord).

⁶⁷⁷ *Saqil tzij* (light word).

⁶⁷⁸ *Saqil pixab'* (light instructions, counsel, law).

⁶⁷⁹ *Qamaq'* (our people, tribe, nation).

⁶⁸⁰ *Cholan* is to “be ordered, aligned, established, placed, or declared.” Thus “Our Lord Deer,” one of the titles for their patron god Tohil (see pp. 234-235; lines 6343-6352), had achieved a permanent, fixed position. From the following phrase, this appears to have been symbolized by some astronomical phenomenon. There appear to be deer constellation references in both the Dresden and Madrid codices. Gabrielle Vail associates the deer-trapping sections of the Madrid Codex as having astronomical associations, identifying the deer constellation as Virgo (Bricker and Vail 1997, 99-107).

Remember us.⁶⁸¹ Do not forget us.⁶⁸² Do not sweep us away. You shall surely see your homes and your mountains where you will settle. Thus let it be so. Go therefore, go to see the place from whence we came.” This was the counsel they were given.

Then they left behind the sign of the existence of Balam Quitze:

“This is the token of my memory that I shall leave with you. This is your glory.

These are my instructions, the result of what I have pondered,” he said when he left behind the sign of his existence. Bundled Glory,⁶⁸³ it was called. Its contents were not clear for it was truly bundled. They did not unwrap it, nor was its stitching clear. No one had seen it when it was bundled.

This, then, was their counsel when they disappeared there atop the mountain Hacavitz. They were not buried by their wives, nor their children. Neither was their

⁶⁸¹ *Kojina'*. Literally “sense/feel us.” This is stronger in the Quiché language than to merely have memories of someone. To an extent, traditionalist Maya do not consider powerful individuals of the past to be dead. Nicolás Chávez Sojuel, a sculptor in the community of Santiago Atitlán, carved an image of Diego Kihu, a powerful *nab'eysil* (priest) who died in the 1970s, on a panel of the central altarpiece in the church. In this panel, Kihu is walking at the head of his own funeral cortège. When I asked how this was possible, Nicolás said that he hadn't really died. He then related the following story: “Diego Kihu... could work many miracles. He had the face of a saint's image. He had power over water and rain. He could make it rain whenever he wished, and yet when he walked in the rain he never got wet.... He was very old when he died, about 128. But he didn't die of illness, he just decided to leave because he wanted to be with the other *nab'eysil*s in *Paq'alib'al* [a cave located southwest of the community where the saints and deified ancestors live]. He told people that he would leave at 6:00 pm on a Wednesday and said goodbye to everyone and gave them his blessing. Everyone placed candles around his bed and he left right at 6:00, as he had said. That evening he visited many people in dreams and told them not to worry about him because he was in *Paq'alib'al*. When he was buried a great wind and earthquake passed through the cemetery to prove that he was not dead” (Christenson 2001, 211). The highland Maya frequently tell stories about visitations from ancestors who continue to work on behalf of their community whenever necessary. Recently I gave an old photograph, depicting a group of elders from Santiago Atitlán taken in the late nineteenth century, to a friend of mine who is the son of a prominent elder in that community. He immediately named a number of the individuals in the photograph. When I asked how he knew them, considering that they had died long before he was born, he replied: “We all know them. They still visit us in dreams and in person. We know their faces. They are still very powerful—the soul of the town. Their minds and their souls are white [*saq*: white, light, pure, clear, clean]. This is our heritage. These people are still alive because I live. I carry their blood. I remember. They are not forgotten.”

⁶⁸² Literally “do not lose us.”

⁶⁸³ *Pisom Q'aq'al*. *Q'aq'al* is derived from the root, *q'aq'* (flame). In this form, it refers to “power, glory, splendor.”

disappearance clear when they vanished. But their counsel was clear. Thus the Bundle came to be precious to them as a memorial to their father. Straightaway they burned offerings before it as a memorial to their father.

Thus the people were established by the lords following this beginning by Balam Quitze, the grandfather and father of the Cavecs. His sons, named Co Caib and Co Cavib, were not lost.

Thus were the deaths of our four grandfathers and fathers when they disappeared, when they left their sons there on top of the mountain Hacavitz. These sons tarried there.

But the day of all the nations had fallen, and they were humiliated and lacking in power.

The people had become numerous by then, and all of them gathered together each day to remember their father. The Bundle was precious⁶⁸⁴ to them. They did not open it. It remained bundled. Bundled Glory they called it when it existed. They also named it their Wrapping. It had been left behind by their fathers as the true sign of their existence. Thus was the disappearance and end of Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam, the first people who came from across the sea in the East. Anciently they came here. They died in their old age, they who were called bloodletters and sacrificers.

THE SONS OF THE PROGENITORS JOURNEY TO TULAN⁶⁸⁵

THEN they remembered in their hearts the journey they were to make there to the East. They remembered the instructions given by their fathers who had died long ago.

⁶⁸⁴ Literally “great its day.”

⁶⁸⁵ lines 7361-7411

The nations had since given wives to them, thus becoming their fathers-in-law. Thus the three of them had married women.

And they said when they left:

“We go to the East from where our fathers came.” Thus said the three sons when they began their journey.⁶⁸⁶ Co Caib was the name of the first, the son of Balam Quitze of the Cavecs. Co Acutec was the name of the son of Balam Acab of the Nihaihs. Co Ahau was the name of the other, the son of Mahucutah of the Ahau Quichés. These, then, were the names of the three who went across the sea. They had wisdom and knowledge. They were more than ordinary people in their nature. They left behind their counsel to all their older brothers, and their younger brothers.

They rejoiced when they left:

“We will not die. We will return,” they said when the three of them left.

Thus they passed over the sea, arriving there in the East. They went there to receive their lordship.

This, then, is the name of the lord, the lord of the East, when they arrived:

THE SONS RECEIVE AUTHORITY TO RULE⁶⁸⁷

THEN they arrived before the face of the lord, whose name was Nacxit.⁶⁸⁸ He was the only judge⁶⁸⁹ over a great dominion.⁶⁹⁰ He then gave to them the signs and symbols of

⁶⁸⁶ Literally “took their road.”

⁶⁸⁷ lines 7412-7450

⁶⁸⁸ Nacxit is derived from the Nahuatl words *nawi* (four) and *ikxit* (foot) (Campbell 1983, 84), perhaps referring to the extent of his power to the four cardinal directions of the earth. This is also one of the titles for the feathered serpent deity known as Kukulcan in the Maya lowlands and as Quetzalcoatl in Central Mexico (Recinos 1950, 207 n. 3; Roys 1967, 83; Edmonson 1982, 16 n. 220; Nicholson 2001, 228). It is

their lordship. Thus they received the signs of office for the Ah Pop,⁶⁹¹ and the Ah Pop of the Reception House.⁶⁹² They received the signs of their glory and lordship that pertained to the offices of Ah Pop and Ah Pop of the Reception House. These, then, are the names of the tokens of their glory and lordship:

Canopy⁶⁹³ and throne,

Bone flute⁶⁹⁴ and drum,⁶⁹⁵

likely that Nacxit was a ruler from some major political center in the general direction east from the Maya highlands. Nacxit was apparently one of the titles used by Maya rulers at both Chichen Itza and Mayapan, indicating their attempts to claim Central Mexican authority as an important component of their own right to rule (Nicholson 2001, 228-229).

⁶⁸⁹ *Q'atol tzij*. Literally “guardian/cutter of the word.”

⁶⁹⁰ *Ajawarem* is “lordship or sovereignty” when referring to the power of the office, and “dominion or domain” when referring to the physical extent of a lord’s territory and its people.

⁶⁹¹ *Aj Pop* (He of the Mat). This is the highest office within the ruling Nima Quiché lineage. The office belonged to the line founded by Co Caib, son of Balam Quitze of the Cavecs. The ancient lords of the Maya sat on mat thrones, and these became symbolic of lordship and authority itself. The mat represented the power not only of the ruler, but also of his subjects. In this sense, the interlaced reeds of the mat represented the members of the community, linked in a common purpose. Thus Ximénez translated *popol* as “community.” This office might then be translated “he of the community” or “master of the community.” Coto lists various offices, all of which held the title of *ah pop*: “constable, chief, counselor, dignitary, and lord.” None of these European titles, however, is equivalent with the Maya concept of the office. “He of the Mat” is misleading without extensive elaboration of the meaning of “mat.” I have chosen therefore to leave the title untranslated.

⁶⁹² *Aj Pop K'am Ja* (He of the Mat Reception House). This is the second highest office among the Nima Quichés, serving as an advisor and representative of the *Ah Pop*. The title was held by representatives of the secondary line founded by Co Nache, the illegitimate son of Co Caib’s wife by Co Cavib (Carmack and Mondloch 1983, 181-182). The “reception house” may refer to a building or hall used for receiving petitioners, visiting dignitaries, or perhaps tribute. The latter possibility is supported by Colonial dictionaries that list *k'amajal* as “to send or pay tribute” (Varea). The importance of tribute collection as the focus of high office may be seen in Las Casas’ description of Pre-Conquest Quiché administration: “That supreme king had certain principal men of counsel who had charge of justice and determined what should be done in all business affairs. It is said today by the Indians who saw it, that they were like the Oidores of Guatemala in the Royal Audience. They saw the tribute which was collected from the kingdom and they divided and sent to the king what was needed for the support of his person and for his estate” (Las Casas 1967, III.ccxxxiv.500. Translation by author). Alternatively, Akkeren reads the word as *k'amaja* (almost, close) in the sense that he holds a position just below the *Ah Pop*. The title would thus be something like “Vice *Ah Pop*” (Akkeren 2000, 213).

⁶⁹³ *Muj* is a “canopy, mantle, throne, or cushion of a throne or seat” (Coto). *Muj* is literally “shadow” and likely refers to the shadow cast by the canopy. Alonso de Zorita noted that prior to the Spanish conquest, the Quichés had “three lords” who were distinguished by the number of canopies they had: “The principal lord had three canopies or mantles adorned with fine featherwork over his seat, the second had two, and the third one” (Zorita 1963, 272).

Shining Black Powder⁶⁹⁶ and Yellow Stone,⁶⁹⁷

Puma Paws and Jaguar Paws,

Head and Hooves of the Deer,⁶⁹⁸

Arm Band⁶⁹⁹ and Snailshell Rattle,

Tobacco Gourd⁷⁰⁰ and Food Bowl,⁷⁰¹

Macaw Feathers and Snowy Egret Feathers.⁷⁰²

All these they brought when they returned. They also brought the writings⁷⁰³ of Tulan from the other side of the sea. These were the writings, as they were called, that contained the many things with which they had been invested.⁷⁰⁴

⁶⁹⁴ Coto identifies this as a small bone flute used in dances.

⁶⁹⁵ The standard musical instruments used in ritual processions and ceremonies are the flute and large drum. Each is considered a living entity. Among the modern highland Maya, the drum often has a hole, or cluster of holes, in its side called its “mouth.” Attendants periodically pour liquor into this hole to give the drum strength when it gets “thirsty.”

⁶⁹⁶ Basseta identifies *tatil* (a variant of *titil*), as a shining black powder or saltpetre used to dry ink when writing. Ximénez interprets *titil* as an “unguent with which they [Quichés] paint/smear” (Ximénez 1985, 536). In this context, it, along with the “yellow stone” that is paired with it, were likely pigments used as face or body paint connected with ceremonial performances.

⁶⁹⁷ Coto identifies *εan abah* (yellow stone) as face paint.

⁶⁹⁸ Deerskins were the symbol of Tohil, the patron deity of the Quichés. They are still kept in many highland Maya communities as tokens of deities and worn in dances (see footnote 620).

⁶⁹⁹ *Makutax* from the Nahuatl *macuetlaxtli* (*mah*—hand, arm; *cuetlax*—leather) (Campbell 1983, 84; cf. Edmonson 1971, 218; D. Tedlock 1996, 316 n. 179). Because it is paired with a musical instrument, this perhaps has dangles that make sounds when danced.

⁷⁰⁰ *K'us B'us* (Tobacco Gourd). This is likely derived from a combination of the lowland Maya word for tobacco (*k'utz*), and a small wild gourd used to hold ground tobacco (*b'ux*). Tobacco plays a major role in Maya ceremonies, both ancient and modern. Deities, rulers, and priests are often depicted wearing a tobacco pouch in Precolumbian art.

⁷⁰¹ Tedlock identifies *kaxkon* with the Nahuatl *caxcomulli* (bowl for eating) (D. Tedlock 1996, 316 n. 179).

⁷⁰² *Astapuhul* is likely the great heron or snowy egret, a word derived from the Nahuatl *aztapololli* (*aztatl*—great heron or snowy egret; and *pol*—great, large) (Campbell 1983, 84; cf. Recinos 1950, 209 n. 5; D. Tedlock 1996, 316 n. 179).

THE MIGRATIONS OF THE QUICHÉS⁷⁰⁵

And when they arrived there atop their citadel called Hacavitz, they gathered all the Tamub and Ilocab together. All the nations rejoiced when Co Caib,⁷⁰⁶ Co Acutec, and Co Ahau arrived. These alone received the lordship of the nations. The Rabinals, the Cakchiquels, and the Ah Tziquinahas rejoiced when the sign of the greatness of their lordship was revealed to them. Great then would become the essence of the nations. For their lordship was not truly complete when they were at Hacavitz. When they were on top of the mountain the only people there were those who had come from the East. But now there were many of them. By then the wives of Balam Quitze, Balam Acab, and Mahucutah had died.

Then they left, they abandoned their mountain and searched for another mountain to settle. They settled innumerable mountains, giving each of them honorific epithets and

⁷⁰³ *Tz'ib'al* is both "writings and paintings." These were likely painted codices. Alonso de Zorita visited Utatlan soon after the Conquest and was shown certain "paintings that they had which recorded their history for more than eight hundred years back, and which were interpreted for me by very ancient Indians" (Zorita 1963, 272).

⁷⁰⁴ These paintings and tokens of lordship gave the Quichés their sanction to rule, received from the hand of a "Toltec" lord who had the proper authority. The painted texts were likely a record of this sanction, prepared at the court of Nacxit to be used as proof of the lords' newly-acquired legitimacy as rulers.

⁷⁰⁵ lines 7451-7550

⁷⁰⁶ According to the *Titulo Totonicapán*, the Quiché lords sent both of the sons of Balam Quitze on this mission. Co Caib traveled East, and his brother Co Cavib went West. Co Caib was successful in bringing back the tokens of authority whereas Co Cavib returned without accomplishing his purpose (Carmack and Mondloch 1983, 181). Upon his return, Co Cavib fell into further disgrace: "Then (C'ok'awib) demonstrated his weakness and fornicated with his sister in law, the wife of C'ocaib. Balam C'ok'awib engendered a son and the child was still in the cradle when it was told to C'ocaib" (Ibid.). It is this same Co Nache who succeeded his father (see p. 262; line 7557) and founded the title of Ah Popol (see p. 293; line 8520). Perhaps because of his illegitimacy, the *Titulo Totonicapán* suggests that he should have held the secondary office of *Ah Pop K'amja* (Ah Pop of the Reception House), which is, indeed, the office held by his descendents beginning with Iztayul (Carmack and Mondloch 1983, 182). Co Caib's legitimate son Xmayquej apparently succeeded to the higher office of Ah Pop (Carmack 1981, 129-130).

names. Our first mothers and fathers gathered together and became strong, according to what the ancient people say. Thus they abandoned their first citadel, called Hacavitz.

Thus they arrived, they founded a new citadel called Chi Quix.⁷⁰⁷ Here they spent a great deal of time atop this unified citadel group. They had daughters and sons when they were there. Although they were on four mountains, there was only one name for the entire citadel.

They gave away their daughters in marriage to their sons. They gave away their daughters merely as an act of compassion, as gifts without payment in return. They did only that which was good.

Then they passed through each division of the citadel. These were the names of the mountains of Chi Quix where they tarried: Chi Chac,⁷⁰⁸ Humetaha,⁷⁰⁹ Culba,⁷¹⁰ and Cavinal.⁷¹¹

⁷⁰⁷ *Chi K'ix* (Thorny Place). Akkeren places this site at the confluence of the Chixoy River and the Calá River where it is known today as Chi Cruz (Akkeren 2000, 94, 107-108).

⁷⁰⁸ *Chi Chak* (Wound/Thorn Place).

⁷⁰⁹ *Jumeta Ja* (Bark House). According to the *Título Totonicapán*, the Quichés settled this area briefly after they had abandoned Hacavitz: "They arrived at the place they called *Chi-Humet*, because there was an abundance of limestone and because they built their dwellings of it. They found some plantains and little birds. Nevertheless, they suffered many hardships in those mountains" (Chonay and Goetz 1953, 182; Carmack 1973, 290-291).

⁷¹⁰ *K'ulb'a* (Landmark), based on *k'ulb'at* (Basseta). In the *Título Totonicapán*, this site is referred to as Culba-Cavinal, indicating that they are closely-related sites.

⁷¹¹ *Kawinal* (Armory), based on *cawij*, "to arm, adorn, prepare, embellish" (Basseta). The Late Postclassic site of Kawinal is located on the *Ka'ala* (Calá) River two kilometers north of where it empties into the Chixoy River (Akkeren, personal communication). The mountain above this site is still called Cerro Cauinal (Fox 1978, 249). It is likely that Chi Quix, Chi Chac, Humetaha and Culuba were located nearby, although their precise location is unknown (Recinos 1950, 211 n. 9). The *Título Totonicapán* and the *Título C'oyoi* list Humeta and Culba-Cavinal as places of refuge for the Quichés following their abandonment of Hacavitz. (Chonay and Goetz 1953, 182-183; Carmack 1973, 289). The Quichés allied themselves to the local Aq'ab' inhabitants here, although it must have been an unequal relationship since they received tribute from them (Carmack 1973, 289-291).

Then they investigated the mountains near their citadel. They looked for a mountain on which to dwell, for they had become numerous. They who had received lordship in the East were now dead. They who had come to the peaks of each citadel had become aged grandfathers. But they were not content.⁷¹² They passed through numerous afflictions and misfortunes until at last they discovered the citadel of the grandfathers and the fathers.

This therefore was the name of the citadel that they came to:

THE FOUNDATION OF CHI IZMACHI⁷¹³

CHI IZMACHI,⁷¹⁴ then, was the name of the mountain on which they dwelt as their citadel. There they settled and tested their glory. They ground their lime plaster and their whitewash⁷¹⁵ in the fourth generation of lords. It is said that Co Nache⁷¹⁶ and Beleheb Queh⁷¹⁷ ruled then, along with the Lord Magistrate.⁷¹⁸

⁷¹² Literally “they did not receive their faces,” which is “to settle down, be content, or become comfortable.”

⁷¹³ lines 7550-7707

⁷¹⁴ *Chi Ismachi'* (Place of Whiskers). The ruins of this settlement are located on a hill just across a small canyon southwest of the later Quiché capital of Cumarcah, occupied at the time of the Spanish conquest. According to the *Título Tamub* (*Historia Quiché de Don Juan de Torres*), the founding of this citadel marked the beginning of the true *ajaware*m (lordship) of the Quichés (Recinos 1957, 43-45), likely reinforced by the presence there of the tokens of office brought from Tulan by Co Caib. All three major lineages of the Quichés (Nima Quichés, Tamub, and Ilocab) occupied Chi Izmachi. After the Nima Quichés moved on to their eventual capital at Cumarcah, the Tamub were left behind as the sole inhabitants of Chi Izmachi. The disgraced Ilocab occupied the site of Chisalin (also known as Mukwitz Pilocab), located across a small canyon northeast of Cumarcah (Carmack 1981, 234-239).

⁷¹⁵ This is the first settlement described as having plastered and whitewashed buildings, characteristic of important Precolumbian centers as opposed to smaller communities built from adobe and wood.

⁷¹⁶ *K'o Na Che'* (Lord House Tree), where *na* is the Lowland Maya form of the Quiché *ja* (house). The Maya often refer to trees as metaphors for lineages, the branches (posterity) growing out of the trunk (founder).

It was there at Chi Izmachi that Lord Co Tuha⁷¹⁹ and Iztayul⁷²⁰ ruled as Ah Pop and Ah Pop of the Reception House. Under them it came to be a very fine citadel.

Only three great houses⁷²¹ were built there at Chi Izmachi, not the twenty-four great houses of today. Yet there were three great houses:

Just one great house of the Cavecs;

Just one great house over the Nihaibs;

And just one of the Ahau Quichés.

⁷¹⁷ *B'elejeb' Kej* (Nine Deer). This is the first occurrence in the text of a historical figure whose name is derived from a day on the Highland Maya calendar, a common practice at the time of the Conquest and into the Spanish Colonial period. It is likely the day on which he was born.

⁷¹⁸ *Q'alel Ajaw*. This is another office within the Quiché hierarchy that has no English equivalent. It is the third highest position within the Nima Quiché line (after Ah Pop and Ah Pop of the Reception House). The title is specifically linked with the Nihaib lineage. Neither the Cavec, the Ajau Quichés, nor the Zauquics (the other three lineages within the Nima Quiché alliance) have a *Q'alel* title. Colonial dictionaries give a variety of descriptive meanings to it including “*cacique*” (Spanish for a native chief), “generous person, prince” (Coto), or simply an “important person” (Varea). Coto also lists *ah xalel* as a “constable.” Basseta defines *calel achi* as a “captain of soldiers.” In modern Quiché, the title is given to judges, and some early dictionaries suggest that this office may have included judicial functions as well. The title is likely something akin to “magistrate” with duties that include peacekeeping and military activity. *Ajaw* is “lord.”

⁷¹⁹ *K'o Tuja* (Lord Sweatbath). According to other highland Maya documents, the rise of the Nima Quichés under the leadership of Co Tuha aroused the envy of the Ilocab at Chi Izmachi. At first they tried to create tension between Co Tuha and Iztayul, the Ah Pop of the Reception House. When this plan did not succeed, the Ilocab ambushed a group of Quiché lords and warriors as they bathed in a canyon. The Ilocab were eventually defeated and the survivors taken back to Chi Izmachi to be sacrificed, but Co Tuha subsequently disappears from the records and apparently died in the revolt. The records say that this was the beginning of regular human sacrifice at Chi Izmachi which caused all the people of the region to fear them greatly (Carmack and Mondloch 1983, 194). Soon after this incident the old alliance broke up and the Nima Quichés abandoned Chi Izmachi.

⁷²⁰ Campbell suggests that this name is derived from the Nahuatl *ista*—white, and *yol*—heart, giving a reading of “White Heart” (Campbell 1983, 85-86).

⁷²¹ *Nim Ja* (Great House) may refer to both a large building or palace, as well as the lineage to which it was dedicated. In this case, the reference is to the lineage, since the three great houses were quartered in only two buildings. This is where administrative and judicial decisions were made for each of the major lineages. The *Popol Vuh* mentions that the negotiation of bride exchange in particular took place in the great houses. The great houses likely also served as the residences for the lineage heads as well as the repositories for the tokens of authority brought from Tulan.

There were only two swollen⁷²² great houses, one each for the two lineage divisions at Chi Izmachi. Their hearts were united. There were no bad feelings or anger, only steadfast⁷²³ lordship. There was no contention or disturbance. There was only purity and a tranquil sense of community in their hearts. There was no envy⁷²⁴ or jealousy.⁷²⁵

Yet their glory was still meager. They had not pulled together,⁷²⁶ nor had they become great. They attempted to strengthen their defenses⁷²⁷ there at Chi Izmachi. This act was surely a sign of their sovereignty. It was surely a sign of their glory, as well as their greatness.

However this was seen by the Ilocab, who fomented war. They desired that Lord Co Tuha be murdered. They desired that there be but one lord over them. Thus the Ilocab wished to convince Lord Iztayul to murder him. But this plot against Lord Co Tuha did not succeed. Their envy merely fell on their own backs. This first attempt by the Ilocab to kill the lord failed. Yet it was the foundation of strife and the clamor for war.

Thus the Ilocab made a first attempt at invading the citadel, coming as killers. It was their desire that the Quichés be destroyed.⁷²⁸ They wished to exercise lordship in

⁷²² *Kumatzil*. This is “swollen, enlarged, inflated” (Basseta). It likely refers here both to the size of the structures, as well as to the fact that they were overcrowded.

⁷²³ *Li'anik* is “steadfast, flat, tranquil, pacific.”

⁷²⁴ *Moxwachinik* (left/crazy facing).

⁷²⁵ *Q'aq'wachinik* (fire facing).

⁷²⁶ The Quiché expression reads *kanuk'maijoq* (drawn/pulled together). It is an interesting coincidence that this metaphor is similar to our English expression “pull it together,” meaning to get one’s life or affairs in order.

⁷²⁷ *Xkikowisaj pokob'* (they strengthened shield). *Kowisaj* is not only “to strengthen,” but specifically “to plaster” (Coto). Thus the Quichés were fortifying their citadel with plastered walls.

⁷²⁸ Literally “the loss of their faces.”

their own hearts. But when they came to seize it they were captured and despoiled, and few of them were ever set free again.

Then began the sacrifices. The Ilocab were sacrificed before the face of the god as payment for their offenses against Lord Co Tuha. Thus many were taken into captivity and enslaved. They became servants. They merely gave themselves up in defeat as a result of their clamor for war against the lord as well as his canyon-citadel.⁷²⁹ They had desired in their hearts to ruin and mock the lordship of the Quichés. But this was not accomplished. Thus they commenced to sacrifice these people before the face of the god.

Then they built their war defenses, and this was the beginning of the fortification of the citadel at Chi Izmachi. Thus they began to lay the foundation of their glory, because the sovereignty of the Quiché lord was surely great. Everywhere there were enchanted lords. None came to humiliate or mock them. They were but workers of greatness.

There they put down roots at Chi Izmachi, and there also their bloodletting god increased in greatness. And all the nations, the small and the great, became afraid. They witnessed the arrival of captive people to be sacrificed and killed by the glory and sovereignty of Lord Co Tuha and Lord Iztayul, in alliance with the Nihai and Ahau Quichés. There were only three divisions of lineages there at the citadel named Chi Izmachi.

⁷²⁹ *Siwan tinamit* (canyon citadel). These two terms together refer to the fortified hilltop center as well as the surrounding population living in the canyons and valleys where crops were cultivated. Many contemporary Quiché towns are still referred to as *siwan-tinamit* when referring to the urban center plus its surrounding dependent communities. Bunzel notes that this phrase is always used to refer to the town of Chichicastenango in ritual contexts (Bunzel 1952, 2; Schultze-Jena 1954, 28).

And yet again they began to feast and to drink to their daughters. They who were called the Three Great Houses gathered together to celebrate. They would drink their drinks and eat their food, and this alone was the bride price for their sisters and their daughters. There was only joy in their hearts when they feasted within their great houses:

“We give only our thanks and our gratitude as a sign of our agreement;⁷³⁰ as a sign of our word regarding the boys and girls born of their mothers,” they said.

They gave one another honorific titles, and gave names to their lineages, their seven nations, their fortified cities.

“We have intermarried, we the Cavecs, we the Nihaibs, and we the Ahau Quichés,” they said.

These three lineages, and these three great houses, dwelt a long time there at Chi Izmachi. But then they looked for and found another citadel. And so they abandoned the peak of Chi Izmachi.

THE FOUNDATION OF CUMARCAH⁷³¹

THUS they rose up again and came to the citadel that the Quichés would call Cumarcach.⁷³² The lord Co Tuha, along with Cucumatz⁷³³ and all the lords, came there.

⁷³⁰ *Tzijel* (word, news, agreement). In this context, *tzijel* refers to the covenant or agreement reached in marriage negotiations. It also has a double meaning, as *tzijel* may refer to “sons, descendants, posterity” (Coto).

⁷³¹ lines 7708-7787

⁷³² *Q'umarkaj* (Ancient/Rotten Canes/Reeds). The name of this citadel has generally been translated “Place of Rotten Canes” (Recinos 1950, 215, D. Tedlock 1996, 183). *Q'umarik*, however, also refers to something ancient, while *aj* can be used for a wide variety of reeds. The more likely translation of the citadel is thus “Place of Ancient Reeds.” This ties the city figuratively with the ancient place of their origin at Tulan (Place of Reeds). Following the Spanish conquest, Cumarcach was renamed *Utatlan* by the Tlaxcalan allies of the invaders. In the Tlaxcalan dialect of Nahuatl, this name means “among the reeds,” a close translation of the Quiché name (Carmack 1981, 143). Cumarcach was the capital of the Nima Quichés

There had been five moves and five generations of people since the beginning of the light, the beginning of the nations, the beginning of life and creation. There they built many homes. They also built houses for the gods at the center, on the highest point of the citadel.

Thus they came and began to be great in their lordship. They were many now, crowded together. They planned their great houses. They gathered together. And yet they were also divided because there began to be contention. They began to envy each other regarding the bride price for their sisters and their daughters. For it was no longer merely food and drink that they demanded. This, then, was the root of their division. They turned on each other, desecrating⁷³⁴ the bones and the skulls of the dead. They became infuriated

at the time of the Spanish conquest. The ruins of the citadel are located approximately two kilometers west of the modern city of Santa Cruz del Quiché. Little remains of its buildings, partly because it was burned by Pedro de Alvarado during his conquest of the Maya highlands in 1524, and partly because of extensive looting of its stones for buildings elsewhere since that time. Cumarcah was constructed atop a small plateau with nearly vertical cliffs on all of its sides. Anciently, the citadel was accessible only by a narrow causeway and bridge from the southeast, and by a steep stairway on the west side (Fox 1978, 22-24), making it easily defended from attack. The move to Cumarcah was apparently necessitated by conflict among the major Quiché lineages. As a result, the Nima Quichés founded Cumarcah as their capital in ca. 1400, while the Tamub remained at nearby Chi Izmachi, and the Ilocab founded a new settlement at Mukwitz Chilocab (Burial Mountain of the Ilocab), now called Chisalin, also located in the vicinity (Recinos 1957, 43-44; Fox 1978, 36). Archaeologically, Mukwitz was by far the smallest of the three, indicating the decline in power suffered by the Ilocab (Carmack 1981, 167). The first occupation in the Cumarcah region actually dates to ca. 1250, thus it is likely that the “move” as described here is less a literal migration than the establishment of the citadel as a center of power as the Cavec lineage becomes more prominent (Akkeren, personal communication).

⁷³³ *Q'ukumatz* (Quetzal Serpent) was likely the son of Co Tuha, who acceded upon the death of his father at the hands of the Ilocab. The manuscript always spells the name of this lord as Cucumatz, whereas the creator deity with the same, or similar, name is spelled Qucumatz. The variant spellings may be the result of multiple scribes working on the manuscript, each with his/her own creative ways of spelling. Alternatively, it may simply be a means of distinguishing between the deity and this lord. With Cucumatz, who reigned ca. 1400-1425, we are entering into a period of Quiché history in which historical details are better known. Under the direction of Cucumatz the power of the Quichés expanded northward to the area of present-day Sacapulas in a series of campaigns aided by allied Cakchiquel warriors (Recinos 1957, 133-139).

⁷³⁴ Literally “turning over.” The ancient Maya kept and revered the bones of their ancestors as the foundation of their power and legitimacy. To disturb these bones would be far more serious than to insult the living members of the lineage. It is likely that the bones of the ancestral founders were kept in the great houses. Thus López-Medel wrote that great rulers were buried in the great houses beneath the place where they had exercised rule in life (Carmack 1981, 193).

with one another and split apart. Thus there came to be nine lineage divisions because of this contention over the sisters and the daughters. Therefore, when lordship was conceived, twenty-four great houses came to be.

When they arrived in ancient times at the top of their citadel, they completed twenty-four great houses there in the citadel of Cumarcah. This citadel was blessed by the lord bishop⁷³⁵ after it was left abandoned.

They were advanced in rank,⁷³⁶ differentiated by their benches and their cushions. They were set apart, each according to their glory. Each of the lords of the nine lineages was distinguished by rank:

Nine lords of the Cavecs;

Nine lords of the Nihaihs;

Four lords of the Ahau Quichés;

And two of the Ahau Zaquics.

Thus they came to be numerous. Many there were behind each of the lords. From the beginning they were the heads of numerous vassals and servants.⁷³⁷ Each of the lineages of lords became crowded.

⁷³⁵ The authors of the *Popol Vuh* are identifying the citadel of Cumarcah as the capital city of the Quichés at the time of the Spanish conquest. The ruins of its destroyed temples and palaces were blessed by the Roman Catholic bishop Francisco Marroquín in 1539: “The very illustrious and reverend Señor Don Francisco Marroquín... was in that court, and blessed the place, and there he fixed and raised the standard of faith, the sign of our Redemption; it was in the same place where for so many years the Prince of Darkness, that idol Tojil, had reigned; thus it was a sign of triumph and conquest” (Ximénez 1929-31, I.xxxix.115). Thus the site of Cumarcah remained a center of occupation for survivors of the conquest for at least a few decades following the conquest. Dominicans administered this settlement, which they called Santa Cruz Utatlán. A new city was built nearby in 1555 named Santa Cruz el Quiché (Spanish “Holy Cross of the Quiché”). Today Santa Cruz is the capital city of the State (*Departamento*) of El Quiché, Guatemala.

⁷³⁶ *Xeq'aq'ar* (they were glorified, advanced in rank). The verb form is derived from *q'aq'al* (glory, power).

We shall now give the titles of each of the lords and of each of their great houses:

THE TITLES OF THE CAVEC LORDS⁷³⁸

THESE, then, are the titles of the lords over the Cavecs.⁷³⁹ The first lords are:

Ah Pop⁷⁴⁰ and

Ah Pop of the Reception House;⁷⁴¹

Ah Tohil and

Ah Cucumatz,⁷⁴²

Great Steward of the Cavecs⁷⁴³ and

⁷³⁷ The political organization of the citadel is based on kinship terms, although no true familial relationship need exist. Here the terms are *al*, *k'ajol* (child of woman, son of man) which are metaphors for vassals and servants.

⁷³⁸ lines 7788-7802

⁷³⁹ Literally "lords before the faces of the Cavecs."

⁷⁴⁰ *Aj Pop* (He of the Mat), the highest office in the Quiché hierarchy.

⁷⁴¹ *Aj Pop K'am Ja* (He of the Mat Reception House). This is the second highest office. Coto lists this office as a "messenger, errand boy." Considering the importance of this position, a more likely translation would be "emissary, legate, or vice-*ah pop*." "Reception House" likely refers to a reception hall for meeting with visiting dignitaries or for receiving tribute.

⁷⁴² *Aj Tojil*, *Aj Q'ukumatz* (He of Tojil, He of Cucumatz). These are likely priests of the two major patron deities. *Q'ukumatz* (Quetzal Serpent) was one of the creator deities (see pp. 61, 68-72, 80-82; lines 25, 140-154)

⁷⁴³ *Nim Ch'okoj Kaweq* (Great Seating Cavec). *Ch'okoj* is "to seat," but when used as a title it refers to one who calls people to service, or to a banquet (Varea). Thus Ximénez glosses *chocoh* as being associated with a "wedding or banquet" (Ximénez 1985, 200). The *ch'okoj* is also charged with providing the food and drinks for state functions, as well as making pronouncements and public discourses. The nearest English terms for such an office would be a "steward or master of ceremonies," although these are comparatively minor functions in most modern societies. It is not a minor role in Maya communities. In Santiago Atitlán, it is the *cabecera* (Spanish: "head person"), the head of the entire confraternity system, that is charged with overseeing the preparation of food and drink, as well as leading the procession of such dishes for large public events. Until the secularization of Guatemalan communities after World War II, the *cabecera* was the principal political and ecclesiastical authority in traditional Maya communities. Within each individual confraternity, it is the wife of the confraternity head that is charged with preparing the food for communal meals, and it is the confraternity head himself who pays for it, distributes it, and gives a brief discourse

Councilor of the Stacks;⁷⁴⁴

Emissary of the Deer House,⁷⁴⁵

Councilor in the Ballcourt of Punishment,⁷⁴⁶ and

Mother of the Reception House.⁷⁴⁷

THESE, then, are the lords over the Cavecs.

There are nine lords for each of the great houses and these shall now be shown:

THE TITLES OF THE NIHAIB LORDS⁷⁴⁸

THESE, then, are the lords over the Nihaihs. The first lords are:

Lord Magistrate⁷⁴⁹ and

Lord Herald;⁷⁵⁰

welcoming those in attendance and, where appropriate, explaining the meaning of the event. Bunzel suggests that at Chichicastenango, the ceremonies of the confraternity are “little more than a series of sacramental meals in which the sacred character of food, especially maize and cacao, holds the center of interest, even to the exclusion of the saint in whose honor the ceremony presumably is held.” In conjunction with such meals, “there are long speeches of blessing and a special type of music” (Bunzel 1952, 45-46). The concluding remarks of the *Popol Vuh* text suggest that the authors were, indeed, the *Nim Ch'okoj* of the three major Quiché lineages. In that passage the three *Nim Ch'okoj* are referred to as the “givers of birth, the mothers and fathers of the word,” presumably referring to the text of the *Popol Vuh* itself (see p. 305; lines 8702-8703).

⁷⁴⁴ *Popol Winaq Chi T'uy* (Councilor of the Stacks). *Popol Winaq* (Mat Person) is the head of a ruling or deliberative council, the unity of the council being symbolized by the interlaced reeds in a woven mat. *T'uy* is a “stack, pile.” This latter term is likely a reference to tribute. It is common in scenes depicting throne rooms on ancient Maya ceramic vessels to see stacks of tribute in the form of textiles, bark paper, exotic feathers and skins, cacao beans, etc.

⁷⁴⁵ *Lolmet Kej Nay* (Emissary of the Deer House). *Lolmet* (or *Lolmay*) is an “emissary or ambassador.” *Kej* is deer. *Na[y]* is the Lowland Maya version of the Quichéan *Ja[y]* (house).

⁷⁴⁶ *Popol Winaq pa Jom Tzalat* (Councilor in the Ballcourt of Punishment). *Jom* is “ballcourt.” *Tzal* is “war, battle, conflict,” while *tzalat* means “punishment, or penalty” (Coto).

⁷⁴⁷ *U Chuch K'am Ja* (Mother of the Reception House). This is likely the overseer of the hall where dignitaries are received, or the building where tribute is stored.

⁷⁴⁸ lines 7803-7814

⁷⁴⁹ *Ajaw Q'alel* (Lord Magistrate).

Magistrate of the Reception House⁷⁵¹ and

Great Reception House;⁷⁵²

Mother of the Reception House⁷⁵³ and

Great Steward of the Nihaihs;⁷⁵⁴

Auilix,⁷⁵⁵

Yacolatam (Corner of the Reed Mat) *Zaclatol*,⁷⁵⁶ and

Great Emissary of the Sprout Giver.⁷⁵⁷

Nine, then, were the lords of the Nihaihs.

THE TITLES OF THE AHAU QUICHÉ LORDS⁷⁵⁸

THESE, then, are the titles of the lords of the Ahau Quichés:

Herald Person⁷⁵⁹ and

⁷⁵⁰ *Ajaw Aj Tzik' Winaq* (Lord Herald Person). *Aj Tzik'* is a “crier, proclaimer, speaker, herald, announcer.”

⁷⁵¹ *Q'alel K'am Ja* (Magistrate Reception House).

⁷⁵² *Nima K'am Ja* (Great Reception House).

⁷⁵³ *U Chuch K'am Ja* (Its Mother Reception House).

⁷⁵⁴ *Nim Ch'okoj Nijaib'ab'* (Great Steward Nijaibs).

⁷⁵⁵ *Awilix*. This is the patron god of the Nijaibs. Likely this is the title for the god's priest.

⁷⁵⁶ *Yakolatam*, *U Tza'm Pop Zaklatol*. This is a singular instance in the *Popol Vuh* text where a Nahua language title is supplied with a Quiché translation by the authors. *Yakolatam* is derived from the Nahua *yacatl* (point, edge) and *tam* (leaves). This is followed by a comma in the manuscript, a fairly rare grammatical mark which in this case may indicate a pause for the authors to give a translation of the preceding word into Quiché. *U tza'm pop* (Quiché: its nose/point/edge/border reed mat) is a rough translation of *yakolatam*. *Zaklatol* is a combination of the Nahua *zacatl* (grass) and *tollin* (reed), a translation of the preceding *pop* (reed mat).

⁷⁵⁷ *Nima Lolmet Ye'ol T'ux* (Great Emissary Giver of Sprouts). *T'ux* is a “sprout, or budding blossom.”

⁷⁵⁸ lines 7815-7822

Lord Emissary;⁷⁶⁰

Great Lord Steward of the Ahau [Quichés]⁷⁶¹ and

Lord Hacavitz.⁷⁶²

These are the four lords over the Ahau Quichés. These are the great houses.

THE TITLES OF THE ZAUIC LORDS⁷⁶³

THERE are also two lineages of Zauic lords:

Maize Flower House⁷⁶⁴ and

Magistrate of the Zauics.⁷⁶⁵

There is only one house for the two lords.

THE GLORY OF THE LORDS OF CUMARCAH⁷⁶⁶

THUS were established the twenty-four lords as well as the twenty-four great houses.

Then their glory and their sovereignty were increased in Quiché. The grandeur and importance⁷⁶⁷ of the Quichés was glorified and made sovereign. Then as well the

⁷⁵⁹ *Aj Tzik' Winaq* (Herald Person).

⁷⁶⁰ *Ajaw Lolmet* (Lord Emissary).

⁷⁶¹ *Ajaw Nim Ch'okoj Ajaw [K'iche']* (Lord Great Steward Ahau [Quiché]). The authors did not include the full name of the Ahau [Quiché] lineage, although this is implied.

⁷⁶² *Ajaw Jakawitz* (Lord Hacavitz). This is likely the priest of the god Hacavitz, the patron deity of the Ahau Quichés.

⁷⁶³ lines 7823-7828

⁷⁶⁴ *Tz'utuju Ja* (Maize Flower House).

⁷⁶⁵ *Q'alel Saqik* (Magistrate Saquic).

⁷⁶⁶ lines 7829-7943

canyon-citadel⁷⁶⁸ was whitewashed and plastered. The nations came there, the small and the great. Thus the lord who made Quiché great has his name.

Then were created their glory and their sovereignty. Then they created the homes of their gods, as well as the homes of the lords. But they themselves did not do it, nor did they work to build their homes or the homes of their gods. Instead it was their vassals and their servants, who had become numerous. They did not need to lure them, or abduct them, or carry them off by force, for they truly belonged to each one of the lords. This place also came to be crowded with the lords' older brothers and younger brothers.⁷⁶⁹

The lords were ever-solicitous,⁷⁷⁰ each of them receiving numerous petitions. They were truly beloved. Great was the authority⁷⁷¹ of the lords. The birthdays of the lords were honored and respected by their vassals and servants.

Thus they multiplied there in the canyon-citadel. Yet they were still not as many as those who fell under submission from among the nations. Even when war came upon their canyon and their citadel, they were glorified because of the spirit essence of their lords, Lord Cucumatz and Lord Co Tuha.

⁷⁶⁷ *Alal nimal* (greatness weightiness/importance). When paired, the combination means “power” (Basseta).

⁷⁶⁸ Thus not only were the buildings of the fortified hilltop citadel plastered and whitewashed, but the dependent communities in the valleys and canyons below were similarly well built.

⁷⁶⁹ *Atz, chaq'* (older brother of a male, younger brother of a male). These likely refer to allies or affiliated lineage heads rather than fraternal brothers.

⁷⁷⁰ Literally “accumulated their existence.” This is to be “assiduous, solicitous, vigilant, preoccupied.”

⁷⁷¹ In modern Quiché usage, *q'ale'm* is both “authority,” as well as “responsibility for the well-being of someone.”

Cucumatz became a truly enchanted lord. In one transformation⁷⁷² he would rise up into the sky, and in another transformation he would go down to Xibalba. In another transformation he would be a serpent, truly becoming a serpent. In another transformation he would make himself into an eagle; and in another transformation into a jaguar. Truly his appearance would be that of an eagle and of a jaguar. In another transformation he would become a pool of blood. Mere pooled blood he would become. Truly he was an enchanted lord in his essence.

Thus all the lords were frightened before his face. Tales about him were quickly spread abroad⁷⁷³ and all the lords of the nations heard of the nature of this enchanted lord.

This, then, was the beginning of the increase of the Quichés. Lord Cucumatz founded the grandeur of his descendents. The faces of his grandchildren and his sons were not lost in his heart. He did not do this so that he would be the sole lord. But his nature was enchanted and thus he toppled all the lords of the nations. This he did merely to reveal himself. Yet because of it, he became the head of the nations. The enchanted lord named Cucumatz was of the fourth generation of lords. He alone was both Ah Pop and Ah Pop of the Reception House. He left behind his heritage for his descendents. For they became glorious, and sovereigns as well.

And then they begat sons, even their own sons, making them numerous. Thus were begotten Tepepul and Iztayul. These exercised true lordship. They were the fifth generation of lords that came to be. They begat sons as well, each a generation of lords.

⁷⁷² *Wuq'*. I base this reading on *wuq'e* which is “to embody, convince” (Coto). It may also be “to wrap one’s self, envelop, or bundle,” perhaps a reference to the clothing and accoutrements worn in transformational dances.

⁷⁷³ Literally “broke open/shattered its hearing.” This implies an instantaneous and widely disseminated spread of the tale, something like the English expression, “breaking news.”

THE VICTORIES OF LORD QUICAB⁷⁷⁴

THESE, then, are the names of the sixth generation of lords. There were two great and glorious lords: Quicab⁷⁷⁵ was the name of the first lord, and Cauizimah⁷⁷⁶ was the

⁷⁷⁴ lines 7944-8032

⁷⁷⁵ *K'iq'ab'* (many hands), the son of Cucumatz, reigned as the Ah Pop of the Nima Quichés from ca. 1425-1475 (Carmack 1981, 122). The name of this lord suggests his power to accomplish what would be impossible for someone with only two hands. It may also suggest the number of vassals and servants he possessed. Quicab's father, Lord Cucumatz, died in battle in an attempt to avenge the death of his daughter at the hands of his son-in-law, Tecum Sicom, a rival lord at Coha, located somewhere near the modern town of Sacapulas (Recinos 1957, 138-141; Carmack 1981, 134-135), or alternatively Quetzaltenango (Akkeren 2000, 23, 212-213). More recently places Coha in the Quetzaltenango area, although it was allied with the Sacapulas region in opposing the rising power of the Quichés (Akkeren 2000, 23, 212-213). Two years later, his son Quicab along with his Cakchiquel allies invaded the town, seized a large cache of jade and precious metal, and burned the town of Coha to the ground. The surviving lords of Coha were taken back to Cumarcah to be sacrificed (Recinos 1957, 140-147). Quicab also brought the bones of his father back to Cumarcah where they were kept in a bundle. This campaign resulted in the conquest of the northern border regions of the Quiché's territory. This included the lands of the Cumatz and Tuhah around Sacapulas as well as that of the Mam of Zaculeu. Quicab subsequently expanded his empire by subduing the rival Sajcabaja, Caukeb and Cubulco (Ikomaquib) in the east and extending his influence as far as the upper Usumacinta and Motagua River Valleys. In the west his forces reached the Ocós River near the Isthmus of Tehuantepec in Chiapas, Mexico. Further conquests extended from the Alta Verapaz in the north to the Pacific Ocean near Escuintla in the south, an area of approximately 26,000 square miles (Fox 1978, 3-4). At the height of his power, Quicab fell victim to an internal revolt ca. 1470 (Carmack 1981, 136-137; Carmack and Mondloch 1983, 195-196). As recorded in the *Título Totoncapán*, all the major lineages, including the Tamub, Ilocab, Rabinals, Cakchiquels, Ah Tziquinahas, and the inhabitants of Sacapulas and Aguatega, gathered at Cumarcah to observe the "Great Dance of Tohil," the patron deity of the Cavec Quichés. In the presence of all the lords, rebel nobles, apparently related to the same faction that had rebelled against Co Tuha, danced with the deities of the various groups present dressed in skins and hunting attire. At the climax of the dance, the son of a Quiché ah pop began to give sacrificial offerings to Tohil. This act was a cue for rebels to initiate an attack against Quicab and his supporters (Carmack 1981, 136; Carmack and Mondloch 1983, 196; Akkeren 2000, 325-335). Although Quicab survived the revolt, his power and authority were severely diminished. He was forced to "humble himself" before the rebel warriors, who "seized the government and the power" (Recinos and Goetz 1953b). One by one the former vassal states within Quicab's empire broke away. His old allies, the Cakchiquels, remained loyal but were soon beset by attacks and insults from the new lords of Cumarcah. As a result, according to the *Annals of the Cakchiquels*, Quicab counseled them to leave the city as well as their old settlement at Chiavar, and establish their own capital independent of the Quichés:

"The die is cast. Tomorrow you will cease to exercise here the command and power which we have shared with you. Abandon the city to these *k'unum* (penises) and *k'achaq* (dung). Let them not hear your words again, my sons" (Recinos and Goetz 1953, 97).

Soon thereafter, in ca. 1470, the Cakchiquels under their lords Huntah and Vucubatz (who had fought alongside Quicab as his allies) founded the citadel of Iximché, an act that initiated a series of disastrous wars between the Quichés and Cakchiquels that persisted until the coming of the Spaniards in 1524. The Ah Tziquinahas were already independent for most, if not all, of the time of their occupation around Lake Atitlán, leaving the Quichés isolated and surrounded by their enemies.

name of the other. These accomplished a great many deeds. They made the Quichés great, for their essence was truly enchanted. They broke apart and shattered the canyons and the citadels of the small nations and the great nations. Anciently these citadels were close together:

The mountain of the Cakchiquels was where Chuvila⁷⁷⁷ is today.

The mountain of the Rabinals was Pa Maca.⁷⁷⁸

The mountain of the Caocs⁷⁷⁹ was Zaccabaha.⁷⁸⁰

The citadels, then, of the Zaculeus⁷⁸¹ were Chuvi Miquina,⁷⁸² Xelahu,⁷⁸³ Chuva Tzac,⁷⁸⁴ and Tzoloh Che.⁷⁸⁵

⁷⁷⁶ *Ka Wi' Simaj* (Two Heads/Tips Sharp). If this lord's name has significance beyond being a proper name, it may have a double meaning. The "sharpness" may refer to the points of the weapons under his command, but it may also refer to the "sharpness" of his mind (a common expression among the Quichés just as it is in English). The latter is all the more impressive because he has "two heads" with which to be clever. Together, these two rulers combine the benefits of "many deeds" and "many thoughts."

⁷⁷⁷ *Chuwil' La* (Above the Stinging Nettle). This is the site of the modern town of Chichicastenango, which at the time of the Spanish conquest was a Quiché community (as it still is today). The original Quiché version of the *Popol Vuh* manuscript was discovered here by Francisco Ximénez.

⁷⁷⁸ *Pa Mak'a'* (Place of Water Droplets). Alternatively this may be *Pa Mak'a* (Place of Dawn), a contracted form of *mak'ahan* (morning, dawn). Akkeren (personal communication) suggests that this may be an abbreviated form of *Pa Amaq' A'* (Place of the Water of the Nations), the ancient name for the River Motagua which is located some 10 km. away (Hill 1996, 357; Akkeren 2000, 136-137). This is the present-day town of Zacualpa (Fox 1978, 236-237; Carmack 1981, 185).

⁷⁷⁹ *Ka'o'keb'* (Caocs). The name is likely derived from *kawoq*, one of the twenty named day-signs of the traditional highland Maya calendar. In the late Postclassic, many of the Caocs moved to the area of Sacatepequez where they were subjugated by the Cakchiquels (Akkeren 2000, 217-218). These are likely the ancestors of the people who settled two communities west of present-day Guatemala City named Santiago Cauque (Sacatepequez) and Santa Maria Cauque (Sacatepequez) (Recinos 1950, 221 n. 4; D. Tedlock 1996, 324 n. 187).

⁷⁸⁰ *Saqkab'a Ja* (Plastered House). This is the present-day town of San Andrés Sajcabaja.

⁷⁸¹ *Saq Ulewab'* (White Earths). These are the Mam speakers. Their ancient capital, Zaculeu, is located four kilometers west of present-day Huehuetenango. The Mam region was conquered soon after the campaigns of Quicab against the Sacapulas Valley sites. The Mam remained subject to the Quichés and fought with them against the Spaniards (Fox 1978, 147).

⁷⁸² *Chuwil' Miq'ina'* (Above Hot Water). This is likely the site known locally as Chuitinamit, located 700 meters above a series of hot water springs near present-day Totonicapán (Recinos 1950, 221; Fox 1978, 161). This and the next three settlements in the list were all heavily populated Quiché communities at the

These all paid homage⁷⁸⁶ to Quicab. They had made war, but they were broken apart. The canyons and citadels of the Rabinals, the Cakchiquels, and the Zaculeus were shattered. All the nations collapsed and were split apart. Yet for a great while Quicab's warriors persisted. There were not then even one or two groups among the nations that did not bring their tribute. Their citadels fell, and they brought tribute before Quicab and Cauizimah.

These lords invaded the lineages, who were bled and shot while bound to wooden posts.⁷⁸⁷ Their day came to nothing, nor did they ever have descendents. It was merely

time of the Spanish conquest, attesting the effectiveness of Quicab's military campaigns. They continue to be occupied by Quiché speakers today.

⁷⁸³ *Xe' Laju* (Below Ten). This is a contracted form of the full name of this site, *Xe' Lajulj No'j* (Below Ten *No'j*—a day on the traditional highland Maya calendar). According to native chronicles, this was the principle settlement in the southern Quetzaltenango basin, although its precise location is unknown. Modern Quetzaltenango is the second largest city in Guatemala.

⁷⁸⁴ *Chuwa Tz'aq* (Before Wall/Altar). This is present-day Momostenango (Nahua “Place of the Altars”). This community is still known as *Chuwa Tz'aq* by its Quiché inhabitants. The ruins of the ancient citadel are now called Pueblo Viejo (Spanish “Old Town”), located some six kilometers northwest of town.

⁷⁸⁵ *Tz'olaj Che'* (Willow Tree). This is in the area of Santa María Chiquimula, likely the nearby ruins known as Pugertinamit located southwest of town (Fox 1978, 129; Carmack 1981, 186). The region became subject to the Nima Quichés in the mid-fifteenth century (Carmack 1973, 291; Recinos 1957).

⁷⁸⁶ *Xrixowaj*. This reading is based on *xowaj*, “to respect, obey, revere, pay homage” (Basseta).

⁷⁸⁷ This refers to an early form of highland Maya ritual sacrifice or execution. The following is a description from the *Annals of the Cakchiquels*:

Then began the execution of Tolgom. He dressed and covered himself with his ornaments. Then they tied him with his arms extended to a poplar tree to shoot him with arrows. Afterwards all the warriors began to dance. The music to which they danced is called the song of Tolgom. Following this they began to shoot the arrows, but no one of them hit the cords [with which he was tied], but instead they fell beyond the gourd tree, in the place of Qakbatzulú where all the arrows fell. At last our ancestor Gagavitz shot the arrow which flew directly to the spot called *Cheetzulú* and pierced Tolgom. After which all of the warriors killed him. Some of the arrows entered [his body] and others fell farther away. And when that man died, his blood was shed in abundance behind the poplar. Then they came and completed the division [of pieces of him] among all the warriors of the seven tribes that took part in the offering and the sacrifice, and his death was commemorated thereafter in the month of Uchum. Every year they gathered for their festivals and orgies and shot at the children, but instead [of arrows] they shot at them with alder branches as though they were Tolgom. Thus our grandfathers related of old,

arrows that were the means of shattering the citadels. Straightaway the mouth of the earth would be split open and thunder would shatter the stones. Thus the nations would suddenly become frightened and make offerings before the Pine Resin Tree. This has become a sign for the citadels, for today there is a mountain of stones, only a few of which were not cut cleanly as if cut by an axe. It is there in the plain called Petatayub⁷⁸⁸ where it may be clearly seen by all the people who pass by it. This is the sign of the war prowess of Quicab. He was not killed, nor was he defeated. He was truly a warrior, and he received tribute from all the nations.

Then all of the lords planned, sending blockaders around the canyons and around the citadels, all the fallen citadels of the nations.

THE QUICHÉS GARRISON THE CONQUERED REGIONS⁷⁸⁹

THUS the sentinels went forth as lookouts against enemy warriors. They became the lineage of watchmen, guardians of the mountains:

“If the nations come again, these will be the guardians,” it was said.

Then all the lords gathered their thoughts and sent out their orders:

“They shall be as our stockade, as the representatives of our lineage, as our fortress. They shall become our palisade, the expression of our anger, our prowess in war,” said all the lords.

oh, our sons! (Recinos and Goetz 1953, 74-75; for a discussion of this sacrificial ritual see Akkeren 2000, 335-341).

⁷⁸⁸ Campbell suggests that this location is the area today known as Ayutla, near Tapachula, Mexico (located just across the border from Guatemala). The name is likely derived from the Nahuatl *petlatl*—reed mat (Campbell 1983, 84).

⁷⁸⁹ lines 8033-8180

Then the orders were sent out to each of the lineages who were to oppose the enemy warriors. They instructed all of them who were to be sent as guardians of their mountain nations:

“Go, for these are our mountains now. Do not fear. If there are still warriors that attack you or kill you, come at once to notify us and we shall go and kill them.” Thus spoke Quicab, along with the Magistrate and the Herald by way of instruction.

And so they went to “put the notch of the arrow to the center of the bowstring,”⁷⁹⁰ as it is said.

Thus the grandfathers and fathers came to be separated. All the Quiché people were placed, each of them, on a mountain as guardians. They were guardians of arrows and bowstrings. They went as guardians against war. Thus they did not have a single dawn, nor did they have a single god. They went out to blockade all the citadels:

Ah Uuila⁷⁹¹ and Ah Chulimal,⁷⁹²

Zaqui Ya⁷⁹³ and Xahbaquieh,⁷⁹⁴

Chi Temah⁷⁹⁵ and Vahxalahuh,⁷⁹⁶

⁷⁹⁰ Literally “set the mouth (notch) of the arrow on the mouth (the center point) of the bowstring.” The expression refers to being ready for battle.

⁷⁹¹ *Aj U Wi' La* (They of Its Top Stinging Nettles). This is a contracted form of *Aj Chuwi' La* (They of Above Stinging Nettles), which is Chichicastenango. The inhabitants of Chichicastenango are referred to by this name in the *Título de la Casa Ixcuin Nihaib* (Recinos 1957, 71; see also footnote 777).

⁷⁹² *Aj Chulimal*. This is perhaps a transcription error for *Aj Ch'umilal* (They of the Stars), one of the lineages mentioned earlier in the text (see footnote 518).

⁷⁹³ *Saqi Ya'* (White River). Akkeren identifies this as a site west of Chichicastenango (2000, 171).

⁷⁹⁴ *Xajb'a Kiej* (Dancing Place/Costume Deer).

⁷⁹⁵ *Chi Temaj* (At the Tilt/Slope). Akkeren identifies this, as well as Vahxalahuh as sites near Chichicastenango (2000, 171).

⁷⁹⁶ *Wajxalajuj* (Eighteen).

Along with Ah Cabracan,⁷⁹⁷ Chabi Cac,⁷⁹⁸ and Chi Hunahpu,⁷⁹⁹

With Ah Maca⁸⁰⁰ and Ah Xay Abah,⁸⁰¹

Ah Zaccabaha⁸⁰² and Ah Ziyaha,⁸⁰³

Ah Miquina⁸⁰⁴ and Ah Xelahun.⁸⁰⁵

These went forth as war sentinels to the plains and to the mountains. They were guardians of the earth. They were sent out by Quicab and Cauizimah, the Ah Pop and the Ah Pop of the Reception House, as well as by the Magistrate and the Herald. Four lords sent them out to act as sentinels against the warriors.

Quicab and Cauizimah were the names of the two lords over the Cavecs;

Quema⁸⁰⁶ was the name of the lord over the Nihaibs;

⁷⁹⁷ *Aj Kab'raqan* (They of Earthquake). This is perhaps related to a small community that still carries a similar name, Chicabracan (Place of Earthquakes), nine kilometers east of Utatlan, where there is a group of Precolumbian ruins including a small masonry temple (Fox 1978, 42).

⁷⁹⁸ *Ch'ab'i Q'aq'* (Arrow Fire). This is a comet (Coto), or a meteor. Perhaps the same as the settlement of the Uchabahs (see footnote 517).

⁷⁹⁹ *Chi Junajpu* (Hunahpu Place).

⁸⁰⁰ *Aj Mak'a'* (They of Water Droplets, or alternatively, They of Dawn). Likely the inhabitants of *Pa Mak'a'*, which is today Zacualpa (see footnote 778).

⁸⁰¹ *Aj Xay Ab'aj* (They of Combed Mountain). Akkeren (personal communication) suggests that this should be Ah Xoy Abah (Polishing Stone/Jasper). The Xoy lineage lived along the Chixoy River, centered at the place where the road from the Verapaz region crosses it on its way to Sacapulas. A branch of this lineage settled the modern area of Joyabaj. According to Ximénez, Joyabaj marked the border between the Central Quiché to the west and the Rabinal to the east (Ximénez 1929-31, I.lxxiv.484).

⁸⁰² *Saqkab'a Ja* (Whitewashed House). Mentioned as the place of the Caocs. This is the present-day town of Sajcabaja (see footnote 780).

⁸⁰³ This is likely a transcription error for *Aj Sija'* (They of Flowering Tree Water). This is the present-day community of Santa Catarina Ixtahuacán.

⁸⁰⁴ *Aj Miq'ina'* (They of Hot Water). The same as *Chuwi' Miq'ina'* (Above Hot Water), which is Totonicapán (see footnote 782).

⁸⁰⁵ *Aj Xe' Lajuj* (They of Below Ten). This is Quetzaltenango (see footnote 783).

Achac Iboy,⁸⁰⁷ then, was the name of the lord over the Ahau Quichés.

These, then, were the names of the lords that sent out messengers and envoys.

They left their vassals and their servants on the mountains, on each one of the mountains.

And soon after they left, they began to bring back female captives⁸⁰⁸ and male captives, who were presented before Quicab, Cauizimah, the Magistrate, and the Herald. They made war with the notch of the arrow and the center of the bowstring, taking female captives and male captives. These envoys came to be warlike then.

Thus they were given gifts. They were increased. The lords provided for⁸⁰⁹ them when they came to deliver all of their female captives and male captives.

Thus the lords Ah Pop, Ah Pop of the Reception House, Magistrate, and Herald gathered their thoughts. Then they made a proclamation:

“We shall ennoble⁸¹⁰ they who are truly first among these lineages who have carried the burden of being watchmen.”

“I am the Ah Pop.”

“I am the Ah Pop of the Reception House.”

“The emblems of office of the Ah Pop shall now become yours. You shall be adorned as Lord Magistrates and as Magistrates,” said all the lords when they gathered their thoughts.

⁸⁰⁶ *Kema* (Weaving). This may be based either on the verb (to weave) or the noun (textile). I have chosen “Weaving” as it may be understood as either.

⁸⁰⁷ *Achaq Ib'oy* (Droppings/Backside/Buttocks Armadillo).

⁸⁰⁸ *Anab'* (sister of a man). In this context these are female captives.

⁸⁰⁹ Literally “heartened.” In Quiché terminology, this is “to tend to, look after, provide for needs.”

⁸¹⁰ Literally “to take, grasp, seize,” apparently referring to some ceremonial action when raising a person to the rank of nobility.

The Tamub and the Ilocab did the same. The three groups of the Quichés were united.⁸¹¹

Thus they ennobled them, giving them their titles. This, then, was their consensus. But it was not there that they ennobled them. There was a designated mountain on which the first vassals and servants were ennobled. Thus all of them were summoned from each of their mountains. They gathered together as one.

THE names of the mountain where they were ennobled were Xe Balax⁸¹² and Xe Camac.⁸¹³ This was the edict that was given. There at Chulimal⁸¹⁴ it was done.

THE TITLES GIVEN TO THOSE WHO WERE ENNOBLED⁸¹⁵

THESE, then, were their titles, their nobility, and the tokens of their office:

Twenty magistrates and twenty ah pops, who were raised to nobility by the Ah Pop and the Ah Pop of the Reception House, as well as by the Magistrate and the Herald. Thus all of the magistrates and ah pops received their offices.⁸¹⁶

Eleven Great Stewards, Magistrates of the Lords, Magistrates of the Zauquics, Military Magistrates,⁸¹⁷ Military Ah Pops, Military Palisade Masters, and Military Border Masters.

⁸¹¹ "Same face."

⁸¹² *Xe' B'alax* (Under Twisted Cord).

⁸¹³ *Xe' K'a'amaq'* (Under String).

⁸¹⁴ This mountain was mentioned earlier as one of those conquered by Quicab.

⁸¹⁵ lines 8181-8231

⁸¹⁶ *Eqalem* (burden, office, stewardship).

These were the titles of the men who were elevated in rank.

They were also named to their seats and to their cushions.⁸¹⁸ These were the first among the vassals and servants of the Quiché people. They were their watchers and their listeners, the notch of the arrow and the center of the bowstring. They encircled the Quichés as their stockade, their enclosure, their fortress, and their palisade.

The Tamub and the Ilocab did likewise. They also ennobled and gave titles to the first among their vassals and their servants on each of the mountains. This therefore was the foundation for the magistrates and ah pops who are assigned to each of the mountains today. This is also the order in which they go out behind the Ah Pop and Ah Pop of the Reception House, and behind the Magistrate and Herald.⁸¹⁹

THE NAMES OF THE GODS' HOUSES⁸²⁰

We shall now tell the names of the houses of the gods. These houses were simply named after the gods themselves:

Great Temple of Tohil⁸²¹ was the name of the temple that served as the house of Tohil of the Cavecs.

⁸¹⁷ *Q'alel Achij* (Magistrate Warriors). *Achij* is "man" but may also refer to "warriors," as in this case. Basseta lists this title as "captain." This office and those that follow are likely military ranks.

⁸¹⁸ In Maya custom, dignitaries are seated on their thrones or benches according to rank.

⁸¹⁹ This likely refers to the order such officers take when walking in procession, or going out to war. Processions are common in traditional Maya communities, and the order of sequence as to who walks behind who is rather rigid.

⁸²⁰ lines 8232-8325

⁸²¹ These three temples, dedicated to the patron deities of the Quichés, were the tallest buildings at the site and were arranged on three sides of the central plaza at Cumarcab, although the structure identified as the Hacavitz temple faces away from the plaza (Fernández-Valbuena 1996, 78-80; Cook 2000, 204). The tallest of these was the Temple of Tohil (Carmack 1981, 225-226). Unfortunately, all the stone that once faced the temple has been looted, leaving only its rubble core. It is still possible, however, to determine that

Auilix was the name of the temple that served as the house of Auilix of the Nihaihs.⁸²²

And Hacavitz was the name of the temple that served as the house of the god of the Ahau Quichés.⁸²³

the main entrance to the sanctuary faced east, toward the rising sun. According to Ximénez, who visited the site when it was in much better condition, the temple of Tohil had stairways on all four sides, oriented to the cardinal directions (Ximénez 1929-31, I.xxvii.74-75). This is confirmed by a drawing of the temple made by Rivera y Maestra in 1834 which clearly shows stairways on each of its visible sides. The Temple of Tohil was thus similar to other radial stairway temples constructed by the Maya since at least the Late Preclassic Period (Ca. 200 BC-AD 250). Examples include Structure E-VII-sub at Uaxactun, the Lost World Pyramid at Tikal, Structure 4 at Copan, Structure A-3 at Seibal, El Castillo at Chichen Itza, the Temple of the Seven Dolls at Dzibilchaltun, and the principal temple at Chutixtiox (not far from Cumarcáh near Sacapulas). Schele and Mathews associate such radial temples with the first mountain to emerge from the primordial sea at the time of creation (Schele and Mathews 1998, 40-42, 179-182, 368 n. 31). Karl Taube further identifies radial stairway structures as loci for New Fire-making rituals connected with the primordial hearth of creation (Taube 1998, 441-442). Tohil was primarily a fire god, who provided “new fire” for his people by means of a twist-drill (see p. 214; line 5499). John Lloyd Stephens described the appearance of the Temple of Tohil, which he called the *Sacrificatorio* (Spanish: Place of Sacrifice) in the late 1830s:

It is a quadrangular stone structure, sixty-six feet on each side at the base, and rising in a pyramidal form to the height, in its present condition, of thirty-three feet. On three sides there is a range of steps in the middle, each step seventeen inches high, and but eight inches on the upper surface, which makes the range so steep that in descending some caution is necessary. At the corners are four buttresses of cut stone, diminishing in size from the line of the square, and apparently intended to support the structure. On the side facing the west there are no steps, but the surface is smooth and covered with stucco, gray from long exposure. By breaking a little at the corners we saw that there were different layers of stucco, doubtless put on at different times, and all had been ornamented with painted figures. In one place we made out part of the body of a leopard, well drawn and coloured. The top of the *Sacrificatorio* is broken and ruined, but there is no doubt that it once supported an altar for those sacrifices of human victims which struck even the Spaniards with horror. It was barely large enough for the altar and officiating priests, and the idol to whom the sacrifice was offered (Stephens 1969, II, 183-184).

Stephens’ mention of a jaguar (he incorrectly called it a leopard) mural on the temple of Tohil is significant. Tohil was the principal deity of Balam Quitze whose *nawal*, or animal counterpart, was the jaguar (see p. 245; lines 6766-6779).

⁸²² The Auilix Temple is located just east of the Temple of Tohil across a small plaza. It consists of two terraces with a small sanctuary atop the second terrace. A single wide stairway on the west side gives access to the first terrace (Carmack 1981, 272-274). Thus the principal facades of these two temples face one another.

⁸²³ The Temple of Hacavitz is likely the large mound situated on the south side of the main plaza at Cumarcáh. Like the other two temples, all the surface stone has been removed and its ancient appearance is thus difficult to determine. Rivera y Maestre (1834) included it in his plan of the city as a pyramidal structure labeled *sacrificatorio* (Spanish: “place of sacrifice”). According to this aerial view plan, the temple faced south onto its own court and complex of great house structures (Carmack 1981, 277-281).

Maize Flower House may surely be seen; Sacrifice House is its other name.

These were great temples wherein were the stone gods. There all the lords of the Quichés worshiped. All the nations worshiped there as well. The nations would enter therein to burn offerings before Tohil first. Then they would worship the Ah Pop and Ah Pop of the Reception House. They would come to give their quetzal feathers and their tribute before the lords—each in turn they would give provisions and sustenance to the Ah Pop and the Ah Pop of the Reception House, the great lords who had brought down their citadels.

Cucumatz and Co Tuha were enchanted people and enchanted lords. Quicab and Cauzimah were also enchanted lords. They knew if there would be war. It was clear before their faces. They saw if there would be death, if there would be hunger. They surely knew if there would be strife. There was an instrument of sight—there was a book. Popol Vuh was their name for it.

But it was not only because of this that they were lords. They were great in their essence. Great as well were their fasts. In order to venerate their temples and venerate their sovereignty, they fasted for long periods of time, and sacrificed⁸²⁴ before the faces of their gods.

And this was their method of fasting: For nine score days⁸²⁵ they would fast, and for nine they would sacrifice and burn offerings. Then for thirteen score days they would observe a fast and for thirteen⁸²⁶ they would sacrifice and burn offerings before the face

⁸²⁴ *K'ajb'ik*. This is specific to the sacrifice of human beings (Coto).

⁸²⁵ *B'elej winaq* (nine people/scores). As a number this is 9 x 20, or 180. It is evident from the context of this passage that the authors are referring to periods of time, although they do not specify what period it is. For purposes of clarity of meaning I have chosen “days,” which is the likely implied meaning here.

of Tohil, as well as before the faces of the other gods. They would eat only zapotes, matasanos, and jocotes.⁸²⁷ They would not eat food made from maize. If they were to sacrifice for seventeen score days, then they would fast for seventeen. Nor did they eat maize. Truly great was the performance of their sacred obligations.⁸²⁸ This was the sign of their essence.

Neither would they sleep with their women. They would merely provide for each other, fasting in the houses of the gods. Each day they would merely worship, merely burn offerings, and merely offer sacrifices. They were there in the darkness and at dawn, weeping in their hearts and in their bowels, pleading for the light and the lives of their vassals and servants. They would lift up their faces to the sky for their lordship.

This, then, is their pleading before the faces of their gods. This is the crying out of their hearts:

THE PRAYER OF THE LORDS TO THEIR GODS⁸²⁹

“YEA, pleasing⁸³⁰ is the day, you, Huracan, and you, Heart of Sky and Earth, you who give abundance⁸³¹ and new life,⁸³² and you who give daughters and sons. Be at

⁸²⁶ The authors are indulging in a bit of shorthand here. My understanding of the text is that the “score” here is implied. Thus for each period of thirteen score days they fast, they would sacrifice for thirteen scores of days more.

⁸²⁷ These are all tropical fruits (see footnotes 463-469).

⁸²⁸ *Awasinik* (sacred ritual; divinely sanctioned obligations). These fasts are therefore ritually sanctioned abstinences.

⁸²⁹ lines 8326-8490

⁸³⁰ *Atob'* is “desirable, pleasing” (Basseta).

peace, scatter your abundance and new life. May life and creation be given. May my daughters and my sons be multiplied and created, that they may provide for you, sustain you, and call upon you on the roads, on the cleared pathways, along the courses of the rivers, in the canyons, beneath the trees and the bushes. Give, then, their daughters and their sons.

May there be no fault, confinement, shame, or misfortune. May no deceiver come behind them or before them. May they not fall⁸³³ or be wounded. May they not be dishonored⁸³⁴ or condemned. May they not fall below the road or above the road. May they not be stricken⁸³⁵ or have impediments⁸³⁶ placed behind them or before them. May

⁸³¹ *Q'anal*, “yellowness” (richness, abundance, ripeness). This is specifically the abundance of ripe yellow maize, however it is used by the Quichés to refer to abundance or wealth of any kind (B. Tedlock 1982, 114). According to Ruth Bunzel, it may also refer to rebirth and regeneration: “*Qanil* (*milpa*, cornfield). Symbolic of the regeneration of the earth, of rebirth after, death, as exemplified in the growth of corn. ‘*Qanil* is the day of the milpa, a good day. It is a day to give thanks for one’s *siembres* [plantings], for harvest and planting. After the harvest one waits for the day *qanil*, either 2 or 3 *qanil*, to give thanks. And likewise after planting. This is optional. But it is obligatory for all people to give thanks for their food and their land on the day 8 *qanil*. And each year one does this, until one dies” (Bunzel 1952, 282).

⁸³² *Räxal*, “green/blueness” (vitality, newness, freshness, fertility). The combination of green and yellow is still used ceremonially to refer to the concept of “abundance.” Thus in the prayers of Quiché *aj q'ij* priests, the litany of deities they invoke include the “green shoulder, yellow shoulder of the world,” described as “the procreative powers of the earth” (Bunzel 1952, 266).

⁸³³ *Mepajik* (may they not fall). This is to fall physically as well as morally (into scandal or shame). A common expression today when saying goodbye, or when passing someone on the road, is *matzaq pa b'e* (don't fall on the road).

⁸³⁴ *Mejoxowik* (may they not be dishonored, seduced, disgraced). This may refer to any type of disgrace, but it applies most particularly to violations of sexual prohibitions.

⁸³⁵ *Pak'* (strike, blow). This may be physical but it also refers to calumny or slander. The highland Maya are somewhat obsessed by slander and envy, because such things may lead to the ancestors or gods punishing them with illness or death if such words are believed. For this reason they are constantly asking what people are saying about them. When a person falls ill, people discuss at great length whether this is due to some fault on the part of that person, or whether it is the result of groundless slanders. The following is a ceremonial prayer to the Earth deity given by a priest as protection from envy on the day 8 *Aq'b'al*, designated as the day when ceremonies are to be performed as protection from slander: “Hail, World Tsokomá, come hither; reveal your face and aspect. Thou my seat, thou, my shrine, thou seest me, thou hearest me before this World and the white light of day. It is I who kneel and bow me down before the world of Heaven. Perhaps it is my mission, perhaps it is my sacred office that makes it necessary that I go about before the face and person of the world. Perhaps I pray for wealth from my business and from my land; out of my house and out of my corn and out of my wheat and out of my food and drink. It seems I am

you place them on green roads and on green pathways. May they not be blamed or confined. Do not hide yourselves from them nor curse them. May their existence be favored, so that they may be providers and sustainers to you, to your mouths and to your faces, you, Heart of Sky and you, Heart of Earth, you, Bundled Glory,⁸³⁷ and you as well Tohil, Auilix, and Hacavitz, Womb of Sky and Womb of Earth, the Four Sides and the Four Corners. May there be only light, only security within your mouths and before your faces, O gods.”

Thus it was that the lords fasted during the nine score days, the thirteen score days, and the seventeen score days as well. They fasted often, crying out in their hearts on behalf of their vassals and servants, as well as on behalf of all their women and children. Thus each of the lords carried out his obligations. This was their way of showing veneration for their lordship. This was the lordship of the Ah Pop, the Ah Pop of the Reception House, the Magistrate, and the Herald. They would go in, two by two in succession,⁸³⁸ to bear responsibility for the nations and all the Quiché people. In unity

in this world. It is not my fault, and also there is no fault in my wealth. Divine World, come hither! If we do well, somewhere people feel pain because of it; and also if we are poor, people mistreat us. Always there are slanders and calumnies, fires and flames of envy in the world. But for my part, Divine World, I know that God sees us in the cold wind, at dawn, at midday and at sunset. The Lord of the Clear Light sees us.... And also my beloved wife, may she not fall into error; and may there be no slanders or calumnies concerning her. And perhaps we, too, have slandered and maligned in our folly. Do we not judge and speak before great people and small people? But we do not wish this. We wish only good words before God. And also that good fortune be granted us, to go about as did the people of past time” (Bunzel 1952, 346; cf. Schultze-Jena 1954, 43-44). Watanabe suggests that this conspicuous uneasiness characteristic of highland Maya societies with regard to what the neighbors are thinking and saying “creates the reserve found in Chimalteco interpersonal relations” (Watanabe 1992, 100-101).

⁸³⁶ *Toxk'om* (impediment, stumbling block) is a physical impediment or obstruction, but also implies stumbling from faults, disputes, or life's difficulties.

⁸³⁷ *Pisom Q'aq'al* (Bundled Glory/Flame). This is the sacred bundle left by the four progenitors before their deaths (pp. 254-255; lines 7276-7300).

⁸³⁸ *Kejalow kib'* (to succeed or replace in office).

went forth the foundation⁸³⁹ of their word, and the foundation of their provision and sustenance. The root of the word went forth as well from the Tamub and the Ilocab, along with that of the Rabinal and the Cakchiquels, the Ah Tziquinahas, the Tuhalahas, and the Uchabahas. In unity they would go forth to bear the burden of the Quichés. For this was done for all.

They did not merely exercise their lordship. They did not merely receive gifts, nor were they merely provided for or sustained; nor did they merely receive food and drink. All this was not without purpose. They did not achieve their lordship, their glory, or their sovereignty by deception or theft. They did not merely crush the canyons and the citadels of the small nations and the great nations. Great was the price that the nations gave in return. They sent jade and precious metal, the size of four fingers across and even the size of a fist across with the thumb extended. They sent precious gems and glittering stones. They sent as well cotinga feathers,⁸⁴⁰ oriole feathers,⁸⁴¹ and the feathers of red birds.⁸⁴² The tribute of all the nations thus came before the faces of the enchanted lords Cucumatz and Co Tuha; and also before the faces of Quicab and Cauizimah, the Ah Pop and Ah Pop of the Reception House, Magistrate and Herald. It was no small thing that they did.

⁸³⁹ *Xe'* (root) refers to the “source, foundation, beginning.”

⁸⁴⁰ *Raxon* (*Cotinga amabilis*) is a dovelike tropical bird with turquoise-blue plumage and a purple breast and throat. According to the *Annals of the Cakchiquels*, the highly prized feathers of the cotinga were given as tribute by the Cakchiquel clans to the lords of Tulan in the East (Recinos and Goetz 1953, 48). In the *Popol Vuh*, the cotinga is often paired with the larger quetzal (see p. 68; lines 145-146), and perhaps that bird's iridescent blue/green feathers are also implied here.

⁸⁴¹ *K'ub'ul*. This is the lowland Maya word for the oriole, as well as other related birds with predominantly yellow feathers.

⁸⁴² *Ch'aktik*. According to Basseta, this is “a colorful bird.” In Yucatec, *ch'ak* is the color red. Likely these three birds were chosen as representative of all the exotic feathers the Quichés received in tribute because they comprise the principal colors of green/blue (the same word in the Quiché language), yellow/orange (also the same word in the Quiché language), and red.

Nor was it merely a few of the nations that were brought down. Many groups of nations came with their tribute for the Quichés.

The lords had suffered affliction, but they overcame. Their glory did not come quickly, for it was not until Cucumatz that the greatness of their lordship began.

We shall now give, then, the sequence of the lords' generations, along with the names of all the lords.

THE GENERATIONS OF QUICHÉ LORDS⁸⁴³

THESE are the generations and the house divisions of lordship, of all who had their dawn:

Balam Quitze, Balam Acab, Mahucutah, and Iqui Balam were the first of our grandfathers and fathers when the sun appeared, along with the moon and stars.

These, then, are the generations and the house divisions of lordship. We shall truly begin here at the roots. The lords acceded in pairs, each generation of lords succeeding their grandfathers and the lords of the citadel, even each and every one of the lords.

Here, then, shall appear the face⁸⁴⁴ of each of the lords, even each and every one of the lords of the Quichés:

⁸⁴³ lines 8491-8515

⁸⁴⁴ This passage may refer to an illustration of the heads or faces of each lord. Similar illustrations appear in the lowland Maya *Books of Chilam Balam* (Craine and Reindorp 1979; Edmonson 1982, 1986).

THE DYNASTY OF CAVEC QUICHÉ LORDS⁸⁴⁵

BALAM Quitze was the founder⁸⁴⁶ of the Cavecs.

Co Caib was the second generation after Balam Quitze.

Balam Co Nache, who initiated⁸⁴⁷ the office of Ah Popol, was the third generation.

Co Tuha and Iztayub were the fourth generation.

Cucumatz and Co Tuha were the foundation⁸⁴⁸ for the enchanted lords. They were the fifth generation.

Tepepul⁸⁴⁹ and Iztayul were, then, the sixth house division.

Quicab and Cauzimah were the seventh succession of lords, who attained the pinnacle of enchantment.

Tepepul⁸⁵⁰ and Iztayub were the eighth generation.

⁸⁴⁵ lines 8516-8555

⁸⁴⁶ *Xe'nab'al* (root-beginning).

⁸⁴⁷ *Xtikib'an* (he planted).

⁸⁴⁸ *U xe'* (its root).

⁸⁴⁹ *Tepepul*. This name is likely derived from the Nahuatl *tepeuh* (conqueror, majesty) and *pul/pol* (great), giving the reading "Great Conqueror." The Quiché word *tepewal* is "glory, majesty, sovereignty." Alternatively, the name may be derived from the Nahuatl *tepe* (mountain) with an augmentative suffix *pul/pol* (great, large) yielding "Great Mountain" (Campbell 1983, 85).

⁸⁵⁰ During the reign of this Tepepul (acceded ca. 1475), a severe frost caused a famine at the Cakchiquel capital of Iximche. A spy informed the Quichés of the resultant weakness in the Cakchiquels' defenses and for a year they prepared their warriors for a decisive invasion. At last Tepepul and Iztayul, accompanied by their patron god Tohil, marched on Iximche. The Cakchiquels, however, had been informed of the attack and were ready for them:

When the sun rose on the horizon and shed its light over the mountain, the war cries broke out and the banners were unfurled; the great flutes, the drums, and the shells resounded. It was truly terrible when the Quichés arrived. They advanced rapidly, and their ranks could be seen at once descending to the foot of the mountain.... Then came the encounter. The clash was truly terrible. The shouts rang out, the war cries, the sound of

Tecum⁸⁵¹ and Tepepul were the ninth generation.

Vahxaqui Cam⁸⁵² and Quicab were the tenth generation of lords.

Vucub Noh⁸⁵³ and Cauatepech⁸⁵⁴ were the eleventh house division of lords.

flutes, the beating of drums and the shells, while the warriors performed their feats of magic (Recinos and Goetz 1953, 103).

The resulting defeat of the Quichés was a devastating blow from which they never fully recovered. The *Annals of the Cakchiquels* claims that more than 16,000 Quiché warriors died in the battle (Recinos and Goetz 1953, 103). Tepepul and Izmayul were taken prisoner, as was the image of the god Tohil. The Quichés never again attempted to strike the citadel of Iximche again, although border conflicts and court intrigues continued for decades.

⁸⁵¹ *Tekum*. This is likely “enthroned” based on the Nahuatl *tecalli* (throne, seat). Tedlock cites a Quiché dictionary compiled by Fermín Joseph Tirado in 1787 which lists tekum as a “large, black butterfly that flies with great speed” (D. Tedlock 1996, 333 n. 195).

⁸⁵² *Wajxaqi K'a'am* (Eight Cord). Recinos (1950, 230 n. 9) suggests that this is likely a Quiché translation of a Nahuatl language date on the Mexican Calendar, *Chicuey Malinalli* (Eight Grass).

⁸⁵³ *Wuqub' No'j* (Seven Thoughts) reigned ca. 1500-1523. This is a day on the traditional 260 day calendar, and is likely the day on which this lord was born. His reign was marked by continued war with the Cakchiquels. In the year 1514, two wars were fought, the first at the river Sotzil and the second at Mukche. The Quiché Magistrate of War (*Q'alel Achi*) died in the latter conflict and many prisoners were taken. Carmack identifies this lord with Ahpop Tuh, the father of Yaxonkik who was soundly defeated in battle with the Cakchiquels in 1517 (Carmack 1981, 138). The *Annals of the Cakchiquels* claims that “during this year our fathers and grandfathers destroyed the Quichés once again; they exterminated them as if by lightning” (Recinos and Goetz 1953, 114). In his day, the Quichés also came into closer contact with the Aztecs of Central Mexico. In 1501, the Aztec king Ahuitzotl sent “merchants and officials” to the court of Cumarcah, likely to demand tribute and/or vassalage. The Quichés ordered them out of their territory (Fuentes y Guzmán 1932-33, 6, 47). Apparently Vucub Noh did not feel as comfortable in his position by 1510, for in that year the Quichés began to pay tribute to the Aztec lord Moctezuma in the form of quetzal feathers, gold, precious stones, cacao, and cloth. These payments continued until the fall of the Aztec empire to the Spaniards (Recinos 1957, 84; Carmack and Mondloch 1983, 142). These ties were strengthened by marriage ties. According to the *Buenabaj Pictorials*, recently discovered by Carmack in the Momostenango area, “the lord Quiché... wed two of the daughters of Mendectzum [Moctezuma] called Malintzin” (Carmack 1973, 371). In 1512, Moctezuma sent an emissary named Witzitil to warn the Quichés of the arrival of the Spaniards along the Mexican Gulf Coast. He warned them to prepare to defend themselves (Recinos 1957, 84-85). In 1519, a plague broke out at Iximche: “First they became ill of a cough, they suffered from nosebleeds and illness of the bladder. It was truly terrible, the number of dead there were in that period.... Little by little, heavy shadows and black night enveloped our fathers and grandfathers and us also, oh, my sons! when the plague raged” (Recinos and Goetz 1953, 115). The plague lasted at least until 1521 and, although Quiché records do not mention it, it is likely that it spread throughout the Guatemalan highlands. Edmonson suggests that this may have been an epidemic of smallpox, a disease brought by the early Spanish explorers (Edmonson 1965, 5). A similar plague struck Yucatán in 1516: “A pestilence seized them, characterized by great pustules, which rotted their bodies with a great stench, so that the limbs fell to pieces in four or five days” (Landa 1941, 42). Perhaps in order to present a united front against the Spanish threat, Vucub Noh negotiated peace with the Cakchiquel lord Belehe Qat in 1522, ending the protracted war that had raged between the two nations since the time of Lord Quicab (Recinos and Goetz 1953, 118). This cessation of hostilities did not, however, prevent the Cakchiquels from allying themselves with the invading Spaniards against the Quichés.

Oxib Quieh⁸⁵⁵ and Beleheb Tzi⁸⁵⁶ were the twelfth generation of lords. These exercised lordship when Donadiu⁸⁵⁷ arrived. They were hung⁸⁵⁸ by the Castilian⁸⁵⁹ people.

⁸⁵⁴ Kawatepech. Tedlock suggests that this name is derived from the Nahuatl *cauani* (to leave a memory behind) and *tepechtli* (base, foundation), yielding a compound that may be read as “founder” (1996, 333 n. 195).

⁸⁵⁵ *Oxib' Kiej* (Three Deer). A day on the traditional 260 day calendar. Shortly before the Spanish invasion of Guatemala in 1524, lord Vucub Noh died leaving Oxib Quiej to face the foreign threat (Fuentes y Guzmán 1932-33, 7.390).

⁸⁵⁶ *B'elejeb' Tz'i'* (Nine Dog). A day on the traditional 260 day calendar.

⁸⁵⁷ *Donadiu* (or *Tonatiuh*) was the name given to Don Pedro de Alvarado, the Spanish captain of Hernán Cortés who conquered the highland Maya region of what is today Guatemala. This is the Quiché Maya version of Tonatiuh (Nahuatl for “sun, heat”), the name by which Alvarado was known to the Aztecs and his Tlaxcalan mercenaries. He likely received this nickname because of his blonde hair, a physical trait unknown in the Precolumbian New World (other than albinos, which are still called “children of the sun” in many Quiché communities). The name may have had further significance for the Quichés, however. Earlier in the *Popol Vuh* text, the appearance of a new sun represented the death of the old world and the establishment of new, divinely-sanctioned political power. Alvarado as the new “sun” destroys the old world and its gods inaugurating a new age. For this reason, Jesus Christ as the newly-established patron deity is equated with the sun throughout the Maya world (La Farge and Byers 1931, 113-114; La Farge 1947, 104; Mace 1970, 24; Thompson 1970, 234; Vogt 1970, 4; Morley et al. 1983, 465; Cook 1986, 140, 148; Tarn and Prechtel 1986, 174, 180-181; Freidel et al. 1993, 292; Cook 2000, 215-219). At Jacaltenango, there is a myth for the foundation of the town in which Christ’s birth is associated with the first rise of the sun, whose rays kill his enemies who had tried to hide in caves and under water. This allows Jacaltenango to be founded in the center of the world. La Farge and Byers suggest that this myth is a syncretized version of the account of the dawn in the *Popol Vuh*, which also ended the previous age and turned its inhabitants to stone (La Farge and Byers 1931, 113-114). At Santiago Atitlán, Maya sculptors carved a vessel bearing a sun on the left and right sides of the community’s colonial era church altarpiece. In his explanation of the sun vessels, one of the sculptors, Diego Chávez Petzey, said that the sun on the left represents a tortilla, because maize is the Maya “sun.” The sun on the right is the Christian eucharistic Host. He went on to say that life cannot exist without sacrifice. Maize must be crushed on a grinding stone before it can be made into tortillas. The wheat in the sacramental Host must also be ground and baked. The sun can only rise in the east after it has been buried in the west: “Tortillas, the Host, Jesus Christ, and the sun give life because they are first killed. Tortillas and bread result from the death of maize and wheat so that they can give us life. They are therefore gods.” Nicolás Chávez Sojuel, who also worked on the altarpiece carvings, told me that when the Spaniards came the earth died along with the ancient gods and kings. When I asked him how the world could die, he replied: “The earth has died many times. Each time the world and its gods are reborn to new life and they regain their former power and new gods are added.... The saints today have Spanish names because the old earth died in the days of the Spanish conquerors. When the spirit keepers of the world appeared again they were the saints, but they do the same work that the old gods did anciently” (Christenson 2001, 135).

⁸⁵⁸ Following a brief and disastrous defensive campaign led by the ruler’s grandson, Tecum (who was killed at the decisive battle at Quetzaltenango), the Quiché lords Oxib Quieh and Beleheb Tzi invited Pedro de Alvarado and his conquering army to enter their capital city of Cumarcah without resistance on March 7, 1524. Once inside the city, Alvarado suspected treachery and ordered the arrest, torture, and execution of

Tecum⁸⁶⁰ and Tepepul⁸⁶¹ paid tribute before the faces of the Castilian people.

These had been begotten as the thirteenth generation of lords.

the lords. The following is taken from his report to Hernán Cortés: “And I saw that by occupying their land and burning it I could bring them into the service of His Majesty. Thus I decided to burn the lords who, at the time I desired to burn them, as would appear in their confessions, admitted that they were the ones who had ordered and carried on the war.... Therefore since I knew them to have such ill will toward the service of His Majesty, and for the good and tranquility of the land, I burned them, and I commanded to be burned the town of Utatlan [the Nahuatl language version of Cumarcah as named by Alvarado’s Tlaxcalan mercenaries] to its foundations, for it was dangerous and strong.... All they that were taken prisoners of war were branded and made slaves” (Alvarado 1946 [1524], 457-459, translation by author). The Cakchiquel version of this incident, as recorded in the *Annals of the Cakchiquels*, confirms that the Quiché lords were burned: “Then [the Spaniards] went forth to the city of Gumarcaah, where they were received by the kings, the Ahpop and the Ahpop Qamahay, and the Quichés paid them tribute. Soon the kings were tortured by Tunatiuh. On the day 4 Qat [March 7, 1524] the kings Ahpop and Ahpop Qamahay were burned by Tunatiuh. The heart of Tunatiuh was without compassion for the people during the war” (Recinos and Goetz 1953b, 120). It is unclear whether Alvarado’s suspicion of treachery was well-founded, however, Fray Bartolomé de las Casas believed that the Quiché lords were executed for failing to satisfy Alvarado’s demand for gold, which is rare in Guatemala: “Guiltless of other fault and without trial or sentence, he immediately ordered them to be burned alive. They killed all the others with lances and knives; they threw them to savage dogs, that tore them to pieces and ate them; and when they came across some lord, they accorded him the honour of burning in live flames. This butchery lasted about seven years from 1524 to 1531. From this may be judged what numbers of people they destroyed” (MacNutt 1909, 352-353). This version of events is supported by the sixteenth century account of the trip to Spain by don Juan Cortés in 1557, in which Alvarado is accused of burning the grandfather of don Juan because he “did not give him gold” (Carrasco 1967, 253).

The “hanging” mentioned in this passage of the *Popol Vuh* likely refers not to the execution of the lords, which was by flame, but rather to the torture and elicitation of confessions mentioned by both Alvarado and the Cakchiquel document. Tedlock notes that the method for obtaining such confessions, according to the Spanish methods of the time, was to hang a prisoner by the wrists while inflicting various types of torture (D. Tedlock 1996, 334 n. 195). Undoubtedly this must have been done in a very public way to have impressed the authors of the text writing decades after the event.

⁸⁵⁹ Castilian. Technically the inhabitants of the Castile region of Spain, however, the term was used in the sixteenth century to refer to Spaniards in general.

⁸⁶⁰ These were the sons of the Ah Pop and Ah Pop of the Reception House executed by the Spaniards during the Conquest. They served as lords of Santa Cruz Utatán, built over the ruins of the old capital Cumarcah. Although at first they paid tribute to the Spaniards, there is some evidence that they eventually rebelled. Carmack identifies Tecum as a certain Chignaiucelut (Nahua for 9 Jaguar), the leader of a revolt mentioned by Fuentes y Guzmán who was “put in possession of the government at Utatlan by Don Pedro de Alvarado on the death of his father” (Fuentes y Guzmán 1932-33, 8.48; Carmack 1981, 308). His rebellion was likely tied to the revolt that involved the communities of Aguacatan, Sacapulas, and Utatlan and which was described in the *actas de cabildo* dated at the end of 1534: “The devil appeared before them and told them that soon all the Christians of this city [Santiago] would die and that they should kill those other Spaniards found in towns outside of the city. Thus it was that in some of these towns more than ten Spaniards were murdered and sacrificed, along with a great number of their Indian slaves and servants” (Kramer 1994, 122). The rebellion was quickly put down by Pedro de Alvarado’s brother Jorge who punished the rebels by “killing them, throwing them to the dogs, hanging them, and throwing them into pits” (Ibid., 122). Lord Tecum was likely one of those hung after he was captured in Chiquimula in 1534 or 1535.

Don Juan de Rojas⁸⁶² and Don Juan Cortes⁸⁶³ were the fourteenth generation of lords, begotten sons of Tecum and Tepepul.

⁸⁶¹ Tepepul is identified by the Nahua version of his calendric name Chicuey Quiaguit (Nahua: “8 Rain”) in the early Colonial document, *Don Juan Cortés, cacique de Santa Cruz Quiché* (Carrasco 1967, 253). According to the *Annals of the Cakchiquels*, the Quiché lord Quivawit Caok (8 Rain), was hung by Alvarado on May 26, 1540 along with the Cakchiquel lord Ahpozotzil Cahi Ymox. They were both in prison at the time for rebellion (Recinos and Goetz 1953, 132). Colonial records list a Quiché ruler named Sequechul (likely a poor transcription for Tepepul) who was imprisoned for participating in an insurrection and eventually hung in 1540 (Recinos 1950, 232 n. 12). Soon after this incident, Alvarado left Guatemala in search of a western sea-route from Mexico to the Spice Islands (Philippines). He never returned, dying in Michoacan a year later in 1541 (Akkeren 2003).

⁸⁶² Juan de Rojas, son of Tecum (9 Jaguar), was eventually recognized by the Spaniards as the Ah Pop of the Cavec lineage. At some point following the Spanish conquest, the surviving lords of the highland Maya lineages were baptized as Christians and adopted Spanish names. Ximénez doubted that this took place when Alvarado invaded highland Maya territory, and suggested that the baptisms began several years later when the first missionaries arrived in Guatemala (Ximénez 1929-31, I.xli.128). Roman Catholicism was not formally established in Guatemala until 1534, when Bishop Francisco Marroquín arrived in the capital city of Santiago de los Caballeros (Pueblo Viejo, a town not far from the present-day city of Antigua), recently founded by Jorge de Alvarado, the brother of the conqueror Pedro de Alvarado. Over the next few years, Bishop Marroquín sent a few missionary friars with portable altars to the various Indian towns and villages to baptize the inhabitants and destroy any remnants of “idolatry” and “paganism” that may have survived the purges of the conquest itself. There were instances of serious resistance to the labors of the missionaries. The following is an account given by Ximénez:

It happened in this kingdom soon after being conquered that, hearing of the lives of Christ and of Our Lady, John the Baptist, and Saint Peter and others which the priests had taught them, there arose a Mexican Indian, a pseudo-prophet. He taught them that Huhapu [Hunahpu] was God, and that Hununapu [One Hunahpu] was the son of God; Xuchinquezal, which is Mexican, or Aquixquic [Xkik', or Lady Blood] was Saint Mary; Vaxaquicab was Saint John the Baptist, and Huntihax was Saint Paul. This caused so much commotion among the Indians that the kingdom was nearly lost because of it, for they came to imagine that our Holy Gospel told them nothing new and that they already knew of it (Ximénez 1929-31, I.xxiii.57).

Early evangelization efforts focused on survivors of the old highland Maya nobility in the hope that they would set an example for the rest of the people. Baptism was also a necessary step for any Maya of noble birth who aspired to a place in the new political order, since without it the Spanish authorities would not recognize their legitimacy or territorial claims. That this is the case here is evident by the title “Don.” This was given to those Maya noblemen who professed faith in Christ as well as those who could prove their legitimacy in court. Many of the documents composed by the Maya in the sixteenth century were “titles” written for the purpose of establishing the legal legitimacy of former ruling lords and their descendents in an effort to recover hereditary honors. As noblemen recognized by the Spanish Crown, they were allowed to receive some tribute from their subjects, to be exempt from compulsory labor, and to ride horses. In addition, baptism afforded a measure of protection from the excesses of Spanish rule. Without it, unconverted Maya were subject to enslavement until the reforms of Governor Alonso López de Cerrato abolished the practice after 1548.

Don Juan de Rojas was likely named after the Spanish captain Diego de Rojas who came to Guatemala at the orders of Hernán Cortés in the latter half of 1524 with fifty Spanish soldiers (Akkeren 2003). Thus, Juan de Rojas must have been born sometime between this year and ca. 1530 when Diego de Rojas departed for Peru. When his father was hung in ca. 1535, Juan de Rojas would have been too young to rule, leaving the Quichés without effective leadership for some time. He had begun to exercise some measure of

THE GREAT HOUSES OF THE CAVEC LORDS⁸⁶⁴

THESE are the generations, the house divisions of lordship, for the Ah Pop and Ah Pop of the Reception House over the Cavec Quichés. We shall now name the great houses of each of the lords of the lineages after the Ah Pop and Ah Pop of the Reception House.

These are the nine great houses of the nine lineages of the Cavecs, along with the titles for each of the lords of the great houses:

Lord Ah Pop has one great house; Guarded House⁸⁶⁵ is the name of this great house.⁸⁶⁶

power by at least 1550, when he became involved in a land dispute and demanded that certain merchants from the Utatlan area pay tribute to him (Lutz 1994, 25-26 n. 28). In his mature years as a native *cacique*, Juan de Rojas collected tribute, carried out censuses, provided labor, enforced church attendance and instruction, and acted as the principal judge in local disputes (Carmack 1981, 313). According to Ximénez, Juan de Rojas was given a special hall at the Royal Palace of Guatemala next to that of the president. Here he administered the affairs of the Maya as the vassal lord of the Spaniards (Ximénez 1929-31, I.xxviii.79).

⁸⁶³ Juan Cortés, son of Tepepul, was recognized by the Spaniards as the Ah Pop of the Reception House. Juan Cortés petitioned the Spanish crown to restore the rights and privileges of lordship that the ancient Quiché lords had enjoyed prior to the Conquest. Accompanied by a Dominican priest, he sailed to Spain in 1557 to press his claim before King Philip II (Carrasco 1967). Unfortunately his ship was attacked by French pirates who seized his documents, which may have included Precolumbian painted codices. He was nevertheless granted audiences before high officials in Spain. Ultimately, Franciscans who opposed the efforts of the Dominicans in favor of the Quiché lords succeeded in opposing these claims on the grounds that it would foster further revolts by the Indians. Spanish authorities in Guatemala also urged caution in granting too much authority to the old Quiché nobility. In a letter to the Spanish crown written in 1552 by Alonso López Cerrato, Governor of Guatemala, the ancient Quiché lords wielded tremendous religious as well as political power over their subjects and could prove dangerous if they were to rebel, “because anciently they revered [them] as gods, and if this persists, the lords could raise the land easily” (Carmack 1973, 379).

⁸⁶⁴ lines 8556-8595

⁸⁶⁵ *K’u Ja* (Guarded House). *K’u* is “guarded, hidden, covered.” Coto lists *Qu hay* as a “granary,” indicating that such guarded houses may have been used to hold food stores or tribute payments.

⁸⁶⁶ John Lloyd Stephens, who visited the site of Cumarcáh in the late 1830s, gave the following description of the principal palace (or great house) there:

In part, however, the floor remains entire, with fragments of the partition walls, so that the plan of the apartments can be distinctly made out. This floor is of a hard cement, which, though year after year washed by the floods of the rainy season, is hard and durable as stone. The inner walls were covered with plaster of a finer description, and in

Lord Ah Pop of the Reception House; Bird House⁸⁶⁷ is the name of this great house.

Great Steward of the Cavecs has one great house.

Lord Ah Tohil has one great house.

Lord Ah Cucumatz has one great house.

Councilor of the Stacks has one great house.

Emissary of the Deer House has one great house.

Councilor in the Ballcourt of Punishment guards his great house.

Tepeu Yaqui⁸⁶⁸ has one great house.

THESE, then, are the nine lineages of the Cavecs. Numerous are the vassals and servants that pertain to the nine great houses.

corners where there had been less exposure were the remains of colours; no doubt the whole interior had been ornamented with paintings (Stephens 1969, II, 183).

This was likely the principal great house of the site belonging to the Ah Pop of the Cavecs located in the southwest corner of Cumarcah. Wauchope began excavation of this palace complex in 1970 and uncovered a small fragment of a mural in the northern section depicting “a blue lake with yellow shells, covered by an ornamented canopy, with a much-plumed green snake winding above it” (Wauchope 1965, 67). This was painted on the walls of a small room with white-plaster floors and clay walls. Wallace continued work at the site and uncovered further traces of these murals. The principal scene depicts a warrior painted in Mixteca-Puebla style covered with jade beads and feathers and carrying a shield in one hand and a rattle in the other (Carmack 1981, 291). Another mural discovered by Wallace depicts the lower portion of a dancing monkey, perhaps a reference to the twin sons Hun Batz and Hun Chouen who were transformed into monkeys and became the patron deities of scribes and artists.

⁸⁶⁷ *Tz'ikina Ja* (Bird House).

⁸⁶⁸ *Tepew Yaki* (Sovereign Yaqui/Mexican). This office does not appear in the previous list of Cavec titles. This office appears in place of the “Mother of the Reception House.” There is a people with a similar name (see p. 229).

THE DYNASTY OF NIHAIB LORDS⁸⁶⁹

THESE, then, are the nine highest of the great houses of the Nihai. We shall first give the dynasty⁸⁷⁰ of lords:

They had but one root, planted before the root of the sun and the light of the people. Balam Acab was their first grandfather and father.

Co Acul and Co Acutec were the second generation.

Co Chahuh⁸⁷¹ and Co Tzibaha⁸⁷² were the third generation.

Beleheb Queh⁸⁷³ was the fourth generation.

Co Tuha⁸⁷⁴ was the fifth generation.

Batza⁸⁷⁵ was the sixth generation.

Iztayul was the seventh generation.

Co Tuha headed the eighth house division of lordship.

Beleheb Queh was the ninth house division.

Quema,⁸⁷⁶ as he is called now, was the tenth generation.

Lord Co Tuha was the eleventh generation.

Don Christoval, as he is called, exercised lordship under the Castilian people.

⁸⁶⁹ lines 8596-8631

⁸⁷⁰ *Le'ab'al rib' ajaware* (self-generation lordship). This is a dynastic list or genealogy.

⁸⁷¹ *K'o Chajuj* (Lord Guardian).

⁸⁷² *K'o Tz'ib'a Ja* (Lord Writing/Painting House).

⁸⁷³ *B'elejeb' Kej* (Nine Deer). A day on the traditional 260 day calendar.

⁸⁷⁴ *K'o Tuja* (Lord Sweatbath).

⁸⁷⁵ *B'atz'a* (Thread/Howler Monkey).

⁸⁷⁶ *Kema* (Loom).

Don Pedro de Robles is the Lord Magistrate today.

THE GREAT HOUSES OF THE NIHAIB LORDS⁸⁷⁷

THESE, then, are all the lords who follow behind the Lord Magistrate. We shall list now the lords of each of the great houses:

Lord Magistrate is the first lord over the Nihaihs. He has one great house.

Lord Herald has one great house.

Lord Magistrate of the Reception House has one great house.

Great Reception House has one great house.

Mother of the Reception House has one great house.

Great Reception House has one great house.

Great Steward of the Nijaibs has one great house.

Lord Auilix has one great house.

Yacolatam (Corner of the Reed Mat) has one great house.

THESE, then, are the names of the great houses over the Nijaibs, of the nine lineages of the Nijaibs, as they are called. There are many lineages among them, each exercising lordship. We have listed the first among these.

⁸⁷⁷ lines 8632-8663

THE DYNASTY OF AHAU QUICHÉ LORDS⁸⁷⁸

THESE, then, are they of the Ahau Quichés:

Mahucutah was their grandfather and father. He was the first person.

Co Ahau was the name of the second generation lord.

Caq Lacan,⁸⁷⁹

Co Cozom,⁸⁸⁰

Co Mahcun,⁸⁸¹

Vucub Ah,⁸⁸²

Co Camel,⁸⁸³

Co Yaba Coh,⁸⁸⁴

Vinac,⁸⁸⁵

Bam.⁸⁸⁶

⁸⁷⁸ lines 8664-8679

⁸⁷⁹ *Kaq' Lakan* (Red/Fire Banner).

⁸⁸⁰ The manuscript reads *qo cozom*. This is most likely *K'o Q'osom* (Lord Thicket/Bramble/Chaff) The precise meaning of this name is unclear, however, because of the limitations of the Latin alphabet used. *Cozom* may also be read as *Kosom* (Fatigued/Perplexed); *K'osom* (Reclined); or *Qosom* (Turkey Ruffling His Wings).

⁸⁸¹ *Maj Kun. Aj Kun* is a “healer/doctor.” The *m-* prefix is a negative marker, which would make the name read something like “Not a Healer.” As a verb, *maj* is “to seize, steal, grasp.” Thus an alternative might be “Seizes Medicine.”

⁸⁸² *Wuqub' Aj* (Seven Reed/Cane). A day in the traditional 260 day calendar.

⁸⁸³ *K'o Kame'l* (Lord Humble).

⁸⁸⁴ *K'o Yab'a Koj* (Lord Sick Puma).

⁸⁸⁵ *Winaq* (Person).

⁸⁸⁶ *B'am* (Counselor/Doer).

THE GREAT HOUSES OF THE AHAU QUICHÉ LORDS⁸⁸⁷

These, then, are the lords over the Ahau Quichés. These are their generations and house divisions as well. These are the titles of the lords within each of the great houses.

There are only four great houses:

Herald Lord is the name of the first lord. He has one great house.

Emissary Lord is the second lord. He has one great house.

Great Steward Lord is the third lord. He has one great house.

Hacavitz, then, is the fourth lord. He has one great house.

Thus there are four great houses over the Ahau Quichés.

THE THREE GREAT STEWARDS AS MOTHERS OF THE WORD⁸⁸⁸

THESE, then, are the three Great Stewards. They are like the fathers of all the Quiché lords. As one the three stewards gathered together as the givers of birth, the mothers of the word, and the fathers of the word.⁸⁸⁹ Great, in a small way, is the essence of these three stewards.

THESE are: The Great Steward before the Cavecs; before the Nijaibs is the second Great Steward; and before the Ahau Quichés is the third Great Steward. Thus there are three stewards, one before each of the lineages.

⁸⁸⁷ lines 8680-8695

⁸⁸⁸ lines 8696-8716

⁸⁸⁹ The *Nim Ch'okoj* (Great Stewards) of the three principal Quiché lineages identify themselves here as the authors of the “word,” likely the *Popol Vuh* manuscript itself.

But this is the essence of the Quichés, because there is no longer a way of seeing⁸⁹⁰ it. It was with the lords at first, but it is now lost.⁸⁹¹

There is only this. All is now completed concerning Quiché, called Santa Cruz.⁸⁹²

⁸⁹⁰ *Ilb'al* (means of seeing, instrument of sight). This is the term used exclusively in the manuscript to describe the original Precolumbian codex version of the *Popol Vuh* (see pp. 64, 287; lines 50-57, 8276).

⁸⁹¹ *Sachinaq* (lost, vanished).

⁸⁹² Bishop Francisco Marroquín blessed the ruins of Cumarcah in 1539, renaming it Santa Cruz (Spanish: "Holy Cross"). In about 1555, the Spaniards founded a new administrative center three miles to the east, which they also named Santa Cruz del Quiché (Spanish: Holy Cross of the Quiché). This was likely carried out under the direction of Alonso de Zorita who administered affairs in various Guatemalan provinces beginning in March 1555, including the area of Utatlan. Akkeren suggests that this compilation of the *Popol Vuh* was carried out in conjunction with the abandonment of the old capital (Akkeren 2003). The resettlement process, which the Spaniards called *congregación* (congregation), followed a uniform pattern throughout Guatemala (García Peláez 1943, 161-166; Betancor and Arboleda 1964). First, a church was erected at the center of the proposed site fronted by an open plaza, or *atrio*, for large assemblies to gather for public ceremonies and indoctrination. The rest of the town was organized into squares divided by streets laid out to the cardinal directions. While the new settlement was under construction, families planted their maize on plots the Spaniards assigned to them in the nearby countryside. When the crops were ready to harvest, the older Precolumbian structures were destroyed to prevent reoccupation, and the people moved into their new homes. Christian missionaries staged elaborate dances and festivals to celebrate the event "so that they would forget their ancient dwellings" (García Peláez 1943, 163).

POPOL

The Mayan Book
of the Dawn of Life

REVISED EDITION

Translated by

1996

PART ONE

THIS IS THE BEGINNING OF THE ANCIENT WORD, here in this place called Quiché. Here we shall inscribe, we shall implant the Ancient Word, the potential and source for everything done in the citadel of Quiché, in the nation of Quiché people.

And here we shall take up the demonstration, revelation, and account of how things were put in shadow and brought to light by

the Maker, Modeler,
named Bearer, Begetter,
Hunahpu Possum, Hunahpu Coyote,
Great White Peccary, Coati,
Sovereign Plumed Serpent,
Heart of the Lake, Heart of the Sea,
plate shaper, bowl shaper, as they are called,
also named, also described as
the midwife, matchmaker
named Xpiyacoc, Xmucane,
defender, protector,
twice a midwife, twice a matchmaker,

as is said in the words of Quiché. They accounted for everything—and did it, too—as enlightened beings, in enlightened words. We shall write about this now amid the preaching of God, in Christendom now. We shall bring it out because there is no longer

a place to see it, a Council Book,
a place to see “The Light That Came from
Beside the Sea,”
the account of “Our Place in the Shadows.”
a place to see “The Dawn of Life,”

as it is called. There is the original book and ancient writing, but the one who reads and assesses it has a hidden identity. It takes a long performance and account to complete the lighting of all the sky-earth:

the fourfold siding, fourfold cornering,
measuring, fourfold staking,
halving the cord, stretching the cord

in the sky, on the earth,
the four sides, the four corners, as it is said,
by the Maker, Modeler,
mother-father of life, of humankind,
giver of breath, giver of heart,
bearer, upbringer in the light that lasts
of those born in the light, begotten in the light;
worrier, knower of everything, whatever there is:
sky-earth, lake-sea.

THIS IS THE ACCOUNT, here it is:

Now it still ripples, now it still murmurs, ripples, it still sighs, still hums, and it is empty under the sky.

Here follow the first words, the first eloquence:

There is not yet one person, one animal, bird, fish, crab, tree, rock, hollow, canyon, meadow, forest. Only the sky alone is there; the face of the earth is not clear. Only the sea alone is pooled under all the sky; there is nothing whatever gathered together. It is at rest; not a single thing stirs. It is held back, kept at rest under the sky.

Whatever there is that might be is simply not there: only the pooled water, only the calm sea, only it alone is pooled.

Whatever might be is simply not there: only murmurs, ripples, in the dark, in the night. Only the Maker, Modeler alone, Sovereign Plumed Serpent, the Bearers, Begetters are in the water, a glittering light. They are there, they are enclosed in quetzal feathers, in blue-green.

Thus the name, "Plumed Serpent." They are great knowers, great thinkers in their very being.

SOVEREIGN PLUMED SERPENT: *Here he is seated, holding a snake in his hand. On his back he wears a quetzal bird, with its head behind his, its wings at the level of his shoulders, and its tail hanging down to the ground. From the Dresden Codex.*

DRAWING BY KARL TAUBE

And of course there is the sky, and there is also the Heart of Sky. This is the name of the god, as it is spoken.

And then came his word, he came here to the Sovereign Plumed Serpent, here in the blackness, in the early dawn. He spoke with the Sovereign Plumed Serpent, and they talked, then they thought, then they worried. They agreed with each other, they joined their words, their thoughts. Then it was clear, then they reached accord in the light, and then humanity was clear, when they conceived the growth, the generation of trees, of bushes, and the growth of life, of humankind, in the blackness, in the early dawn, all because of the Heart of Sky, named Hurricane. Thunderbolt Hurricane comes first, the second is Newborn Thunderbolt, and the third is Sudden Thunderbolt.

So there were three of them, as Heart of Sky, who came to the Sovereign Plumed Serpent, when the dawn of life was conceived:

"How should the sowing be, and the dawning? Who is to be the provider, nurturer?"

"Let it be this way, think about it: this water should be removed, emptied out for the formation of the earth's own plate and platform, then should come the sowing, the dawning of the sky-earth. But there will be no high days and no bright praise for our work, our design, until the rise of the human work, the human design," they said.

And then the earth arose because of them, it was simply their word that brought it forth. For the forming of the earth they said "Earth." It arose suddenly, just like a cloud, like a mist, now forming, unfolding.

THE HEART OF SKY, NAMED HURRICANE: *Here he peers out from among swirls of smoke and flame (or clouds and lightning) that come from the obsidian mirror on his own forehead. From a Late Classic vase from the lowlands.*

DRAWING BY KARL TAUBE

THUNDERBOLT: A lowland Maya Chak or Thunderbolt god, holding a lightning-striking axe in his left hand and a representation of the sound of thunder in his right. From the Dresden Codex.

DRAWING BY CARLOS A. VILLACORTA

Then the mountains were separated from the water, all at once the great mountains came forth. By their genius alone, by their cutting edge alone they carried out the conception of the mountain-plain, whose face grew instant groves of cypress and pine.

And the Plumed Serpent was pleased with this:

"It was good that you came, Heart of Sky, Hurricane, and Newborn Thunderbolt, Sudden Thunderbolt. Our work, our design will turn out well," they said.

And the earth was formed first, the mountain-plain. The channels of water were separated; their branches wound their ways among the mountains. The waters were divided when the great mountains appeared.

Such was the formation of the earth when it was brought forth by the Heart of Sky, Heart of Earth, as they are called, since they were the first to think of it. The sky was set apart, and the earth was set apart in the midst of the waters.

Such was their plan when they thought, when they worried about the completion of their work.

NOW THEY PLANNED THE ANIMALS OF THE MOUNTAINS, all the guardians of the forests, creatures of the mountains: the deer, birds, pumas, jaguars, serpents, rattlesnakes, fer-de-lances, guardians of the bushes.

A Bearer, Begetter speaks:

"Why this pointless humming? Why should there merely be rustling beneath the trees and bushes?"

"Indeed—they had better have guardians," the others replied. As soon as they thought it and said it, deer and birds came forth.

And then they gave out homes to the deer and birds:

"You, the deer: sleep along the rivers, in the canyons. Be here in the meadows, in the thickets, in the forests, multiply yourselves. You will stand and walk on all fours," they were told.

So then they established the nests of the birds, small and great:

"You, precious birds: your nests, your houses are in the trees, in the bushes. Multiply there, scatter there, in the branches of trees, the branches of bushes," the deer and birds were told.

When this deed had been done, all of them had received a place to sleep and a place to stay. So it is that the nests of the animals are on the earth, given by the Bearer, Begetter. Now the arrangement of the deer and birds was complete.

AND THEN THE DEER AND BIRDS WERE TOLD by the Maker, Modeler, Bearer, Begetter:

"Talk, speak out. Don't moan, don't cry out. Please talk, each to each, within each kind, within each group," they were told—the deer, birds, puma, jaguar, serpent.

"Name now our names, praise us. We are your mother, we are your father. Speak now:

'Hurricane,
Newborn Thunderbolt, Sudden Thunderbolt,
Heart of Sky, Heart of Earth,
Maker, Modeler,
Bearer, Begetter,'

speak, pray to us, keep our days," they were told. But it didn't turn out that they spoke like people: they just squawked, they just chattered, they just howled. It wasn't apparent what language they spoke; each one gave a different cry. When the Maker, Modeler heard this:

"It hasn't turned out well, they haven't spoken," they said among themselves. "It hasn't turned out that our names have been named. Since we are their mason and sculptor, this will not do," the Bearers and Begetters said among themselves. So they told them:

"You will simply have to be transformed. Since it hasn't turned out well and you haven't spoken, we have changed our word:

JUST LET YOUR FLESH BE
EATEN: A turkey (left) and
deer (right) caught in
bent-tree snares. From the
Madrid Codex.

DRAWING BY CARLOS A. VILLACORTA

"What you feed on, what you eat, the places where you sleep, the places where you stay, whatever is yours will remain in the canyons, the forests. Although it turned out that our days were not kept, nor did you pray to us, there may yet be strength in the keeper of days, the giver of praise whom we have yet to make. Just accept your service, just let your flesh be eaten.

"So be it, this must be your service," they were told when they were instructed—the animals, small and great, on the face of the earth.

And then they wanted to test their timing again, they wanted to experiment again, and they wanted to prepare for the keeping of days again. They had not heard their speech among the animals; it did not come to fruition and it was not complete.

And so their flesh was brought low: they served, they were eaten, they were killed—the animals on the face of the earth.

AGAIN THERE COMES AN EXPERIMENT WITH THE HUMAN WORK, the human design, by the Maker, Modeler, Bearer, Begetter:

"It must simply be tried again. The time for the planting and dawning is nearing. For this we must make a provider and nurturer. How else can we be invoked and remembered on the face of the earth? We have already made our first try at our work and design, but it turned out that they didn't keep our days, nor did they glorify us.

"So now let's try to make a giver of praise, giver of respect, provider, nurturer," they said.

So then comes the building and working with earth and mud. They made a body, but it didn't look good to them. It was just separating, just crumbling, just loosening, just softening, just disintegrating, and just dissolving. Its head wouldn't turn, either. Its face was just lopsided, its

face was just twisted. It couldn't look around. It talked at first, but senselessly. It was quickly dissolving in the water.

"It won't last," the mason and sculptor said then. "It seems to be dwindling away, so let it just dwindle. It can't walk and it can't multiply, so let it be merely a thought," they said.

So then they dismantled, again they brought down their work and design. Again they talked:

"What is there for us to make that would turn out well, that would succeed in keeping our days and praying to us?" they said. Then they planned again:

"We'll just tell Xpiyacoc, Xmucane, Hunahpu Possum, Hunahpu Coyote, to try a counting of days, a counting of lots," the mason and sculptor said to themselves. Then they invoked Xpiyacoc, Xmucane.

THEN COMES THE NAMING OF THOSE WHO ARE THE MIDMOST SEERS: the "Grandmother of Day, Grandmother of Light," as the Maker, Modeler called them. These are names of Xpiyacoc and Xmucane.

When Hurricane had spoken with the Sovereign Plumed Serpent, they invoked the daykeepers, diviners, the midmost seers:

"There is yet to find, yet to discover how we are to model a person, construct a person again, a provider, nurturer, so that we are called upon and we are recognized: our recompense is in words.

Midwife, matchmaker,
our grandmother, our grandfather,
Xpiyacoc, Xmucane,
let there be planting, let there be the dawning
of our invocation, our sustenance, our recognition
by the human work, the human design,
the human figure, the human form.
So be it, fulfill your names:
Hunahpu Possum, Hunahpu Coyote,
Bearer twice over, Begetter twice over,
Great Peccary, Great Coati,
lapidary, jeweler,
sawyer, carpenter,
plate shaper, bowl shaper,
incense maker, master craftsman,
Grandmother of Day, Grandmother of Light.

You have been called upon because of our work, our design. Run your hands over the kernels of corn, over the seeds of the coral tree, just get it done, just let it come out whether we should carve and gouge a mouth, a face in wood," they told the daykeepers.

And then comes the borrowing, the counting of days; the hand is moved over the corn kernels, over the coral seeds, the days, the lots.

Then they spoke to them, one of them a grandmother, the other a grandfather.

This is the grandfather, this is the master of the coral seeds: Xpiyacoc is his name.

And this is the grandmother, the daykeeper, diviner who stands behind others: Xmucane is her name.

And they said, as they set out the days:

"Just let it be found, just let it be discovered,
say it, our ear is listening,
may you talk, may you speak,
just find the wood for the carving and sculpting
by the builder, sculptor.
Is this to be the provider, the nurturer
when it comes to the planting, the dawning?
You corn kernels, you coral seeds,
you days, you lots:
may you succeed, may you be accurate,"

they said to the corn kernels, coral seeds, days, lots. "Have shame, you up there, Heart of Sky: attempt no deception before the mouth and face of Sovereign Plumed Serpent," they said. Then they spoke straight to the point:

"It is well that there be your manikins, woodcarvings, talking, speaking, there on the face of the earth."

"So be it," they replied. The moment they spoke it was done: the manikins, woodcarvings, human in looks and human in speech.

This was the peopling of the face of the earth:

They came into being, they multiplied, they had daughters, they had sons, these manikins, woodcarvings. But there was nothing in their hearts and nothing in their minds, no memory of their mason and builder. They just went and walked wherever they wanted. Now they did not remember the Heart of Sky.

And so they fell, just an experiment and just a cutout for humankind. They were talking at first but their faces were dry. They were not yet

developed in the legs and arms. They had no blood, no lymph. They had no sweat, no fat. Their complexions were dry, their faces were crusty. They flailed their legs and arms, their bodies were deformed.

And so they accomplished nothing before the Maker, Modeler who gave them birth, gave them heart. They became the first numerous people here on the face of the earth.

A GAIN THERE COMES A HUMILIATION, destruction, and demolition. The manikins, woodcarvings were killed when the Heart of Sky devised a flood for them. A great flood was made; it came down on the heads of the manikins, woodcarvings.

The man's body was carved from the wood of the coral tree by the Maker, Modeler. And as for the woman, the Maker, Modeler needed the hearts of bulrushes for the woman's body. They were not competent, nor did they speak before the builder and sculptor who made them and brought them forth, and so they were killed, done in by a flood:

There came a rain of resin from the sky.

There came the one named Gouger of Faces: he gouged out their eyeballs.

There came Sudden Bloodletter: he snapped off their heads.

There came Crunching Jaguar: he ate their flesh.

There came Tearing Jaguar: he tore them open.

HE GOUGED OUT THEIR EYEBALLS: A human eye in the beak of a king vulture, still attached by the optic nerve. From the Madrid Codex.

DRAWING BY CARLOS A. VILLACORTA

They were pounded down to the bones and tendons, smashed and pulverized even to the bones. Their faces were smashed because they were incompetent before their mother and their father, the Heart of Sky, named Hurricane. The earth was blackened because of this; the black rainstorm began, rain all day and rain all night. Into their houses came the animals, small and great. Their faces were crushed by things of wood and stone. Everything spoke: their water jars, their tortilla griddles, their plates, their cooking pots, their dogs, their grinding stones, each and every thing crushed their faces. Their dogs and turkeys told them:

"You caused us pain, you ate us, but now it is *you* whom *we* shall eat." And this is the grinding stone:

"We were undone because of you.

Every day, every day,
in the dark, in the dawn, forever,
r-r-rip, r-r-rip,
r-r-rub, r-r-rub,
right in our faces, because of you.

This was the service we gave you at first, when you were still people, but today you will learn of our power. We shall pound and we shall grind your flesh," their grinding stones told them.

And this is what their dogs said, when they spoke in their turn:

"Why is it you can't seem to give us our food? We just watch and you just keep us down, and you throw us around. You keep a stick ready when you eat, just so you can hit us. We don't talk, so we've received nothing from you. How could you not have known? You *did* know that we were wasting away there, behind you.

"So, this very day you will taste the teeth in our mouths. We shall eat you," their dogs told them, and their faces were crushed.

And then their tortilla griddles and cooking pots spoke to them in turn:

"Pain! That's all you've done for us. Our mouths are sooty, our faces are sooty. By setting us on the fire all the time, you burn us. Since *we* felt no pain, *you* try it. We shall burn you," all their cooking pots said, crushing their faces.

The stones, their hearthstones were shooting out, coming right out of the fire, going for their heads, causing them pain. Now they run for it, helter-skelter.

They want to climb up on the houses, but they fall as the houses collapse.

They want to climb the trees; they're thrown off by the trees.

THEIR HEARTHSTONES WERE SHOOTING OUT: According to Classic Maya inscriptions, three hearthstones entered the sky and formed a new constellation at the end of the world that preceded the present one. The glyph at left (from a stele at Quiriguá) reads yax ox tunal, "new three-stone place," and repeats the sign for "stone" (tun) three times; the glyph at right (from a stele at Toniná) adds signs for smoke and flames to the stones.

DRAWING BY KARL TAUBE

They want to get inside caves, but the caves slam shut in their faces.

Such was the scattering of the human work, the human design. The people were ground down, overthrown. The mouths and faces of all of them were destroyed and crushed. And it used to be said that the monkeys in the forests today are a sign of this. They were left as a sign because wood alone was used for their flesh by the builder and sculptor.

So this is why monkeys look like people: they are a sign of a previous human work, human design—mere manikins, mere woodcarvings.

THIS WAS WHEN THERE WAS JUST A TRACE OF EARLY DAWN on the face of the earth, there was no sun. But there was one who magnified himself; Seven Macaw is his name. The sky-earth was already there, but the face of the sun-moon was clouded over. Even so, it is said that his light provided a sign for the people who were flooded. He was like a person of genius in his being.

"I am great. My place is now higher than that of the human work, the human design. I am their sun and I am their light, and I am also their months.

"So be it: my light is great. I am the walkway and I am the foothold of the people, because my eyes are of metal. My teeth just glitter with jewels, and turquoise as well; they stand out blue with stones like the face of the sky.

"And this nose of mine shines white into the distance like the moon.

Since my nest is metal, it lights up the face of the earth. When I come forth before my nest, I am like the sun and moon for those who are born in the light, begotten in the light. It must be so, because my face reaches into the distance," says Seven Macaw.

It is not true that he is the sun, this Seven Macaw, yet he magnifies himself, his wings, his metal. But the scope of his face lies right around his own perch; his face does not reach everywhere beneath the sky. The faces of the sun, moon, and stars are not yet visible, it has not yet dawned.

And so Seven Macaw puffs himself up as the days and the months, though the light of the sun and moon has not yet clarified. He only wished for surpassing greatness. This was when the flood was worked upon the manikins, woodcarvings.

And now we shall explain how Seven Macaw died, when the people were vanquished, done in by the mason and sculptor.

PART TWO

HERE IS THE BEGINNING OF THE DEFEAT AND DESTRUCTION OF THE DAY OF SEVEN MACAW by the two boys, the first named Hunahpu and the second named Xbalanque. Being gods, the two of them saw evil in his attempt at self-magnification before the Heart of Sky. So the boys talked:

"It's no good without life, without people here on the face of the earth."

"Well then, let's try a shot. We could shoot him while he's at his meal. We could make him ill, then put an end to his riches, his jade, his metal, his jewels, his gems, the source of his brilliance. Everyone might do as he does, but it should not come to be that fiery splendor is merely a matter of metal. So be it," said the boys, each one with a blowgun on his shoulder, the two of them together.

And this Seven Macaw has two sons: the first of these is Zipacna, and the second is the Earthquake. And Chimalmat is the name of their mother, the wife of Seven Macaw.

And this is Zipacna, this is the one to build up the great mountains: Fireplace, Hunahpu, Cave by the Water, Xcanul, Macamob, Huliznab, as the names of the mountains that were there at the dawn are spoken. They were brought forth by Zipacna in a single night.

And now this is the Earthquake. The mountains are moved by him; the mountains, small and great, are softened by him. The sons of Seven Macaw did this just as a means of self-magnification.

"Here am I: I am the sun," said Seven Macaw.

"Here am I: I am the maker of the earth," said Zipacna.

THE BOYS TALKED: Hunahpu (left) and Xbalanque (right). The latter, known as Yax Balam in lowland Maya texts, has patches of jaguar skin on his face and body. Classic Maya painting from the cave at Naj Tunich, Guatemala.

DRAWING BY KARL TAUBE

"As for me, I bring down the sky, I make an avalanche of all the earth," said Earthquake. The sons of Seven Macaw are alike, and like him: they got their greatness from their father.

And the two boys saw evil in this, since our first mother and father could not yet be made. Therefore deaths and disappearances were planned by the two boys.

AND HERE IS THE SHOOTING OF SEVEN MACAW BY THE TWO BOYS. We shall explain the defeat of each one of those who engaged in self-magnification.

This is the great tree of Seven Macaw, a nance, and this is the food of Seven Macaw. In order to eat the fruit of the nance he goes up the tree every day. Since Hunahpu and Xbalanque have seen where he feeds, they are now hiding beneath the tree of Seven Macaw, they are keeping quiet here, the two boys are in the leaves of the tree.

And when Seven Macaw arrived, perching over his meal, the nance, it was then that he was shot by Hunahpu. The blowgun shot went right to his jaw, breaking his mouth. Then he went up over the tree and fell flat on the ground. Suddenly Hunahpu appeared, running. He set out to

HE WAS SHOT BY HUNAHPU: Seven Macaw is perched at the top of the tree at left. Xbalanque is hidden behind its trunk, with only his pawlike hand showing just below the fruit that dangles from the base of the tree's right limb. Hunahpu, with his blowgun on target, crouches at right, shaded by a straw hat. From a Classic Maya vase.

DRAWING BY KARL TAUBE

grab him, but actually it was the arm of Hunahpu that was seized by Seven Macaw. He yanked it straight back, he bent it back at the shoulder. Then Seven Macaw tore it right out of Hunahpu. Even so, the boys did well: the first round was not their defeat by Seven Macaw.

And when Seven Macaw had taken the arm of Hunahpu, he went home. Holding his jaw very carefully, he arrived:

"What have you got there?" said Chimalmat, the wife of Seven Macaw.

"What is it but those two tricksters! They've shot me, they've dislocated my jaw. All my teeth are just loose, now they ache. But once what I've got is over the fire—hanging there, dangling over the fire—then they can just come and get it. They're real tricksters!" said Seven Macaw, then he hung up the arm of Hunahpu.

Meanwhile Hunahpu and Xbalanque were thinking. And then they invoked a grandfather, a truly white-haired grandfather, and a grandmother, a truly humble grandmother—just bent-over, elderly people. Great White Peccary is the name of the grandfather, and Great White Coati is the name of the grandmother. The boys said to the grandmother and grandfather:

"Please travel with us when we go to get our arm from Seven Macaw; we'll just follow right behind you. You'll tell him:

'Do forgive us our grandchildren, who travel with us. Their mother and father are dead, and so they follow along there, behind us. Perhaps we should give them away, since all we do is pull worms out of teeth.' So we'll seem like children to Seven Macaw, even though *we're* giving you the instructions," the two boys told them.

"Very well," they replied.

After that they approached the place where Seven Macaw was in front

GREAT WHITE PECCARY: A white-lipped peccary wearing a cloth headdress. From the Dresden Codex.

DRAWING BY CARLOS A. VILLACORTA

of his home. When the grandmother and grandfather passed by, the two boys were romping along behind them. When they passed below the lord's house, Seven Macaw was yelling his mouth off because of his teeth. And when Seven Macaw saw the grandfather and grandmother traveling with them:

"Where are you headed, our grandfather?" said the lord.

"We're just making our living, your lordship," they replied.

"Why are you working for a living? Aren't those your children traveling with you?"

"No, they're not, your lordship. They're our grandchildren, our descendants, but it is nevertheless *we* who take pity on *them*. The bit of food they get is the portion we give them, your lordship," replied the grandmother and grandfather. Since the lord is getting done in by the pain in his teeth, it is only with great effort that he speaks again:

"I implore you, please take pity on me! What sweets can you make, what poisons can you cure?" said the lord.

"We just pull the worms out of teeth and we just cure eyes. We just set bones, your lordship," they replied.

"Very well, please cure my teeth. They really ache, every day. It's insufferable! I get no sleep because of them—and my eyes. They just shot me, those two tricksters! Ever since it started I haven't eaten because of it. Therefore take pity on me! Perhaps it's because my teeth are loose now."

"Very well, your lordship. It's a worm, gnawing at the bone. It's merely a matter of putting in a replacement and taking the teeth out, sir."

"But perhaps it's not good for my teeth to come out—since I am, after all, a lord. My finery is in my teeth—and my eyes."

"But then we'll put in a replacement. Ground bone will be put back in." And this is the "ground bone": it's only white corn.

"Very well. Yank them out! Give me some help here!" he replied.

And when the teeth of Seven Macaw came out, it was only white corn that went in as a replacement for his teeth—just a coating shining white, that corn in his mouth. His face fell at once, he no longer looked like a lord. The last of his teeth came out, the jewels that had stood out blue from his mouth.

And when the eyes of Seven Macaw were cured, he was plucked around the eyes, the last of his metal came off. Still he felt no pain; he just looked on while the last of his greatness left him. It was just as Hunahpu and Xbalanque had intended.

And when Seven Macaw died, Hunahpu got back his arm. And Chimalmat, the wife of Seven Macaw, also died.

Such was the loss of the riches of Seven Macaw: only the doctors got the jewels and gems that had made him arrogant, here on the face of the earth. The genius of the grandmother, the genius of the grandfather did its work when they took back their arm: it was implanted and the break got well again. Just as they had wished the death of Seven Macaw, so they brought it about. They had seen evil in his self-magnification.

After this the two boys went on again. What they did was simply the word of the Heart of Sky.

AND HERE ARE THE DEEDS OF ZIPACNA, the first son of Seven Macaw.

"I am the maker of mountains," says Zipacna.

And this is Zipacna, bathing on the shore. Then the Four Hundred Boys passed by dragging a log, a post for their hut. The Four Hundred Boys were walking along, having cut a great tree for the lintel of their hut.

And then Zipacna went there, he arrived where the Four Hundred Boys were:

"What are you doing, boys?"

THIS IS ZIPACNA, BATHING ON THE SHORE: *With bands of sky above and water below, this lowland version of Zipacna takes the form of a caiman. From a Classic Maya vase.*

DRAWING BY KARL TAUBE

"It's just this log. We can't lift it up to carry it."

"I'll carry it. Where does it go? What do you intend to use it for?"

"It's just a lintel for our hut."

"Very well," he replied.

And then he pulled it, or rather carried it, right on up to the entrance of the hut of the Four Hundred Boys.

"You could just stay with us, boy. Do you have a mother and father?"

"Not so," he replied.

"We'd like some help tomorrow in cutting another one of our logs, a post for our hut."

"Good," he replied.

After that the Four Hundred Boys shared their thoughts:

"About this boy: what should we do with him?"

"We should kill him, because what he does is no good. He lifted that log all by himself. Let's dig a big hole for him, and then we'll throw him down in the hole. We'll say to him:

'Why are you spilling dirt in the hole?' And when he's wedged down in the hole we'll wham a big log down behind him. Then he should die in the hole," said the Four Hundred Boys.

And when they had dug a hole, one that went deep, they called for Zipacna:

"We're asking you to please go on digging out the dirt. We can't go on," he was told.

"Very well," he replied.

After that he went down in the hole.

"Call out when enough dirt has been dug, when you're getting down deep," he was told.

"Yes," he replied, then he began digging the hole. But the only hole he dug was for his own salvation. He realized that he was to be killed, so he dug a separate hole to one side, he dug a second hole for safety.

"How far is it?" the Four Hundred Boys called down to him.

"I'm digging fast. When I call up to you, the digging will be finished," said Zipacna, from down in the hole. But he's not digging at the bottom of the hole, in his own grave; rather, the hole he's digging is for his own salvation.

After that, when Zipacna called out, he had gone to safety in his own hole. Then he called out:

"Come here, take the dirt, the fill from the hole. It's been dug. I've really gone down deep! Can't you hear my call? As for your call, it just echoes down here, it sounds to me as if you were on another level, or

two levels away," said Zipacna from his hole. He's hidden in there, he calls out from down in the hole.

Meanwhile, a big log is being dragged along by the boys.

And then they threw the log down in the hole.

"Isn't he there? He doesn't speak."

"Let's keep on listening. He should cry out when he dies," they said among themselves. They're just whispering, and they've hidden themselves, each one of them, after throwing down the log.

And then he did speak, now he gave a single cry. He called out when the log fell to the bottom.

"Right on! He's been finished!"

"Very good! We've done him in, he's dead."

"What if he had gone on with his deeds, his works? He would've made himself first among us and taken our place—we, the Four Hundred Boys!" they said. Now they enjoyed themselves:

"On to the making of our sweet drink! Three days will pass, and after three days let's drink to dedicate our hut—we, the Four Hundred Boys!" they said. "And tomorrow we'll see, and on the day after tomorrow we'll see whether or not ants come from the ground when he's stinking and rotting. After that our hearts will be content when we drink our sweet drink," they said. But Zipacna was listening from the hole when the boys specified "the day after tomorrow."

And on the second day, when the ants collected, they were running, swarming. Having taken their pickings under the log, they were everywhere, carrying hair in their mouths and carrying the nails of Zipacna. When the boys saw this:

"He's finished, that trickster! Look here how the ants have stripped him, how they've swarmed. Everywhere they carry hair in their mouths. It's his nails you can see. We've done it!" they said among themselves.

But this Zipacna is still alive. He just cuts the hair off his head and chews off his nails to give them to the ants.

And so the Four Hundred Boys thought he had died.

After that, their sweet drink was ready on the third day, and then all the boys got drunk, and once they were drunk, all four hundred of those boys, they weren't feeling a thing.

After that the hut was brought down on top of them by Zipacna. All of them were completely flattened. Not even one or two were saved from among all the Four Hundred Boys. They were killed by Zipacna, the son of Seven Macaw.

Such was the death of those Four Hundred Boys. And it used to be

said that they entered a constellation, named Hundrath after them, though perhaps this is just a play on words.

And this is where we shall explain the defeat of Zipacna by the two boys, Hunahpu and Xbalanque.

NOW THIS IS THE DEFEAT AND DEATH OF ZIPACNA, when he was beaten by the two boys, Hunahpu and Xbalanque.

What now weighed heavily on the hearts of the two boys was that the Four Hundred Boys had been killed by Zipacna.

It's mere fish and crabs that Zipacna looks for in the waters, but he's eating every day, going around looking for his food by day and lifting up mountains by night.

Next comes the counterfeiting of a great crab by Hunahpu and Xbalanque.

And they used bromeliad flowers, picked from the bromeliads of the forests. These became the forearms of the crab, and where they opened were the claws. They used a flagstone for the back of the crab, which clattered.

After that they put the shell beneath an overhang, at the foot of a great mountain. Meauan is the name of the mountain where the defeat took place.

After that, when the boys came along, they found Zipacna by the water:

"Where are you going, boy?" Zipacna was asked.

"I'm not going anywhere. I'm just looking for my food, boys," Zipacna replied.

"What's your food?"

"Just fish and crabs, but there aren't any that I can find. It's been two days since I stopped getting meals. By now I can't stand the hunger," Zipacna told Hunahpu and Xbalanque.

"There is that crab that's down in the canyon. A really big crab! Perhaps you might manage to eat her. We were just getting bitten. We wanted to catch her, but we got scared by her. If she hasn't gone away you could catch her," said Hunahpu and Xbalanque.

"Take pity on me, please come point her out, boys," said Zipacna.

"We don't want to, but you go ahead. You can't miss her. Just follow the river, and you go straight on over there below a great mountain. She's clattering there at the bottom of the canyon. Just head on over there," said Hunahpu and Xbalanque.

"But won't you please take pity on me? What if she can't be found, boys? If you come along I'll show you a place where there are plenty of birds. Please come shoot them, I know where they are," Zipacna replied. They consented. He went ahead of the boys.

"What if you can't catch the crab? Just as we had to turn back, so will you. Not only didn't we eat her, but all at once *she* was biting *us*. We were entering face down, but when she got scared we were entering on our back. We just barely missed reaching her then, so you'd better enter on your back," he was told.

"Very well," Zipacna replied, and then they went on. Now Zipacna had company as he went. They arrived at the bottom of the canyon.

The crab is on her side, her shell is gleaming red there. In under the canyon wall is their contrivance.

"Very good!" Zipacna is happy now. He wishes she were already in his mouth, so she could really cure his hunger. He wanted to eat her, he just wanted it face down, he wanted to enter, but since the crab got on top of him with her back down, he came back out.

"You didn't reach her?" he was asked.

"No indeed—she was just getting on top with her back down. I just barely missed her on the first try, so perhaps I'd better enter on my back," he replied.

After that he entered again, on his back. He entered all the way—only his kneecaps were showing now! He gave a last sigh and was calm. The great mountain rested on his chest. He couldn't turn over now, and so Zipacna turned to stone.

Such, in its turn, was the defeat of Zipacna by the two boys, Hunahpu and Xbalanque. He was "the maker of mountains," as his previous pronouncements had it, the first son of Seven Macaw. He was defeated beneath the great mountain called Meauan, defeated by genius alone. He was the second to magnify himself, and now we shall speak what is spoken of another.

AND THE THIRD TO MAGNIFY HIMSELF IS THE SECOND SON OF SEVEN MACAW, NAMED EARTHQUAKE.

"I am the breaker of mountains," he said. But even so, Hunahpu and Xbalanque defeated the Earthquake. Then Hurricane spoke, Newborn Thunderbolt, Sudden Thunderbolt; he spoke to Hunahpu and Xbalanque:

"The second son of Seven Macaw is another one, another who should

be defeated. This is my word, because what they do on the face of the earth is no good. They are surpassing the sun in size, in weight, and it should not be that way. Lure this Earthquake into sitting down over there in the east," Hurricane told the two boys.

"Very well, your lordship. There is more to be done. What we see is no good. Isn't it a question of your position and your eminence, sir, Heart of Sky?" the two boys said when they responded to the word of Hurricane.

Meanwhile he presses on, this Earthquake, breaker of mountains. Just by lightly tapping his foot on the ground he instantly demolishes the mountains, great and small. When he met up with the two boys:

"Where are you going, boy?" they asked Earthquake.

"I'm not going anywhere. I just scatter the mountains, and I'm the one who breaks them, in the course of the days, in the course of the light," he said when he answered. Then the Earthquake asked Hunahpu and Xbalanque:

"Where did you come from? I don't know your faces. What are your names?" said Earthquake.

"We have no names. We just hunt and trap in the mountains. We're just orphans, we have nothing to call our own, boy. We're just making our way among the mountains, small and great, boy. And there's one great mountain we saw that's just growing right along. It's rising really high! It's just swelling up, rising above all the other mountains. And there weren't even one or two birds to be found, boy. So how could it be that you destroy all mountains, boy?" Hunahpu and Xbalanque said to Earthquake.

"It can't be true you saw the mountain you're talking about. Where is it? You'll see me knock it down yet. Where did you see it?"

"Well, it's over there in the east," said Hunahpu and Xbalanque.

"Good. Lead the way," the two boys were told.

"Not so. You take the middle. Stay here between us—one of us at your left, the other at your right hand—because of our blowguns. If there are birds, we'll shoot," they said. They enjoy practicing their shooting.

And this is the way they shoot: the shot of their blowguns isn't made of earth—they just blow at the birds when they shoot, to the amazement of the Earthquake.

And then the boys made fire with a drill and roasted the birds over the fire. And they coated one of the birds with plaster, they put gypsum on it.

"So this is the one we'll give him when he's hungry, and when he

THE BOYS MADE FIRE
WITH A DRILL: Two

savors the aroma of our birds. That will be victory, since we've covered his bird with baked earth. In earth we must cook it, and in earth must be his grave—if the great knower, the one to be made and modeled, is to have a sowing and dawning," said the boys.

"Because of this, the human heart will desire a bite of meat, a meal of flesh, just as the heart of the Earthquake will desire it," Hunahpu and Xbalanque said to each other. Then they roasted the birds and cooked them until they were brown, dripping with fat that oozed from the backs of the birds, with an overwhelmingly fragrant aroma.

And this Earthquake wants to be fed, his mouth just waters, he gulps and slurps with spittle and saliva because of the fragrance of the birds. So then he asked:

"What are you eating? I smell a truly delicious aroma! Please give me a little bit," he said. And when they gave a bird to Earthquake, he was as good as defeated.

After he had finished off the bird, they went on until they arrived in the east, where the great mountain was.

Meanwhile, Earthquake had lost the strength in his legs and arms. He couldn't go on because of the earth that coated the bird he'd eaten. So now there was nothing he could do to the mountain. He never recovered; he was destroyed. So then he was bound by the two boys; his hands were bound behind him. When his hands had been secured by the boys, his ankles were bound to his wrists.

After that they threw him down, they buried him in the earth.

Such is the defeat of Earthquake. It's Hunahpu and Xbalanque yet again. Their deeds on the face of the earth are countless.

And now we shall explain the birth of Hunahpu and Xbalanque, having first explained the defeat of Seven Macaw, along with Zipacna and Earthquake, here on the face of the earth.

PART THREE

AND NOW WE SHALL NAME THE NAME OF THE FATHER OF HUN-AHPU AND XBALANQUE. Let's drink to him, and let's just drink to the telling and accounting of the begetting of Hunahpu and Xbalanque. We shall tell just half of it, just a part of the account of their father. Here follows the account.

These are the names: One Hunahpu and Seven Hunahpu, as they are called.

And these are their parents: Xpiyacoc, Xmucane. In the blackness, in the night, One Hunahpu and Seven Hunahpu were born to Xpiyacoc and Xmucane.

And this One Hunahpu had two children, and the two were sons, the firstborn named One Monkey and the second named One Artisan.

And this is the name of their mother: she is called Egret Woman, the wife of One Hunahpu. As for Seven Hunahpu, he has no wife. He's just a partner and just secondary; he just remains a boy.

They are great thinkers and great is their knowledge. They are the midmost seers, here on the face of the earth. There is only good in their being and their birthright. They taught skills to One Monkey and One Artisan, the sons of One Hunahpu. One Monkey and One Artisan became flautists, singers, and writers; carvers, jewellers, metalworkers as well.

And as for One and Seven Hunahpu, all they did was throw dice and play ball, every day. They would play each other in pairs, the four of them together. When they gathered in the ball court for entertainment a falcon would come to watch them, the messenger of Hurricane, Newborn Thunderbolt, Sudden Thunderbolt. And for this falcon it wasn't far to the earth here, nor was it far to Xibalba; he could get back to the sky, to Hurricane, in an instant.

The four ballplayers remained here on the face of the earth after the mother of One Monkey and One Artisan had died. Since it was on the road to Xibalba that they played, they were heard by One Death and Seven Death, the lords of Xibalba:

"What's happening on the face of the earth? They're just stomping and shouting. They should be summoned to come play ball here. We'll defeat them, since we simply get no deference from them. They show no respect, nor do they have any shame. They're really determined to run right over us!" said all of Xibalba, when they all shared their thoughts, the ones named One and Seven Death. They are great lawgivers.

AND THESE ARE THE LORDS OVER EVERYTHING, each lord with a commission and a domain assigned by One and Seven Death:

There are the lords named Scab Stripper and Blood Gatherer. And this is their commission: to draw blood from people.

Next are the lordships of Demon of Pus and Demon of Jaundice. And this is their domain: to make people swell up, to make pus come out of their legs, to make their faces yellow, to cause jaundice, as it is called. Such is the domain of Demon of Pus and Demon of Jaundice.

Next are the lords Bone Scepter and Skull Scepter, the staff bearers of Xibalba; their staffs are just bones. And this is their staff-bearing: to reduce people to bones, right down to the bones and skulls, until they die from emaciation and edema. This is the commission of the ones named Bone Scepter and Skull Scepter.

Next are the lords named Demon of Filth and Demon of Woe. This is their commission: just to give people a sudden fright whenever they have filth or grime in the doorway of the house, the patio of the house. Then they're struck, they're just punctured till they crawl on the ground, then die. And this is the domain of Demon of Filth and Demon of Woe, as they are called.

Next are the lords named Wing and Packstrap. This is their domain: that people should die in the road, just "sudden death," as it is called. Blood comes to the mouth, then there is death from vomiting blood. So to each of them his burden, the load on his shoulders: just to strike people on the neck and chest. Then there is death in the road, and then

PEOPLE SHOULD DIE IN THE ROAD: A Xibalban (right) stabs a merchant god (left) on a road (indicated by the footprints). From the Madrid Codex.

DRAWING BY KARL TAUBE

they just go on causing suffering, whether one is coming or going. And this is the domain of Wing and Packstrap.

Such are those who shared their thoughts when they were piqued and driven by One and Seven Hunahpu. What Xibalba desired was the gaming equipment of One and Seven Hunahpu: their kilts, their yokes, their arm guards, their panaches and headbands, the costumes of One and Seven Hunahpu.

And this is where we shall continue telling of their trip to Xibalba. One Monkey and One Artisan, the sons of One Hunahpu, stayed behind. Their mother died—and, what is more, they were to be defeated by Hunahpu and Xbalanque.

AND NOW FOR THE MESSENGERS OF ONE AND SEVEN DEATH:

"You're going, you Military Keepers of the Mat, to summon One and Seven Hunahpu. You'll tell them, when you arrive:

"They must come," the lords say to you. "Would that they might come to play ball with us here. Then we could have some excitement with them. We are truly amazed at them. Therefore they should come," say the lords, "and they should bring their playthings, their yokes and arm guards should come, along with their rubber ball," say the lords, you will say when you arrive," the messengers were told.

THESE MESSENGERS OF THEIRS ARE OWLS:
The great horned owl appears as a bird of omen in lowland Maya art, serving as the messenger of the merchant lord of Xibalba.
From the Dresden Codex.

DRAWING BY KARL TAUBE

And these messengers of theirs are owls: Shooting Owl, One-legged Owl, Macaw Owl, Skull Owl, as the messengers of Xibalba are called.

There is Shooting Owl, like a point, just piercing.

And there is One-legged Owl, with just one leg; he has wings.

And there is Macaw Owl, with a red back; he has wings.

And there is also Skull Owl, with only a head alone; he has no legs, but he does have wings.

There are four messengers, Military Keepers of the Mat in rank.

And when they came out of Xibalba they arrived quickly, alighting above the ball court where One and Seven Hunahpu were playing, at the ball court called Great Hollow with Fish in the Ashes. The owls, arriving in a flurry over the ball court, now repeated their words, reciting the exact words of One Death, Seven Death, Demon of Pus, Demon of Jaundice, Bone Scepter, Skull Scepter, Scab Stripper, Blood Gatherer, Demon of Filth, Demon of Woe, Wing, Packstrap, as all the lords are named. Their words were repeated by the owls.

"Don't the lords One and Seven Death speak truly?"

"Truly indeed," the owls replied. "We'll accompany you.

'They're to bring along all their gaming equipment,' say the lords."

"Very well, but wait for us while we notify our mother," they replied.

And when they went to their house, they spoke to their mother; their father had died:

"We're going, our dear mother, even though we've just arrived. The messengers of the lord have come to get us:

"They should come," he says,' they say, giving us orders. We'll leave our rubber ball behind here," they said, then they went to tie it up under the roof of the house. "Until we return—then we'll put it in play again."

They told One Monkey and One Artisan:

"As for you, just play and just sing, write and carve to warm our house and to warm the heart of your grandmother." When they had been given their instructions, their grandmother Xmucane sobbed, she had to weep.

"We're going, we're not dying. Don't be sad," said One and Seven Hunahpu, then they left.

AFTER THAT ONE AND SEVEN HUNAHPU LEFT, guided down the road by the messengers.

And then they descended the road to Xibalba, going down over the edge of a steep slope, and they descended until they came to the mouth where the canyons change, the ones named Rustling Canyon, Gurgling Canyon.

They passed through there, then they passed through Scorpion Rapids. They passed through countless scorpions but they were not stung.

And then they came to water again, to blood: Blood River. They crossed but did not drink. They came to a river, but a river filled with pus. Still they were not defeated, but passed through again.

And then they came to the Crossroads, but here they were defeated, at the Crossroads:

Red Road was one and Black Road another.

White Road was one and Yellow Road another.

There were four roads, and Black Road spoke:

"I am the one you are taking. I am the lord's road," said the road. And they were defeated there: this was the Road of Xibalba.

And then they came to the council place of the lords of Xibalba, and they were defeated again there. The ones seated first there are just manikins, just woodcarvings dressed up by Xibalba. And they greeted the first ones:

"Morning, One Death," they said to the manikin. "Morning, Seven Death," they said to the woodcarving in turn.

So they did not win out, and the lords of Xibalba shouted out with laughter over this. All the lords just shouted with laughter because they had triumphed; in their hearts they had beaten One and Seven Hunahpu. They laughed on until One and Seven Death spoke:

"It's good that you've come. Tomorrow you must put your yokes and arm guards into action," they were told.

"Sit here on our bench," they were told, but the only bench they were offered was a burning-hot rock.

THE LORDS OF XIBALBA SHOUTED OUT WITH LAUGHTER: *This lowland Maya death lord, whose skull and joints have no flesh on them, sits on a throne made of bones. From the Dresden Codex.*

DRAWING BY CARLOS A. VILLACORTA

So now they were burned on the bench; they really jumped around on the bench now, but they got no relief. They really got up fast, having burned their butts. At this the Xibalbans laughed again, they began to shriek with laughter, the laughter rose up like a serpent in their very cores, all the lords of Xibalba laughed themselves down to their blood and bones.

"Just go in the house. Your torch and cigars will be brought to your sleeping quarters," the boys were told.

After that they came to the Dark House, a house with darkness alone inside. Meanwhile the Xibalbans shared their thoughts:

"Let's just sacrifice them tomorrow. It can only turn out to be quick; they'll die quickly because of our playing equipment, our gaming things," the Xibalbans are saying among themselves.

This ball of theirs is just a spherical knife. White Dagger is the name of the ball, the ball of Xibalba. Their ball is just ground down to make it smooth; the ball of Xibalba is just surfaced with crushed bone to make it firm.

AND ONE AND SEVEN HUNAHPU WENT INSIDE DARK HOUSE.

And then their torch was brought, only one torch, already lit, sent by One and Seven Death, along with a cigar for each of them, also already lit, sent by the lords. When these were brought to One and Seven Hunahpu they were cowering, here in the dark. When the bearer of their torch and cigars arrived, the torch was bright as it entered; their torch and both of their cigars were burning. The bearer spoke:

"They must be sure to return them in the morning—not finished,

A CIGAR: A lowland Maya god producing a shower of sparks with a cigar. From the Dresden Codex.

DRAWING BY CARLOS A. VILLACORTA

but just as they look now. They must return them intact,' the lords say to you," they were told, and they were defeated. They finished the torch and they finished the cigars that had been brought to them.

And Xibalba is packed with tests, heaps and piles of tests.

This is the first one: the Dark House, with darkness alone inside.

And the second is named Rattling House, heavy with cold inside, whistling with drafts, clattering with hail. A deep chill comes inside here.

And the third is named Jaguar House, with jaguars alone inside, jostling one another, crowding together, with gnashing teeth. They're scratching around; these jaguars are shut inside the house.

Bat House is the name of the fourth test, with bats alone inside the house, squeaking, shrieking, darting through the house. The bats are shut inside; they can't get out.

And the fifth is named Razor House, with blades alone inside. The blades are moving back and forth, ripping, slashing through the house.

These are the first tests of Xibalba, but One and Seven Hunahpu never entered into them, except for the one named earlier, the specified test house.

And when One and Seven Hunahpu went back before One and Seven Death, they were asked:

"Where are my cigars? What of my torch? They were brought to you last night!"

"We finished them, your lordship."

"Very well. This very day, your day is finished, you will die, you will disappear, and we shall break you off. Here you will hide your faces: you are to be sacrificed!" said One and Seven Death.

And then they were sacrificed and buried. They were buried at the Place of Ball Game Sacrifice, as it is called. The head of One Hunahpu was cut off; only his body was buried with his younger brother.

"Put his head in the fork of the tree that stands by the road," said One and Seven Death.

And when his head was put in the fork of the tree, the tree bore fruit. It would not have had any fruit, had not the head of One Hunahpu been put in the fork of the tree.

This is the calabash, as we call it today, or "the skull of One Hunahpu," as it is said.

And then One and Seven Death were amazed at the fruit of the tree. The fruit grows out everywhere, and it isn't clear where the head of One Hunahpu is; now it looks just the way the calabashes look. All the Xibalbans see this, when they come to look.

The state of the tree loomed large in their thoughts, because it came

about at the same time the head of One Hunahpu was put in the fork. The Xibalbans said among themselves:

"No one is to pick the fruit, nor is anyone to go beneath the tree," they said. They restricted themselves; all of Xibalba held back.

It isn't clear which is the head of One Hunahpu; now it's exactly the same as the fruit of the tree. Calabash came to be its name, and much was said about it. A maiden heard about it, and here we shall tell of her arrival.

AND HERE IS THE ACCOUNT OF A MAIDEN, the daughter of a lord named Blood Gatherer.

And this is when a maiden heard of it, the daughter of a lord. Blood Gatherer is the name of her father, and Blood Moon is the name of the maiden.

And when he heard the account of the fruit of the tree, her father retold it. And she was amazed at the account:

"I'm not acquainted with that tree they talk about. 'Its fruit is truly sweet!' they say, I hear," she said.

Next, she went all alone and arrived where the tree stood. It stood at the Place of Ball Game Sacrifice:

"What? Well! What's the fruit of this tree? Shouldn't this tree bear something sweet? They shouldn't die, they shouldn't be wasted. Should I pick one?" said the maiden.

And then the bone spoke; it was here in the fork of the tree:

BLOOD MOON IS THE NAME OF THE MAIDEN: *The lowland Maya moon goddess sits on a platform that represents the sky, and receives an offering. Her lunar identity is revealed in part by the crescent-shaped object she wears tucked under her arm and curving up behind her back to touch her shoulder. From the Dresden Codex.*

DRAWING BY CARLOS A. VILLACORTA

"Why do you want a mere bone, a round thing in the branches of a tree?" said the head of One Hunahpu when it spoke to the maiden. "You don't want it," she was told.

"I do want it," said the maiden.

"Very well. Stretch out your right hand here, so I can see it," said the bone.

"Yes," said the maiden. She stretched out her right hand, up there in front of the bone.

And then the bone spit out its saliva, which landed squarely in the hand of the maiden.

And then she looked in her hand, she inspected it right away, but the bone's saliva wasn't in her hand.

"It is just a sign I have given you, my saliva, my spittle. This, my head, has nothing on it—just bone, nothing of meat. It's just the same with the head of a great lord: it's just the flesh that makes his face look good. And when he dies, people get frightened by his bones. After that, his son is like his saliva, his spittle, in his being, whether it be the son of a lord or the son of a craftsman, an orator. The father does not disappear, but goes on being fulfilled. Neither dimmed nor destroyed is the face of a lord, a warrior, craftsman, orator. Rather, he will leave his daughters and sons. So it is that I have done likewise through you. Now go up there on the face of the earth; you will not die. Keep the word. So be it," said the head of One and Seven Hunahpu—they were of one mind when they did it.

This was the word Hurricane, Newborn Thunderbolt, Sudden Thunderbolt had given them. In the same way, by the time the maiden returned to her home, she had been given many instructions. Right away something was generated in her belly, from the saliva alone, and this was the generation of Hunahpu and Xbalanque.

And when the maiden got home and six months had passed, she was found out by her father. Blood Gatherer is the name of her father.

AND AFTER THE MAIDEN WAS NOTICED BY HER FATHER, when he saw that she was now with child, all the lords then shared their thoughts—One and Seven Death, along with Blood Gatherer:

"This daughter of mine is with child, lords. It's just a bastard," Blood Gatherer said when he joined the lords.

"Very well. Get her to open her mouth. If she doesn't tell, then sacrifice her. Go far away and sacrifice her."

TAKE HER AWAY FOR SACRIFICE: *The merchant lord of the underworld (the lowland Maya equivalent of Blood Gatherer) sends away the moon goddess. Sitting on his hat is his owl messenger. From the Dresden Codex.*

DRAWING BY CARLOS A. VILLACORTA

"Very well, your lordships," he replied. After that, he questioned his daughter:

"Who is responsible for the child in your belly, my daughter?" he said.

"There is no child, my father, sir; there is no man whose face I've known," she replied.

"Very well. It really is a bastard you carry! Take her away for sacrifice, you Military Keepers of the Mat. Bring back her heart in a bowl, so the lords can take it in their hands this very day," the owls were told, the four of them.

Then they left, carrying the bowl. When they left they took the maiden by the hand, bringing along the White Dagger, the instrument of sacrifice.

"It would not turn out well if you sacrificed me, messengers, because it is not a bastard that's in my belly. What's in my belly generated all by itself when I went to marvel at the head of One Hunahpu, which is there at the Place of Ball Game Sacrifice. So please stop: don't do your sacrifice, messengers," said the maiden. Then they talked:

"What are we going to use in place of her heart? We were told by her father:

'Bring back her heart. The lords will take it in their hands, they will satisfy themselves, they will make themselves familiar with its composition. Hurry, bring it back in a bowl, put her heart in the bowl.' Isn't that what we've been told? What shall we deliver in the bowl? What we want above all is that you should not die," said the messengers.

"Very well. My heart must not be theirs, nor will your homes be here. Nor will you simply force people to die, but hereafter, what will be truly yours will be the true bearers of bastards. And hereafter, as for One and

Seven Death, only blood, only nodules of sap, will be theirs. So be it that these things are presented before them, and not that hearts are burned before them. So be it: use the fruit of a tree," said the maiden. And it was red tree sap she went out to gather in the bowl.

After it congealed, the substitute for her heart became round. When the sap of the croton tree was tapped, tree sap like blood, it became the substitute for her blood. When she rolled the blood around inside there, the sap of the croton tree, it formed a surface like blood, glistening red now, round inside the bowl. When the tree was cut open by the maiden, the so-called cochineal croton, the sap is what she called blood, and so there is talk of "nodules of blood."

"So you have been blessed with the face of the earth. It shall be yours," she told the owls.

"Very well, maiden. We'll show you the way up there. You just walk on ahead; we have yet to deliver this apparent duplicate of your heart before the lords," said the messengers.

And when they came before the lords, they were all watching closely:

"Hasn't it turned out well?" said One Death.

"It has turned out well, your lordships, and this is her heart. It's in the bowl."

"Very well. So I'll look," said One Death, and when he lifted it up with his fingers, its surface was soaked with gore, its surface glistened red with blood.

"Good. Stir up the fire, put it over the fire," said One Death.

After that they dried it over the fire, and the Xibalbans savored the aroma. They all ended up standing here, they leaned over it intently. They found the smoke of the blood to be truly sweet!

THE OWLS WENT TO SHOW THE MAIDEN THE WAY OUT: *Flying above the moon goddess (and thus appearing above the earth ahead of her) is the owl messenger of the merchant god of the underworld. From the Dresden Codex.*

DRAWING BY CARLOS A. VILLACORTA

And while they stayed at their cooking, the owls went to show the maiden the way out. They sent her up through a hole onto the earth, and then the guides returned below.

In this way the lords of Xibalba were defeated by a maiden; all of them were blinded.

And here, where the mother of One Monkey and One Artisan lived, was where the woman named Blood Moon arrived.

AND WHEN BLOOD MOON CAME TO THE MOTHER OF ONE MONKEY AND ONE ARTISAN, her children were still in her belly, but it wasn't very long before the birth of Hunahpu and Xbalanque, as they are called.

And when the woman came to the grandmother, the woman said to the grandmother:

"I've come, my lady. I'm your daughter-in-law and I'm your child, my lady," she said when she came here to the grandmother.

"Where do you come from? As for my little babies, didn't they die in Xibalba? And these two remain as their sign and their word: One Monkey and One Artisan are their names. So if you've come to see my children, get out of here!" the maiden was told by the grandmother.

"Even so, I really am your daughter-in-law. I am already his, I belong to One Hunahpu. What I carry is his. One Hunahpu and Seven Hunahpu are alive, they are not dead. They have merely made a way for the light to show itself, my mother-in-law, as you will see when you look at the faces of what I carry," the grandmother was told.

And One Monkey and One Artisan have been keeping their grandmother entertained: all they do is play and sing, all they work at is writing and carving, every day, and this cheers the heart of their grandmother.

And then the grandmother said:

"I don't want you, no thanks, my daughter-in-law. It's just a bastard in your belly, you trickster! These children of mine who are named by you are dead," said the grandmother.

"Truly, what I say to you is so!"

"Very well, my daughter-in-law, I hear you. So get going, get their food so they can eat. Go pick a big netful of ripe corn ears, then come back—since you are already my daughter-in-law, as I understand it," the maiden was told.

"Very well," she replied.

After that, she went to the garden; One Monkey and One Artisan had a garden. The maiden followed the path they had cleared and arrived

ALL THEY WORK AT IS WRITING: Two monkey scribes sit on either side of a thick screen-fold book, discussing a page they have opened. The scribe on the left holds a writing instrument in his hand. From a Late Classic Maya vase.

DRAWING BY STEPHEN D. HOUSTON

there in the garden, but there was only one clump, there was no other plant, no second or third. That one clump had borne its ears. So then the maiden's heart stopped:

"It looks like I'm a sinner, a debtor! Where will I get the netful of food she asked for?" she said. And then the guardians of food were called upon by her:

"Come on out, rise up now, come on out, stand up now:
Thunder Woman, Yellow Woman,
Cacao Woman and Cornmeal Woman,
thou guardian of the food of One Monkey, One Artisan,"

said the maiden.

And then she took hold of the silk, the bunch of silk at the top of the ear. She pulled it straight out, she didn't pick the ear, and the ear reproduced itself to make food for the net. It filled the big net.

And then the maiden came back, but animals carried her net. When she got back she went to put the pack frame in the corner of the house, so it would look to the grandmother as if she had arrived with a load.

And then, when the grandmother saw the food, a big netful:

"Where did that food of yours come from? You've leveled the place! I'm going to see if you've brought back our whole garden!" said the grandmother.

And then she went off, she went to look at the garden, but the one clump was still there, and the place where the net had been put at the foot of it was still obvious.

And the grandmother came back in a hurry, and she got back home, and she said to the maiden:

"The sign is still there. You really are my daughter-in-law! I'll have to keep watching what you do. These grandchildren of mine are already showing genius," the maiden was told.

Now this is where we shall speak of the birth of Hunahpu and Xbalanque.

AND THIS IS THEIR BIRTH; WE SHALL TELL OF IT HERE.

Then it came to the day of their birth, and the maiden named Blood Moon gave birth. The grandmother was not present when they were born; they were born suddenly. Two of them were born, named Hunahpu and Xbalanque. They were born in the mountains, and then they came into the house. Since they weren't sleeping:

"Throw them out of here! They're really loudmouths!" said the grandmother.

After that, when they put them on an anthill, they slept soundly there. And when they removed them from there, they put them in brambles next.

And this is what One Monkey and One Artisan wanted: that they should die on the anthill and die in the brambles. One Monkey and One Artisan wanted this because they were rowdy and flushed with jealousy. They didn't allow their younger brothers in the house at first, as if they didn't even know them, but even so they flourished in the mountains.

And One Monkey and One Artisan were great flautists and singers, and as they grew up they went through great suffering and pain. It had cost them suffering to become great knowers. Through it all they became flautists, singers, and writers, carvers. They did everything well. They simply knew it when they were born, they simply had genius. And they were the successors of their fathers who had gone to Xibalba, their dead fathers.

Since One Monkey and One Artisan were great knowers, in their hearts they already realized everything when their younger brothers

came into being, but they didn't reveal their insight because of their jealousy. The anger in their hearts came down on their own heads; no great harm was done. They were decoyed by Hunahpu and Xbalanque, who merely went out shooting every day. These two got no love from the grandmother, or from One Monkey and One Artisan. They weren't given their meals; the meals had been prepared and One Monkey and One Artisan had already eaten them before they got there.

But Hunahpu and Xbalanque aren't turning red with anger; rather, they just let it go, even though they know their proper place, which they see as clear as day. So they bring birds when they arrive each day, and One Monkey and One Artisan eat them. Nothing whatsoever is given to Hunahpu and Xbalanque, either one of them. All One Monkey and One Artisan do is play and sing.

And then Hunahpu and Xbalanque arrived again, but now they came in here without bringing their birds, so the grandmother turned red:

"What's your reason for not bringing birds?" Hunahpu and Xbalanque were asked.

"There are some, our dear grandmother, but our birds just got hung up in a tree," they said, "and there's no way to get up the tree after them, our dear grandmother, and so we'd like our elder brothers to please go with us, to please go get the birds down," they said.

"Very well. We'll go with you at dawn," the elder brothers replied.

Now they had won, and they gathered their thoughts, the two of them, about the fall of One Monkey and One Artisan:

"We'll just turn their very being around with our words. So be it, since they have caused us great suffering. They wished that we might die and disappear—we, their younger brothers. Just as they wished us to be slaves here, so we shall defeat them there. We shall simply make a sign of it," they said to each other.

And then they went there beneath a tree, the kind named yellow tree, together with the elder brothers. When they got there they started shooting. There were countless birds up in the tree, chittering, and the elder brothers were amazed when they saw the birds. And not one of these birds fell down beneath the tree:

"Those birds of ours don't fall down; just go throw them down," they told their elder brothers.

"Very well," they replied.

And then they climbed up the tree, and the tree began to grow, its trunk got thicker.

After that, they wanted to get down, but now One Monkey and One

Artisan couldn't make it down from the tree. So they said, from up in the tree:

"How can we grab hold? You, our younger brothers, take pity on us! Now this tree looks frightening to us, dear younger brothers," they said from up in the tree. Then Hunahpu and Xbalanque told them:

"Undo your pants, tie them around your hips, with the long end trailing like a tail behind you, and then you'll be better able to move," they were told by their younger brothers.

"All right," they said.

And then they left the ends of their loincloths trailing, and all at once these became tails. Now they looked like mere monkeys.

After that they went along in the trees of the mountains, small and great. They went through the forests, now howling, now keeping quiet in the branches of trees.

Such was the defeat of One Monkey and One Artisan by Hunahpu and Xbalanque. They did it by means of their genius alone.

And when they got home they said, when they came to their grandmother and mother:

"Our dear grandmother, something has happened to our elder brothers. They've become simply shameless, they're like animals now," they said.

"If you've done something to your elder brothers, you've knocked me down and stood me on my head. Please don't do anything to your elder brothers, my dear grandchildren," the grandmother said to Hunahpu and Xbalanque. And they told their grandmother:

"Don't be sad, our dear grandmother. You will see the faces of our elder brothers again. They'll come, but this will be a test for you, our dear grandmother. Will you please not laugh while we test their destiny?" they said.

And then they began playing. They played "Hunahpu Monkey."

AND THEN THEY SANG, THEY PLAYED, THEY DRUMMED. When they took up their flutes and drums, their grandmother sat down with them, then they played, they sounded out the tune, the song that got its name then. "Hunahpu Monkey" is the name of the tune.

And then One Monkey and One Artisan came back, dancing when they arrived.

And then, when the grandmother looked, it was their ugly faces the grandmother saw. Then she laughed, the grandmother could not hold

right hand. From a Late
Classic Maya vase.

DRAWING BY KARL TAUBE

back her laughter, so they just left right away, out of her sight again, they went up and away in the forest.

"Why are you doing that, our dear grandmother? We'll only try four times; only three times are left. We'll call them with the flute, with song. Please hold back your laughter. We'll try again," said Hunahpu and Xbalanque.

Next they played again, then they came back, dancing again, they arrived again, in the middle of the patio of the house. As before, what they did was delightful; as before, they tempted their grandmother to laugh. Their grandmother laughed at them soon enough. The monkeys looked truly ridiculous, with the skinny little things below their bellies and their tails wiggling in front of their breasts. When they came back the grandmother had to laugh at them, and they went back into the mountains.

"Please, why are you doing that, our dear grandmother? Even so, we'll try it a third time now," said Hunahpu and Xbalanque.

Again they played, again they came dancing, but their grandmother held back her laughter. Then they climbed up here, cutting right across the building, with thin red lips, with faces blank, puckering their lips, wiping their mouths and faces, suddenly scratching themselves. And when the grandmother saw them again, the grandmother burst out laughing again, and again they went out of sight because of the grandmother's laughter.

SUDDENLY SCRATCHING

vase.*

DRAWING BY THE AUTHOR

"Even so, our dear grandmother, we'll get their attention."

So for the fourth time they called on the flute, but they didn't come back again. The fourth time they went straight into the forest. So they told their grandmother:

"Well, we've tried, our dear grandmother. They came at first, and we've tried calling them again. So don't be sad. We're here—we, your grandchildren. Just love our mother, dear grandmother. Our elder brothers will be remembered. So be it: they have lived here and they have been named; they are to be called One Monkey and One Artisan," said Hunahpu and Xbalanque.

So they were prayed to by the flautists and singers among the ancient people, and the writers and carvers prayed to them. In ancient times they turned into animals, they became monkeys, because they just magnified themselves, they abused their younger brothers. Just as they wished them to be slaves, so they themselves were brought low. One Monkey and One Artisan were lost then, they became animals, and this is now their place forever.

Even so, they were flautists and singers; they did great things while they lived with their grandmother and mother.

AND NOW THEY BEGAN TO ACT OUT THEIR SELF-REVELATION before their grandmother and mother. First they made a garden:

"We'll just do some gardening, our dear grandmother and mother," they said. "Don't worry. We're here, we're your grandchildren, we're the successors of our elder brothers," said Hunahpu and Xbalanque.

And then they took up their axe, their mattock, their hoe; each of them went off with a blowgun on his shoulder. They left the house having instructed their grandmother to give them their food:

"At midday bring our food, dear grandmother," they said.

"Very well, my dear grandchildren," said their grandmother.

After that, they went to their gardening. They simply stuck their mattock in the ground, and the mattock simply cultivated the ground.

And it wasn't only the mattock that cultivated, but also the axe. In the same way, they stuck it in the trunk of a tree; in the same way, it cut into the tree by itself, felling, scattering, felling all the trees and bushes, now leveling, mowing down the trees.

Just the one axe did it, and the mattock, breaking up thick masses, countless stalks and brambles. Just one mattock was doing it, breaking up countless things, just clearing off whole mountains, small and great.

And then they gave instructions to that creature named the mourning dove. They sat up on a big stump, and Hunahpu and Xbalanque said:

"Just watch for our grandmother, bringing our food. Cry out right away when she comes, and then we'll grab the mattock and axe."

"Very well," said the mourning dove.

This is because all they're doing is shooting; they're not really doing any gardening.

And as soon as the dove cries out they come running, one of them grabbing the mattock and the other grabbing the hoe, and they're tying up their hair.

One of them deliberately rubs dirt on his hands; he dirties his face as well, so he's just like a real gardener.

And as for the other one, he deliberately dumps wood chips on his head, so he's like a real woodcutter.

Once their grandmother has seen them they eat, but they aren't really doing their gardening; she brings their food for nothing. And when they get home:

"We're really ready for bed, our dear grandmother," they say when

they arrive. Deliberately they massage, they stretch their legs, their arms in front of their grandmother.

And when they went on the second day and arrived at the garden, it had all grown up high again. Every tree and bush, every stalk and bramble had put itself back together again when they arrived.

"Who's been picking us clean?" they said.

And these are the ones who are doing it, all the animals, small and great: puma, jaguar, deer, rabbit, fox, coyote, peccary, coati, small birds, great birds. They are the ones who did it; they did it in just one night.

After that, they started the garden all over again. Just as before, the ground worked itself, along with the woodcutting.

And then they shared their thoughts, there on the cleared and broken ground:

"We'll simply have to keep watch over our garden. Then, whatever may be happening here, we'll find out about it," they said when they shared their thoughts. And when they arrived at the house:

"How could we get picked clean, our dear grandmother? Our garden was tall thickets and groves all over again when we got there a while ago, our dear grandmother," they said to their grandmother and mother. "So we'll go keep watch, because what's happening to us is no good," they said.

After that, they wound everything up, and then they went back to the clearing.

And there they took cover, and when they were well hidden there, all the animals gathered together, each one sat on its haunches, all the animals, small and great.

And this was the middle of the night when they came. They all spoke when they came. This is what they said:

"Arise, conjoin, you trees!
Arise, conjoin, you bushes!"

they said. Then they made a great stir beneath the trees and bushes, then they came nearer, and then they showed their faces.

The first of these were the puma and jaguar. The boys tried to grab them, but they did not give themselves up. When the deer and rabbit came near they only got them by the tail, which just broke off: the deer left its tail in their hands. When they grabbed the tail of the deer, along with the tail of the rabbit, the tails were shortened. But the fox, coyote, and peccary, coati did not give themselves up. All the animals went by in front of Hunahpu and Xbalanque.

SO NOW THERE WAS FIRE IN THEIR HEARTS, because they didn't catch them. And one more came, the last one now, jumping as he came, then they cut him off. In their net they caught the rat.

And then they grabbed him and squeezed him behind the head. They tried to choke him; they burned his tail over a fire. Ever since the rat's tail got caught, there's been no hair on his tail, and his eyes have been the way they are since the boys tried to choke him, Hunahpu and Xbalanque.

"I will not die by your hand! Gardening is not your job, but there is something that is," said the rat.

"Where is what is ours? Go ahead and name it," the boys told the rat.

"Will you let me go then? My word is in my belly, and after I name it for you, you'll give me my morsel of food," said the rat.

"We'll give you your food, so name it," he was told.

"Very well. It's something that belonged to your fathers, named One Hunahpu and Seven Hunahpu, who died in Xibalba. What remains is their gaming equipment. They left it up under the roof of the house: their kilts, their wrist guards, their rubber ball. But your grandmother doesn't take these down in front of you, because this is how your fathers died."

"You know the truth, don't you!" the boys told the rat.

There was great joy in their hearts when they got word of the rubber ball. When the rat had named it they gave the rat his food, and this is his food: corn kernels, squash seeds, chili, beans, pataxte, cacao. These are his.

"If anything of yours is stored or gets wasted, then gnaw away," the rat was told by Hunahpu and Xbalanque.

"Very well, boys. But what will your grandmother say if she sees me?" he said.

"Don't be fainthearted. We're here. We know what our grandmother needs to be told. We'll set you up under the corner of the roof right away. When that's taken care of you'll go straight to where the things were left, and we'll look up there under the roof, but it's our stew we'll be looking at," they told the rat when they gave him his instructions.

Hunahpu and Xbalanque made their plans overnight and arrived right at noon, and it wasn't obvious that they had a rat with them when they arrived. One of them went right inside the house when he reached it, while the other went to the corner of the house, quickly setting up the rat. And then they asked their grandmother for their meal:

"Just grind something for our stew, we want chili sauce, our dear grandmother," they said.

After that, she ground chili for their stew. A bowl of broth was set out in front of them, but they were just fooling their grandmother and mother. They had emptied the water jar:

"We're really parched! Bring us a drink," they told their grandmother.

"Yes," she said, then she went, and they kept on eating. They weren't really hungry; they just put on false appearances.

And then they saw the rat reflected in their chili sauce: here was the rat loosening the ball that had been left in the peak of the roof. When they saw him in the chili sauce they sent a mosquito, that creature the mosquito, similar to a gnat. He went to the water, then he punctured the side of the grandmother's jar. The water just gushed out from the side of her jar. She tried, but she could not stop up the side of her jar.

"What has our grandmother done? We're choking for lack of water, our parched throats will do us in," they told their mother, then they sent her there.

After that, the rat cut the ball loose. It dropped from beneath the roof, along with the yokes, wrist guards, kilts. These were taken away then; they went to hide them on the road, the road to the ball court.

After that, they went to join their grandmother at the water, and their grandmother and mother were unable to stop up the side of the jar, either one of them.

After that, the boys arrived, each with his blowgun. When they arrived at the water:

"What have you done? We got weary at heart, so we came," they said.

"Look at the side of my jar! It cannot be stopped," said their grandmother, and they quickly stopped it up.

And they came back together, the two of them ahead of their grandmother.

In this way, the matter of the rubber ball was arranged.

HAPPY NOW, THEY WENT TO PLAY BALL AT THE COURT. So they played ball at a distance, all by themselves. They swept out the court of their fathers.

And then it came into the hearing of the lords of Xibalba:

"Who's begun a game again up there, over our heads? Don't they have any shame, stomping around this way? Didn't One and Seven Hunahpu

die trying to magnify themselves in front of us? So, you must deliver another summons," they said as before, One and Seven Death, all the lords.

"They are hereby summoned," they told their messengers. "You are to say, on reaching them:

"They must come," say the lords, "We would play ball with them here. In seven days we'll have a game," say the lords, 'you will say when you arrive,' the messengers were told.

And then they came along a wide roadway, the road to the house of the boys, which actually ended at their house, so that the messengers came directly to their grandmother. As for the boys, they were away playing ball when the messengers of Xibalba got there.

"Truly, they are to come," say the lords," said the messengers of Xibalba. So then and there the day was specified by the messengers of Xibalba:

"In seven days our game will take place," Xmucaane was told there.

"Very well. They'll go when the day comes, messengers," said the grandmother, and the messengers left. They went back.

So now the grandmother's heart was broken:

"How can I send for my grandchildren? Isn't it really Xibalba, just as it was when the messengers came long ago, when their fathers went to die?" said the grandmother, sobbing, at home by herself.

After that a louse came down where it could be seen, and then she picked it up and put it in her hand, and the louse moved around with fits and starts.

"My grandchild, perhaps you might like to take my message, to go where my grandchildren are, at the ball court," the louse was told when he went as a message bearer:

"A messenger has come to your grandmother,' you will say. 'You are to come:

'In seven days they are to come,' say the messengers of Xibalba," says your grandmother,' you will say," the louse was told.

Then he went off, and he went in fits and starts, and sitting in the road was a boy named Tamazul, the toad.

"Where are you going?" said the toad to the louse.

"My word is contained in my belly. I'm going to the two boys," said the louse to Tamazul.

"Very well. But I notice you're not very fast," the louse was told by the toad. "Wouldn't you like me to swallow you? You'll see, I'll run bent over this way, we'll arrive in a hurry."

TAMAZUL, THE TOAD: *Trailing down the back of this toad is a piece of skin he is shedding. From a Late Classic Maya vase.*

DRAWING BY KARL TAUBE

"Very well," said the louse to the toad.

After that, when he had been united with the toad, the toad hopped. He went along now, but he didn't run.

After that, the toad met a big snake named Zaquicaz:

"Where are you going, Tamazul boy?" the toad was asked next by Zaquicaz.

"I'm a messenger. My word is in my belly," the toad next said to the snake.

"But I notice you're not fast. Listen to me, I'll get there in a hurry," said the snake to the toad.

"Get going," he was told, so then the toad was next swallowed by Zaquicaz. When snakes get their food today they swallow toads.

So the snake was running as he went, then the snake was met from overhead by a laughing falcon, a large bird. The snake was swallowed up by the falcon, and then he arrived above the court. When hawks get their food, they eat snakes in the mountains.

And when the falcon arrived he alighted on the rim of the ball court. Hunahpu and Xbalanque were happy then, they were playing ball when the falcon arrived.

So then the falcon cried out:

"Wak-ko! Wak-ko!"

said the falcon as he cried.

"Who's crying out there? Come on! Our blowguns!" they said. And they shot the falcon, landing their blowgun shot right in his eye. Wob-

bling, he fell down and they went right there to grab him, then they asked him:

"What are you after?" they said to the falcon.

"My word is contained in my belly. But heal my eye first, then I'll name it," said the falcon.

"Very well," they said.

Next they took a bit of rubber off the surface of the ball, then they put it on the falcon's eye. "Blood of sacrifice" was their name for it. As soon as he was treated by them, the falcon's vision became good again.

"So name it," they said to the falcon, and then he vomited a big snake.

"Speak up," they said next to the snake.

"Yes," he said next, then he vomited the toad.

"What's your errand? Tell it," the toad was told next.

"My word is contained in my belly," the toad said next, and then he tried to throw up, but there was no vomit, he just sort of drooled. He was trying, but there was no vomit.

After that, he had to be kicked by the boys.

"You trickster!" he was told, then they kicked him in the rear, and they crushed the bones of his rear end with their feet. When he tried again, he just sort of spit.

And then they pried the toad's mouth open, it was opened by the boys. They searched his mouth, and the louse had simply stuck in the toad's teeth, it was right there in his mouth. He hadn't swallowed it, but had only seemed to swallow.

And such was the defeat of the toad. It's not clear what kind of food they gave him, and because he didn't run he became mere meat for snakes.

"Tell it," the louse was told next, so then he named his word:

"Boys, your grandmother says:

'Summon them. A message came for them:

"From Xibalba comes the messenger of One and Seven Death:

THEY PUT IT ON THE FALCON'S EYE:
The laughing falcon, alone among the hawks and falcons of Mesoamerica, has black feathers around the eye.

DRAWING BY THE AUTHOR

"In seven days they are to come here. We'll play ball. Their gaming equipment must come along: rubber ball, yokes, arm guards, kilts. This will make for some excitement here," say the lords,' is the word that came from them," ' says your grandmother. So your grandmother says you must come. Truly your grandmother cries, she calls out to you to come."

"Isn't it the truth!" the boys said in their thoughts. When they heard it they left at once and got to their grandmother, but they went there only to give their grandmother instructions:

"We're on our way, dear grandmother. We're just giving you instructions. So here is the sign of our word. We'll leave it with you. Each of us will plant an ear of green corn. We'll plant them in the center of our house. When the corn dries up, this will be a sign of our death:

'Perhaps they died,' you'll say, when it dries up. And when the sprouting comes:

'Perhaps they live,' you'll say, our dear grandmother and mother. From now on, this is the sign of our word. We're leaving it with you," they said, then they left.

Hunahpu planted one and Xbalanque planted another. They were planted right there in the house: neither in the mountains nor where the earth is damp, but where the earth is dry, in the middle of the inside of their house. They left them planted there, then went off, each with his own blowgun.

THEY WENT DOWN TO XIBALBA, quickly going down the face of a cliff, and they crossed through the change of canyons. They passed right through the birds—the ones called throng birds—and then they crossed Pus River and Blood River, intended as traps by Xibalba. They did not step in, but simply crossed over on their blowguns, and then they went on over to the Crossroads. But they knew about the roads of Xibalba: Black Road, White Road, Red Road, Green Road.

And there they summoned that creature named the mosquito. Having heard that he's a spy, they sent him ahead:

"Bite them one by one. First bite the first one seated there, then bite every last one of them, and it will be yours alone to suck the blood of people in the roads," the mosquito was told.

"Very well," replied the mosquito, then he took Black Road and stopped at the two manikins, or woodcarvings, that were seated first. They were all dressed up, and he bit the first of them. It didn't speak, so he bit again. When he bit the one seated second, again it didn't speak,

THAT CREATURE NAMED THE MOSQUITO: *In this drawing from a Late Classic Maya vase, the mosquito wears its weapon on the front of its headdress and dribbles blood from its anus.*

DRAWING BY KARL TAUBE

and then he bit the third one, the one seated third actually being One Death.

"Yeow!" each one said as he was bitten.

"What?" each one replied.

"Ouch!" said One Death.

"What is it, One Death?"

"Something's bitten me."

"It's—ouch! There's something that's bitten me," the one seated fourth said next.

"What is it, Seven Death?"

"Something's bitten me." The one seated fifth spoke next:

"Ow! Ow!" he said.

"What, Scab Stripper?" Seven Death said to him.

"Something's bitten me," he said next. The one seated sixth was bitten:

"Ouch!"

"What is it, Blood Gatherer?" Scab Stripper said to him.

"Something's bitten me," he said next. Then the one seated seventh was bitten:

"Ouch!" he said next.

"What is it, Demon of Pus?" Blood Gatherer said to him.

"Something's bitten me," he said next. The one seated eighth was bitten next:

"Ouch!" he said next.

"What is it, Demon of Jaundice?" Demon of Pus said to him next.

"Something's bitten me," he said next. Then the one seated ninth was bitten next:

"Ouch!" he said.

"What is it, Bone Scepter?" Demon of Jaundice said to him.

"Something's bitten me," he said next. Then the one seated tenth in order was bitten next:

"Ouch!"

"What is it, Skull Scepter?" said Bone Scepter.

"Something's bitten me," he said next. Then the one seated eleventh was bitten next:

"Ouch!" he said next.

"What is it, Wing?" Skull Scepter said to him next.

"Something's bitten me," he said next. Then the one seated twelfth was bitten next:

"Ouch!" he said next.

"What, Packstrap?" he was asked next.

"Something's bitten me," he said next. Then the one seated thirteenth was bitten next:

"Ouch!"

"What is it, Bloody Teeth?" Packstrap said to him.

"Something's bitten me," he said next. Then the one seated fourteenth was bitten next:

"Ouch! Something's bitten me," he said next.

"Bloody Claws?" Bloody Teeth said to him next.

And such was the naming of their names, they named them all among themselves. They showed their faces and named their names, each one named by the one ranking above him, and naming in turn the name of the one seated next to him. There wasn't a single name they missed, naming every last one of their names when they were bitten by the hair that Hunahpu had plucked from his own shin. It wasn't really a mosquito that bit them. It went to hear all their names for Hunahpu and Xbalanque.

After that Hunahpu and Xbalanque went on, and then they came to where the Xibalbans were:

"Bid the lords good day," said someone who was seated there. It was a deceiver who spoke.

"These aren't lords! These are manikins, woodcarvings!" they said as they came up.

And after that, they bid them good morning:

"Morning, One Death.	Morning, Seven Death.
Morning, Scab Stripper.	Morning, Blood Gatherer.
Morning, Demon of Pus.	Morning, Demon of Jaundice.
Morning, Bone Scepter.	Morning, Skull Scepter.
Morning, Wing.	Morning, Packstrap.
Morning, Bloody Teeth.	Morning, Bloody Claws,"

they said when they arrived, and all of their identities were accounted for. They named every one of their names; there wasn't a single name they missed. When this was required of them, no name was omitted by them.

"Sit here," they were told. They were wanted on the bench, but they didn't want it:

"This bench isn't for us! It's just a stone slab for cooking," said Hunahpu and Xbalanque. They were not defeated.

"Very well. Just get in the house," they were told.

And after that, they entered Dark House. They were not defeated there. This was the first test they entered in Xibalba, and as far as the Xibalbans were concerned they were as good as defeated.

FIRST THEY ENTERED DARK HOUSE.

And after that, the messenger of One Death brought their torch, burning when it arrived, along with one cigar apiece.

"'Here is their torch,' says the lord. 'They must return the torch in the morning, along with the cigars. They must return them intact,' say the lords," the messenger said when he arrived.

"Very well," they said, but they didn't burn the torch—instead, something that looked like fire was substituted. This was the tail of the macaw, which looked like a torch to the sentries. And as for the cigars, they just put fireflies at the tips of those cigars, which they kept lit all night.

"We've defeated them," said the sentries, but the torch was not consumed—it just looked that way. And as for the cigars, there wasn't anything burning there—it just looked that way. When these things were taken back to the lords:

"What's happening? Where did they come from? Who begot them and bore them? Our hearts are really hurting, because what they're doing to us is no good. They're different in looks and different in their very being," they said among themselves. And when they had summoned all the lords:

"Let's play ball, boys," the boys were told. And then they were asked by One and Seven Death:

"IT'S JUST A SKULL": In this game the ball (just right of center) is marked with a skull in profile. From the mouths of the two players at left and the one at extreme right comes speech (resembling curling smoke), probably in the form of taunts like the ones hurled back and forth in the Popol Vuh. The first player to the left of the ball holds the severed head of the first player to the right, whose neck sprouts serpents (representing spurts of blood) and a squash vine (recalling an episode in which a squash serves as Hunahpu's head). From a relief panel in the great ball court at Chichén Itzá.

DRAWING FROM ALFRED M. TOZZER, CHICHEN ITZA AND ITS CENOTE OF SACRIFICE: PHOTO BY HILLEL BURGER © 1984 BY THE PRESIDENT AND FELLOWS OF HARVARD COLLEGE

"Where might you have come from? Please name it," Xibalba said to them.

"Well, wherever did we come from? We don't know," was all they said. They didn't name it.

"Very well then, we'll just go play ball, boys," Xibalba told them.

"Good," they said.

"Well, this is the one we should put in play, here's our rubber ball," said the Xibalbans.

"No thanks. This is the one to put in, here's ours," said the boys.

"No it's not. This is the one we should put in," the Xibalbans said again.

"Very well," said the boys.

"After all, it's just a decorated one," said the Xibalbans.

"Oh no it's not. It's just a skull, we say in return," said the boys.

"No it's not," said the Xibalbans.

"Very well," said Hunahpu. When it was sent off by Xibalba, the ball was stopped by Hunahpu's yoke.

And then, while Xibalba watched, the White Dagger came out from inside the ball. It went clattering, twisting all over the floor of the court.

"What's that!" said Hunahpu and Xbalanque. "Death is the only thing you want for us! Wasn't it *you* who sent a summons to us, and wasn't it *your* messenger who went? Truly, take pity on us, or else we'll just leave," the boys told them.

And this is what had been ordained for the boys: that they should have died right away, right there, defeated by that knife. But it wasn't like that. Instead, Xibalba was again defeated by the boys.

"Well, don't go, boys. We can still play ball, but we'll put yours into play," the boys were told.

"Very well," they said, and this was the time for their rubber ball, so the ball was dropped in.

And after that, they specified the prize:

"What should our prize be?" asked the Xibalbans.

"It's yours for the asking," was all the boys said.

"We'll just win four bowls of flowers," said the Xibalbans.

"Very well. What kinds of flowers?" the boys asked Xibalba.

"One bowl of red petals, one bowl of white petals, one bowl of yellow petals, and one bowl of whole ones," said the Xibalbans.

"Very well," said the boys, and then their ball was dropped in. The boys were their equals in strength and made many plays, since they only

THEIR BALL WAS DROPPED IN: Hunahpu (left) and a member of the Xibalba team (right) jointly hold a ball up with their arm guards just before putting it into play; the latter wears a trophy head on his back. From a relief carved on a stone ball-court marker at Copán.

DRAWING BY BARBARA FASH

had very good thoughts. Then the boys gave themselves up in defeat, and the Xibalbans were glad when they were defeated:

"We've done well. We've beaten them on the first try," said the Xibalbans. "Where will they go to get the flowers?" they said in their hearts.

"Truly, before the night is over, you must hand over our flowers and our prize," the boys, Hunahpu and Xbalanque, were told by Xibalba.

"Very well. So we're also playing ball at night," they said when they accepted their charge.

AND AFTER THAT, THE BOYS NEXT ENTERED RAZOR HOUSE, the second test of Xibalba.

And this is when it was ordained that they be cut clear through with

knives. It was intended to be quick, intended that they should die, but they did not die. They spoke to the knives then, they instructed them:

"This is yours: the flesh of all the animals," they told the knives, and they no longer moved—rather, each and every knife put down its point.

And this is how they stayed there overnight, in Razor House. Now they summoned all the ants:

"Cutting ants, conquering ants, come now,
all of you fetch all of them for us:
flowers in bloom, prizes for lords."

"Very well," they replied. Then all the ants went to get the flowers, the plantings of One and Seven Death, who had already given instructions to the guardians of the flowers of Xibalba:

"Would you please watch our flowers? Don't let them get stolen. We've defeated these boys, so won't they come looking for the prize they owe us? Don't sleep tonight."

"Very well," they replied, but the guardians of the plants never knew a thing. Their only inclination was to stretch their mouths wide open, going from one perch to another in the trees and plants, repeating the same song:

"Whip-poor-will! Whip-poor-will!"

one of them says as he cries.

"Poor-willow! Poor-willow!"

says the other as he cries, the one named poorwill.

The two of them are the guards of the garden, the garden of One and Seven Death, but they don't notice the ants stealing what's under their guard, swarming, carrying away loads of flowers, coming to cut down the flowers in the trees, gathering these together with the flowers beneath the trees, while the guards just stretch their mouths wide open, not noticing the nibbling at their own tails, the nibbling at their own wings. The severed flowers rain down into the gathering and bunching here below, so that four bowls of flowers are easily filled, an acrobatic performance that lasts till dawn.

After that the messengers, the pages, arrive:

"They are to come," says the lord: "They must bring our prizes here right away," the boys were told.

"Very well," they said. Having loaded up the flowers, four bowls of them, they left and came before the lord, or lords, who received the flowers with pained looks.

With this, the Xibalbans were defeated. The boys had sent mere ants; in just one night the ants had taken the flowers and put them in the bowls.

With this, all the Xibalbans looked sick, they paled at the sight of the flowers.

After that, they summoned the flower guards:

"How did you allow our flowers to get stolen? These are *our* flowers! Here! Look!" the guards were told.

"We took no notice, your lordship, though our tails are the worse for it," they said.

And then their mouths were split wide, their payment for the theft of what was under their guard.

Such was the defeat of One and Seven Death by Hunahpu and Xbalanque, on account of which the whippoorwills got gaping mouths. Their mouths gape to this day.

Now after that, when the ball was dropped in, they just played to a tie. When they finished the game they made an arrangement with each other:

"At dawn again," said Xibalba.

"Very well," said the boys, then they were finished.

AND NOW THEY ENTERED COLD HOUSE. There are countless drafts, thick-falling hail inside the house, the home of cold. They diminished the cold right away by shutting it out. The cold dissipated because of the boys. They did not die, but were alive when it dawned.

So, although Xibalba had wanted them to die there, they did not, but were alive when it dawned. They came out when the pages arrived and the guards left.

"Why haven't they died?" said the rulers of Xibalba. Again they were amazed at the feats of the boys, Hunahpu and Xbalanque.

SO NEXT THEY ENTERED JAGUAR HOUSE, the jaguar-packed home of jaguars:

"Don't eat *us*. There *is* something that should be yours," the jaguars were told.

With that, they scattered bones before the animals.

After that, the jaguars were wrestling around there, over the bones.

"So they've made good work of them, they've eaten their very hearts. Now that the boys have given themselves up, they've already been transformed into skeletons," said the sentries, all of them finding it sweet. But they hadn't died; they were well. They came out of Jaguar House.

"What sort of people are they? Where did they come from?" said all the Xibalbans.

SO NEXT THEY ENTERED THE MIDST OF THE FIRE, a house of fire with only fire alone inside. They weren't burned by it, just toasted, just simmered, so they were well when it dawned. Although it had been ordained that they be quickly killed in there, overcome, they weren't, and instead it was the Xibalbans who lost heart over this.

NOW THEY WERE PUT INSIDE BAT HOUSE, with bats alone inside the house, a house of snatch-bats, monstrous beasts, their snouts like knives, the instruments of death. To come before these is to be finished off at once.

When they were inside they just slept in their blowgun; they were not bitten by the members of the household. But this is where they gave one of themselves up because of a snatch-bat that came down, he came along just as one of them showed himself. They did it because it was actually what they were asking for, what they had in mind.

And all night the bats are making noise:

"Eek-eek! Eek-eek!"

they say, and they say it all night.

Then it let up a little. The bats were no longer moving around. So there, one of the boys crawled to the end of the blowgun, since Xbalanque said:

"Hunahpu? Can you see how long it is till dawn?"

"Well, perhaps I should look to see how long it is," he replied. So he kept trying to look out the muzzle of the blowgun, he tried to see the dawn.

SNATCH-BATS, MONSTROUS BEASTS: *The design on the bat's wings represents plucked-out eyes; the scroll-like forms issuing from his mouth are his shrieks. From a Late Classic Maya vase in the Chamá style, found in the same region as the Great Hollow where Hunahpu and Xbalanque descended into Xibalba.*

DRAWING BY THE AUTHOR

And then his head was taken off by a snatch-bat, leaving Hunahpu's body still stuffed inside.

"What's going on? Hasn't it dawned?" said Xbalanque. No longer is there any movement from Hunahpu. "What's this? Hunahpu hasn't left, has he? What have you done?" He no longer moves; now there is only heavy breathing.

After that, Xbalanque despaired:

"Alas! We've given it all up!" he said. And elsewhere, the head meanwhile went rolling onto the court, in accordance with the word of One and Seven Death, and all the Xibalbans were happy over the head of Hunahpu.

After that, Xbalanque summoned all the animals: coati, peccary, all the animals, small and great. It was at night, still nighttime when he asked them for their food:

"Whatever your foods are, each one of you: that's what I summoned you for, to bring your food here," Xbalanque told them.

"Very well," they replied, then they went to get what's theirs, then indeed they all came back.

HIS HEAD WAS TAKEN OFF: *Hunahpu stands headless with his arms bound. From the Dresden Codex.*

DRAWING BY CARLOS A. VILLACORTA

There's the one who only brought his rotten wood.

There's the one who only brought leaves.

There's the one who only brought stones.

There's the one who only brought earth, on through the varied foods of the animals, small and great, until the very last one remained: the coati. He brought a squash, bumping it along with his snout as he came.

And this became a simulated head for Hunahpu. His eyes were carved right away, then brains came from the thinker, from the sky. This was the Heart of Sky, Hurricane, who came down, came on down into Bat House. The face wasn't finished any too quickly; it came out well. His strength was just the same, he looked handsome, he spoke just the same.

And this is when it was trying to dawn, reddening along the horizon:

"Now make the streaks, man," the possum was told.

"Yes," said the old man. When he made the streaks he made it dark again; the old man made four streaks.

XBALANQUE SUMMONED ALL THE ANIMALS: *Here he brings a hummingbird to him. Around his mouth and on his back and thigh are patches of jaguar skin. From the Dresden Codex.*

DRAWING BY CARLOS A. VILLACORTA

THE POSSUM: *Bringing in a new year that begins on the day named E or Eb, a possum uses a backpack to carry the patron deity assigned to such years. There are four kinds of year in all, corresponding to the four streaks made by the possum who comes to the aid of Xbalanque. Drawing from the Dresden Codex.*

DRAWING BY CARLOS A. VILLACORTA

"Possum is making streaks," people say today, ever since he made the early dawn red and blue, establishing its very being.

"Isn't it good?" Hunahpu was asked.

"Good indeed," he replied. His head was as if it had every bone; it had become like his real head.

After that, they had a talk, they made arrangements with each other:

"How about not playing ball yourself? You should just make lots of threats, while I should be the one to take all the action," Xbalanque told him. After that, he gave instructions to a rabbit:

"Your place is there above the court, on top. Stay there among the ball bags," the rabbit was told by Xbalanque, "until the ball comes to you, then take off while I get to work," the rabbit was told. He got his instructions while it was still dark.

After that, when it dawned, both of them were just as well as ever.

And when the ball was dropped in again, it was the head of Hunahpu that rolled over the court:

"We've won! You're done!
Give up! You lost!"

they were told. But even so Hunahpu was shouting:

"Punt the head as a ball!" he told them.

"Well, we're not going to do them any more harm with threats," and with this the lords of Xibalba sent off the ball and Xbalanque received it, the ball was stopped by his yoke, then he hit it hard and it took off, the

IT WAS THE HEAD OF HUNAHPU: *A member of the Xibalba team goes down on one knee and returns the ball with his thigh, protected by a leather kilt. The ball bears the name of Hunahpu. From a relief carved on an Early Classic Maya ball-court marker from La Esperanza, Chiapas.*

DRAWING BY THE AUTHOR

ball passed straight out of the court, bouncing just once, just twice, and stopping among the ball bags. Then the rabbit took off hopping, then they went off in pursuit, then all the Xibalbans went off, shouting, shrieking, they went after the rabbit, off went the whole of Xibalba.

After that, the boys got Hunahpu's head back. Then Xbalanque planted the squash; this is when he went to set the squash above the court.

So the head of Hunahpu was really a head again, and the two of them were happy again. And the others, those Xibalbans, were still going on in search of the ball.

After that, having recovered the ball from among the bags, the boys cried out to them:

"Come back! Here's the ball! We've found it!" they said, so they stopped. When the Xibalbans got back:

"Have we been seeing things?" they said. Then they began their ball game again, and they made equal plays on both sides again.

After that, the squash was punted by Xbalanque. The squash was wearing out; it fell on the court, bringing to light its light-colored seeds, as plain as day right in front of them.

"How did you get ahold of that? Where did it come from?" said Xibalba.

With this, the masters of Xibalba were defeated by Hunahpu and Xbalanque. There was great danger there, but they did not die from all the things that were done to them.

AND HERE IT IS: THE EPITAPH, THE DEATH OF HUNAHPU AND XBALANQUE.

Here it is: now we shall name their epitaph, their death. They did whatever they were instructed to do, going through all the dangers, the troubles that were made for them, but they did not die from the tests of Xibalba, nor were they defeated by all the voracious animals that inhabit Xibalba.

After that, they summoned two midmost seers, similar to readers. Here are their names: Xulu, Pacam, both knowers.

"Perhaps there will be questions from the lords of Xibalba about our death. They are thinking about how to overcome us because we haven't died, nor have we been defeated. We've exhausted all their tests. Not even the animals got us. So this is the sign, here in our hearts: their instrument for our death will be a stone oven. All the Xibalbans have gathered together. Isn't our death inevitable? So this is your plan, here we shall name it: if you come to be questioned by them about our death, once we've been burned, what will you say, Xulu, and you, Pacam? If they ask you:

'Wouldn't it be good if we dumped their bones in the canyon?'

'Perhaps it wouldn't be good, since they would only come back to life again,' you will say.

'Perhaps this would be good: we'll just hang them up in a tree,' they'll say to you next.

'Certainly that's no good, since you would see their faces,' you will say, and then they'll speak to you for the third time:

'Well, here's the only good thing: we'll just dump their bones in the river.' If that's what they ask you next:

'This is a good death for them, and it would also be good to grind their bones on a stone, just as hard corn is refined into flour, and refine each of them separately, and then:

'Spill them into the river,
sprinkle them on the water's way,
among the mountains, small and great,'

you will say, and then you will have carried out the instructions we've named for you," said little Hunahpu and Xbalanque. When they gave these instructions they already knew they would die.

THIS IS THE MAKING OF THE OVEN, the great stone oven. The Xibalbans made it like the places where the sweet drink is cooked, they opened it to a great width.

After that, messengers came to get the boys, the messengers of One and Seven Death:

"They must come. We'll go with the boys, to see the treat we've cooked up for them,' say the lords, you boys," they were told.

"Very well," they replied. They went running and arrived at the mouth of the oven.

And there they tried to force them into a game:

"Here, let's jump over our drink four times, clear across, one of us after the other, boys," they were told by One Death.

"You'll never put that one over on us. Don't we know what our death is, you lords? Watch!" they said, then they faced each other. They grabbed each other by the hands and went head first into the oven.

And there they died, together, and now all the Xibalbans were happy, raising their shouts, raising their cheers:

"We've really beaten them! They didn't give up easily," they said.

After that they summoned Xulu and Pacam, who kept their word: the bones went just where the boys had wanted them. Once the Xibalbans

WALKING ON STILTS: A figure
from the Madrid Codex.

DRAWING BY CARLOS A. VILLACORTA

had done the divination, the bones were ground and spilled in the river, but they didn't go far—they just sank to the bottom of the water. They became handsome boys; they looked just the same as before when they reappeared.

AND ON THE FIFTH DAY THEY REAPPEARED. They were seen in the water by the people. The two of them looked like catfish when their faces were seen by Xibalba. And having germinated in the waters, they appeared the day after that as two vagabonds, with rags before and rags behind, and rags all over too. They seemed unrefined when they were examined by Xibalba; they acted differently now.

It was only the Dance of the Poorwill, the Dance of the Weasel, only Armadillos they danced.

Only Swallowing Swords, only Walking on Stilts now they danced.

They performed many miracles now. They would set fire to a house, as if they were really burning it, and suddenly bring it back again. Now Xibalba was full of admiration.

Next they would sacrifice themselves, one of them dying for the other, stretched out as if in death. First they would kill themselves, but then they would suddenly look alive again. The Xibalbans could only admire what they did. Everything they did now was already the groundwork for their defeat of Xibalba.

And after that, news of their dances came to the ears of the lords, One and Seven Death. When they heard it they said:

"Who are these two vagabonds? Are they really such a delight? And is their dancing really that pretty? They do everything!" they said. An account of them had reached the lords. It sounded delightful, so then they entreated their messengers to notify them that they must come:

" "If only they'd come make a show for us, we'd wonder at them and marvel at them," say the lords,' you will say," the messengers were told. So they came to the dancers, then spoke the words of the lords to them.

"But we don't want to, because we're really ashamed. Just plain no. Wouldn't we be afraid to go inside there, into a lordly house? Because we'd really look bad. Wouldn't we just be wide-eyed? Take pity on us! Wouldn't we look like mere dancers to them? What would we say to our fellow vagabonds? There are others who also want us to dance today, to liven things up with us, so we can't do likewise for the lords, and likewise is not what we want, messengers," said Hunahpu and Xbalanque.

Even so, they were prevailed upon: through troubles, through torments, they went on their tortuous way. They didn't want to walk fast. Many times they had to be forced; the messengers went ahead of them as guides but had to keep coming back. And so they went to the lord.

AND THEY CAME TO THE LORDS. Feigning great humility, they bowed their heads all the way to the ground when they arrived. They brought themselves low, doubled over, flattened out, down to the rags, to the tatters. They really looked like vagabonds when they arrived.

So then they were asked what their mountain and tribe were, and they were also asked about their mother and father:

"Where do you come from?" they were asked.

"We've never known, lord. We don't know the identity of our mother

THEY DANCED THE ARMADILLO: *This dancer wears a scaly armadillo mask, plays a flute, and shakes a rattle. From a Late Classic Maya vase in the Chamá style, found in the same region as the Great Hollow where Hunahpu and Xbalanque descended into the Xibalba.*

DRAWING BY THE AUTHOR

THEN THEY TOOK HOLD OF A HUMAN SACRIFICE: The aged merchant god of the underworld sits on a dais in his palace, with his owl messenger perched on his hat. The women around the platform are all of noble rank; one of them turns to watch the performance to the left, in which two masked dancers (probably Hunahpu and Xbalanque in disguise) carry out a human sacrifice. The left-hand dancer is applying an axe to the back of the neck of the victim. From a Late Classic Maya vase in the Princeton University Art Museum.

DRAWING REPRODUCED BY PERMISSION OF MICHAEL D. COE AND THE GROLIER CLUB

and father. We must've been small when they died," was all they said. They didn't give any names.

"Very well. Please entertain us, then. What do you want us to give you in payment?" they were asked.

"Well, we don't want anything. To tell the truth, we're afraid," they told the lord.

"Don't be afraid. Don't be ashamed. Just dance this way: first you'll dance to sacrifice yourselves, you'll set fire to my house after that, you'll act out all the things you know. We want to be entertained. This is our heart's desire, the reason you had to be sent for, dear vagabonds. We'll give you payment," they were told.

So then they began their songs and dances, and then all the Xibalbans arrived, the spectators crowded the floor, and they danced everything: they danced the Weasel, they danced the Poorwill, they danced the Armadillo. Then the lord said to them:

"Sacrifice my dog, then bring him back to life again," they were told.

"Yes," they said.

When they sacrificed the dog
he then came back to life.
And that dog was really happy
when he came back to life.
Back and forth he wagged his tail
when he came back to life.

And the lord said to them:

"Well, you have yet to set my home on fire," they were told next, so then they set fire to the home of the lord. The house was packed with all the lords, but they were not burned. They quickly fixed it back again, lest the house of One Death be consumed all at once, and all the lords were amazed, and they went on dancing this way. They were overjoyed.

And then they were asked by the lord:

"You have yet to kill a person! Make a sacrifice without death!" they were told.

SACRIFICE YET AGAIN, EVEN DO IT TO YOURSELVES!: At left is Hunahpu disguised as a Thunderbolt god, about to swing a lightning-striking axe; the catfish barbel on his cheek recalls the episode in which he and his brother appeared as catfish. Playfully waiting to have his head cut off is a prostrate Xbalanque, no longer limited to wearing a few patches of jaguar skin but rather appearing as a parody of himself. Next (from left to right) are a skeletal Xibalban who dances with delight, a dog who wags his tail (having survived his own decapitation), and a firefly bearing a torch (from the Dark House episode). From a Late Classic Maya vase in the Metropolitan Museum of Art.

DRAWING REPRODUCED BY PERMISSION OF MICHAEL D. COE AND THE GROLIER CLUB

"Very well," they said.
And then they took hold of a human sacrifice.
And they held up a human heart on high.
And they showed its roundness to the lords.
And now One and Seven Death admired it, and now that person was brought right back to life. His heart was overjoyed when he came back to life, and the lords were amazed:
"Sacrifice yet again, even do it to yourselves! Let's see it! At heart, that's the dance we really want from you," the lords said now.
"Very well, lord," they replied, and then they sacrificed themselves.

AND THIS IS THE SACRIFICE OF LITTLE HUNAHPU BY XBALANQUE. One by one his legs, his arms were spread wide. His head came off, rolled far away outside. His heart, dug out, was smothered in a leaf, and all the Xibalbans went crazy at the sight.

So now, only one of them was dancing there: Xbalanque.
"Get up!" he said, and Hunahpu came back to life. The two of them were overjoyed at this—and likewise the lords rejoiced, as if they were doing it themselves. One and Seven Death were as glad at heart as if they themselves were actually doing the dance.

And then the hearts of the lords were filled with longing, with yearning for the dance of little Hunahpu and Xbalanque, so then came these words from One and Seven Death:

"Do it to us! Sacrifice us!" they said. "Sacrifice both of us!" said One and Seven Death to little Hunahpu and Xbalanque.

"Very well. You ought to come back to life. What is death to you? And aren't we making you happy, along with the vassals of your domain?" they told the lords.

And this one was the first to be sacrificed: the lord at the very top, the one whose name is One Death, the ruler of Xibalba.

And with One Death dead, the next to be taken was Seven Death. They did not come back to life.

And then the Xibalbans were getting up to leave, those who had seen the lords die. They underwent heart sacrifice there, and the heart sacrifice was performed on the two lords only for the purpose of destroying them.

As soon as they had killed the one lord without bringing him back to life, the other lord had been meek and tearful before the dancers. He didn't consent, he didn't accept it:

"Take pity on me!" he said when he realized. All their vassals took the road to the great canyon, in one single mass they filled up the deep abyss. So they piled up there and gathered together, countless ants, tumbling down into the canyon, as if they were being herded there. And when they arrived, they all bent low in surrender, they arrived meek and tearful.

Such was the defeat of the rulers of Xibalba. The boys accomplished it only through wonders, only through self-transformation.

AND THEN THEY NAMED THEIR NAMES, they gave themselves names before all of Xibalba:

"Listen: we shall name our names, and we shall also name the names of our fathers for you. Here we are: we are little Hunahpu and Xbalanque by name. And these are our fathers, the ones you killed: One Hunahpu and Seven Hunahpu by name. And we are here to clear the road of the torments and troubles of our fathers. And so we have suffered all the troubles you've caused us. And so we are putting an end to all of you. We're going to kill you. No one can save you now," they were told. And then all the Xibalbans got down on the ground and cried out:

"Take pity on us, Hunahpu and Xbalanque! It is true that we wronged your fathers, the ones you name. Those two are buried at the Place of Ball Game Sacrifice," they replied.

"Very well. Now this is our word, we shall name it for you. All of you listen, you Xibalbans: because of this, your day and your descendants will not be great. Moreover, the gifts you receive will no longer be great, but reduced to scabrous nodules of sap. There will be no cleanly blotted blood for you, just griddles, just gourds, just brittle things broken to pieces. Further, you will only feed on creatures of the meadows and clearings. None of those who are born in the light, begotten in the light will be yours. Only the worthless will yield

themselves up before you. These will be the guilty, the violent, the wretched, the afflicted. Wherever the blame is clear, that is where you will come in, rather than just making sudden attacks on people in general. And you will hear petitions over headed-up sap," all the Xibalbans were told.

Such was the beginning of their disappearance and the denial of their worship.

Their ancient day was not a great one,
these ancient people only wanted conflict,
their ancient names are not really divine,
but fearful is the ancient evil of their faces.

They are makers of enemies, users of owls,
they are inciters to wrongs and violence,
they are masters of hidden intentions as well,
they are black and white,
masters of stupidity, masters of perplexity,

as it is said. By putting on appearances they cause dismay.

Such was the loss of their greatness and brilliance. Their domain did not return to greatness. This was accomplished by little Hunahpu and Xbalanque.

AND THIS IS THEIR GRANDMOTHER, CRYING AND CALLING OUT IN FRONT OF THE EARS OF GREEN CORN they left planted. Corn plants grew, then dried up.

And this was when they were burned in the oven; then the corn plants grew again.

And this was when their grandmother burned something, she burned copal before the ears of green corn as a memorial to them. There was happiness in their grandmother's heart the second time the corn plants sprouted. Then the ears were deified by their grandmother, and she gave them names: Middle of the House, Middle of the Harvest, Living Ears of Green Corn, Bed of Earth became their names.

And she named the ears Middle of the House, Middle of the Harvest, because they had planted them right in the middle of the inside of their home.

And she further named them Bed of Earth, Living Ears of Green Corn, since the ears had been placed up above an earthen floor.

And she also named them Living Ears of Green Corn, because the corn plants had grown again. So they were named by Xmucane. They had been left behind, planted by Hunahpu and Xbalanque, simply as a way for their grandmother to remember them.

And the first to die, a long time before, had been their fathers, One Hunahpu and Seven Hunahpu. And they saw the face of their father again, there in Xibalba. Their father spoke to them again when they had defeated Xibalba.

THEIR FATHER IS PUT BACK TOGETHER BY THEM: Hunahpu (left) and Xbalanque (right) resurrect their father. He takes the form of a maize god in lowland Maya art, here emerging (or sprouting) from a cleft in the back of a turtle (the earth). From a Late Classic Maya bowl.

DRAWING BY KARL TAUBE

AND HERE THEIR FATHER IS PUT BACK TOGETHER BY THEM. They put Seven Hunahpu back together; they went to the Place of Ball Game Sacrifice to put him together. He had wanted his face to become just as it was, but when he was asked to name everything, and once he had found the name of the mouth, the nose, the eyes of his face, there was very little else to be said. Although his mouth could not name the names of each of his former parts, he had at least spoken again.

And so it remained that they were respectful of their father's heart, even though they left him at the Place of Ball Game Sacrifice:

"You will be prayed to here," his sons told him, and his heart was comforted. "You will be the first resort, and you will be the first to have your day kept by those who will be born in the light, begotten in the light. Your name will not be lost. So be it," they told their father when they comforted his heart.

"We merely cleared the road of your death, your loss, the pain, the suffering that were inflicted upon you."

And such was the instruction they gave when all the Xibalbans had been finally defeated. And then the two boys ascended this way, here into the middle of the light, and they ascended straight on into the sky, and the sun belongs to one and the moon to the other. When it became light within the sky, on the face of the earth, they were there in the sky.

THE MOON TO THE OTHER:
The lowland Maya Jaguar
Moon Lord, enclosed by a
lunar crescent. From an Early
Classic conch shell trumpet.

DRAWING BY LINDA SCHELE

And then the Four Hundred Boys climbed up, the ones who were killed by Zipacna.

And so they came to accompany the two of them, they became the sky's own stars.

PART FOUR

AND HERE IS THE BEGINNING OF THE CONCEPTION OF HUMANS, and of the search for the ingredients of the human body. So they spoke, the Bearer, Begetter, the Makers, Modelers named Sovereign Plumed Serpent:

"The dawn has approached, preparations have been made, and morning has come for the provider, nurturer, born in the light, begotten in the light. Morning has come for humankind, for the people of the face of the earth," they said. It all came together as they went on thinking in the darkness, in the night, as they searched and they sifted, they thought and they wondered.

And here their thoughts came out in clear light. They sought and discovered what was needed for human flesh. It was only a short while before the sun, moon, and stars were to appear above the Makers and Modelers. Split Place, Bitter Water Place is the name: the yellow corn, white corn came from there.

And these are the names of the animals who brought the food: fox, coyote, parrot, crow. There were four animals who brought the news of the ears of yellow corn and white corn. They were coming from over there at Split Place, they showed the way to the split.

THE YELLOW CORN AND
WHITE CORN WERE GROUND:

*This woman is rubbing a
hand stone ("mano") over a
grinding stone ("metate") that
has stone feet. From a Late
Classic Maya bowl.*

DRAWING BY THE AUTHOR

And this was when they found the staple foods.

And these were the ingredients for the flesh of the human work, the human design, and the water was for the blood. It became human blood, and corn was also used by the Bearer, Begetter.

And so they were happy over the provisions of the good mountain, filled with sweet things, thick with yellow corn, white corn, and thick with pataxte and cacao, countless zapotes, anonas, jocotes, nances, matasanos, sweets—the rich foods filling up the citadel named Split Place, Bitter Water Place. All the edible fruits were there: small staples, great staples, small plants, great plants. The way was shown by the animals.

And then the yellow corn and white corn were ground, and Xmucane did the grinding nine times. Food was used, along with the water she rinsed her hands with, for the creation of grease; it became human fat when it was worked by the Bearer, Begetter, Sovereign Plumed Serpent, as they are called.

After that, they put it into words:

the making, the modeling of our first mother-father,
with yellow corn, white corn alone for the flesh,
food alone for the human legs and arms,
for our first fathers, the four human works.

It was staples alone that made up their flesh.

THESE ARE THE NAMES OF THE FIRST PEOPLE WHO WERE MADE AND MODELED.

This is the first person: Jaguar Quitze.

And now the second: Jaguar Night.

And now the third: Not Right Now.

And the fourth: Dark Jaguar.

And these are the names of our first mother-fathers. They were simply made and modeled, it is said; they had no mother and no father. We have named the men by themselves. No woman gave birth to them, nor were they begotten by the builder, sculptor, Bearer, Begetter. By sacrifice alone, by genius alone they were made, they were modeled by the Maker, Modeler, Bearer, Begetter, Sovereign Plumed Serpent. And when they came to fruition, they came out human:

They talked and they made words.

They looked and they listened.

They walked, they worked.

They were good people, handsome, with looks of the male kind. Thoughts came into existence and they gazed; their vision came all at once. Perfectly they saw, perfectly they knew everything under the sky, whenever they looked. The moment they turned around and looked around in the sky, on the earth, everything was seen without any obstruction. They didn't have to walk around before they could see what was under the sky; they just stayed where they were.

As they looked, their knowledge became intense. Their sight passed through trees, through rocks, through lakes, through seas, through mountains, through plains. Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar were truly gifted people.

And then they were asked by the builder and mason:

"What do you know about your being? Don't you look, don't you listen? Isn't your speech good, and your walk? So you must look, to see out under the sky. Don't you see the mountain-plain clearly? So try it," they were told.

And then they saw everything under the sky perfectly. After that, they thanked the Maker, Modeler:

"Truly now,
double thanks, triple thanks
that we've been formed, we've been given
our mouths, our faces,
we speak, we listen,
we wonder, we move,
our knowledge is good, we've understood
what is far and near,
and we've seen what is great and small
under the sky, on the earth.
Thanks to you we've been formed,
we've come to be made and modeled,
our grandmother, our grandfather,"

they said when they gave thanks for having been made and modeled. They understood everything perfectly, they sighted the four sides, the four corners in the sky, on the earth, and this didn't sound good to the builder and sculptor:

"What our works and designs have said is no good:

'We have understood everything, great and small,' they say." And so the Bearer, Begetter took back their knowledge:

"What should we do with them now? Their vision should at least reach nearby, they should see at least a small part of the face of the earth, but what they're saying isn't good. Aren't they merely 'works' and 'designs' in their very names? Yet they'll become as great as gods, unless they procreate, proliferate at the sowing, the dawning, unless they increase."

"Let it be this way: now we'll take them apart just a little, that's what we need. What we've found out isn't good. Their deeds would become equal to ours, just because their knowledge reaches so far. They see everything," so said

the Heart of Sky, Hurricane,
Newborn Thunderbolt, Sudden Thunderbolt,
Sovereign Plumed Serpent,
Bearer, Begetter,
Xpiyacoc, Xmucane,
Maker, Modeler,

as they are called. And when they changed the nature of their works, their designs, it was enough that the eyes be marred by the Heart of Sky. They were blinded as the face of a mirror is breathed upon. Their vision flickered. Now it was only from close up that they could see what was there with any clarity.

And such was the loss of the means of understanding, along with the means of knowing everything, by the four humans. The root was implanted.

And such was the making, modeling of our first grandfather, our father, by the Heart of Sky, Heart of Earth.

AND THEN THEIR WIVES AND WOMEN CAME INTO BEING. Again, the same gods thought of it. It was as if they were asleep when they received them, truly beautiful women were there with Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar. With their women there they really came alive. Right away they were happy at heart again, because of their wives.

Red Sea Turtle is the name of the wife of Jaguar Quitze.

Prawn House is the name of the wife of Jaguar Night.

Water Hummingbird is the name of the wife of Not Right Now.

Macaw House is the name of the wife of Dark Jaguar.

So these are the names of their wives, who became ladies of rank, giving birth to the people of the tribes, small and great.

AND THIS IS OUR ROOT, WE WHO ARE THE QUICHÉ PEOPLE. And there came to be a crowd of penitents and sacrificers. It wasn't only four who came into being then, but there were four mothers for us, the Quiché people. There were different names for each of the peoples when they multiplied, there in the east. Their names became numerous: Sovereign Oloman, Cohah, Quenech Ahau, as the names of the people who were there in the east are spoken. They multiplied, and it is known that the Tams and Ilocs began then. They came from the same place, there in the east.

Jaguar Quitze was the grandfather and father of the nine great houses of the Cauecs.

Jaguar Night was the grandfather and father of the nine great houses of the Greathouses.

Not Right Now was the grandfather and father of the four great houses of the Lord Quichés.

There were three separate lineages. The names of the grandfathers and fathers are not forgotten. These multiplied and flowered there in the east, but the Tams and Ilocs also came forth, along with thirteen allied tribes, thirteen principalities, including:

The Rabinals, Cakchiquels, those of Bird House.

And the White Cornmeals.

And also the Lamacs, Serpents, Sweatbath House, Talk House, those of Star House.

And those of Quiba House, those of Yokes House, Acul people, Jaguar House, Guardians of the Spoils, Jaguar Ropes.

It is sufficient that we speak only of the largest tribes from among the allied tribes; we have only noted the largest. Many more came out afterward, each one a division of that citadel. We haven't written their names, but they multiplied there, from out of the east. There came to be many peoples in the blackness; they began to abound even before the birth of the sun and the light. When they began to abound they were all there together; they stood and walked in crowds, there in the east.

There was nothing they could offer for sustenance, but even so they lifted their faces to the sky. They didn't know where they were going. They did this for a long time, when they were there in the grasslands:

black people, white people, people of many faces, people of many languages, uncertain, there at the edge of the sky.

And there were mountain people. They didn't show their faces, they had no homes. They just traveled the mountains, small and great. "It's as if they were crazy," they used to say. They derided the mountain people, it was said. There they watched for the sunrise, and for all the mountain people there was just one language. They did not yet pray to the tree-stone.

These are the words with which they remembered the Maker, Modeler, Heart of Sky, Heart of Earth. It was said that these were enough to keep them mindful of what was in shadow and what was dawning. All they did was ask; they had reverent words. They were reverent, they were givers of praise, givers of respect, lifting their faces to the sky when they made requests for their daughters and sons:

"Wait!
 thou Maker, thou Modeler,
 look at us, listen to us,
 don't let us fall, don't leave us aside,
 thou god in the sky, on the earth,
 Heart of Sky, Heart of Earth,
 give us our sign, our word,
 as long as there is day, as long as there is light.
 When it comes to the sowing, the dawning,
 will it be a greening road, a greening path?
 Give us a steady light, a level place,
 a good light, a good place,
 a good life and beginning.
 Give us all of this, thou Hurricane,
 Newborn Thunderbolt, Sudden Thunderbolt,
 Newborn Nanahuac, Sudden Nanahuac,
 Falcon, Hunahpu,
 Sovereign Plumed Serpent,
 Bearer, Begetter,
 Xpiyacoc, Xmucane,
 Grandmother of Day, Grandmother of Light,
 when it comes to the sowing, the dawning,"

they said when they made their fasts and prayers, just watching intently for the dawn. There, too, they looked toward the east, watching closely for the sun carrier, the great star at the birth of the sun, of the heat for

THEY DID NOT YET PRAY TO THE TREE-STONE: A wooden stele commemorating a new year. The cluster of branches and leaves at the top is the glyph for *te'* or "tree," while the glyph at the foot of the stele is for *tun* or "stone." The snake (*kan*) near the top is a pun on "sky" (*kan*); the inscription on the strip of paper hanging from the stele is represented only by footprints that signify the passage of time, following the reading order of a column of glyphs. From the Dresden Codex.

DRAWING BY KARL TAUBE

what is under the sky, on the earth, the guide for the human work, the human design.

They spoke, those who are Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar:

"We're still waiting for the dawning," they said, these great knowers, great thinkers, penitents, praisers, as they are called. And there was no tree-stone in the keeping of our first mother-fathers, and they were weary at heart there, waiting for the sun. Already there were many of them, all the tribes, including the Mexican people, all penitents and sacrificers.

"Let's just go. We'll look and see whether there is something to keep as our sign. We'll find out what we should burn in front of it. The way we are right now, we have nothing to keep as our own," said Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar. They got word of a citadel. They went there.

AND THIS IS THE NAME OF THE MOUNTAIN WHERE THEY WENT, Jaguar Quitze, Jaguar Night, Not Right Now, Dark Jaguar, and the Tams and Ilocs: Tulan Zuyua, Seven Caves, Seven Canyons is the name of the citadel. Those who were to receive the gods arrived there.

And they arrived there at Tulan, all of them, countless people arrived, walking in crowds, and their gods were given out in order, the first being those of Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar. They were happy:

"We have found what we were looking for," they said. And this one was the first to come out:

Tohil is the name of the god loaded in the backpack borne by Jaguar Quitze. And the others came out in turn:

Auilix is the name of the god that Jaguar Night carried.

Hacauitz, in turn, is the name of the god received by Not Right Now.

Middle of the Plain is the name of the god received by Dark Jaguar.

And there were still other Quiché people, since the Tams also received theirs, but it was the same Tohil for the Tams, that's the name received by the grandfather and father of the Tam lords, as they are known today.

And third were the Ilocs: again, Tohil is the name of the god received by the grandfather and father of those lords, the same ones known today.

And such was the naming of the three Quichés. They have never let go of one another because the god has just one name: Tohil for the Quiché proper, and Tohil for the Tams and Ilocs. There is just one name for their god, and so the Quiché threesome has not come apart, those three. Tohil, Auilix, and Hacauitz are truly great in their very being.

And then all the tribes came in: Rabinals, Cakchiquels, those of Bird House, along with the Mexican people, as the names are today. And the languages of the tribes changed there; their languages became differentiated. They could no longer understand one another clearly when they came away from Tulan.

And there they broke apart. There were those who went eastward and many who came here, but they were all alike in dressing with hides. There were no clothes of the better kinds. They were in patches, they were adorned with mere animal hides. They were poor. They had nothing of their own. But they were people of genius in their very being when they came away from Tulan Zuyua, Seven Caves, Seven Canyons, so says the ancient text.

THEY WALKED IN CROWDS WHEN THEY ARRIVED AT TULAN, AND THERE WAS NO FIRE. Only those with Tohil had it: this was the tribe whose god was first to generate fire. How it was generated is not clear. Their fire was already burning when Jaguar Quitze and Jaguar Night first saw it:

TOHIL . . . WAS FIRST TO GENERATE FIRE: *Here he sits amid swirls of smoke and fire (or clouds and lightning), some of which originate from his own forehead and tongue. One of his legs, turned to the right, can be seen turning into a snake (lightning) below his knee. From an incised potsherd found at Rotten Cane (Uatlán), now in the Peabody Museum, Harvard University.*

REPRODUCED BY PERMISSION OF DOVER PUBLICATIONS

"Alas! Fire has not yet become ours. We'll die from the cold," they said. And then Tohil spoke:

"Do not grieve. You will have your own even when the fire you're talking about has been lost," Tohil told them.

"Aren't you a true god!
Our sustenance and our support!
Our god!"

they said when they gave thanks for what Tohil had said.

"Very well, in truth,
I am your god: so be it.
I am your lord: so be it,"

the penitents and sacrificers were told by Tohil.

And this was the warming of the tribes. They were pleased by their fire.

After that a great downpour began, which cut short the fire of the

tribes. And hail fell thickly on all the tribes, and their fires were put out by the hail. Their fires didn't start up again. So then Jaguar Quitze and Jaguar Night asked for their fire again:

"Tohil, we'll be finished off by the cold," they told Tohil.

"Well, do not grieve," said Tohil. Then he started a fire. He pivoted inside his sandal.

After that, Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar were pleased.

After they had been warmed, the fires of the other tribes were still out. Now they were being finished off by the cold, so they came back to ask for their fire from Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar. They could bear the cold and hail no longer. By now they were chattering and shivering. There was no life left in them. Their legs and arms kept shaking. Their hands were stiff when they arrived.

"Perhaps we wouldn't make ourselves ashamed in front of you if we asked to remove a little something from your fire?" they said when they arrived, but they got no response. And then the tribes cursed in their thoughts. Already their language had become different from that of Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar.

"Alas! We left our language behind. How did we do it? We're lost! Where were we deceived? We had only one language when we came to Tulan, and we had only one place of emergence and origin. We haven't done well," said all the tribes beneath the trees and bushes.

And then a person showed himself before Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar, and he spoke as a messenger of Xibalba:

"Truly, since you have your god, your nurturer, and he is the representation, the commemoration of your Maker and your Modeler, don't give the tribes their fire until they give something to Tohil. You don't want them to give anything to *you*. You must ask for what belongs to Tohil; to *him* must come what they give in order to get fire," said the Xibalban. He had wings like the wings of a bat.

"I am a messenger of those who made you and modeled you," said the Xibalban. So now they were happy; now they thought all the more of Tohil, Aulix, and Hacautz. When the Xibalban had spoken he made himself vanish right in front of them, without delay.

And so again the tribes arrived, again done in by the cold. Thick were the white hail, the blackening storm, and the white crystals. The cold was incalculable. They were simply overwhelmed. Because of the cold all the tribes were going along doubled over, groping along when they arrived in the presence of Jaguar Quitze, Jaguar Night, Not Right Now, and

Dark Jaguar. There was great pain in their hearts; they had covetous mouths and covetous faces.

And now they were coming as thieves before Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar:

"Wouldn't you take pity on us if we asked to remove a little something from your fire? Wasn't it found and wasn't it revealed that we had just one home and just one mountain when you were made, when you were modeled? So please take pity on us," they said.

"And what would you give us for taking pity on you?" they were asked.

"Well, we'd give you metal," said the tribes.

"We don't want metal," said Jaguar Quitze and Jaguar Night.

"Whatever might you want, if we may ask?" the tribes said then.

"Very well. First we must ask Tohil, and then we'll tell you," they were told next. And then they asked Tohil:

"What should the tribes give you, Tohil? They've come to ask for your fire," said Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar.

"Very well. You will tell them:

"Don't they want to be suckled on their sides and under their arms?"

THEY'VE COME TO ASK FOR YOUR FIRE: *This is a scepter held by a ruler, one of the forms taken by K'awil, the lowland Maya counterpart of Tohil, or Hurricane. On his forehead he wears an obsidian mirror with a burning torch emerging from it. His body and his one normal leg are omitted here, leaving only the leg that becomes a serpent (or lightning). This is a reconstruction from several Late Classic stucco reliefs at Palenque.*

DRAWING BY THE AUTHOR

Isn't it their heart's desire to embrace me? I, who am Tohil? But if there is no desire, then I'll not give them their fire," says Tohil. "When the time comes, not right now, they'll be suckled on their sides, under their arms," he says to you, 'you will say,' they were told, Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar, and then they spoke the word of Tohil.

"Very well. Let him suckle. And very well, we shall embrace him," said the tribes, when they answered and agreed to the word of Tohil. They made no delay but said "very well" right away, and then they received their fire.

After that they got warm, but there was one group that simply stole the fire, there in the smoke. This was the Bat House. Snake Tooth is the name of the god of the Cakchiquels, but it looks like a bat. They went right past in the smoke then, they sneaked past when they came to get fire. Those fiery Cakchiquels didn't ask for their fire. They didn't give themselves up in defeat, but all the other tribes were defeated when they gave themselves up to being suckled on their sides, under their arms.

And this is what Tohil meant by being "suckled": that all the tribes be cut open before him, and that their hearts be removed "through their sides, under their arms." This deed had not yet been attempted when Tohil saw into the middle of it, nor had Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar received fiery splendor and majesty.

WHEN THEY CAME AWAY FROM TULAN ZUYUA, they weren't eating. They observed a continuous fast. It was enough that they watch intently for the dawning, that they watch closely for the rising of the sun, taking turns at watching for the great star named sun carrier. This one came first before the sun when the sun was born, the newly risen sun carrier.

And there, always, they were facing the east, when they were there in the place named Tulan Zuyua. Their gods came from there. It wasn't really here that they received their fiery splendor and their dominion, but rather there that the tribes, great and small, were subjugated and humiliated. When they were cut open before Tohil, all the peoples gave their blood, their gore, their sides, their underarms. Fiery splendor came to them all at once at Tulan, along with great knowledge, and they achieved this in the darkness, in the night.

And now they came away, they tore themselves away from there. Now they left the east:

"Our home is not here. Let's go on until we see where we belong,"

said Tohil. He actually spoke to them, to Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar.

"It remains for you to give thanks, since you have yet to take care of bleeding your ears, yet to take stitches in your elbows. You must worship. This is your way of giving thanks before your god."

"Very well," they replied, then they bled their ears. They cried in their song about coming from Tulan. They cried in their hearts when they came away, when they made their departure from Tulan:

"Alas!

We won't be here when we see the dawn,
when the sun is born,
when the face of the earth is lit,"

they said.

AND THEN THEY CAME AWAY, JUST CAMPING ON THE ROAD. People were just camping there, each tribe slept and then got up again. And they were always watching for the star, the sign of the day. They kept this sign of the dawn in their hearts when they came away from the east. In unity they passed beyond the place named Great Hollow today.

And then they arrived on top of a mountain there. All the Quiché people got together there, along with the other tribes, and all of them held council there. The name the mountain has today is from when they took counsel together; Place of Advice is the name of the mountain. They got together and identified themselves there:

"Here am I: I am a Quiché person, and you there, you are Tams, this will be your name," the Tams were told. And then the Ilocs were told:

"You are the Ilocs, this will be your name. The three Quichés must not be lost. We are united in our word," they said when they fixed their names.

And then the Cakchiquels were named; their name became Cakchiquels. So, too, with the Rabinals; this became their name. It hasn't been lost today.

And then there are those of Bird House, as they are named today.

These are the names they named for one another. When they held council there, they were still waiting for the dawning, watching for the appearance of the rising star, the one that came before the sun when it was born.

"When we came away from Tulan, we broke ourselves apart," they told each other.

This is what kept weighing on their hearts, the great pain they went through: there was nothing to eat, nothing to feed on. They were just smelling the tips of their staffs as if they were thinking of eating them, but they weren't eating at all as they came.

And it isn't clear how they crossed over the sea. They crossed over as if there were no sea. They just crossed over on some stones, stones piled up in the sand. And they gave it a name: Stone Courses, Sand Banks was their name for the place where they crossed through the midst of the sea. Where the waters were divided, they crossed over.

And this is what weighed on their hearts when they took counsel: that they had nothing to eat. They had one beverage to drink, just one atole, which they brought up on the mountain named Place of Advice. And they also brought Tohil, Auilix, and Hacauitz.

Observing a great fast was Jaguar Quitze, with his wife; Red Sea Turtle is his wife's name.

Likewise doing it was Jaguar Night, with his wife, named Prawn House.

And Not Right Now was also there at the great fast, with his wife, named Water Hummingbird, along with Dark Jaguar, whose wife's name is Macaw House.

So these were the ones who fasted, there in the blackness, in the early dawn. Their sadness was great when they were there on the mountain named Place of Advice today. And their gods spoke there.

AND THEN TOHIL, ALONG WITH AUILIX AND HACAUITZ, SPOKE TO THEM, to Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar:

"Let's just go, let's just get up, let's not stay here. Please give us places to hide. It's nearly dawn. Wouldn't you look pitiful if we became plunder for warriors? Construct places where we can remain yours, you penitents and sacrificers, and give one place to each of us," they said when they spoke.

"Very well. Let's get out and search the forests," they all replied.

After that they packed each one of the gods on their backs.

And then Auilix went into the canyon named Concealment Canyon, as they called it, into the great canyon in the forest. Auilix's Place is the name today. He was left there, placed in the canyon by Jaguar Night, coming first in the sequence of placements.

And then Hacauitz was placed at the top of a great pyramid. Hacauitz is the name of the mountain today, and it became their citadel. So the god Hacauitz remained there, and Not Right Now stayed with his god. This was the second god to be hidden by them. Hacauitz didn't stay in the forest. It was on a bare mountain that Hacauitz was hidden.

And then came Jaguar Quitze. He arrived in the great forest there. Tohil was put into hiding by Jaguar Quitze; the mountain is called Tohil's Place today. Then they gave Concealment Canyon an epithet: Tohil Medicine. Masses of serpents and masses of jaguars, rattlesnakes, fer-de-lances were there in the forest where he was hidden by the penitents and sacrificers.

So they were there in unity: Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar. In unity they waited for the dawn, there on top of the mountain named Hacauitz.

Also, a short distance away, was the god of the Tams, together with the Ilocs. Tam Tribe is the name of the place where the god of the Tams was, there at the dawn. Net Weave Tribe is the name of the place where dawn came for the Ilocs. The god of the Ilocs was just a short distance away.

Also there were all the Rabinals, Cakchiquels, those of Bird House, all the tribes, small and great. In unity they stopped there, and in unity they had their dawning there. In unity they waited there for the rising of the great star named sun carrier.

"It will rise before the sun when the dawn comes," they said, and they were in unity there: Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar. There was no sleep, no rest for them. They cried their hearts and their guts out, there at the dawning and clearing, and so they looked terrible. Great sorrow, great anguish came over them; they were marked by their pain. They just stayed that way.

"Coming here hasn't been sweet for us. Alas! If we could only see the birth of the sun! What have we done? We all had one identity, one mountain, but we sent ourselves into exile," they said when they talked among themselves. They talked about sorrow, about anguish, about crying and wailing, since their hearts had not yet been set to rest by the dawn.

And these are the ones who did feel settled there: the gods who were in the canyons, in the forests, just out in the bromeliads, in the hanging mosses, not yet-set on pedestals. At first, Tohil, Auilix, and Hacauitz actually spoke. The greatness of their day and the greatness of their breath of spirit set them above all the other tribal gods. Their genius was manifold and their ways were manifold, their strategies. They were chilling, they were frightening in their very being and in the hearts of the tribes, whose thoughts were calmed by Jaguar Quitze, Jaguar Night, Not

Right Now, and Dark Jaguar. Their hearts did not yet harbor ill will toward the gods who had been taken up and carried away when they all came from Tulan Zuyua, there in the east, and who were now in the forest.

These were the dawning places: Tohil's Place, Auilix's Place, and Hacauitz, as they are called today. And this is where our grandfathers, our fathers had their sowing, their dawning.

This is what we shall explain next: the dawning and showing of the sun, moon, and stars.

AND HERE IS THE DAWNING AND SHOWING OF THE SUN, MOON, AND STARS. And Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar were overjoyed when they saw the sun carrier. It came up first. It looked brilliant when it came up, since it was ahead of the sun.

After that they unwrapped their copal incense, which came from the east, and there was triumph in their hearts when they unwrapped it. They gave their heartfelt thanks with three kinds at once:

Mixtam Copal is the name of the copal brought by Jaguar Quitze.

Cauiztan Copal, next, is the name of the copal brought by Jaguar Night.

Godly Copal, as the next one is called, was brought by Not Right Now.

The three of them had their copal, and this is what they burned as they incensed the direction of the rising sun. They were crying sweetly as they shook their burning copal, the precious copal.

IT WAS AHEAD OF THE SUN: *The band across the top is sky, with the glyph for Venus in the middle. Below Venus, lying on the earth, is the profile of the sun god. From a Late Classic Maya relief on a bench at Copán.*

DRAWING BY KARL TAUBE

After that they cried because they had yet to see and yet to witness the birth of the sun.

And then, when the sun came up, the animals, small and great, were happy. They all came up from the rivers and canyons; they waited on all the mountain peaks. Together they looked toward the place where the sun came out.

So then the puma and jaguar cried out, but the first to cry out was a bird, the parrot by name. All the animals were truly happy. The eagle, the white vulture, small birds, great birds spread their wings, and the penitents and sacrificers knelt down. They were overjoyed, together with the penitents and sacrificers of the Tams, the Ilocs.

And the Rabinals, Cakchiquels, those of Bird House.

And the Sweatbath House, Talk House, Quiba House, those of Yokes House.

And the Mexican Sovereigns—however many tribes there may be today. There were countless peoples, but there was just one dawn for all tribes.

And then the face of the earth was dried out by the sun. The sun was like a person when he revealed himself. His face was hot, so he dried out the face of the earth. Before the sun came up it was soggy, and the face of the earth was muddy before the sun came up. And when the sun had risen just a short distance he was like a person, and his heat was unbearable. Since he revealed himself only when he was born, it is only his reflection that now remains. As they put it in the ancient text,

"The visible sun is not the real one."

And then, all at once, Tohil, Auilix, and Hacauitz were turned to stone, along with the icons of the puma, jaguar, rattlesnake, fer-de-lance, which the White Sparkstriker took with him into the trees. Everywhere, all of them became stone when the sun, moon, and stars appeared. Perhaps we would have no relief from the voracious animals today—the puma, jaguar, rattlesnake, fer-de-lance—and perhaps it wouldn't even be our day today, if the original animals hadn't been turned to stone by the sun when he came up.

There was great happiness in the hearts of Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar. They were overjoyed when it dawned. The people on the mountain of Hacauitz were not yet numerous; just a few were there. Their dawning was there and they burned copal there, incensing the direction of the rising sun. They came from there: it is their own mountain, their own plain. Those named Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar came from there, and they began their increase on that mountain.

And that became their citadel, since they were there when the sun, moon, and stars appeared, when it dawned and cleared on the face of the earth, over everything under the sky.

AND THERE BEGAN THEIR SONG NAMED "CAMACU." They sang out the lament of their very hearts and guts. In their song they stated:

"Alas!
We were lost at Tulan!
We shattered ourselves!
We left our elder brothers behind!
Our younger brothers!
Where did they see the sun?
Where must they be staying,
now that the dawn has come?"

They were speaking of the penitents and sacrificers who were the Mexican people.

"Even though Tohil is his name, he is the same as the god of the Mexican people, who is named Yolcuat and Quitzalcuat. When we divided, there at Tulan, at Zuyua, they left with us, and they shared our identity when we came away," they said among themselves when they remembered their faraway brothers, elder and younger, the Mexican people whose dawn was there in the place named Mexico today.

And again, some of the people stayed there in the east; Sovereign Oloman is their name.

"We left them behind," they said. It was a great weight on their hearts, up there on Hacautitz. The Tams and Ilocs did likewise, except that they were in the forest. Tam Tribe is the name of the place where it dawned for the penitents and sacrificers of the Tams, with their god, the same Tohil. There was just one name for the god of all three divisions of the Quiché people.

And again, the name of the god of the Rabinals was the same. His name was only slightly changed; "One Toh" is the way the name of the god of the Rabinals is spoken. They say it that way, but it is meant to be in agreement with the Quichés and with their language.

And the language has differentiated in the case of the Cakchiquels, since their god had a different name when they came away from Tulan Zuyua. Snake Tooth is the name of the god of the Bat House, and they

speak a different language today. Along with their god, the lineages took their names; they are called Keeper of the Bat Mat and Keeper of the Dance Mat. Like their god, their language was differentiated on account of a stone, when they came from Tulan in the darkness. All the tribes were sown and came to light in unity, and each division was allocated a name for its god.

And now we shall tell about their stay and their sojourn there on the mountain. The four were there together, the ones named Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar. Their hearts cried out to Tohil, Aulix, and Hacautitz, who were now amid the bromeliads and hanging mosses.

AND HERE THEY BURN THEIR COPAL, and here also is the origin of the masking of Tohil.

And when they went before Tohil and Aulix, they went to visit them and keep their day. Now they gave thanks before them for the dawning, and now they bowed low before their stones, there in the forest. Now it was only a manifestation of his genius that spoke when the penitents and sacrificers came before Tohil, and what they brought and burned was not great. All they burned before their gods was resin, just bits of pitchy bark, along with marigolds.

And when Tohil spoke now it was only his genius. When the gods taught procedures to the penitents and sacrificers, they said this when they spoke:

"This very place has become our mountain, our plain. Now that we are yours, our day and our birth have become great, because all the peoples are yours, all the tribes. And since we are still your companions, even in your citadel, we shall give you procedures:

"Do not reveal us to the tribes when they burn with envy over us. They are truly numerous now, so don't you let us be hunted down, but rather give the creatures of the grasses and grains to us, such as the female deer and female birds. Please come give us a little of their blood, take pity on us. And set the pelts of the deer aside, save them. These are for disguises, for deception. They will become deerskin bundles, and they will also serve as our surrogates before the tribes. When you are asked:

"Where is Tohil?" then you will show them the deerskin bundle, yet you won't be giving yourselves away. And there is still more for you to do. You will become great in your very being. Defeat all the tribes. They

must bring blood and lymph before us, they must come to embrace us. They belong to us already," said Tohil, Auilix, and Hacauitz. They had a youthful appearance when they saw them, when they came to burn offerings before them.

So then began the hunting of the young of all the birds and deer; they were taken in the hunt by the penitents and sacrificers.

And when they got hold of the birds and fawns, they would then go to anoint the mouth of the stone of Tohil or Auilix with the blood of the deer or bird. And the bloody drink was drunk by the gods. The stone would speak at once when the penitents and sacrificers arrived, when they went to make their burnt offerings.

They did the very same thing before the deerskin bundles: they burned resin, and they also burned marigolds and stevia. There was a deerskin bundle for each of the gods, which was displayed there on the mountain.

They didn't occupy their houses during the day, but just walked in the mountains. And this was their food: just the larva of the yellow jacket, the larva of the wasp, and the larva of the bee, which they hunted. As yet there wasn't anything good to eat or good to drink. Also, it wasn't obvious how to get to their houses, nor was it obvious where their wives stayed.

And the tribes were already densely packed, settling down one by one, with each division of a tribe gathering itself together. Now they were crowding the roads; already their roadways were obvious.

As for Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar, it wasn't obvious where they were. When they saw the people of the tribes passing by on the roads, that was when they would get up on the mountain peaks, just crying out with the cry of the coyote and the cry of the fox. And they would make the cries of the puma and jaguar, whenever they saw the tribes out walking in numbers. The tribes were saying:

"It's just a coyote crying out," and "Just a fox."

"Just a puma. Just a jaguar."

In the minds of all the tribes, it was as if humans weren't involved. They did it just as a way of decoying the tribes; that was what their hearts desired. They did it so that the tribes wouldn't get really frightened just yet; that was what they intended when they cried out with the cry of the puma and the cry of the jaguar. And then, when they saw just one or two people out walking, they intended to overwhelm them.

Each day, when they came back to their houses and wives, they brought just the same things—yellow jacket larvae, wasp larvae, and bee larvae—and gave them to their wives, each day. And when they went before Tohil, Auilix, and Hacauitz, they thought to themselves:

"They are Tohil, Auilix, and Hacauitz, yet we only give them the blood

of deer and birds, we only take stitches in our ears and our elbows when we ask for our strength and our manhood from Tohil, Auilix, and Hacauitz. Who will take care of the death of the tribes? Should we just kill them one by one?" they said among themselves.

And when they went before Tohil, Auilix, and Hacauitz, they took stitches in their ears and their elbows in front of the gods. They spilled their blood, they poured gourdfuls into the mouths of the stones. But these weren't really stones: each one became like a boy when they arrived, happy once again over the blood.

And then came a further sign as to what the penitents and sacrificers should do:

"You must win a great many victories. Your right to do this came from over there at Tulan, when you brought us here," they were told. Then the matter of the suckling was set forth, at the place called Stagger, and the blood that would result from it, the rainstorm of blood, also became a gift for Tohil, along with Auilix and Hacauitz.

Now here begins the abduction of the people of the tribes by Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar.

AND THEN COMES THE KILLING OF THE TRIBES. This is how they died: when there was just one person out walking, or just two were out walking, it wasn't obvious when they took them away.

After that they went to cut them open before Tohil and Auilix.

After that, when they had offered the blood, the skull would be placed in the road. They would roll it onto the road. So the tribes were talking:

"A jaguar has been eating," was all that was said, because their tracks were like a jaguar's tracks when they did their deed. They did not reveal themselves. Many people were abducted.

It was actually a long time before the tribes came to their senses:

"If it's Tohil and Auilix who are after us, we have only to search for the penitents and sacrificers. We'll follow their tracks to wherever their houses are," said all those of the tribes, when they shared their thoughts among themselves.

After that, they began following the tracks of the penitents and sacrificers, but they weren't clear. They only saw the tracks of the deer, the tracks of the jaguar. The tracks weren't clear, nothing was clear. Where they began the tracks were merely those of animals. It was as if the tracks were there for the sole purpose of leading them astray. The way was not clear:

It would get cloudy.
It would get dark and rainy.
It would get muddy, too.
It would get misty and drizzly.

That was all the tribes could see in front of them, and their search would simply make them weary at heart. Then they would give up.

Because Tohil, Aulix, and Hacautitz were great in their very being, they did this for a long time, there on the mountain. They did their killing on the frontiers of the tribes when the abductions began; they singled them out and cut them down. They would seize the people of the tribes in the roads, cutting them open before Tohil, Aulix, and Hacautitz.

And the boys hid there on the mountain. Tohil, Aulix, and Hacautitz had the appearance of three boys when they went out walking; these were simply the spirit familiars of the stones. There was a river. They would bathe there on the bank, just as a way of revealing themselves, and this gave the place its name. The name of the river came to be Tohil's Bath, and the tribes saw them there many times. They would vanish the moment they were seen by the tribes.

Then the news spread as to the whereabouts of Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar, and this is when the tribes realized how they were being killed.

FIRST THE TRIBES TRIED TO PLAN THE DEFEAT OF TOHIL, AULIX, AND HACAUTITZ. All the penitents and sacrificers of the tribes spoke to the others. They roused and summoned one another, all of them. Not even one or two divisions were left out. All of them converged and presented themselves, then they shared their thoughts. And they said, as they questioned one another:

"What would assure the defeat of the Cauecs, the Quiché people? Our vassals have met their ends because of them. Isn't it clear that our people have been lost because of them? What if they finish us off with these abductions?"

"Let it be this way: if the fiery splendor of Tohil, Aulix, and Hacautitz is so great, then let this Tohil become our god! Let him be captured! Don't let them defeat us completely! Don't we constitute a multitude of people? And as for the Cauecs, there aren't as many of them," they said, when all of them had assembled. Some among the tribes also said this when they spoke:

"Who could be bathing every day at the riverbank? If it's Tohil, Aulix, and Hacautitz, then we can defeat them ahead of time. Let the defeat of the penitents and sacrificers begin right there!" some of them said, and then they spoke further:

"How shall we defeat them?" And then they said:

"Let this be our means for defeating them: since they present the appearance of adolescent boys at the river, let two maidens go there. Let them be choice maidens who radiate preciousness, so that when they go they'll be desirable," they said.

"Very well. So we'll just search for two perfect maidens," the others replied. And then they searched among their daughters for those who were truly radiant maidens. Then they gave the maidens instructions:

"You must go, our dear daughters. Go wash clothes at the river, and if you should see three boys, undress yourselves in front of them. And if their hearts should desire you, you will titillate them. When they say to you:

'We're coming after you,' then you are to say:

'Yes.' And then you will be asked:

'Where do you come from? Whose daughters are you?' When they say that, you are to answer them:

'We are the daughters of lords, so let a sign be forthcoming from you.' Then they should give you something. If they like your faces you must really give yourselves up to them. And if you do not give yourselves up, then we shall kill you. We'll feel satisfied when you bring back a sign, since we'll think of it as proof that they came after you," said the lords, instructing the two maidens.

Here are their names: Lust Woman is the name of the one maiden, and Wailing Woman is the name of the other.

AND THEY SENT THE TWO OF THEM, NAMED LUST WOMAN AND WAILING WOMAN, over to the place where Tohil, Aulix, and Hacautitz bathed. All the tribes knew about this.

And then they went off. They were dressed up, looking truly beautiful, when they went to the place where Tohil bathed. They were carrying what looked like their wash when they went off. Now the lords were pleased over having sent their two daughters there.

And when they arrived at the river, they began to wash. They undressed themselves, both of them. They were on the rocks, on their hands and knees, when Tohil, Aulix, and Hacautitz came along. They got

to the bank of the river and just barely glanced at the two maidens washing there, and the maidens got a sudden scare when Tohil and the others arrived. They did not go lusting after the two maidens. Then came the questioning:

"Where do you come from?" the two maidens were asked. "What do you intend by coming here, to the bank of our river?" they were also asked.

"We were sent here by the lords, so we came. The lords told us:

'Go see the faces of Tohil and the others, and speak to them,' the lords told us, 'and also, there must come a sign as to whether you really saw their faces. Go!' is what we were told," said the two maidens, explaining their errand.

But this is what the tribes had intended: that the maidens should be violated by the spirit familiars of Tohil and the others. Then Tohil, Aulix, and Hacautz spoke, answering the two maidens named Lust Woman and Wailing Woman:

"Good. Let a sign of our word go with you. But you must wait for it, then give it directly to the lords," they were told.

And then Tohil and the others plotted with the penitents and sacrificers. Jaguar Quitze, Jaguar Night, and Not Right Now were told:

"You must inscribe three cloaks, inscribe the signs of your being. They're for the tribes; they'll go back with the maidens who are washing. Give them to the maidens," Jaguar Quitze, Jaguar Night, and Not Right Now were told.

After that, they inscribed all three of them. Jaguar Quitze wrote first: the jaguar became his image, he inscribed it on the face of his cloak.

Then there was Jaguar Night: the eagle was now his image, he inscribed it on the face of his cloak.

The next to write was Not Right Now: swarms of yellow jackets, swarms of wasps were his images, his figures; he inscribed them on the face of his cloak. Then their figures were complete, all three of them; they had done the threefold inscription.

After that, when Jaguar Quitze, Jaguar Night, and Not Right Now went to give the cloaks to those who were named Lust Woman and Wailing Woman, they spoke to them:

"Here is the proof of your word. When you come before the lords you will say:

'Tohil really spoke to us, and here is the sign we've brought back,' you'll tell them, and give them the cloaks to try on," the maidens were told when they were given their instructions.

So then they went back, taking the inscribed cloaks.

And when they arrived, the lords were happy the moment they spotted what they had asked for, hanging from the arms of the maidens.

"Didn't you see the face of Tohil?" they were asked.

"See it we did," said Lust Woman and Wailing Woman.

"Very good. You've brought back some sort of sign. Isn't that so?" said the lords, since there seemed to be signs of their sin—or so thought the lords. So then they were shown the inscribed cloaks by the maidens: one with a jaguar, one with an eagle, and one with yellow jackets and wasps figured on the inside, on a smooth surface.

And they loved the way the cloaks looked. They costumed themselves. The one with the jaguar figured on it didn't do anything; it was the first to be tried on by a lord.

And when another lord costumed himself with the second inscribed cloak, with the eagle figured on it, he just felt good inside it. He turned around in front of them, unfurling it in front of all of them.

And then came the third inscribed cloak to be tried on by a lord, he costumed himself with the one that had yellow jackets and wasps inside it.

And then he started getting stung by the yellow jackets and wasps. He couldn't endure it, he couldn't stand the stings of the insects. That lord yelled his mouth off over the insects, mere written images, the figures of Not Right Now. It was the third inscription that defeated them.

And then the maidens named Lust Woman and Wailing Woman were reprimanded by the lords:

"How did you get these things you brought back? Where did you go to get them, you tricksters!" the maidens were told when they were reprimanded.

Again, all the tribes were defeated because of Tohil. This is what they had intended: that Tohil would be tempted to go after the maidens. It then became the profession of Lust Woman and Wailing Woman to bark shins; the tribes continued to think of them as temptresses.

So the defeat of Jaguar Quitze, Jaguar Night, and Not Right Now was not brought about, since they were people of genius.

And then all the tribes plotted again:

"How are we going to beat them? They are truly great in their very being," they said when they shared their thoughts.

"Even so, we'll invade them and kill them. Let's fit ourselves out with weapons and shields. Aren't we a multitude? There won't even be one or two of them left," they said when they shared their thoughts. All the tribes fitted themselves out. There were masses of killers, once the killers of all the tribes had joined together.

And as for Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar, they were there on the mountain. Hacautiz is the name of the mountain where they were, and those spirit boys of theirs were hidden there on the mountain. They were not a numerous people then; their numbers were not equal to the numbers of the tribes. There were just a few of them on the mountain, their fortress, so when it was said that the tribes had planned death for them, all of them gathered together. They held a council; they all sent for one another.

AND HERE IS THE JOINING TOGETHER OF ALL THE TRIBES, all decked out now with weapons and shields. Their metal ornaments were countless, they looked beautiful, all the lords, the men. In truth, they were just making talk, all of them. In truth, they would become our captives.

"Since there is a Tohil, and since he is a god, let's celebrate his day—or let's make him our prize!" they said among themselves. But Tohil already knew about it, and Jaguar Quitze, Jaguar Night, and Not Right Now also knew about it. They had heard about it while it was being plotted, since they were neither asleep nor at rest.

So then all the lance-bearing warriors of the tribes were armed.

After that, all the warriors got up during the night, in order to enter

THEY WOULD BECOME OUR CAPTIVES: *This warrior has bound his prisoner's arms behind his back and stripped him of nearly all his paraphernalia. From the Dresden Codex.*

DRAWING BY CARLOS A. VILLACORTA

our very midst. They set off, but they never arrived. They just fell asleep on the way, all those warriors.

And then they were defeated again by Jaguar Quitze, Jaguar Night, and Not Right Now, since every last one of them fell asleep in the road. Now they couldn't feel a thing. A multitude slept, all of them, and that's when things got started. Their eyebrows were plucked out, along with their beards.

And then the metal was undone from their cloaks, along with their headdresses.

And their necklaces came off too, and then the necks of their staffs. Their metal was taken just to cause them a loss of face, and the plucking was done just to signify the greatness of the Quiché.

After that, they woke up. Right away they reached for their headdresses, along with the necks of their staffs. There was no metal on their cloaks and headdresses.

"How could it have been taken from us? Who could have plucked us? Where did they come from? Our metal has been stolen!" said all the warriors.

"Perhaps it's those tricksters who've been abducting people! But it's not over with. Let's not get frightened by them. Let's enter their very citadel! That's the only way we'll ever see our metal and make it ours again!" said all the tribes, but even so, they were just making talk, all of them.

The hearts of the penitents and sacrificers were content, there on the mountain, but even so, Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar were making great plans.

AND THEN JAGUAR QUITZE, JAGUAR NIGHT, NOT RIGHT NOW, AND DARK JAGUAR HAD A PLAN. They made a fence at the edge of their citadel. They just made a palisade of planks and stakes around their citadel.

Next they made manikins; it was as if they had made people. Next they lined them up on the parapet. They were even equipped with weapons and shields. Headdresses were included, with metal on top, and cloaks were included. But they were mere manikins, mere woodcarvings. They used the metal that belonged to the tribes, which they had gone to get in the road. This is what they used to decorate the manikins. They surrounded the citadel.

And then they asked Tohil about their plan:

"What if we die, and what if we're defeated?" They spoke straight from their hearts before Tohil.

"Do not grieve. I am here. And here is what you will use on them. Do not be afraid," Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar were told, and then the matter of the yellow jackets and wasps was set out.

And when they had gone to get these insects and come back with them, they put them inside four large gourds, which were placed all around the citadel. The yellow jackets and wasps were shut inside the gourds. These were their weapons against the tribes.

And they were spied upon and watched from hiding; their citadel was studied by the messengers of the tribes.

"There aren't many of them," they said, but when they came to look it was only the manikins, the woodcarvings, that were moving, with weapons and shields in their hands. They looked like real people, they looked like real killers when the tribes saw them.

And all the tribes were happy when they saw there weren't many of them. The tribes themselves were in crowds; there were countless people, warriors and killers, the assassins of Jaguar Quitze, Jaguar Night, and Not Right Now, who were there on the mountain called Hacautiz. This is where they were when they were invaded. Here we shall tell about it.

AND THESE ARE THE ONES WHO WERE THERE: JAGUAR QUITZE, JAGUAR NIGHT, NOT RIGHT NOW, AND DARK JAGUAR. They were in unity on the mountain with their wives and children.

And then all the warriors came, the killers, and it was nothing less than eight hundred score, or even thirty times eight hundred people who surrounded the citadel. They were bellowing, bristling with weapons and shields, rending their mouths with howling and growling, bellowing, yelling, whistling through their hands when they came up below the citadel. But the penitents and sacrificers had no fear; they just enjoyed the spectacle from the parapet of the stockade. They were lined up with their wives and children. Their hearts were content, since the tribes were merely making talk.

And then they climbed up the mountainside, and now they were just a little short of the edge of the citadel.

And then the gourds were opened up—there were four of them around the citadel—and the yellow jackets and wasps were like a cloud of smoke when they poured out of each of the gourds. And the warriors

were done in, with the insects landing on their eyes and landing on their noses, on their mouths, their legs, their arms. The insects went after them wherever they were, they overtook them wherever they were. There were yellow jackets and wasps everywhere, landing to sting their eyes. They had to watch out for whole swarms of them, there were insects going after every single person. They were dazed by the yellow jackets and wasps. No longer able to hold on to their weapons and shields, they were doubling over and falling to the ground, stumbling. They fell down the mountainside.

And now they couldn't feel a thing when they were hit with arrows and cut with axes. Now Jaguar Quitze and Jaguar Night could even use sticks; even their wives became killers.

Now some of them turned away, then all the tribes just took off running. The first to be overtaken were finished off, killed, and it wasn't just a few people who died. For those who didn't die the chase was carried into their very midst when the insects caught up with them. There were no manly deeds for them to do, since they no longer carried weapons and shields.

Then all the tribes were conquered. Now the tribes humbled themselves before Jaguar Quitze, Jaguar Night, and Not Right Now:

"Take pity on us! Don't kill us!" they said.

"Very well. Although you were destined to join the dead, you will be payers of tribute for as long as there are days and as long as there is light," they were told.

Such was the defeat of all the tribes by our first mother-fathers. It was done there on the mountain named Hacautiz today. This is where they first began. They grew, they multiplied, they had daughters, they had sons on Hacautiz. They were happy, once they had beaten all the tribes, who were defeated there on the mountain.

In this way they accomplished the defeat of the tribes, all the tribes.

After that, their hearts were content. They informed their sons that their death was approaching. They very much intended to be taken by death.

NOW THIS IS WHERE WE SHALL TELL ABOUT THE DEATH OF JAGUAR QUITZE, JAGUAR NIGHT, NOT RIGHT NOW, AND DARK JAGUAR, as they are named. Since they knew about their death and disappearance, they left instructions with their sons. They weren't sickly yet, they weren't gasping for breath when they left their word with their sons.

These are the names of their sons:

Jaguar Quitze begot these two: Noble Two was the name of the first-born and Noble Raiment was the name of the second of the sons of Jaguar Quitze, the grandfather and father of the Cauecs.

And again, Jaguar Night begot two. These are their names: Noble Acul was the name of his first son, and the other was called Noble Acutec, the second son of Jaguar Night, of the Greathouses.

And Not Right Now begot just one son, named Noble Lord.

These three had sons, but Dark Jaguar had no son. They were all true penitents and sacrificers, and these are the names of their sons, with whom they left instructions. They were united, the four of them together. They sang of the pain in their hearts, they cried their hearts out in their singing. "Camacu" is the name of the song they sang.

And then they advised their sons:

"Our dear sons: we are leaving. We are going back. We have enlightened words, enlightened advice to leave with you—and with you who have come from faraway mountains, our dear wives," they told their wives. They advised each one of them:

"We are going back to our own tribal place. Again it is the time of our Lord Deer, as is reflected in the sky. We have only to make our return. Our work has been done, our day has been completed. Since you know this, neither forget us nor put us aside. You have yet to see your own home and mountain, the place of your beginning.

"Let it be this way: you must go. Go see the place where we came from," were the words they spoke when they gave their advice.

And then Jaguar Quitze left a sign of his being:

"This is for making requests of me. I shall leave it with you. Here is your fiery splendor. I have completed my instructions, my counsel," he said when he left the sign of his being, the Bundle of Flames, as it is called. It wasn't clear just what it was; it was wound about with coverings. It was never unwrapped. Its sewing wasn't clear because no one looked on while it was being wrapped.

In this way they left instructions, and then they disappeared from there on the mountain of Hacauitz. Their wives and children never saw them again. The nature of their disappearance was not clear. But whatever the case with their disappearance, their instructions were clear, and the bundle became precious to those who remained. It was a memorial to their fathers. Immediately they burned offerings before this memorial to their fathers.

When the lords began their generation of the people, the Cauecs took

IT WAS WOUND ABOUT WITH COVERINGS: *The rounded shape and large knot on top are characteristic of lowland Maya sacred bundles. From a Late Classic vase.*

DRAWING REPRODUCED BY PERMISSION OF MICHAEL D. COE AND THE GROLIER CLUB

their start from Jaguar Quitze, the grandfather and father; his sons, named Noble Two and Noble Raiment, were not lost.

Such was the death of all four of our first grandfathers and fathers. When they disappeared their sons remained there on the mountain of Hacauitz; their sons stayed there for a while. As for all the tribes, it was now their day to be broken and downtrodden. They no longer had any splendor to them, though they were still numerous.

All those on Hacauitz gathered on each day that was for the remembrance of their fathers. For them, the day of the bundle was a great one. They could not unwrap it; for them it stayed bundled—the Bundle of Flames, as they called it. It was given this epithet, this name when it was left in their keeping by their fathers, who made it just as a sign of their being.

Such was the disappearance and loss of Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar, the first people to come from beside the sea, from the east. They came here in ancient times. When they died they were already old. They had a reputation for penitence and sacrifice.

PART FIVE

AND THEN THEY REMEMBERED WHAT HAD BEEN SAID ABOUT THE EAST. This is when they remembered the instructions of their fathers. The ancient things received from their fathers were not lost. The tribes gave them their wives, becoming their fathers-in-law as they took wives. And there were three of them who said, as they were about to go away:

"We are going to the east, where our fathers came from," they said, then they followed their road. The three of them were representative sons:

Noble Two was the name of the son of Jaguar Quitze who represented all the Cauecs.

Noble Acutec was the name of the son of Jaguar Night who served as the sole representative of the Greathouses.

Noble Lord was the name of the only son of Not Right Now, representing the Lord Quichés.

So these are the names of those who went there beside the sea. There were only three who went, but they had skill and knowledge. Their being was not quite that of mere humans. They advised all their brothers, elder and younger, who were left behind. They were glad to go:

"We're not dying. We're coming back," they said when they went, yet it was these same three who passed over the sea.

And then they arrived in the east; they went there to receive lordship. Next comes the name of the lord with dominion over those of the east, where they arrived.

AND THEN THEY CAME BEFORE THE LORD NAMED NACXIT, the great lord and sole judge over a populous domain.

And he was the one who gave out the signs of lordship, all the emblems; the signs of the Keeper of the Mat and the Keeper of the Reception House Mat were set forth.

And when the signs of the splendor and lordship of the Keeper of the Mat and Keeper of the Reception House Mat were set forth, Nacxit gave a complete set of the emblems of lordship. Here are their names:

Canopy, throne.

Bone flute, bird whistle.

Sparkling powder, yellow ocher.

Puma's paw, jaguar's paw.

Head and hoof of deer.
Leather armband, snail-shell rattle.
Tobacco gourd, food bowl.
Parrot feathers, egret feathers.

So they came away bringing all of these. Then, from beside the sea, they brought back the writing of Tulan, the writing of Zuyua. They spoke of their investiture in their signs, in their words.

Also, after they had reached their citadel, named Hacautitz, all the Tams and Ilocs gathered there. All the tribes gathered themselves together; they were happy. When Noble Two, Noble Acutec, and Noble Lord came back, they resumed their lordship over the tribes. The Rabinals, the Cakchiquels, and those of Bird House were happy. Only the signs of the greatness of lordship were revealed before them. Now the lords became great in their very being; when they had displayed their lordship previously, it was incomplete.

This was when they were at Hacautitz. The only ones with them were all those who had originally come from the east. And they spent a long time there on that mountain. Now they were all numerous.

And the wives of Jaguar Quitze, Jaguar Night, and Not Right Now died there. Then they came away, they left their mountain place behind. They sought another mountain where they could settle. They settled countless mountains, giving them epithets and names. Our first mothers and our first fathers multiplied and gained strength at those places, according to what the people of ancient times said when they told about the abandonment of their first citadel, named Hacautitz.

AND THEN THEY CAME TO A PLACE WHERE THEY FOUNDED A CITADEL NAMED THORNY PLACE. They spent a long time there in that one citadel. They had daughters and sons while they were there. There were actually four mountains, but there came to be a single name for the whole town. Their daughters and sons got married. They just gave them away. They accepted mere favors and gifts as sufficient payment for their daughters. They did only what was good.

Then they examined each division of the citadel. Here are the names of the divisions of Thorny Place: Dry Place, Bark House, Boundary Marker, and Stronghold are the names of the mountains where they stayed.

And this is when they looked out over the mountains of their citadel. They were seeking a further mountain, since all the divisions had become more numerous. But those who had brought lordship from the east had

died by now; they had become old in the process of going from one citadel to another. But their faces did not die; they passed them on.

They went through a great deal of pain and affliction; it was a long time before the grandfathers and fathers found their citadel. Here is the name of the citadel where they arrived.

AND BEARDED PLACE IS THE NAME OF THE MOUNTAIN OF THEIR CITADEL. They stayed there and they settled down there.

And they tested their fiery splendor there. They ground their gypsum, their plaster, in the fourth generation of lords. It was said that Noble Roofree ruled when Nine Deer was the Lord Minister, and then the lords named Noble Sweatbath and Iztayul reigned as Keeper of the Mat and Keeper of the Reception House Mat. They reigned there at Bearded Place. It was through their works that it became an excellent citadel.

The number of great houses only reached three, there at Bearded Place. There were not yet a score and four great houses, but only three of them:

Just one Cauec great house.

And just one great house for the Greathouses.

And finally, just one for the Lord Quichés.

But the three were housed in just two buildings, one in each of the two divisions of the citadel.

This is the way it was when they were at Bearded Place:

They were of just one mind: there was no evil for them, nor were there difficulties.

Their reign was all in calm: there were no quarrels for them, and no disturbances.

Their hearts were filled with a steady light: there was nothing of stupidity and nothing of envy in what they did.

Their splendor was modest: they caused no amazement, nor had they grown great.

And then they tested themselves. They excelled in the Shield Dance, there at Bearded Place. They did it as a sign of their sovereignty. It was a sign of their fiery splendor and a sign of their greatness.

When it was seen by the Ilocs, the Ilocs began to foment war. It was their desire that the Lord Noble Sweatbath be murdered, and that the other lord be allied with them. It was the Lord Iztayul they wanted to persuade; the Ilocs wanted him as their disciple in committing murder. But their jealous plotting behind the back of the Lord Noble Sweatbath

THEY WERE CAPTURED AND
THEY WERE MADE PRISONERS: A

failed to work out. They just wanted it over with, but the lord wasn't killed by the Ilocs on the first try.

Such were the roots of disturbances, of tumult and war. First they invaded the citadel, the killers were on the move. What they wanted was to obliterate the very identity of the Quichés. Only then, they thought, could they alone have sovereignty, and it was for this alone that they came to kill. They were captured and they were made prisoners. Not many of them ever got their freedom again.

And then began the cutting of flesh. They cut the Ilocs open before the gods. This was in payment for their wrongs against Lord Noble Sweatbath. And many others went into bondage; they were made into slaves and serfs. They had simply given themselves up in defeat by fomenting war against the lord and against the canyon and the citadel. What their hearts had desired was the destruction and disintegration of the very identity of the Quiché lord, but it did not come to pass.

In this way it came about that people were cut open before the gods. The shields of war were made then; it was the very beginning of the fortification of the citadel at Bearded Place. The root of fiery splendor was implanted there, and because of it the reign of the Quiché lords was truly great. They were lords of singular genius. There was nothing to humble them; nothing happened to make fools of them or to ruin the greatness of their reign, which took root there at Bearded Place.

The penance done for the gods increased there, striking terror again, and all the tribes were terrified, small tribes and great tribes. They witnessed the arrival of people captured in war, who were cut open and killed for the splendor and majesty of Lord Noble Sweatbath and Lord Iztayul, along with the Greathouses and the Lord Quichés. There were only three branches of kin there at the citadel named Bearded Place.

And it was also there that they began feasting and drinking over the blossoming of their daughters. This was the way the ones they named the "Three Great Houses" stayed together. They drank their drinks there and ate their corn there, the payment for their sisters, payment for their daughters. There was only happiness in their hearts when they did it. They ate, they feasted inside their palaces.

"This is just our way of being thankful and grateful that we have good news and good tidings. It is the sign of our agreements about the daughters and sons born to our women," they said.

Epithets were bestowed there, and the lineages, the allied tribes, the principalities gave themselves names there.

"We are intermarried: we Cauacs, we Greathouses, and we Lord Quichés," said those of the three lineages and the three great houses. They spent a long time there at Bearded Place, and then they sought again and saw another citadel. They left Bearded Place behind.

AND THEN THEY GOT UP AND CAME TO THE CITADEL OF ROTTEN CANE, as the name is spoken by the Quichés. The Lords Noble Sweatbath and Plumed Serpent came along, together with all the other lords. There had been five changes and five generations of people since the origin of light, the origin of continuity, the origin of life and of humankind.

And they built many houses there.

And they also built houses for the gods, putting these in the center of the highest part of the citadel. They came and they stayed.

After that their domain grew larger; they were more numerous and

more crowded. Again they planned their great houses, which had to be regrouped and sorted out because of their growing quarrels. They were jealous of one another over the prices of their sisters and daughters, which were no longer a matter of mere food and drink.

So this was the origin of their separation, when they quarreled among themselves, disturbing the bones and skulls of the dead. Then they broke apart into nine lineages, putting an end to quarrels over sisters and daughters. When the planning of the lordships was done, the result was a score and four great houses.

It was a long time ago when they all came up onto their citadel, building a score and four palaces there in the citadel of Rotten Cane. That was the citadel blessed by the lord bishop after it had been abandoned.

They achieved glory there. Their marvelous seats and cushions were arranged; the varieties of splendor were sorted out for each one of the lords of the nine lineages. One by one they took their places:

The nine lords of the Cauecs.

The nine lords of the Greathouses.

The four lords of the Lord Quichés.

The two lords of the Zaquics.

They became numerous. Those who were in the following of a given lord were also numerous, but the lord came first, at the head of his vassals. There were masses, masses of lineages for each of the lords. We shall name the titles of the lords one by one, for each of the great houses.

AND HERE ARE THE TITLES OF THE LORDS WHO LED THE CAUECS, beginning with the first in rank:

Keeper of the Mat.

Keeper of the Reception House Mat.

Keeper of Tohil.

Keeper of the Plumed Serpent.

Master of Ceremonies for the Cauecs.

Councilor of the Stores.

Quehnay Emissary.

Councilor in the Ball Court.

Mother of the Reception House.

So these are the lords who led the Cauecs, nine lords with their palaces ranged around, one for each of them. And now to show their faces . . .

AND NOW THESE ARE THE LORDS WHO LED THE GREATHOUSES, beginning with the first lord:

Lord Minister.

Lord Herald.

Minister of the Reception House.

Chief of the Reception House.

Mother of the Reception House.

Master of Ceremonies for the Greathouses.

Lord Auilix.

Yacolatam, meaning the "corner of the mat" or the zaclatol.

Chief Yeoltux Emissary.

So there were nine lords who led the Greathouses.

AND NOW THESE ARE THE LORD QUICHÉS. Here are the titles of the lords:

Herald.

Lord Emissary.

Lord Master of Ceremonies for the Lord Quichés.

Lord Hacauitz.

Four lords led the Lord Quichés, with their palaces ranged around.

AND THERE WERE ALSO TWO LINEAGES OF ZAQUIC LORDS:

Lord Corntassel House.

Minister for the Zaquics.

There was just one palace for these two lords.

Such was the arrangement of the score and four lords, and there came to be a score and four great houses as well.

THEN SPLENDOR AND MAJESTY GREW AMONG THE QUICHÉ. The greatness and weight of the Quiché reached its full splendor and majesty with the surfacing and plastering of the canyon and citadel. The tribes came, whether small or great and whatever the titles of their lords,

adding to the greatness of the Quiché. As splendor and majesty grew, so grew the houses of gods and the houses of lords.

But the lords could not have accomplished it, they could not have done the work of building their houses or the houses of the gods, were it not for the fact that their vassals had become numerous. They neither had to lure them nor did they kidnap them or take them away by force, because each one of them rightfully belonged to the lords. And the elder and younger brothers of the lords also became populous.

Each lord led a crowded life, crowded with petitions. The lords were truly valued and had truly great respect. The birthdays of the lords were made great and held high by their vassals. Those who lived in the canyons and those who lived in the citadels multiplied then. Even so they would not have been numerous, had not all the tribes arrived to give themselves up.

And when war befell their canyons and citadels, it was by means of their genius that the Lord Plumed Serpent and the Lord Noble Sweatbath blazed with power. Plumed Serpent became a true lord of genius:

On one occasion he would climb up to the sky; on another he would go down the road to Xibalba.

On another occasion he would be serpentine, becoming an actual serpent.

On yet another occasion he would make himself aquiline, and on another feline; he would become like an actual eagle or a jaguar in his appearance.

On another occasion it would be a pool of blood; he would become nothing but a pool of blood.

Truly his being was that of a lord of genius. All the other lords were fearful before him. The news spread; all the tribal lords heard about the existence of this lord of genius.

And this was the beginning and growth of the Quiché, when the Lord Plumed Serpent made the signs of greatness. His face was not forgotten by his grandsons and sons. He didn't do these things just so there would be one single lord, a being of genius, but they had the effect of humbling all the tribes when he did them. It was just his way of revealing himself, but because of it he became the sole head of the tribes.

This lord of genius named Plumed Serpent was in the fourth generation of lords; he was both Keeper of the Mat and Keeper of the Reception House Mat.

And so he left signs and sayings for the next generation. They achieved splendor and majesty, and they, too, begot sons, making the sons still

HE WOULD MAKE HIMSELF . . .

FELINE: A dancing shaman transforms himself into a jaguar. From a Late Classic Maya vase from Altar de Sacrificios.

DRAWING BY KARL TAUBE

more populous. Tepepul and Iztayul were begotten; they merely served out their reign, becoming the fifth generation of lords. They begot another generation of lords.

AND HERE ARE THE NAMES OF THE SIXTH GENERATION OF LORDS. There were two great lords; they were fiery. Quicab was the name of one lord; Cauizimah was the name of the other.

And Quicab and Cauizimah did a great deal in their turn. They added to the greatness of the Quiché because they truly had genius. They crushed and they shattered the canyons and citadels of the tribes, small and great—the ones that had citadels among them in ancient times, nearby:

There was a mountain place of the Cakchiquels, called Nettles Heights today.

And also a mountain place of the Rabinals, Place of Spilt Water.

And a mountain of the Caoques, Plaster House.

And then a citadel of the White Earths, Hot Springs Heights.
Under Ten, Front of the Monument, and Willow Tree.

They all hated Quicab. They made war, but in fact they were brought down, they were shattered, these canyons, these citadels of the Rabinals, Cakchiquels, White Earths. All the tribes went down on their faces or flat on their backs. The warriors of Quicab kept up the killing for a long time, until there were only one or two groups, from among all the enemies, who hadn't brought tribute. Their citadels fell and they brought tribute to Quicab and Cauizimah. Their lineages came to be bled, shot full of arrows at the stake. Their day came to nothing, their heritage came to nothing.

Projectiles alone were the means for breaking the citadels. All at once the earth itself would crack open; it was as if a lightning bolt had shattered the stones. In fear, the members of one tribe after another went before the gum tree, carrying in their hands the signs of the citadels, with the result that a mountain of stones is there today. Only a few of these aren't cut stones; the rest look as though they had been split with an axe. The result is there on the plain named Petatayub; it is obvious to this day. Everyone who passes by can see it as a sign of the manhood of Quicab. He could not be killed, nor could he be conquered. He was truly a man, and all the tribes brought tribute.

And then all the lords made plans; they moved to cordon off the canyons and citadels, the fallen citadels of all the tribes.

AFTER THAT CAME THE SENTRIES, to watch for the makers of war. Now lookout lineages were established to occupy the conquered mountains:

"Otherwise the tribes would return to inhabit their citadels," all the lords said when they had all shared their thoughts. Then the assignments were given out:

"Let them be like a palisade to us, and like doubles for our own lineages, and like a stockade, a fortress to us. Let them now become our anger, our manliness," said all the lords. The assignments were given to each of the lineages that were to provide opposition to the makers of war.

And then they were notified, and then they went to their posts, occupying the mountain places of the tribes:

"Go, because these are now our mountains. Do not be afraid. The moment there are makers of war again, coming back among you as your

DRAWING BY THE AUTHOR

murderers, send for us to come and kill them," Quicab and the Minister and the Herald told them, notifying all of them.

Then they went off, those who are called the Point of the Arrow, Angle of the Bowstring. Their grandfathers and fathers split up then; they were on each of the mountains. They went just as guards of the mountains, and as arrowhead and bowstring guards, and as guards against the makers of war as well. None of them had been there at the dawning nor did any of them have his own god; they just blocked the way to the citadel. They all went out:

The keepers of Nettles Heights, keepers of Mirror Side, White River, Deer Dance Plaza, Plank Place, Eighteen.

Also, the keepers of Earthquake, Meteor, Hunahpu Place.

And the keepers of Spilt Water, keepers of Among the Rocks, keepers of Plaster House, keepers of Ziya House, keepers of Hot Springs, keepers of Under Ten, of the plains, of the mountains.

The war sentries, the guardians of the land, went out, they went on behalf of Quicab and Cauizimah, Keeper of the Mat and Keeper of the Reception House Mat, and on behalf of the Minister and the Herald. There were four lords who posted messengers and sentries against the makers of war:

Quicab and Cauizimah are the names of the two lords who led the Cauecs.

Woven is the name of the lord who led the Greathouses.

And Armadillo Dung is the name of the lord who led the Lord Quichés.

So these are the names of the lords who posted messengers and couriers. Their own vassals went to the mountains, to each one of the moun-

tains, and as soon as they had gone, spoils kept coming back, and prisoners of war kept coming back to Quicab and Cauizimah, to the Minister and the Herald. The Points of the Arrows and Angles of the Bowstrings made war. They took spoils and prisoners again. There came to be heroes again, among those who were sentries. They were given seats and honored; they were generously remembered by the lords when they came to turn over all their spoils and their prisoners.

After that, when the Lords Keeper of the Mat, Keeper of the Reception House Mat, Minister, and Herald had shared their thoughts, their decision came out:

"When it comes to the ennobling of the lookout lineages, we'll induct only those who are first in rank. I am Keeper of the Mat."

"And I am Keeper of the Reception House Mat."

"The nobility of Keeper of the Mat, which is mine—and that which is yours, Lord Minister—should enter into this. Ministers will be ennobled." And all the lords spoke as they gathered their thoughts. The Tams and Ilocs did just the same; the three divisions of the Quiché were in concord when they carried out the investiture. They titled those of the first rank among their vassals.

In this way the decision was reached. But they weren't inducted at Quiché. The mountain where the first-ranking vassals were inducted has a name; all of them were summoned, from each of the mountains where they were, and they gathered in just one place. Under the Twine, Under the Cord is the name of the mountain where they were inducted, where they entered into nobility. It was done at the boundary of Mirror Side.

And here are their titles, their honors, and their marks: a score of Ministers and a score of Keepers of the Mat were created by the Keeper of the Mat and the Keeper of the Reception House Mat, and by the Minister and the Herald.

All of these entered the nobility: Ministers, Keepers of the Mat, eleven Masters of Ceremonies, Minister for the Lords, Minister for the Zaquics, Military Minister, Military Keeper of the Mat, Military Walls, and Military Corners are the titles that came in when the soldiers were titled and named to their seats, their cushions.

These were the first-ranking vassals, watchers and listeners for the Quiché people, Points of the Arrows, Angles of the Bowstrings, a palisade, an enclosure, a wall, a fortress around Quiché.

And the Tams and Ilocs did the same thing; they inducted and titled the first-ranking vassals for each mountain.

So this was the origin of the noble Ministers and Keepers of the Mat that exist for each of the mountains today. The sequence was such that

they came out later than the Keeper of the Mat proper and the Keeper of the Reception House Mat, and later than the Minister and the Herald.

AND NOW WE SHALL NAME THE NAMES OF THE HOUSES OF THE GODS, although the houses have the same names as the gods:

Great Monument of Tohil is the name of the building that housed Tohil of the Cauecs.

Auilix, next, is the name of the building that housed Auilix of the Greathouses.

Hacauitz is the name, then, of the building that housed the god of the Lord Quichés.

Cornassel, whose house of sacrifice can still be seen, is the name of another great monument.

These were the locations of the stones whose days were kept by the Quiché lords. Their days were also kept by all the tribes. When the tribes burned offerings, they came before Tohil first.

After that, they greeted the Keeper of the Mat and Keeper of the Reception House Mat next, then they handed over their quetzal feathers and their tribute to the lords, these same lords.

And so they nurtured and provided for the Keeper of the Mat and Keeper of the Reception House Mat, who had been victorious over their citadels.

THEY CAME BEFORE TOHIL FIRST: Seated in his temple (shown in cross section behind him), K'awil (the lowland Maya counterpart of Tohil) receives offerings in bowls and (at extreme left) a censer full of flaming copal. From the Dresden Codex.

DRAWING BY CARLOS A. VILLACORTA

They were great lords, they were people of genius. Plumed Serpent and Noble Sweatbath were lords of genius, and Quicab and Cauizimah were lords of genius. They knew whether war would occur; everything they saw was clear to them. Whether there would be death, or whether there would be famine, or whether quarrels would occur, they knew it for certain, since there was a place to see it, there was a book. Council Book was their name for it.

But it wasn't only in this way that they were lords. They were great in their own being and observed great fasts. As a way of cherishing their buildings and cherishing their lordship, they fasted for long periods, they did penance before their gods.

And here is their way of fasting:

For nine score days they would fast, and for nine they would do penance and burn offerings.

Thirteen score was another of their fasts, and for thirteen they would do penance and burn offerings before Tohil and their other gods. They would only eat zapotes, matasanos, jocotes; there was nothing made of corn for their meals.

Even if they did penance for seventeen score, then for seventeen they fasted, they did not eat. They achieved truly great abstinence.

This was a sign that they had the being of true lords. And there weren't any women with them when they slept; they kept themselves apart when they fasted. They just stayed in the houses of the gods, each day. All they did was keep the days, burn offerings, and do penance. They were there whether it was dark or dawn; they just cried their hearts and their guts out when they asked for light and life for their vassals and their domain. They lifted their faces to the sky, and here is their prayer before their gods, when they made their requests.

AND THIS IS THE CRY OF THEIR HEARTS, here it is:

"Wait! On this blessed day,
thou Hurricane, thou Heart of the Sky-Earth,
thou giver of ripeness and freshness,
and thou giver of daughters and sons,
spread thy stain, spill thy drops
of green and yellow;
give life and beginning
to those I bear and beget,

that they might multiply and grow,
nurturing and providing for thee,
calling to thee along the roads and paths,
on rivers, in canyons,
beneath the trees and bushes;
give them their daughters and sons.

"May there be no blame, obstacle, want, or misery;
let no deceiver come behind or before them,
may they neither be snared nor wounded,
nor seduced, nor burned,
nor diverted below the road nor above it;
may they neither fall over backward nor stumble;
keep them on the Green Road, the Green Path.

"May there be no blame or barrier for them
through any secrets or sorcery of thine;
may thy nurturers and providers be good
before thy mouth and thy face,
thou, Heart of Sky; thou, Heart of Earth;
thou, Bundle of Flames;
and thou, Tohil, Auilix, Hacauitz,
under the sky, on the earth,
the four sides, the four corners;
may there be only light, only continuity within,
before thy mouth and thy face, thou god."

So it was with the lords when they fasted during nine score, thirteen score, or seventeen score days; their days of fasting were many. They cried their hearts out over their vassals and over all their wives and children. Each and every lord did service, as a way of cherishing the light of life and of cherishing lordship.

Such were the lordships of the Keeper of the Mat, Keeper of the Reception House Mat, Minister, and Herald. They went into fasting two by two, taking turns at carrying the tribes and all the Quiché people on their shoulders.

At its root the word came from just one place, and the root of nurturing and providing was the same as the root of the word. The Tams and Ilocs did likewise, along with the Rabinals, Cakchiquels, those of Bird House, Sweatbath House, Talk House. They came away in unity, having heard, there at Quiché, what all of them should do.

It wasn't merely that they became lords; it wasn't just that they received occasional gifts from nurturers and providers who merely made food and drink for them. Nor did they wantonly falsify or steal their lordship, their splendor, their majesty. And it wasn't merely that they crushed the canyons and citadels of the tribes, whether small or great, but that the tribes paid a great price:

There came turquoise, there came metal.

And there came drops of jade and other gems that measured the width of four fingers or a full fist across.

And there came green, yellow, and red feather work, the tribute of all the tribes. It came to the lords of genius Plumed Serpent and Noble Sweatbath, and to Quicab and Cauizimah as well, to the Keeper of the Mat, Keeper of the Reception House Mat, Minister, and Herald.

What they did was no small feat, and the tribes they conquered were not few in number. The tribute of Quiché came from many tribal divisions.

And the lords had undergone pain and withstood it; their rise to splendor had not been sudden. Actually it was Plumed Serpent who was the root of the greatness of the lordship.

Such was the beginning of the rise and growth of Quiché.

And now we shall list the generations of lords, and we shall also name the names of all these lords.

AND HERE ARE THE GENERATIONS, THE SEQUENCES OF LORDSHIPS, so that all of them will be clear.

Jaguar Quitze, Jaguar Night, Not Right Now, and Dark Jaguar were our first grandfathers, our first fathers when the sun appeared, when the moon and stars appeared.

And here are the generations, the sequences, of lordships. We shall begin from here, at their very root. The lords will come up two by two, as each generation of lords enters and succeeds the previous grandfathers and lords of the citadel, going on through each and every one of the lords.

And here shall appear the faces of each one of the lords.

AND HERE SHALL APPEAR THE FACES, ONE BY ONE, OF EACH OF THE QUICHÉ LORDS . . .

Jaguar Quitze, origin of the Cauecs.

Noble Raiment, in the second generation after Jaguar Quitze.

Jaguar Noble Rooftree, who began the office of Keeper of the Mat, was in the third generation.

Noble Sweatbath and Iztayul, in the fourth generation.

Plumed Serpent and Noble Sweatbath, at the root of the lords of genius, were in the fifth generation.

Tepepul and Iztayul next, sixth in the sequence.

Quicab and Cauizimah, in the seventh change of lordship, were the culmination of genius.

Tepepul and Xtayub, in the eighth generation.

Black Butterfly and Tepepul, in the ninth generation.

Eight Cord, with Quicab, in the tenth generation of lords.

Seven Thought and Cauatepech next, eleventh in the sequence of lords.

Three Deer and Nine Dog, in the twelfth generation of lords. And they were ruling when Tonatiuh arrived. They were tortured by the Castilian people.

Black Butterfly and Tepepul were tributary to the Castilian people. They had already been begotten as the thirteenth generation of lords.

Don Juan de Rojas and Don Juan Cortés, in the fourteenth generation of lords. They are the sons of Black Butterfly and Tepepul.

So these are the generations, the sequences of lordships for the Keeper of the Mat and Keeper of the Reception House Mat, the lords who have led the Cauecs of Quiché. Next we shall name the lineages.

And here are the great houses of each one of the lords in the following of the Keeper of the Mat and Keeper of the Reception House Mat. These are the names of the nine lineages of the Cauecs, nine great houses. Here are the titles of the rulers of each one of the great houses:

Lord Keeper of the Mat, with one great house. Granary is the name of the palace.

WHEN TONATIUH ARRIVED: A Quiché sketch of the coat of arms of the Hapsburgs, rulers of Austria and Spain when Pedro de Alvarado (Tonatiuh) invaded the Quiché kingdom. From the sixteenth-century *Título de los Señores de Coyoy*.

Lord Keeper of the Reception House Mat. Bird House is the name of his palace.

Master of Ceremonies for the Cauecs, with one great house.

Lord Keeper of Tohil, with one great house.

Lord Keeper of the Plumed Serpent, with one great house.

Councilor of the Stores, with one great house.

Quehnay Emissary, with one great house.

Councilor in the Ball Court, Xcuxeba, with one great house.

Sovereign Mexican, with one great house.

So these are the nine lineages of the Cauecs. Many vassals are counted in the following of these nine great houses.

AND HERE ARE THOSE OF THE GREATHOUSES, with nine more great houses. First we shall name the genealogy of the lordship. It began, from just one root, at the origin of the root of the day and the light:

Jaguar Night, first grandfather and father.

Noble Acul and Noble Acutec, in the second generation.

Noble Chahuh and Noble Inscription House, in the third generation.

Nine Deer next, in the fourth generation.

Noble Sweatbath, in the fifth generation of lords.

And Monkey House next, in the sixth generation.

And Iztayul, in the seventh generation of lords.

Noble Sweatbath then, eighth in the sequence of lordships.

Nine Deer, ninth in the sequence.

Woven, as the next one was called, in the tenth generation.

Lord Noble Sweatbath, in the eleventh generation.

Don Cristóbal, as he was called, became lord in the presence of the Castilian people.

Don Pedro de Robles is Lord Minister today.

And these are all the lords who come in the following of the Lord Minister. Now we shall give the title of the ruler of each one of the great houses:

Lord Minister, the first-ranking lord at the head of the Greathouses, with one great house.

Lord Herald, with one great house.

Lord Minister of the Reception House, with one great house.

Chief of the Reception House, with one great house.

Mother of the Reception House, with one great house.

Master of Ceremonies for the Greathouses, with one great house.

Lord Auilix, with one great house.

Yacolatam, with one great house.

So these are the great houses at the head of the Greathouses; these are the names of the nine lineages of the Greathouses, as they are called. There are many branch lineages in the following of each one of these lords; we have named only the first-ranking titles.

AND NOW THESE ARE FOR THE LORD QUICHÉS. Here are their grandfathers and fathers:

Not Right Now, the first person.

Noble Lord is the name of the lord of the second generation.

Red Banner.

Noble Short One.

Noble Doctor.

Seven Cane.

Noble Mortal.

Noble Caller.

Person of Bam.

So these are the lords at the head of the Lord Quichés; these are their generations and sequences.

And here are the lords within the palaces, with just four great houses:

Herald for the Lords is the title of the first lord, with one great house.

Emissary for the Lords, the second lord, with one great house.

Master of Ceremonies for the Lords, the third lord, with one great house.

And Hacauitz, the fourth lord, with one great house.

And so these are the four great houses at the head of the Lord Quichés.

AND THERE ARE THREE MASTERS OF CEREMONIES IN ALL. They are like fathers to all the Quiché lords. They come together in unity, these three Masters of Ceremonies. They are givers of birth, they are Mothers of the Word, they are Fathers of the Word, great in being few, these three Masters of Ceremonies:

Master of Ceremonies for the Cauecs, first.

And Master of Ceremonies for the Greathouses, second.

Lord Master of Ceremonies for the Lord Quichés, third of the Masters of Ceremonies.

And so there are three Masters of Ceremonies, one representing each of these lineages.

THIS IS ENOUGH ABOUT THE BEING OF QUICHÉ, given that there is no longer a place to see it. There is the original book and ancient writing owned by the lords, now lost, but even so, everything has been completed here concerning Quiché, which is now named Santa Cruz.

DOVER PUBLICATIONS, INC.
Mineola, New York

At Dover Publications we're committed to producing books in an earth-friendly manner and to helping our customers make greener choices.

Manufacturing books in the United States ensures compliance with strict environmental laws and eliminates the need for international freight shipping, a major contributor to global air pollution.

And printing on recycled paper helps minimize our consumption of trees, water and fossil fuels. The text of *The Codex Borgia: A Full-Color Restoration of the Ancient Mexican Manuscript* was printed on paper made with 10% post-consumer waste, and the cover was printed on paper made with 10% post-consumer waste. According to Environmental Defense's Paper Calculator, by using this innovative paper instead of conventional papers, we achieved the following environmental benefits:

Trees Saved: 6 • Air Emissions Eliminated:
603 pounds

Water Saved: 2,904 gallons • Solid Waste
Eliminated: 176 pounds

For more information on our environmental practices, please visit us online at www.doverpublications.com/green

“The mission of man is to remember. To remember to remember. To taste everything in eternity as once in time. All happens only once but that is forever.”

HENRY MILLER

Remember to Remember

To Richard Guthrie, artist, and Tomás Díaz—each, in his own way, proving that when enough pressure is applied a diamond appears from within.

G. D., 1993

Thanks to Alberto and Gualberta Trejo, papermaker, San Pablito, Mexico; Armando Arriaga, woodcarver, Puebla, Mexico; Beckey Reisberg, conservator and bookmaker; Jeff Baker, photographer; Carl and Terrie Huff, whose door was always open; Patricia Morris, Lenny Lamm and Henry Miller, for showing the way.

A. R., 1993

My thanks go to John Pohl, Betsy Smith and Nancy Troike, inspiring students of pre-Columbian writing; to Cara Tannenbaum for almost everything; and to Leah Madeline for giving reason to being.

ARTISTS' PREFACE

The aim of the Díaz-Rodgers version of the Codex Borgia was to reproduce the codex using traditional methods and materials, and to restore as accurately as possible all damaged sections of the book; in short, to see the book in the pristine condition it had existed in during the time of the Aztecs.

Of course, the idea of codex restoration is not new. This project was heavily influenced by the restoration work done on the Codex Dresden and, most importantly of all, the work on the Codex Nuttall, which has been reprinted by Dover Publications.

Work on this project began with drawings made from photographs of the Codex Borgia. The first set of drawings was made to become familiar with the symbols and characters within the manuscript. The object at this point was to copy the original artwork as closely as possible. After the first drawings were completed, the entire book was redrawn again using pen and ink on Herculene film. In these final drawings, the restoration of the codex was conducted. First, each character (separate image) was centered within its defined space. For example, if the original artist(s) implied a division of one-half page in the original text, exactly one-half page was used to reproduce that portion of the codex. With regard to the characters, no changes were made. If a temple leaned in one direction or another, it was left as it was. Here, the process of extrapolated restoration occurred. The easiest restoration was the connecting of the lines based on other undamaged parts of the manuscript. This was relatively easy in some parts, as the figures were easily identifiable with just small parts of the figure worn away.

Of course, other sections were not so easily reproduced and some value judgments were called for. It is here, in the more difficult restoration parts, that some criticism is possible. An example is Plate 2. According to Alexander von Humboldt, the first and last pages of the original codex were partially burned by servant children of the Giustiniani family. In one of the burned areas (upper right), a scorpion is partially visible. Therefore, in the final series of drawings it was reproduced as a whole

scorpion using other scorpions in the codex as guidelines. For example, Plates 13, 18, 59 and 69 each contain stylized versions of the scorpion. What may be wrong or lacking is the direction or curve of the scorpion's stinger on Plate 2. In order to fill and balance the given area, the scorpion was drawn with the straight extended stinger as found on Plate 59. The stylistic traits of the partial scorpion on Plate 2 served as the foundation of the new scorpion. In the final drawings, implied symmetry was formalized. All red dividing lines were made straight in the horizontal and vertical directions.

In the section of the book comprising Plates 61 through 70, the day signs, or symbols, are accurate. What may be lacking are certain characteristics unique to that particular day according to its place within the sacred order of 260 days. For instance, it should be noted that each half of these pages has 13 day signs associated with it. This order was noted by Sahagún in his monumental work *Historia de las Cosas de Nueva España*. What will be found lacking are certain aspects of characteristics of the day signs which would have borne specific significance for that specific time period. For example, "Ollin," or Movement, can take several forms. In all the different forms, Movement is still Movement but it has several ways of being represented in this manuscript. On Plate 65 (upper half) it is seen upright and entwined with a red side dominating the right half of the symbol. On this same plate, in the bottom row of day signs, Movement is found again entwined, but this time it is lying down with the red half of the symbol on the bottom side. Plate 70 again shows Movement in the top row of the day signs. Here it is exactly as found on the bottom row of Plate 65, except the blue half is found on a totally different form. It is no longer entwined, but rather a star or flower form. That is by no means all of the possible forms of "Ollin." Sometimes the color and the shape of the center point varies. Each aspect that "Ollin" assumes has an important symbolic meaning and something distinct to say about that particular moment in time and space.

The bottom parts of Plates 28, 57, 58, 61 through 64 and 66 through 70 were especially difficult to reproduce. In all of these plates, the day signs were entirely missing, which called for quite a few judgment calls during the restoration process.

Concurrent with the drawing process was the investigation of different types of traditional *ámatl* bark paper. This investigation led to San Pablito, Mexico, and to Alberto and Berta Trejo. The Trejos were traditional makers of the paper that was used in this project. The process for this handmade paper has been well documented in many papers and several books; however, because of the special size requirement of the paper and the fact that the paintings were to be mounted onto an accordion-like book, several new methods of producing oversize pieces of paper were investigated. The new process for large-format paper quickly became the standard for the entire village.

After the final drawings were completed and the *ámatl* paper selected, the drawings made on the transparent film were transferred to the *ámatl* paper using a blackline

undercoating. Because of the variation in the paper's color and quality, approximately 20 copies of each plate were transferred. The best copy of each plate was then carefully selected, based on paper characteristics and accuracy of line reproduction.

The next phase was the application of color. First, two coats of titanium-white watercolor were applied as a base. This served to stretch the paper and fill the porous surface of the paper. Colors were then applied by hand starting with yellow. Red was the final color to be applied. Experiments were conducted using natural dyes; however, it quickly became apparent that this was beyond the scope of this project. Instead, watercolors were used. To insure uniformity in paint color, some portions of the plates required as many as four or five separate coats of paint. Although the plates were produced over several years, every effort was made to insure uniformity and consistency in color from Plate 1 through Plate 76. Finally, after all the colors were applied, the black lines were hand painted with tiny brushes, thereby encasing the characters of the manuscript. Two coats of acrylic fixative were finally applied to protect the colors. The plates were produced in order.

After the paintings were completed, they were photographed by Dallas photographer Jeff Baker. The plates were then taken to Beckey Reisberg, who assembled them into a unique accordion-style book using proper conservation techniques and methods. Two 40-foot *ámatl* sheets were produced. Each painting was then mounted on one of these long sheets, which then folded into an accordion-style book. Plates 1 through 38 are in one of these original books and Plates 39 through 76 are in the other. The books are stored in a hand-carved cedar box produced by Armando Arriaga, one of Mexico's finest woodcarvers.

Total time to complete the project was seven years.

The original painted Díaz and Rodgers restoration of the Codex Borgia, showing its screenfold (accordion-fold) nature, its amatl paper and the handsome box crafted for it.

INTRODUCTION AND COMMENTARY

BY BRUCE E. BYLAND

The Present Edition of the Codex Borgia

The present edition is a new hand-painted restoration of the Codex Borgia designed to recreate the sense of awe and wonder that the original manuscript must have inspired before the depredations of time and ill treatment took their toll. Over the five or more centuries since the original was painted by some unknown Mexican scribe or scribes, much has happened to it. It has been opened and closed countless times. Its fragile pages have been touched and manipulated, folded and rubbed, photographed and drawn. It has been exposed to heat and humidity. It has survived the abuse of children, who folded some of its pages and burned others. It has lost its original wooden end pieces. The result of all this activity is that the images painted so carefully by the original artist or artists have been damaged. In many places flakes of pigment have been rubbed off and lost, thus obscuring the original images to varying extents. Most seriously, parts of three leaves have been damaged by fire.

This has left a document which, though still recognized as one of the finest and most important original sources for the study of pre-Columbian religion, has been seriously compromised. Ms. Gisele Diaz and Mr. Alan Rodgers are to be commended for their efforts to recover the grandeur of the original manuscript. The Dover edition will, for the first time, make a reproduction of the manuscript accessible to the general public. That it is not a photographic or precise facsimile may possibly trouble some among the corps of professional codex scholars, though they are among the few who have access to the costly photographic facsimiles already published (Kingsborough 1831-48, Ehrle 1898, Seler 1904-09 [Spanish translation as Seler 1963], Nowotny 1976). Although these rare, expensive editions remain preferable for serious scholarship, that does not lessen the inspirational and broad educational value of this restoration.

Just as Dover's edition of Zelia Nuttall's copy of the Codex Zouche-Nuttall is not an exact rendition of the original, the reproduction published here is not an exact copy of the Codex Borgia., even in its current state. It is, rather, an informed attempt at a restoration, a careful reimagining of the original beauty of the manuscript. Even though the restoration has omitted the glosses added to the manuscript by a European hand after the conquest, it is not intended to be a definitive reconstruction of the original as it was painted before the arrival of the Spanish. It is not a precise copy of the extant portions but rather a redrawing that includes tiny differences of detail throughout. (Any significant differences will be pointed out in the commentary later in this introduction.) Colors are rendered close to their appearance in the original as it exists today, not as they were when the Codex Borgia was new; for example, some original greens are now a shade of tan, and it is the tan that appears here.

Because of its very availability and because of the care that Diaz and Rodgers have put into this faithful restoration of the manuscript, students can learn much from it. Those who want to study the original in fine detail should first use this edition as a guide but should also seek out a copy of the fine photographic facsimile published by ADEVA (Nowotny 1976). They should also look for the outstanding commentaries on the codex published by Nowotny (1961a) and Seler (1963). In addition, the serious student should not neglect the important studies of the Codex Borgia and the other members of the Borgia Group of codices published by Humboldt (1810), Caso (1927), Noguera (1927), Robertson (1963), Spranz (1964), Glass (1975), Sisson (1983), Biedermann (1989) and others. The present edition will become a starting point for study of the religious codices of highland Mexico just as the Dover publication of the Codex Zouche-Nuttall (Miller 1975) has become the principal introduction to the Mixtec historical codices for so many modern students.

The original codex was painted on a long strip of folded animal skin as a screenfold book. Fourteen strips of skin were attached end to end, trimmed to a standard height of 27 cm, folded into a screenfold and prepared for painting with a white lime-plaster ground. The artist or scribe then painted the manuscript with an extraordinarily artistic hand, using both mineral and vegetable pigments. The book was intended to be read in continuous fashion from one end to the other, from right to left, on one side and then turned over so that the reading could continue on the other side. Even though the current binding does not reproduce that screenfold format, the reading order in this edition does recreate the linear form of the original by binding the pages in reverse order so that the text begins at the back and is read from right to left and from back to front, in much the same way as the Dover edition of the Codex Zouche-Nuttall.

The History of the Codex Borgia

The Codex Borgia has long been recognized as one of the most elegant and beautiful of the few surviving pre-Columbian painted manuscripts. Its special significance has been seen in its detailed depiction of highland Mesoamerican gods and the ritual and divination associated with them. Substantial portions of the codex convey various aspects and attributes of the 260-day ritual calendar. The more detailed ceremonial aspects of the images have been harder to understand.

The Codex Borgia is today housed in the Apostolic Library of the Vatican in Rome, Italy. It was originally painted somewhere in the central highlands of Mexico as a unique manuscript. The exact place at which it was painted is not now known and is the subject of much discussion. During the summer of 1982, the Pre-Columbian Studies Program at Dumbarton Oaks in Washington, D.C., sponsored a summer research seminar on the codices of the Borgia Group at which much attention was paid to this problem (Sisson 1983). While no final conclusion could be drawn, the opinion of most of the participants in the seminar was that the Codex Borgia was probably originally painted somewhere in central or southern Puebla, the area around Tepeaca and Cuauhtinchan or the Tehuacán Valley. Others would expand this potential area of origin to include nearby areas of the Mixteca Alta in Oaxaca. Since various aspects of the manuscript seem to point with equal validity to each of these areas, we cannot choose one over the others. Perhaps we should conclude, rather, that central and southern Puebla and northern Oaxaca shared a religious and iconographic scheme and that the pronouncements of the Codex Borgia would have had equal validity in all of these nearby regions (Pohl and Byland n.d.). Seen in that light, the precise point of origin is not so important as the information that can be gained from careful study of the codex.

It is generally believed that the Codex Borgia was originally painted in the decades immediately before the arrival of the Spanish. This presumption is based on the observation that its style shows no hint of European influence. In addition its religious content was more apt to have been repressed rather than encouraged after the arrival of Catholic priests. It is not possible now to determine exactly how long before the beginning of the Colonial period it was painted, though it probably dates to the late fifteenth or very early sixteenth century.

The Codex Borgia was sent back to Europe at some point in the early Colonial period, though when, by whom and to whom is not known. Its early movements in Europe are also obscure. It has been argued that at some time in the sixteenth century the manuscript was sent to Italy either directly from Mexico or from an intermediate stop in Spain (Ehrle 1898). This supposition is based on the paleography of a gloss on page 68 of the manuscript that appears to have been written in poor Italian (presumably in the hand of a sixteenth-century Mexican or Spaniard not fully fluent in Italian). At any rate, from then until very late in the eighteenth century nothing is known of the whereabouts of the codex.

It first came to the attention of scholarship when in 1805 Alexander von Humboldt saw it in Rome among the effects of Cardinal Stefano Borgia, who had died the previous year. Humboldt wrote, with some authority, that Cardinal Borgia had acquired the codex from the Giustiniani family, neighbors who had entrusted the document to some servants, who in turn had given it to their children as a plaything. As a result, before Humboldt ever saw it the manuscript had been burned and mistreated. When Cardinal Borgia died he left almost all of his possessions to the branch of the Vatican which he had directed for many years, the Congregatio de Propaganda Fide; his brother was to inherit the family museum. Although the codex was not located in the family museum at the time of the Cardinal's death, his brother sued for its possession. After a few years of legal wrangling the Congregatio was awarded the codex and housed it in its library. Late in the nineteenth century it was transferred to the Apostolic Library of the Vatican, where it remains today.

Pre-Columbian Manuscripts

The painted books of Mesoamerica represent an amazing legacy of the religious and historical knowledge acquired by the pre-Columbian people of Mexico and northern Central America. A scant few of these documents survive to this day. The vast majority of them were destroyed in the misguided efforts of early Spanish priests to stamp out all vestiges of the heathen religions of the native peoples. Accounts of the burning and destruction of hundreds and thousands of native books can bring tears to the eyes. We can only wonder today at the range and depth of information lost through the destruction of so vast a cultural resource. Despite this tragedy, much can be said about the manuscript-painting traditions of Mesoamerica. We have perhaps fifteen or so surviving books and manuscripts that were produced either before the Conquest or in a native style in the years directly after the arrival of the Spanish (Glass 1975:11-12). In addition to these works, there are about two dozen pictorial documents made by indigenously trained native scribes and artists for the Spanish conquerors as illustrations of native history, religion, custom and practice. Finally, there are literally hundreds of pictorial manuscripts produced by native artists during the early Colonial period in many ordinary contexts: maps to go with geographic descriptions, genealogies or histories to support claims to titles and tribute, lists of tribute actually paid or due, evidence for cases tried in Spanish courts, calendrical documents and many others.

The surviving pre-Conquest-style screenfolds include three classes or groups of books: Mixtec histories, Maya religious books and highland religious books. The histories include the seven Mixtec historical manuscripts, which deal with local history and royal genealogies from various communities in the Mixteca Alta and surrounding regions (Smith 1973, Byland and Pohl in press). A second group comprises the three or four surviving Maya screenfolds, all of which are painted on paper rather than animal skin (Glass 1975:77). These codices are substantially divinatory and calendrical in

content and are written in a distinctively Mayan style incorporating much Maya hieroglyphic text. A third group of pre-Conquest books is known as the Borgia Group, named after their most prominent member, the Codex Borgia (Nowotny 1961a). These are all screenfolds on animal skin that are concerned with religious and ritual matters. They are painted in styles very similar, though not identical, to those of the Mixtec historical codices.

The Mixtec historical manuscripts include the Codex Zouche-Nuttall (Miller 1975, Troike 1987); the Codex Colombino-Becker I, composed of two rejoined parts (Troike 1980, Smith 1963, Caso and Smith 1966); the Codex Becker II (Nowotny 1961b); the Codex Bodley (Caso 1960); the Codex Selden (Smith 1983, Caso 1964); the Codex Vindobonensis (Furst 1978, Adelhofer 1963); and the Codex Egerton (Burland 1965).

The three widely accepted Maya codices are the Codex Paris (Anders 1968), the Codex Dresden (Anders and Dekkert 1975) and the Codex Madrid (Anders 1967). Each appears to be dedicated to the calendar, the deities of the Maya pantheon and the supernatural aspects of the calendar associated with ritual divination. A fourth codex, the Grolier Codex, may also be a member of this group though it is not yet universally accepted.

The Codex Borgia is the leading member of a small group of pre-Columbian manuscripts known collectively as the Borgia Group. The Borgia Group is particularly significant because of its pre-Conquest date and its religious content. The many manuscripts treating religious subjects that must have existed before the sixteenth century were particularly sought out for destruction by zealous Spanish priests and friars who were charged with ending idolatrous practices. The manuscripts of the Borgia Group seem to have been spared this fate by the happy accident of their having been sent to Europe, probably to Spain, early in the Conquest period.

In addition to the Codex Borgia, the principal screenfold members of the Borgia Group are the Codex Cospi (Nowotny 1968), which is a ritual calendar with some ritual information on its reverse side; the Codex Fejérváry-Mayer (Burland 1971), which is a ritual calendar; the Codex Laud (Burland 1966), which is a ritual calendar with several other kinds of ritual information included; and the Codex Vaticanus B (Anders 1972), which is also a ritual calendar. The other related documents sometimes included in the group as minor members are the Fonds Mexicains no. 20, a single page of deerskin, and the Codex Porfirio Diaz, a screenfold that includes a section with similar ritual and religious content.

From these extant native-tradition books we may discern several characteristics of Mesoamerican written records. We know, for example, that books were not published in a European sense. That is to say, they were all handmade in single copies without the use of any type of impression-making device: no movable type, no stamps or rollers. It is arguable that every book was unique, made in one place by one patron and for one set

of purposes. Information is shared among several of the codices but its form is never identical. Of course, the very small sample size of surviving manuscripts makes this generalization difficult to prove. It is certainly possible that books were exactly copied in a scribal tradition similar to that of the European monastic tradition, though no proof of this possibility exists.

It can be argued that the written literature of the pre-Columbian peoples was divided into categories in their minds as well as ours. Historical books deal with people, places, politics and genealogy. Religious documents deal with the calendar, ceremonialism and divination. Overlap between them is found in areas where historically important people participate in divination or other ceremonies and where politically significant places have sacred significance.

The content of the post-Conquest documents suggests the possibility of other written genres that have not survived. The codices do not contain two-dimensional maps of the landscape in forms familiar as such to European eyes. Despite this observation, the fact that space is represented in the codices in various ways (Pohl and Byland 1990) and the existence of many post-Conquest maps (see Glass 1975) suggest that space had been graphically represented in pre-Columbian times. In addition, the lists of tribute obligations of towns prepared for the Spanish tax collectors suggests the likelihood of similar record keeping before the European arrival. We can imagine the rulers of native communities making a sincere effort to keep such documents, if they ever existed, out of the hands of the new oppressors.

Pre-Columbian Religion

The religious beliefs of pre-Columbian peoples in Mesoamerica were vastly complex. There was a shared religious system over much of Mexico and northern Central America with regard to the calendar, the major deities, the structure of the world and the hierarchy of the supernatural world. Nevertheless, each town and region had its own nuances of belief that set it apart from its neighbors. Different deities were held in esteem in different places and many gods, even major ones, had differing characteristics of dress and behavior. Much of this complexity is not now discernible but some has been preserved. We know, for example, the patron deities of many communities whose particular charge was the protection of the local people and land.

The behavioral range covered by religion in ancient Mesoamerica was like that of any complex religious system. The gods were organized in a hierarchy reflecting that of the people. They came equipped with family ties, affections and jealousies, indeed with all the complexities of human life. They had potential influence over the very existence of the world, having caused its destruction and re-creation as many as five times, according to Aztec chroniclers. On a smaller scale they were thought to have the capacity to affect the forces of nature and the success of human endeavor. Rain would

come only if the rain deity was properly propitiated. Wind would blow too strongly or too weakly unless the wind deity was correctly worshiped. Spirits inhabited the night air and the wild animals of the hills. Auguries and oracles could predict the success or failure of any activity. Patterns in nature were explained by the interaction of the forces of the supernatural world with those of the physical one. In all these ways and more, the supernatural was present in the daily lives of the people of Mesoamerica.

The people of the various towns and cities of ancient Mesoamerica had to be able to deal with the potent forces of the transcendent world above, below and around them. These interactions were often made on a personal level, at a family shrine, or by repetition of a special prayer or incantation in the fields or while doing some task. At other times connection to the power of the supernatural required a trained specialist, a priest. For this task a wide variety of specialized priests was available. There were priests dedicated to each of the many gods and other supernatural forces. There were bureaucratic priests dedicated to the ancestral deities of each town or region. There were priests who performed autosacrifice and human sacrifice. There were those who prophesied the future of natural phenomena and those who prophesied the future of human activity. There were priests who preached and others who taught.

For priests to be able to fulfill all these complex roles they had to have immense knowledge. Part of that knowledge was acquired in formal schools called *calmecac*. More was learned on the job as junior priests working with older, more experienced priests. Among the things required of priests was the ability to read books and interpret the information contained in them. That was nowhere more evident than in the case of the religious books, which served as densely packed compendia of vital information about the nature of the supernatural world and its relationships with the physical one. The Codex Borgia was just such a book.

Much of the capacity to interpret the codex was based on intimate knowledge of the gods and their many characteristics. The pantheon of ancient Mesoamerica was amazingly complex. The many deities often had multiple identities, different names and characteristics apparently being associated with a single deity. Similarly, the iconographic representations of deities often seem to display substantial overlap. Attributes associated with two or more individual deities could be represented on the person of a single god in a particular context. All this makes the study of pre-Columbian religion a daunting task. The most encyclopedic analysis of which I am aware is the masterly work of H. B. Nicholson (1971). A very strong, and more accessible, recent study is by David Carrasco (1990).

It is not possible in any brief treatment to expound fully the intricacies of pre-Columbian religion and its extraordinarily complex deities. A few characteristics of a handful of the deities will have to suffice as an introduction here.

Quetzalcóatl is the Feathered Serpent. He is a god of rebirth and renewal. In one of his most important capacities he is known as Ehécatl, the god of the wind. He is at one and the same time the god of the wind, the four winds of the four directions and the 400 little winds that blow everywhere. In another identity he is known as Tlahuizcalpantecuhli, the embodiment of the planet Venus as the morning or evening star. Quetzalcóatl was one of the creators of the sun and the world.

Tezcatlipoca is the Dark Smoking Mirror. He is an all-knowing, ever-present and all-powerful god. He, too, is a god of several capacities or personalities. Tezcatlipoca is sometimes represented as the Red Tezcatlipoca (Tlatlahuiqui Tezcatlipoca) and sometimes as the Black Tezcatlipoca (Yayauhqui Tezcatlipoca). He is the sower of discord and conflict, a god of darkness and warfare.

Tláloc is the god of rain and storm. He is the god of waters in the sky. Tláloc is a creator of life; his rain brings regrowth in the spring. He also carries the lightning and is responsible for destructive storms.

Chalchiuhtlicue is the consort of Tláloc. She is the goddess of running water, waters on the earth like lakes, rivers and springs. Her name literally means “Precious Green Stone Skirt.”

Tlazoltéotl was a very basic and very complex deity. She was a goddess of the earth. She had a role as the goddess of the moon. She was sometimes known as Tlaelcuani and in that capacity was known as the eater of filth and excrement. In this role she was also a sensual goddess of enticement and sexuality. Other names for Tlazoltéotl included Teteoinnan, “mother of the gods,” and Toci, “our grandmother.”

There were, of course, dozens of other deities both high and low, some of whom will be identified briefly in the commentary below.

The Nature of the Codex Borgia

Purpose or Function

The Codex Borgia is a native-tradition religious manuscript from an unidentified part of the southern central highlands of Mexico, perhaps from somewhere in what is now the states of Puebla and Oaxaca. Though we do not know from what indigenous context it was first extracted by the Spaniards, it is not hard to surmise that it was a ritual document taken from a sacred place—perhaps a temple, a priest’s residence or a sacred shrine of some sort. Its content suggests that it was used for several purposes. It seems to have been a prognostication tool for divining the future in various ways. Parts of the codex are ritual 260-day calendars. These are augmented by substantial sections delineating the signs of the days and the deities of the days and the nights. Other pages characterize various portions of the ritual calendar and still others relate the ritual

calendar to the solar year. Another part of the manuscript presents a sort of numerological prognostication of the lives of wedded couples. Other sections concern the cardinal directions of the world and the supernatural characters and attributes of these regions. Other portions describe the characteristics of various deities, forming a sort of catalog of supernatural beings who can influence the world. Still other passages may contain a pattern for ceremonies for the installation of rulers in certain pre-Columbian kingdoms. These aspects will all be discussed below in an abbreviated commentary based largely on the work of Seler (1963) and Nowotny (1961a).

An underlying level of meaning within the Codex Borgia is found in its frequent depictions of the various deities and other supernatural beings. The interpretation of auguries depended on the priest's reading of the images and his knowledge of the characteristics of the various powerful creatures represented.

Approaches to Reading the Codex

The Codex Borgia is composed of 39 equally sized leaves. The first and last of these, the outside surfaces of the stack of folded pages, were affixed to end pieces, presumably fashioned of wood. Every exposed side of the manuscript was painted with information by the artist or artists who created the document. We thus have 37 leaves that are painted on both sides and two end leaves painted on only one side, for a total of 76 painted pages.

The wonderful character of a screenfold manuscript, in comparison with a modern binding, is that the reader is not restricted to seeing only two pages at once. When a screenfold book is opened two, four, six or more pages can be seen at a time. Indeed, the pages being consulted simultaneously do not need to be consecutive or even on the same side of the manuscript. This structure allows for easy transgression of a simple linear reading order. Flashbacks, flashforwards and cross references can be found entirely out of the simple flow of time.

As a result of this versatile format, reading order for a learned scribe could be very diverse. He could read a book from beginning to end in a linear form similar to ours, or else read several pages at once, referring back and forth as needed through many images to follow different aspects of the information being studied. Clearly the skill required to read these books was not easily obtained.

The Content of the Codex

Though the content of the Codex Borgia is only partially understood, we can say with assurance that it is a ritual book. Substantial parts seem to be a text of standard ritual information, to be used like a reference book. Other parts seem to be mnemonic devices encoding more arcane ritual information. Yet another part seems to have been a

prescriptive set of directions for the performance of a particular series of ceremonies. The best and most detailed commentaries on the manuscript are those written by Eduard Seler (1904–09) and K.A. Nowotny (1961a). Their work notwithstanding, much of the interpretation offered to date is limited. While codex scholars have been able to work out much of the calendrical order and to recognize some of the deities, creatures and objects depicted in the manuscript, the contexts in which they have been portrayed are still not fully understood. It is still necessary to identify the more obscure images and to divine the relationships between the deities and activities depicted and the calendar to which they are attached. Efforts to do so are ongoing. Similarly, it is still necessary to pinpoint the language spoken by the original authors of the Borgia Group codices; many separate languages were spoken in the likely regions of origin. Recent work on these manuscripts has been conducted by a handful of scholars from around the world, among them Peter van der Loo, John M. D. Pohl, Maarten Jansen, Eduardo Matos Moctezuma, Mark King and Edward B. Sisson.

What follows here is a very brief redaction of the commentaries of Seler and Nowotny, informed by the more recent work of Pohl (Pohl and Byland n.d., 1991) and van der Loo (1982, 1987 and personal communication) and with a few ideas of the present writer. It is intended to help the novice reader begin the search for understanding. All readers of this introduction are encouraged to pursue the study of ancient Mexican religion by referring to more extensive commentaries on the codex and to other more general studies of pre-Columbian religion (Carrasco 1990, León-Portilla 1963, Lopez Austin 1973, Nicholson 1971) and writing (Benson 1973, Marcus 1992, Smith 1973). The text of the Codex Borgia has been arbitrarily divided into a number of groups of pages or parts of pages that seem to make sense when taken together. Though these divisions seem today to be reasonable, they should not be considered to be absolutely authoritative. New insight may be gained by trying new ways of seeing and understanding the images of highland pre-Columbian writing systems.

An Abbreviated Commentary on the Codex Borgia

Plates (Original Pages) 1-8: The First Calendar, a 260-Day Ritual Calendar

A fundamental tool of ritual prognostication and divination throughout ancient Mesoamerica was the 260-day ritual calendar, known to the Aztecs as the *tonalpohualli*, or “the book of the days.” (In many ancient Mesoamerican languages the term for the ritual calendar had much the same meaning; the Mixtecs, for example, had several names, including *tutu yehe dahui quevui*, “the book that has the days.”) This ritual calendar, covering a period that is shorter than the solar year, was used for various purposes. It was much more than just a list of days: it expressed the relationship

between time and space and between both of them and the world of the gods. The Mixtecs had another term for the calendar that conveys some of this interconnection: *nee ñuhu duyú dusa*, meaning more or less “all the spirits who support the disc of the earth” (Alvarado 1962| 1593 |:41v, Arana and Swadesh 1965). The disc of the earth is the plane upon which we live. It is composed of four cardinal directions and linked to the realms above and below by a central hinge that constitutes a fifth direction. Periods within the calendars are associated with specific supernatural figures and are linked to the five directions. Here the relationship of time, space and the supernatural world becomes evident.

The 260-day ritual calendar was constructed using two continuous sequences, one of 13 numbers and the other of 20 day signs. The 13 numbers run in sequence and then start again. Similarly the 20 day signs run in sequence and then start again. The total number of uniquely identified days using this system, then, is 13 times 20 or 260. In [Figure 1](#), the 260 days of the calendar are arranged in 13 columns and 20 rows. To the left of each row is found the day sign, and in each cell of the diagram is the corresponding day number. The calendar in this form should be read from top to bottom and from left to right through 260 days. In this illustration the first day is 1 Alligator, the second day is 2 Wind and so on. The thirteenth day is 13 Reed, but be sure to note that the fourteenth day is 1 Jaguar, not 14 Jaguar, because only 13 numbers are used in the day-number cycle.

The first eight pages of the Codex Borgia enumerate the 260 days of the *tonalpohualli* together with images that seem to carry information about the qualities of these days. Here the 260 days are arranged in five narrow rows of day signs with the 13 numbers omitted. Above and below the rows of day signs are 104 taller images laid out in two rows. These 104 images are unique depictions of people, deities, places or things that presumably have supernatural qualities. They are usually taken to be qualifiers for the five specific days shown between each upper and lower pair. Some are clearly of standard deities. Tonatiuh, Tezcatlipoca, Xipe Tótec and others.¹ Others represent natural objects and artifacts: the scorpion, offerings, bundles, serpents, the sky, the sun and many other things. Still others seem more religious and iconographic : images of human sacrifice and other offerings, serpents descending from the sky, blood flowing from the sun, complex sacred bundles and other things laden with unknown meaning. The actual significance to a pre-Columbian priest of these many different images remains obscure but can certainly be the subject of further study.

The enumeration of 260 days begins with a drawing of the Alligator at the lower right corner of the five narrow rows on Plate 1. It then proceeds from right to left across all eight pages of the *tonalpohualli*. At the end of that row, at the bottom left corner of Plate 8, the day sign for Grass is found. It is the fifty-second day sign and should, if 1 Alligator was the first day, represent the day 13 Grass. The next day in the sequence should be the day 1 Reed. The only place that Reed is found at either end of one of these five rows of day signs is at the right end of the next row up, the second row from the

bottom on Plate 1. If the reading continues there, Reed is followed by Jaguar and Eagle and Vulture and so on. Following this pattern, the calendar is read as five rows of 52 day signs from right to left and from bottom to top. The last day in the calendar is the day Flower, which should be 13 Flower if the first day was indeed 1 Alligator.

Plates 9-13: The 20 Deities of the 20 Named Days

The next five pages of the Codex Borgia are also meant to be read as a unit, as they depict 20 deities, four to a page. Each quarter-page contains a deity, an elaborately drawn day sign and another figure or group of figures. These five pages undoubtedly carry information important to the interpretation of the supernatural qualities of each of the 20 days.

The five pages of the deities of the days are meant to be read in the order of the days, beginning with Alligator in the lower right quadrant of Plate 9. The reading order then proceeds from right to left along the lower register across pages in succession until the lower left quadrant of Plate 13 is reached with the deity of the day named Dog. The next day sign in sequence is Monkey, which is found on page 13 just above Dog—that is, in the upper left quadrant. The reading order then proceeds from left to right until you reach the day Flower in the upper right quadrant of Plate 9, just above the first of the 20 day names. This arrangement of the days sets up a cyclic structure: the reading can proceed continuously through the circle of 20 names again and again in a never-ending cycle, just as the calendar goes on and on.

The deities associated with each day sign are characters who have some relationship with the natural qualities of the name of the day, though these relationships are not always obvious. The identification of these 20 deities was accomplished by both Seler and Nowotny, who used the iconographic associations of the images as drawn here and in other native-tradition manuscripts. Another detailed analysis of the intricacies of the imagery and inter-deity associations is to be found in Spranz (1973). A summary is offered here; extensive explication of the main areas of influence of each of these deities is beyond the scope of this introduction.

DAY SIGN	DEITY (NAHUATL)	DEITY (ENGLISH)
Alligator	Xochipilli/ Tonacatecuhtli	Prince of Flowers/The Supreme Male Deity
Wind	Quetzalcóatl/ Ehécatl	Feathered Serpent/Wind Deity
House	Tepeyóllotl	Heart of the Mountain
Lizard	Huehucóyotl	Old Coyote
Serpent	Chalchiuhtlicue	Goddess of Running Water/Precious Green

Death	Tecciztécatl	Stone Skirt
Deer	Tláloc	Goddess of the Moon
Rabbit	Mayáhucl	Rain and Storm (Rain of Fire)
		Goddess of Maguey

FIGURE 1: DAY SEQUENCE FOR THE 260-DAY CALENDAR.

	Alligator	1	8	2	9	3	10	4	11	5	12	6	13	7
	Wind	2	9	3	10	4	11	5	12	6	13	7	1	8
	House	3	10	4	11	5	12	6	13	7	1	8	2	9
	Lizard	4	11	5	12	6	13	7	1	8	2	9	3	10
	Serpent	5	12	6	13	7	1	8	2	9	3	10	4	11
	Death	6	13	7	1	8	2	9	3	10	4	11	5	12
	Deer	7	1	8	2	9	3	10	4	11	5	12	6	13
	Rabbit	8	2	9	3	10	4	11	5	12	6	13	7	1
	Water	9	3	10	4	11	5	12	6	13	7	1	8	2
	Dog	10	4	11	5	12	6	13	7	1	8	2	9	3
	Monkey	11	5	12	6	13	7	1	8	2	9	3	10	4
	Grass	12	6	13	7	1	8	2	9	3	10	4	11	5
	Reed	13	7	1	8	2	9	3	10	4	11	5	12	6
	Jaguar	1	8	2	9	3	10	4	11	5	12	6	13	7
	Eagle	2	9	3	10	4	11	5	12	6	13	7	1	8
	Vulture	3	10	4	11	5	12	6	13	7	1	8	2	9
	Movement	4	11	5	12	6	13	7	1	8	2	9	3	10
	Flint	5	12	6	13	7	1	8	2	9	3	10	4	11
	Rain	6	13	7	1	8	2	9	3	10	4	11	5	12
	Flower	7	1	8	2	9	3	10	4	11	5	12	6	13

DAY SIGN	DEITY (NAHUATL)	DEITY (ENGLISH)
Water	Xiuhtecuhli	God of Fire
Dog	Mictlantecuhli	God of the Underworld
Monkey	Xochipilli	Prince of Flowers
Grass	Patécatl	God of Pulque
Reed	Tezcatlipoca- Ixquimilli	The Smoking Mirror with Bandaged Eyes
Jaguar	Tlazoltéotl	Goddess of Filth and the Earth
Eagle	Tlatlauhqui Tezcatlipoca	Red Smoking Mirror
Vulture	Itzpapálotl	Obsidian Butterfly
Movement	Xólotl	God of Twins
Flint	Chalchiuhtotolin	Turkey of the Precious Stone
Rain	Tonatiuh	The Sun
Flower	Xochiquétzal	Flower-Quetzal Feather

Plate 14: The Nine Deities of the Night

The next page of the Codex Borgia changes the format to an arrangement of three rows of three deities each. These nine divine beings are generally understood to represent the supernatural rulers of the nine hours of the night, and are connected to the first nine day signs from the list of 20 days. Each of these gods stands offering a bundle of sticks, a rubber ball and a quetzal feather as the components of a burnt offering that perhaps symbolizes the night in some way.

The nine deities of the night hours are read in a serpentine pattern beginning at the bottom right and proceeding from right to left across the lower register. As the end of that register is reached, the reading proceeds, in the order of the days, directly up to the middle register at the left margin and then proceeds from left to right, and finally up to the upper register and there from right to left. The identifications of the deities who rule these nine parts of the night are indicated below. You will note that, though the calendrical signs tied to them are the same as the beginning of the list of 20 days given in the previous five pages, the deities are different (or at least associated with different day signs).

NIGHT HOUR	DEITY (NAHUATL)	DEITY (ENGLISH)
Alligator	Xiuhtecuhli	God of Fire

Wind	Itztli (Yayauhqui Tezcatlipoca)	Flint (Black Smoking Mirror) Tezcatlipoca)
House	Piltzintecuhtli	God of Youth (a solar deity)
Lizard	Cintéotl	God of Maize
Serpent	Mictlantecuhtli	God of Death (the Underworld)
Death	Chalchiuhtlicue,	Goddess of Running Water/Precious Green Stone Skirt
Deer	Tlazoltéotl	Goddess of Filth and the Earth
Rabbit	Tepcyóllotl	Heart of the Mountain
Water	Tláloc	Rain and Storm

Plates 15-17: 20 Deities and 80 Days

The next two and one-third pages are filled with 20 images of deities connected to 20 groups of four days each. The signs of the days form a continuous sequence of 80 days. Each deity is depicted with subordinate characters who are shown as sacrifices, offerings, newborn children or nursing infants. The purpose of these subordinate figures is not clearly understood but seems in a way to characterize groups of the main deities.

Five groups of four day signs are needed to go through one complete set of 20 days. Only five of the 20 possible day signs can be found in the lead position in each group of four days. The first day of each group of four will always be Alligator, Serpent, Water, Reed or Movement. As a result of this peculiarity, the 20 deities can be grouped in two different ways. The five deities who illustrate one group of 20 consecutive days belong together. Similarly, the five deities who illustrate the same set of four day signs can be said to belong together. As it turns out, each of the four groups of five consecutive deities is also linked by their actions. Hence, one of each group is connected to each set of four day signs.

Seler assigns directional qualities to the days and their deities. The directional system of Mesoamerican religion has five cardinal directions—North, South, East, West and Center, with Center being a kind of linchpin connecting the four directions and linking them to the abodes of the gods above and below the disc of the Earth. Seler has suggested that the directional associations of the five groups of four days—the groups that begin with Alligator, Serpent, Water, Reed and Movement—are West, South, Center, East and North.

The reading order of days is the same as in the day lists given above. It begins at the lower right corner of Plate 15 with the day sign Alligator, and then proceeds from right to left across Plates 15 and 16. After 20 days, five groups of four days and five corresponding deity images, the count of day signs begins again in a continuous cycle.

Each of these first five deities is seen to be sacrificing the eye of a smaller human figure with a sharpened bone awl. The reading then continues to the last image on the lower register of Plate 16 and, following the order of the days, moves up to the center register at the left side and from there continues from left to right back across Plate 16 and Plate 15. These five deities are all offering small figures who share attributes with them and indeed generally seem to be smaller versions of these very deities. On Plate 15, in the center panel of the page, the day-sign sequence begins again and the behavior of the deities again changes. This group of five deities is shown holding the umbilical cords of small figures that are in the pose of a newborn baby. Midway in this sequence the reading has moved up to the upper register of Plate 15 and has changed direction again to move from right to left. All five of the birth figures are found on Plate 15. As the reading continues to Plate 16, the fourth and last group of five deities and 20 days begins. In this group the deities are all female and four of the five are nursing infants, three of whom are human children and one an animal. The fifth deity is nourishing a full-sized skeletal figure with blood rather than milk, thus maintaining the pattern with an altered image. The last two images of this sequence are found on the upper register of Plate 17, a placement necessary to complete the pattern of 20 deities and 80 days.

A result of this structure is that the first five deities in the list of 20 may be taken to characterize the five cardinal directions for a certain quality, perhaps that of sacrifice. The second group of five may characterize the five cardinal directions for offering, the third for birth and the fourth for sustenance. Alternatively, we might group together the four deities who are linked calendrically to the West (and similarly for each of the other directions) and say that they describe four qualities of that direction, the qualities of sacrifice, offering, birth and sustenance.

An identification of most of the deities in this list of 20 is as follows (each will be listed with its directional association following Seler). The first group of five: W–Cintéotl (God of Maize); S–a complex deity not yet identified; C–Mictlantecuhltli (God of the Underworld); E–Quetzalcóatl (God of the Wind); and N–Xochipilli (Prince of Flowers). The second group of five: W–Xochi-quétzal (Flower-Quetzal Feather); S–Tláloc (God of Rain and Storm/Rain of Fire); C–Mictlantecuhltli (God of the Underworld); E–Tlahuizcalpantecuhltli (God of Venus as the Morning Star); and N–Mixcóatl (God of the Hunt). The third group of five: W–Xochipilli (Prince of Flowers); S–Tonatiuh (God of the Sun); C–Tezcatlipoca-Ixquimilli (Smoking Mirror with Bandaged Eyes); E–Xipe Tótec (Our Lord the Flayed One); and N–Macuilxóchitl (5 Flower, God of Games). The fourth and last group of five: W–Mayáhuel (Goddess of Maguey); S–Tlazoltéotl (Goddess of Filth and the Earth); C–Mictecacihuatl (Goddess of the Underworld); E–Chalchiuhtlicue (Goddess of Running Water); and N–Xochiquétzal (Flower-Quetzal Feather).

Plate 17: Tezcadipoca with the 20 Day Signs on His Body and Costume

The lower portion of Plate 17 contains a large and beautiful image of the deity Tezcatlipoca in his black guise. This image expresses the magical relationships between certain parts of his body and costume and each of the 20 day signs. The association of day signs with body parts presumably has at least some connection with ritual curing, but, since several day signs are associated with costume elements rather than with body parts, the curing explanation is limited. Seler and Nowotny believe that these day signs express attributes that are in some way appropriate to the form or function of the costume elements involved. Why Tezcatlipoca rather than some other deity is used as the base upon which to show these relationships is not clear.

Plates 18-21: Eight Supernatural Scenes with Calendrical Associations

The next four pages of the codex form an abbreviated 260-day calendar that follows the structure of the first *tonalpohualli*, found on the first eight pages of the manuscript. Each of these four pages is divided into upper and lower halves, with each half further divided into a band of five day signs and a wider band of images of supernatural characters and their appurtenances.

The reading order begins with the lower register of Plate 18, proceeds from right to left across all four pages, moves up to the upper register of Plate 21 and from there proceeds from left to right until Plate 18 is again reached. The five day signs on each of these eight panels are equivalent to a single column of five day signs in the *tonalpohualli* found on Plates 1 to 8. For example, the first panel—the lower panel on Plate 18—shows five day signs beginning with Alligator and continuing with Reed, Serpent, Movement and Water. These are not in the order one would expect from the sequence of 20 day signs, but if you direct your attention to the rightmost column of day signs on Plate 1 you will find these same five day signs in identical order from bottom to top. At the left side of the larger panel on the lower half of Plate 18 there are six red dots. These represent the next six columns of day signs found in the first *tonalpohualli*. The eighth column of day signs in the *tonalpohualli* (Plate 2, second column from the right) includes the day signs Rabbit, Flower, Grass, Lizard and Vulture. These are the same as the day signs depicted in the lower register of Plate 19. The entire ritual calendar is represented in this fashion: a column of day signs (that is, a column in the first *tonalpohualli*), red dots as spacers, a column of day signs, red dots as spacers and so on.

With this explanation, the pattern of reading the day signs and interpreting them as an abbreviated 260-day calendar has been established. The five day signs on each half-

page of Plates 18–21 represent one column of days in the calendar arranged as five rows of 52 days each (Plates 1–8). The dots between pages on Plates 18–21, to the left on the lower register and to the right on the upper register, serve as spacers or place holders and represent the given number of columns of days. Each of the sets of enumerated days can be found in the first *tonalpohualli* by skipping over the number of columns equal to the number of red dots indicated, and then looking at the next column of days. Adding up all of the dots and the eight groups of days that are actually enumerated, we get 52 groups of five days, the entire 260-day *tonalpohualli*.

This unusual arrangement suggests that the images in the eight larger panels were not intended to qualify or characterize eight periods within the *tonalpohualli*. Rather, they seem to refer to five separate short periods of seven or five days each (interpreting the red dots as time included with the five named days) or five single days separated by six or four days each (reading the red dots as spacers between the relevant periods). In either case, the possibility that images in the major bands were intended to have significance apart from the simple counting of days must be considered.

The first panel, on the lower half of Plate 18, contains an image of the solar deity, Tonatiuh, who is making an offering in front of a temple.

The second panel, found on the lower half of Plate 19, contains the image of Quetzalcóatl standing in front of a platform that supports a tree and the God of Venus as the Morning Star.

The lower half of Plate 20 contains an image of Chalchiuhtlicue, the Goddess of Running Water. She stands making an offering of blood before a smoking stream that contains a fire serpent and supports minimal images of two deities identified by Seler as Xochiquétzal, Goddess of Love, and Nanahuatzin, a God of Lechery and of the Evening Sun.

The lower part of Plate 21 contains the fourth scene of this series. It is dominated by the image of the Black Tezcatlipoca to the right of a ball court and the smaller image of the Red Tezcatlipoca to the left.

The reading order reverses now as we move to the upper register of Plate 21. Here the Red and Black Tezcatlipocas have changed their relative sizes and their sequence. The Red Tezcatlipoca is shown as a traveler with a walking stick and a backpack. The smaller Black Tezcatlipoca is placed at the end of the path.

The next image, on Plate 20, shows the rain deity Tláloc cultivating corn using a *coa* or wooden digging stick. A smaller Tláloc shown at the center of the image throws curved lightning at a corn plant, which is thus destroyed.

The seventh panel of this group is found at the top of Plate 19. It shows the God of the Planet Venus (perhaps as Evening Star) chopping branches from a tree with an ax.

The last of the eight scenes follows on the upper half of Plate 18. Here the background is obscured in a representation of the night or the darkness of the underworld. The two main deities seen here are the male and female gods of death and the underworld, Mictlantecuhltli and Mictecacíhuatl. An inset rectangle placed between them represents the dark sky with the moon and stars.

The manner in which these eight pages would have been used by an ancient Mesoamerican priest remains obscure. The physical pattern of relationship to the calendar is very clear. The significance of that relationship is far from clear. How the eight panels are related one to the other, and what directional significance should be attached to the days tied to each of them, is difficult to interpret.

Plate 22: Two Deer That Represent One Half of a 260-Day Calendar

The upper portion of Plate 22 uses the same shorthand system of referring to the first *tonalpohualli* that we have just seen in the previous four pages. In this case the page is divided into two halves, right and left. Each half is divided into three bands, the upper band containing the image of a deer and 12 place-holding red dots, and the middle band containing five day signs. (The lower band is part of the next passage, to be discussed below.)

The two rows of five day signs in the middle register represent columns of day signs from the *tonalpohualli* found at the beginning of the Codex Borgia, on Plates 1 through 8.

As we read from right to left across the upper two registers, the first half of the page contains the image of a white male deer, which is apparently dead, and the five day signs of the first column of the *tonalpohualli*. The 12 red dots drawn to the left of the deer mark the place of the next 12 columns of days and, together with the five day signs enumerated below, represent one quarter of the days in the *tonalpohualli*, those shown in the first quarter of the calendar. Note that these are not the first 65 consecutive days of the calendar round of 260 days. They represent five discontinuous groups of 13 days each.

Continuing the reading on the upper two registers of the left half of the page, we find a tan male deer, which is being pierced by an arrow, and the five day signs of the fourteenth column of the *tonalpohualli*. Just as before, to the left of the wounded deer we see 12 red dots, which this time represent the fifteenth through twenty-sixth columns of day signs in the *tonalpohualli* from the first eight pages of the Codex Borgia.

These images are odd in that they refer to only half of the *tonalpohualli*, the first two quarters of the calendar. No reference is made to the third and fourth quarters. The directional associations generally identified with the first two parts of the calendar are

East and North. Why these two clusters of days are defined here and the others are not mentioned is not yet completely understood.

Plates 22-24: 20 Supernaturals Associated with the 20 Day Signs

The bottom third of Plate 22, and the next two pages, contain another list of 20 deities or their representatives in association with the 20 day signs. These figures are not all images of deities. Some seem to be priests dedicated to deities, others seem to be objects symbolic of deities and one seems to be a world region. Many of the deities are unusual composites and are difficult to identify. The relationship of this list to that of the deities of the day signs enumerated on Plates 9 through 13 of this codex is not understood. Clearly, the supernaturals associated with the day signs are different but we do not know why. It may be that this list is of patrons of some particular parts of the days or that it refers to the numbers 1 to 20 rather than to days.

The reading order of this series of 20 images is serpentine. The day signs are found in normal order, beginning with Alligator at the bottom right of Plate 22. Reading then flows from right to left across Plates 23 and 24. Upon arrival at the bottom left panel of Plate 24, with the day sign Rabbit, the sequence moves up to the middle register and the day sign Water. Reading proceeds from there from left to right back across Plates 24 and 23 until the day sign Jaguar is reached and the order moves up to the top right of Plate 23, where Eagle is found. From there again reading proceeds from right to left until the top left of Plate 24 is found at the day sign Flower.

The relationship, if any, of the 20 days and their supernatural figures is unknown. Rather than belabor what we do not know, I will conservatively follow Seler in attempting to identify the 20 images on these three pages. Where an identification has eluded us a question mark will be found.

DAY SIGN	SUPERNATURAL (NAHUATL)	SUPERNATURAL (ENGLISH)
Alligator	priest of Quetzalcóatl	Feathered Serpent/Wind Deity
Wind	?	a god of death and blood
House	Quetzalcóatl	Feathered Serpent/Wind Deity
Lizard	Quetzalcóatl as bird	Feathered Serpent/Wind Deity
Serpent	Chalchiuhtlicue as bird	Goddess of Running Water
Death	?	jaguar supporting sky
Deer	Nanahuatzin?	God of Lechery and Evening Sun
Rabbit	Xipe Tótec	Our Lord the Flayed One

Water	Xochipilli?	Prince of Flowers in his solar or fire aspect
Dog	Tamoanchan	The Western Region (a place)
Monkey	?	An animal/human god of music
Grass	Tonatiuh	Sun God
Reed	Tonatiuh	Sun God as autosacrificer
Jaguar	Teyollocuani	priest—eater of hearts
Eagle	?	black priest—related to Tláloc
Vulture	Patécatl (symbolically)	pulque vessel and rabbit
Movement	Tlazoltéotl	Goddess of Filth and The Earth
Flint	Íztac Mixcóatl	Old God of the Heavens
Rain	Chalchiuhtlicue	Goddess of Running Water
Flower	Xochipilli (symbolically)	corn plant and fire serpent

Plates 25-28: The Five Directions with Calendrical Notations

Here follow four pages in each of which the world is shown divided into five parts. In each of these representations the implication is that there are four cardinal directions and a fifth, central, direction. Of course, in addition to the spatial significance of these images there is in each case a calendrical significance as well. Plate 25 presents four deities, placed in the four corners of the page. They are divided by a peculiar arrangement of the 20 day signs. The day signs are arranged in a cross surrounding an enlarged Movement sign, which is given the number 10 (the ten dots). Three leftover day signs are tacked on in the upper left corner of the page. The order of the day signs can easily be followed but is very unusual, beginning with Alligator in the upper arm of the cross but then going to the left arm with Wind, House and Lizard, and from there to Serpent, Death and Deer in the lower arm, and from there to Rabbit, Water and Dog in the right arm, and from there to Monkey, Grass and Reed in the upper arm, from there jumping to the three signs in the corner, Jaguar, Eagle and Vulture, and finally hopping back to finish the count from the central Movement and then Flint from the left arm, Rain from the lower arm and Flower from the right arm. Though there is a pattern, there is no readily apparent reason for this odd display.

The four deities are the patrons of the four cardinal directions. Each is tied physically to an arm of the cruciform calendar by a red line. The patron of the West is Xipe Tótec, Our Lord the Flayed One, shown in the lower left corner. The patron of the South is Tláloc, the god of rain and storm, shown in the lower right corner. The patron of the

East, shown in the upper right corner, is a complex figure who bears elements of the solar deity and a god of pulque. The patron of the North is Mixcóatl, the god of the hunt, shown in the upper left corner. No patron deity is shown for the central direction. It is simply named “10 Movement.”

Plate 26 contains another unusual display of the five-directional scheme coupled with an unusual arrangement of the 20 day signs. The human skull in the center is surrounded by the 20 day signs in a new and unusual array. These, in turn, are surrounded by four deceased and bundled deities, who have been placed on thrones, and by four human figures interspersed between them.

The calendrical figures (the day signs) begin, as usual, with Alligator at the bottom of the group of four signs on the right side of the central skull; one reads up that column and from there across the second group of four day signs, above the skull. That gets the reading through Rabbit and up to Water. The day sign Water is found at the corner next to Rabbit, and the reading order proceeds counterclockwise around the four corners of the square (Dog, Monkey, Grass). After the day sign Grass (located at the top right corner) the reading picks up again at the top of the left column of day signs with the sign for Reed and proceeds down that group of four and on to the fifth and last group across the bottom of the square, which is read from left to right.

The four deities located at the four sides of the calendar square and the skull in its center are to be associated with the cardinal points of the compass. The deities are shown as deceased: their eyes are closed, they are wrapped in cloth and tied in funerary bundles, and they bear funerary banners. The figure at the right side of the page is Chalchiuhtlicue, the goddess of running water, as patron of the four day signs of the West. At the top of the page we find Mixcóatl, god of the hunt, as patron of the day signs of the South. At the left side of the page is Xochipilli, the young prince of the flowers, as patron of the day signs of the East. At the bottom of the page is a dark deity as patron of the day signs of the North. This character seems to be the same as the unidentified patron of the Eagle day sign at the top right corner of Plate 23. The central direction is characterized by a skull and four long bones painted within the square formed by the 20 day signs.

The directional associations given here disagree with those given by Seler in his discussion of this part of the manuscript, but agree with his determination of the directionality of the day signs as discussed earlier, in the analysis of Plates 15-17.

The use of a death's-head as the symbol of the Center direction and of the dead deities on the four sides suggests that this page describes the directional scheme of the world in the land of the dead and relates that spatial information to five divisions within the sequence of 20 day signs.

Plate 27 repeats the basic theme of these pages, the division of the world into the five directions and their relationship to the calendar. This page, however, is different from

all the previous temporal information presented in the Codex Borgia because here, for the first time, the year being referred to is not the magical 260-day *tonalpohualli* but the solar year of 365 days.

The solar year can be formed from the 13 day numbers and the 20 day signs by using 18 cycles of 20 signs plus 5 other named days ($(18 \times 20) + 5 = 365$) or by using 28 cycles of 13 numbers plus 1 other day number ($(28 \times 13) + 1 = 365$). A mathematical consequence of these relationships is that every year will begin one day number and five day signs ahead of the previous year. That means that all the solar years will start with one of only four possible day signs and will count smoothly through the 13 day numbers and then begin again in a perpetual cycle. A further consequence of the comparison between the 365-day solar year and the 260-day magical year is that the initial dates of the years do not repeat until 52 solar years have passed. This 52-year period can be divided into four parts of 13 years each. As it turns out, each of these quarters begins with a date that has the coefficient of 1 and one of the four year bearers.

If the calendar starts with the day 1 Reed, as most Mesoamerican calendars do, then the four quarters of the 52-year period are begun by days named 1 Reed, 1 Flint, 1 House and 1 Rabbit. These days are shown on Plate 27, one in each quarter of the page. Oddly, there are four other days indicated besides these normal year-bearing days. These other days are 1 Alligator, 1 Death, 1 Monkey and 1 Vulture. These four days are separated from each other in exactly the same fashion as the more normal year bearers. If the solar calendar began on the same day as the ritual calendar, then the year bearers would have these four day names. These four days, 1 Alligator, 1 Death, 1 Monkey and 1 Vulture, would be the initial dates of the four quarters of the 52-year period in such a calendar. Their association here with the more normal solar calendar seems to show the relationship of the *tonalpohualli* as related in the Codex Borgia to the familiar solar calendar. How this relationship influenced the interpretation of the days is not fully understood.

Plate 27 is composed of four quarters and a central panel, representing the four cardinal directions and the Center. Each of these five sections contains an image of Tláloc, the god of rain and storm, looking skyward and pouring water onto the earth below. Each of these deity figures is colored and dressed differently, though each is clearly a manifestation of the rain deity. In the four corners the Tlálocs are standing over fields of corn which are, in turn, resting on two day signs with the numerical coefficient of 1, indicated by an embellished dot. In the center Tláloc is standing over a representation of the earth with two small figures of Chalchiuhtlicue, goddess of running water. The Tláloc in the center is a White-and-Red-Striped Tláloc, who embodies both fertility and pestilence. Since the 52-year period is completed by the periods associated with the four quarters or directions, there are no time markers associated with the Center direction.

The four cardinal directions and the years associated with them are each shown to have different qualities. In the lower right quadrant the Black Tláloc represents the first quarter of the 52-year cycle and the direction East. His period of 13 years begins with the year 1 Reed (1 Alligator). He sheds rain on a healthy field of corn, suggesting that the East is a fertile and fecund region. The upper right quadrant contains a Yellow Tláloc representing the second quarter and the North. His period begins with the day 1 Flint (1 Death). Here locusts are shown destroying the corn despite the rain. The upper left quadrant contains a Blue Tláloc representing the third quarter and the West. His period begins with the year 1 House (1 Monkey). The cornfield here is inundated with water, perhaps suggesting excessive rain. The lower right quadrant completes the 52-year period and depicts a Red Tláloc representing the fourth quarter and the South. His period begins with the day 1 Rabbit (1 Vulture). In this panel the ears of corn are being eaten by small furry animals with little skeletal jaws.

Plate 28 has much in common with the previous page of Tlálocs in their relation to the solar year and to the 52-year period, but it is also quite distinct. This page, too, contains five images of Tláloc, set in the center and the four corners. It, too, shows rain falling on corn and it, too, has indications of a solar calendar in the dates painted below the Tláloc figures. It stands apart, though, in that the dates are different, each containing a year sign and two day dates seemingly selected at random. It is also different if Seler's interpretation is correct and the directions are placed differently on the page. It is further different in that supplementary supernaturals are shown in containers or on the earth below each Tláloc.

A guiding characteristic of this arrangement is that each of the directional panels is labeled with a date that incorporates a year sign. These years are consecutive and are the first five years of the 52-year cycle. The bottom register of the page is badly damaged in the original and is not completely reconstructed by Díaz and Rodgers. Seler has been able to infer some information about this row of dates that cannot now be seen. For example, in the lower right panel there are three dates. The leftmost of these must have had a year sign, in the form of an intertwined capital A and O, behind it and must have been the year 1 Reed. We know this because the pattern continues in the upper right quadrant, where the rightmost date is 2 Flint with an A-O year sign behind the Flint. From there the upper left quadrant has the year 3 House with the A-O year sign as its rightmost date. The lower left quadrant should have 4 Rabbit with the year sign as its leftmost date but it, too, is illegible. The center, which here has time indicators unlike on the previous page, has the year 5 Reed as its leftmost date. These five years are the first five of the 52-year period of solar years. It is this interpretation by Seler that unequivocally ties this page to the solar-year cycle.

Though the day dates seem to be chosen at random, there may be some as yet unrecognized underlying order to them. It seems unlikely that they are truly insignificant.

The five directions with their Tláloc figures are differently located and characterized when compared to the previous page. Here reading begins as before at the lower right quadrant, where the first year sign was once located, the year 1 Reed. Tláloc is black in this panel and has the face paint of Tezcatlipoca, the God of the Smoking Mirror and God of the Night. This conjoined Tláloc/ Tezcatlipoca is interpreted by Seler as the patron of the North. The second year, 2 Flint, is found in the upper right panel, where a White-and-Red-Striped Tláloc has the face paint of Tlahuizcalpantecuhtli, the god of Venus, in this case as the Evening Star. This compound deity is said to be the patron of the West. The third year is 3 House, found at the upper left corner of the page. Tláloc here is yellow and has the face paint of Xiuhtecuhtli, the god of fire, thought to be the patron of the East. The fourth year, 4 Rabbit, is at the lower left and is protected by the black figure of Tláloc. This Tláloc has only two elements of facial adornment to suggest a composite nature. They are a yellow beard, barely visible in the original and not reproduced in the Díaz and Rodgers restoration, and a yellow line at the front of the face. These tiny features are characteristic of Quetzalcóatl, the Feathered Serpent and the wind deity. His presence is further indicated by the small effigies of Quetzalcóatl that emerge from the ears of corn and the streams of water in other parts of the image. This Tláloc/Quetzalcóatl is conceived as the patron of the East. It is noteworthy that this rain/wind deity also has smoke coming from his eye. This is a nonstandard trait of Quetzalcóatl that will be important in identifying a particular person in the long ritual passage on Plates 29 through 46. The fifth year, 5 Reed, is located in the center image and is again seen in front of a partly hidden A-O year sign. Its Tláloc, said to represent the Center, has a red body and wears the face paint of Xochipilli, the young prince of flowers.

Plates 29-46: A Long Supernatural Journey and Ritual Sequence

This passage of 18 pages is the longest and most elaborate of the entire Codex Borgia. It has the character of a story or narrative rather than a calendar, and in that is unique. The narrative, if such it is, is filled with ritual acts and with apparently real as well as supernatural characters. It is certainly religious in nature, though there does seem to be an element of physical reality that runs through the pages. This has been recognized by Nowotny (1961a) as well as by many others.

In this section of the codex the orientation of the pages shifts from that of a long horizontal strip read from right to left to that of a long vertical strip read from top to bottom (from the right edge of the page to the left edge of the page). This orientation prevails through page 46, the end of the current passage, after which the earlier orientation returns. The imagery of these pages is consummately complex. It is out of the

question here to describe these plates fully or to discuss all the potential interpretations, even concisely. Nevertheless, an overview of the structure may be helpful.

This long passage begins with a series of five enclosures (Plates 29-32) that serve to make supernatural statements. Two major temples dedicated to heaven are then identified (Plates 33 and 34). Then begins a ceremonial sequence in which a principal participant, known to us as Stripe Eye (a name given to him by Peter van der Loo), engages in a long ritual journey in which he performs several specific deeds (Plates 35–44). Finally the series is closed by a short passage (Plates 45 and 46) from which Stripe Eye is apparently missing but in which a new fire, symbolizing a new beginning, is ignited.

The account begins on Plate 29, the first of several enclosures formed by the body of a goddess of death. Within this enclosure is a large black disc. On the disc is a large blue vessel from which emerges a dark foamy substance. From this substance emerge numerous animate creatures who are characterized as winds by the Quetzalcóatl features they display. In addition to the many winds, two skeletal figures are shown, one a deity of death and the other a representation of Tlazoltéotl as the earth below the blue vessel. At the left edge of the page (the lower edge of the image) two intertwined starry wind serpents spit out smaller wind figures to lead the reader to the next page.

There (Plate 30) a similar scene is found. The body of the death deity forms an enclosure containing a large circular device that in turn contains the two intertwined wind serpents and their two small wind figures. Other significant features of this page are the 20 day signs arranged counterclockwise around the central device and the presence of four Tláloc-plant combination figures at the corners of the enclosure. Among the day signs four have been singled out by their placement in medallions that are pierced by the four Tlálocs wielding sacrificial instruments. These four days are Alligator, Death, Monkey and Vulture. The Tlálocs are each adorned with trees. This page can be said to represent the abundance of the Eastern direction.

The selection of these four day signs for special treatment is indicative of the use of a different form of the 260-day calendar from that which we have encountered so far. The *tonalpohualli* on Plates 1-8 of the Codex Borgia is arranged with 52 day signs in a row, a layout that requires five rows to include all of the 260 days. If, instead, 65 days comprised a row, then only four rows would be needed to incorporate all 260 days. As it turns out, the four days singled out here on Plate 30 would be the first day signs in each of these four rows. The directional qualities of this calendar are such that these four days and the four groups of 13 days that they begin are days ruled by the East. In a calendar composed of four rows rather than five, the days governed by one direction are found together. It is important to understand which form of the *tonalpohualli* is being used in any given case, because the directional qualities and the supernatural patrons of the days and periods of the calendar are different.

Plate 30 ends with the intertwined wind serpents again leading the way to the next page by spitting out two small wind creatures.

Plate 31 is divided into two halves, each of which depicts enclosures similar to those of the previous two pages. Calendrical medallions are found at the four corners of these two enclosures. The first of these scenes, on the right side of the page (top half of the image), has Deer, Grass, Movement and Wind singled out. These are the day signs that begin the third, Western, section of the calendar as laid out in four rows. The colors of this scene are generally dark and obscure, appropriate to the direction in which the sun sets. In the center of this half of the page are a variety of death deities or skeletal spirits. The central image is of a naked goddess with bandaged eyes, whose heart is exposed outside of her chest. Two small death creatures lead the way through the passage to the next enclosure.

The left side of the page (bottom half of the image) is similar, though its color scheme is red, the color of blood. The day signs featured in medallions at the corners of this enclosure are those of the North. They lead the second group of four rows of 13, the days Jaguar, Rain, Lizard and Water. Again death and earth images abound in the various small figures within this border.

Plate 32 has the calendrical associations of the South, bearing the day signs of the fourth segment of the calendar as described above, the signs of Flower, Serpent, Dog and Eagle. This enclosed space is constructed differently from the previous four. It does not have a death deity in its border; instead, at the left margin of the page (the bottom of the image) a female skeletal figure, who seems to be an earth goddess as well as a death goddess, appears as a border and a passage to the next scene. The border of the enclosure is composed of rows of flint knives surrounding a broad dark band of obscurity. This band is occupied by eight figures carrying decapitated heads in both hands, four Tezcatlipocas in the corners and four other supernatural figures. The central image of the panel is of a white-and-red-striped figure with two large flint knives in place of a head. Tezcatlipocas emerge from flint knives at its arms and legs and appear as the heads of the serpents below. The overall imagery of this scene is very clearly about blood sacrifice by cutting and decapitation. The page ends at the left margin, where a figure of Quetzalcóatl is born from between two large flint knives found in an opening in the body of the white Death/Earth Goddess. This Quetzalcóatl is unusual in that he has two volutes indicating smoke emerging from the corner of his eye.

Considering that the subsequent 12 pages seem to refer to a ceremony or series of ceremonies undergone by Stripe Eye, it may be that these first four pages should be read as a sort of invocation undertaken in preparation for the performance of the central events being described in this long passage. The sequence of events could be as follows: first, a pot is prepared that liberates the winds (Plate 29); second, the winds and rains of the East are propitiated (Plate 30); third, the death and sacrifice of the West

and the North are observed (Plate 31); fourth, the blood sacrifice of the Tezcatlipocas who influence the South is honored so that fifth, and finally, the Quetzalcóatl character can emerge ready for what is to come (Plate 32). This is certainly speculative interpretation but it seems to me to be a plausible framework for reading these pages as a prescription for the performance of a ceremony of major importance.

The next two pages of this passage, Plates 33 and 34, are taken up by two very large and distinctive structures with some activity going on around them. These two temples are unusual in at least two ways. They are by far the largest and most elaborate buildings illustrated in the codex. They are identified as “Temples of Heaven” by the presence in their roofs of three bands of stars and Venus symbols. Atop each of these two structures sits a Flint-helmeted deity from whom descends a white rope. The building on Plate 33 has a pointed, conical roof, a form associated with Quetzalcóatl, the wind deity. Quetzalcóatl appears seated on a throne within the temple, where he is being addressed by Tlahuizcalpantecuhtli, the god of Venus as the Morning Star. At the top of the stairs in the front of the temple lies Xipe Tótec, Our Lord the Flayed One. Other deities in the scene include Xólotl, the god of twins, standing behind the temple building; Cintéotl, the corn goddess, also behind the temple but above Xólotl, and a second appearance of Quetzalcóatl and Tlahuizcalpantecuhtli performing heart sacrifice in front of the temple building. A monstrous black serpent winds around the building and several horizontal male figures are drawn on the roof and on the tiers of the platform that supports the temple.

The temple on Plate 34 is similar, though it has a rectangular roof with “ears” at its peak. It is also topped by a Flint-helmeted deity, is entwined by a monstrous serpent, has Cintéotl, the corn goddess, behind the temple and bears horizontal figures on its roof and platform, though this time the serpent is red and the figures are female. The innermost part of the temple is occupied by Tepeyóllotl, the Heart of the Mountain. In front of him fire is started on a jewel in the chest of a representation of Tlazoltéotl, the goddess of the moon. In front of the temple, heart sacrifice is again performed by a second appearance of the deity shown within, in this case Tepeyóllotl. These two buildings provide the scene and place for the ceremonies that follow. They are prominently portrayed in undoubted relation to their importance to these ceremonies.

Plates 35-38 give an account of a sacred-bundle ritual performed before the Temple of Heaven. The actions that now take place all seem to be physically possible; they present a sense of reality grounded in real space rather than of ethereal, supernatural events occurring on another plane. It seems reasonable, therefore, to interpret these images as rituals that occur or could occur in the real world. It seems to John Pohl, and to me that these pages present a prescription for the proper enactment of a very complex ceremony in which a person is elevated to the role of king or ruler of a community. The actors in this account, then, should be interpreted as real people whenever possible.

The account begins on Plate 35 in the top right corner of the image (bottom right of the page). Here we see a priest wearing a goggle-eyed mask who is passing the sacred bundle to two associates standing on an eagle place at the end of a blue road. The upper associate combines attributes of Quetzalcóatl (his wind mask) and Tezcatlipoca (his face paint), and the second is a black Quetzalcóatl who has a puff of smoke painted near his eye. The temple in which the goggle-eyed priest is sitting also has stars in its roof, though the configuration of the roof shows that this structure is different from either of the Temples of Heaven depicted on the previous pages and thus must represent some other building. After the priests Wind Mask and Smoke Eye receive the sacred bundle, they transport it along the blue road to a point where it ends at the edge of the next page. John Pohl, and I have discussed these buildings, this road and the activity that follows elsewhere (Byland and Pohl in press).

Next to the road, in the ball court, the character now known as Stripe Eye makes his first appearance. The angular black stripe that runs from his hairline to his eye and then to the corner of his jaw is a variant of the facial painting of Quetzalcóatl. Seler (1904–09) noted that this character is the subject of a continuous story that runs through this and the next nine pages of the codex. Seler identified Stripe Eye as Quetzalcóatl, failing to recognize that he was different from other Quetzalcóatl figures in the passage. While it is indeed possible that he is meant to represent Quetzalcóatl, the nature of his behavior also suggests that he is the idealized king of this ceremonial center.

After the ball game, Stripe Eye appears on Plate 36 in front of the sacred bundle that the Wind Mask and Smoke eye priests have brought from the shrine above. The bundle is then opened under the supervision of Wind Mask and another priest (or deity) who wears the costume of Xólotl, a Dog Mask. Stripe Eye is then enveloped in a heavenly mist and magically transported across Plates 36 and 37. On Plate 38 he emerges from the mouth of Ehécatl-Quetzalcóatl. While Stripe Eye is on this magical journey, a number of priests, notably including Dog Mask, enact a series of rituals (Plate 37) in a large area that appears to lie in front of the eared-roofed Temple of Heaven and a smaller structure similar to that portrayed on Plate 35. On Plate 38 Stripe Eye and Dog Mask engage in other ritual acts.

It is noteworthy that this series of events seems to be moderated or overseen by a series of specialized priests. The Quetzalcóatl priest known as Smoke Eye first appeared on Plate 32, as the initial series of sacred enclosures came to an end and we were about to arrive at the two major Temples of Heaven. After sacrificial rituals were undertaken at the two temples, Smoke Eye was joined by a Tezcatlipoca priest wearing a Wind Mask. The two of them proceeded to the place where the sacred bundle dedicated to Quetzalcóatl was opened for the idealized king known as Stripe Eye. There Wind Mask took over and Smoke Eye dropped out of the account. Wind Mask was then joined by a Xólotl priest who wore the Dog Mask. After the bundle was opened Wind Mask's role ended and he dropped out, leaving Dog Mask to oversee the action until

just after Stripe Eye emerged from his sacred journey. From this point on Stripe Eye does not have priestly guides to perform actions on his behalf. It is as though the experience of witnessing the opening of the bundle and of undertaking the supernatural journey had transformed him into a person of new status and capacity, one who now was qualified to act on his own behalf in a highly charged ritual. Future appearances of these priests show them to be clearly acting as assistants while Stripe Eye conducts the central activities himself, until the very end of the long passage.

Plate 38 is the last page of the obverse side of the Codex Borgia. The story of Stripe Eye and his ritual activity continues on the reverse side beginning with Plate 39. Entrance to Plate 39 is afforded at the right of the page (top of the image), where a Quetzalcóatl figure without the eye stripe emerges from the body of the earth goddess. Stripe Eye is depicted in the center of the page paired with a red Quetzalcóatl, in a red field surrounded by a blue road upon which dance 12 women or female spirits known as *cihuaheteo*. The four calendar signs dedicated to the West are found in medallions at the four corners of the dance scene: Deer, Grass, Movement and Wind. Arrayed at the left and right sides of the image are six deities. Counterclockwise from the bottom right, they are: the Black Tezcatlipoca, a black Mictlantecuhтли, a blue Xochipilli, Tlahuizcalpantecuhтли, Tepeyóllotl and the Red Tezcatlipoca. The blue road enters the jaws of the earth monster, identified by Seler as the supreme deity, Tonacatecuhтли.

Tonacatecuhтли's body forms a large rectangle that covers the remainder of this page and all of Plate 40. Within this outline is found a band of day signs. In the Díaz and Rodgers reconstruction there are a few errors in the replacement of the most seriously damaged of these, mostly on the bottom margin of the page and a few at the upper left corner. The progression of these day signs begins at the top of the rectangle, just to the right of the head of Tonacatecuhтли. The first day signs visible are Wind and House just below the clawed arm of the deity. We can imagine that Alligator is obscured by the head of the god. The 20 day signs then proceed in normal order clockwise until the twentieth, Flower, is reached. Then the cycle begins again and runs for 12 or 13 additional days. It seems that Death is obscured by the leg of the god, that Dog was left out in the original and that Water was replaced by Rain in the Díaz and Rodgers reconstruction. Seler did not recognize the last sign in the series, Reed, but Díaz and Rodgers did recognize it, and it is here drawn just below the red-and-white-filled box at the center left side of Plate 40. The left half of this band of day signs seems to be organized with directional significance (as indicated in the *tonalpohualli* arranged in four rows of 65 days) paramount. The first nine day signs are the four that are associated with the North repeated twice, and with the first one drawn a third time. Following Seler, they should be Jaguar, Water, Lizard, Rain, Jaguar, Water, Lizard, Rain and Jaguar; all but the last are incorrectly reconstructed here. It should be noted that the original is so badly damaged on this edge of the page that none of these signs but the last is really recognizable. Continuing clockwise in the same pattern for nine days are the

day signs of the Center direction, Rabbit, House, Flint and Reed. Then come nine signs associated with the West: Wind, Movement, Grass and Deer. These proceed correctly to the top right edge of Plate 40, where the sign for grass is omitted by Díaz and Rodgers; then, at the continuation on Plate 39, the first two signs should be Deer and Wind. Finally, descending along the top margin of the frame, back on Plate 39, are the signs of the East: Vulture, Monkey, Death, Alligator and Vulture. Here only five signs are visible as the rest of the presumed sequence of nine are obscured under the head and arm of the god Tonacatecuhtli.

Entering from the top into the space framed by the calendar band and the body of Tonacatecuhtli are the two Quetzalcóatl figures seen first in the center of Plate 39. The one on the right is presumably the figure of Stripe Eye, though his face paint is now dark. The central figure of Plate 40 is that of Stripe Eye, who, assisted by eight priests, is conducting a heart sacrifice of the solar deity, Tonatiuh. Pohl has suggested that this scene is similar to scenes of confirmation depicted for the lords of Tilantongo in the Mixtec historical codices Zouche-Nuttall and Bodley (Byland and Pohl 1993). In these documents Lord 8 Deer journeys to the Sun God's oracle as part of his process of confirmation as legitimate ruler of Tilantongo. Stripe Eye, as the idealized ruler of the ceremonial precinct depicted here, similarly visits the solar deity, though here a symbolic sacrifice is shown.

The remainder of Plate 40 is taken up by a small ball court and two temples. Interestingly, the two temples are shown as a conical temple dedicated to Quetzalcóatl, with a smoke-eyed Quetzalcóatl priest in it, and an eared temple, with Tezcatlipoca (minus his wind mask) shown in front of it. There is, however, no obvious indication that these are the same temples as the important ones referred to earlier. The ball court contains images of Tlazoltéotl, to the right, and the Red Tezcatlipoca, to the left, both looking at an odd skeletal monster who is giving birth. There is no passage indicated to lead the reader out of this page's effigy of Tonacatecuhtli and on to the next page.

The entry to Plate 41 is shown as an elongated skeletal earth goddess, Tlazoltéotl, drawn perhaps as Teteoinnan, the mother of the gods, similar to her depictions on Plates 32 and 39. At an opening in her belly a skeletal figure enters a small cloudy-bordered enclosure. There two fleshed Tlazoltéotls, shown as the goddess of the moon, descend with a Black Tezcatlipoca. They seem to be directed toward a large cogged disc, which is half in and half out of a blue road that emerges from the headdress and feet of the skeletal Tlazoltéotl and that forms a larger rectangular enclosure. On the left branch of this road we find Stripe Eye, a Black Tezcatlipoca and a black *cihuatéotl*, the spirit of a woman who died in childbirth. On the right branch of the road we find a parallel sequence of characters, a white Quetzalcóatl with red dots, a Red Tezcatlipocas and a red-costumed *cihuatéotl*.

The central disc is shown calendrically to represent the Southern direction. It is marked with a day sign (in a medallion) of an Eagle, one of the four days of the South. Arranged around the outside of the disc are four other day signs related to each of the other four directions: House-Center, Deer–West, Rain–North and Monkey–East. Within the disc a Quetzacóatl with a dark face (presumably Stripe Eye) and his associate, the Quetzalcóatl with a white body and red dots, perform autosacrifice by piercing their sexual organs with bone implements. The blood flows into the mouths of Chalchiuhtlicue and her male counterpart.

Just below this disc, 13 consecutive day signs, beginning with Eagle, are painted between the roofs of two temples, one with a round roof and the other with an eared roof. The roofs of these buildings are on Plate 41 and their bases are on Plate 42. Note the parallel construction between the placement and the construction of these two buildings and the two temples seen earlier on Plate 40. The identity of these two sets of buildings seems unequivocal. The round temple on Plate 42 has Stripe Eye within it and the eared temple has a version of Xochipilli. Between the temples is a platform with a sacrificial stone on which Stripe Eye extracts the heart of the white Quetzalcóatl with red dots. In this he is assisted by the Black Tezcatlipoca. Above them floats a medallion with the day sign Jaguar, which is taken to represent the North, in contraposition to the South of the cogged disc on the previous page. From this sacrifice scene, the white Quetzalcóatl with red dots is taken to the underworld and to a ball court. Next we see him on a cruciform device with five little images of Nanahuatzin, the dead and cooked god of lechery and the evening sun, emerging from his four limbs and his heart. Seler interpreted this as the transformation of Quetzalcóatl into Xólotl–Nanahuatzin. Nanahuatzin is shown to the left and right of this image as well. Stripe Eye participates in the cooking of him at the left.

On Plate 43 an opening in another elongated image of Tlazoltéotl provides entry for Stripe Eye to a precinct bounded by ears of corn and rays of sunlight. Within this enclosure we see a large image of a dark solar deity who supports the birth of corn from the earth. The figure of the deity is in the pose of childbirth; its body is covered by a dark solar disc with stars on its periphery. This solar deity wears the skin of a jaguar and the jaws of a serpent. Its face is dark and its eye is hanging out of its socket. This suggests that it may represent the sun-at-night, the “dark sun,” or the moon. Below the solar disc is a Tlazoltéotl figure surrounded by ears of maize and encrusted with stars. Around these figures are eight small characters who are shown sustaining the growth of maize plants with blue and (originally) green fluids that emanate from their mouths. A dark-faced Quetzalcóatl leaves the sun/maize precinct through an opening at the left side of the page and descends, bearing a basket full of maize, to the next page.

On Plate 44 another elongated Tlazoltéotl with an opening in its belly allows Stripe Eye to descend, in his last appearance in the story, into the next in this series of precincts or compounds. This one is composed of a broad wall surrounded by flowers

on its exterior and lined by flint knives on its interior. The four corners of the broad wall hold medallions with the four day signs of the South: Flower, Serpent, Dog and Eagle. The walls of the precinct are open at the four sides where four figures enter, three serpents and a bat, all with human heads. Placed on the broad wall, adjacent to these four figures, are symbols of sacrifice: decapitated heads, severed arms and legs and skeletal ribs with hearts. The three human-headed serpents are being tormented by rapacious animals, and the bat is facing the priest whom we know as Smoke Eye. He is wearing a hummingbird costume. From a heart in the hands of the bat flows a bifurcated torrent of blood that lands at the head and feet of a recumbent variant of Xochiquétzal, shown as the young goddess of the moon. She has a lunar disc in her chest that holds a heart, from which grows a multicolored tree.

Plate 45 is entered through an opening in the chest of Tlazoltéotl, the skeletal earth goddess. This time her orientation is reversed and the entering figure is a cloudy wind serpent similar in form to the one that emerged from the sacred bundle on Plate 36. The main character, Stripe Eye, does not appear on this page or the next. The activities seem to have been taken over by the Quetzalcóatl priest we know as Smoke Eye; he appears several times, both here and on the next page.

In the four corners of Plate 45 are four houses of eagles, each with a figure of Smoke Eye. One of the houses is drawn as a conical-roofed round temple and another has eagle down rather than an adult eagle on its roof. On either side of the page are images that Seler has interpreted as representing the life and death of warriors. Life is represented by a pot of pulque, an intoxicating liquor made from maguey, with a drunken figure beneath it and the Black and Red Tezcatlipocas above it. Death is represented by a red-and-white-striped figure in a stream whose heart is torn out by Smoke Eye dressed as an eagle. The center of the page contains a skull-rack platform upon which stands a skeletal figure identified by Seler as Tlahuizcalpantecuhtli, the god of Venus as the Morning Star. This figure supports a tree from which emerge six banners. The bottom of the page contains an image of Smoke Eye with a Venus star as his headdress. He is bleeding from his buttocks and is covered by a net or blanket that bears nine faces painted with the four directional colors and the dots indicative of Tlahuizcalpantecuhtli. This image is surrounded by four full figures of Tlahuizcalpantecuhtli with similar-colored face paint.

The final page (Plate 46) is framed by a pair of elongated Tlazoltéotl figures. Smoke Eye enters from the top and leaves from the bottom. The remainder of the image is framed by two structures and two thrones. The structures contain images of Xiuhtecuhtli, the old fire god, presenting Smoke Eye and a Black Tezcatlipoca priest. This may hark back to the two priests who attended the opening of the sacred bundle on Plates 35 and 36. The two thrones are occupied by a Black Tezcatlipoca and a figure who seems to be an amalgam of a Black Tezcatlipoca, Quetzalcóatl and Xiuhtecuhtli.

The center of the page contains a four-sided red field bounded by four fire serpents, and an image of Smoke Eye starting a fire in the chest of a combined image of the Fire Serpent and Xiuhtecuhtli. The red field contains a pot in which Smoke Eye is being cooked, perhaps only symbolically in preparation for the lighting of the fire.

These last two pages are reminiscent of the early activities of the priests in preparing the way for Stripe Eye to undergo his complex ceremonial sequence. Here, though, they seem to be bringing the ceremonial sequence to a close, performing the acts that mark the end of the ceremony and the beginning of the new era.

Plates 47 and 48: Three Groups of Five Deities

These two pages represent three groups, each with five supernatural figures. They are read simply from right to left in the three registers (the orientation of the text is back to the horizontal arrangement normal to most of the codex). Each of the upper two registers includes a sixth panel depicting the birth of the five associated characters.

The bottom row represents five elaborately dressed female deities, who all bear the significant attributes of Tlazoltéotl, the goddess of the moon and of the earth. In each case she is dressed differently and has different figures accompanying her. Each Tlazoltéotl is given a separate calendrical name: from right to left, 9 Reed, 4 Flint, 6 Reed, 8 Reed and 1 Eagle. Seler interprets them as having directional significance as well: from right to left, East, North, West, South and Center.

The second row of figures are five *cihuateteo*, the deified spirits of women who died in childbirth. Their collective birth is indicated in the panel at the right margin of Plate 47 by the image of the birth of a female figure with bandaged eyes. There, on a blue field, a monstrous being is the source of five serpents and four centipedes. Around the edge of the field are five dates that all begin with the number 13. Seler has shown that they are the dates that fall immediately before the first day indicated in each of the five panels of *cihuateteo*. Just as with the Tlazoltéotls, the five *cihuateteo* are each differently dressed and painted and have different accompanying figures. They also are each associated with a calendrical notation, one that is a bit more complex than those accompanying the Tlazoltéotls. For each of these female figures, 13 consecutive days are indicated, with the first, fifth and thirteenth shown by their day sign and the others shown by red-dot place holders. The names and directional associations of the *cihuateteo*, then, are: 1 Deer-East, 1 Rain-North, 1 Monkey-West, 1 House-South and 1 Eagle-Center.

The top row of figures are five male deities of sensual pleasures, the *ahuiateteo*. They are part of a group of deities whose names begin with 5 and whose best-known member is Macuilxóchitl, 5 Flower, the god of games and pleasure. The first image of the top row, similarly to that of the center row, represents the birth of the five *ahuiateteo* by showing a stone (?) from which five serpents extend and from which a

male figure is born. There are five dates around this image, all of which begin with the number 4. The male figure in this image is identifiable as Nanahuatzin, the god of lechery, who is another aspect, or another personality, of Xólotl, the god of twins. This relationship is reinforced by the presence of a dog (*xólotl*) standing on the rock. The names of the five *ahuiateteo* are given by the fifth day sign in the series of 13 shown with each image. These are, with their directional qualities: 5 Lizard-East, 5 Vulture-North, 5 Deer-West, 5 Flower-South and 5 Grass-Center.

Plates 49-53: The Five Directions and Their Supernatural Patrons

The next four and one-half pages present a sort of definition of the qualities and protectors of the five directions of the world. The first four pages describe the four cardinal directions: East, North, West and South. The right half of page 53 represents the Center. Each page is constructed with a band of day signs at the bottom. Above this is a wide band showing a directional tree and bird. On Plates 49—52 this wide band also contains other figures, including a temple and various deities. Above the wide band is another band of day signs. Finally, at the top of each page, a wide band shows the supernaturals who support the heavens and walk on the earth in each of the directions. Seler has suggested that these supernaturals are associated with the opposite direction from that depicted in the lower register, so that for the first page, for example, the tree is of the East but the upper-register deities are of the West.

The largest fields describe the qualities of the cardinal directions. Their central image is a tree with a bird in its branches and an earth goddess from which it springs. Above this image on Plates 49-52 is a temple with a special patron deity of the direction. Clockwise from the temple, the other images are of a sacrificer, two celestial spirits descending, the maker of fire, a throne and deity seated before it, a place where a male and female deity are married, an animal ball player and a tree with a pair of sacrificed animals.

For the East, depicted on Plate 49, the central tree is one of precious jewels. It was originally painted blue and green (blue and tan in this edition, as in the current state of the original) and has jewels as its fruit. Its bird is a green quetzal. The temple above is an eared temple dedicated to the sun and is attended by Tonatiuh, the solar deity. In the upper register on the right the Western starry blue sky is supported by Tlahuizcalpantecuhtli, the god of Venus as the Morning Star, and on the left Xipe Tótec, Our Lord the Flayed One, walks the earth with his blue-and-white flowered staff.

For the North, shown on Plate 50, the central tree is a cactus covered with spines. It is painted blue and green and has small flowers and what are perhaps prickly pears as fruit. Its bird is a black-and-white eagle. The temple above is a house of flint knives with the image of the moon inside. A broad channel of darkness descends from above

and fills the interior of the temple. The attendant of the temple is a male moon god, Metztli. The god who supports the Southern dark starry sky in the upper register at the right is Xiuhtecuhtli, the old fire god. On the left the god of death walks with his red staff tied with red-and-white banners.

On Plate 51 the Western direction is shown with a tree of unusual qualities. It has been identified as a young corn plant with tassels but without fruit. The bird is a blue raptorial bird of indeterminate species. The temple is again an eared-roofed building with flowers in its roof. In the temple is a yellow object that Seler identifies as a gourd for holding tobacco. The deity attending the temple is a combination of several and cannot be easily identified. He manifests aspects of Xochipilli, Tonacatecuhtli., Cintéotl and perhaps Xiuhtecuhtli. In the upper register Quetzalcóatl, the Feathered Serpent, god of the wind, supports the Eastern blue starry sky, and Xochipilli, the young prince of flowers, the god of sustenance, walks the earth with his flowering tree as a staff.

The South is shown on the lower register of Plate 52. Its red spiny tree has solar discs as its fruit. The red bird in the tree is perhaps an owl, associated with Xiuhtecuhtli. The temple above is a skeletal building with an owl in its interior. Mictlantecuhtli, the God of Death, stands before it and offers blood from the neck of a headless person. In the upper register Mictlantecuhtli supports the Northern dark starry sky, and Cintéotl, the corn god, walks the earth with a precious red staff.

The right half of Plate 53 contains the images of the Center direction. The tree here is a large green maize plant that is producing ears of corn as its fruit. The tree emerges from the earth alongside two huge ears of corn. Two figures perform autosacrifice by piercing their sexual organs with bone awls and shedding blood on the base of the tree. These figures are: on the right, Macuilxóchitl, 5 Flower; and, on the left, Quetzalcóatl in the form of the lord Stripe Eye (see Plates 35 through 44). This image beautifully portrays a mythic relationship held between people and the earth such as that described for the Mixtec people of the village of Nuyoo by John Monaghan (1987): the people feed the earth their blood and their bodies, and in return the earth feeds the people by yielding maize. Having the king make this sacrifice idealizes the perpetual nature of this relationship and sanctifies it for the people of the kingdom. In the upper register of the right half of Plate 53 a human figure descends into the mouth of an earth monster that has a decidedly rectilinear, architectural aspect. This descent into the mouth of the earth corresponds well with the up-and-down nature of the Center as the middle of the earth, the central hinge of space and time.

Plates 53 and 54: Xochipilli as a Deer, and Five Frames of Piercing Sacrifices with Calendrical Notations

The upper left corner of Plate 53 contains an image of a deer with the 20 day signs attached to its body. The deer is an animal closely associated with Xochipilli, the young

prince of flowers. This deer is marked as a representative of Xochipilli by its face paint. Arrayed on a curved white panel in front of the deer are five of the day signs, the sixth through the tenth in the series of 20: Death, Deer, Rabbit, Water and Dog. These are taken, one each, from the list of days linked to each of the five directions: East, West, Center, North and South. After offering two other forms of expressing the directional qualities of the calendar and the characteristics of the directions in this image the Codex Borgia presents a third way of describing these associations. The relationship of this image of Xochipilli to the preceding pages or to the following page is unclear. We do not know why it is inserted here.

Directly below the Xochipilli deer we find the first of five representations of Tlahuizcalpantecuhtli, the Venus deity, performing a spear sacrifice. Each of these images is in a frame bounded on two sides by an unusual arrangement of dates. The names of these dates are drawn from the five directions in the *tonalpohualli* as arranged in four rows of 65 days: Alligator, Serpent, Water, Reed and Movement. The days give a certain directional quality to these five images. In contrast to these qualities, the deities or objects being speared have other directional associations. To further complicate the issue, Seler assigns to the image of Tlahuizcalpantecuhtli in each of the five panels the direction opposite to the one associated with his adversary.

In the first of them, in the lower left corner of Plate 53, a black-skull-faced Venus god strikes the leg of Chalchiuhtlicue, the goddess of running water. The day signs around the scene include all the numbers from 1 to 13 paired with Alligator, beginning with 1 Alligator at the lower right. The day sign Alligator yields an association of this scene with the East. Chalchiuhtlicue is a goddess of the East, and because of the conflict between the characters Seler represents Venus as being the West. Floating above Chalchiuhtlicue are the next three day signs, Wind, House and Lizard. If these were taken to represent three days in the *tonalpohualli* following 1 Alligator, then the fifth day in that sequence would be 5 Serpent.

This is the day that begins the display on the lower right corner of Plate 54. There an owl-faced Venus god strikes the leg of the Black Tezcatlipoca. The day sign Serpent belongs to the group associated with the South. The Black Tezcatlipoca is the god of the North, so that Seler assigns Venus here to the South. Above Tezcatlipoca are the next three days signs, Death, Deer and Rabbit. If we continue the count from 5 Serpent, the next day in the sequence should be 9 Water.

This is the date that appears at the lower right end of the next quadrant of the page. In this corner, the lower left, a dog-faced Venus god strikes the corn god, Cintéotl, on the leg. Here the Water day sign can be calendrically tied to the North, but Cintéotl is a god of the West and Seler assigns this Venus to the East.

Continuing the pattern, after the day signs of Dog, Monkey and Grass should come 13 Reed, and indeed it appears as the first in the list of Reed dates in the upper left
